GENERAL REQUIREMENTS

SECTION 01 45 25 - TESTING, ADJUSTING, AND BALANCING FOR HVAC

PART 1 – GENERAL

1.01 SUMMARY

A. SECTION INCLUDES

1. This Section specifies the requirements for test and balance of HVAC and related systems.

B. RELATED REQUIREMENTS

1. Section 01 11 00: Summary of Work.
2. Section 01 31 13: Project Coordination.
3. Section 01 32 13: Construction Schedule.
4. Section 01 33 00: Submittal Procedures.
5. Section 01 77 00: Contract Closeout.
6. Section 23 05 00: Common Work Results for HVAC.
7. Section 23 05 13: Basic HVAC Materials and Methods.
8. Section 23 05 48: HVAC Sound, Vibration and Seismic Control.
9. Section 23 09 00: HVAC Instrumentation and Controls.
10. Section 23 09 23: Environmental Control and Energy Management Systems (Only include when DDC Energy Management and Control Systems are provided).
11. Section 23 30 00: Air Distribution.
12. Section 23 50 00: Central Heating Equipment
13. Section 23 80 00: Heating, Ventilating and Air Conditioning Equipment.

PART 2 – PRODUCTS (Not used)

PART 3 – EXECUTION

3.01 DEFINITIONS AND APPLICABLE PUBLICATIONS

A. For the purposes of this Section definitions are as indicated in applicable publications of AABC, NEBB, TABB, ASHRAE, ANSI and SMACNA.

1. TAB: Testing, Adjusting and Balancing.

2. TABB: Testing, Adjusting and Balancing Bureau.

3. AABC: Associated Air Balance Council.

4. NEBB: National Environmental Balancing Bureau.

5. ASHRAE: American Society of Heating, Refrigerating and Air-Conditioning Engineers.

6. ANSI: American National Standards Institute.

7. SMACNA: Sheet Metal and Air Conditioning Contractors' National Association.

8. OAR: OWNER'S Authorized Representative

3.02 QUALITY ASSURANCE

A. The General Contractor shall contract directly with the test and balance agency. Tests performed by testing agencies contracted with the system's subcontractor will not be accepted. The qualifications of the agency shall comply with Article 3.02, Quality Assurance. The agency shall be responsible for furnishing labor, instruments, and tools required to test, adjust, and balance the heating, ventilating, and air conditioning (HVAC) systems and related plumbing systems, as described and/or as indicated in the Contract Documents.

B. CONTRACTOR shall obtain services of an independent, qualified testing agency acceptable to Architect to perform testing and balancing Work as specified and as follows:

1. Agency shall be currently certified by either the Associated Air Balance Council (AABC), the National Environmental Balancing Bureau (NEBB), or the Testing, Adjusting and Balancing Bureau (TABB). NEBB or TABB certification shall be for Air and Hydronic Testing, Adjusting and Balancing and Sound and Vibration Measurement.

2. Work shall be in accordance with the latest edition of the AABC, NEBB, or TABB National Standards. Where the requirements of the two standards are different, the more stringent requirements shall prevail. Also, if the Contract Documents impose a more stringent standard, then the Contract Documents shall prevail.

C. Performance Criteria: Work of this Section shall be performed in accordance with approved Testing, Adjusting, and Balancing agenda.

D. Test Equipment Criteria: Basic instrumentation requirements and accuracy/calibration required by Section Two of the AABC, Section II of the NEBB, or TABB Procedural Standards for Testing, Adjusting and Balancing of Environmental Systems.

E. Verification: The Test and Balance Agency shall recheck 10 percent (minimum 10) of the measurements listed in the report. The locations shall be selected by PROJECT INSPECTOR or OAR. The recheck will be witnessed by PROJECT INSPECTOR or OAR. If 20 percent of the measurements that are retested differ from the report and are also out of the specified range, an additional 10 percent will be tested. If 20 percent fall outside the specified range, the report will be considered invalid and all test and balance work shall be repeated.

F. Due to more stringent acoustical requirements in the educational environment, the Test and Balance Agency shall recheck the air systems where the sound level is higher than the specified requirements and demonstrate compliance with the methodology specified in this document with emphasis on fan speed adjustment and balancing for optimum acoustical performance. The recheck will be witnessed by PROJECT INSPECTOR or OAR. When there are multiple air systems, a system selected by PROJECT INSPECTOR or OAR shall be rechecked. If this system is found to be not in compliance, a second system shall be checked. If the second system if also found to be not in compliance, the report will be considered invalid, and all test and balance work shall be repeated.

3.03 SUBMITTALS

A. Submit name of agency to perform the Work. Include in the submittal the certified qualifications of all persons responsible for supervising and performing actual Work of this Section. Agency shall submit a minimum of five commercial or industrial HVAC system TAB projects of similar type, size, and degree of difficulty completed within the last two years. Agency shall provide name and telephone number of contact person for each listed project.

B. Submit, for approval, 6 copies of the Agenda as indicated in Article 3.06 to test and balance all mechanical and relevant plumbing systems.

C. Preliminary Report: Review the Contract Documents, examine Work installations and submit a written report to ARCHITECT, PROJECT INSPECTOR and OAR indicating deficiencies in Work precluding proper testing and balancing of the Work.

D. Final TAB Report: Submit the final TAB report for review by ARCHITECT, PROJECT INSPECTOR, and OAR outlining the conditions and Work completed on each HVAC system. All outlets, devices, HVAC equipment, etc. shall be identified, along with a numbering system corresponding to report unit identification.

E. Submit an AABC “National Project Performance Guaranty” or “NEBB Quality Assurance Certification”, assuring the Project systems were tested, adjusted, and balanced in accordance with the Specifications and AABC, NEBB, or TABB National Standards.

F. CAD drawings: Submit single line, multi-color CAD drawings indicating outside return and supply air, volume control boxes, each outlet and inlet, room numbers, duct sizes at traverse locations, temperatures and pressures, systems balanced, components changed, and CONTRACTOR installed access points. In addition, drawings shall identify controls, equipment settings, including manual damper quadrant positions, manual valve indicators, fan speed control levers, and similar controls, and devices shall be marked on the drawings to show final settings. CAD files shall be submitted on CD-ROM upon final submittal of TAB report. Reports shall identify discrepancies between completed Work and the Contract Documents affecting the performance and longevity of the system.

3.04 GENERAL SCOPE OF WORK

A. The general scope of Work shall include but not be limited to the following:

1. Measure airflow rates of HVAC systems and make adjustments to achieve design airflow rates, tabulate results, and submit reports.

2. Measure water-flow rates of HVAC systems and make adjustments to achieve design water flow rates, tabulate results, and submit reports.

3. Measure flow velocities, temperatures, static pressures or head, rotational speed, and electrical power demand of fans, pumps, and other related HVAC system components, tabulate results, and submit reports.

4. Measure sound levels in each conditioned space, tabulate results, and submit reports.

5. Measure ambient sound levels of outdoor HVAC units and system components, tabulate results, and submit reports.

6. Reports shall contain sufficient data for the system designer to evaluate system performance and solve installation problems such as system pressure profiles and pressure drops across system components

3.05 SPECIFIC SCOPE OF WORK

A. The specific scope of Work shall include the following HVAC system components as indicated on the Drawings:

1. Air Handling Units.

2. Air Conditioning Units.

3. Heating and Ventilating Units.

4. Heating and Cooling Coils.

5. Supply, Return, Relief and Exhaust Fans.

6. Outside Air and Return Air Plenums.

7. Outside Air Intakes.

8. All Supply and Return Ductwork.

9. All associated Air Terminal Devices, i.e. Supply Diffusers, Return Registers, etc.

10. Mixing Boxes and Variable Air Volume (VAV) boxes.

11. Reheat Coils

12. Exhaust Duct Systems.

13. Fire and Fire/Smoke Dampers.

16. Heat Exchangers.

19. Boilers.

20. Chilled Water and Heating Hot Water pumps.

3.06 TESTING, ADJUSTING, AND BALANCING AGENDA

A. Provide proposed materials, methods, procedures, forms, diagrams, and reports for test and balance Work.

B. Agenda to be completed by the test and balance agency and submitted to ARCHITECT, PROJECT INSPECTOR, and OAR for review and approval.

C. Agenda shall include one complete set of AABC, NEBB, or TABB publications listed in Sub-paragraph 3.02.B.2, applicable publications, or, in case of other test and balance agencies and or organizations, comparable publications to establish an approved, systematic, and uniform set of procedures.

D. Agenda shall also include the following detailed narrative procedures, system diagrams, and forms for test results:

1. Specific standard procedures required and proposed for each system of the Work.

2. Specified test forms for recording each procedure and for recording sound and vibration measurements.

3. Systems diagrams for each air, water, and steam system. Diagrams may be single line.

E. In addition to information recorded for standard AABC, NEBB, or TABB procedures, the following information is required:

1. Fan data.

2. System number, location, manufacturer, model, and serial number.

3. Fan wheel type and size.

4. Motor horse power, type, and rpm.

5. Sheave size, type, number of grooves, and open turns on Variable Pitch Sheave.

6. Number and size of belts, motor and fan shaft sizes, center-to-center of shafts in inches, and adjustment available motor data, including nameplate data, actual amps, rated, and actual motor rpm, volts, phase, hp, kW, starter heater size, and capacity.

7. Fan design airflow and service (supply, return, outdoor air or exhaust).

8. Fan static pressure, suction/discharge, static profile, and static control point.

F. The following traverse data is required:

1. Traverse location, size of duct (inside dimensions), and area of duct in square feet.

2. Column for each hole traversed/lines for each reading.

3. Barometric pressure.

4. Temperature/Static pressure in the duct.

5. Actual CFM corrected to SCFM.

6. Notes.

G. The following air distribution data is required:

1. Room identification.

2. Outlet or intake balance sequence number.

3. Size of outlet or inlet.

4. AK Factor.

5. Design and Actual FPM and CFM.

6. Notes.

H. The following hydronic coil data is required:

1. Air flow through the coil in CFM.

2. Dry bulb and wet bulb temperatures entering/leaving coil.

3. Enthalpy or total heat differences in BTU/pound.

4. Capacity in BTU/hour at time of test.

5. Water temperature and pressure entering/leaving coil.

6. Flow (in GPM) through coil.

7. Air pressure drop across coil.

8. Water head drop across coil.

9. Notes.

I. The following DX coil data is required:

1. Air flow through the coil in CFM.

2. Dry and wet bulb temperatures entering/leaving coil.

3. Enthalpy or total heat difference across coil in BTU/ pound.

4. Capacity in BTU/hour at time of test.

5. Air pressure drop across coil.

6. Notes.

J. The following data is required for steam to water heat exchangers for heat and/or domestic generation:

1. Exchanger identification number.
2. Nameplate data; manufacturer, model, and serial number.
3. Temperature entering/leaving unit.
4. Flow through unit in GPM.
5. Pressure drop through unit.
6. Entering steam pressure.
7. Notes.

K. The following electric heating coil data is required:

1. Heating coil identification number.
2. Nameplate data; manufacturer, model and serial number.
3. Amperage/Voltage on each phase.
4. Phase, kW, and Stages.
5. Safety device installed.
6. Air pressure drop across coil.
7. Notes.

L. The following boiler and domestic water heater data is required:

1. Performance test results for rated capacity.
2. Boiler identification number.
3. Nameplate data; manufacturer, model, and serial number.
4. Water temperature entering/leaving the boiler.
5. Outside conditions: temperature, humidity, general cloud cover.
6. Barometric pressure.

M. The following air-cooled split system condensing unit data is required:

1. Performance test results for rated capacity.
2. Unit identification number.
3. Nameplate data, manufacturer, model, and serial number.
4. Compressor nameplate and actual amps, volts, phase, and hertz.

5. RPM of motors, where applicable.

6. Refrigerant type.

7. Suction/Discharge pressure when gage installed.

8. Number of stages.

9. Low-pressure/High-pressure control setting.

10. Condenser fan sequence stages.

11. Crankcase heater watts (nameplate).

12. Hot gas bypass installed - yes/no.

13. SCFM Air Flow Measurement vs. Design CFM.

N. The following air-cooled split system heat pump data is required:

1. Performance test results for rated heating and cooling capacities.

2. Unit identification number.

3. Nameplate data, manufacturer, model, and serial number.

4. Compressor nameplate and actual amps, volts, phase, and hertz.

5. RPM of motors, where applicable.

6. Refrigerant type.

7. Suction/Discharge pressure for both heating and cooling modes when gage installed.

8. Number of stages.

9. Low-pressure/High-pressure control setting.

10. Condenser fan sequence stages.

11. Crankcase heater watts (nameplate).

12. Hot gas bypass installed - yes/no.

13. SCFM Air Flow Measurement vs. Design CFM.

O. The following sound test data is required:

1. Area or location.

2. Sound level in dB(A) as specified in Article 3.19.

3. Sound level at the center band frequencies of eight non-weighted octaves with equipment on and off for 5 rooms selected by the OAR/PROJECT INSPECTOR.

4. Plot of corrected sound-level reading on Noise Criteria (NC) curve for the measurements in Q 3 above.

P. The following vibration test data is required:

1. Equipment identification number.

2. Vibration levels at all accessible bearings, motors, fans, pumps, casings, and isolators.

3. Measurements in mils deflection and velocity in inches per second.

4. Each measurement taken in horizontal, vertical, and axial planes as accessible.

Q. The following mixing damper leakage test data is required:

1. Equipment identification number (unit, box, zone, etc.).

2. Dry bulb temperature in the cold/hot (or bypass) deck.

3. Dry bulb temperature in the mixed air stream.

4. Calculated percent leakage.

5. Data above taken in the full cool and full heat (or bypass) mode.

6. Notes.

R. The following airflow station data is required:

1. Station identification number.

2. Nameplate data including effective area.

3. Differential test pressure or velocity.

4. Calculated CFM.

5. Actual CFM (from Pitot-tube traverse form).

6. Read out CFM.

7. Notes

S. The following unit heater data is required:

1. Equipment identification number.

2. Nameplate data; manufacturer, model, and serial number.

3. Test CFM (use manufacturer rated CFM if not ducted).

4. Heat test data per applicable procedure (hot water, electric, etc.).

5. Notes.

T. The following fan coil and unit ventilator data is required:

1. Equipment identification number.

2. Nameplate data; manufacturer, model, and serial number.

3. Tested supply CFM or manufacturer rated CFM if not ducted.

4. Tested outside air in CFM.

5. Motor data and actual amps and volts.

6. Cooling/Heating test data.

7. Static pressure.

8. Notes.

U. The following data for water-to-water heat exchangers for domestic and/or heating is required:

1. Exchanger identification number.

2. Nameplate data; manufacturer, model, and serial number.

3. GPM and Pressure drop through each side.

4. Capacity of each side.

5. Notes.

V. The following pump data, including but not limited to, chilled water, heating hot water, boiler feed, domestic hot water booster, domestic hot water circulation, sewage ejectors, sump pumps and domestic hot water booster is required:

1. Pump number.

2. Nameplate data; manufacturer, model, and serial number.

3. Motor data including nameplate data, actual amps, volts, RPM, horsepower, starter heater size, and capacity.

4. Pump discharge and suction pressure along with total dynamic head in the following modes.

5. Shut-off head FT, Wide open Head FT, and Final operating Head FT.

6. Final GPM Test plotted on a pump curve.

7. Notes.

W. The following water flow station data is required:

1. Station identification number.
2. Nameplate data; manufacturer, model, and serial number.
3. Design and actual GPM.
4. Differential test pressure.
5. Setting (open turns, degree, etc.) if required GPM.
6. Notes.

X. The following terminal box data is required:

1. Box identification number.
2. Node, address, or designation on system.
3. Box size.
4. Cooling CFM.
5. Minimum CFM (if applicable).
6. Heating CFM (if applicable).
7. Box fan amps and volts (if applicable).
8. For DDC controlled boxes, record computer readout maximum, minimum, and heat, along with box correction factor for calibrating to true CFM.
9. Notes.

3.07 PROCEDURES

A. Schedule the Work of this Section in order for test and balance activities to be completed prior to the date of Substantial Completion. CONTRACTOR shall place all heating, ventilating, and air conditioning equipment into operation during each day and until all HVAC adjusting, balancing, testing, demonstrations, and instructions on systems are completed. Agency shall prepare and submit reports within ten (10) days from completion of the Work of this Section to allow sufficient time for corrective measures to be completed before Substantial Completion of the Work. When an individual building or portion thereof is ready for occupancy, all equipment relative to such portion of Work shall be put into service, tested, and balanced.

B. Prior to the date of Substantial Completion, and upon completion of test and balance Work, place all exhaust fans in operation, force all air handling units, and air conditioning units into a 100 percent outdoor air economizer mode with heating and cooling locked out and flush the building continuously for a period of fourteen (14) days.

C. Coordinate test and balance procedures with any phased Project requirements so test and balance procedures on each phased portion of the Work will be completed prior to completion of said designated phase.

3.08 FIELD EXAMINATION

A. Before the commencement of test and balance Work, CONTRACTOR shall ascertain that following conditions are fulfilled:

1. Ensure that all water heating and water cooling systems have been flushed, cleaned, and filled and high points vented.

2. Boilers (hot water) are filled.

3. Refrigerant systems are fully charged with specified refrigerant.

4. Over-voltage and current protection have been provided for motors.

5. Equipment has been labeled as required.

6. Curves and descriptive data on each piece of equipment to be tested and adjusted are available as required.

7. Operations and maintenance manuals have been supplied.

8. Controls manufacturer and boiler-burner representatives shall be available for consultation and supervision of adjustments during tests.

9. Verify that heating and cooling coil fins are cleaned, combed and air filters clean, and installed.

10. Verify that duct systems are clean of debris and leakage is minimized, access doors are closed and duct end caps are in place, and fire and volume dampers are in place and open.

11. Automatic control systems are completed and operating.

12. Start up and initial commissioning of all HVAC equipment except fans shall be by the manufacturer.

B. In addition to the above, CONTRACTOR shall establish a specific, coordinated plan which details how each area of existing building will be balanced during the various phases of the Work. The evaluation shall address, at a minimum, the following concerns:

1. OWNER operations.

2. Building safety and security policies. Prior to any fire safety or security systems shutdown at any time during the Work, CONTRACTOR shall first advise and coordinate with OWNER to ensure all concerned parties are notified.

3. Protecting furniture, computers, photocopiers, and other office equipment.

4. Protecting classroom fixtures and equipment.

5. Concerns specific and unique to building related issues.

6. Downtime required for each Air Handling Unit including projected time to return each portion of the building back to its normal occupancy temperature and humidity.

7. Shutdown and reactivation of the fire alarm system to avoid accidental alarms during test and balance and related Work.

3.09 TEST AND BALANCE

A. For each heating, ventilating, or air conditioning system the following shall be performed, recorded, and submitted in an approved format for review. Make, type, and model of unit, and location of each piece of equipment shall be included in the report. Readings shall include but not be limited to following:

1. Air Systems**:**

a. General

1) Verify all ductwork, dampers, grilles, registers, and diffusers have been installed per design and set in the full open position. Agency shall perform the following TAB procedures in accordance with AABC or NEBB National Standards. Where the requirements of the two standards are different, the more stringent requirements shall prevail. Also, if the Contract Documents impose a more stringent standard then the Contract Documents shall prevail.

b. Zone, Branch, and Main Ducts:

1) Adjust ducts to within design CFM requirements by means of Pitot-tube duct traverse.

c. Supply Fans:

1) Fan Speeds: Test and adjust fan RPM to achieve maximum or design CFM. CONTRACTOR shall provide new belt pulleys when required.

2) Current and Voltage: Test and record motor voltage and amperage, and compare data with the nameplate limits. Ensure fan motor is not in or above the service factor as published by the motor manufacturer.

3) Pitot-Tube Traverse: Perform a Pitot-tube traverse of main supply and return ducts, record total CFM.

4) Outside Air: Test and adjust the outside air using Pitot-tube traverse.

5) Static Pressure: Test and record system static profile of each supply fan.

6) Current and Voltage: Test and record motor voltage and amperage, and compare data with the nameplate limits. Ensure fan motor is not in or above the service factor as published by the motor manufacturer.

d. Return, Relief, and Exhaust Fans:

1) Fan Speeds: Test and adjust fan RPM to achieve maximum or design CFM. CONTRACTOR shall provide new belt pulleys where required.

2) Pitot-Tube Traverse: Perform a Pitot-tube traverse of the main return ducts to obtain total CFM.

3. Static Pressure: Test and record system static profile of each fan.

e. VAV Systems:

1) Set volume regulators on all terminal boxes to meet design maximum and minimum CFM requirements.

2) Identification: Identify the type, location, and size of each terminal box. This information shall be recorded on terminal box data sheets.

f. Diffusers, Registers and Grilles:

1) Tolerances: Test and balance each diffuser, grille, and register to within 5 percent of design requirements.

2) Identification: Identify the type, location, and size of each grille, diffuser, and register. This information shall be recorded on air outlet data sheets.

g. Coils: Air Temperature: Once airflow is set to acceptable limits, agency shall take wet bulb and dry bulb air temperatures on the entering and leaving side of each cooling coil. Dry-bulb temperature shall be taken on the entering and leaving side of each heating coil.

h. Duct Leakage Testing:

1) On existing ductwork, agency shall calculate duct leakage by traversing the unit and reading associated diffusers.

2) On new installations each and every section of the entire air distribution system (all supply, return, exhaust, and relief ductwork) shall be tested at 1.5 times design static pressure. All ducts shall demonstrate 5 percent leakage maximum (per CBC).

i. Air Handling Units:

1) Prepare pressure profile and show design and actual CFM (outside air, return air, and supply air).

2) Measure and record each mode (minimum OA and 100 percent OA) where economizer cycle is specified.

3) Record pressure drops of all components (coils, filters, sound attenuators, louvers, dampers, and fans) and compare with design values.

4) Pressure profile and component pressure drops are performance indicators and are not to be used for flow measurements.

j. System Pressure Profiles:

1) Prepare pressure profiles from fan (supply, return, and exhaust) or air handling unit to extremities of system.

2) As a minimum, show pressure at each floor, main branch, and airflow measuring device.

3) Make pitot-tube traverses of all trunk lines and major branch lines where required for analysis of distribution system. Airflow measuring devices installed in ductwork, if available, may be utilized.

4) Record residual pressures at inlets of volume controlled terminals at ends of system.

5) Show actual pressures at all static pressure control points utilized for constant or variable flow systems.

k. Fan speed adjustments and balancing for optimum acoustical performance:

1) As the very first step, the speed of all fans (supply, return, and exhaust inside packaged equipment or air handling units) shall be adjusted to deliver the required fan total air quantity with all volume dampers and other flow rate control devices fully open. Adjustments shall be made with the outdoor air intake dampers, return air dampers, and relief air dampers in the minimum outdoor air position. The adjustments shall be made again in the 100 percent outdoor air position in systems with 100 percent outdoor air economizers.

2) The above adjustment shall be done with wet cooling coils, where cooling coils are provided.

3) The airflow rates at each branch duct shall be adjusted as the second step with air with all volume dampers and other flow rate control devices fully open.

4) The airflow rates at each air inlet and outlet shall be adjusted as the final step. The volume damper in the branch duct shall be used for balancing. Opposed blade dampers at air inlets and outlets where provided shall only be used for fine adjustments and shall not be closed beyond 60 percent open or when the dampers start to generate audible noise.

5) CONTRACTOR shall provide the labor and materials for all dampers, pulleys, and belt changes required for balancing. The design documents indicate the worst-case scenario with safety factors in fan static pressures for contingency. Properly coordinated and installed air systems may require a lower static pressure and a reduction in fan speed.

2. Water Systems: CONTRACTOR shall confirm all equipment, piping, and coils have been filled and purged, strainers are clean, and all balancing valves (except bypass valves) are set full open. Agency shall perform the following TAB procedures in accordance with the AABC, TABB, or NEBB National Standards:

B. Pumps:

1. Test and adjust chilled water, hot water, and condenser water pumps to achieve maximum or design GPM.

2. Measure and record suction and discharge pressures.

3. Check pumps for proper operation. Pumps shall be free of vibration and cavitation.

4. Current and Voltage: Agency shall test and record motor voltage and amperage and compare data with the nameplate limits. Ensure pump motor is not in or above the service factor as published by the motor manufacturer.

5. Adjust pump flow by adjusting and setting balancing valves to obtain amperage reading on a clamp-on ammeter that corresponds to amperage indicated on pump's curves for required flow.

6. Verify that the motor is not drawing more current than indicated on motor plate rating. When actual flows of primary pumps are found by test to vary more than 5 percent from specified amount, system shall be re-balanced to regulate flow within this tolerance. When a flow indicating device(s) is in circuit, it shall be used to verify pump flows.

7. When testing is completed, a pump capacity chart with pump number and location indicated shall be marked indicating operating point of pump on the curve. Chart shall then be included in the report.

C. Boilers: (Start-up and initial commissioning by manufacturer only.) Test and balance boilers only after test and balance of pumps have been completed. Boilers shall not be initially operated or tests performed with students or faculty on the Project site. Boilers shall be tested for the following:

1. Heating Hot Water Boilers and Domestic Hot Water Boilers:

a. Current and Voltage: Test and record motor voltage and amperage, and compare data with the nameplate limits. Ensure motor is not in or above the service factor.

b. Test and balance water flow through water boilers.

c. Test and record temperature and pressure profiles of water and/or steam boilers.

d. Upon completion of tests, controls and devices shall be returned to their normal operating condition and boiler shall remain in service.

D. Heat Exchangers:

1. Water to Water Heat Exchanger:

a. Primary Heating Water: Entering and leaving hot water temperatures, gpm flow, and pressure drop.

b. Secondary Heated Water: Entering and leaving hot water temperatures, gpm flow, pressure drop, and control set point.

E. Coils:

1. Tolerances: Test and balance all chilled-water and hot-water coils within 5 percent of design requirements.

2. Verify the type, location, final pressure drop, and GPM of each coil.

F. System Mains and Branches including chilled water, heating hot water, cooling tower water, domestic hot water and domestic cold water:

1. Balance water flow in pipes to achieve maximum or design GPM.

I. Heating Systems:

1. Heating Coils: Steam pressure at coils, cfm, coil pressure drop, entering and leaving air dry bulb temperatures.

2. Boilers:

a. Pressure, temperature, and quantity of feed-water (see Testing and Adjusting procedures).

b. Make, type, serial number, and rated capacity.

c. Flue gas temperature at boiler outlet ahead of back-draft diverter.

d. Percent carbon dioxide in flue gas.

e. Condensate quantities and temperatures.

3. Air Conditioning Units: (Start-up and initial commissioning by manufacturer only.)

a. Suction pressure and temperature.

b. Discharge pressure and temperature.

c. Amps and volts.

d. Make, type, and model of unit, capacity rating.

e. Ambient temperature: WB, DB.

f. Supply, return, relief, and exhaust fans shall be balanced as indicated in Section 3.09, A, 1, Air Systems.

g. Proper operation of controls: Temperature controllers and safety devices shall be tested during operating tests, with all other controls and devices, except one under test, being by-passed.

h. Upon completion of tests, controls and devices shall be returned to their normal operating condition and boiler shall remain in service.

4. Condensing and Refrigerating Units: (Start-up and initial commissioning by manufacturer only.)

a. Suction pressure and temperature.

b. Discharge pressure and temperature.

c. Amps and volts.

d. Make, type, and model of unit, capacity rating.

e. Ambient temperature: WB, DB.

f. Proper operation of controls: Temperature controllers and safety devices shall be tested during operating tests, with all other controls and devices, except one under test, being by-passed.

g. Upon completion of tests, controls and devices shall be returned to their normal operating condition and boiler shall remain in service.

5. Split System Heat Pump Units: (Start-up and initial commissioning by manufacturer only.)

a. Suction pressure and temperature.

b. Discharge pressure and temperature.

c. Amps and volts.

d. Make, type, and model of unit, capacity rating.

e. Ambient temperature: WB, DB.

f. Supply, return, relief and exhaust fans shall be balanced as indicated in Sub-paragraph 3.09.A.1, Air Systems.

g. Proper operation of controls: Temperature controllers and safety devices shall be tested during operating tests, with all other controls and devices, (except one under test) being by-passed.

h. Upon completion of tests, controls and devices shall be returned to their normal operating condition and boiler shall remain in service.

6. MISCELLANEOUS:

a. Electric Heaters:

1. Amperage.

2. Voltage.

3. Make, type, model, and name plate capacity rating.

3.10 VERIFICATION OF HVAC CONTROLS

A. Agency shall verify in conjunction with CONTRACTOR all control components are installed in accordance with the intent of the Contract Documents and are functioning according to the design intent, including all electrical interlocks, damper sequences, air and water resets, fire stats, and other safety devices.

B. CONTRACTOR shall verify all control components are calibrated and set for design operating conditions and intent.

3.11 TEMPERATURE TESTING

A. To verify system control and operation, agency shall perform a series of three temperature tests taken at approximately two hour intervals in each separately controlled zone. The resulting temperatures shall not vary more than two degrees Fahrenheit from the thermostat or control set point during the tests. Outside temperature and humidity shall also be recorded during the testing periods.

3.12 BUILDING/ZONE PRESSURIZATION

A. Agency shall test and adjust building/zone pressurization by setting the design flows to meet the required flow direction and pressure differentials. Positive/Negative area(s) supply air shall be set to design flow and exhaust air rates adjusted to obtain the required pressure differential(s).

3.13 FIRE AND SMOKE DAMPER TESTING

A. This work is to be performed by OWNER and State Fire Marshall. Do not include in agency scope of work.

3.14 LIFE SAFETY CONTROLS TESTING

A. This work is to be performed by OWNER and State Fire Marshall. Do not include in agency scope of Work.

3.15 FINAL TABULATION

A. After heating, ventilating, and air conditioning components are satisfactorily tested and balanced, entire system shall be put into operation and all pressures, temperatures, gpm, cfm, velocities, etc., shall be recorded and checked against design schedules. Design requirements shall be listed on reports and final tabulation shall be within a tolerance of plus or minus five percent of design requirements.

B. Readings at various locations as described herein will be made every hour for four (4) hours, during normal working hours for three (3) days. Boilers and, forced air furnaces shall be started up far enough in advance to meet design conditions during period of testing.

3.16 VIBRATION TESTING

A. Furnish instruments and perform vibration measurements if specified in Division 23. Provide measurements for all rotating HVAC equipment half horsepower and larger, including reciprocating/centrifugal/screw/scroll compressors, pumps, fans, and motors.

B. Record initial and final measurements for each unit of equipment on test forms. Where vibration readings exceed allowable tolerance and efforts to make corrections have proved unsuccessful, forward a separate report to ARCHITECT.

3.17 SOUND TESTING

A. Perform and record sound measurements as specified in this Section and in Section 23 05 48: HVAC Sound, Vibration and Seismic Control. Take additional readings if required by ARCHITECT.

B. Measuring equipment and methods shall comply with the current requirements of the AABC, NEBB, TABB and ANSI S12.60. Take measurements with a calibrated Type 1 sound level meter and octave band analyzer.

C. Sound reference levels, formulae, and coefficients shall be according to ASHRAE Handbook: HVAC Applications, Chapter on Sound and Vibration Control.

D. Where sound pressure levels are specified as noise criteria or room criteria in Section 23 0548: HVAC Sound, Vibration and Seismic Control determine compliance with the Contract Documents as follows:

1. Reduce background noise as much as possible by shutting off unrelated audible equipment.

2. Measure octave band sound pressure levels with specified equipment "off".

3. Measure octave band sound pressure levels with specified equipment "on".

4. Use difference in corresponding readings to determine sound pressure due to equipment. Sound pressure level, due to equipment equals sound pressure level with equipment "on" minus factor.

DIFF.:	0	1	2	3	4	5	9-10 or More
FACTOR:	10	7	4	3	2	1	0

5. Plot octave bands of sound pressure level due to equipment for typical rooms, on a graph, which also shows, noise criteria (NC) curves.

E. Where sound levels are required in dbA, measure sound levels using the A-frequency-weighting of meter. Single value readings will be used instead of octave band analysis.

F. Measure sound levels at each octave band as NC or RC (room criteria) if indicated in the Drawings or other Spec Sections. Where measured sound levels exceed specified level, CONTRACTOR shall take all remedial action and necessary sound tests shall be repeated. Sound tests after remedial action shall be in octave band in NC or RC for the room and also at each diffuser, grille, or register in occupied areas. Sound levels shall be measured approximately five feet above floor on a line approximately 45 degrees to center of opening, on the A- and C-frequency-weighting of the measuring instrument.

G. Measure and record sound levels in decibels for each room per current ANSI S12.60.

H. Report shall include ambient sound levels, taken without air-handling equipment operating, of rooms in which above openings are located. A report shall also be made of any noise caused by mechanical vibration.

END OF SECTION

COMPTON COMMUNITY COLLEGE DISTRICT

TEMPORARY FACILITIES AND CONTROLS

PART 1 - GENERAL

1.1 SUMMARY

A. This Section specifies requirements for temporary services and facilities, including utilities, construction and support facilities, security and protection.

B. Temporary utilities required include but are not limited to:

1. Water service and distribution.

2. Temporary electric power and light.

3. Telephone service with separate Fax line.

4. Storm and sanitary sewer.

C. Temporary construction and support facilities required include but are not limited to:

1. Temporary heat.

2. Field offices and storage sheds.

3. Sanitary facilities, including drinking water.

4. Temporary enclosures.

5. Temporary Project identification sign.

6. Waste disposal services.

D. Security and protection facilities required include but are not limited to:

1. Temporary fire protection. Coordination of Fire Watch.

2. Barricades, warning signs.

3. Environmental protection.

4. Temporary security fencing when required and in compliance with the Phase temporary fencing provided by Bid Package xx.

1.2 SUBMITTALS

A. Temporary Utilities: Submit reports of tests, inspections, meter readings and similar procedures performed on temporary utilities.

1.3 RELATED WORK

A. All equipment furnished by subcontractors shall comply with all requirements of pertinent safety regulations. The ladders, planks, hoists, and similar items normally furnished by the individual trades in execution of their own portions of the work are not part of this section.

B. Permanent installation and hook-up of the various lines are described in the other pertinent sections.

1.4 QUALITY ASSURANCE

A. Regulations: Comply with industry standards and applicable laws and regulations of authorities having jurisdiction, including but not limited to:

1. Building Code requirements.

2. Health and safety regulations.

3. Utility company regulations.

4. Police, Fire Department and Rescue Squad rules.

5. Environmental protection regulations.

B. Standards: Comply with NFPA Code 241, "Building Construction and Demolition Operations", ANSI-A10 Series standards for "Safety Requirements for Construction and Demolition", and NECA Electrical Design Library "Temporary Electrical Facilities."

1. Refer to "Guidelines for Bid Conditions for Temporary Job Utilities and Services", prepared jointly by AGC and ASC, for industry recommendations.

2. Electrical Service: Comply with NEMA, NECA and UL standards and regulations for temporary electric service. Install service in compliance with National Electric Code (NFPA 70).

C. Inspections: Arrange for authorities having jurisdiction to inspect and test each temporary utility before use. Obtain required certifications and permits.

1.5 PROJECT CONDITIONS

A. Conditions of Use: Keep temporary services and facilities clean and neat in appearance. Operate in a safe and efficient manner. Take necessary fire prevention measures. Do not overload facilities, or permit them to interfere with progress. Do not allow hazardous dangerous or unsanitary conditions, or public nuisances to develop or persist on the site.

PART 2 - PRODUCTS

2.1 MATERIALS

A. General: Provide new materials; if acceptable to the Architect/Engineer, undamaged previously used materials in serviceable condition may be used. Provide materials suitable for the use intended.

B. Water: Provide potable water approved by local health authorities.

2.2 FIELD OFFICE

A. Provided by this Bid Package; Provide on-site, adequate field space for use by construction forces, the District Inspector, and the Architect during the time construction is in progress. The offices shall be conveniently located and shall be watertight and waterproof, clean, insulated, heated, cooled, lockable, provided with windows to give adequate light and ventilation, have electrical service outlets, and have a floor. Minimum size of temporary site construction is 360 square feet.

1. The Contractor shall provide and pay for separate telephone service for phone and fax machine. Telephone and fax machines are to be on separate telephone line.

2. Equip with a minimum of one desk and a layout table. Equip with additional folding chairs for field meetings.

3. The offices, equipment, and furniture shall remain the property of the Contractor and shall be removed by contractor upon completion of work.

4. A complete set of approved plans and specifications shall be kept in the office at all times.

B. Inspectors Field Office: Contractor is required to provide for the use of the School District's Inspector a temporary office space to be located as directed by the Inspector and to be maintained until removal is authorized by the School District. Space is to have a lockable separate room area with a table for plans and a desk with two chairs. At least one entrance to Inspector office space is to be from the outside and not through the Contractors field office space. Provide and pay for high speed internet service. Maintain for Inspector until completion of the Contract.

2.3 TOILET FACILITIES

A. Provided by Each Bid Package for their personnel; Provide, install and maintain, for during of the work, temporary outside toilet facilities for use of construction personnel. Toilet facilities shall be constructed, maintained and supplied as required for the numbers of construction personnel required, and according to local regulations.

2.4 FIRST AID

A. Maintain such first aid supplies as may be required for minor accidents. Make arrangements with local emergency center and nearest hospital to receive cases requiring medical attention, including emergencies. Such information shall be conspicuously displayed at the construction office.

2.5 WATCHMAN SERVICES

A. Provided by this Bid Package; The Contractor shall provide such watchman services as he may deem necessary to properly safeguard materials, tools, appliances, and work during all hours that operations under the Contract are not actively proceeding. The District will not assume any responsibility for the loss of or damage to materials, tools, appliances or work arising from acts of theft, vandalism, malicious mischief, or other causes.

2.6 FIRE PROTECTION

A. Provide fire extinguisher on the premises during the course of construction of the type and sizes recommended by the NBFU to control fires resulting from the particular work being performed. Instruct employees in their use. Place extinguisher in the immediate vicinity of the work being performed, ready to be used.

B. During the use of hazardous equipment such as acetylene torches, welding equipment, bitumen kettles, salamanders and similar devices, no work shall be commenced or equipment used unless fire extinguisher of an approved type and capacity are placed in the working area and available for use by the workmen using such hazardous equipment.

C. Provide fire extinguisher conforming to the requirements, as minimums, of NFPA 10 and 241.

2.7 SAFETY AND PROTECTION

A. Provided by this Bid Package the Contractor shall furnish and erect temporary or permanent fences around the areas, as indicated on the drawings, and elsewhere where required for protection of the work, and to prevent unauthorized persons from entering the construction area. Temporary fences shall be at least eight feet (6'-0") above grade, of chain link or other substantial construction. Necessary gates for access to the site shall be placed where directed by the School District.

B. Furnish or construct barricades, lights and other guards about the work area that may be required by local ordinance or for public safety and necessity. Protect all work from vandalism.

2.8 TEMPORARY UTILITY SERVICES

A. Provided by this Bid Package; Power and Lighting: Furnish, install and maintain temporary wiring, poles, meter board, service entrance switch, lamps and equipment necessary to provide temporary lighting and power for the construction site.

1. Temporary power is available from location as directed by the Power Company.

2. Any temporary transmission lines required shall be installed by Contractor.

3. Provide power sources within eighty feet of any working position to allow the use of one hundred foot extension cords.

B. Water: Install required temporary connections to existing water. Locate temporary pipelines so that they do not interfere with traffic or drainage. Design and construct such pipelines so that they do not leak or cause damage or nuisance.

1. Upon completion of work, remove all temporary piping.

2.9 HEAT AND VENTILATION

A. Provide temporary heat and ventilation as required to maintain adequate environmental conditions to facilitate the progress of the work, to meet specified minimum conditions for the installation of materials, and to protect materials and finishes from damage due to temperature and humidity.

1. Pay costs of installation, maintenance, operation and removal, and fuel consumed.

2.10 CONSTRUCTION AIDS

A. Provide construction aids and equipment required by personnel and to facilitate the execution of the work; scaffolds, staging, ladders, stairs, ramps, runways, platforms, railings, hoists, cranes, chutes and other such facilities and equipment.

B. Provide all necessary facilities and means of access to all parts of the structure so that Governmental Agency Inspectors, Special Inspectors and the Architect and Structural Engineer may inspect any portion of the structure.

1. Means of access includes, but is not limited to, ladders, and/or scaffolds.

2.11 ACCESS ROADS AND PARKING AREAS

A. Prior to starting work, the Contractor, District and the Architect or his representative shall make a thorough survey of the site and approaches thereto. The Contractor will maintain temporary access roads required to perform the work and locate construction offices at locations approved by the Architect/Engineer and the District. The Contractor shall verify all grade elevations indicated on the Drawings at the site and immediately notify the Architect/Engineer if any

deviations are found. The Contractor shall assume all responsibility if any work proceeds without such notification.

B. Maintain specific vehicular access as required for the orderly progress of the work. Fill, compact and grade areas as necessary to provide suitable support during all weather conditions for anticipated loads including municipal fire apparatus. Provide adequate surface drainage and do not interrupt natural flow of existing drainage.

C. Provide designated parking areas for use by construction personnel.

D. Restore temporary vehicular access and parking areas to original or to specified conditions at completion of work.

2.12 TEMPORARY CONTROLS

A. Provide and maintain methods, equipment, and temporary construction, as necessary to provide controls over environmental conditions at the construction site and related areas under Contractor's control; remove physical evidence of temporary facilities at completion of work.

B. Dust Control: Provide positive methods and apply dust control materials and methods to minimize raising dust from construction operations. Provide positive means to prevent air-borne dust from dispersing into the atmosphere.

C. Water Control: Provide methods to control surface water to prevent damage to the Project, the site, or adjoining properties.

1. Control fill, grading and ditching to direct surface drainage away from excavations, pits, tunnels, and other construction areas; and to direct drainage to proper runoff.

2. Provide, operate and maintain hydraulic equipment of adequate capacity to control surface water.

3. Dispose of drainage water in a manner to prevent flooding, erosion, or other damage to any portion of the site or to adjoining areas.

D. Pollution Control:

1. Provide methods, means and facilities required to prevent contamination of soil, water or atmosphere by the discharge of noxious substances from construction operations.

2. Provide equipment and personnel; perform emergency measures required to contain any spillages, and to remove contaminated soils or liquids.

E. Excavate and dispose of any contaminated earth off-site, and replace with suitable compacted fill and topsoil.

1. Take special measures to prevent harmful substances from entering public waters and atmosphere.

a. Prevent disposal of wastes, effluent, chemicals, or other such substances in sanitary or storm sewers.

PART 3 - EXECUTION

3.1 INSTALLATION

A. Use qualified personnel for installation of temporary facilities. Locate facilities where they will serve the Project adequately and result in minimum interference with performance of the Work. Relocate and modify facilities as required.

B. Provide each facility ready for use when needed to avoid delay. Maintain and modify as required. Do not remove until facilities are no longer needed, or are replaced by authorized use of completed permanent facilities.

3.2 TEMPORARY UTILITY INSTALLATION

A. General: Engage the appropriate local utility company to install temporary service or connect to existing service. Where the company provides only part of the service, provide the remainder with matching, compatible materials and equipment; comply with the company's recommendations.

1. Arrange with the company and existing users for a time when service can be interrupted, where necessary, to make connections for temporary services.

2. Provide adequate capacity at each stage of construction. Prior to temporary utility availability, provide trucked-in services.

3. Obtain easements to bring temporary utilities to the site, where the Owner's easements cannot be used for that purpose.

4. Use Charges: Cost or use charges for temporary facilities are not chargeable to the Owner or Architect, and will not be accepted as a basis of claims for a Change Order.

B. Water Service: Install water service and distribution piping of sizes and pressures adequate for construction until permanent water service is in use. Water may be taken from existing site water supply.

1. Sterilization: Sterilize temporary water piping prior to use.

C. Temporary Electric Power Service: Provide weatherproof, grounded electric power service and distribution system of sufficient size, capacity, and power characteristics during construction period. Include meters, transformers, overload protected disconnects, automatic ground-fault interrupters and main distribution switch gear.

3.3 PROJECT IDENTIFICATION AND SIGNS

A. Project Identification and Temporary Signs: Prepare project identification and other signs of the size indicated; install signs where indicated to inform the public and persons seeking entrance to the Project. Support on posts or framing of preservative treated wood or steel. Do not permit installation of unauthorized signs.

B. Provide temporary on-site informational signs.

1. As required by codes, laws and regulatory agencies.

2. To identify key elements of the construction facilities.

3. To direct traffic.

C. Project Identification Sign: Size, design and information lettered as specified and as shown on drawing located at the end of this section. Finish with 3 coats of paint. Locate sign as indicated or directed by the Architect and School District.

3.4 OWNERSHIP OF TEMPORARY FACILITIES AND CONTROLS

A. Items provided by the Contractor under this section shall remain the property of the Contractor and shall be removed from the job site immediately upon completion of the work.

3.5 COLLECTION AND DISPOSAL OF WASTE

A. Collect waste from construction areas and elsewhere daily. Comply with requirements of NFPA 241 for removal of combustible waste material and debris. Enforce requirements strictly. Do not hold materials more than 7 days during normal weather or 3 days when the temperature is expected to rise above 80 deg F (27 deg C). Handle hazardous, dangerous, or unsanitary waste materials separately from other waste by containerizing properly. Dispose of material in a lawful manner.

3.6 OPERATION, TERMINATION AND REMOVAL

A. Termination and Removal: Unless the Architect requests that it be maintained longer, remove each temporary facility when the need has ended, or when replaced by authorized use of a permanent facility, or no later than Substantial Completion. Complete or, if necessary, restore permanent construction that may have been delayed because of interference with the temporary facility. Repair damaged Work, clean exposed surfaces and replace construction that cannot be satisfactorily repaired.

1. Materials and facilities that constitute temporary facilities are property of the Contractor. The School District reserves the right to take possession of Project identification signs.

END OF SECTION

SECTION 01 57 23 - STORM WATER POLLUTION CONTROL

PART 1 – GENERAL

1.1 SUMMARY

A. This section includes the following:
   1. Requirements for compliance with the Storm Water Pollution Prevention Plan (SWPPP) developed specifically for this Project are the responsibility of the Contractor.
      a. SWPPP satisfies the mandates of Federal Clean Water Act as enforced by State of California Water Resources Control Board and its Regional Water Quality Boards.
      b. In accordance with the State Water Resources Control Board's (SWRCB) General Construction Activities Storm Water Permit, Order No. 2009-0009-DWQ, NPDES No. CAS000002, the SWPPP Major objective is to:

         (1) Identify the sources of sediment and other pollutants that affect the quality of storm water discharges

         (2) Describe and ensure the implementation of Best Management Practices, (BMPs) to reduce or eliminate sediment and other pollutants in storm water as well as non-storm water discharges.

B. Related Sections
   1. Contractor shall retain a California State Certified Qualified SWPPP Practitioner (QSP) to implement and maintain the SWPPP and file all necessary documents to the State.
   2. SWPPP requires compliance of all trades on Project that use or manipulate materials of any nature which can potentially enter storm-water drainage system.
   3. Representative materials controlled by the SWPPP include erosion of native soils and fill materials, groundwater, leakage or spills from construction vehicles and machinery, stored fuels, concrete truck washout, chemical treatments, curing, compounds, paints, plasters, paving materials, adhesives and sealants, trash and general construction debris, pesticides, fertilizers, and any other material which can be carried by running water or percolate into earth.

1.2 SUBMITTALS

A. Provide name and certification documents of the Qualified SWPPP Practitioner (QSP).

B. Trough the entirety of construction, prepare inspection reports, rain gauge readings, stormwater sampling and analysis, bio assessment reports, Annual Reports and submit through the State's Storm Water Multiple Application and Report Tracking System (SMARTS) as required by the General Construction Permit.

C. Closeout Submittals: Submit to owner documentation certifying compliance with the SWPPP, site monitoring reports, and notification of Agencies of completion of operations as required by the General Construction Permit.

D. Provide a Rain Event Action Plan (REAP) if project is considered a RISK LEVEL 2 or 3. REAP shall be prepare by the project QSP.

E. SWPPP plan.
1. The SWPPP will be prepared by a Qualified SWPPP Developer (QSD) certified by the RWQCB, as required by the General Construction Permit.
2. Implementation and report processing of the SWPPP shall be conducted by a Qualified SWPPP Practitioner as required by the General Construction Permit.

1.3 REGULATORY BACKGROUND

A. As required by Federal Water Pollution Control Act (Clean Water Act) and regulations of U.S. Environmental Protection Agency and of State of California Water Resources Control Board current General construction Permit, any construction activity of ONE acre or more must be covered by National Pollutant Discharge Elimination System (NPDES) permit.

B. The Act further decrees fines of as much as $37,500 per day per violation.

C. It is implicit that SWPPP satisfies requirements of NPDES permit.

D. If Owner is cited for violation of Clean Water Act due to failure of SWPPP to address requirement, Contractor shall be liable for any fines or penalties that might be imposed by regulatory agency, he shall be obligated to perform mandated corrective measures at his own expense.

E. If Owner, Architect, or Owner's Inspector becomes aware of violations of SWPPP, they will immediately inform Contractor in writing. Contractor shall immediately cease violation and shall restore site, at his own expense, to same conditions it was in before violation, to approval of Owner.

F. Should Contractor continue to violate requirements of SWPPP, or refuse to comply, or refuse to repair results of violation to Owner's approval, for purposes of this Contract it shall be considered as any other violation of Contract. Owner will take necessary measures as set forth in General Conditions.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Provide all temporary and permanent Best Management Practices (BMP’s) storm water pollution prevention equipment, material, and facilities as required by or as necessary to comply with the SWPPP and meet the General Construction Permit requirements.

PART 3 - EXECUTION

3.1 IMPLEMENTATION

A. Measures required in SWPPP shall be executed as dictated by SWPPP itself.

B. Legally Responsible Person (LRP) authorized by the Owner shall file Notice of Intent and obtain project WDID number.

C. Contractor shall not commence construction until a Notice of Intent has been filed to the State and project WDID number has been issued.
   1. Concurrent with commencement of construction activities, Contractor shall implement and retain at project site, the Storm Water Pollution Prevention Plan and a monitoring program and reporting plan throughout construction in accordance with the General Permit.

D. Contractor shall be responsible for paying the necessary permit fees and complying with State Water Resources Control Board Order No. 2009-009-DWQ, implementing provisions of the Clean Water Act relating to storm water discharges.

E. The plan will address all potential sources of pollutants which may enter the storm water system, it must explain what steps will be taken during construction to minimize the risk of storm water contamination and must address management procedures to be utilized during construction to prevent pollution discharges such as spills, leaking, and dumping.

F. A copy of said plan shall be provided to owner and upon request contractor shall certify, in writing, compliance with the relevant rules, regulations and laws.
Additional information regarding State Water Resources Control Board requirements can be obtained from State Water Resources Control Board, Division of Water Quality:

Attention: Storm Water Permit Unit,
P.O. Box 1977, Sacramento, CA 95812-1977.
Telephone Number (916) 657-1146.

G. During construction, make changes as necessary for proper functioning of SWPPP measures. Notify QSP on recommended changes.

H. At completion of work, Contractor shall remove temporary SWPPP measures and dispose of any pollutants in legal manner offsite, or as otherwise required by SWPPP

3.2 PERFORMANCE

A. Minimum Water Quality Protection Requirements
   1. The Contractor is required to meet the following minimum standards of good housekeeping:
      a. Eroded sediments and other pollutants must be retained on site and may not be transported from the site via sheet flow, swales, area drains, natural drainage, or wind.
      b. Stockpiles of earth and other construction-related materials must be protected from being transported from the site by wind or water.
      c. Fuels, oils, solvents, and other toxic materials must be stored in accordance with their listing and are not to contaminate the soil nor the surface waters. All approved toxic storage containers are to be protected from the weather. Spills must be cleaned up immediately and disposed of in a proper manner. Spills may not be washed into the drainage system.

d. Excess or waste concrete may not be washed into the public way or any drainage system. Provisions shall be made to retain concrete wastes on-site until they can be appropriately disposed of or recycled.
e. Trash and construction-related solid wastes must be deposited into a covered receptacle to prevent contamination of rainwater and dispersal by wind.
f. Sediments and other materials may not be tracked from the site by vehicle traffic. The construction entrance roadways must be stabilized so as to inhibit sediments from being deposited into the public ways. Accidental depositions must be swept up immediately and may not be washed down by rain or by any other means.

B. Stormwater Pollution Prevention Plan
1. The Contractor shall comply with The Stormwater Pollution Prevention Plan (SWPPP). The Contractor shall implement Best Management Practices (BMPs) necessary to control stormwater pollution from sediments, erosion, and construction materials leaving the construction site.
2. The BMPs contained in the Development Best Management Practices Handbook – Part A, Construction Activities cover the following categories of construction activities:
   a. Site preparation/earth removal
   b. Underground structures
   c. Aboveground structures
   d. Roadways, walkways and parking lots
   e. Planting and landscaping
3. The SWPPP document shall include the following information:
   a. The name, location, period of construction, and a brief description of the Project.
   b. Contact information for the Contractor, including name, address, and telephone number.
   c. Name, location, and description of any environmentally sensitive areas located on or adjoining the Project.
   d. A list of major construction materials, waste, and activities.
   e. A list of BMPs to be used to control pollutant discharges from major construction materials, wastes, and activities.
   f. A site plan (a construction plan may be used) indicating the location of BMPs where appropriate.
   g. A developer's certification statement that all required and selected BMPs will be effectively implemented.
4. Whenever the Contractor is required to get any type of permit from the Department of Building and Safety (DBAS), the Contractor shall submit the SWPPP document to the DBAS for review and approval before obtaining the permit. At least one copy of the approved SWPPP shall be kept at the construction site and accessible to City inspectors.
5. Publication on the General Construction Permit details are available at:

   State Water Resources Control Board Website:

   http://www.waterboards.ca.gov/water_issues/programs/stormwater/construction.shtml

END OF SECTION

DIVISION 02
EXISTING CONDITIONS

SECTION 02 41 13 - SITE DEMOLITION

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Special Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. This Section includes the following

1. Demolition and removal of site improvements and all other related contiguous improvements as required. Refer to Contract Drawings for items and location.

2. Demolition, dismantling, cutting and alterations as indicated, specified, and required for completion of the Contract; for new construction, modernization and rehabilitation projects, as applicable. Includes items such as the following:
    1. Protecting existing work to remain.
    2. Salvageable items to be retained.
    3. Cleaning soiled materials that are to remain.
    4. Disconnecting and capping utilities.
    5. Removing debris and equipment.
    6. Removal of items indicated on drawings.

B. Demolition of Existing Building Foundations

1. Demolition and removal of all existing building foundations, footings, slabs, retaining walls, etc. shall be carried in a careful and orderly manner, and according to all applicable codes and regulations for demolition of structures, safety of adjacent structures, dust control and disposal of materials.
2. Sprinkle Work with water to minimize dust. Provide hoses and water connections for that purpose.

D. Demolition and Removal of Pavements

1. Markup all existing utilities on site.
2. Sawcut all Concrete Pavements, as indicated on Drawings.
3. Remove all indicated pavements, walkways, curb and gutter, concrete ditches, landscape areas, etc.
4. Protect all manhole and valve covers, lids, vaults and other site fixtures, marked to remain.

E. Related Sections: The following Sections contain requirements that relate to this Section:

1. Sections for “Photographic Documentation”, “Special Environmental Procedures”, ”Temporary Facilities”, “Tree and Plant Protection”, “Cutting and Patching” as applicable.

2. Division 31 for "Site Clearing" and “Earthwork” as applicable.

3. Asbestos-Containing Materials (ACMs) and/or other Hazardous Materials Report.

1.03 DEFINITIONS

A. Remove: Remove and legally dispose of items except those indicated to be reinstalled, salvaged, or to remain the owners' property.

B. Asbestos-Containing Materials (ACMs) and other hazardous materials: As identified in the Report, remove asbestos-containing materials (ASMs) and other identified hazardous materials.

C. Remove and Salvage: Items indicated to be removed and salvaged remain the Owner's property. Remove, clean, and pack or crate items to protect against damage. Identify contents of containers and deliver to Owner's designated storage area.

D. Remove and Reinstall: Remove items indicated; clean, service, and otherwise prepare them for reuse; store and protect against damage. Reinstall items in locations indicated or as directed by Owner.

E. Existing to Remain: Protect construction indicated to remain against damage and soiling during demolition. When permitted by the Architect and Owner, items may be removed to a suitable, protected storage location during demolition and then cleaned and reinstalled in their original locations.

1.04 MATERIALS OWNERSHIP

A. Except for items or materials indicated to be reused, salvaged, or otherwise indicated to remain the Owner's property, demolished materials shall become the Contractor's property and shall be removed from the site with further disposition at the Contractor's option.

B. Historical items indicated remain the Owner's property. Carefully remove and salvage each item in a manner to prevent damage and deliver promptly to the Owner.

C. Historical items, archeological or paleontological findings, relics, and similar objects including, but not limited to, cornerstones and their contents, commemorative plaques and tablets, commemorative benches, antiques, and other items of interest or value to the Owner, which may be encountered during demolition, remain the Owner's property. If such items are encountered, all project operations shall cease in the area of discovery immediately. The Owner shall secure the services of an archeological consultant to assess the resources and determine a course of action.

1. Cooperate with Owner's archaeological consultant or historical adviser. Mitigated Negative Declaration (MND) for related requirements.

D. Human Remains: In the event that human remains are discovered, there shall be no disposition of such human remains, other than in accordance with the procedures and requirements set forth in the California Health and Safety Code and Public Resources Code. All project operations shall cease in the area of discovery immediately. In conjunction with the Owner, the Code provisions require immediate notification of the County Coroner and the Native American Heritage Commission.

1. Cooperate with the County Coroner, the Native American Heritage Commission representative and other related officials. Refer to the Mitigated Negative Declaration (MND) for related requirements.

1.05 SUBMITTALS

A. General: Submit each item in this Article according to the Conditions of the Contract and Division 01 Specification Sections, for information only, unless otherwise indicated.

B. Proposed dust-control measures.

C. Proposed noise-control measures.

D. Proposed signage.

E. Schedule of demolition activities indicating the following:

1. Detailed sequence of demolition and removal work, with starting and ending dates for each activity.

2. Dates for shutoff, capping, and continuation of utility services.

F. Inventory of items to be removed and salvaged.

G. Inventory of items to be removed by Owner, if any.

H. Photographs or videotape, sufficiently detailed, of existing conditions of adjoining construction and site improvements that might be misconstrued as damage caused by demolition operations.

I. Record drawings at Project closeout according to Section "Project Record Documents".

1. Identify and accurately locate capped utilities and other subsurface structural, electrical, or mechanical conditions.

J. Landfill records for record purposes indicating receipt and acceptance of hazardous wastes by a landfill facility licensed to accept hazardous wastes.

1.06 QUALITY ASSURANCE

A. Demolition Firm Qualifications: Engage an experienced firm that has successfully completed demolition Work similar to that indicated for this Project.

B. Regulatory Requirements: Comply with governing EPA & SCAQMD notification regulations before starting demolition. Observe applicable Best Practices and implementation of the Storm Water Pollution Prevention Plan (SWPPP). Comply with hauling and disposal regulations of authorities having jurisdiction.

C. Pre-demolition Conference: Conduct conference at Project site to comply with pre-installation conference requirements of Division 01 Section "Project Meetings."

1.07 PROJECT CONDITIONS

A. Conditions existing at time of inspection for bidding purpose will be maintained by Owner as far as practical. Bidders shall make themselves fully aware of the existing conditions within the site. Scope limits scheduled for demolition and items/areas to remain protected in supplement to the Bid Drawings and Documents.

B. If conditions are encountered that vary from those indicated on plan, notify the Architect for instructions prior to proceeding.

C. Buildings immediately adjacent to demolition area will be occupied. Conduct building demolition so operations of occupied buildings will not be disrupted.

1. Provide not less than 72 hours' notice of activities that will affect operations of adjacent occupied buildings.
2. Maintain access to existing walkways, exits, and other facilities used by occupants of adjacent buildings. Do not close or obstruct walkways, exits, or other facilities used by occupants of adjacent buildings without written permission from owner.

D. Contractor to obtain all necessary encroachment and excavation permits from the local jurisdiction of authority for demolition of existing improvements in public right-of-way.

1.08 SCHEDULING

A. Arrange demolition schedule so as not to violate city construction ordinances.
B. Arrange demolition schedule with Owner.

PART 2 - PRODUCTS

2.01 SOIL MATERIALS

A. Requirements for satisfactory soil materials are specified in Division 31 Section "Earthwork". Refer to the Geotechnical Investigation Report, dated July 7, 2021 prepared by Atlas Technical Consultants LLC and subsequent amendment reports for site soil requirements

1. Obtain approved borrow soil materials off-site when sufficient satisfactory soil materials are not available on-site.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Verify that utilities have been disconnected and capped. Test lines as required.

B. Survey existing conditions and correlate with requirements indicated to determine extent of demolition required.

C. Inventory and record the condition of items to be removed and reinstalled and items to be removed and salvaged.

D. Survey existing conditions of the improvements such as light standards and trees to determine the best method(s) for removal so as not to cause potential damage to persons and property during the course of removal.

E. Perform surveys as the Work progresses to detect hazards resulting from demolition activities.

3.02 UTILITY SERVICES

A. Maintain existing utilities indicated to remain in service and protect them against damage during demolition operations.

1. Do not interrupt existing utilities serving occupied or operating facilities on or off the property, except when authorized in writing by Owner and authorities having jurisdiction. Provide temporary services during interruptions to existing utilities, as acceptable to Owner and to governing authorities.

a. Provide not less than 72 hours' notice to Owner if shutdown of service is required during changeover.

B. Utility Requirements: Locate, identify, disconnect, and seal or cap off indicated utility services serving structures to be demolished.

1. Arrange to shut off indicated utilities with utility companies.

C. Utility Requirements: Refer to Division 33 Sections and Contract Drawings, for shutting off, disconnecting, removing, and sealing or capping utility services. Do not start demolition work until utility disconnecting and sealing have been completed and verified in writing.

3.03 PREPARATION

A. Drain, purge, or otherwise remove, collect, and dispose of chemicals, gases, explosives, acids, flammables, or other dangerous materials before proceeding with demolition operations.

B. Conduct demolition operations and remove debris to ensure minimum interference with roads, streets, walks, and other adjacent occupied and used facilities.

1. Do not close or obstruct streets, walks, or other adjacent occupied or used facilities without permission from Owner and authorities having jurisdiction. Provide alternate routes around closed or obstructed traffic ways if required by governing regulations.

C. Conduct demolition operations to prevent injury to people and damage to adjacent buildings and facilities to remain. Ensure safe passage of people around demolition area.

D. Erect temporary protection, such as walks, fences, railings, canopies, and covered passageways, where required by authorities having jurisdiction.

E. Protect existing site improvements, appurtenances, and landscaping to remain.

1. Erect a plainly visible fence around drip line of individual trees or around perimeter drip line of groups of trees to remain.

3.04 CUTTING EXISTING CONCRETE

A. Cutting of existing concrete shall be done by experienced workers familiar with the requirements and space necessary for placing concrete. Perform concrete cutting with concrete cutting wheels and hand chisels. Take care not to damage concrete that is intended to remain.

B. Extent of cutting of concrete shall be as indicated on drawings and in accordance with standard plans for public works construction plan no. 132-3. Replace concrete that is removed in excess of amount indicated or required.

C. Prior to cutting or coring concrete, determine locations of hidden utilities and take necessary measures to protect them from damage.

D. If an existing pavement joint or cracked area is within two feet outside of a designated sawcut line shown on the Drawings, removal and resurfacing shall be to that joint, and/or shall include the crack or cracked area, unless otherwise approved by Architect.

3.05 EXPLOSIVES

A. Explosives: Use of explosives will not be permitted.

3.06 POLLUTION CONTROLS

A. Use water mist, temporary enclosures, and other suitable methods to limit the spread of dust and dirt. Comply with governing environmental protection regulations.

1. Do not create hazardous or objectionable conditions, such as ice, flooding, and pollution, when using water.

B. Remove and transport debris in a manner that will prevent spillage on adjacent surfaces and areas.

1. Remove debris from elevated portions of building by chute, hoist, or other device that will convey debris to grade level.

C. Clean adjacent buildings and improvements of dust, dirt, and debris caused by demolition operations. Return adjacent areas to condition existing before start of demolition.

3.07 DEMOLITION

A. Demolition: Demolish improvements completely and remove from the site. Use methods required to complete Work within limitations of governing regulations and as follows:

B. Below-Grade Construction: Demolish foundation walls and other below-grade construction, as follows:

1. Completely remove below-grade construction, including foundation walls and footings unless noted otherwise on the drawings.

2. Break up and remove below-grade concrete slabs, unless indicated to remain.

C. Filling Below-Grade Areas: Completely fill below-grade areas and voids resulting from demolition of buildings and pavements with soil materials according to requirements specified in Division 31 Section "Earthwork."

D. Damages: Promptly repair damages to adjacent facilities caused by demolition operations.

3.08 DISPOSAL OF DEMOLISHED MATERIALS

A. General: Promptly dispose of demolished materials. Do not allow demolished materials to accumulate on-site.

B. Burning: Do not burn demolished materials.

C. Disposal: Transport demolished materials off Owner’s property and legally dispose them.

END OF SECTION

DIVISION 03
CONCRETE

SECTION 03 10 00 - CONCRETE FORMING AND ACCESSORIES

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Formwork for cast-in-place concrete as indicated.

2. Installation of items to be embedded in concrete, such as anchor bolts, inserts, embeds, and sleeves.

B. Related Requirements:

1. Division 01 - General Requirements.

2. Section 03 2000: Concrete Reinforcing.

3. Section 03 3000: Cast-In-Place Concrete.

1.02 REFERENCES

A. American Concrete Institute (ACI) Publication:

1. ACI 318 – Building Code Requirements for Structural Concrete, Chapter 6, Formwork, Embedded Pipes, and Construction Joints.

2. ACI 347 – Guide to Formwork for Concrete.

B. American Plywood Association (APA):

1. Form No. V345 - Concrete Forming Design/Construction Guide.

C. National Institute of Standards and Technology (NIST):

1. NIST Voluntary Product Standard PS 1.

1.03 SUBMITTALS

A. Shop Drawings: Submit Shop Drawings indicating locations of forms, construction and expansion joints, embedded items, and accessories.

B. Product Data: Submit manufacturer's Product Data for form materials and accessories.

1.04 REGULATORY REQUIREMENTS

A. California Building Code (CBC), Chapter 19A.

B. California Code of Regulations, Title 8, Division 1, Chapter 4, Subchapter 4, Construction Safety Orders, Article 6, Excavations, Sections 1713 and 1717.

1.05 DELIVERY, STORAGE AND HANDLING

A. Storage shall prevent damage and permit access to materials for inspection and identification.

PART 2 - PRODUCTS

2.01 GENERAL

A. Form materials may be reused during progress of the Work provided they are completely cleaned and reconditioned, recoated for each use, capable of producing formwork of required quality, and are structurally sound.

B. Form Lumber: WCLIB Construction Grade or Better, WWPA No. 1 or Better.

C. Plywood: NIST Voluntary Product Standard PS 1, Group 1, Exterior Grade B-B Plyform or better, minimum 5-ply and 3/4 inch thick for exposed locations and at least 5/8 inch thick for unexposed locations, grade marked, not mill oiled. Furnished plywood with medium or high density overlay is permitted.

D. Coated Form Plywood: For exposed painted concrete, plastic overlaid plywood of grade specified above, factory coated with a form coating and release agent Nox-crete", or equal.

E. Form Ties: Prefabricated rod, flat band, wire, internally threaded disconnecting type, not leaving metal within 1 1/2-inch of concrete surface.

F. Form Coating: Non-staining clear coating free from oil, silicone, wax, not grain-raising, "Formshield" by A.C. Horn, Inc., "Release" by Edoco/Dayton Superior, "Cast-Off" by Sonneborn/BASF Building Systems or equal. Where form liners are furnished, provide form coatings recommended by form liner manufacturer.

G. Form Liner: Rigid or resilient type by L.M. Scofield, Symons, Greenstreak, or equal.

PART 3 - EXECUTION

3.01 GENERAL

A. Forms shall be constructed so as to shape final concrete structure conforming to shape, lines and dimensions of members required by Drawings and Specifications, and shall be sufficiently tight to prevent leakage of mortar. They shall be properly braced or tied together to maintain position and shape. Forms and their supports shall be designed so that previously placed structures will not be damaged.

B. Use form coating at all surfaces in contact with concrete.

3.02 TOLERANCES

A. Permitted abrupt or gradual irregularities in formed surfaces as measured within a 5 feet length with a straightedge shall per ACI 347, Table 3.1:

Class of Surface			
A	B	C	D
1/8 inch	1/4 inch	1/2 inch	1 inch

Edit Note: Edit tolerances indicated below for project specifics.

1. Class A: Use for concrete surfaces prominently exposed to public view.

2. Class B: Use for coarse-textured concrete-formed surfaces intended to receive plaster, stucco or wainscoting.

3. Class C: Use as a general standard for permanently exposed surfaces where other finishes are not specified.

4. Class D: Use for surfaces where roughness is not objectionable and will be permanently concealed.

3.03 ERECTION

A. Plywood shall be installed with horizontal joints level, vertical joints plumb and with joints tight. Back joints by studs or solid blocking, and fill where necessary for smoothness. Reused plywood shall be thoroughly cleaned, damaged edges or surfaces repaired and both sides and edges oiled with colorless form oil. Nail plywood along edges, and to intermediate supports, with common wire nails spaced as necessary to maintain alignment and prevent warping.

B. Openings for Cleaning: Provide temporary openings at points in formwork to facilitate cleaning and inspection. At base of walls and wide piers, bottom form board on one face for entire length shall be omitted until form has been cleaned and inspected.

C. Chamfers: Provide 3/4 inch by 3/4 inch chamfer strips for all exposed concrete corners and edges unless otherwise indicated.

D. Reglets and Rebates: As specified in Section 03 3000: Cast-In-Place Concrete.

3.04 REMOVAL OF FORMS

A. Forms shall not be removed until concrete has sufficiently hydrated to maintain its integrity and not be damaged by form removal operations. Unless noted otherwise and/or permitted by the Architect, columns and wall forms shall not be removed in less than five days, floor slabs in less than seven days, beams and girders in less than 15 days, pan

forms for joists may be removed after three days, but joist centering shall not be removed until after 15 days, and ramp, landing, steps and floor slabs shall not be removed in less than seven days. Shoring shall not be removed until member has acquired sufficient strength to support its weight, load upon it, and added load of construction.

B. Compressive strength of in-place concrete shall be determined by testing field-cured specimens representative of concrete location or members, as specified in Section 03 3000: Cast-In-Place Concrete.

3.05 PROTECTION

A. Protect the Work of this section until Substantial Completion.

3.06 CLEAN UP

A. Remove rubbish, debris and waste materials and legally dispose of off the Project site.

END OF SECTION

SECTION 03 20 00 - CONCRETE REINFORCING

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Concrete steel reinforcement.

B. Related Requirements:

1. Division 01 - General Requirements.
2. Section 03 10 00: Concrete Forming.
3. Section 03 30 00: Cast-In-Place Concrete.
4. Section 04 22 00: Concrete Unit Masonry.

1.02 REGULATORY REQUIREMENTS

A. Fabrication and placement of reinforcing shall be in accordance with requirements of CBC, Chapter 19A.

1.03 REFERENCES

A. American Society for Testing and Materials (ASTM):

1. ASTM A82 - Standard Specification for Steel Wire, Plain, for Concrete Reinforcement.
2. ASTM A184 - Standard Specification for Fabricated Deformed Steel Bar Mats for Concrete Reinforcement.
3. ASTM A185 - Standard Specification for Steel Welded Wire Reinforcement, Plain, for Concrete.
4. ASTM A496 - Standard Specification for Steel Wire, Deformed, for Concrete Reinforcement.
5. ASTM A497 - Standard Specification for Steel Welded Wire Reinforcement, Deformed, for Concrete.
6. ASTM A615 - Standard Specification for Deformed and Plain Carbon-Steel Bars for Concrete Reinforcement.
7. ASTM A706 - Standard Specification for Low-Alloy Steel Deformed and Plain Bars for Concrete Reinforcement.

B. American Concrete Institute (ACI) Publication:

1. ACI SP-66 – ACI Detailing Manual.

2. ACI 318 – Building Code Requirements for Structural Concrete, as modified by CBC.

C. American Welding Society (AWS):

1. AWS D1.4 – Structural Welding Code – Reinforcing Steel.

1.04 SUBMITTALS

A. Shop Drawings: Submit steel reinforcement Shop Drawings in accordance with ACI 315. Include assembly diagrams, bending charts and slab plans. Indicate lengths and location of splices, size and lengths of reinforcing steel.

B. Closeout Submittals: Record exact locations of reinforcing that vary from Shop Drawings.

1.05 QUALITY ASSURANCE

A. Comply with the following as a minimum requirement:

1. Concrete Reinforcing Steel Institute (CRSI) Manual of Standard Practice.

2. American Welding Society (AWS).

3. American Concrete Institute (ACI).

4. CBC, Chapter 19A, Concrete.

B. Source Quality Control: Refer to Division 01 Sections for general requirements and to the following paragraphs for specific procedures. Testing laboratory retained by the OWNER shall select test Samples of bars, ties, and stirrups from the material at the Project Site or from the place of distribution, with each Sample consisting of not less than two 18 inch long pieces, and perform the following tests according to ASTM A615, or ASTM A706, as applicable:

1. Identified Bars: If Samples are obtained from bundles as delivered from the mill, identified as to heat number, accompanied by mill analyses and mill test reports, and properly tagged with the identification certificate so as to be readily identified, perform one tensile and one bend test for each 10 tons or fraction thereof of each size of bars. Submit mill reports when Samples are selected.

2. Unidentified Bars: When positive identification of reinforcing bars cannot be performed and when random Samples are obtained; perform tests for each 2.5 tons or fraction thereof, one tensile and one bend test from each size of bars.

C. Certification of Welders: Shop and Project site welding shall be performed by welding operators certified by AWS.

1.06 DELIVERY, STORAGE AND HANDLING

A. Avoid exposure to dirt, moisture or conditions harmful to reinforcing.

B. Reinforcing steel bars, wire, and wire fabric shall be stored on the Project site to permit easy access for examination and identification of each shipment. Material of each shipment shall be separated for size and shape.

PART 2 - PRODUCTS

2.01 GENERAL

A. Provide reinforcing of sizes, gages and lengths indicated, bent to indicated shapes.

2.02 MATERIALS

A. Steel Reinforcing Bars: ASTM A615, or ASTM A706 deformed grade 60 billet steel unless otherwise specified or indicated.

B. Bars or Rod Mats: ASTM A184.

C. Welded Wire Fabric for Reinforcement: ASTM A185.

D. Tie Wire: ASTM A82, fully annealed, copper-bearing steel wire, 16 gage minimum.

E. Chairs, Spacers, Supports, and Other Accessories: Standard manufacture conforming to ACI 315 fabricated from steel wire of required types and sizes. For reinforcement supported from grade, provide properly sized dense precast blocks of concrete.

2.03 FABRICATION OF REINFORCING BARS

A. Comply with CRSI Manual of Standard Practice for Reinforced Concrete Construction for fabrication of reinforcing steel.

B. Bending and Forming: Fabricate bars of the indicated sizes and bend and form to required shapes and lengths by methods not injurious to materials. Do not heat reinforcement for bending. Bend bars No. 6 size and larger in the shop only. Bars with unscheduled kinks or bends are not permitted. Provide only tested and permitted bar materials.

C. Welding: Provide only ASTM A706 steel where welding is indicated. Perform welding by the direct electric arc process in accordance with AWS D1.4 and specified low-hydrogen electrodes. Preheat 6 inches each side of joint. Protect joints from drafts during the cooling process; accelerated cooling is not permitted. Do not tack weld bars. Clean metal surfaces to be welded of loose scale and foreign material. Clean welds each time electrode is changed and chip burned edges before placing welds. When wire brushed, the completed welds must exhibit uniform section, smooth welded metal, feather edges without undercuts or overlays, freedom from porosity and clinkers, and good fusion and penetration into the base metal. Cut out welds or parts of welds deemed defective, using chisel, and replace with proper welding. Prequalification of welds shall be in accordance with CBC requirements.

PART 3 - EXECUTION

3.01 INSTALLATION

A. Bars shall be bent cold. Bars partially embedded in concrete shall not be field bent except as indicated on reviewed Shop Drawings.

B. Before installation and just prior to placing concrete, clean reinforcing of loose scale, rust, oil, dirt and any coating that could reduce bond.

C. Accurately position, install, and secure reinforcing to prevent displacement during the placement of concrete.

D. Provide metal chairs to hold reinforcement the required distance above form bottoms. In beams and slab construction, provide chairs under top slab reinforcement as well as under bottom reinforcement. Space chairs so that reinforcement will not be displaced during installation. Provide metal spacers to secure proper spacing. Stirrups shall be accurately and securely wired to bars at both top and bottom. At slabs, footings, and beams in contact with earth, provide concrete blocks to support reinforcement at required distance above grade.

E. Install and secure reinforcement to maintain required clearance between parallel bars and between bars and forms. Lapped splices shall be installed wherever possible in a manner to provide required clearance between sets of bars. Stagger lapped splices. Dowels and bars extending through construction joints shall be secured in position against displacement before concrete is installed and subsequently cleaned of concrete encrustations while they are still soft.

F. Do not install reinforcing in supported slabs and beams until walls and columns have been installed to underside of slabs and beams or until construction joints have been thoroughly cleaned. Reinforcing shall be inspected before placement of concrete and cleaned as required.

G. Use deformed bars unless otherwise indicated, except for spiral reinforcement.

3.02 CLEAN UP

A. Remove rubbish, debris and waste materials and legally dispose of off the Project site.

3.03 PROTECTION

A. Protect the Work of this section until Substantial Completion.

END OF SECTION

SECTION 03 30 00 - CAST-IN-PLACE CONCRETE

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Cast-in-place normal weight and lightweight concrete, placement and finishing.

B. Related Requirements:

1. Division 01 - General Requirements.
2. Section 03 10 00: Concrete Forming and Accessories.
3. Section 03 20 00: Concrete Reinforcing.
4. Section 07 26 16: Vapor Barriers.
5. Section 32 13 13: Concrete Paving.

1.02 REFERENCES

A. American Concrete Institute (ACI) Publication:

1. ACI 117 – Specifications for Tolerances for Concrete Construction and Materials.
2. ACI 301 – Specifications for Structural Concrete.
3. ACI 302.1R – Guide for Concrete Floor and Slab Construction.
4. ACI 305R - Specification for Hot Weather Concreting.
5. ACI 306.1 – Standard Specification for Cold Weather Concreting.
6. ACI 308R – Guide to External Curing of Concrete.
7. ACI 318 - Building Code Requirements for Structural Concrete, as modified by CBC Sections 1903A and 1905A.

2. ASTM C33 - Standard Specification for Concrete Aggregates.
3. ASTM C39 - Standard Test Method for Compressive Strength of Cylindrical Concrete Specimens.
4. ASTM C42 - Standard Test Method for Obtaining and Testing Drilled Cores and Sawed Beams of Concrete.

5. ASTM C88 - Standard Test Method for Soundness of Aggregates by use of Sodium Sulphate or Magnesium Sulphate.

6. ASTM C94 - Standard Specification for Ready-Mixed Concrete.

7. ASTM C143 - Standard Test Method for Slump of Hydraulic Cement Concrete.

8. ASTM C150 - Standard Specification for Portland Cement.

9. ASTM C156 – Standard Test Method for Water Loss (from a Mortar Specimen) Through Liquid membrane-Forming Curing Compounds for Concrete.

10. ASTM C171 - Standard Specification for Sheet Materials for Curing Concrete.

11. ASTM C172 – Standard Practice for Sampling Freshly Mixed Concrete.

12. ASTM C173 – Standard Test Method for Air Content of Freshly Mixed Concrete by the Volumetric Method.

13. ASTM C260 – Standard Specification for Air-Entraining Admixtures for Concrete.

14. ASTM C289 - Standard Test Method for Potential Alkali-Silica Reactivity of Aggregates (Chemical Method).

15. ASTM C309 - Standard Specification for Liquid Membrane-Forming Compounds for Curing Concrete.

16. ASTM C330 - Standard Specification for Lightweight Aggregates for Structural Concrete.

17. ASTM C494 - Standard Specification for Chemical Admixtures for Concrete.

18. ASTM C567 - Standard Test Method for Determining Density of Structural Lightweight Concrete.

19. ASTM C618 - Standard Specification for Coal Fly Ash and Raw or Calcined Natural Pozzolan for Use in Concrete.

20. ASTM C845 - Standard Specification for Expansive Hydraulic Cement

21. ASTM C989 - Standard Specification for Ground Granulated Blast-Furnace Slag for Use in Concrete and Mortars.

22. ASTM C1107 - Standard Specification for Packaged Dry, Hydraulic-Cement Grout (Nonshrink).

23. ASTM C1064 - Standard Test Method for Temperature of Freshly Mixed Hydraulic-Cement Concrete.

24. ASTM C1240 - Standard Specification for Silica Fume Used in Cementitious Mixtures.

25. ASTM C1315 – Standard Specification for Liquid Membrane-Forming Compounds Having Special Properties for Curing and Sealing Concrete.

26. ASTM D1308 – Standard Test Method for Effect of Household Chemicals on Clear and Pigmented Organic Finishes.

27. ASTM C1567 - Standard Test Method for Determining the Potential Alkali-Silica Reactivity of Combinations of Cementitious Materials and Aggregate (Accelerated Mortar-Bar Method).

28. ASTM D1751 - Standard Test Method for Preformed Expansion Joint Filler for Concrete Paving and Structural Construction (Non-extruding and Resilient Bituminous Types).

29. ASTM D7234 – Standard Test Method for Pull-Off Adhesion Strength of Coatings on Concrete Using Portable Pull-Off Adhesion Testers.

30. ASTM E96 - Standard Test Methods for Water Vapor Transmission of Materials.

31. ASTM E1155 - Standard Test Method for Determining F_F Floor Flatness and F_L Floor Levelness Numbers.

32. ASTM E1643 - Standard Practice for Selection, Design, Installation, and Inspection of Water Vapor Retarders Used in Contact with Earth or Granular Fill under Concrete Slabs.

33. ASTM E1745 - Standard Specification for Water Vapor Retarders Used in Contact with Soil or Granular Fill under Concrete Slabs.

34. ASTM F710 – Standard Practice for Preparing Concrete Floors to Receive Resilient Flooring.

35. ASTM F1869 – Standard Test Method for Measuring Moisture Vapor Emission Rate of Concrete Subfloor Using Anhydrous Calcium Chloride.

36. ASTM F2170 – Standard Test Method for Determining Relative Humidity in Concrete Floor Slabs Using In Situ Probes.

37. ASTM F3010 – Standard Practice for Two-Component Resin Based Membrane-Forming Moisture Mitigation Systems for Use under Resilient Floor Coverings.

1.03 SUBMITTALS

A. Shop Drawings: Submit Shop Drawings indicating locations of cast-in-place concrete Work and accessory items such as vapor barriers. Include details and locations of reinforcing, embedded items, and interfacing with other Work.

B. Mix Design Data: Submit concrete mix designs as specified herein and in Article 2.02.

1. Submit name, address and telephone number of the concrete production facility which the contractor intends to engage to design the concrete mixes. Submit name and qualifications of the proposed concrete technologist.

2. Mix Design: Submit a concrete mix design for each strength and type of concrete indicated in the drawings or specified. Include water/cement ratio, source, size and amount of coarse aggregate and admixtures. Predict minimum compressive strength, maximum slump and air content percentage. Clearly indicate locations where each mix design will be used.

a. Water/cement ration for concrete slabs on grade shall be 0.45 maximum.

3. Test Reports: Submit copies of test reports showing that the proposed mixes produce concrete with the strengths and properties specified. Include tests for cement, aggregates and admixtures. Provide gradation analysis.

C. Material Samples: Submit Samples illustrating concrete finishes and hardeners, minimum 12-inch by 12-inch.

D. Certificates: Submit certification that each of the following conforms to the standards indicated:

1. Portland cement: ASTM C150.

2. Normal weight concrete aggregates: ASTM C33.

3. Lightweight concrete aggregates: ASTM C330.

4. Aggregates: Submit evidence that the aggregate is not reactive in the presence of cement alkalis. In the absence of evidence, aggregate shall be tested by one of the methods in ASTM C33 Appendix XI, Methods for Evaluating Potential for Deleterious Expansion Due to Alkali Reactivity of an Aggregate. Aggregates deemed to be deleterious or potentially deleterious may be used with the addition of a material that has been shown to prevent harmful expansion in accordance with Appendix XI of ASTM C33, when approved by the building official, in accordance to CBC Section 1903A5A.

5. Curing materials: ASTM C171.

E. Admixtures: Submit product data for proposed concrete admixtures.

1.04 QUALITY ASSURANCE

A. Continuous inspection shall be provided at the batch plant and for transit-mixed concrete to run check sieve analysis of aggregate, check moisture content of fine aggregate, check design of mix, check cement being used with test reports, check loading of mixer trucks, and certify to quantities of materials placed in each mixer truck.

B. Inspection shall be performed by a representative of a testing laboratory selected by the OWNER. OWNER will pay for inspection costs. Notify the laboratory 24 hours in advance of time concrete is to be mixed. Notify the laboratory of postponement or cancellation of mixing within at least 24 hours of scheduling time.

C. CONTRACTOR shall assist the testing laboratory in obtaining and handling samples at the project site and at the source of materials.

D. Special Inspections and Tests shall be in accordance with CBC Chapter 17A, Reinforcement and Anchor testing per CBC Section 1910A.

1.05 DELIVERY, STORAGE AND HANDLING

A. Store cement and aggregate materials so as to prevent their deterioration or intrusion by foreign matter. Deteriorated or contaminated materials shall not be furnished.

B. Packaged materials shall bear the manufacturers and brand name label, and shall be stored in their original unbroken package in a weather tight place until ready for use in the work.

1.06 PROJECT CONDITIONS

A. Cold Weather Requirements: Batching, mixing, delivering and placing of concrete in cold weather shall comply with the applicable requirements of ACI 306.1.

B. Hot Weather Requirements: Batching, mixing, delivering and placing of concrete in hot weather shall comply with the applicable requirements of ACI 305R.

C. Concrete temperature of freshly mixed concrete shall be determined per ASTM C1064.

PART 2 - PRODUCTS

2.01 MATERIALS

A. Cement: ASTM C150. Portland Cement.

B. Aggregates: Conform to the following standards:

1. Normal weight concrete: ASTM C33.

2. Lightweight concrete: ASTM C330, with fine aggregates per ASTM C33.

3. Aggregate shall be tested for Potential Alkali Reactivity of Cement-Aggregate Combinations per ASTM C289.

4. Nominal maximum size of coarse aggregate shall be no larger than:

a. 1/5 the narrowest dimension between sides of forms, nor

b. 1/3 the depth of slabs, nor

c. 3/4 the clear spacing between individual reinforcing bars or wires, bundles of bars, individual tendons, or ducts.

d. CONTRACTOR may request the ARCHITECT and DSA waiver of the above limitations reported per ACI 318, provided that the workability and methods of consolidation are such that the concrete can be placed without honeycombs or voids.

C. Water: Water for concrete mixes, curing and cleaning shall be potable and free from deleterious matter.

D. Admixtures: Shall be shown capable of maintaining essentially the same composition and performance throughout the work as the product used in establishing concrete proportions in accordance with ACI 318, Section 26.4.1.4.

1. Admixtures containing chlorides or sulfides are not permitted.

2. Air-entraining admixtures shall comply with ASTM C260. Air-entrained admixtures shall not be used for floor slabs to receive steel trowel finish.

3. Admixtures for water reduction and setting time modification shall conform to ASTM C494.

4. Admixtures for producing flowing concrete shall conform to ASTM C1017.

5. Fly ash, pozzolan and ground granulated blast-furnace slag:

   a. Fly ash or other pozzolan used as a partial substitution for ASTM C150 Portland cement shall meet the following requirements:

      1) Shall conform to ASTM C618 for Class N or F materials (Class C is not permitted).

      2) Up to 15% percent by weight of fly ash or other pozzolans may substitute for ASTM C150 Portland cement provided the mix design is proportioned per ACI 318, Section 26.4.3.

   b. Ground-granulated blast-furnace slag used as a partial substitution for ASTM C150 Portland cement shall meet the following requirements:

      1) Shall conform to ASTM C989.

      2) Up to 15% percent by weight of ground-granulated blast-furnace slag may substitute for ASTM C150 Portland cement provided the mix design is proportioned per ACI 318, Section 26.4.3.

6. Admixtures containing ASTM C845 expansive cements shall be compatible with the cement and produce no deleterious effects.

7. Silica fumes used as an admixture shall conform to ASTM C1240.

E. Reinforcement Fibers: Chop strands of alkali-resistant polypropylene or nylon fibers added to the concrete mix for protection against shrinkage cracks.

F. Expansion Joint Fillers: Preformed strips, non-extruding and resilient bituminous type, of thickness indicated, conforming to ASTM D1751.

G. Curing:

1. Curing Paper: Shall conform to ASTM C171 and consist of two sheets of kraft paper cemented together with a bituminous material in which are embedded cords or strands of fiber running in both directions. The paper shall be light in color, shall be free of visible defects, with uniform appearance.

2. Elevated slabs and slabs on grade may be cured at CONTRACTOR's option with curing and proactive water vapor emission and alkalinity control system. Products shall be approved by OWNER's Office of Environmental Health and Safety.

   a. VaporSeal 309, by Floor Seal Technology, Inc., or equal.

      1) ASTM C156: 0.39 kg/m².

      2) ASTM C309: Exceeds requirements.

      3) ASTM C1315: Exceeds requirements.

      4) ACI 308R-01 Compliant.

b. Remedial Treatment: Water vapor emission and alkalinity control treatment, MES 100 by Floor Seal Technology, Inc. or equal.

1) ASTM E96: <0.1 Perms.

2) ASTM D1308: 14pH Resistant.

3) ASTM D7234: 500+psi 100% concrete failure.

4) ASTM F2170: 100%RH resistant.

5) VOC Content: <100 g/L, meets SCAQMD Rule #1113.

6) ASTM F3010: Meets Requirements.

c. Self-leveling Compounds: Ardex Engineered Cements, K15, or V1200, Schonox ZM Rapid, US Self Leveler Armstrong, S-194, or equal.

H. Floor Hardener: Water soluble, inorganic, silicate-based curing, hardening, sealing and dustproofing compound. Aquaseal W20 by Monopole Inc., Kure-N-Harden by BASF, Chem Hard by L&M, Liqui-Hard by W. R. Meadows, or equal.

I. Underlayment: Two component latex underlayment for filling low spots in concrete for both interior and exterior applications, from featheredge to a maximum of 3/8 inch in thickness. Underlayment shall be non-shrink and suitable for repairing exposed concrete surfaces and for underlayment of carpet, resilient, tile and quarry floor coverings. La-O-Tex by TexRite, Underlay C, RS by Mer-Krete Systems, Underlayment 962 by C-Cure, or equal.

J. Vapor Barrier: Refer to Section 07 26 16, Vapor Barriers.

K. Stair Treads and Nosings: Two part stair tread and nosing with ribbed abrasive bars. Fabricated from 6063-T5 or 6063-T6 extruded aluminum, mill finish. Anti-slip abrasive filler consisting of aluminum oxide, silicon carbide, or a combination of both, in an epoxy-resin binder. Color shall extend uniformly throughout filler.

1. American Safety Tread: TP-311R.

2. Balco Inc.: DST-330.

3. Nystrom: STTB-P3.375E.

4. Wooster Products Inc.: WP-RN3SG.

5. Equal.

L. Grout: ASTM C1107, non-shrink type, pre-mixed compound consisting of non-metallic aggregate, cement, water reducing and plasticizing additives, capable of developing a minimum compressive strength of 7,000 psi at 7 days; of consistency suitable for application and a 30 minute working time.

2.02 CONCRETE MIX

A. Mix shall be signed and sealed by a Civil or Structural Engineer currently registered in the State of California.

B. Strength of Concrete: Strengths and types of concretes shall be as indicated in the Drawings. Unless otherwise indicated or specified, concrete shall be provided with minimum 28-day strength of 3000 psi (f'c).

C. Concrete mix shall meet the durability requirements of ACI 318, Chapter 19.

D. Concrete proportioning shall be determined on the basis of field experience and/or trial mixtures shall in accordance with ACI 318, Section 26.4.3. Proportions of materials shall provide workability and consistency to permit concrete to be placed readily into forms and around reinforcement under conditions of placement to be employed, without segregation or excessive bleeding.

E. Ready-Mixed Concrete: Mix and deliver in accordance with requirements of ASTM C94.

PART 3 - EXECUTION

3.01 GENERAL

A. Surfaces to receive concrete shall be free of debris, standing water, and any other deleterious substances before start of concrete placing.

B. Time of Placing: Do not place concrete until reinforcement, conduits, outlet boxes, anchors, hangers, sleeves, bolts, and other embedded materials are securely fastened in place. Contact the Inspector at least 24 hours before placing concrete; do not place concrete until inspected by the Project Inspector.

C. Pouring Record: A record shall be kept on the Project site of time and date of placing concrete in each portion of structure. Such record shall be maintained on the Project site until Substantial Completion and shall be available for examination by the ARCHITECT and DSA.

3.02 TOLERANCES

A. Concrete construction tolerances shall be as specified in ACI 117 and as modified herein.

B. Floor Flatness (F_F) and Floor Levelness (F_L) shall be as indicated below:

	Specified Overall Value		Minimum Local Value	
	F_F	F_L	F_F	F_L
Slabs on ground: mechanical and electrical rooms, parking structures and mortar bed set tile and quarry flooring.	20	15	15	10
Slab on ground: carpet.	25	20	17	15
Slab on ground: thinset tile and resilient flooring.	35	25	24	17

C. Refer to ACI 302.1R, Tables 8.1 and 8.2 Slab on Ground and Suspended Flatness/Levelness Construction Guide, for recommended concrete placing and finishing methods.

D. Floor Flatness and Floor Levelness shall be tested in accordance to ASTM E1155. Floor measurements shall be made within 48 hours after slab installation, and shall precede removal of shores and forms.

E. Main gymnasium event area slab on grade shall be steel troweled and finished smooth to a tolerance of 1/8 inch in any 10 foot radius. Refer to architectural specification and floor finish manufacturer for additional tolerance requirements.

3.03 PREPARATION

A. For installation of vapor barrier refer to Section 07 26 16, Vapor Barriers.

B. Reglets and Rebates:

1. Form reglets and rebates in concrete to receive flashing, frames and other equipment as detailed and required. Coordinate dimensions and locations required with other related Work.

2. If concrete slabs on grade adjoin a wall or other perpendicular concrete surface, form a reglet in wall to receive and carry horizontal concrete Work. Reglet shall be full thickness of the slab and shall be 3/4 inch wide, unless otherwise indicated. Requirement does not apply to exterior walks, unless specifically indicated.

C. Screeds: Install screeds accurately and maintain at required grade or slab elevations after steel reinforcement has been installed, but before starting to place concrete. Install screeds adjacent to walls and in parallel rows not to exceed 8 feet on centers.

3.04 INSTALLATION

A. Conveying and Placing:

1. Concrete shall be placed only under direct observation of the Project Inspector. Do not place concrete outside of regular working hours, unless the Inspector has been notified at least 48 hours in advance.

2. Concrete shall be conveyed from mixer to location of final placement by methods that will prevent separation or loss of materials.

3. Concrete shall be placed as nearly as practicable to its final position to avoid segregation due to re-handling or flowing. No concrete that has partially hydrated or has been contaminated by foreign materials shall be placed, nor shall re-tempered concrete or concrete which has been remixed after initial set be placed.

4. In placing concrete in columns, walls or thin sections, provide openings in forms, elephant trunks, tremies or other recognized devices, to prevent segregation and accumulation of partially hydrated concrete on forms or metal reinforcement above level of concrete being placed. Such devices shall be installed so that concrete will be dropped vertically. Unconfined vertical drop of concrete from end of such devices to final placement surface shall not exceed 6 feet.

5. Concrete shall be placed as a continuous operation until placing of panel or section is completed. Top surfaces of vertically formed lifts shall be level.

6. Concrete shall be thoroughly consolidated by suitable means during placement, and shall be thoroughly worked around reinforcement and embedded fixtures and into corners of forms.

7. Where conditions make consolidation difficult or where reinforcement is congested, batches of mortar containing same proportions of cement, sand, and water as provided in the concrete, shall first be deposited in the forms to a depth of at least one inch.

B. Cold Weather:

1. Provide adequate equipment for heating concrete materials and protecting concrete during freezing or near-freezing weather. All ground with which concrete is to come in contact shall be free from frost. No frozen materials or materials containing ice shall be used.

2. The temperature of concrete at the time of placement shall not be below the minimum temperatures given in Table 3.1 of ACI 306.1.

3. Concrete shall be maintained at a temperature of at least 50° F. for not less than 72 hours after placing or until it has thoroughly hardened. Cover concrete and provide sufficient heat as required. When necessary, aggregates shall be heated before mixing. Special precautions shall be taken for protection of transit-mixed concrete.

C. Hot Weather:

1. Concrete to be placed during hot weather shall comply with the requirements of ACI 318, Section 26.5.5.

2. Maintain concrete temperatures indicated in Table 2.1.5 of ACI 305R to prevent the evaporation rate from exceeding 0.2 pound of water per square feet of exposed concrete per hour.

3. Cool concrete using methods indicated in ACI 305R Appendix B.

4. Place and cure concrete as specified in ACI 305R Chapter 4.

D. Compaction and Screeding:

1. Tamp freshly placed concrete with a heavy tamper until at least 3/8 inch of mortar is brought to surface. Concrete shall then be tamped with a light tamper and screeded with a heavy straightedge until depressions and irregularities are eliminated, and surface is true to finish grades or elevations. Remove excess water and debris.

2. Where slabs are to receive separate cement finish or mortar setting bed, continued tamping to raise mortar to surface is not performed. Laitance shall be removed by brushing with a stiff brush or by light sandblasting to expose clean top surface of coarse aggregate.

E. Floating and Troweling:

1. When concrete has hydrated sufficiently, it shall be floated to a compact and smooth surface. After floating, wait until concrete has reached proper consistency before troweling. Top surfaces shall receive at least 2 troweling operations with steel hand trowel. Prior to and during final troweling, apply a fine mist of water frequently with an atomizing type fog sprayer. Omit troweling for slabs to receive a separate cement finish.

2. For interior finish slabs, final troweling shall provide a hard, impervious, and non-slip surfaces, free from defects and blemishes. Finished surface shall be within tolerances indicated in Article 3.02. Avoid burnishing. Do not add cement or sand to absorb excess moisture.

   a. Floor of Walk-In Refrigerator: Finish as specified above, to a smooth finish.

   b. Floor of Gymnasium Locker Rooms: After floating, and while the surface is still plastic, provide a fine textured finish by drawing a fine fiber bristle broom uniformly over the surface in one direction only. Floors sloped for drainage should be brushed in the direction of flow.

3. Vertical concrete surfaces shall be finished smooth and free from marks or other surface defects.

3.05 CURING

A. Length of time, temperature and moisture conditions for curing concrete shall be in accordance with ACI 318, Section 26.5.3.

B. Forms containing concrete, top of concrete between forms, and exposed concrete surfaces after removal of forms shall be maintained in a thoroughly wet condition for at least 7 consecutive days after placing.

C. If weather is hot or surface has dried out, spray surface of concrete slabs and paving with fine mist of water, starting not later than 2 hours after final troweling and continuing until sunset. Surface of finish shall be kept continuously wet until curing medium has been installed.

D. Immediately after finishing, monolithic floor slabs shall be covered with curing paper. Paper shall be lapped 4 inches at joints and sealed with waterproof sealer. Edges shall be cemented to finish. Repair or replace paper damaged during construction operations.

E. When curing slabs with proactive water vapor emission and alkalinity control system:

   1. Coordinate and schedule application of curing compound with concrete pour schedule, while conforming to manufacturer’s application instructions.

   2. When the surface of the concrete has hardened sufficiently to sustain foot traffic pre-cure slabs with liquefied product application following manufacturer’s written instructions. Application shall be by trained applicators.

   3. Monitor Environmental Conditions: Set up weather station 20 to 30 inches above freshly placed concrete. Record temperature, humidity and wind velocity measurements at 15 minute maximum intervals.

   4. Calculate Evaporation Rate: Use recorded weather information in combination with nomograph per ACI 308R, Figure 4.1, Guide to Curing Concrete, to evaluate relevant evaporation rate.

   5. When the bleed water rate of the concrete is approximately equal to the surface water evaporation rate, spray curing compound material throughout surface of slabs and decks, following manufacturer’s written instructions. Application shall be by trained applicators.

6. Perform the following tests at least 28 days after placement of concrete and prior to floor covering installation. Submit to OAR test results indicating locations that do not comply with scheduled flooring installation requirements.

   a. Calcium chloride testing per ASTM F1869.

   b. Relative humidity testing per ASTM F2170.

   c. Alkalinity testing per ASTM F710.

   d. Perform concrete bond layer humidity meter testing to determine substrate surface acceptability.

7. Areas emitting moisture and alkalinity at rates exceeding floor covering manufacturer's published ASTM F1869 limits, shall receive a corrective coating, at no cost to the OWNER, as follows:

   a) Mask and protect adjacent walls and floor surfaces from effects of scarification and application of remedial treatment.

   b) Scarify slab surface in area of application by shot blasting or other method acceptable to corrective coating manufacturer.

   c) Prepare and fill cracks, control joints and cold joints.

   d) Apply two-component modified epoxy penetrant and coating with roller and squeegee over required treatment area; saturate surfaces to ensure a through mechanical bond.

   e) Clean and fill divots, chips, voids and other surface irregularities with one hundred percent Portland cement based patching compound or cementitious fill.

   f) Apply cementitious surfacing over coating in areas to receive resilient and wood floor coverings to facilitate adhesion; apply to a thickness of 1/8 inch.

3.06 FILLING, LEVELING AND PATCHING

A. Concrete slabs exhibiting high or low spots and indicated to receive resilient floor covering or soft floor covering, shall have surfaces repaired. High spots shall be honed, or ground with power-driven machines to required tolerances. Low spots shall be filled with latex underlayment, installed in strict accordance with manufacturer's written recommendations.

B. Holes resulting from form ties or sleeve nuts shall be solidly packed, through exterior walls, by pressure grouting with cement grout, as specified. Grouted holes on exposed surfaces shall be screeded flush and finished to match adjoining surfaces.

C. Cement Base: Cement base shall be of the height, thickness, and shape detailed. Base shall be reinforced with one inch mesh, 18 gage, zinc-coated wire fabric. Base finish mixture shall be one part Portland cement, 2 parts of fine aggregate and one part pea gravel. Colored cement base shall include a chemically inert mineral oxide pigment in the mix.

3.07 FINISHING

A. Soda and Acid Wash: Concrete surfaces to receive plaster, paint or other finish, and which have been formed by oil coated forms, shall be scrubbed with a solution of 1-1/2 pounds of caustic

soda to one gallon of water. Surfaces where smooth wood or waste molds have been furnished shall be scrubbed with a solution of 20 percent muriatic acid. Wash with clean water after scrubbing.

B. Sacking: Exposed concrete curbs, walls, and other surfaces shall be sacked by an application of Portland cement grout, floated, and rubbed. Sacking shall not be performed until patching and filling of holes has been completed. Entire sacking operation for any continuous area shall be started and completed within the same day.

1. Mix one part Portland cement and 1-1/2 parts fine sand with sufficient water to produce a grout having consistency of thick paint. Wet surface of concrete sufficiently to prevent absorption of water from grout. Apply grout uniformly with a brush or spray gun, then immediately float surface with a cork or other suitable float, scouring wall vigorously.

2. While grout is still plastic, finish surface with a sponge-rubber float, removing excess grout. Allow surface to dry thoroughly, then rub vigorously with dry burlap to completely remove dried grout. No visible film or grout shall remain after rubbing with burlap.

C. Sandblasting: Exterior concrete surfaces to receive stucco dash coat finish, where plywood or other smooth forms have been furnished, shall be uniformly sand-blasted with sharp quartz sand under sufficient air pressure to remove dirt, form oil and other foreign materials, and roughen surface to provide a proper bond. Such surfaces shall be thoroughly washed with clean water after sandblasting.

D. Abrasive: Concrete stair treads, landings, ramps and steps on interior and exterior of buildings, and interior exposed concrete floors in shop buildings shall receive an abrasive finish.

E. Floor Hardener: Exposed interior concrete floors throughout shall be treated with floor hardener.

1. Protect adjacent surfaces. Clean surfaces to receive treatment in accordance with manufacturer's instructions, ensuring that all stains, oil, grease, form release agents, laitance, dust and dirt are removed prior to application.

2. Apply hardener in accordance with manufacturer’s instructions as soon as concrete is firm enough to work on after final troweling.

F. Cement Grout and Dry-Pack Concrete: Cement grout shall be mixed at the Project site and shall be composed of one volume of Portland cement and 2-1/2 volumes of fine aggregate. Materials shall be mixed dry with sufficient water added to make mixture flow under its own weight. When grout is used as a dry pack concrete, add sufficient water to provide a stiff mixture, which can be molded into a sphere.

G. Broom Finish: Exterior stair treads, stair landings, and pool building restrooms shall be provided with a non-slip broom finish in addition to abrasive finish specified.

H. Abrasive Stair Nosing: Nosing shall be installed according to manufacturers written recommendations.

3.08 EXPANSION AND CONSTRUCTION JOINTS

A. Construction Joints: Details and proposed location of construction joints shall be as indicated on the Drawings, located to least impair strength of structure, in accordance with the following:

1. Thoroughly clean contact surface by sand blasting entire surface not earlier than 5 days after initial placement.

2. A mix containing same proportion of sand and cement provided in concrete plus a maximum of 50 percent of coarse aggregate shall be placed to a depth of at least one inch on horizontal joints. Vertical joints shall be wetted and coated with a neat cement grout immediately before placing of new concrete.

3. Should contact surface become coated with earth, sawdust, or deleterious material of any kind after being cleaned, entire surface shall be re-cleaned before applying mix.

B. Expansion Joints: Provide expansion joints where indicated in walks and exterior slabs. Space approximately 20 feet apart, unless otherwise indicated. Joints shall extend entirely through slab with joint filler in one piece for width of walk or slab. Joint filler shall be 3/8 inch thick, unless otherwise indicated.

C. Tooled Joints: Slabs, walks and paving shall be marked into areas as indicated with markings made with a V-grooving tool. Marks shall be round-edged, free from burrs or obstructions, with clean cut angles and shall be straight and true. Walks, if not indicated, shall be marked off into rectangles of not more than 12 square feet and shall have a center marking where more than 5 feet wide.

3.09 TESTING

A. Molded Cylinder Tests:

1. Inspector or testing lab personnel will prepare cylinders and perform slump tests. Samples for concrete strength shall be taken in accordance to ASTM C172. Each cylinder shall be dated, given a number, point in structure from which sample was obtained, mix design number, mix design strength and result of accompanying slump test noted.

2. Separate tests of molded concrete cylinders obtained at same place and time shall be made at age of three days, seven days, and 28 days. A strength test shall be the average of the compressive strength of two cylinders, obtained from the same sample of concrete and tested at 28 days or at test age designated for determination of f'c.

3. Test cylinders shall be prepared at the Project site and stored in testing laboratory in accordance with ASTM C31, and tested in accordance with ASTM C39.

B. Core Test: At request of the ARCHITECT, cores of hardened concrete shall be cut from portions of hydrated structures for testing, in accordance with CBC and ASTM C42.

1. Provide 4 inch diameter cores at representative places throughout the structure as designated by the ARCHITECT.

2. In general, provide sufficient cores to represent concrete placed with at least one core for each 4,000 square feet of building area, and at least 3 cores total for each Project.

3. Where cores have been removed, fill voids with drypack, and patch the finish to match the adjacent existing surfaces.

C. Concrete Consistency: Measure consistency according to ASTM C143. Test twice each day or partial day's run of the mixer.

D. Adjustment of Mix: If the strength of any grade of concrete for any portion of Work, as indicated by molded test cylinders, falls below minimum 28 days compressive strength specified or

indicated, adjust mix design for remaining portion of construction so that resulting concrete meets minimum strength requirements.

E. Air Content Testing: Measure in accordance to ASTM C173 or ASTM C231, for each composite sample taken in accordance to ASTM C172.

F. Defective Concrete:

1. Should strength of any grade of concrete, for any portion of Work indicated by tests of molded cylinders and core tests, fall below minimum 28 days strength specified or indicated, concrete will be deemed defective Work and shall be replaced or adequately strengthened in a manner acceptable to the ARCHITECT and DSA.

2. Concrete Work that is not formed as indicated, is not true within 1/250 of span, not true to intended alignment, not plumb or level where so intended, not true to intended grades and levels, contains sawdust shavings, wood or embedded debris, or does not fully conform to Contract provisions, shall be deemed to be defective Work and shall be removed and replaced.

G. Concrete for Equipment Pads, Mechanical and Electrical Work: Unless otherwise indicated, strength shall have a minimum f'c = 3,000 psi. Exposed concrete shall be provided with a hand trowel finish with radius corners and edges. Form and place concrete where necessary as described in Section 03 1000 Concrete Forming and Accessories, and reinforced as described in Section 03 2000 Concrete Reinforcing. Calcium chloride shall not be furnished in any concrete mix provided for the installation of underground electrical conduits. For concrete encasement of more than one conduit, furnish 3/4 inch maximum aggregate.

3.10 CLEAN UP

A. Remove rubbish, debris and waste materials and legally dispose of off the Project site.

3.11 PROTECTION

A. Protect the Work of this section until Substantial Completion.

END OF SECTION

SECTION 03 33 00 – ARCHITECTURAL CONCRETE

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:

1. Finishing formed decorative concrete surfaces (CONC-1).
2. This Section supplements Section 03 30 00.

B. Related requirements:

1. Other Section of Division 03 for finishing concrete surfaces.
2. Division 07 for sealants.
3. Division 32 for finishing Portland cement concrete pavement outside building perimeter is specified in Section.

1.2 PREINSTALLATION CONFERENCE:

A. Conduct conference at Project site to comply with requirements in Division 01.

1. Require representatives of each entity directly concerned with cast-in-place architectural concrete to attend, including the following:

    a. Contractor's superintendent.
    b. Ready-mix concrete manufacturer.
    c. Waterproofing manufacturer’s representative.
    d. Cast-in-place architectural concrete subcontractor.

2. Review concrete design mixture and examine procedures for ensuring quality and consistency of concrete materials. Review hot-weather concreting procedures, curing procedures, construction joints, forms and form-removal limitations, reinforcement accessory installation, concrete repair procedures, and protection of concrete.

1.3 STANDARDS

A. Comply with the requirements of the structural requirements of Sections 03 31 00, 03 32 00 and 03 30 00 Cast-in-Place Concrete, Reinforcement & Formwork Sections, and as specified herein.

1.4 DEFINITIONS

A. Architectural Concrete: Formed concrete that is exposed to view on surfaces of completed structure and that requires special concrete materials, formwork, placement or finishes to obtain specified architectural appearance. Surfaces of architectural concrete elements that are not exposed to view in the completed work, need not conform to requirements of this Section.

1.5 SUBMITTALS

A. Data: Manufacturer Product Data, including installation instructions where applicable, for the following items.

1. Curing and curing/hardening compounds.
2. Curing paper.
3. Bonding agents.

4. Control joint filler.

B. Design mixtures. Indicate amounts of mixing water to be withheld for later addition at the site.
C. Formwork Shop Drawings: Show formwork construction including form-facing joints, rustications, construction and contraction joints, form joint-sealant details, form tie locations and patterns, inserts and embedments, cutouts, cleanout panels, and other items that visually affect architectural concrete.

1. Indicate and call special attention to butted form joints. Indicate method of sealing joints and maintain alignment.
2. Review of formwork drawings is only for features affecting visual quality.

D. Placement schedule indicating locations of all construction joints.
E. Samples for Board Form Material Selection:

1. Match Architect's sample pattern and texture.
2. Submit samples at least 30 days prior to constructing mock-up panels.
3. Submit three 24-inch-long samples representative of the range of material to be expected for each width and finish.
4. Based on review of samples, Architect will identify boards to be used for field sample panels.

F. Mockup for formed concrete work:

1. After all Samples, Product Data, and the Shop Drawings for the mockup are approved, construct mockups of the CIPAC in a location approved by the Architect as specified below.
2. Mockups and mockup submissions for the concrete work shall consist of the following:

    a. Mockup showing the following: Board-formed planter wall (CONC-1).
    b. Additional mockups or partial mockups shall be required if the above mockups are deficient in producing the quality required for the Project.

3. Mockup of board-formed concrete planter wall shall consist of the following:

    c. Foundation of a size and reinforcement adequate to support the work.
    d. Scope of mockup:

        1) 3-ft by 6-ft "L" shaped planter wall.

            a) One vertical construction joint in wall.
            b) One horizontal construction joint in wall.
            c) Form ties with layout as shown in the wall.

    e. Reinforce as in a similar detail on the Drawings and add necessary reinforcement and/or supports to maintain stability.
    f. Use approved form face materials, reinforcement and accessories and assemble formwork as intended for the building construction
    g. Place concrete in the wall with methods to be used for typical long wall in building, including anticipated time delays between deposit lifts.
    h. Finish exposed hardened surfaces of the walls with specified finish treatments when directed by the Architect and with the Architect present. Finish wall with minimum 2 feet wide areas as directed by the Architect.
    i. Use same concrete mix design for the mockup as will be used in the construction of the final board formed walls.

4. If mockups are rejected by the Architect, remove and replace them at no cost to the Owner.

j. Locate mockups so they will remain throughout construction. Protect mockup from damage at all times; remove when directed by the architect.

G. Concrete mix designs: As specified in Section 03 30 00, "Cast-in-Place Concrete" and as specified herein.

1.6 QUALITY ASSURANCE

A. The work of this Section shall be performed by a concrete subcontractor specialized in the type of architectural cast-in-place concrete work required for this Project, with a minimum of 5 years of documented successful experience and shall be performed by skilled workmen thoroughly trained in the necessary crafts to perform architectural concrete work.

1. The cast in place concrete subcontractor, carpenter foreman, labor foreman and the reinforcement erector foremen shall have successful experience in performing cast-in-place concrete work that shows the ability to perform architectural quality work and shall be approved for work on project. Submit projects, including name, description of responsibilities, scope of work, and references.

B. Concrete quality control technician: Assign a quality control person to oversee the architectural concrete work. The primary duty is to be responsible for the required execution of the work. The Concrete Quality Control Technician shall develop a check list for execution of the work and for sign off by the concrete superintendent and be submitted to the Architect.

1. Board-formed concrete vertical surfaces (CONC-1).
2. Smooth-sacked concrete finish (CONC-1).

1.7 HANDLING/PROJECT CONDITIONS

A. Protect adjacent surfaces from staining and damage by covering them with impermeable coverings securely taped in place.

PART 2 - PRODUCTS

2.1 CONCRETE MATERIALS

A. As specified in Section 03 30 00.
B. Water: Fresh, clean, and free of oil and other materials injurious to concrete.

2.2 CURING COMPOUNDS

A. See Section 03 30 00 for general curing materials.

2.3 MISCELLANEOUS MATERIALS

A. Board-formed materials:

1. Board Forms: Textured wood boards of species and surface finish to be selected based on sample panel program. Select material for straightness and appearance characteristics matching approved samples. Take measures, as necessary, to prevent warping and cupping of boards prior to formwork removal. Take measures as necessary to obtain desired appearance of seams between adjacent boards.
2. Material: Douglas Fir, FAS Grade, free of knots
3. Backing Panels (for board-forms): PS 1 plywood, minimum 19/32 inch thick, edge sealed, exterior exposure. Seal surface to prevent absorption of moisture.

4. Form Joint Tape: Compressible foam tape; pressure sensitive; AAMA 800, "Specification 810.1, Expanded Cellular Glazing Tape"; minimum 1/4 inch thick.
5. Form Joint Sealant: Elastomeric sealant complying with ASTM C 920, Type M or S, Grade NS, that adheres to form joint substrates.
6. Sealer: Penetrating, clear, polyurethane wood form sealer formulated to reduce absorption of bleed water and prevent migration of chemicals from wood.
7. Form-Release Agent: Commercially formulated colorless form-release agent that will not bond with, stain, or adversely affect architectural concrete surfaces and will not impair subsequent treatments of those surfaces.
8. Form Ties: Factory-fabricated, internally disconnecting or removable ties designed to resist lateral pressure of fresh concrete on forms and to prevent spalling of concrete on removal. Ties shall be sealed to prevent staining at exposed face associated with loss of moisture.
9. Provide types and strengths required for each condition.
10. Furnish ties with tapered tie cone spreaders that, when removed, will leave holes 1 inch in diameter on concrete surface.
11. Furnish ties with integral water-barrier plates, when surface is exposed to weather.
12. Steel left in the concrete shall be at least 1 1/2 inches back from surfaces exposed to weather and 1 inch back from other surfaces.
13. Subject to providing necessary strength to resist concrete pressure, Dayton Superior A3 snap ties, with 1 x 1 1/2-inch A 2 plastic cones and A8 waterseal washers, or equal.

B. Bonding agent (non-structural)): ASTM C 1059, Type II, non-redispersible, acrylic emulsion or styrene butadiene, Acryl-Bond by Atlas Tech Products or equal.
C. Skim coat: Use the following in lieu of sacking.

1. Ardex Titl Wall Patch.
2. Rapid Set UnderFixx or Wunderfixx.
3. Euclid Chemicals Tammscrete.
4. WR Meadows Speed Crete.Noxcrete Panel Patch.
5. Or equal.
6. Joint filler: Homex Expansion Joint by Homasote Co. or equal non-bituminous product compatible with sealant specified in Section 07 92 00. Use in combination with plastic joint cap made by Greenstreak or equal.
7. Joint sealant and back-up rod: As specified in Section 07 92 00.

PART 3 - EXECUTION

3.1 GENERAL REQUIREMENTS

A. Finish concrete surfaces to produce a uniform appearance throughout area involved and throughout adjacent areas with the same treatment.
B. Tolerances: Use Fl and Ff numbers. Do not use straightedge method. Do not use Fl numbers for suspended slabs.
C. Where concrete finishing occurs adjacent to finished metal and similar surfaces, particularly where serrated or indented surfaces occur, remove all traces of cement film before allowing concrete to harden.
D. Use no troweling machines within 12 inches of electrical junction and outlet boxes set to finish flush with concrete floors.

1. Float and trowel such areas by hand with wood floats and steel trowels, using caution so that concrete is finished flush with box cover and matches adjacent surfaces.

E. Concrete finish will be considered defective and shall be repaired, when the repairs are acceptable to the Architect, or removed and replaced with proper work conforming to Contract Documents, at no additional cost to Owner, when:

1. It does not match approved sample panels.
2. It is not true to lines and planes.
3. It is not properly troweled and surfaced as required and varies in excess of tolerances specified.
4. Is scuffed or has a rough surface, except where required.
5. Does not connect properly to adjoining work.
6. Does not slope consistently to drains (has bird baths).
7. Is not properly cured.

3.2 FORMWORK

A. General: Comply with Section 03 10 00, “Formwork”, except where more stringent requirements are specified herein. Requirements for formwork apply only at exposed to view surfaces; other surfaces shall conform to requirements for structural concrete.

B. Preparation of Form Surfaces: Apply form sealer to all wood form surfaces to prevent absorption of moisture.

C. Design formwork to permit easy removal. Prying against the concrete surface will not be permitted.

1. Provide 1:6 draft on rustication strips to facilitate removal.

D. Formwork shall be strong enough and sufficiently rigid to withstand pressures that result from rapid filling and high frequency consolidation.

1. Limit deflection of form-facing panels to not exceed ACI 303.1 requirements.

E. Design and construct form work to be water tight under full head hydrostatic pressure of the section to be placed as well as the action of the specified consolidation techniques.

1. Take particular care to seal penetrations, including form ties.

F. Layout form joints, reveals, ties as shown on the Drawings and plumb and true to line. Locate vertical construction joints behind rustications and away from corners.

G. Nail or screw heads shall not occur at contact surface with concrete. Form surfaces in contact with concrete shall be screw attached from backside, glued, or fastened using other approved method.

H. Form exposed architectural faces first. Indicate butted form joints on shop drawings and locate in field only as shown on the approved shop drawings. Perform work necessary to align and seal joints of abutting panels prior to placement of reinforcement.

1. Limit concrete surface irregularities, designated by ACI 347R as abrupt or gradual, to Class A, 1/8 inch.

I. Board-Form Finish: Construct formwork with wood plank face forms secured to minimum 5/8-inch-thick plywood backing panels. Bond face layer and back-up panels together with waterproof contact glue or screwed together from back side so as not to penetrate the finished face.

1. Splice boards only at locations shown.
2. Fit edges of boards as approved by Architect. Place foam gaskets between adjacent boards, held back 1/8 inch from contact surface.

J. Coat contact surfaces of forms with a light uniform coating of form-release agent, according to manufacturer's written instructions, before placing reinforcement.

1. Do not allow excess form-coating materials to accumulate in forms or come in contact with concrete surfaces against which fresh concrete will be placed.
2. Coat forms with release agent prior to erection, where coating cannot be applied in place.

3.3 MARKINGS

A. At control joints and elsewhere as indicated, provide markings with a rounded edging or marking tool, to a 1/4-inch radius. In textured work, edge and mark with a combination edging and smoothing tool approximately 1-1/2-inch wide.
B. Make markings within a tolerance not exceeding 1/4-inch in 10 feet.
C. Where indicated, provide cut markings sawn into surface of cured concrete. Coordinate this work with the work of other Sections to avoid damage to adjacent surfaces.
D. Complete sawcutting within 16 hours after casting.
E. Use sawcutting equipment specifically designed to cut 1/8-inch-wide joints crisp, sharp, unchipped edges in newly cast concrete. Use cutting machine with a high speed (10,000 rpm minimum), self-propelling without forcing the speed, with a 4-inch blade specially made for green concrete. Equipment and blades made by Soff-Cut Corp., Corona, CA, or equal that will provide similar results.
F. Make marking lines straight, or curved where required by the Drawings, equally spaced and parallel to adjacent lines and walls, edges and other construction, and of uniform depth and cross section, with intersections accurately formed. Continue markings to vertical surfaces interrupting the flatwork.

3.4 BUILT-IN ITEMS

A. Set items furnished under this or other Sections and finish to floor fixtures and other floor features as indicated. Adjust finish to properly connect and fit to other work. Slope floor to drain where indicated.
B. Floor drains and other items furnished and installed under other Sections: Finish concrete surface flush with rims unless detailed otherwise.
C. Exercise particular care with respect to drains to ascertain that they are installed at proper elevations to permit drainage. Do not proceed until corrective work is performed and accepted.

3.5 CONCRETE PLACEMENT

A. Placement in accordance with Chapter 6, ACI 304 and Chapter 7, ACI 303R and the following:
B. Depositing Concrete:

1. Deposit concrete using pump hoses or tremies inserted into the form cavity to minimize segregation and accumulated concrete on formwork and reinforcement. Do not drop concrete more than 30 inches.
2. Deposit concrete continuously between joints in layers not exceeding 30 inches in height and in a manner to avoid inclined lift lines.

    a. First layer of concrete placed against hardened concrete shall not exceed 24 inches in height.

3. Allow fresh face to stand not more than 15 minutes prior to placement of succeeding layer.

C. Consolidating Concrete:

1. Consolidate placed concrete with internal vibration according to ACI 303.1.

2. Use two vibrators at each placement. Optimum size of vibrator head shall be 1 inch to 1 1/2 inches.
3. Do not use vibrators to transport concrete in forms.
4. Vibrators shall be placed into the concrete vertically at a consistent spacing that will thoroughly blend deposits, remove entrapped air and consolidate concrete. Vibrator head shall be inserted rapidly and penetrate at least 12 inches into preceding layer, then withdrawn slowly and uniformly to blend layers and remove a maximum amount of entrapped air.
5. After top layer is placed, the concrete shall be allowed to set for 10 to 15 minutes and then given a final vibration of the top 24 inches.
6. Do not place vibrators against formwork.

3.6 FINISHING FORMED SURFACES

A. General:

1. Remove fins, laitance and loose materials from concrete surfaces when forms are removed.
2. Repair honeycombs, rock pockets, sand runs, spalls and other damaged surfaces by removing the damaged or unsatisfactory area to sound concrete, with slightly undercut edges, and filling-in with the same mix as the adjacent concrete minus the coarse aggregate.
3. Fill-in tie holes with the same mix as the adjacent concrete minus the coarse aggregate.
4. Tamp and float, or trowel patches flush with adjacent surface and to match adjacent concrete texture.

B. Grout cleaned finish (CONC-1): This finish may be indicated as “Smooth Sacked” on the Drawings.

1. No form pattern shall be visible after surfaces are finished as specified.
2. Provide grout cleaned finish to surfaces that have received smooth form finish treatment.
3. Combine one part Portland cement to 1-1/2 parts fine sand by volume, and mix with water to consistency of thick paint. Blend standard Portland cement and white Portland cement, amounts determined by trial patches, so that the final color of dry grout will closely match adjacent concrete surfaces.
4. Thoroughly wet the concrete surface and apply grout uniformly by brushing or spraying immediately on the wet surfaces.
5. Scrub surface with cork float or stone to coat surface and completely fill surface holes.
6. Remove excess grout by scraping, followed by rubbing with clean burlap and remove any visible grout film.
7. Keep grout damp during setting period by means of fog spray at least 36 hours after final rubbing.
8. Complete any area the same day it is started to a natural break such as a corner.
9. In lieu of the above, Contractor may skim coat concrete surfaces using one of the premixed material specified above, after providing a satisfactory sample panel in a location acceptable to the Architect.

C. Related unformed surfaces:

1. At tops of wall, horizontal offsets, and similar unformed surfaces occurring adjacent to formed surfaces, strike off smooth and finish with textured matching the adjacent formed surfaces.
2. Continue the final surface treatment of formed surfaces uniformly across the adjacent unformed surface, unless otherwise shown.

D. Curing:

1. Wet the tops and exposed portions of formed concrete and keep moist until forms are removed.
2. If forms are removed before 14 days after concrete is cast, coat concrete with curing compound Type II applied as specified for curing compound Type III for flatwork below.

3.7 CURING - GENERAL

A. See Section 03 30 00.
B. Protect freshly placed concrete from premature drying and excessive cold or hot temperatures. Comply with ACI 306.1 for cold-weather protection and ACI 301 for hot-weather protection during curing.
C. Where supplementary cementitious materials are used, take extra precautions to prevent premature drying. Where fly-ash replacement is 35% or higher, floor slabs shall receive at least a 3-day moist cure before application of a curing compound. Other surfaces with the exception of foundations shall receive the approved curing compound immediately after removal of formwork.

3.8 BOARD-FORM REMOVAL AND CURING

A. Use consistent stripping time and curing method for exposed surfaces. Maintain surface appearance that matches approved field sample panels and mockups.
B. For surfaces exposed to weather, leave formwork securely in place for 7 days and cover exposed top surface tightly with impervious sheeting.
C. In hot weather, cover forms during curing period to protect from direct sunlight.
D. Thoroughly wet surface immediately after loosening forms and again after form removal.

3.9 BOARD-FORMED FINISHING

A. General: Match approved mockup, identified and described as indicated, to satisfaction of Architect.
B. As-Cast Formed Finishes: Concrete shall have uniform as-cast surface with minimal additional finishing being anticipated or required. Remove fins and projections, where necessary, by grinding without marring adjacent surface. Repair honeycombed concrete and other defects; surface blemishes will not be filled. Fill tie holes and strike flush with adjacent surfaces.

1. Type 1 Finish: Board formed with 7-1/4” wide boards oriented vertical.

C. Fill tie holes with patching mortar, recessing 1/2 inch from finished surface.
D. Related Unformed Surfaces: At tops of walls, horizontal offsets, and similar unformed surfaces adjacent to formed surfaces, strike off smooth and finish with a texture matching adjacent formed surfaces.
E. Continue final surface treatment of formed surfaces uniformly across adjacent unformed surfaces, unless otherwise indicated.
F. Maintain uniformity of finishes, including alignment of boards, over construction joints, unless otherwise indicated.

3.10 MOISTURE CONTROL

A. In addition to finishing requirements specified, use a water fog spray to reduce plastic shrinkage cracks during flatwork finishing operations when conditions of low humidity and high temperature exist, or use evaporation retarder specified.

1. Immediately after wet concrete has been leveled, or sloped as required, and the shiny film of moisture disappears, start fog spraying and continue until final troweling, by applying a light film of moisture with an atomizing type sprayer.
2. Use frequent light applications of moisture rather than excessive amounts at any one time. Adjust the amount and frequency of fog spray as required by variable conditions of weather, wind, temperature and humidity.

3.11 PATCHING

A. Do not patch any area without specific approval from the Architect on a case-by-case basis.
B. Develop patching technique on mock-up prior to patching in-place concrete for review and approval by the Architect. Use only the same mix for patching as finally developed for the approved sample on the mock-up.
C. Remove all loose concrete prior to patching and thoroughly wet the surface to prevent moisture loss form the patch mix.
D. Pack patch mix into the void and hand dress to match texture and color of adjoining concrete.

3.12 ADJUSTING/CLEANING

A. Clean architectural concrete surfaces to remove gasket adhesives, markings, laitance, dust, and debris.
B. Protect corners, edges, and surfaces of architectural concrete from damage. Pay particular attention to surfaces near the work of other trades.
C. Protect concrete from staining during remainder of construction period, including rust, paint, and oils.
D. Wash and rinse surfaces according to concrete finish applicator's written recommendations. Protect other Work from staining or damage due to cleaning operations.
E. Do not use cleaning materials or processes that could change the appearance of cast-in-place architectural concrete finishes.
F. Protect exposed concrete work as necessary to prevent damage resulting from impact or from subsequent work or rubbish.
G. Protect adjacent work from damages by this work with heavy Kraft paper or polyethylene film.
H. Maintain protection in effective condition for as long as need for protection exists.
I. Control use of water within the building so that no damage to previously installed work or existing structures and finish occurs.

3.13 FORM REUSE

A. Forms shall not be reused for architectural concrete, if there is evidence of surface wear, or other defects that would impair the quality or consistency of appearance of the surface.
B. Board forms shall not be reused.

3.14 FIELD QUALITY CONTROL

A. Conduct a water test, in the Architect’s presence to verify that flatwork drains away from the building and that water flows to drains.
B. Correct non-conforming concrete, or remove and replace defective paving, to the Architect’s satisfaction.

C. Except as specified, acceptance of structure for dimensional tolerances, appearance, and strength will be based on ACI-301, Chapter 18.

END OF SECTION

SECTION 03 35 00 - CONCRETE FINISHING

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:

1. Finishing formed decorative concrete surfaces and interior concrete flatwork.
2. This Section Supplements Section 03 30 00.

B. Related requirements:

1. Other Section of Division 03 for finishing concrete surfaces.
2. Division 07 for sealants.
3. Division 32 for finishing Portland cement concrete pavement outside building perimeter is specified in Section.

1.2 SUBMITTALS

A. Data: Manufacturer Product Data, including installation instructions where applicable, for the following items.

1. Curing and curing/hardening compounds.
2. Curing paper.
3. Bonding agents.
4. Patching and surfacing compounds.
5. Abrasive aggregates.
6. Control joint filler.
7. Concrete wall polishing equipment and operator qualifications.

1.3 QUALITY ASSURANCE

A. Installer qualifications: Qualified installer who employs on Project personnel qualified as ACI-certified Flatwork Technician and Finisher and a supervisor who is an ACI-certified Concrete Flatwork Technician.

B. Field Samples: Provide 4-foot by 4-foot Field Samples of each concrete finish specified for the Architect's approval prior to commencing concrete work. Repeat sample panels if first ones prove unsatisfactory. Locate Field Samples where directed at the site.

1. Broom, float and trowel finishes.
2. Sandblasted finish; CONC-2.

1.4 HANDLING/PROJECT CONDITIONS

A. Protect adjacent surfaces from staining and damage by covering them with impermeable coverings securely taped in place.

PART 2 - PRODUCTS

2.1 CONCRETE MATERIALS

A. As specified in Section 03 30 00.
B. Water: Fresh, clean, and free of oil and other materials injurious to concrete.

2.2 ADMIXTURES AND PIGMENTS

A. Admixtures for colored concrete: Only air-entraining admixture permitted.

2.3 CURING COMPOUNDS

A. General: See Section 03 30 00 for Curing requirements.

2.4 MISCELLANEOUS MATERIALS

A. Bonding agent (non-structural)): ASTM C 1059, Type II, non-redispersible, acrylic emulsion or styrene butadiene, Acryl-Bond by Atlas Tech Products or equal.
B. Skim coat: Use the following in lieu of sacking.

1. Ardex Tilt Wall Patch.
2. Rapid Set UnderFixx or Wunderfixx.
3. Euclid Chemicals Tammscrete.
4. WR Meadows Speed Crete.Noxcrete Panel Patch.
5. Joint filler: Homex Expansion Joint by Homasote Co. or equal non-bituminous product compatible with sealant specified in Section 07 92 00. Use in combination with plastic joint cap made by Greenstreak or equal.
6. Joint sealant and back-up rod: As specified in Section 07 92 00.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Joints in flatwork:

1. Set premolded expansion joint strip below finished surface with a slightly tapered, dressed, wood strip, temporarily secured to top of expansion strip to provide space for sealant, or use an extruded plastic strip, approved by the Architect.
2. Install expansion joints in straight or curved lines as indicated within a tolerance not exceeding 1/4-inch in 10 feet.
3. After concrete finishing operations are completed, and concrete is cured, fill void formed by the strip with sealant as specified in Section 07 92 00. Provide joints where indicated and in all cases where concrete flatwork abuts vertical elements such as walls, columns and curbs.

3.2 GENERAL REQUIREMENTS

A. Finish concrete surfaces to produce a uniform appearance throughout area involved and throughout adjacent areas with the same treatment.
B. Where concrete finishing occurs adjacent to finished metal and similar surfaces, particularly where serrated or indented surfaces occur, remove all traces of cement film before allowing concrete to harden.
C. Use no troweling machines within 12 inches of electrical junction and outlet boxes set to finish flush with concrete floors.

    1. Float and trowel such areas by hand with wood floats and steel trowels, using caution so that concrete is finished flush with box cover and matches adjacent surfaces.

D. Concrete stairs:

    1. As soon as concrete is set up sufficiently to permit working, remove riser forms and finish treads and risers in a continuous operation, working from top to bottom.
    2. Slope treads 1/8-inch from base of riser to nosing, run nosings straight and level to template.
    3. Finish nosings and coves at junction of treads and vertical surfaces to a uniform profile throughout. Where abrasive nosings are indicated, embed them in the fresh concrete, level and centered on the tread.

E. Concrete finish will be considered defective and shall be repaired, when the repairs are acceptable to the Architect, or removed and replaced with proper work conforming to Contract Documents, at no additional cost to Owner, when:

    1. It does not match approved sample panels.
    2. It is not true to lines and planes.
    3. It is not properly troweled and surfaced as required, and varies in excess of tolerances specified.
    4. Is scuffed or has a rough surface, except where required.
    5. Does not connect properly to adjoining work.
    6. Does not slope consistently to drains (has bird baths).
    7. Is not properly cured.

3.3 MARKINGS

A. At control joints and elsewhere as indicated, provide markings with a rounded edging or marking tool, to a 1/4-inch radius. In textured work, edge and mark with a combination edging and smoothing tool approximately 1-1/2-inch wide.
B. Make markings within a tolerance not exceeding 1/4-inch in 10 feet.
C. Where indicated, provide cut markings sawn into surface of cured concrete. Coordinate this work with the work of other Sections to avoid damage to adjacent surfaces.
D. Complete sawcutting within 16 hours after casting.
E. Use sawcutting equipment specifically designed to cut 1/8-inch wide joints crisp, sharp, unchipped edges in newly cast concrete. Use cutting machine with a high speed (10,000 rpm minimum), self propelling without forcing the speed, with a 4-inch blade specially made for green concrete. Equipment and blades made by Soff-Cut Corp., Corona, CA, or equal that will provide similar results.
F. Make marking lines straight, or curved where required by the Drawings, equally spaced and parallel to adjacent lines and walls, edges and other construction, and of uniform depth and cross section, with intersections accurately formed. Continue markings to vertical surfaces interrupting the flatwork.

3.4 BUILT-IN ITEMS

1. Set items furnished under this or other Sections and finish to floor fixtures and other floor features as indicated. Adjust finish to properly connect and fit to other work. Slope floor to drain where indicated.
2. Floor drains and other items furnished and installed under other Sections: Finish concrete surface flush with rims unless detailed otherwise.
3. Exercise particular care with respect to drains to ascertain that they are installed at proper elevations to permit drainage. Do not proceed until corrective work is performed and accepted.

3.5 FINISHING FORMED SURFACES

A. General:

1. Remove fins, laitance and loose materials from concrete surfaces when forms are removed.
2. Repair honeycombs, rock pockets, sand runs, spalls and other damaged surfaces by removing the damaged or unsatisfactory area to sound concrete, with slightly undercut edges, and filling-in with the same mix as the adjacent concrete minus the coarse aggregate.
3. Fill-in tie holes with the same mix as the adjacent concrete minus the coarse aggregate.
4. Tamp and float, or trowel patches flush with adjacent surface and to match adjacent concrete texture.

B. Rough form finish:

1. Provide as-cast rough form finish to formed concrete surfaces that will be concealed in the finish work or by other construction, unless otherwise indicated.
2. Standard rough form finish shall be concrete surface having the texture imparted by the form facing material used, with tie holes and defective areas repaired and patched, and fins and other projections exceeding 1/4-inch high rubbed down or chipped off.

C. Smooth form finish:

1. Provide as-cast smooth form finish for formed concrete surfaces that will remain exposed-to-view, or that will be covered with a material applied directly to the concrete, or a material bonded to the concrete such as waterproofing, painting, and similar system.
2. Select form material to impart a smooth, hard, uniform texture and arrange forms in an orderly and symmetrical pattern, with a minimum of seams.
3. Repair and patch defective areas with fins or other projections completely removed and smooth.

D. Smooth rubbed finish:

1. Provide smooth rubbed finish to concrete surfaces so indicated, not later than the day after form removal.
2. Moisten concrete surfaces and rub with carborundum brick or other abrasive until a uniform color and texture is produced.
3. Do not apply cement grout other than that created by the rubbing process.

E. Grout cleaned finish: This finish may be indicated as “Sack and Rub” on the Drawings.

1. See Section 03 30 00 paragraph 3.07 B.

2. In lieu of the above, Contractor may skim coat concrete surfaces using one of the premixed material specified above, after providing a satisfactory sample panel in a location acceptable to the Architect.

F. Related unformed surfaces:

1. At tops of wall, horizontal offsets, and similar unformed surfaces occurring adjacent to formed surfaces, strike off smooth and finish with textured matching the adjacent formed surfaces.
2. Continue the final surface treatment of formed surfaces uniformly across the adjacent unformed surface, unless otherwise shown.

G. Abrasive blasting (sandblasting):

1. Sandblast accent paving panels indicated on the Drawings to expose fine aggregates with occasional exposure of coarse aggregate for a 1/16-inch aggregate exposure.
2. Protect corners with boards when sandblasting so that they remain sharp.
3. Remove loose aggregates, after desired exposure is achieved, with clean air under pressure.

H. Curing:

1. Wet the tops and exposed portions of formed concrete and keep moist until forms are removed.
2. If forms are removed before 14 days after concrete is cast, coat concrete with curing compound Type II applied as specified for curing compound Type III for flatwork below.

3.6 COMPACTING AND FLOATING FLATWORK

A. Bring slabs with monolithic finish to proper level using screeds and strike off with a straightedge. Remove excess water and laitance.

1. Compact and consolidate to embed coarse aggregates.
2. Float and test surfaces with a 10-foot straightedge and eliminate high and low spots to comply with tolerances specified.
3. From this point, use methods and tools necessary to produce surface finish specified.

B. Use continuous screeds of such type and construction and so spaced and located as to produce surface tolerances specified.

3.7 CURING - GENERAL

A. Protect freshly placed concrete from premature drying and excessive cold or hot temperatures. Comply with ACI 306.1 for cold-weather protection and ACI 301 for hot-weather protection during curing.
B. Where supplementary cementitious materials are used, take extra precautions to prevent premature drying. Where fly-ash replacement is 35% or higher, floor slabs shall receive at least a 3-day moist cure before application of a curing compound. Other surfaces with the exception of foundations shall receive the approved curing compound immediately after removal of formwork.

3.8 METHODS OF FINISHING AND CURING FLATWORK

A. See Section 03 30 00 PART 3.

3.9 MOISTURE CONTROL

A. In addition to finishing requirements specified, use a water fog spray to reduce plastic shrinkage cracks during flatwork finishing operations when conditions of low humidity and high temperature exist, or use evaporation retarder specified.

1. Immediately after wet concrete has been leveled, or sloped as required, and the shiny film of moisture disappears, start fog spraying and continue until final troweling, by applying a light film of moisture with an atomizing type sprayer.
2. Use frequent light applications of moisture rather than excessive amounts at any one time. Adjust the amount and frequency of fog spray as required by variable conditions of weather, wind, temperature and humidity.

3.10 FLATWORK FINISHES

A. Integral float finish:

1. Use for curbs, gutters, surfaces to receive roofing and waterproofing membrane, and ceramic and paver tile whether on conventional setting bed over a cleavage membrane or dry-set over concrete slab.
2. After screeding and compacting, finish with a wood float using a rotary or darbied circular motion to produce a uniform texture and finish throughout.

B. Integral smooth steel trowel finish:

1. Use for surfaces to receive carpet, resilient flooring, and surfaces that have no other specific finish specified.
2. Trowel surface until the slabs are finished to a smooth, hard, burnished surface.
3. Consolidate the concrete surface by final hand troweling operation, free of trowel marks, uniform in texture and appearance, and with surface plane tolerance specified. Grind smooth surface defects that would telegraph through applied floor covering system.
4. Where surfaces will receive elastomeric coating and thin set tiles, in lieu of the final troweling, brush surface lightly with a broom or floor brush as recommended by the coating manufacturer. Coordinate finishing operations with the trades applying the elastomeric coating and performing the tile work.

C. Raked or scratched finish:

1. Use for surfaces to receive a bonded topping slab or cementitious setting bed.
2. After screeding and compacting, roughen finish with a garden rake or other appropriate tool to provide a mechanical bond for topping slabs.

D. Trowel and Fine-Broom Finish: Apply a first trowel finish to surfaces indicated on Drawings where ceramic or quarry tile is to be installed by either thickset or thinset method. While concrete is still plastic, slightly scarify surface with a fine broom perpendicular to main traffic route.

1. Coordinate required final finish with Architect before application.
2. Comply with flatness and levelness tolerances for trowel-finished floor surfaces.

E. Broom finish:

1. After screeding, compacting and floating, sweep the finish with a coarse broom, against a straightedge at right angle to the slope or direction of travel, to produce a uniform non-skid surface with the depressions parallel and at a uniform depth.

2. Time this operation to texture slabs at the same age to obtain a uniform finish throughout.
3. Provide a heavy broom finish at the Pool House Restrooms.

F. Abrasive aggregate finish:

1. Apply abrasive aggregates after first troweling, at uniform rate of not less than 25 lb./100 sq.-foot.
2. After second troweling rub surface of concrete with steel wool pads to remove cement film and expose the aggregates uniformly, or treat surface with a 10 percent solution of muriatic acid.
3. Wash the acid completely from the concrete after treatment and dispose of it legally

3.11 CONCRETE SAW CUTTING

A. Discharge of water, dust or debris from concrete saw cutting to storm or sanitary systems is prohibited. Protect storm and sanitary drains from clogging by dust and debris.

1. Contain and collect water used in concrete saw cutting and sweeping for proper disposal. Suggested controls include wet vacuum and/or absorbents.
2. Use good housekeeping practices at the jobsite. Minimize dust.

3.12 ADJUSTING/CLEANING

A. Protect exposed concrete work as necessary to prevent damage resulting from impact or from subsequent work or rubbish.
B. Protect adjacent work from damages by this work with heavy Kraft paper or polyethylene film.
C. Maintain protection in effective condition for as long as need for protection exists.
D. Control use of water within the building so that no damage to previously installed work or existing structures and finish occurs.

3.13 FIELD QUALITY CONTROL

A. Conduct a water test, in the Architect’s presence to verify that flatwork drains away from the building and that water flows to drains.
B. Correct non-conforming concrete, or remove and replace defective paving, to the Architect’s satisfaction.
C. Except as specified, acceptance of structure for dimensional tolerances, appearance, and strength will be based on ACI-301, Chapter 18.

END OF SECTION

SECTION 03 35 43 - POLISHED CONCRETE FINISH

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Polished concrete finish in accordance with specified requirements to produce:

   a. Aggregate Exposure B.
   b. Concrete Appearance 2 (see Part 3 charts for assistance).

1.2 ADMINISTRATIVE REQUIREMENTS

A. Pre-Concrete Conference, Mandatory.

1. Schedule: Two (2) weeks prior to pouring cast-in-place concrete.
2. Attendance: Concrete installer, polishing installer and batch plant.
3. Review and discuss:

   a. Concrete placement.
   b. Floor flatness (ff) requirements.
   c. Admixtures, additives and mix design approval.

1.3 SUBMITTALS

A. Submittals for Review:

1. Product Data: Manufacturer’s descriptive data for the following:
2. Cleaner
3. Densifier
4. Sealer
5. Accessories
6. Samples: 6-inch x 6-inch samples with sheen level and aggregate exposure.

B. Quality Control Submittals:

1. Manufacturer’s approval of applicator certificate

C. Post-installation surface testing of the following:

1. ASTM D5767 Distinctness-of-Image, %
2. ASTM D4039 Reflection Haze of High-Gloss Surfaces, less than 10

1.4 QUALITY ASSURANCE.

A. Installer Qualifications:

1. Minimum 5 years documented experience in work of this Section.
2. Certified, approved, and accepted manufacturer applicator.
3. Supervisor certified as Craftsman or Master Craftsman by CPAA.

B. Concrete:

1. Installer to accept concrete mix design, finishing agents, admixtures, and curing methods prior to concrete placement.

C. Mockup:

1. Size: Minimum 25 square feet.
2. Install specified materials to for approval.
3. Locate in areas subjected to direct and indirect sunlight during review.
4. Approved mockup may be remain as part of the Work when approved by Architect.

D. Mock- Up Approval Conference, Mandatory

1. Schedule: Four (4) weeks prior to installation
2. Attendance: Owner, Architect, polishing installer,
3. Review and discuss installed mock-up and the following for approval:

   a. Interior environmental requirements.
   b. Approved submittal samples.
   c. Approved aggregate exposure and appearance requirement.

E. ASTM D5767 Distinctness-of-Image requirements
F. ASTM D4039 Reflection Haze of High-Gloss Surfaces requirements

1. Staging and sequencing.
2. Protection of completed work.

G. Coefficient of Friction: Range of 0.35 to 0.45 under wet conditions when tested to ANSI B101.3 upon completion of polishing.

1.5 PROJECT CONDITIONS

A. Prohibit concrete surfaces from the following prior to and after application process:

1. Vehicular traffic and pipe cutting operations in, around and above surfaces
2. Storage of wood, ferrous metals, plastic, or any other materials to could potential create damage
3. Liquid drippings, sprinkler discharge and sprinkler testing on surfaces.
4. Chemical storage, acids and acidic detergents
5. Prevent painting over surfaces without 100% floor protection from overspray.
6. Diaper all hydraulic lines of equipment that must enter polished floor spaces.

B. Maintain interior room conditions of 50 and 90 degrees F.
C. Ventilate areas to promote proper curing of components.
D. Restrict trade traffic from work areas during and after application process.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Acceptable Manufacturers:

1. Lythic (www.lythic.com)
2. MirrorCrete (www.floorseal.com)
3. Or equal.

2.2 MATERIALS

A. Surface Cleaner:

1. Type: Water-based, Colloidal silica blended surfactant used as a cutting aid, silica dust reducer and minimize concrete surface scratches during grinding process.
2. Source: Lytic Cleaner by Solomon Colors.
3. VOC Content: Less than 0.5 grams per liter. pH Level: 10.0pH, non-hazardous waste per EPA requirements.

B. Hardener and Densifier:

1. Type: Odorless, non-hazardous, colloidal silica based
2. Source: Lythic Densifier & XL by Solomon Colors
3. VOC Content: max. 50 grams per liter.
4. pH level: 10.0pH, non-hazardous waste per EPA requirements.

C. Sealer and Water Repellent:

1. Type: Water-based, UV resistant, non-yellowing, impregnating sealant, meeting ASTM D1308 stain resistance requirements.
2. Source: Stealth Seal by Solomon Colors.
3. VOC Content: max. 20 grams per liter.

2.3 ACCESSORIES

A. Crack and Spall Repair: Color matching system by MatchPatch Pro (www.MatchPatchPro.com)
B. Concrete Grout: Epoxy- Polyurea based material by one of the following:

1. Quick Mender by VersaFlex: www.versaflex.com
2. TX3 by Hi-Tech Systems: www.hitechpolyurea.com

C. Temporary Protection: Seamless, spill, stain and water resistant sheeting.

1. MT Commercial by Skudo: www.skudousa.com
2. Ram Board by Ram Board: www.ramboard.com

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrate with installer present for conditions affecting work performance of finish.
B. Installation deems acceptance of onsite conditions.

3.2 PREPARATION

A. Clean concrete surfaces of contaminants and patch imperfections as required by manufacturer to match adjacent surfaces/
B. Protect surrounding areas, equipment and finished surfaces from overspray.

3.3 APPLICATION

A. Mechanically clean and polish surface in accordance with the approved gloss and aggregate exposure as approved by Architect and onsite mockup, following the Concrete Polishing Council terminology.

B. Provide all required polishing steps to achieve approved aggregate exposure and appearance to meet approved mockup.
C. Floors shall be smooth with no scratches in polish finish.
D. Crack and Spall Repair: Apply repair in accordance with manufacturer's instructions.
E. Concrete Grout: Apply as needed to provide a smooth floor surface in accordance with manufactures instructions.
F. Polished Concrete Aggregate Exposure Chart

Class	Name	Approximate Surface Cut Depth	Surface Exposure, %
A	Cream Fines	Very little	85 – 95% Cement Fines 5 – 15% Sand Aggregates
B	Sand Aggregate	1/16 inch	85 – 95% Sand Aggregates 5 – 15% blend of cement fines and course aggregates
C	Coarse Aggregate	1/8 - 1/4 inch	80 - 90% Coarse Aggregate 10 - 20% Blend of cement fines and sand aggregates

G. Polished Concrete Appearance Chart

Level	Name	Distinctness –of-Image (DIO) Gloss, ASTM D5767	ASTM D5767, D4039	ASTM D4039
1	Flat (Ground)	Images of objects being reflected have a flat appearance.	0 - 9	< 10
2	Satin (Honed)	Images of objects being reflected have a matte appearance.	10 - 39	
3	Polished	Images of objects being reflected do not have a sharp and crisp appearance but can be easily identified.	40 - 69	
4	Highly Polished	Images of objects being reflected do not have a sharp and crisp as would be seen in a near-mirror like reflection. May require grouting.	70 - 100	

H. Sealer and Water Repellant:

1. Prior to application, perform a five (5) of the following tests at various locations:

   a. ASTM D5767 Distinctness-of-Image
   b. ASTM D4039 Reflection Haze of High-Gloss Surfaces

I. Proceed with sealer and water repellant application, when results of testing are deemed compliant.

3.4 SEALER AND WATER REPELLANT

A. Apply in accordance with manufacturer's instructions.
B. Burnish sealer, as recommended by manufacturer, to produce maximum water resistance.

3.5 FIELD QUALITY CONTROL

A. Measure slip resistance using BOT-3000 slip-tester; ensure compliance with slip resistance rating.
B. Allow floors to cure for 24 hours and install protective covering in high traffic areas; main hallways and entry ways where foot traffic will proceed until substantial completion.

3.6 PROTECTION

A. Close areas to traffic until concrete treatment has cured.
B. Apply manufacturer approved non-staining protective coverings.

END OF SECTION

SECTION 03 35 53 - INTERIOR CONCRETE FLOOR SEALER

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:

1. Surface preparation.
2. Application of clear concrete sealer on exposed surfaces of the interior concrete floors indicated. (CONC-4)

1.2 ADMINISTRATIVE REQUIREMENTS

A. Pre-installation meeting:

1. Prior to start of installation, arrange a pre-installation meeting between the sealer manufacturer, the applicator, and related trades whose work will be in contact with the treated surface, including but not limited to those for colored concrete and joint sealers.
2. Record minutes of the meeting, file in the Project file, and send a copy to the Architect.

B. Phasing

1. Where feasible delay sealer application until installation of sealants is complete in joints adjoining surfaces to be coated.
2. Sealer work may precede sealant application only if sealant adhesion and compatibility have been tested and verified using substrate, sealer, and sealant materials identical to those used in the Work.

1.3 SUBMITTALS

A. Data: Manufacturer Product Data of the proposed sealer, including recommended coverage rates, include material test reports indicating and interpreting test results for compliance of water-repellent sealer with criteria specified.

B. Manufacturer certification:

1. Letter from the sealer manufacturer to verify its acceptance of the applicator, acceptance of substrates as satisfactory to receive the specified sealer, and affidavit that sealer is compatible with concrete curing agent used.
2. Duplicate copies of manufacturer affidavit with each shipment of materials delivered to the jobsite certifying that material furnished complies with specified requirements.

1.4 QUALITY ASSURANCE

A. Installer qualifications: Firm with a minimum of 3 consecutive years of experience in application of the sealer proposed for use, or similar sealers, on projects of similar size and scope, and licensed or approved in writing by the sealer manufacturer.

B. Sample panels: When requested by the sealer manufacturer, or necessary to adjust sealer formulation, provide sealer manufacturer with sufficient samples of substrate to be coated to determine exact formulation and coverage rates.

C. Manufacturer inspections:

1. Obtain materials only from manufacturer who will send a qualified technical representative to the Project site before start of this work to verify substrate acceptability. Schedule subsequent visits as required thereafter to review installation procedures and completed work, and to issue warranty specified.

2. Unsatisfactory conditions disclosed by the manufacturer visits to the site shall be promptly and satisfactorily repaired and the areas re-inspected by the manufacturer before work starts or resumes in affected areas.

1.5 JOB CONDITIONS

A. Comply with manufacturer's recommendations regarding environmental requirements, and temperature and conditions of surfaces to receive sealer.

PART 2 - PRODUCTS

2.1 SEALER/MANUFACTURER

A. Basis of design is Liqui-Hard Ultra manufactured by W. R. Meadows or equal by one of the following:

1. Consolideck LS by Prosoco,
2. Hydrozo Silane 40 VOC by BASF.
3. Seal Hard by L&M Construction Chemicals, Inc.
4. L3000 by Pecora Corp.
5. Or equal.

2.2 PERFORMANCE REQUIREMENTS

A. Provide sealer with the following properties based on testing manufacturer standard products, according to test methods indicated, applied to substrates simulating Project conditions using same materials and application methods to be used for Project.

1. Absorption: Minimum 90 percent reduction of absorption after 24 hours in comparison of treated and untreated specimens for hardened concrete: ASTM C 642.
2. Water-vapor transmission: Maximum 10 percent reduction in rate of vapor transmission in comparison of treated and untreated specimens, ASTM E 96.
3. Durability: Maximum 5 percent loss of water repellency after 2500 hours of weathering in comparison to specimens before weathering, ASTM G 53.
4. Permeability: Minimum 80 percent breathable in comparison of treated and untreated specimens, ASTM D 1653.

B. Appearance: When compared visually to an untreated sample under same lighting conditions, the sealer shall not change the color and sheen of the coated substrate and shall be invisible after application and over the life of the building.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Obtain the services of a factory-authorized technical service representative, from the sealer manufacturer, to inspect and approve the substrates before application and to instruct the applicator on the product and application method to be used.
B. Verify that slabs to be sealed are clean, dry and free of dust, dirt, oil, grease and other foreign material that would affect the application and performance of the sealer.
C. Correct detrimental conditions before proceeding with installation.

3.2 PROTECTION

A. Protect adjacent work, including sealant bond surfaces, from spillage or blow-over of sealer.

3.3 APPLICATION

A. Test application:
   1. Before performing this work, including bulk purchase and delivery of products, prepare a small application in an unobtrusive location and in a manner approved by Architect to demonstrate the final effect (visual, physical, and chemical) of planned application.
   2. Proceed with work only after Architect review of test application.

B. Sealer shall be applied by manufacturer-approved applicators using recommended methods and equipment. Do not exceed the application rate recommended by the manufacturer.
C. Do not dilute concrete densifier and chemical hardener.
D. Fresh Concrete
   1. Apply undiluted concrete densifier and chemical hardener as soon as concrete is firm enough to work on after final troweling.
   2. Apply undiluted concrete densifier and chemical hardener at approximately 650 - 800 ft.2/gal. using a low-pressure sprayer.
   3. Do not allow material to puddle on the surface.

3.4 FIELD QUALITY CONTROL

A. The Owner may employ a testing agency to test the in-place sealer in compliance with standards specified.
B. The Owner will pay cost of test, except when test discloses that the sealer tested does not comply with these Specifications; the Contractor shall pay subsequent retests until application meets Specifications requirements.
C. In the event test shows that the sealer is deficient, apply additional sealer.
D. Repetition of the above procedure on all previously treated surfaces will be at Contractor's expense.

3.5 CLEANING

A. Clean sealer from adjacent surfaces immediately after spillage.
B. Comply with manufacturer’s recommendations for cleaning.

END OF SECTION

SECTION 03 54 16 - SELF-LEVELING CEMENTITIOUS UNDERLAYMENT

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes self-leveling cementitious underlayment where monolithic concrete floor slabs to be covered by a finish material do not comply with the tolerances specified either in Section 03 30 00 or the Sections where the floor finishes are specified.
B. Related Requirements: Division 03 for structural concrete.

1.2 SUBMITTALS

A. Data: Manufacturer Product Data for product proposed for use.
B. Tests: Test results as specified below.

1.3 QUALITY ASSURANCE

A. Installer qualifications: Licensed and approved in writing by the underlayment manufacturer.
B. Sample panel:

1. Provide, on a floor slab at the job site, a 10-foot square Sample panel of the cementitious underlayment to demonstrate texture of finish surface and test levelness of finish assembly.
2. Make such modifications as necessary to achieve a Sample panel satisfactory to the Architect or remove and construct additional Sample panel(s).
3. Approved Sample panel may remain in place shall serve as the standard for the same work on the building.

1.4 HANDLING

A. Deliver materials in their unopened packages and protect them from extreme temperatures and moisture.

1.5 JOB CONDITIONS

A. Do not place underlayment when the floor is covered with standing water or if surface temperature is 50 degrees or below.
B. Follow these Specifications and the self-leveling underlayment manufacturer's instructions for placing, finishing, curing and protecting self-leveling underlayment when the conditions require hot weather installation.

PART 2 - PRODUCTS

2.1 MANUFACTURER/MATERIALS

A. Ardex, Inc., Ardex K-15” (basis of design.)
B. Atlas Tech Products “Tech-Level Premier.”
C. Mapei “UltraPLan 1.”
D. Dayton “Levelayer 1.”
E. Tec Specialties “Level Set 300.”

2.2 MATERIALS

A. Cementitious material: Ardex K-15, with total binder of 80 percent cement binder per ASTM C 114.
B. Aggregate: Well-grade, washed gravel for use when underlayment is installed thicker than 1-1/2 inch.
C. Water: Fresh, potable and not warmer than 70 degrees F.
D. Primer: Ardex P-51.
E. Feather edge skim finish: Ardex “Feather Finish.”

2.3 MIX DESIGN

A. As recommended by the underlayment manufacturer’s instructions to obtain a homogenous concrete mass that will flow freely, self-level and screed to a smooth, even surface within the tolerance specified, and shall meet the following:

1. Minimum compressive strength: 4,000 psi at 28-day when tested in accordance with ASTM C 109 MOD.
2. Minimum flexural strength: 1,000 psi at 20-day when tested in accordance with ASTM C 348.

PART 3 - EXECUTION

3.1 EXAMINATION/PREPARATION

A. Verify conditions affecting the work of this Section at the site.
B. Correct detrimental conditions before proceeding with installation.
C. General: Prepare and clean substrate according to manufacturer's written instructions.

1. Treat nonmoving substrate cracks according to manufacturer's written instructions to prevent cracks from telegraphing (reflecting) through underlayment.
2. Fill substrate voids to prevent underlayment from leaking.

D. Concrete Substrates: Mechanically remove, according to manufacturer's written instructions, laitance, glaze, efflorescence, curing compounds, form-release agents, dust, dirt, grease, oil, and other contaminants that might impair underlayment bond.

1. Moisture Testing: Perform tests so that each test area does not exceed [200 sq. ft. (18.6 sq. m)] [1000 sq. ft. (304.8 sq. m)] <Insert area>, and perform no fewer than three tests in each installation area and with test areas evenly spaced in installation areas.

a. Anhydrous Calcium Chloride Test, ASTM F1869: Proceed with installation only after substrates do not exceed a maximum moisture-vapor-emission rate of [3 lb of water/1000 sq. ft.] <Insert value> in 24 hours.
b. Relative Humidity Test: Using in situ probes, ASTM F2170. Proceed with installation only after substrates have a maximum [85] <Insert number> percent relative humidity level measurement, or as recommended by hydraulic cement underlayment manufacturer.

E. Wood Substrates: Mechanically fasten loose boards and panels to eliminate substrate movement and squeaks. Sand to remove coatings that might impair underlayment bond and remove sanding dust.

1. Install underlayment reinforcement recommended in writing by manufacturer.

3.2 PLACEMENT

A. General: Mix and apply underlayment components according to manufacturer's written instructions.

1. Close areas to traffic during underlayment application and for time period after application recommended in writing by manufacturer.
2. Coordinate application of components to provide optimum adhesion to substrate and between coats.
3. At substrate expansion, isolation, and other moving joints, allow joint of same width to continue through underlayment.

B. Prime subfloor leaving no bare spots.
C. Install screeds as recommended by manufacturer and as required to meet tolerance specified below. Set screeds with a laser level.

1. Set screeds so that the minimum thickness of underlayment will be at least 1/8 inch.
2. Where underlayment covers only a small area, grind, chisel and undercut slab, if required, so that the minimum thickness will not be less than 1/8 inch.

D. Place the underlayment in accordance with its manufacturer's instructions in one continuous operation without cold joints. Screed to required level suitable to receive finish flooring materials.
E. Finish underlayment so that it contacts a 10-foot straightedge with a tolerance not exceeding the following at any location:

1. One-sixteen inch under wood flooring.
2. One-eight inch elsewhere.

3.3 PROTECTING/PATCHING

A. Do not permit traffic on the underlayment until it has developed sufficient strength to withstand traffic without damage (minimum of 24 hours).
B. Patch damaged surfaces flush with adjacent areas in accordance with manufacturer's recommendations.

3.4 FIELD QUALITY CONTROL

A. The Contractor shall have 2-inch cubes tested by a reputable and recognized testing laboratory, in accordance with ASTM C 109 MOD., to determine compliance with compressive strength specified.

END OF SECTION

DIVISION 04
MASONRY

SECTION 04 22 00 - CONCRETE UNIT MASONRY

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Concrete masonry units.
2. Reinforcing steel.
3. Mortar, grout and grouting.
4. Bolts, anchors, hardware, metal frames, and other insert items.

B. Related Requirements:

1. Division 01 - General Requirements.
2. Section 03 10 00 - Concrete Forming and Accessories.
3. Section 03 20 00 - Concrete Reinforcing.
4. Section 03 30 00 - Cast-In-Place Concrete.
5. Section 05 12 00 - Structural Steel Framing.
6. Section 08 11 13 - Hollow Metal Doors and Frames.

1.02 REFERENCES

A. American Society for Testing and Materials International (ASTM):

1. ASTM A307 - Standard Specification for Carbon Steel Bolts and Studs, 60 000 PSI Tensile Strength.
2. ASTM C90 - Standard Specification for Load Bearing Concrete Masonry Units.
3. ASTM C94 - Standard Specification for Ready-Mixed Concrete.
4. ASTM C140 - Standard Test Methods for Sampling and Testing Concrete Masonry Units and Related Units.
5. ASTM C144 - Standard Specification for Aggregate for Masonry Mortar.
6. ASTM C150 - Standard Specification for Portland Cement.
7. ASTM C207 - Standard Specification for Hydrated Lime for Masonry Purposes.
8. ASTM C270 - Standard Specification for Mortar for Unit Masonry.

9. ASTM C404 - Standard Specification for Aggregates for Masonry Grout.

10. ASTM C426 - Standard Test Method for Linear Drying Shrinkage of Concrete Masonry Units.

11. ASTM C476 - Standard Specification for Grout for Masonry.

12. ASTM C780 - Standard Test Method for Preconstruction and Construction Evaluation of Mortars for Plain and Reinforced Unit Masonry.

13. ASTM C1019 - Standard Test Method for Sampling and Testing Grout.

14. ASTM C1314 - Standard Test Method for Compressive Strength of Masonry Prisms.

15. ASTM C1586 – Standard Guide for Quality Assurance of Mortars.

B. Masonry Standards Joint Committee (MSJC), the Masonry Society (TMS), American Concrete Institute (ACI) and American Society of Civil Engineers (ASCE).

1. TMS 602/ACI 530.1/ASCE 6 – Specification for Masonry Structures.

2. TMS 402/ACI 530/ASCE 5 – Building Code Requirements for Masonry Structures.

1.03 SUBMITTALS

A. Mix Design: Submit grout and mortar mix designs. Mix designs shall be signed and sealed by a Civil or Structural Engineer registered in the State of California.

B. Product Data: Submit manufacturer's Product Data for assembly components, materials, and accessories. Submit certificates and data assuring that the proposed materials meet the specified ASTM standards.

C. Samples: Submit Samples for each type of required masonry unit, including reinforcement and accessories.

D. Shop Drawings: Indicate wall reinforcement, splice locations and bending diagrams.

E. Admixtures: Additives and admixtures to mortar and grout shall not be used unless approved by the enforcing agency. Submit product data for any proposed admixture.

1.04 REGULATORY REQUIREMENTS

A. Perform the Work in accordance with CBC, Chapter 21A.

B. Comply with requirements of TMS 602.

1.05 QUALITY ASSURANCE

A. Concrete Masonry Units:

1. Notify the testing laboratory a minimum of 45 days in advance of installing concrete unit masonry, to allow for preconstruction testing of the units.

a. Units will be sampled and tested in accordance with ASTM C140 for compressive strength, absorption and moisture content.

b. Units will be sampled and tested in accordance with ASTM C426 for linear drying shrinkage.

2. The material testing laboratory shall receive concrete masonry unit specimens for testing from masonry unit manufacturer. Number of specimens shall be as indicated in referenced ASTM standard tests. Testing laboratory will perform and send test results to the ARCHITECT and Project Inspector.

B. Portland Cement: Submit certification from the cement manufacturer that the cement proposed for use on the project has been manufactured in accordance with ASTM C150. Certification shall include test results made on cement samples during production.

C. Mortar and Grout Tests: Prior to the beginning of masonry work, mortar and grout will be tested, unless prism tests will be performed as indicated below.

1. Mortar: Shall conform to ASTM C270 Table 2 for Type S mortar.

a. Provide qualifications of mortar as meeting ASTM C270 at the beginning of the job and whenever mix design is changed.

b. Mortars will be evaluated during preconstruction and tested during construction for proportioning or compressive strength in accordance to ASTM C780.

2. Grout: Shall conform to ASTM C476, and will be tested in accordance with ASTM C1019. Compressive strength shall equal or exceed specified compressive strength (*f'm*) at 28 days, but not less than 2,000 psi.

a. Ready-Mix Grout: Grout manufacturer shall furnish batch ticket information in accordance to ASTM C94.

D. Prism Test: The compressive strength of concrete masonry will be determined by the prism test method prior to the start of construction and during construction.

E. Masonry Core Testing: Core testing will be performed in accordance with CBC, Section 2105A.4.

F. Inspection During Installation: A special inspector will continuously observe the installation of reinforced masonry. The Project Inspector shall be responsible for monitoring the work of the special inspector and testing laboratories to ensure that the testing program is satisfactorily completed.

G. OWNER will be responsible for the costs of original tests and inspection.

1.06 DELIVERY, STORAGE AND HANDLING

A. Store units above grade on level platforms or pallets, in a dry location.

B. Store cementitious materials and aggregates in such a manner as to prevent deterioration or intrusion of foreign matter or moisture.

C. Handle units on pallets or flat bed barrows. Free discharge from conveyor units or transportation in mortar trays is not permitted.

PART 2 - PRODUCTS

2.01 MATERIALS

Pool Building: 50% burnished blocks and 50% Precision blocks, color per architectural drawings.

A. Concrete Unit Masonry: Modular **medium** weight conforming to ASTM C90, hollow load-bearing concrete unit masonry. Masonry units shall meet the minimum compressive strength requirements of ASTM C90, or as indicated on project drawings, whichever is greater.

1. Concrete masonry unit sizes shall be as indicated on the drawings.

2. Provide open-end units at walls to be fully grouted.

3. Provide closed-end units at walls and at openings where ends will be exposed in finish Work; provide bond beam blocks where horizontal reinforcement is indicated.

4. Provide special shapes and accessory units at locations indicated on Drawings.

5. Provide units in colors and textures as indicated in the drawings.

6. Masonry unit shall have been cured for a minimum of 28 days.

7. Masonry unit shall have maximum liner shrinkage of 0.065 percent from saturated to oven dry.

B. Portland Cement: ASTM C150, Type II, from one source.

C. Hydrated Lime: ASTM C207, Type S.

D. Aggregates: ASTM C144 for mortar and ASTM C404 for grout.

E. Mortar: ASTM C270, Type S, conforming to the property specifications of CBC Table 2103A.8 (2).

F. Grout: ASTM C476.

G. Admixture for Grout: Grout Aid, as manufactured by Sika Chemical Corp., or equal.

H. Water: Clean, potable, free from substances deleterious to mortar, grout or reinforcement.

I. Reinforcing Steel: Provide and install reinforcing steel in accordance with Section 03 20 00 - Concrete Reinforcing.

J. Cleaning Materials: Sure Klean No. 600 detergent by ProSoCo.

K. Miscellaneous Materials: As required to complete the Work.

L. Anchor Bolts: Shall be hex headed bolts conforming to ASTM A307 Grade A with the dimensions of the hex head conforming to ANSI/ASME B18.2.1.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Discard units with cracks or other defects not complying with requirements of ASTM C 90.

3.02 CONSTRUCTION

A. Construct per applicable provisions of CBC and TMS 602.

B. Conform to TMS 602 for hot and cold weather masonry construction.

3.03 MORTAR AND GROUT MIXING

A. Mortar: Shall provide a minimum strength of 1,800 psi.

B. Grout: Shall provide a minimum strength of 2,000 psi or as indicated in the drawings, whichever is higher. Grout space requirements for coarse and fine grouts shall be per Table 7 of TMS 602. Add Sika Chemical Corp. Grout Aid per manufacturer's instructions.

C. Measurements: Measure in calibrated devices that can be checked at any time.

1. Add water for workable consistency.

2. Shovel measurements are not permitted.

D. Mixing: Mix in accordance to TMS 602.

1. Mortar: Mix cementitious materials and aggregates between three and five minutes in a mechanically operated mixer. Mix dry ingredients with a sufficient amount of water to provide a workable mix. Batches of less than one sack of cement, and fractional sack batches are not permitted.

2. Factory Blended Mortar: Mix in accordance with manufacturer's recommendations.

3. Grout: Add sufficient water for a workable mix that will flow into all voids of the masonry without separation or segregation. Grout slump shall be between 8 and 11 inches.

E. Re-tempering Time Limit: Use mortar within 2 ½ hours after mixing. Discard any mortar that has been mixed longer or that has begun to set. If necessary re-temper within this time limit, by replacing only water lost due to evaporation and by thoroughly remixing.

3.04 INSTALLATION OF MASONRY UNITS

A. Workmanship: Install masonry plumb and true to line with straight level joints of uniform thickness. Comply with TMS 602 tolerances. Maintain masonry clean during and after installation.

1. Lay-out and incorporate embedded hardware items.

2. Assist other trades with built-in items, which require cutting and fitting of masonry.

3. Cut block units with a diamond saw or carborundum wheel. Trowel or chisel cutting is not permitted.

4. Keep cavities clear of droppings and debris. Remove droppings prior to grouting.

B. Reinforcing Steel: Install as indicated on Drawings. Except as otherwise indicated, install reinforcement in accordance with standards of Concrete Reinforcing Steel Institute and to requirements specified in Section 03 2000 - Concrete Reinforcing. Do not splice vertical reinforcement except where indicated on the Drawings.

C. Shoring: Provide temporary shoring for lintels with sufficient strength to carry load without deflecting. Remove temporary shoring not less than 28 days after masonry has been installed.

D. Block Installation: Clean dirt and dust from surfaces before installation. Do not wet masonry units.

1. Foundation preparation: Clean top surface of concrete foundation of dirt, projections and laitance before starting masonry construction. Wet saw cutting of units immediately prior to laying is permitted.

2. Install masonry with mortar to required joint thickness. Install blocks with 3/8-inch mortar bed. Fill head joints solid, install tightly to adjoining units. Provide 3/8-inch joint thickness.

a. Hold racking to a minimum.

b. No toothing is permitted.

c. If it becomes necessary to move a unit after it has been installed, remove the unit, discard the mortar, and install the unit in fresh mortar.

3. Anchor Bolts:

a. Provide 1/2-inch minimum grout space between bolts and masonry

b. Provide 1-inch minimum grout all around embeded anchor.

4. Bond: Unless otherwise indicated, install units in common running bond.

5. Finish Joint Treatment: Unless otherwise indicated, cut both interior and exterior joints flush, and tool slightly concave to a dense, uniform surface.

6. Grouting: Unless noted otherwise on Drawings, completely fill cells with grout.

E. Steel Door Frames:

1. Locate door frames accurately, install plumb, Set frames to floor with powder driven or expansion anchors to floor surface and brace in position before start of masonry installation.

    a. Frames are specified to be furnished with adjustable anchors.

    b. Fill interior of frames solid with mortar or grout as walls are constructed.

2. Provide temporary wood spreaders from jamb to jamb and from head to floor to ensure that jambs do not bow-in, distort from a straight line, or deflect from superimposed loads during construction.

3.05 GROUTING

A. Prior to grouting all cells shall be cleaned so that all spaces to be filled with grout do not contain mortar projections greater than 1/4 inch, loose mortar or foreign material.

B. Grout materials and water contents shall be controlled to provide adequate fluidity for placement without segregation of the constituents, and shall be mixed thoroughly. Reinforcement shall be properly positioned and solidly embedded in the grout.

C. The grouting of any section of wall shall be completed in one day with no interruptions greater than one hour.

D. Between grout pours, a horizontal control joint shall be formed by stopping all wythes at the same elevation and with the grout stopping at 1 ½ inches below a mortar joint, except at the top of the wall. Where bond beams occur, the grout pour shall be stopped a minimum of ½ inch below the top of the masonry.

3.06 LOW-LIFT GROUTING FOR HOLLOW MASONRY UNITS

A. Grouting shall meet the requirements of CBC Section 2104A.1.3.

B. After mortar joints have set, cells are cleaned of mortar and debris, and reinforcement is installed and inspected, grout cells in 4-foot maximum lifts. Horizontal and vertical reinforcement shall be held in place within permitted tolerances by suitable devices.

C. Grout may be installed by pump, tremie or bucket, using hoppers to avoid spilling on exposed surfaces.

D. All grout shall be consolidated and reconsolidated with a mechanical vibrator after placing so as to completely fill all voids and to consolidate the grout. Grouted walls shall be solid and without voids.

3.07 HIGH-LIFT GROUTING OPTION FOR HOLLOW MASONRY UNITS

A. Grouting shall meet the requirements of CBC Section 2104A.1.3 and DSA IR 21-2.

B. High-lift grouting shall apply only to cell sizes available with 8 inch and wider block units. This method is subject to approval of the Division of the State Architect (DSA).

C. Provide bond beam units, inverted for start course, and omit alternate blocks or remove entire face shell of every other unit to allow access to all cells on bottom course for cleanouts.

D. Plug each cleanout by setting a face shell in mortar into opening and securely bracing it in place to prevent displacement. If masonry is not exposed in finish Work, cleanouts may be formed.

E. Grouting: Grouting shall be done in a continuous pour in lifts not exceeding 5-foot in height. The grouting of any section of a wall between control barriers shall be completed in one day, with no interruptions greater than one hour.

F. Consolidating: Grout shall be consolidated by mechanical vibration only, and shall be reconsolidated after excess moisture has been absorbed, but before plasticity is lost. Vibrating of reinforcing steel is not permitted.

3.08 CURING

A. Remove efflorescence, stains, debris, excess grout, and foreign matter.

B. During curing, or for any other purpose, do not saturate masonry with water.

3.09 PARGE COAT

A. Apply parge coat to the earth side of surfaces that are to receive waterproofing.

B. A Portland cement and sand mix (1:3.5 by volume) or Type S mortar may be used for the parge coat.

C. Parging should be applied to damp (not saturated) concrete masonry in two 1/4 inch thick layers. The first coat should be roughened when partially set, hardened for 24 hours, and then moistened before second coat is applied. The second coat should be trowelled to a smooth, dense surface.

D. The parge coat should be beveled at the top to form a wash, and thickened at the bottom to form a cove between the base of the wall and the top of footing.

3.10 CLEANING

A. At completion of masonry Work, remove misplaced mortar, grout or other foreign substances, and clean surfaces which will be exposed in finish Work with specified cleaner, or with clean water and stiff fiber brushes.

B. Remove rubbish, debris, and waste materials and legally dispose of off the Project site.

3.11 PROTECTION

A. Protect the Work of this section until Substantial Completion.

END OF SECTION

DIVISION 05
METALS

SECTION 05 05 12 - HOT DIP GALVANIZING

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:

1. Surface preparation and zinc galvanic coatings applied in the shop or factory to surfaces of iron and steel installed at exterior locations and either totally or partially exposed to weather, humidity, moisture or precipitation; and elsewhere as indicated.
2. Repair of damaged galvanic coatings.

1.2 ADMINISTRATIVE REQUIREMENTS

A. Scheduling and sequencing.
B. Preinstallation meeting:

1. Arrange for a preinstallation meeting between the Contractor, Architect, fabricator and galvanizer, to be held at least 2 weeks prior to the start of surface preparation and galvanizing to review galvanizing methods and processes.
2. Review Project schedule, scope of work indicated to be galvanized, coordination between fabricator and galvanizer, scheduled finish, application of coatings, submittals and approvals.
3. Review fabricator's Shop Drawings to verify steel chemical composition suitability to receive zinc coating and to evaluate whether proposed fabrication methods will result in components and accessories that are suitable for galvanizing. Identify conditions that would be unsuitable for galvanizing, or that would require special processing techniques, and coordinate required fabrication modifications.
4. Review procedures to be followed in order to provide proper protection and touchup of zinc coatings during and after installation of components and accessories. Determine and reach agreement on the maximum aggregate galvanized coating area and maximum local damage size permitted to be repaired, whether in the shop or field, in compliance with the renovation guidelines of ASTM A 123.
5. Identify potential concerns during the galvanizing process, including handling issues that may require design modification before galvanizing proceeds.
6. Record minutes of the meeting, decisions made and corrective measures to be taken before galvanizing starts. Send copy of the minutes to the Architect no later than 3 days following the meeting.

1.3 SUBMITTALS

A. Submittals:

1. Shop Drawings: Submit galvanizing schedule indicating material category, material thickness and minimum coating grade mil thickness for each item to be galvanized.
2. Samples: Submit three 12-inch square Samples for flat work, and three 12-inch long Samples for each type of linear work, showing full range of spangle variation and general appearance to be expected in the Work.

3. Certificates: Upon completion of the Work, submit certificate signed by the galvanizer stating that coated items have been hot dip galvanized in compliance with the specified requirements.

    a. Indicate ASTM standard used for the hot dip galvanized coating, and certify coating meets or exceeds that ASTM standard's minimum requirements.
    b. Provide detailed description of the material processed and of quenching, if any.

1.4 QUALITY ASSURANCE

A. Galvanizer's qualifications: Firm and individuals with a minimum of 5 consecutive years' experience in the preparation of surfaces and the application of hot dip galvanized coatings for projects similar in material, design, complexity and extent to this Project, and whose work has resulted in applications with a record of successful in-service performance.
B. Follow the procedures in the Quality Assurance Manual of the American Galvanizers Association
C. Coordination Between Fabricator and Galvanizer: Prior to fabrication, fabricators shall submit approved fabrication shop drawings to the galvanizer. The Galvanizer shall review fabricator'' shop drawings for suitability of materials for galvanizing and coatings and coordinate any required fabrication modifications.

1.5 HANDLING

A. Handle all articles to be galvanized to avoid mechanical damage.
B. Storage:

    1. Load and store galvanized products to prevent formation of wet storage film.
    2. Wet storage stain:

        a. When galvanized articles are packed loosely together for periods of time, take adequate precautions against wet storage stain. Minimize wet storage stains by maintaining a low humidity environment around the material and by providing adequate ventilation between stacked pieces.
        b. If outdoor stacking is unavoidable, raise the articles from the ground and separate with strip spacers to provide air circulation to all surfaces of the galvanized piece.
        c. Incline to provide maximum drainage.
        d. Do not leave uncovered material standing where it may be exposed to rain, mist, condensation, and frost.

C. If galvanized components must be stacked or stored in humid environments, apply an after-galvanized treatment to inhibit wet storage stain.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Zinc: ASTM B 6, Prime Western (PW) Grade.

B. Bath composition: ASTM 123.

2.2 ACCESSORIES

A. Galvanizing repair solder:

1. Description: Lead-free high zinc content solder formulated specifically for repairs to galvanized steel surfaces.
2. Products: Provide one of the following.

a. “All-State Galvover” by ESAB.
b. “Galvanizing Solder” by Belmont Metals.
c. “Galvanite” by Kapp Alloy & Wire, Inc.
d. “Zaclon Alloy Repair Rod” by Zaclon, Inc.

B. Galvanizing repair paint: “94-H20 Hydro-Zinc” by Tnemec Co., or equal by Valspar Corp., Devoe Coatings, ZRC Worldwide, or Ameron Protective Coating Division.

2.3 FABRICATION

A. Fabricate structural steel in accordance with Class I, II, III guidelines as described in AGA's Recommended Details for Galvanized Structures.
B. Fabrication practices for products to be in accordance with the applicable portions of ASTM A 143, A 384, and A 385, except as specified herein. Avoid fabrication techniques that could cause steel distortion or embrittlement.
C. Fabricator shall consult with architect/engineer and hot-dip galvanizer regarding potential concerns, including handling issues, during the galvanizing process that may require design modification before fabrication proceeds.
D. Remove all welding slag, splatter, anti-splatter compounds and burrs prior to delivery for galvanizing.
E. Provide holes and/or lifting lugs to allow for handling during galvanizing.
F. Place vent holes where they will drain by gravity in the finished assembly. Plug vent holes with lead or silicone sealant after galvanizing.
G. Avoid unsuitable marking paints. Consult with the galvanizer about removal of grease, oil, paint and other deleterious material prior to fabrication.
H. Remove by blast-cleaning, or other methods, surface contaminants and coatings that are not removable by the normal chemical cleaning process in the galvanizing operation.

2.4 FINISHES

A. Appearance: Bright minimized spangle zinc (galvanized) finish.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine conditions affecting the work of this Section.
B. Consult with Architect and fabricator regarding potential concerns during the galvanizing process, including handling issues that may require design modification before galvanizing proceeds.
C. Correct detrimental conditions before proceeding with installation.
D. Reject excessively pitted and rusted components.

3.2 SURFACE PREPARATION

A. Remove oil, organic materials, mill primers, paint, crayon marks, grease or oil-based marks, and similar materials from metal before galvanizing. When directly identifying an item to be galvanized, provide an identification tag (preferred), or mark component on a surface that will be concealed in the Work, by stamping or with a seep stencil.
B. Pre-clean iron or steel with an alkaline cleaner, then acid pickle and flux; or blast-clean and flux (recommended method of processing high strength steels for galvanizing to avoid hydrogen embrittlement). The flux treatment must be a separate bath (dry kettle galvanizing).
C. Follow procedures outlined in ASTM A 1430 to safeguard against and test for possible embrittlement.

3.3 GALVANIZING

A. Comply with the American Galvanizing Association publication “The Design of Products to be Hot Dip Galvanized After fabrication,” and the following.
B. Coating application:

1. Galvanize non-fabricated materials, fabricated components and assembled steel items in compliance with ASTM A 123.
2. Galvanize castings and hardware items including bolts, nuts, washers and similar threaded fasteners, in compliance with ASTM A 153.
3. Safeguard products against steel embrittlement in conformance with ASTM A 143.
4. Handle all articles to be galvanized in such a manner as to avoid any mechanical damage and to minimize distortion.

C. Coating thickness: Produce galvanized items having continuous, reasonably smooth and uniformly thick zinc coating.

1. Comply with the requirements of ASTM A 123 Table 2 for minimum coating thickness grade, as determined by material category and material thickness indicated in Table 1.
2. When galvanizing assemblies of components of varying material category and material thickness, provide minimum coating thickness grade for all members equal to or exceeding the maximum highest material category coating grade.
3. Allow for thickness of coating in threaded items.
4. Excessive dross, rough surfaces, blisters, lumpiness, runs, edge tears and spikes are not acceptable.

D. Use caution to avoid warpage and distortion in the galvanized assemblies:

1. Assemblies constructed of sheets or plates from 20-gage to 1/4-inch thick assembled by welding or riveting to bar-size shapes, angles. Channels, Tees, etc., commonly distort and warp and shall not be provided for the Project.
2. Warpage is accentuated by use of nonsymmetrical sections such as channels. Channels require straightening after galvanizing. Avoid using channels and other nonsymmetrical sections for the framework of a sheet metal assembly to be hot-dip galvanized where symmetrical shapes or sections can be used.
3. The use of wide radii bends in corners is recommended for sheet metal work.
4. Avoid unequal thickness of metal wherever possible due to the different rates of heating and cooling during the galvanizing operation and the effect of unequal expansion and contraction.
5. Continuously weld joints using balanced welding techniques to reduce uneven thermal stresses.
6. Provide temporary bracing and/or reinforcing to minimize or prevent warpage and distortion during galvanizing.
7. Seal welds to prevent moisture penetration in the welded joint.

E. Coating Appearance: Provide minimized spangled zinc coating. Coated surface for components such as handrails shall be smooth and without pits, craters, dross and other imperfections.

3.4 QUENCHING

A. Items scheduled to receive paint or coating:

1. Do not water-quench galvanized items scheduled to be painted immediately after galvanizing.
2. Do not chromate-quench galvanized items scheduled to be painted.
3. Do not phosphate-quench galvanized items scheduled to receive zinc-rich paint.

B. Items scheduled to remain uncoated: If required to prevent wet storage staining, quench freshly galvanized steel in a passivating solution.

3.5 REPAIR/RESTORATION

A. Repair areas damaged by welding, flame cutting or during handling, transport or erection by one of the approved methods in accordance with ASTM A 780 whenever damage exceeds 3/16-inch in width. Minimum thickness requirements for the repair are those described in ASTM A 123, Section 6.2.
B. Exposed-in-service galvanized surfaces scheduled to remain unfinished: Apply galvanizing repair solder in compliance with method specified in ASTM A 780, Annex A1.
C. Both concealed-in-service galvanized surfaces scheduled to remain unfinished and exposed galvanized surfaces scheduled to receive a field-applied coating: Apply galvanizing repair paint in compliance with method specified in ASTM A 780, Annex A2, to a minimum DFT of 8 mils, and overlapping undamaged area at least 2 inches.

3.6 FIELD QUALITY CONTROL

A. Tests and Inspection: Perform inspection and testing of zinc coatings under the guidelines outlined in the American Galvanizer's Association (AGA) publication "Inspection of Products Hot Dip Galvanized After Fabrication."

1. Take thickness measurements with either a magnetic, electromagnetic, or eddy-current gage to ensure the applied zinc coating is as specified.
2. Determine whether zinc coating thickness on metal surfaces conforms to the minimum specified levels.
3. Re-coat non-conforming work.

3.7 PROTECTION

A. When galvanized items will be packed loosely together for periods of time, take adequate precautions to prevent wet storage stain by providing adequate ventilation between stacked items and by maintaining a low-humidity environment around galvanized material.
B. If outdoor stacking is unavoidable, store galvanized items off the ground and provide strip spacers in order to separate items and to provide air circulation around all surfaces of galvanized items.

1. Incline galvanized items to provide maximum drainage.
2. Do not leave galvanized items uncovered where they may be exposed to rain, mist, high humidity, condensation, or frost.

END OF SECTION

SECTION 05 12 00 - STRUCTURAL STEEL FRAMING

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Structural steel.
2. Architecturally exposed structural steel.

B. Related Requirements:

1. Division 01 - General Requirements.
2. Section 03 30 00 - Cast-In-Place Concrete.
3. Section 04 22 00 - Concrete Unit Masonry.
4. Section 05 05 13 – Hot-Dip Galvanizing.
5. Section 05 30 00 - Metal Decking.
6. Section 05 50 00 - Metal Fabrications.
7. Section 05 52 00 – Steel Railings.
8. Section 09 90 00 - Paints and Coatings.

1.03 REGULATORY REQUIREMENTS

A. Structural steel shall conform to CBC requirements, except that steel manufactured by acid Bessemer process is not permitted for structural purposes.

B. Sheet and strip steel other than those listed in CBC, if provided for structural purpose, shall comply with DSA requirements.

1.04 SUBMITTALS

A. Shop Drawings: Submit Shop Drawings, including complete details and schedules for fabrication and shop assembly of members, and details, schedules, procedures and diagrams showing the sequence of erection. Fully detail minor connections and fastenings not shown or specified in the Contract Documents to meet required conditions using similar detailing as shown in the Contract Documents. Include a fully detailed, well controlled sequence and technique plan for shop and field welding that minimizes locked in stresses and distortion; submit sequence and technique plan for review by the ARCHITECT.

1. Include details of cuts, connections, camber, and holes in accordance with Figure 4.5 of AWS D1.1 or AISC Chapter J, weld position plan and other pertinent data. Indicate welds by standard AWS symbols, and show size, length and type of each weld.

2. Provide setting drawings, templates, and directions for installation of anchor bolts and other anchorages to be installed for Work specified in other sections.

3. Erection and Bracing Plan and Erection Procedure: Submit an erection and framing plan, including columns, beams, and girders, signed and sealed by a Structural or Civil Engineer registered in the State of California in accordance with Title 8 California Code of Regulations, Section 1710, Structural Steel

Erection. Maintain a copy at the Project site as required by the California Division of Industrial Safety.

4. Submit a list of steel items to be galvanized.

5. Include identification and details of Architecturally Exposed Structural Steel (AESS) members, if applicable.

B. Product Data: Submit copies of fabricator's specifications and installation instructions for the following products. Include laboratory test reports and other data required demonstrating compliance with these Specifications:

1. Structural steel, each type; including certified copies of mill reports covering chemical and physical properties.

2. Welding electrodes.

3. Welding gas.

4. Unfinished bolts and nuts.

5. Structural steel primer paint.

6. High-strength bolts, including nuts and washers.

C. Manufacturer's Mill Certificate: Submit, certifying that products meet or exceed specified requirements.

D. Mill Test Reports: Submit manufacturer's certificates, indicating structural yield and tensile strength, destructive and non-destructive test analysis.

E. Charpy-V-Notch (CVN) Impact Test: Submit certified copies of Charpy-V-Notch (CVN) Impact Test by the manufacturer for applicable steel members and components.

1. Charpy-V-Notch (CVN) Impact Test for Base Metal: Moment frame columns and girders subjected to Charpy-V-Notch impact test in accordance with "Seismic Provisions for Structural Steel Buildings", Part I, Section 6.3, as modified by Supplement 1.

2. Charpy-V-Notch test shall be performed by the manufacturer employing Test Frequency (P) in accordance with ASTM A673 and utilizing standard specimen sizes shown in Figure 6 of ASTM E23.

F. Submit certified copies of tests by manufacturer for fine grain practice. Structural steel base material, as described above, shall be manufactured to be fully killed and fine grained having grain size number 5 or better as determined by ASTM E112.

G. Welding Procedure Specifications (WPS): Submit weld procedures for all welding on project to OWNER's testing laboratory for approval. After approval by testing laboratory, submit to ARCHITECT for Record. Weld procedures shall be qualified as described in AWS D1.5, AISC 341 and AISC 358, as applicable. Weld procedures shall indicate joints details and tolerances, preheat and interpass temperature, post-heat treatment, single or multiple stringer passes, peening of stringer passes for groove welds except for the first and the last pass, electrode type and size, welding current, polarity and amperes and root treatment. The welding variables for each stringer pass shall be recorded and averaged;

from these averages the weld heat input shall be calculated. Submit the manufacturer's product data sheet for all welding material used.

H. Welder's Certificates: Field welders shall be Project certified in accordance with AWS D1.1. Shop welders shall be Project certified for FCAW in accordance with AWS D1.1.

I. Test Reports: Submit reports of tests conducted on shop and field welded and bolted connections. Include data on type of test conducted and test results.

J. Welding Material Certification: Provide certificate that welding material complies with specifications. Submit to OWNER's testing laboratory.

1.05 QUALITY ASSURANCE

A. Comply with the following as a minimum requirement, except as otherwise indicated:

1. American Institute of Steel Construction (AISC) "Code of Standard Practice for Steel Buildings and Bridges, modified as follows:

a. Replace "Structural Design Drawings" with "Contract Documents' throughout the document.

b. Paragraph 3.2 is hereby modified in its entirety as follows: "Contract Documents including but not limited to architectural, mechanical, plumbing, electrical, civil and kitchen design drawings and specifications shall be used as supplement to the structural plans to define configurations and construction information."

c. Delete Paragraph 3.3.

d. In Paragraph 4.4, delete the following sentence: "These drawings shall be returned to the Fabricator within 14 calendar days."

e. Delete Paragraph 4.4.1.(a) in its entirety.

f. Paragraph 4.4.2 is hereby modified in its entirety as follows: "No review action, implicit or explicit, shall be interpreted to authorize changes in the Contract Documents."

2. Perform welding in accordance with AWS Standards, AWS D1.1, and California Building Code Section 2204A.1 and approved Weld Procedure Specifications (WPS).

B. Shop fabrication shall be inspected in accordance with CBC.

C. Erect mock-up panel of fabricated structural steel meeting Architecturally Exposed Structural Steel (AESS) tolerances for exposed areas. Approval by ARCHITECT is required. Mock-up to remain for comparison but may not be left as part of the work.

1.06 DELIVERY, STORAGE AND HANDLING

A. Store structural steel above grade on platforms, skids or other supports.

B. Protect steel from corrosion.

C. Store welding electrodes in accordance with AWS D 12.1.

D. Store other materials in a weather-tight and dry place until installed into the Work.

PART 2 - PRODUCTS

2.01 GENERAL

A. Stock Materials: Provide exact materials, sections, shapes, thickness, sizes, weights, and details of construction indicated on Drawings. Changes because of material stock or shop practices will be considered if net area of shape or section is not reduced thereby, if material and structural properties are at least equivalent, and if overall dimensions are not exceeded.

B. Shapes, bars, plates, tubes and pipes shall be made of materials with at least 16 percent recycled content if produced from Basic Oxygen Furnace (BOF) or at least 67 percent recycled content if produced from Electric Arc Furnace (EAF).

2.02 MATERIALS

A. Structural Steel: Wide flange shapes shall conform to ASTM A992 grade 50. Other steel shall conform to ASTM A36.

B. Unfinished Threaded Fasteners: ASTM A307, Grade A, regular low carbon bolts and nuts.

C. High-Strength Threaded Fasteners: ASTM F3125 or ASTM F959 quenched and tempered, steel bolts, nuts and washers.

D. Primers: Lead-free metal primer:

1. SSPC-Paint 20, Zinc-Rich Coating Inorganic and Organic.

2. SSPC-Paint 23, Latex Primer for Steel Surfaces.

E. Steel Pipe: ASTM A53, Type E or S, Grade B.

F. Structural Tubing:

1. Hot-formed, ASTM A501.

2. Cold-formed, ASTM A500, Grade B.

G. Galvanizing: ASTM A123.

H. Shear stud connectors: ASTM A108, Grade 1015 forged steel, headed, uncoated, granular flux filled shear connector or anchor studs by Nelson Stud Welding Division, or equal.

I. Grout: ASTM C1107, non-shrink type, pre-mixed compound consisting of non-metallic aggregate, cement, water reducing and plasticizing additives, capable of developing a minimum compressive strength of 7,000 psi at seven days; of consistency suitable for application and a 30 minute working time.

2.03 FABRICATION

A. Fabricate in accordance to AISC Code of Standard Practice for Steel Buildings and Bridges and AISC 360.

B. Cleaning and Straightening Materials: Materials being fabricated shall be thoroughly cleaned of scale and rust, and straightened before fabrication. Cleaning and straightening methods shall not damage material. After punching or fabrication of component parts of a member, twists or bends shall be removed before parts are assembled.

C. Cutting, Punching, Drilling and Tapping: Unless otherwise indicated or specified, structural steel fabricator shall perform the cutting, punching, drilling and tapping of Work so that Work of other trades will properly connect to steel Work.

D. Milling: Compression joints depending on contact bearing shall be furnished with bearing surfaces prepared to a common plane by milling.

E. Use of Burning Torch: Oxygen cutting of members shall be performed by machine. Gouges greater than 3/16 inch that remain from cutting shall be removed by grinding. Reentrant corners shall be shaped notch free to a radius of at least 1/2 inch. Gas cutting of holes for bolts or rivets is not permitted.

F. Galvanizing: After fabrication, items indicated or specified to be galvanized shall be galvanized per Section 05 5013, Hot-Dip Galvanizing.

G. Welding:

1. Type of steel furnished in welded structures shall provide chemical properties suitable for welding as determined by chemical analysis. Welds shall conform to the verification and inspection requirements of CBC Chapter 17A. Conform to AWS D1.1, and CBC Chapter 22A.

2. Materials and workmanship shall conform to the requirements specified herein and to CBC requirements, modified as follows:

   a. No welded splices shall be permitted except those indicated on Drawings unless specifically reviewed by the ARCHITECT.

   b. Drawings will designate joints in which it is important that welding sequence and technique be controlled to minimize shrinkage stresses and distortion.

3. Welding shall be performed in accordance with requirements of the AWS Structural Welding Code.

4. Architecturally Exposed Structural Steel: Verify that weld sizes, fabrication sequence, and equipment used for Architecturally Exposed Structural Steel will limit distortions to allowable tolerances. Prevent surface bleeding of back-side welding on exposed steel surfaces. Grind smooth exposed fillet welds ½ inch and larger. Grind flush butt welds. Dress exposed welds.

5. Remove erection bolts on welded, Architecturally Exposed Structural Steel; fill holes with plug welds; and grind smooth at exposed surfaces.

H. Shop Finish:

1. Notify the Project Inspector when Work is ready to receive shop prime coat. Work shall be inspected by the Project Inspector before installation of primer.

2. Structural steel and fittings shall receive a coat of primer, except:

   a. Surfaces that will be galvanized.

   b. Surfaces that will be fireproofed.

   c. Surfaces that will be field welded.

   d. Surfaces in contact with concrete.

   e. Surfaces high strength bolted.

3. The primer specified shall be spray applied, filling joints and corners and covering surfaces with a smooth unbroken film. The minimum dry film thickness of the primer shall be 2.0 mils.

I. Comply with fabrication tolerance limits of AISC's "Code of Standard Practice for Steel Buildings and Bridges" for structural steel.

J. Fabricate Architecturally Exposed Structural Steel with exposed surfaces smooth, square, and free of surfaces blemishes, including pitting, rust and scale seam marks, roller marks, rolled trade names, and roughness.

1. Remove blemishes by filling, grinding, or by welding and grinding, prior to cleaning, treating and shop priming.

2. Comply with fabrication requirements, including tolerance limits of AISC's "Code of Standard Practice for Steel Buildings and Bridges" for Architecturally Exposed Structural Steel.

K. Architecturally Exposed Structural Steel: use special care in unloading, handling and erecting the steel to avoid marking or distorting the steel members. Minimize damage to any shop paint when temporary braces or erection clips are used. Avoid unsightly surfaces upon removal. Grind smooth tack welds and holes filled with weld metal or body solder. Plan and execute all operations in such a manner that the close fit and neat appearance of the structure will not be impaired.

2.04 SHOP AND FIELD QUALITY CONTROL

A. A special inspector, approved by DSA to inspect the Work of this section, shall inspect high-strength bolted connections. OWNER will provide a DSA approved independent testing laboratory to perform tests and prepare test reports in accordance with CBC 1704A. The Project Inspector shall be responsible for monitoring the work of the special inspector and testing laboratories to ensure that the testing program is satisfactorily completed.

B. An AWS certified welding inspector (CWI), approved by DSA to inspect the Work of this section, shall inspect welded connections in accordance with CBC 1705A.2.5. The OWNER will provide a DSA approved independent testing laboratory to perform tests and prepare test reports. The Project Inspector shall be responsible for monitoring the work of the special inspector and testing laboratories to ensure that the testing program is satisfactorily completed.

C. The independent testing laboratory shall conduct and interpret test and state in each report whether test specimens comply with requirements, and specifically state any deviations there from.

D. Provide access to all places where structural steel Work is being fabricated or produced so required inspection and testing can be performed.

E. The independent testing laboratory may inspect or test structural steel at plant before shipment; however, ARCHITECT reserves the right at any time before Contract Completion to deem materials not in compliance with the specified requirements as defective Work.

F. Correct defects in structural Work when inspections and laboratory test reports indicate noncompliance with specified requirements. Perform additional tests as may be required to reconfirm noncompliance of original Work, and as may be required to show demonstrate compliance of corrected Work.

G. Inspection of Structural Tube Steel/Hollow Structural Sections (HSS): Structural tube steel members (round, square, rectangular), disregarding steel origin, will be inspected during shop fabrication per DSA Bulletin 07-03. Inspector will perform a visual examination of the seam weld area for visible discontinuities. When defects are suspected, non-destructive testing will be considered.

H. Welding: Inspect and test during fabrication and erection of structural steel assemblies as follows:

1. Certify welders and conduct inspections and tests as required. Record types and locations of defects found in the Work. Record Work required and performed to correct deficiencies.

2. Inspect welds. Welds shall be visually inspected before performing any non-destructive testing. Groove weld shall be inspected by ultrasonic or other approved non-destructive test methods. Testing shall be performed to AWS D1.1 Table 6.3 cyclically loaded non-tubular connections.

3. Ultrasonic testing shall be performed by a specially trained and qualified technician who shall operate the equipment, examine welds, and maintain a record of welds examined, defects found, and disposition of each defect. Repair and test defective welds.

4. Rate of Testing: Completed welds contained in joints and splices shall be tested 100 percent either by ultrasonic testing or by radiography.

5. Welds, when installed in column splices, shall be tested by either ultrasonic testing or radiography.

6. Base metal thicker than 1 ½-inch, when subjected to through-thickness weld shrinkage strains, shall be ultrasonically inspected by shear wave methods for discontinuities directly behind such welds. Tests shall be performed at least 48 hours after completed joint has cooled down to ambient air temperature.

7. Material discontinuities shall be reviewed based on the defect rating in accordance with the criteria of AWS D1.1 table 6.3 by the ARCHITECT and DSA.

8. Other method of non-destructive testing and inspection, for example, liquid dye penetrate testing, magnetic particle inspection or radiographic inspection may be performed on weld if required.

9. Lamellar Tearing: Lamellar-tearing resulting from welding is a crack (with zero tolerance) and shall be repaired in accordance with AWS D1.1.

10. Lamination: The rejection criteria shall be based on ASTM A435.

11. Where testing reveals lamination or conditions of lamellar tearing in base metal, the steel fabricator shall submit a proposed method of repair for review by the ARCHITECT. Test repaired areas as required.

12. Magnetic Particle Testing: Magnetic particle testing when required shall be provided in accordance with AWS D1.1 for procedure and technique. The standards of acceptance shall be in accordance with AWS D1.1 – Qualification.

I. Lamellar Tearing: Prior to welding plates 1 to 1-½ inch thick and greater and rolled shapes within the distance from 6 inches above the top of the joint to 6 inches below the bottom of the joint shall be checked by ultrasonic testing for laminations in base metal which may interfere with the inspection of the completed joint. Should these defects occur, members will be reviewed by the ARCHITECT and DSA. Welding procedure specifications in paragraph 1.04.G specify welding practices to minimize lamellar tearing.

J. Prior Testing of Base Material: Test material before fabrication.

K. Lines and levels of erected steel shall be certified by a State of California licensed surveyor as set forth in related Division 01 section.

L. Welded studs shall be tested and inspected by the special inspector in accordance with requirements of AWS D1.1 – Stud Welding.

M. Record Drawings: After steel has been erected, correct or revise Shop Drawings and erection diagrams to correspond with reviewed changes performed in the field.

PART 3 - EXECUTION

3.01 PREPARATION

A. Verify governing dimensions and conditions of the Work before commencing erection Work.

1. Report discrepancies between drawings and field dimensions to ARCHITECT before commencing work.

2. Beginning of installation means erector accepts existing conditions and surfaces underlying or adjacent to work of this section.

B. Provide temporary shoring and bracing, and other support during performance of the Work. Remove after steel is in place and connected, and after cast-in-place concrete has reached its design strength.

C. Coordinate prime coat repair and application with requirements of Section 09 9000.

3.02 ERECTION

A. Install structural steel accurately in locations, to elevations indicated, and according to AISC specifications and CBC requirements.

B. Clean surfaces of base plates and bearing plates.

1. Install base and bearing plates for structural members on wedges, shims, or setting nuts as required.

2. Tighten anchor bolts after supported members have been positioned and plumbed. Do not remove wedges or shims; cut off flush with edge of base or bearing plate before packing with grout.

C. Maintain erection tolerances of structural steel within AISC Code of Standard Practice for Steel Buildings and Bridges.

1. Architecturally Exposed Structural Steel members and components, plumbed, leveled and aligned to a tolerance not to exceed one-half the amount permitted for structural steel. CONTRACTOR to provide adjustable connections between Architecturally Exposed Structural Steel and the structural steel frame or the masonry or concrete supports, in order to provide the erector with means for adjustment.

D. Align and adjust various members forming part of complete frame or structure before permanently fastening. Before assembly, clean bearing surfaces and other surfaces that will be in permanent contact after assembly. Perform necessary adjustments to compensate for discrepancies in elevations and alignment.

1. Level and plumb individual members of structure.

E. Do not permit thermal cutting during erection of structural steel.

F. Where indicated for field connections, provide standard bolts complying with ASTM A307.

G. Install high strength steel bolts at locations indicated. Assembly and installation shall be in accordance with CBC requirements and AISC specifications.

1. Allowable hole sizes: 1/16 inch larger than bolt size.

2. Use friction type connection with standard hardened steel circular, square or rectangular washer under bolt nut.

3. Thoroughly clean area under bolt head, nut and washer. Remove all paint, lacquer, oil or other coatings except organic zinc-rich paints in accordance with SSPC, SP-2.

4. Tighten bolts by power torque wrench or hand wrench until twist-off.

H. CONTRACTOR shall be responsible for correcting detailing and fabrication errors and for correct fitting of all members and components.

I. Erect structural steel plumb and level and to proper tolerances as set forth in the AISC Manual. Provide temporary bracing, supports or connections required for complete safety of structure until final permanent connections are installed.

J. Install column bases within a tolerance of 1/8 inch of detailed centerlines, level at proper elevations. Support bases on double nuts and solidly fill spaces under bases with cement grout.

K. Provide anchor bolts with templates and diagrams. CONTRACTOR shall be responsible for proper location and installation of bolts. Correct deficiencies and errors.

3.03 FITTING

A. Closely fit members, finished true to line and in precise position required to allow accurate erection and proper joining in the field.

B. Drilling to enlarge unfair holes will not be allowed. Allow only enough drifting during assembly to bring parts into position, but not enough to enlarge holes or distort the metal. Do not heat rolled sections, unless approved by ARCHITECT.

3.04 PUNCHING AND DRILLING

A. Punch material 1/16 inch larger than nominal diameter of bolt, wherever thickness of metal is equal to or less than the diameter of the bolt plus 1/8 inch.

B. Drill or sub-punch and ream where metal is equal to or more than the diameter of the bolt plus 1/8 inch. Make diameter for sub-punched and sub-drilled holes 1/16 inch larger than nominal diameter of bolt.

C. Precisely locate holes to ensure passage of bolt through assembled materials without drifting. Enlarge holes when necessary to receive bolts by reaming; flame cutting to enlarge holes is not acceptable. Structural Steel members with poorly matched holes will be rejected.

3.05 FINISHING

A. After erection, spots or surfaces where paint has been removed, damaged, or burned off, and field rivets, bolts, and other field connections shall be cleaned of dirt, oil, grease, and burned paint and furnished with a spot coat of the same primer installed during shop priming.

B. Touchup:

1. Painting: Immediately after erection, clean field welds, bolted connections, and abraded areas of shop paint. Install paint to exposed areas with the same material installed during shop painting. Install by brush or spray to provide a minimum dry film thickness of 1.5 mils.

2. Galvanized Surfaces: Clean field welds, connections and damaged areas. Apply two coats of Carbomastic 15, by Carboline or equal product approved by OWNER's OEHS. Brush or roll to a 4 to 6 mil thickness.

3.06 FIELD QUALITY CONTROL

A. OWNER will provide a special inspector and independent testing laboratory to perform field inspections and tests and to prepare test reports.

B. Correct deficiencies in or remove and replace structural steel that inspections and test reports indicate do not comply with specified requirements.

3.07 CLEAN UP

A. Remove rubbish, debris and waste materials and legally dispose of off the Project Site.

3.08 PROTECTION

A. Protect the Work of this section until Substantial Completion.

3.09 HANDLING

A. Both in shop and in the field, transport, handle and erect to prevent damage or overstressing of any component.

END OF SECTION

SECTION 05 12 13 - ARCHITECTURALLY-EXPOSED STRUCTURAL STEEL

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:

1. Requirements regarding the appearance and surface preparation of Architecturally Exposed Structural Steel (AESS).
2. Preparation and priming of AESS.
3. Unless otherwise indicated, this Section applies to all structural steel members and their connections that will remain exposed in the Work.

B. Related requirements:

1. Division 05 for the following:

   a. Refer to Section 05 12 00 for all other requirements regarding steel work (including concealed structural steel) not included in this Section.
   b. Section 05 30 00 for steel decking.
   c. Loose steel-bearing plates and miscellaneous steel framing.

2. Finish coat requirements and coordination with primer and surface preparation specified in this Section 09 96 00.

1.2 REFERENCES

A. AISC Code of Standard Practice for Steel Buildings and Bridges, current edition.

1.3 ADMINISTRATIVE REQUIREMENTS

A. Scheduling and sequencing: Coordinate requirements for shipping, special handling, attachment of safety cables and temporary erection bracing, touchup painting, and other requirements for AESS.

B. Pre-installation meeting:

1. Prior to start of installation schedule a pre-installation meeting between the fabricator authorized representative, the Contractor, the installer for the work of this Section, and the Architect, to review supports to receive this work, adjacent work, the Drawings, and the Specifications.
2. Review the following:

   a. Submittals.
   b. Surface preparation and protection.
   c. Installation procedures.
   d. Sequencing and installation priority for the work of this Section and those of adjacent materials.
   e. Inspection, testing, protection and repair procedures.

3. Record meeting minutes and distribute PDF copy to all concerned, including the Architect, within 48 hours of the meeting.

1.4 SUBMITTALS

A. Data: Manufacturer Product Data for products specified, except steel.
B. Shop Drawings:

1. Erection Drawings clearly indicating which members are considered AESS.
2. Provide connections for exposed AESS consistent with the details on the Drawings.
3. Indicate welds by standard AWS symbols, distinguishing between shop and field welds, and show size, length and type of each weld. Identify grinding, finishing and profile of welds as defined below.
4. Indicate type, size, finish, and length of bolts, distinguishing between shop and field bolts. Identify high-strength bolted slip-critical, direct-tensioned shear/bearing connections. Unless otherwise noted, all bolt heads in the Work shall be oriented in the same direction.
5. Indicate which surfaces or edges will be exposed in the Work and what class of surface preparation will be used.
6. Indicate special tolerances and erection requirements noted on the Drawings or defined herein.

C. Qualifications: Data for firms and persons specified in the “Quality Assurance” Article to demonstrate their capabilities and experience. Include lists of completed projects names and address, names and addresses of architects and owners, and other information specified.

1.5 QUALITY ASSURANCE

A. Fabricator qualifications: In addition to those qualifications listed in Section 05 12 00, engage a firm experienced in fabricating AESS similar to that indicated for this Project with a record of successful in-service performance.
B. Erector qualifications: In addition to those qualifications listed in Section 05 12 00, engage an experienced erector who has completed AESS work similar in material, design, and extent to that indicated for this Project and with a record of successful in-service performance.
C. Standard: Comply with Section 10, AISC Code of Standard Practice, as amended below.

1.6 HANDLING

A. Handling:

1. Erect pre-painted finish pieces using padded slings or other methods such that they are not damaged.
2. Provide padding to protect while rigging and aligning members frames.
3. Weld tabs for temporary bracing and safety cabling only at points concealed from view in the completed structure or where approved by the Architect during the pre-installation meeting acceptable methods of removing temporary erection devices and finishing the AESS.

B. Storage:

1. Store materials to permit easy access for inspection and identification.
2. Keep steel members off ground by using pallets, platforms, or other supports.
3. Protect steel members and packaged materials from erosion and deterioration.
4. Use special care in handling to prevent twisting or warping of AESS members.

1.7 PROJECT CONDITIONS

A. Where AESS is indicated to fit against walls and other construction, verify dimensions by field measurements before fabrication and indicate measurements on shop drawings. Coordinate fabrication schedule with construction progress to avoid delaying the work.

PART 2 - PRODUCTS

2.1 MATERIALS

A. General: As specified in Section 05 12 00, except as amended below.
B. High-strength bolts, nuts, and washers: As specified in Section 05 12 00 heavy hex heads and nuts. Provide standard carbon steel mechanically galvanized finish.

2.2 PAINT

A. Shop-applied organic zinc-rich primer for exterior steel: “Tneme-Zinc 90-97” by Tnemec Co., or equal.
B. Primer for all other steel to be primed: “10-99” or “Unibond” by Tnemec Co., or equal.
C. Field-applied galvanizing repair (zinc-rich) paint: “94-H20 Hydro-Zinc” by Tnemec Co., or equal.

2.3 FABRICATION

A. Fabricate, prefit and assemble AESS in the shop to the greatest extent possible to comply with SEAC/RCSCA “Architecturally Exposed Structural Steel” standard Category 1, Category 2 and Category 3 as specified below.
B. Locate field joints in AESS assemblies as indicated and accepted on Shop Drawings.
C. Detail AESS assemblies to minimize field handling and expedite erection.
D. Fabricate AESS with exposed surfaces smooth, square and of surface quality consistent with the approved mockups.
E. Use special care in handling and shipping of AESS both before and after shop priming or painting.
F. In addition to special care used to handle and fabricate AESS, employ the following fabrication techniques:

1. Fabrication tolerance: One-half the normal tolerances specified in the AISC Code of Standard Practice Section 10.
2. Welds: Grind welds of AESS smooth. For groove welds, the weld shall be made flush to the surfaces each side and be within plus 1/16-inch, minus 0-inch of plate thickness.
3. Contouring and blending of welds: Where fillet welds are indicated, ground-contour or blend oversize welds as required and grind to provide a smooth transition and to match profile on approved mockups.
4. Continuous welds: Provide continuous welds of uniform size and profile.
5. Minimize weld show through: Where welding on the far side of an exposed connection occurs, grind distortion and marking of the steel to a smooth profile with adjacent material.
6. Coping and blocking tolerance: Maintain a uniform gap of 1/8-inch (plus or minus 1/32-inch) at copes and blocks.
7. Joint gap tolerance: Maintain a uniform gap of 1/8-inch plus or minus 1/32-inch.
8. Piece marks hidden: Fabricate such that piece marks are fully hidden in the final structure or made with such media to permit full removal after erection.
9. Mill mark removal: Deliver steel with no mill marks (stenciled, stamped, raised etc) in exposed locations. Omit mill marks by cutting mill material to appropriate lengths where

possible. Where not possible, fabricator can fill and/or grind to a surface finish consistent with the approved mockups.

10. Grinding sheared edges: Grind edges of sheared, punched or flame-cut steel to match approved mockups.
11. Seal weld open ends of round and rectangular hollow structural section with 3/8-inch closure plates. Provide continuous, sealed welds at angle to gusset-plate connections and similar locations where AESS is exposed to weather.

G. Galvanizing: As specified in Section 05 50 00.
H. Shop priming: As specified in Section 09 96 00 and compatible with finish coats also specified in Section 09 96 00.

2.4 SHOP CONNECTIONS

A. Bolted connections: Make in accordance with Section 05 12 00. Provide bolt type and finish as specified herein and align bolt heads as indicated on the approved shop erection drawings.
B. Welded connections: Comply with AWS D1.1 and Section 05 12 00. Appearance and quality of welds shall be consistent with the mockups. Assemble and weld built-up sections by methods that will maintain alignment of members without warp exceeding the tolerance of this Section.

2.5 PREPARATION PRIOR TO PRIMING

A. As specified in Section 09 96 00.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine governing dimensions and conditions at the site before starting erection.
B. Verify the location and elevation of anchor bolts and concrete surfaces supporting steel to verify that they meet the following tolerances:

1. Elevation of concrete surfaces: Plus 3/8-inch.
2. Elevation top of anchor bolts: Plus one-inch, minus 3/8-inch.
3. Out-of-position of anchor bolts: Plus 1/8-inch.

C. Check AESS members upon delivery for twist, kinks, gouges or other imperfections which might result in rejection of the appearance of the member. Coordinate remedial action with fabricator prior to erecting steel or return the damaged components and replace with new ones.
D. Correct conditions that would prevent proper and timely completion of this work before proceeding with erection.

3.2 PREPARATION

A. Provide connections for temporary shoring, bracing and supports only where noted on the approved shop drawings.
B. Make temporary connections not indicated at concealed locations in the final structure, or as approved by the Architect.
C. Handle, lift and align pieces using padded slings and/or other protection required to maintain the appearance of the AESS through the process of erection.

3.3 ERECTION

A. Set AESS accurately in locations and to elevations indicated, and according to AISC specifications referenced in this Section.
B. In addition to the special care used to handle and erect AESS, employ the following erection techniques:

1. AESS erection tolerances: In accordance with Chapter 10 of the AISC Code of Standard Practice.
2. Welds: Grind welds smooth in the connections of AESS members.
    a. For groove welds, the weld shall be made flush to the surfaces of each side and be within plus 1/16-inch, minus 0-inch of plate thickness.
3. Contouring and blending of welds: Fillet welds shall be ground contoured, or blended. Grind to provide a smooth transition and to match profile on approved mockup.
4. Continuous welds: Provide continuous welds of a uniform size and profile.
5. Minimize weld show-through: Where welding on the far side of an exposed connection occurs, grind distortion and marking of the steel to a smooth profile with adjacent material.
6. Bolt head orientation: Install all bolt heads in the same direction as accepted on the shop drawings.
7. Removal of field connection aids:
    a. Run-out tabs, erection bolts and other steel members added to connections to allow for alignment, fit-up, and welding in the field shall be removed from the structure.
    b. Select field groove welds to eliminate the need for backing bars or to permit their removal after welding.
    c. Remove welds at run-out tabs to match adjacent surfaces and ground smooth.
    d. Plug weld holes for erection bolts and grind smooth and flush with adjacent surfaces.
8. Filling of weld access holes:
    a. Where holes must be cut in the web at the intersection with flanges on W shapes and structural tees to permit field welding of the flanges, they shall be filled flush with adjacent surfaces.
    b. Filling shall be executed with proper procedures to minimize restraint and address thermal stresses in group 4 and 5 shapes.

C. Field welding: Weld profile, quality, and finish shall be consistent with mockups approved prior to fabrication.
D. Splice members only where indicated.
E. Obtain permission for torch cutting or field fabrication from the Architect. Finish sections thermally cut during erection to a surface appearance consistent with the mockup.
F. Do not enlarge unfair holes in members by burning or by using drift pins. Ream holes that must be enlarged to admit bolts. Replace misaligned connection plates where holes cannot be aligned with acceptable final appearance.

3.4 FIELD CONNECTIONS

A. Bolted connections: Install bolts of the specified type and finish as specified in Section 05 12 00.

B. Welded connections: Comply with AWS D1.1 for procedures, and appearance. Refer to Section 05 12 00 for other requirements.

1. Assemble and weld built-up sections by methods that will maintain true alignment of axes without warp. Verify that weld sizes, fabrication sequence, and equipment used for AESS will limit distortions to allowable tolerances.
2. Obtain Architect's approval for appearance of welds in repaired or field modified work.

3.5 FIELD QUALITY CONTROL

A. Structural requirements: The Owner will engage an independent testing and inspecting agency to perform field inspections and tests and to prepare test reports. Refer to Section 05 12 00 for detailed bolt and weld testing requirements.
B. AESS acceptance: The Architect will review the AESS in place and determine acceptability based on the accepted mockups.

3.6 ADJUSTING AND CLEANING

A. Touchup: Cleaning and touchup painting of field welds, bolted connections, and abraded areas of shop paint shall blend with the adjacent surfaces of AESS. Perform touchup work in accordance with the paint manufacturer's instructions as specified in Section 09 96 00.
B. Galvanized surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A 780.

3.7 AESS FINISH SCHEDULE

A. AESS Category 1, Basic Elements:

1. Surface Preparation to SSPC-SP6.
2. Sharp edges ground smooth.
3. Continuous weld appearance.
4. Standard structural bolts.
5. Weld spatters removed.

B. AESS Category 2, Feature Elements not in close view, greater than 20-feet from view:

1. Comply with AESS Category 1, basic elements, and the following:

a. Visual samples, if requested.
b. One-half standard fabrication tolerances.
c. Fabrication marks not apparent.
d. Welds uniform and smooth.

C. AESS Category 3, Feature elements in close view, 20-feet or less from view:

1. Comply with AESS Category 1 and 2 elements, and the following:

a. Mill marks removed.
b. Butt and plug welds ground smooth and filled.
c. HSS weld seam oriented for reduced visibility.
d. Cross sectional abutting surface aligned.
e. Joint gap tolerances minimized.
f. All welded connections, optional.

D. AESS Category 4, Showcase Elements, where specifically identified on Drawings:

1. Comply with AESS Category 1, 2 and 3 elements, and the following:

a. HSS seam not apparent.
b. Welds contoured and blended.
c. Surfaces filled and sanded.
d. Weld show-through minimized.

END OF SECTION

SECTION 05 12 19- BUCKLING RESTRAINED BRACES

PART 1 – GENERAL

1.1 SUMMARY

A. Provide all parts, materials, and labor required for the design, delivery, testing and erection of buckling-restrained braces, which are designed by the manufacturer to meet stiffness, yield strength, and elongation requirements as indicated on the Drawings and other requirements specified herein.

B. Related Sections
   1 Section 05 12 00 Structural Steel Framing

1.2 REFERENCES

A. The following applicable standards are to be adhered to unless indicated otherwise.

B. American Institute of Steel Construction (AISC):

E. Steel Structures Painting Council (SSPC):
   1. Steel Structures Painting Manual, latest edition.

1.3 DEFINITIONS

A. Buckling-Restrained Brace (BRB): A steel brace consisting of an outer steel casing, an inner steel core, and a concrete matrix between the core and the outer steel casing. The inner steel core resists against tensile and compressive axial loads and is restrained from buckling by the concrete contained in the outer steel casing.

1.4 SUBMITTALS

A. The following submittals shall be made. All submittals shall be made in the English language.

B. Proposed Design of Buckling-Restrained Braces:
1. Design Drawings shall clearly display size, thickness and length of exterior brace casing as well as configuration and size of the full length of the core plates.
2. Calculations shall be provided to display the ability of the proposed “BRB’s” to meet the Performance Criteria described herein.
3. The Design Drawings and Calculations shall be sealed and stamped by a Structural Engineer (S.E.) licensed in California.
4. Preliminary design: At contractor’s option, make an initial submittal of the above items without sealed S.E. stamp for review by project Structural Engineer of Record, Architect and Jurisdictional Authority and coordination with structural steel contractor. Once all reviews are complete and incorporated, resubmit with sealed S.E. stamps for record.

C. Shop Drawings
1. Shop drawings shall clearly display all geometries necessary to manufacture BRB’s including plate thickness, lengths, plate dimensions inside and outside of the casing, and casing dimensions
2. Shop drawings shall clearly display all connection information including location of bolts, bolt types, bolt diameters, hole size, and faying surface types.

D. Material Test Reports
1. Tensile tests and chemical analysis for all steel.
2. Independent coupon tests used to verify core plate initial yield stress, tensile stress, and ultimate elongation.
   a. Where core plates are fabricated from plate material, coupon tests shall be performed on each plate.
   b. Where core plates are fabricated from bar stock, coupons shall be made at intervals of each 5 tons of material of same heat and thickness.
   c. Coupon tests to be taken at point of manufacture. Mill test reports (MTR) may not be used.
3. Core plates 2 inches (50mm) and thicker shall be supplied with Charpy V-Notch testing in accordance with ASTM A673, Frequency P, or approved equal. The impact test shall meet a minimum average value of 20 ft-lbs absorbed energy at +70 degrees Fahrenheit and shall be conducted in accordance with AISC Specification, or approved equal.

E. Technical Report
1. The Manufacturer shall submit a BRB testing report. The testing configurations used, and the results obtained shall meet the criteria found in the AISC Seismic Provisions and those indicated in Article 2.5.

F. Welding Certificates
1. Welder Performance Qualification Records (WPQR’s)
2. Welding Procedure Specification (WPS) written in conformance with AWS D1.1 for each proposed type of welded joint, whether pre-qualified or qualified by testing.

G. Manufacturer’s Quality Assurance Plan

H. Manufacturer's in-house Quality Assurance Inspection Report for each brace upon completion of fabrication.

I. Outside Testing Agency Quality Control Report where applicable.

1.5 QUALITY ASSURANCE

A. The Manufacturer shall have a detailed Quality Assurance Plan.
   1. The Quality Assurance Plan shall contain the procedures for manufacturing buckling-restrained braces including:
      a. Welding procedures.
      b. Methodology for verifying and documenting material properties.
      c. Indication of how the product is to be identified, such that it can be traced back to production quality assurance records.
      d. A flow chart of the process by which the product is manufactured, including description of production methods.
      e. Identified manufacturing tolerances for each production process.
      f. In-process quality control including all points of internal inspection for control and monitoring of the fabrication and assembly process.
   2. Design Engineer Requirements: The Design Engineer shall be registered in the state of California as a Structural Engineer, have experience with designing buckling-restrained braced frame systems, and have a thorough knowledge of the submitted BRB test report.
   3. Qualification testing shall conform to Article 2.5.

B. The Manufacturer shall notify Owner of fabrication schedule at least 30 days prior to fabrication in order to allow Owner or Owner's Representative to observe fabrication process.

PART 2 – PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

A. Plants fabricating buckling-restrained braces shall comply with the following:
   1. Buckling-restrained braces for this project shall be manufactured in the same facility (following the same quality assurance procedures) as the braces manufactured and tested to fulfill the AISC 341 testing requirements.

B. Buckling-Restrained Braces shall be designed, manufactured and supplied by the following vendor or equal.
   1. CoreBrace, LLC
      5789 West Wells Park Road
      West Jordan, UT 84081
      801.280.0701

C. Documentation showing evidence of valid accreditation and experience shall be submitted to the Engineer of Record during the bidding phase for any proposed manufacturer not listed above.

2.2 MATERIALS

A. Core Plate
   1. ASTM A36 with Fy as noted on the drawings.
      a. Fy of all core plate material shall be verified via coupon test per Article 1.4.D.2.
      b. Core plates 2 inches (50mm) and thicker shall be supplied with Charpy V-Notch testing per Article 1.4.D.3.

B. Primer
   1. Standard shop primer.

C. Welding Materials
   1. Shielded metal arc welding electrodes conform to AWS A5.1, flux-cored arc welding electrodes conform to AWS A5.20, and electrodes used for gas metal arc or submerged arc conform to the requirements of AWS A5.18.
   2. The minimum tensile strength of the E70 class electrodes used in production is 70,000 psi (470 MPa).
   3. Materials shall provide production welds with minimum Charpy V Notch properties of 20 ft-lbs (27 J) at -20°F (-30 C).

D. Infill Grout
   1. Manufacturer's standard infill that has been demonstrated suitable by sub-assemblage testing per the Recommended Provisions.

2.3 DESIGN REQUIREMENTS

A. A Structural Engineer shall design the buckling-restrained braces to meet the Performance Requirements. The Engineer shall have a thorough knowledge of the qualifying cyclical tests and competently apply the test results to the Project conditions.

B. Interpolation or extrapolation of test results for different member sizes shall be justified by rational analysis that demonstrates stress distributions and magnitudes of internal strains that are consistent with or less severe than the tested assemblies and that considers the adverse effects of larger material and variations in material properties.

C. Stability calculations shall include beams, columns and gussets adjoining the BRB's.

D. Bracing connections are to be designed to a minimum of 1.0 times the adjusted brace strength as defined in the AISC Seismic Provisions with overstrength parameters determined per Article 2.4.F.

2.4 PERFORMANCE REQUIREMENTS

A. Core plate material shall have yield range within the minimum and maximum yield stress indicated in the structural drawings. Coupon tests taken from plates at point of manufacture of BRBs shall be used to verify conformance. Additional coupon tests may be performed to replace coupon tests that fall out of acceptable range.

B. Increasing amplitude cyclic displacement tests per the AISC Seismic Provisions shall provide stable performance up to a displacement corresponding to 2.0 x Design Story Drift.
   1. Hysteretic behavior shall display no post-yield loss of strength, degradation, or pinching.
   2. Fracture of any portion of the BRB shall not occur during the qualifying tests.

C. The steel core shall resist compression and tension forces. The steel core area shall be as per the project drawings and core material shall be within the yield stress range specified in Article 2.4.A.

D. The concrete fill and steel casing shall prevent the steel core from buckling globally and locally during compressive loading without binding due to longitudinal shortening and transverse expansion. Demand for local and global stability of casing checks shall be based on the adjusted brace strength at the maximum yield stress (Fysc,max) of the specified yield stress range of the core plate material.

E. Steel core projections beyond the steel casing and brace connections shall develop the adjusted brace strength without instigation of fracture or instability. For core plate checks use the minimum (Fysc,min) of the specified yield stress range for determining demand. For all other materials use Fysc,max to determine demand.

F. The overstrength factors (ω, β) shall be determined at a brace strain level associated with the greater of a 2% interstory drift or twice the design story drift, the latter of which is taken as $(2\varphi C_d F_{ysc,min})/(\rho I_e E)$, where C_d is the design drift deflection amplification factor, E is the nominal modulus of elasticity of the core plate material, I_e is the Importance Factor, ρ is the Redundancy Factor. When actual brace demand is provided, twice the design story drift is taken as $(2C_d P_d)/(A_{sc}\rho I_e E)$, where P_d is the axial force demand in the BRBs at the controlling drift design load case.

2.5 QUALIFICATION TESTS

A. Buckling-restrained brace design shall be based on two qualifying cyclic tests conforming to the AISC Seismic Provisions for Buckling Restrained Braced Frames. As stated in the Provisions, at least one of the two qualifying tests needs to be a subassemblage test to demonstrate the ability of the BRB to withstand rotational demands. The other test may be performed uniaxially or may also be a subassemblage test.

B. The requirements of the AISC 341 Seismic Provisions shall be met

C. The strain level during testing shall be equivalent to, or greater than, the strains that the project braces will be expected to withstand.

D. Qualifying tests can be based on full-scale cyclical tests previously reported for projects or research that are deemed similar to project conditions by the Manufacturer and Project Engineer.

2.6 FATIGUE LIFE INSTRUMENTATION

A. Displacement measurement devices shall be installed as indicated on the structural drawings or as a minimum on one BRB at each level in each direction. These devices shall include the following capabilities as a minimum.
   1. Minimum total stroke capacity (oriented axially with brace) of 8”. This capacity shall be increased as required to capture the expected brace deformations corresponding to considered drifts in Article 2.4.F.
   2. Maximum displacement precision of 0.050”.
   3. Minimum recording resolution of 300 readings/second
   4. Minimum internal storage capacity of 5 million measurements.
   5. Minimum expected internal battery life of 8 years.
   6. Documented methodology, validated through testing, for converting recorded data into fatigue damage assessment.

B. Installation of the devices is to be coordinated by the General Contractor and may require additional trades including steel erector, low-voltage subcontractor, general contractor or others.

PART 3 – EXECUTION

3.1 FABRICATION

A. Braces shall be fabricated in accordance with AISC Code of Standard Practice and in an AISC Certified Shop that participates in the AISC Quality Certification Program.

B. Core plates shall be cut to profile shown on Design Drawings.
1. The general roughness cannot exceed 1000 micro-inches in the yielding length.
2. Notches in yield length region up to 1/8–inch may be repaired by grinding to a smooth transition. The length of the transition shall not be less than 10 times the notch depth.
3. Notches in the yielding length region greater than 1/8–inch and less than or equal to 3/8–inch may be repaired using procedures outlined in the Company Quality Assurance Manual. The repairs shall be examined using Ultrasonic Testing (UT) procedures in conformance with AWS D1.1.
4. Notches in the yielding length region greater than 3/8–inch in the yield length shall be rejected.

C. No splices are allowed in the yielding region of the steel core plate.

D. Minimum casing dimensions shall be as required by manufacturer or as specified on the project documents.

E. Holes for bolted connections may be drilled, cut or punched in conformance with AISC standards and burs removed.

F. Finish shall be manufacturer’s standard shop primer. Do not paint connection faying surfaces of connections designated slip critical.

G. Assembly of the different components of the brace shall be done in accordance with the manufacturer’s Quality Assurance Manual in a manner that ensures proper performance of the brace.

H. Pin connection hole shall be no more than 1/32” larger than connecting pin.

3.2 SHIPPING

A. Manufacturer to package BRB’s for protection against shipping damage.

B. Manufacturer shall coordinate delivery dates and quantities with Contractor/Owner. Contractor/Owner shall provide adequate storage space and proper lay-down areas.

C. Braces shall be stored on dunnage not touching the ground.

D. Coordinate erection aid requirements with contractor/Owner.

3.3 ERECTION

A. Braces are to be erected under the Structural Steel Specification Section and according to referenced AISC Specifications.

B. Prior to erection, clean faying surfaces of bolted BRBs to remove any surface contaminants including temporary coatings that may have been applied for transport.

C. Allow for erection loads and for sufficient temporary bracing to maintain structure safe, plumb, and in true alignment until completion of erection and installation of buckling-restrained braces.

D. No field welding to BRB's is allowed, including non-structural pieces unless approved by BRB manufacturer and Engineer of Record (EOR).

E. No field cutting or altering of the BRB's is permitted without the approval of the BRB manufacturer and EOR.

END OF SECTION

SECTION 05 30 00 - METAL DECKING

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Floor and roof metal decking.
2. Shear connector studs for composite decking construction.
3. Edge strips, closure strips and decking accessories.

B. Related Requirements:

1. Division 01 - General Requirements.
2. Section 03 30 00 – Cast-In-Place Concrete.
3. Section 05 12 00 - Structural Steel Framing.
4. Section 07 62 00 - Flashing and Sheet Metal.

1.02 REFERENCES

A. ASTM International (ASTM):

1. ASTM A108 – Standard Specification for Steel Bar, Carbon and Alloy, Cold-Finished.
2. ASTM A653 - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
3. ASTM A780 – Standard Practice for Repair of Damaged and Uncoated Areas of Hot-Dip Galvanized Coatings.
4. ASTM D746 - Standard Test Method for Brittleness Temperature of Plastics and Elastomers by Impact.
5. ASTM D1056 - Standard Specification for Flexible Cellular Materials—Sponge or Expanded Rubber.

B. American Welding Society (AWS):

1. AWS D1.1 - Structural Welding Code Sheet – Steel.
2. AWS D1.3 – Structural Welding Code Sheet – Sheet Steel.

C. American Iron and Steel Construction (AISI):

1. AISI – Specifications for the Design of Cold-Formed Steel Structural Members.

D. Underwriters Laboratory (UL):

1. UL – Fire Resistance Directory.

1.03 PERFORMANCE REQUIREMENTS

A. Compute properties of deck sections on basis of effective design width as limited by provisions of the AISI specifications. Provide no less than deck section properties specified, including section modulus and moment of inertia per foot of width.

B. Regulatory Requirements:

1. Decking installed as part of a fire rated assembly shall meet the requirements of the applicable UL Fire Resistance Directory design number.

2. Work of this section shall be in accordance with CBC.

1.04 SUBMITTALS

A. Shop Drawings: Drawings, sections and details indicate type of decking, location, finish, gage of metal, arrangement of sheets, necessary fabrication to incorporate decking into the Work, and relationship to openings and flashing.

B. Product Data: For each type of decking specified, including structural properties, dimensions, profiles and finishes.

C. Welder Certificates: Signed by CONTRACTOR certifying that welders comply with the requirements specified under Article “Quality Assurance”.

1.05 QUALITY ASSURANCE

A. General: Metal decking steel shall conform to requirements of strengths and properties of standards specified.

B. Qualifications of Welders: Properly certified for the type of Work involved in compliance with CBC requirements.

C. Continuous inspection of welding will be performed by a special inspector, approved by DSA to inspect the Work of this section. The Project Inspector will be responsible for monitoring the work of the special inspector to ensure that the inspection program is satisfactorily completed.

D. Identification of metal decking steel shall conform to the standards specified in this section and the Drawings.

1. Fabricator shall furnish sufficient evidence to the ARCHITECT attesting compliance with specified requirements.

2. Conform to CBC requirements. Unclassified or unidentified decking is not permitted. Furnish deck manufacturer's certified mill analyses and test reports for each heat covering decking having a minimum Fy of 33 Ksi. In addition, for

decking having F_y greater than 33 Ksi, testing laboratory shall perform one tension and elongation test and one bend or flattening test for each gage.

E. Unidentifiable Steel: Steel which is not readily identifiable as to grade from markings and test records is not permitted to be provided as part of the Work of this section.

F. Manufacturers shall be members of Steel Deck Institute (SDI).

1.06 DELIVERY, STORAGE AND HANDLING

A. Protect steel deck from corrosion, deformation and other damage during delivery, storage and handling.

B. Deck bundles shall be stored off the ground, with one end elevated to provide drainage. Bundles shall be protected against condensation with a ventilated waterproof covering.

PART 2 - PRODUCTS

2.01 ACCEPTABLE MANUFACTURERS

A. Verco Manufacturing Co.

B. Or equal contingent to review and approval by AOR and SEOR.

2.02 MATERIALS

A. Metal Decking:

1. Roll-formed sheets conforming to ASTM A653, with G90 zinc coating.

2. Section properties conforming to applicable provisions of latest edition of AISI - Specification for the Design of Cold-Formed Steel Structural Members.

3. Cellular acoustical decking and all exposed decking shall be painted per architectural specifications and drawings.

B. Flexible Closure Strips for Deck: Vulcanized, closed-cell, expanded chloroprene elastomer, complying with ASTM D1056, Grade SCE #41.

1. Brittleness Temperature: Minus 40 degrees F, ASTM D746.

2. Flammability Resistance: Self-extinguishing,

C. Decking Accessories: Metal cover plates, sheet metal edging, metal closure strips, valley and ridge strips, seat angles, sump pans, flashings: 22 gage minimum, with ASTM A653, G90 zinc coating.

D. Shear Connectors: Headed stud type, ASTM A108 Grade 1015, cold-finished carbon steel complying with AISC specifications.

E. Galvanizing Repair Paint: Mil. Spec. MIL-P-21035B and approved by the OWNER’s Office of Environmental Health and Safety (OEHS).

2.03 FABRICATION

A. Corrugated sheets or sections shall be designed to support required live load between supporting members.

B. Provide decking in lengths to span over three or more supports.

C. Except as detailed otherwise, provide decking with interlocking side laps, 2 ½-inch minimum end bearing, and 1 ½-inch minimum side bearing.

D. Welding: Provide materials and methods in accordance with recommendations of steel decking manufacturer and reviewed submittals. Hold decking tight to the supporting elements with screws or other means for proper welding or crimping of the decking edges. Conform to AWS D1.3, and to the patterns and weld types indicated, with welds free from sharp edges and protrusions. Field coat welds and abraded surfaces at completion with an anodic type galvanizing repair paint. Omit the field paint coating where welds or abrasions are covered by concrete fill or sprayed fireproofing.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Verify supporting structure and existing conditions prior to starting work.

B. Remove oil, dirt, paint, and rust from steel surfaces to which metal decking will be welded.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 OPENINGS

A. Cut and reinforce units to provide openings which are located and dimensioned on the structural and mechanical Drawings.

B. Provide openings, or other Work not indicated on the Drawings.

3.03 INSTALLATION

A. Install metal decking in accordance with decking manufacturers' recommendations, requirements of Drawings, Shop Drawings, and Specifications.

B. Install metal decking on supporting steel framework and adjust to final position before permanently fastening in place.

1. Install each unit to proper bearing on supports.

2. Install units in straight alignment for entire length of run of cells with close registration of cells of one unit with those of abutting unit.

C. Fasten decking to steel framework at ends of units and at intermediate supports. Welding shall be as indicated on Drawings.

D. Fasten side laps between supports as indicated on Drawings.

E. Perform field cutting parallel with cells in area between cells, leaving sufficient horizontal material to permit welding to support steel.

F. Weld shear connectors to supports thru decking units as required by Drawings. Weld only on clean, dry surfaces. Do not weld shear connectors thru two layers of decking units.

3.04 METAL FLASHINGS AND CLOSURES

A. Furnish, install, and weld in position, sheet metal closure flashing, closure angles, closure plates, profile plates, and shear plates.

B. Close open ends of cell runs at columns, openings, walls, similar interruptions and termination.

3.05 FIELD QUALITY CONTROL

A. Install steel decking under continuous inspection according to CBC Section 1704A.

B. Welding inspection for steel deck diaphragms shall conform to CBC Section 2204A.1.

3.06 CLEAN UP

A. Remove rubbish, debris, and waste materials and legally dispose of off the Project site.

3.07 PROTECTION

A. Protect the Work of this section until Substantial Completion.

END OF SECTION

SECTION 05 41 00 - COLD-FORMED STEEL FRAMING *(NON-AXIAL LOAD BEARING WALLS)*

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes exterior vertical cold-formed steel framing (CFSF) system consisting of non-axial, load bearing punched channel studs and Cee-shaped steel studs.

B. Related requirements:

1. Division 05 for structural steel.
2. Division 07 for thermal insulation in CFSF system.
3. Division 09 for non-structural metal framing, and ceiling and soffit suspension systems.

C. Definition: Design engineer as used in this Section refers to a California-licensed structural engineer engaged by the Contractor to perform the tasks specified below to comply with the “deferred approval “process.

1.2 ADMINISTRATIVE REQUIREMENTS

A. Pre-construction meeting: Prior to starting erection of the CFSF, but not later than one week, arrange a preliminary meeting with trades associated with the work of this Section.

1. Presided over by Contractor, include subcontractor for CFSF, testing company representative, as appropriate, and a representative of the Fire Marshall.
2. Review locations of access panels, fire hose cabinets and fire extinguisher cabinets; the latter with a representative of the Fire Marshall.
3. Identify those locations on the slab. Use an easily removable marker where the slab is scheduled to remain exposed in the Work.
4. Review installation methods, procedures, time schedule and conditions under which this work will proceed, including stud manufacturer's instructions and coordination required with Related Requirements.
5. Review and verify availability of materials and installer’s experience.

B. Coordination:

1. Notify concerned trades of items required to be incorporated into their work. Certain components specified under this Section includes items which are closely integrated with air/water barrier transitions, doors, glazed assemblies, flashing pieces, and work specified in other Sections that require close coordination with the work of this Section.
2. Be responsible for coordination required to ensure correct installation procedures and results.
3. Verify actual locations of embeds and existing adjacent structural supports by field measurements before erection; indicate measurements on Shop Drawings. Coordinate tolerances of other trades that may affect the work of this Section prior to start of Shop Drawings preparation.

1.3 SUBMITTALS

A. Data: Manufacturer Product Data including specifications for the following.

1. Studs and runners.
2. Installation instructions for each item of cold-formed metal framing and accessories.
3. Mill certificates.

4. Galvanizing certificates.

B. Shop Drawings:

1. Large scale (minimum 1:32), dimensioned Shop Drawings of all assemblies.
2. Show elevations of each wall, framing member size and gage designations, number, type, location, and spacing.
3. Indicate connections/attachments, clips, strapping, bracing, splices, bridging, accessories, and details required for proper installation at 1:12 minimum scale.
4. Indicate and identify all fasteners and welds (with AWS symbols).
5. Indicate loads imposed on the primary building structure.

C. Load tables:

1. Complete load tables properly annotated for anticipated use for all studs.
2. Indicate conformance or deviation with design criteria indicated on the Structural Drawings.

D. Preconstruction test reports: Indicate and interpret test results for compliance with requirements.

E. Product test reports: From a qualified testing agency, unless otherwise stated, indicating that each of the following complies with requirements, based on evaluation of comprehensive tests for current products.

1. Steel sheet.
2. Expansion anchors.
3. Power-actuated anchors.
4. Mechanical fasteners.
5. Vertical deflection clips.
6. Horizontal drift deflection clips
7. Miscellaneous structural clips and accessories.

F. Research/evaluation reports: For cold-formed metal framing.

G. Manufacturer installation instructions: For framing members and accessories.

H. Sealant compatibility and adhesion test reports: From sealant manufacturer indicating that materials forming joint substrates and joint sealant backings have been tested for compatibility and adhesion with sealants; include sealant manufacturer's interpretation of test results for sealant performance and recommendations for primers and substrate preparation needed for adhesion.

I. Field test reports: Indicate and interpret test results for compliance with requirements.

J. Closeout: Furnish the Owner a comprehensive plan for replacement of broken glass. Include a local source.

K. Certificates:

1. Mill certificates signed by framing member/accessory manufacturer certifying compliance with material requirements.
2. Welder certificates signed by Contractor certifying that welders comply with specified requirements.

L. Qualification data: For design engineer and testing agency.

1.4 QUALITY ASSURANCE

A. Qualifications:

1. Installer: Firm with minimum 3 years experience in installation of the type of products specified.
2. Welders: Qualified welders experienced in welding lightgage steel in compliance with AWS D1.1 and D1.3.
3. Design engineer: California-licensed professional engineer experienced in providing engineering services of the kind indicated. Engineering services are defined as those performed for installations of cold-formed metal framing that are similar to those indicated for this Project in material, design, and extent.
4. Testing agency: Independent testing agency, acceptable to AHJ and qualified according to ASTM E 329 to conduct the testing indicated.

B. Product tests: Mill certificates or data from a qualified independent testing agency, or in-house testing with calibrated test equipment indicating steel sheet complies with specified requirements, including base-metal thickness, yield strength, tensile strength, total elongation, chemical requirements, ductility, and metallic-coating thickness.
C. Welding: Qualify procedures and personnel according to AWS D1.1/D1.1M, "Structural Welding Code-Steel," and AWS D1.3, "Structural Welding Code-Sheet Steel."
D. Fire-rated assemblies: Where the work of this Section is a component of assemblies indicated to be fire-rated, including those required for compliance with governing regulations, provide units approved by AHJ.
E. Mockup(s): Provide CFSF components for mockups specified elsewhere in these Specifications.

1.5 HANDLING

A. Protect metal framing units from rusting and damage.
B. Store off ground in a dry ventilated space or protect with suitable waterproof coverings.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Failure includes, but is not limited to, the following:

1. Noise or vibration created by wind, and thermal and structural movements.
2. Loosening or weakening of fasteners, attachments, and other components.

B. Where stud sizes and connections are indicated on the Drawings, do not substitute with items of lesser structural capacity.

2.2 MANUFACTURERS

A. General: One of the following members of the MSMA or SSMA.
B. Studs:

1. Alabama Metal Industries Corp.
2. CEMCO.
3. ClarkDietrich Building Systems.
4. Dale Industries, Inc.
5. Marino Industries, Inc.

6. SCAFCO Corp.
7. Superior Steel Studs, Inc.
8. Or equal.

C. Tracks: Bottom tracks by stud manufacturer; top track by one of the following.

1. ClarkDietrich Building Systems “Maxtrack 2D.”
2. CEMCO “Exterior Slotted Track.”
3. Or equal.

2.3 STEEL FRAMING COMPONENTS

A. Studs: Channel-shaped with lipped flanges, punched web, size (depth) indicated on Drawings, thickness and grade required by structural design calculations.
B. Tracks: Same designation, coating, and thickness as studs except as otherwise noted, channel-shaped, solid web, depth compatible with studs, size, thickness and grade required by structural design calculations.
C. Accessories: Manufacturer standard steel accessories, including but not limited to the following.

1. Supplementary framing.
2. Bracing, bridging, and solid backing.
3. Web stiffeners.
4. Gusset plates.
5. Stud kickers and girts.
6. Reinforcement plates.

D. Bridging:

1. Cold-rolled channel: 1-1/2 by 1/2-inch by 56-mil thick.
2. Bridging clip: BridgeClip by The Steel Network, Inc., or equal. Provide attachment through stud punch-out clamping onto stud web and wrapping around bridging channel. Provide holes for screw attachment to stud web and channel.
3. Flat strap: Width and thickness required by structural design calculations for rigid attachment to stud flange.
4. Solid bridging: Channel-shaped bridging with lipped flanges and integral formed clips, BridgeBar by the Steel Network, or equal, screw attachment to stud, 33-mil minimum thickness, size as required by structural design calculations.

2.4 MATERIALS

A. Steel - general: ASTM A 653 steel; SS Grade 50, Class 1 minimum tensile strength, unless otherwise indicated on the Drawings.
B. Finish on steel:

1. General: Provide framing components galvanized with a G 60 zinc coating; EQC is not acceptable.
2. Accessories: Finish to match that of main framing components.

C. Fasteners:

1. Screws: Corrosion-resistant coated, self-drilling, pan or hex washer head. Provide screw type and size required by structural design calculations.
2. Anchor bolts and studs: ASTM A 307, Grade A, carbon steel, with hex-head carbon steel nuts and flat steel washers. Hot-dip zinc coated in accordance with ASTM A 153. Provide bolt or stud type and size as required by structural design calculations.

3. Expansion anchors: FS FF-S-325, Group II, Type 4, Class 1. Provide bolts listed or approved by authorities having jurisdiction, and of diameter and length as required by structural design calculations.
4. Powder-actuated fasteners: FS FF-P-395 made from AISI 1062 or 1065 steel, austempered to a minimum core hardness of 50 to 54 HRC and zinc plated in accordance with ASTM B 633. Provide fasteners listed or approved by authorities having jurisdiction, of type, diameter and length required by structural design calculations:
5. Welding electrodes: Comply with AWS Code and as recommended by stud manufacturer.

D. Isolating tape: 1/4 inch thick by 1-1/2 inch wide by 8 feet long “Thermablok” tape by Thermablok, or equal consisting of self-adhering flexible aerogel and fiber composite insulation with a thermal conductivity of 0.0078 Btu/ft/hr/F.
E. Galvanizing repair (zinc-rich) paint: “94-H20 Hydro-Zinc” by Tnemec Co., or equal by Valspar Corp., Devoe Coatings, ZRC Worldwide, or Ameron Protective Coating Division.

2.5 FABRICATION

A. General:

1. Framing components may be prefabricated into assemblies before erection. Design panels to resist handling as well as dead and live loads without damage and permanent deflection.
2. Fabricate units in jig templates to hold members in proper alignment and position and to assure consistent component placement.
3. Space studs no more than 1/8-inch from designated spacing.
4. Prefabricated panels shall be no more than 1/8-inch out-of-square within the panel length.
5. Fabricate panels plumb, square, true to line, and braced against racking with joints welded. Make all stud-to-track connections prior to handling the panel.
6. Lift prefabricated units to prevent damage and distortion.

B. Cutting: Cut members by shearing or sawing.
C. Fastenings:

1. Attach similar components by welding. Attach dissimilar components by welding, bolting, or screw fasteners, as standard with manufacturer and accepted on the Shop Drawings.
2. Wire-tying and screw-attachment of framing components, unless otherwise indicated, is not permitted.

D. Fabrication tolerances: Fabricate CFSF assemblies level, plumb, and true to line to a maximum allowable tolerance variation of 1:960 and as follows.

1. Spacing:

a. Space individual framing members no more than plus or minus 1/8-inch from plan location.
b. Cumulative error shall not exceed minimum fastening requirements of sheathing or other finishing materials.

2. Squareness: Fabricate each CFSF assembly to a maximum out-of-square tolerance of 1/8-inch.

E. Damaged zinc coating: Touchup damaged galvanizing before shipment of assemblies to site.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine conditions and measurements affecting the work of this Section at site.
B. Correct detrimental conditions before proceeding with installation.

3.2 INSTALLATION

A. General:

1. Install CFSF systems in compliance with the DSA approved Drawings, their manufacturer's instructions, ASTM C 1007, and these Specifications.
2. Field cutting is allowed with saws or shears, but not torch cutting. Restore damaged zinc coating as specified.
3. Reinforce holes cut thru the studs.

B. Runner tracks:

1. Install continuous tracks sized to match studs.
2. Align tracks accurately to layout at base and tops of studs. Secure tracks as accepted on Shop Drawings.
3. Fasten tracks securely to supports.

C. Studs:

1. Secure studs to top and bottom runner tracks by either welding or screw fastening at both inside and outside flanges, as accepted on Shop Drawings.
2. Install members in single piece lengths except that tracks may be spliced, butt-welded, or each length anchored to a common building frame element.
3. Set studs plumb within the tolerance specified, except as needed for diagonal bracing or required for out-of-plumb walls or warped surfaces and similar requirements.
4. Where stud system abuts structural columns or walls, anchor ends of stiffeners to supporting structure.
5. Where components are boxed to form closed tubes, fill these areas with insulation that would otherwise remain uninsulated after assembly of the framing members.
6. Install insulation in framing spaces of insulated assemblies made inaccessible after erection.

D. Supplementary framing:

1. Install supplementary framing, blocking, and bracing in metal framing system where walls are indicated to support fixtures, equipment, services, casework, heavy trim and furnishings, and similar work requiring attachment to the wall.
2. Comply with stud manufacturer recommendations and industry standards in each case, considering weight or loading resulting from item supported.

E. Frame wall openings larger than 2 feet square with double stud at each jamb of frame except where more than 2 studs are indicated.

1. Install runner tracks and jack studs above and below wall openings.
2. Anchor tracks to jamb studs with stud shoes or by welding, and space jack studs same as full-height studs of wall.
3. Secure stud system wall opening frame as indicated.

F. Frame both sides of expansion and control joints with separate studs; do not bridge the joint with components of stud system.
G. Install horizontal stiffeners in stud system, spaced (vertical distance) at not more than 54 inches o.c.
H. Welding:

1. Perform welding in compliance with AWS recommendations by welders qualified to weld lightgage metal.
2. Provide stitch plates where studs are burned-through.

I. Isolating tape:

1. Clean contact surfaces of oil, grease and other foreign materials that would prevent adhesion of the isolating tape.
2. Remove protective paper and install tape on exterior face of studs and runners, so that there will be no direct contact between metal framing members and subsequently applied materials, such as sheathing. Butt ends tightly.

J. Erection tolerances:

1. Bolt or weld wall panels (at both horizontal and vertical junctures) to produce flush, even, true-to-line joints.
2. Set exterior edge of studs within 1/8 inch in or out of the theoretical plane of the wall.
3. Maximum variation in plane and true position shall not exceed L/960 from plumb and level with individual framing members no more than plus or minus 1/8 inch from plan location.
4. Cumulative error shall not exceed minimum fastening requirements of sheathing and other finishing materials.

3.3 FIELD QUALITY CONTROL

A. The Owner may employ a qualified testing laboratory to perform the following tests and submit test reports.
B. Testing agency will review and approve Weld Procedure Specifications submitted by the Contractor. The testing agency shall visually observe welding procedures to certify the WPS plan is followed.

1. Perform visual inspection of a minimum of 20 percent of all welds.
2. Additional testing will be required for the following:

a. If more than 5 percent of the tested welds are rejected, than an additional 20 percent of all welds shall be tested. This additional testing process shall be repeated until the rejection rate drops below 5 in 100.
b. Costs of additional inspection required by this paragraph shall be borne by the Contractor.

C. Inspections and testing shall be in conformance with the CBC.

3.4 TOUCHUP

A. Touchup damaged shop-applied protective coating, including cut ends and welds.

B. Use zinc-rich galvanizing paint for prime-coated and galvanized surfaces. Sand or grind damaged zinc coating to bright metal and apply zinc-rich paint, to a minimum DFT of 2 mils, overlapping undamaged area at least 2 inches. Comply with ASTM A 780.

END OF SECTION

SECTION 05 43 00 – SLOTTED CHANNEL FRAMING

PART 1 - GENERAL

1.1 SUMMARY

A. Framing shall be a strut type metal framing system (Strut System).

B. Strut System shall be used:

1. To support mechanical and electrical equipment and devices.
2. For structural applications as applicable.

C. Strut System and components must be supplied from a single approved Manufacturer.

D. This Section supplements Section 05 50 00.

1. Those requirements apply this Section as well except as modified with-in this Section.

1.2 ADMINISTRATIVE REQUIREMENTS

A. Field verification: Verify actual locations of supports.

1.3 SUBMITTALS

A. Data:

1. Specifications and installation instructions for manufactured items.
2. Manufacturer's literature, including engineering data for anchors and data sheets for gate hardware.

B. Shop Drawings:

1. Large scale, dimensioned Shop Drawings of metal fabrications indicating in detail methods of fabrication and assembly, weight, materials, holes, lugs, inserts, finishes and other pertinent data.
2. For components to be embedded in concrete and masonry work, furnish templates supplemented by dimensioned Shop Drawings to trades placing those components in their work. Assist in location of these components where so requested by those trades.

1.4 QUALITY ASSURANCE

A. Manufacturer's qualifications:

1. The manufacturer shall have at least 10 years’ experience in manufacturing Strut Systems.
2. The manufacturer must certify in writing all components supplied have been produced in accordance with an established quality assurance program.

PART 2 - PRODUCTS

2.1 MANUFACTURERS:

1. Strut System and components shall be UNISTRUT®, basis o design.
2. Or equal.

2.2 MATERIALS

A. All channel members shall be fabricated conforming to one of the following ASTM specifications:

1. Plain Carbon Steel: A 1011 SS Grade 33.
2. Stainless Steel: A 240 (Type 304).
3. Aluminum: B 221 (Type 6063-T6).

B. All fittings shall be fabricated conforming to one of the following ASTM specifications:

1. Carbon Steel: All carbon steel fittings shall be fabricated from steel that meets/exceeds the physical requirements of ASTM A1011 SS Grade 33 and conforms to one of the following ASTM specifications:

   a. A 575.
   b. A 576.
   c. A 36.
   d. A 635 e. A 1059 f. A 1046.

2. Stainless Steel:

   a. A 240 (Type 304 or Type 316).
   b. A 276 (Type 304 or Type 316).

3. Aluminum:

   a. B 209 (Type 1100F or Type 5052-H32).

2.3 FINISHES

A. Factory painted:

1. Channel

   a. Rust inhibiting thermoset acrylic enamel paint applied by electrodeposition after cleaning and phosphating, and thoroughly baked.

2. Fittings

   a. Polyester powder coat after cleaning and phosphating, and thoroughly baked.

3. Color shall be FHWA Highway Green, Color Tolerance Chart, PR Color No. 4
4. Hardness = 2H

   a. Salt Spray per ASTM B117.

      1) Scribed: Exceed 400 hours.
      2) Unscribed: Exceed 600 hours.

   b. Nominal chalking at 1,000 hours per weatherometer G-23 test.
   c. No checking at 1,000 hours per weatherometer G-23 test.

B. Electro-galvanized per ASTM B 633 Type III SC 1.

C. Pre-galvanized per ASTM A653.

1. Zinc coated by hot-dipped process prior to roll forming at the steel mill.
2. Zinc coating thickness shall be G90 (0.75 mil = 0.45 oz./ sq. ft. surface area).

D. Hot-dipped galvanized per ASTM A123 or A153.

1. Zinc coated after all manufacturing operations are complete.
2. Zinc coating thickness shall be G65 (2.6 mils = 1.50 oz./ sq. ft. surface area).

E. UNISTRUT DEFENDER™ per ASTM A1046 and A1059.

1. Strut coated per A1046 to a mass of 0.45 oz./ sq. ft. surface area.
2. Fittings coated per A1059 to a thickness of 30 microns and/or A1046 to a mass of 0.45 oz./sq. ft. surface area.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine conditions and measurements affecting the work of this Section at site.

B. Correct detrimental conditions before proceeding with installation.

C. Provide other trades with metal items to be embedded in their work. Where necessary, provide templates and instructions for this work.

3.2 INSTALLATION

A. Install in accordance with Section 05 50 00 for:

1. Installation.
2. Field welding.
3. Adjusting and cleaning.
4. Cleanup.
5. Protection.

B. Install plumb, level, and square with adjacent construction.

1. Attach assemblies securely to supports.

a. Verify allowable tolerances.

C. Use Unistrut P1000 to support college logo, see A714.

END OF SECTION

SECTION 05 50 00 - METAL FABRICATIONS

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes: Metal fabrications:

1. Steel thresholds.
2. Steel ladders and ladder safety cages.
3. Elevator hoist way door sill angles,
4. Steel framing and supports for countertops.
5. Steel tube reinforcement for low partitions.
6. Steel framing and supports for mechanical and electrical equipment.
7. Steel Gates.
8. Gratings, frames and covers.
9. Steel bollards.
10. Embedded edge angles in concrete.
11. Steel supports for coiling doors.
12. Steel framing and supports for operable partitions.
13. Supportive framing for sunshade panels.
14. Miscellaneous steel framing, supporting angles, plates, brackets, clips, anchors and bolts for equipment, and other work which is not specifically included in Section 05 12 00, Structural Steel Framing.
15. Miscellaneous fabrications, as indicated on the Drawings.

B. Related Requirements:

1. Division 01 - General Requirements.
2. Section 03 30 00 – Cast-in-Place Concrete.
3. Section 04 22 00: Concrete Unit Masonry.
4. Section 05 05 12: Hot-Dip Galvanizing.
5. Section 05 12 00: Structural Steel Framing.

6. Section 05 52 00: Steel Railings.

1.02 REFERENCES

A. ASTM International (ASTM):

1. ASTM A27 – Standard Specification for Steel Castings, Carbon, for General Application.

2. ASTM A36 – Standard Specification for Carbon Structural Steel.

3. ASTM A47 - Standard Specification for Ferritic Malleable Iron Castings.

4. ASTM A53 - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless.

5. ASTM A123 - Standard Specification for Zinc (Hot-Dipped Galvanized) Coatings on Iron and Steel Products.

6. ASTM A153 - Standard Specification for Zinc Coating (Hot-Dip) on Iron and Steel Hardware.

7. ASTM A283 - Standard Specification for Low and Intermediate Tensile Strength Carbon Steel Plates.

8. ASTM A307 - Standard Specification for Carbon Steel Bolts, Studs, and Threaded Rod 60 000 PSI Tensile Strength.

9. ASTM A500 - Standard Specification for Cold-Formed Welded and Seamless Carbon Steel Structural Tubing in Rounds and Shapes.

10. ASTM A501 - Standard Specification for Hot-Formed Welded and Seamless Carbon Steel Structural Tubing.

11. ASTM A563 - Standard Specification for Carbon and Alloy Steel Nuts.

12. ASTM A653 - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.

13. ASTM C1107 - Standard Specification for Packaged Dry, Hydraulic-Cement Grout (Nonshrink).

14. ASTM D1187 - Standard Specification for Asphalt-Base Emulsions for Use as Protective Coatings for Metal.

15. ASTM F1554 - Standard Specification for Anchor Bolts, Steel, 36, 55, and 105-ksi Yield Strength.

16. ASTM F2329 - Standard Specification for Zinc Coating, Hot-Dip, Requirements for Application to Carbon and Alloy Steel Bolts, Screws, Washers, Nuts, and Special Threaded Fasteners.

B. American Welding Society (AWS):

1. AWS D1.1 Structural Welding Code - Steel.

2. AWS D1.3 Structural Welding Code - Sheet Steel.

3. AWS D-19.0 Welding Zinc Coated Steel.

1.03 COORDINATION

A. Coordination between Steel Fabricator and Galvanizer:

1. Prior to fabrication, submit approved fabrication shop drawings to the galvanizer.

2. Notify galvanizer of steel fabrications that exceed the ASTM A385 recommended percentages for carbon, phosphorus, manganese and silicon, so special galvanizing processing techniques are used.

B. Coordinate installation of metal fabrications that are anchored to concrete or masonry, or that receive work specified by other Sections. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry.

C. Field Measurements: Field verify dimensions prior to fabrication.

D. Coordinate selection of shop primers with galvanizing, and with paintings to be applied over them. Comply with paint and coating manufacturers' written recommendations to ensure that shop primers and paintings are compatible with one another.

1.04 SUBMITTALS

A. Shop Drawings: Submit Shop Drawings indicating provided materials, dimensions, anchoring detail, and details of termination or connection to adjacent construction. Indicate items that are purchased from a manufacturer and items that are shop fabricated. Indicate component parts requiring Project site fabrication or assembly.

B. Product Data: Submit Product Data for manufactured items. Submit Product Data for primers and finishes.

C. Material Samples: Submit Samples of primers and finishes on fabricated items.

D. Fabricator qualifications per Article “Quality Assurance”.

E. Welding:

1. Welder’s Certificates: Field welders shall be Project certified in accordance with AWS D1.1.

2. Welding Material Certification: Provide certificate that welding material complies with specifications.

F. Research/Evaluation Reports: ICC-ES for post-installed anchors.

1.05 QUALITY ASSURANCE

A. Fabricator Qualifications: Firm with a minimum five year experience in successfully producing metal fabrications similar to that shown on the drawings.

B. Welding Qualifications: Qualify procedures and personnel according to the following:

1. AWS D-1.1– Structural Welding Code – Steel.

2. AWS D1.3 - Structural Welding Code - Sheet Steel.

C. Field applied primers, paintings, sealers and adhesives shall be approved by the OWNER's Office of Environmental Health and Safety (OEHS).

D. Preassemble items in shop to greatest extent possible to minimize field welding. Mark units for reassembly and coordination of installation. Use marking method compatible with galvanizing.

1.06 DELIVERY, STORAGE AND HANDLING

A. Store miscellaneous metal items above grade on platforms, skids, or other required supports.

B. Protect from damage and from corrosion, dirt, grease and other foreign matter.

PART 2 - PRODUCTS

2.01 MATERIALS

A. Structural Steel Shapes: ASTM A36.

B. Rolled Steel Plates: ASTM A36. Plates to be bent or cold-formed shall conform to ASTM A283, Grade C.

C. Round HSS: ASTM A500 Grade B or C.

D. Square and Rectangular HSS: ASTM A500 Grade B or C.

E. Steel Pipe: ASTM A53 Type E or S, Grade B, standard weight (Schedule 40), unless otherwise noted. Black finish.

F. Steel Sheet: ASTM A1008 or ASTM A1011.

G. Steel Bolts: ASTM A307, Grade A, or F3125 with hex steel nuts per ASTM A563 and washers. Galvanized in accordance with ASTM A153 for exterior locations.

H. Steel Bars: Conforming to ASTM A108 or ASTM A575.

I. Concrete Inserts: Threaded or wedge type; galvanized ferrous castings, either malleable iron, ASTM A47, or cast steel, ASTM A27. Provide bolts, washers, and shims, hot-dip galvanized per ASTM A153.

J. Nonshrink, Nonmetallic Grout: Factory-packaged, non-staining, noncorrosive, nongaseous grout complying with ASTM C1107. Provide grout specifically recommended by manufacturer for interior and exterior applications.

K. Concrete Materials:

1. Concrete per Section 03 30 00, Cast-in-Place Concrete.

2. Welded wire fabric and reinforcing per section 03 20 00, Concrete Reinforcing.

2.02 FABRICATION

A. General:

1. Preassemble items in the shop to greatest extent possible. Use connections that maintain structural value of joined pieces. Mark units for reassembly and installation.

2. Cut, drill, and punch metals cleanly and accurately. Ease exposed edges to a radius of approximately 1/32 inch, unless otherwise indicated or specified. Remove sharp and rough areas on exposed surfaces. Form exposed work with accurate angles and surfaces and straight edges. Form exposed connections with hairline joints, flush and smooth. Locate joints where least conspicuous.

B. Welding:

1. Weld connections unless otherwise indicated.

2. Weld corners and seams continuously and in accordance with requirements of AWS D1.1 Structural Welding Code. Welds shall be inspected as required in Section 05 12 00: Structural Steel Framing.

3. Grind exposed welds smooth and flush to match and blend with adjoining surfaces.

2.03 PREPARATION FOR GALVANIZING

A. Fabricate to the largest size possible and whenever possible use slip joints to minimize field welding.

B. Fabricate structural steel in accordance with Class I, II, III guidelines as described in AGA's Recommended Details for Galvanized Structures, to facilitate galvanizing process. Corners of gussets, stiffeners, and bracing shall be cropped to allow free flow of zinc during galvanizing process.

C. Remove welding slag, splatter, anti-splatter compounds and burrs prior to delivery for galvanizing.

D. Marking for Identification: Avoid unsuitable marking paints for identification, such as oil based paints and markers and crayon markers. Use water soluble paints or markers acceptable to galvanizer or steel tags wired to the work.

E. Masking: Use masking materials recommended by the American Galvanizers Association (AGA) to produce ungalvanized areas for field welding and at slip critical bolts.

F. Galvanize fabrications per Section 05 5013, Hot-Dip Galvanizing, in accordance with ASTM A123 and ASTM A153.

2.04 SHOP FINISH

A. Metal fabrications shall be provided with a coat of primer, except those indicated to be hot-dip galvanized.

B. Primers:

1. Universal Shop Primer: Fast-curing, lead- and chromate-free, universal modified-alkyd primer complying with MPI#79 and compatible with topcoat. Use primer containing pigments that make it easily distinguishable from zinc-rich primer.

2. Epoxy Zinc-Rich Primer: Complying with MPI#20 and compatible with topcoat.

3. Minimum dry film thickness of primer shall be 2.0 mils.

C. Preparation for Primer Painting: Miscellaneous ferrous metal, except items specified galvanized, shall be thoroughly cleaned and prepared for painting, including removal of shipping oils or protective coatings, mill scale, grease, dirt and rust. Prepare in accordance with SSPC recommendations. Deliver to Project site primed or galvanized as indicated, and ready to receive Project site applied finishes.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine the areas where metal fabrications are to be installed. Notify the OAR in writing of unsatisfactory conditions. Do not proceed with the work until unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Provide anchorage devices and fasteners as indicated in the drawings and where necessary for securing miscellaneous metal fabrications to in-place construction.

B. Cut, drill, and fit as required for installation of miscellaneous metal fabrications. Set metal fabrication accurately in location, alignment, and elevation; with edges and surfaces level, plumb, true, and free of rack; and measured from established lines and levels.

C. Fit exposed connections accurately together to form hairline joints. Weld connections that are not to be left as exposed joints but cannot be shop-welded because of shipping size

limitations. Do not weld, cut, or abrade the surfaces of hot-dip galvanized fabrications intended for bolted or screwed field connections.

D. Alignment: Verify alignment of items with adjacent construction. Coordinate related work.

E. Grout: Follow manufacturer's recommendations for substrate preparation and application.

F. Corrosion Protection: Coat concealed surfaces of metals that will come into contact with grout, concrete, masonry, or wood, with a heavy coat of bituminous paint or zinc chromate primer. Protect dissimilar metals from galvanic corrosion by pressure tapes, coating, or isolators.

3.03 FIELD WELDING

A. Preparation of Weld Area of Galvanized Fabrications: Remove masking from fabrications. Remove remaining zinc coating between one inch and four inches from both sides of members to be welded, by grinding back the zinc coating, burning the zinc away or pushing back the molten zinc from the weld area.

B. Welding: Comply with AWS Code for procedures of manual shielded metal-arch welding, appearance and quality of welds made, methods used in correcting welding work.

1. Weld in accordance to AWS D-1.1.

2. Weld galvanized fabrications in accordance to AWS D-19.0.

C. Remove welding flux immediately. At exposed connections, finish exposed welds and surfaces smooth and blended so that no roughness shows after finishing and contour of welded surfaces matches those adjacent.

D. Upon completion of welding plug vent, drainage and lifting holes of galvanized fabrications with appropriate diameter zinc plugs. Push in about half way by hand, and hammer to a tight fit. With a hand file or an abrasive tool, file away excess material. Repair scratches with a zinc rich coating.

1. Plug railing holes.

2. Plug visible holes of HSS members.

3.04 ADJUSTING AND CLEANING

A. Touch Up Damaged Surfaces:

1. Shop Painted Finishes: Comply with SSPC-PA-1 for touch-up; apply with brush to produce a minimum 2.0 mil dry film thickness.

2. Galvanized Surfaces: Clean field welds, connections and damaged areas. Apply two coats of Carbomastic 15, by Carboline or equal product approved by OWNER’s OEHS. Brush or roll to a 4 to 6 mil thickness.

3.05 CLEAN UP

A. Remove rubbish, debris, and waste materials and legally dispose of off the Project site.

3.06 PROTECTION

A. Protect the Work of this section until Substantial Completion.

END OF SECTION

SECTION 05 51 33 - ALUMINUM SHIPS LADDERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:

1. Aluminum ships ladders and landings.
2. Aluminum railings attached to ships ladders.
3. Supplementary parts and components, such as inserts, clips, bracing and other miscellaneous supports required for a complete installation.

B. Related requirements:

1. Section 05 50 00 for miscellaneous metal supports.

1.2 SUBMITTALS

A. Shop Drawings: Show dimensioned, materials, methods of fabrication and assembly, finishes, installation and attachment to abutting and supporting construction.
B. Samples: The following finished as specified showing proposed weld quality.

1. Full size Samples of brackets.
2. Corner and coped section.
3. Ships ladder tread.

1.3 QUALITY ASSURANCE

A. Product Qualification: Product design shall comply with OSHA 1910.27 minimum standards for ladders.
B. Welding:

1. Qualify procedures and personnel according to AWS D1.2.
2. Verify that welders to be employed in this work have satisfactorily passed AWS qualification tests.
3. If recertification of welders is required, retesting will be Contractor's responsibility.

C. Fabricator/installer’s qualifications: Firm experienced in producing ladders similar to those indicated for the Project and with a record of successful in-service performance, as well as sufficient production capacity to produce required units.

1.4 WARRANTY

A. Manufacturer shall provide an extended Corrective Period for work of this Section for a period of 5 years commencing on the Certificate of Occupancy date of the product against all the conditions indicated below, and when notified in writing from Owner, manufacturer shall promptly and without inconvenience and cost to Owner correct said deficiencies.

1. Defects in materials and workmanship.
2. Deterioration of material and surface performance below minimum OSHA standards as certified by independent third party testing laboratory. Ordinary wear and tear, unusual abuse or neglect excepted.
3. Within the warranty period, the manufacturer shall, at its option, repair, replace, or refund the purchase price of defective ladder.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. O'Keeffe's, Inc., basis of design.
B. Alaco Ladder Co.
C. Precision Ladders.
D. Or equal.

2.2 PERFORMANCE REQUIREMENTS

A. Provide ships ladders at an incline of 60 degrees, including railings capable of safely withstanding the dead loads of the assemblies, plus the live loads prescribed by Code without exceeding the allowable design working stress of the materials involved, including anchors and connections. Apply each load to produce the maximum stress in each component. Design for a minimum live load of 100 psf.
B. Thermal movements: Provide exterior assemblies with expansion joints spaced so that no distortion or damage occurs when subjected to a surface temperature of plus 180 degrees and a temperature swing of 160 degrees (plus 20 to plus 180 degrees).

1. Make joints as small as possible but sufficiently wide to meet the design criteria.
2. Show joint spacing on Shop Drawings.
3. Space joints equally and symmetrically. Joint locations are subject to relocation at no additional cost to the Owner.

C. Deflection:

1. Limit deflection under uniform load to L/240; L/120 under concentrated load; or 1/4-inch maximum, whichever is more restrictive.
2. Apply each load to produce the maximum stress in each component.

2.3 MATERIALS

A. Aluminum:

1. Extruded tubes: ASTM B 210, B 221, B 234 or B 241.
2. Bars, rods and wire: ASTM B 211.
3. Sheet and plate: ASTM B 209.
4. Structural shapes, rolled and extruded: ASTM B 308.

B. Welding electrodes: As recommended by AWS for the conditions of use and the alloys being welded.
C. Bolts, rivets and other fasteners: The following made of stainless steel.

1. As permitted by the reference standard and CBC.
2. For attachment to concrete and masonry use self-drilling or non-drilling expansion types by Phillips Drill Co., Inc., Rawlplug Co., Inc., Star Expansion Industries, Inc. or equal. Indicate the make, type and capacity of each type of anchor on the Shop Drawings.

2.4 FABRICATION

A. General:

1. Form and fabricate this work to meet installation conditions.
2. Fabricate ladder, in compliance with the approved Shop Drawings, to the dimensions and profiles indicated.

3. Provide complete assembly, including railing systems, struts, clips, brackets, bearing plates, and other components necessary for the support of the ladder and its anchorage to the supporting structure.
4. Weld corners and seams continuously to comply with AWS recommendations and the following:

    a. Use materials, methods and welding sequence that minimize distortion and develop strength and corrosion resistance of base metals.
    b. Obtain fusion without undercut or overlap.
    c. Remove welding flux immediately.
    d. At exposed connections, undercut edges of components to be welded, weld and finish exposed welds and surfaces smooth and blended so that no roughness shows after finishing and contour of welded surface matches those adjacent.
    e. Where welds will be exposed to the elements, weld connections between various pieces continuously to prevent water intrusion in the weld area, or seal welded parts, after weld is ground, with silicone sealant specified in Section 07 92 00.

5. Accurately fit or miter joints with hairline contacts welded.
6. Shear and punch metals cleanly and accurately.
7. Remove sharp and rough edges.
8. Ease exposed edges to a radius of approximately 1/32 inch.
9. Fabricate joints which will be exposed to the weather to exclude water, or provide weep holes where water may accumulate.
10. Close open ends of channel stringers with steel closure plates continuously welded, and ground flush and smooth with parent metal.
11. Fabricate treads so finished walking surfaces slope to drain.

B. Railings:

1. Form simple and compound curves by bending members in jigs to produce uniform curvature for each repetitive configuration required; maintain cross section of member throughout entire bend without buckling, twisting, cracking, or otherwise deforming exposed surfaces of components.
2. Interconnect members by butt-welding or welding with internal connectors, at fabricator's option, unless otherwise indicated.
3. At Tee and cross intersections, cope ends of intersecting members to fit contour of tube to which end is joined, and weld all around.
4. Form changes in direction of handrails and rails by bending.
5. Provide welded closures at ends of all handrails.

C. Welding: Weld corners and seams continuously to comply with the following.

1. Comply with AWS Code, unless bolted connections are specifically shown.
2. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
3. Obtain fusion without undercut or overlap.
4. Remove welding flux immediately.
5. At exposed connections, undercut edges of components to be welded, weld and finish exposed welds and surfaces smooth and blended so that no roughness shows after finishing and contour of welded surface matches those adjacent.
6. Make welded joints light-proof and tight. Where joints will be exposed to the elements, at any time including during construction, close welded joint to air and water infiltration either by welding interface completely, or by sealing remaining space with silicone sealant specified in Section 07 92 00.

2.5 FINISH

A. Clear Anodic Finish: AA-M10C22A41 Mechanical finish as fabricated. Architectural Class I, clear coating 0.018 mm or thicker.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine conditions and measurements affecting the work of this Section at site.
B. Correct detrimental conditions before proceeding with installation.

3.2 INSTALLATION

A. Isolate aluminum surfaces in contact with dissimilar metals and cementitious materials with tape or paint (minimum 6 mils DFT).
B. Install ships ladders and railings true to line and level, with tight, flush fitting joints.
C. Frame and securely anchor to structure in compliance with the approved Shop Drawings.

END OF SECTION

SECTION 05 52 00 - STEEL RAILINGS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes painted-steel handrails and railings.
B. Related requirements:

1. Section 05 12 00 for structural steel requirements.

1.2 ADMINISTRATIVE REQUIREMENTS

A. Scheduling and sequencing:
B. Preinstallation Conference: Conduct conference at Project site.

1.3 SUBMITTALS

A. Shop Drawings: Large scale, dimensioned, indicating in detail methods of fabrication and assembly, welds, weight, materials, holes, lugs, inserts, fasteners, finishes and other pertinent data.
B. Data: Manufacturer Product Data consisting of the following.

1. Specifications and installation instructions for manufactured items.
2. Manufacturer's literature, including engineering data, for drilled-in anchors and shot pins.

1.4 QUALITY ASSURANCE

A. Fabricator qualifications:

1. Successfully engaged in the manufacture of ornamental work, similar to the work described in this Section and indicated on the Drawings, for a minimum of 5 years.
2. Fabricator qualifications are subject to Architect's review and approval before subcontract is awarded.

B. Welding work qualifications:

1. Qualify welding procedures and welding operators in compliance with AWS "Qualification" requirements for AWS D1.1.
2. Verify that welders to be employed in this work have satisfactorily passed AWS qualification tests.
3. If recertification of welders is required, retesting will be Contractor's responsibility.

C. Mockups:

1. Erect at the Project site, unless otherwise acceptable to the Architect, a mockup of each assembly for the Architect's review and approval.
2. Make mockups complete with all accessories, features required for the final assemblies.
3. Mockup’s size and features are indicated on the Drawings.
4. Make such modifications as necessary to achieve mockups satisfactory to the Architect or remove and construct additional mockup(s).
5. Approved mockups shall serve as the standard for the same work on the building.

6. Remove mockups only after completion and acceptance of final work unless its incorporation in the Work is authorized by the Architect.
7. Protect mockups until their removal.

1.5 HANDLING

A. Protect fabrications with strippable coating or other forms of protection standard with the fabricator for exposed metal surfaces.

1.6 FIELD CONDITIONS

A. Field Measurements: Verify actual locations of walls and other construction contiguous with railings by field measurements before fabrication.

PART 2 - PRODUCTS

2.1 MATERIALS

A. General:

1. Select materials for their surface flatness, smoothness and freedom from blemishes wherever exposed to view in the finished work.
2. Materials shall have been cold-rolled, cold-finished, cold-drawn, extruded, stretcher-leveled and machine cut to the highest commercial standards for flatness, with edges and corners sharp and true to angle or curvature as required.
3. Exposed-to-view surfaces which exhibit pitting, seam marks, roller marks, oil-canning, stains, discolorations or other imperfections will not be acceptable and shall be removed from the job site.

B. Steel:

1. Tubing: ASTM A500/A500M (cold formed) or ASTM A513/A513M, Type 5.
2. Pipe: ASTM A53/A53M, Type F or Type S, Grade A, Standard Weight (Schedule 40), unless another grade and weight are required by structural loads.
3. Plates, Shapes, and Bars: ASTM A36/A36M.

C. Welding electrodes and filler metal: Type and alloy recommended by producer of the metal to be welded, as required for color match, strength and compatibility in the fabricated items.
D. Fasteners: Plated steel fasteners complying with ASTM F1941 (ASTM F1941M), Class Fe/Zn 5 for zinc coating.

1. Finish exposed fasteners to match appearance, including color and texture, of railings.

2.2 MISCELLANEOUS MATERIALS

A. Handrail Brackets: Cast iron. Center of handrail to wall, as detailed.
B. Shop Primers: Provide primers that comply with Section 09 96 00 "High-Performance Coatings."
C. Intermediate Coats and Topcoats: By Section 09 96 00 "High-Performance Coatings."
D. Bituminous paint: Cold-applied asphalt mastic complying with SSPC Paint 12, except containing no asbestos fibers.
E. Nonshrink, Nonmetallic Grout: Factory-packaged, nonstaining, noncorrosive, nongaseous grout, complying with ASTM C1107/C1107M. Provide grout specifically recommended by manufacturer for interior and exterior applications.

2.3 FABRICATION

A. Design components to allow for expansion and contraction for a temperature range of 120-degree F, ambient, 180-degree F, material surfaces, without causing buckling, excessive opening of joints, and overstressing of welds and fasteners.
B. Design assemblies to minimize site welding.
C. Form metal work to the required shapes.
D. Welding: Comply with AWS and the metal producer's recommendations.

1. Use welding for joining pieces together, unless otherwise accepted by the Architect on shop drawings.
2. Welds shall be continuous, except where stitch and spot welding are specifically permitted.
3. Make welded joints light-proof and tight. Close welded joint to air and water infiltration by welding interface completely.
4. Maintain proper welding temperature to avoid discoloring adjacent metal components.
5. Clamp parts in jigs during welding to avoid distortion.
6. Undercut metal edges where welds will be ground flush and dressed smooth.
7. Grind welds exposed to view flush, and fill and dress to match adjacent parent metal surfaces so that joint will be invisible in the Work.
8. Welds on or behind surfaces that will be exposed to view shall be done so that finished surface will be free of imperfections such as pits, runs, splatter, cracks, warping, dimpling, depressions or other forms of distortion or discoloration.
9. Remove weld spatter and welding oxides from welded surfaces.

E. Cut components square. Remove burrs from cut edges. Mill joints to a tight, hairline, flush fit. Cope or miter corner joints.
F. Close exposed ends of hollow railing members with prefabricated cap and end fittings of same metal and finish as railings.
G. Provide wall returns at ends of wall-mounted handrails unless otherwise indicated. Close ends of returns unless clearance between end of rail and wall is 1/4 inch or less.
H. Brackets, Flanges, Fittings, and Anchors: Provide wall brackets, flanges, miscellaneous fittings, and anchors to interconnect railing members to other work unless otherwise indicated.

1. At brackets and fittings fastened to plaster or gypsum board partitions, provide crush-resistant fillers or other means to transfer loads through wall finishes to structural supports and prevent bracket or fitting rotation and crushing of substrate.

I. Unless otherwise shown or accepted on the shop drawings, conceal fasteners in the finish work. Back-up joints with either sleeves or back-up plates.
J. Built-in work: Furnish anchor bolts, inserts, plates and other anchorage devices, and all other items for metalwork to be built into concrete, masonry, or work of other trades, with necessary templates and instructions to facilitate proper placing and installation.
K. Toe Boards: Where indicated, provide toe boards at railings around openings and at edge of open-sided floors and platforms. Fabricate to dimensions and details indicated.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine conditions and measurements affecting the work of this Section at site.
B. Correct detrimental conditions before proceeding with installation.

3.2 PREPARATION

A. Furnish shop drawings, templates, and inserts for work to be embedded in work of other trades.

3.3 INSTALLATION

A. General:

1. Do not install components damaged or defective in any way. Remove and replace members damaged during installation or thereafter, before Final Acceptance.
2. Do not cut, trim or weld parts during erection, where it would damage the finish, decrease the strength, or result in a visual imperfection or a failure in performance of the work.
3. Return components which require alteration to the shop for refabrication, if possible, or for replacement by new parts.
4. Install work with tight joints accurately fitted and aligned.
5. Where cutting is required for proper fitting and jointing, restore finish to eliminate evidence of corrective work.
6. Joints at changes in direction in stainless steel railings shall be shop welded; field joints shall be a minimum of 2 feet from a change in direction and assembled with concealed sleeves or back-up plates and set screws.
7. Install this work with concealed fasteners.
8. Apply a bituminous coating of approximately 30 mils DFT, or other suitable permanent separator, on surfaces of dissimilar metals (except where exposed to view) and metal surfaces in contact with cementitious materials. Where the metals are exposed to view, provide a plastic or neoprene separators between dissimilar metals.
9. Comply with AWS Code for manual shielded metal-arc welding procedures, the appearance and quality of welds made, and the methods used in correcting welding work which must be approved by the Architect in each case.

B. Fastening to in-place construction:

1. Set this work accurately in location, alignment and elevation, plumb, level or sloped to follow ramped conditions, and true to line, measured from established lines and levels.
2. Provide required anchorage devices and fasteners for securing ornamental metals to in-place construction; coordinate the embedment of anchors with the work of Section 03 30 00.

3.4 RAILING CONNECTIONS

A. Welded Connections: Use fully welded joints for permanently connecting railing components. Comply with requirements for welded connections in "Fabrication" Article, whether welding is performed in the shop or in the field.

3.5 ANCHORING POSTS

A. Form or core-drill holes not less than 5 inches (125 mm) deep and 3/4 inch (20 mm) larger than OD of post for installing posts in concrete. Clean holes of loose material, insert posts, and fill annular space between post and concrete with nonshrink, nonmetallic grout, mixed and placed to comply with anchoring material manufacturer's written instructions.
B. Cover anchorage joint with flange of same metal as post, welded to post after placing anchoring material.
C. Anchor posts to metal surfaces with flanges, angle type, or floor type, as required by conditions, connected to posts and to metal supporting members as follows:

    1. For steel railings, weld flanges to post and bolt to metal supporting surfaces.

3.6 ATTACHING RAILINGS

A. Anchor railing ends to metal surfaces with flanges bolted to metal surfaces and welded to railing ends.
B. Attach handrails to walls with wall brackets. Provide brackets with 1-1/2-inch clearance from inside face of handrail and finished wall surface.

    1. Use type of bracket with predrilled hole for exposed bolt anchorage.
    2. Locate brackets as indicated or, if not indicated, at spacing required to support structural loads.

C. Secure wall brackets to building construction as follows:
D. For concrete and solid masonry anchorage, use drilled-in expansion shields and hanger or lag bolts.
E. For hollow masonry anchorage, use toggle bolts.
F. For steel-framed partitions, fasten brackets directly to steel framing or concealed steel reinforcements, using self-tapping screws of size and type required to support structural loads.

3.7 FIELD QUALITY CONTROL

A. Control of corrosion: Prevent galvanic action and other forms of corrosion by isolating metals and other materials from direct contact with incompatible materials.
B. Extent and Testing Methodology: Owner’s Testing agency may randomly select completed railing assemblies for testing that are representative of different railing designs and conditions in the completed Work. Railings will be tested according to ASTM E 894 and ASTM E 935 for compliance with performance requirements.

    1. Remove and replace railings where test results indicate that they do not comply with specified requirements unless they can be repaired in a manner satisfactory to Architect and will comply with specified requirements.
    2. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.

3.8 TOUCHING-UP/CLEANING/PROTECTING

A. Field repair damaged components and finishes when the results are satisfactory to the Architect, otherwise replace with undamaged new components.
B. Restore protective coverings damaged during shipment or installation. Remove protective coverings only when there is no possibility of damage from other work yet to be performed at the same location.

C. Clean and protect exposed surfaces at completion of this work and protect assemblies from damage and stains until final acceptance.

END OF SECTION

SECTION 05 52 13 - PIPE AND TUBE ROOF PROTECTION RAILING SYSTEMS

PART 1 - GENERAL

1.1 SECTION INCLUDES

A. Permanent roof edge protection.

1. Wall mount guardrails

1.2 RELATED SECTIONS

A. Section 05 50 00 - Metal Fabrications.

1.3 ADMINISTRATIVE REQUIREMENTS

A. Sequencing and scheduling:

B. Scheduling and sequencing: Schedule installation so wall attachments are made only to completed walls. Do not support railings temporarily by any means that do not comply with structural performance requirements.

C. Field verification: Verify actual locations of supports.

D. Coordinate fabrication and delivery schedule of handrails with construction progress and sequence to avoid delay of railing installation.

1.4 SUBMITTALS

A. Product Data: Manufacturer's data sheets for products and assemblies specified.

B. Preparation instructions and recommendations.

1. Storage and handling requirements and recommendations.
2. Cleaning methods.

C. Shop Drawings:

1. Indicate profiles, sizes, connections, size and type of fasteners, accessories.
2. Show location of rails and guardrails including plans, details of components and anchor details.
3. Field Verified Measurements: Verify dimensions indicated on Drawings.

D. Verification Samples: For each finish specified, two samples representing actual colors specified.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Deliver, store and handle materials and products in strict compliance with manufacturer's instructions and recommendations and industry standards.

B. Store materials in manufacturer's original sealed, labeled packaging until ready for installation and in accordance with manufacturer's instructions. Protect finishes on rails and uprights from damage.

1.6 PROJECT CONDITIONS

A. Maintain environmental conditions, temperature, humidity, and ventilation, within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's recommended limits.

B. Field Measurements: Where horizontal rails and uprights are indicated to fit to other construction, check actual dimensions or other construction by accurate field measurements prior to ordering and installation; show recorded measurements on final Shop Drawings.

C. Where field measurements cannot be made without delaying the system fabrication and delivery, obtain guaranteed dimensions in writing by the Contractor and proceed with fabrication of products to not delay fabrication, delivery and installation.

D. Section includes access panels required for access to concealed equipment and assemblies.

E. Related requirements: Division 09 for finish painting access panels, except stainless steel surfaces.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis of design: Leading Edge Safety, LLC, which is located at: 1345 Taney St.; North Kansas City, MO 64116; Toll Free Tel: 888-990-2990; Fax: 816-472-0822; Email:request info (sales@leadingedgesafety.net); Web:https://leadingedgesafety.net.

B. Or equal.

2.2 WALL MOUNT GUARDRAIL !BC 50; 50 LBS PER FOOT

A. Product: IBC Wall Mount Guardrail, Powder Coated Steel. Permanent full-perimeter fall protection, allowing direct mounting to interior parapet walls using a dual plate mounting system that assures water-tight installation. Backup plates, target patches, and upright plates creates a compression attachment to prevent water infiltration around mounting studs. Powder coated steel colors available to match Kynar sheet metal or other building components and RAL colors.

1. Standards:

   a. California Building Codes: Meets and exceeds 50 lbs per ft.
   b. Meets and exceeds OHSA Standard 29 CFR 1926.501, 1926.502, 1910.29, Cal-OSHA, 1620,1621, 3209, 3210.
   c. ANSI/ASEE A1264.1-2007.
   d. USACE EM 385-1-1 (21.E.01 a-c).

2. Materials:

   a. Uprights: 1.625 x 0.25-inch steel tube per ASTM A-513-5-08A DOM Grade 1026.
   b. Mounting Bracket: 3/16-inch steel plate per ASTM A36 bracket with pre-punched holes for mounting stud attachment.
   c. Horizontal Rails: 1.625 x 0.065 inch and 1.375 x .065 inch per ASTM A-513 DOM Grade 1020 steel tube adjustable slide rails.

3. Sizes:

   a. Uprights: Custom designed per project to OSHA Standards and CBC code requirements.
   b. Horizontal Rails: 5 ft. on center; 70 to 43 inch, 43 to 29 inch adjustable.
   c. Outside Corner: 20.5 inch on center.
   d. Inside Corner: 12.5 inch on center. Inside Corner.

4. Weight: All weights are approximate.

   a. Uprights: 25 lbs.
   b. Horizontal Rails: 1 lbs per linear ft.
   c. Corners: 2 lbs.

5. Hardware: 3/8-16 inch x 1 inch zinc plated steel. Consult manufacturer for approved structural attachment fasteners.
6. Labels: Applicable safety warnings and manufacturer's contact information.
7. Finish: Powder coated steel or Hot-Dipped Galvanized to ASTM A123.

B. Hardware:

1. Hinges: Concealed spring hinges or concealed continuous piano hinge set to open 175-degree. For fire-resistive units, provide self-closing mechanism.
2. Locking device: Flush, screwdriver-operated cam lock of number required to hold door in flush, smooth plane when closed.

2.3 FABRICATION

A. Fabricate to profiles indicated without exposed cut edges.

B. Provide exterior access panels with weatherproof extruded door gasket.

C. Finishes: As indicated on the Drawings.

PART 3 - EXECUTION

3.1 EXAMINATION AND PREPARATION

A. Inspect and prepare substrates and nailers using the methods recommended by the manufacturer for achieving best result for the substrates under project conditions. Verify that nailers and other structural components of the building are securely fastened and capable of withstanding loads applied by the guardrail system.

B. Do not proceed with installation until substrates and nailers have been prepared using the methods recommended by the manufacturer and deviations from manufacturer's recommended tolerances are corrected. Commencement of installation constitutes acceptance of conditions.

C. If preparation is the responsibility of another installer, notify Architect in writing of deviations from manufacturer's recommended installation tolerances and conditions.

3.2 INSTALLATION

A. Install in accordance with manufacturer's instructions including the following.

B. Permanent Roof Edge Protection:

1. Set uprights, horizontal rails and corners accurately in location, alignment and elevation, measured from established lines and levels and per installation drawings.
2. Install fasteners as recommended by manufacturer in holes provided on the upright bracket.
3. Inspect final installation and test for capacity in accordance with manufacturer's recommendations.

C. Wall Mount Guardrail shall provide water-tight installation through wall flashings on parapet walls with the use of backup plates, target patches and wall mount brackets. Target patches shall be field fabricated to fit around backup plate mounting studs and provide roof manufacturers recommended seam width around perimeter of target patch. Mounting studs shall be sealed behind target patch with non-curing butyl or manufacturers recommended sealant.

3.3 PROTECTION

A. Protect installed products until completion of project.

B. Touch-up, repair or replace damaged products before Substantial Completion.

END OF SECTION

SECTION 05 73 13 – GLAZED DECORATIVE GLASS RAILINGS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes glass railings (glass, base, cap, and accessories).
B. Related requirements:

1. Division 03 for installation of railing base in concrete slab.
2. Division 05 for all other railings.
3. Division 08 for all other glass and glazing.

1.2 ADMINISTRATIVE REQUIREMENTS

A. Scheduling and sequencing:
B. Coordinate installation of anchorages for railings. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver items to Project site in time for installation.
C. Preinstallation Conference: Conduct conference at Project site.

1.3 SUBMITTALS

A. Product Data:

1. Metal railings assembled from standard components.
2. Glass products.
3. Glazing cement and accessories for structural glass railings.
4. Sealant and accessories for structural glass railings.
5. Fasteners.

B. Shop drawings:

1. Large scale, dimensioned Shop Drawings for the work of this Section.
2. Show sizes, location of joints in metal work and glass panels; method of fabrication including connectors and welds.
3. Provide instructions, template or setting diagrams for installation of anchors set by other trades.

C. Samples:

1. Metal samples: 6 inches square for sheets and 12-inch long Samples of each cap, base and other types, profile and finish to be exposed in the Work, showing proposed range of color and texture variations.
2. Glass samples: Samples of glass to be used and finished edges.
3. Assembled Samples of railing systems, made from full-size components, including top rail, handrail, glass panels]and base. Show method of finishing members at intersections. Samples need not be full height.

D. Provide an ESR for the rail assembly.

1.4 HANDLING

A. Protection: For exposed metal surfaces provide strippable coating or other forms of protection standard with the fabricator.
B. Precautions: Prevent damage to glass from condensation, temperature changes, run-off, and other causes.

1.5 FIELD CONDITIONS

A. Field Measurements: Verify actual locations of walls and other construction contiguous with railings by field measurements before fabrication and indicate measurements on Shop Drawings.

1.6 WARRANTY

A. See Section 08 80 00 for warranty requirements.

PART 2 - PRODUCTS

2.1 GLASS RAILING MANUFACTURERS

A. One of the following, or equal:

1. CR Lawrence, basis of design. ESR-3269.
2. Kinslo Glass.
3. Or equal.

2.2 METALS

A. General:

1. Provide metals selected for their surface flatness, smoothness and freedom from blemishes wherever exposed to view in the finished work.
2. Provide materials cold-rolled, cold-finished, cold-drawn, extruded, stretcher-leveled, and machine cut to the highest commercial standards for flatness, with edges and corners sharp and true to angle or curvature as required.
3. Exposed to view surfaces that exhibit pitting, seam marks, roller marks, stains, oil canning, stains, discolorations or other imperfections will not be acceptable.

B. Aluminum extrusions:

1. ASTM B 221, B 308 or B 210.
2. For base, provide alloy required to safely support the loads to which the railings are subjected.
3. Show alloy type on Shop Drawings.

C. Stainless steel: Grade or type designated below for each form required:

1. Tubing: ASTM A 554, Grade MT 304.
2. Plate and flat bar: ASTM A 666, Type 304.
3. Bars and Shapes: ASTM A276, Type 304.

D. Steel and Iron: Bars: Hot-rolled, carbon steel complying with ASTM A29/A29M, Grade 1010.
E. Structural steel components: ASTM A 36.
F. Welding electrodes and filler metal: Type and alloy recommended by producer of the metal to be welded, as required for color match, strength and compatibility in the fabricated items.
G. Fasteners:

1. Structural bolts for railings: ASTM A 307; where higher strength is r equired, submit bolt specifications with Shop Drawings.
2. All other fasteners shall be stainless steel.

H. Shop primer for steel: As specified in Section 05 50 00.
I. Bituminous paint: SSPC-Paint 12 (cold-applied asphalt mastic).

2.3 GLASS AND GLAZING PRODUCTS, GENERAL

A. Tempered clear float glass, as specified in Section 08 80 00, not less than 1/2-inch thick, with flat ground polished edges with pencil corners where exposed.
B. Glass shall be free from bubbles, smoke vanes, air holes, scratches and other defects.
C. Justify glass thickness by calculations in compliance with ASTM E 1300 for a statistical probability of breakage of one lite per 1000.
D. Glass flatness shall be such that tolerance between installed glass panels will not exceed 3/32-inch.
E. Safety Glazing: Glazing shall comply with 16 CFR 1201, Category II.
F. Safety Glazing Labeling: Permanently mark glass with certification label of the SGCC or another certification agency acceptable to authorities having jurisdiction or manufacturer. Label shall indicate manufacturer's name, type of glass, thickness, and safety glazing standard with which glass complies.
G. Fully Tempered Float Glass: ASTM C1048, Kind FT (fully tempered), Condition A (uncoated) unless otherwise indicated, Type I, Class 1 (clear), Class 1 and low-iron clear, Quality-Q3.
H. Glazing Cement and Accessories for Structural Glass Railings: Glazing cement, setting blocks, shims, and related accessories as recommended or supplied by railing manufacturer for installing structural glazing in metal base channels.
I. Glazing Gaskets for Glass-Infill Panels: Glazing gaskets and related accessories as recommended or supplied by railing manufacturer for installing glass-infill panels in post-supported railings.

2.4 SEALANTS

A. Sealant and Accessories for Structural Glass Railings: Sealant, gaskets, setting blocks, shims, and related accessories as recommended or supplied by railing manufacturer for installing structural glazing in metal base channels.

2.5 FABRICATION

A. Provide matching alloy (for color) for exposed metal surfaces. Form metal work to the required shapes.

B. Design assemblies to minimize site welding.
C. Comply with AWS for recommended practices in shop welding. Avoid distortion or discoloration of the exposed side. Welds on exposed surfaces shall be continuous.

1. Use only technicians qualified to weld aluminum and stainless steel using TIG equipment.
2. Maintain proper welding temperature to avoid discoloring adjacent metal.
3. Clamp components in jigs during welding to avoid distortion.
4. Clean exposed welded joints of welding flux, and dress on exposed and contact surfaces to be invisible, under normal lighting conditions, from adjacent surfaces.
5. Alligatored, discolored and warped components will be rejected.

D. Joints:

1. Show joint location on the Shop Drawings.
2. Mill metal assemblies jointing tight, hairline, so they fit flush.
3. Cope or miter corner joints.

E. Unless otherwise shown or accepted on the Shop Drawings, conceal all fasteners in the finish work. Backup joints in handrails with sleeves.
F. Finishing metal surfaces:

1. For exposed stainless-steel surfaces: NAAMM No. 4 “Satin” finish.
2. For concealed aluminum surfaces: Mill finish.

PART 3 - EXECUTION

3.1 EXAMINATION/PREPARATION

A. Examine conditions and measurements affecting the work of this Section at site.
B. Correct detrimental conditions before proceeding with installation.

3.2 INSTALLATION

A. General:

1. Do not install damaged and defective components. Remove and replace members that have been damaged during installation or thereafter, before the time of final acceptance.
2. Do not cut, trim or weld parts during erection, in any manner that would damage the finish, decrease the strength, or result in a visual imperfection or a failure in performance of the work.
3. Return components that require alteration to the shop for refabrication, if possible, or for replacement by new parts.
4. Install work with tight joints accurately fitted. Where cutting is required for proper fitting and jointing, restore finish to eliminate evidence of corrective work.
5. Install this work with concealed fasteners.
6. Apply a bituminous coating of approximately 30 mils dry film thickness, or other suitable permanent separator, on surfaces in contact with concrete.
7. Comply with requirements specified above for field welding.

B. Fastening to in-place construction:

1. Set this work accurately in location, alignment and elevation, plumb, level and true, measured from established lines and levels.
2. Provide required anchorage devices and fasteners for securing glass railings to in-place construction; coordinate the embedment of anchors with the work of Section 03 30 00.

C. Glazing:

1. Install glass as specified in Section 08 80 00 and the railing manufacturer's instructions, plumb, level, with joints uniform in width and in the same plane.
2. Attach to base securely as indicated on the approved Shop Drawings.

D. Tolerances: Maximum deviations from theoretical locations shall not exceed 1/8-inch and adjacent glass edges shall not deviate more than 1/16-inch from plumb.

3.3 FIELD QUALITY CONTROL

A. Field repair damaged components and finishes when the results are satisfactory to the Architect, otherwise replace with undamaged new components, to the Architect's satisfaction.

END OF SECTION

SECTION 05 73 16 – CABLE RAILINGS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes cable railings consisting of painted steel main members, and stainless-steel wire ropes and accessories.
B. Related requirements:

1. Division 03 for installation of railing base in concrete.
2. Section 05 50 00 for steel shapes.

1.2 ADMINISTRATIVE REQUIREMENTS

A. Scheduling and sequencing: Schedule installation of cable railings so wall and floor attachments are made only to completed substrates. Do not support assemblies temporarily by any means that do not suit structural performance requirements.

1.3 SUBMITTALS

A. Shop Drawings:

1. Large scale, dimensioned Shop Drawings for the work of this Section.
2. Show elevation of each railing, sizes, location of joints in metal work; method of fabrication including connectors and welds.
3. Provide instructions, template or setting diagrams for installation of anchors set by other trades.

B. Metal Samples:

1. 12-inch-long Samples of each type, profile and finish of components to be exposed in the Work, showing proposed range of color and texture variations.
2. Full size accessories.

1.4 QUALITY ASSURANCE

A. Engineering: Contractor, thru a California-licensed professional engineer, employed by the Contractor, shall be responsible for the engineering, fabrication and installation of the railings, and rails, and their connections to the structure within the physical limitations indicated on the Drawings.

1. Railings shall comply with ASTM E 2353.
2. Obtain approval of Authorities Having Jurisdiction (AHJ) for the railings Shop Drawings and calculations, and pay fees incurred thereby before start of installation.
3. Fasteners and connections.

    a. Fasteners or connections shall not conflict with or require revision of the finish profiles of the railings or the supporting work.
    b. Connections to the structural frame shall not impose eccentric loading or induce twisting or warping.
    c. Connections to the structural frame shall be able to accommodate misalignment of the primary structure within limits allowed by the AISC and ACI tolerances.

1.5 HANDLING

A. Protection: For exposed metal surfaces provide strippable coating or other forms of protection standard with the fabricator.
B. Precaution: Prevent oxidation and stains from condensation, temperature changes, run-off, and other causes that would damage or stain the components.

PART 2 - PRODUCTS

2.1 CABLE RAILING MANUFACTURERS

A. One of the following, or equal:

1. Carl Stahl DecorCable Innovations, Inc.
2. Jakob.
3. Hayn Lines.
4. San Diego Cable Railings.
5. Ultra-Tec Cable Railing System.
6. Or equal.

2.2 METALS

A. General:

1. Provide metals selected for their surface flatness, smoothness and absence of blemishes where exposed to view in the finished work.
2. Provide materials that have been processed to the highest commercial standards.
3. Exposed to view surfaces that exhibit damaged wire ropes, pitting, seam marks, roller marks, stains, discolorations and other imperfections will not be acceptable.

B. Steel components: See Section 05 50 00.
C. Welding electrodes and filler metal: See Section 05 50 00.
D. Fasteners and accessories: Stainless steel finished to a uniform matte surface.
E. Shop primer for steel: As specified in Section 05 50 00.
F. Bituminous paint: SSPC-Paint 12 (cold-applied asphalt mastic).

2.3 FABRICATION

A. Provide matching alloy (for color) for exposed metal surfaces. Form metal work to the required shapes.
B. Design assemblies to minimize site modifications and welding.
C. Comply with AWS for recommended practices in shop welding. Avoid distortion or discoloration of the exposed side. Welds on exposed surfaces shall be continuous.

1. Maintain proper welding temperature to avoid discoloring adjacent metal.
2. Clamp components in jigs during welding to avoid distortion.
3. Clean exposed welded joints of welding flux, and dress on exposed and contact surfaces to be invisible, under normal lighting conditions, from adjacent surfaces.
4. Alligatored, discolored and warped components will be rejected.

D. Joints:

1. Show joint location on the Shop Drawings.
2. Mill metal assemblies jointing hairline-tight, so they fit flush.

3. Cope or miter corner joints.

E. Unless otherwise shown or accepted on the Shop Drawings, conceal all fasteners in the finish work. Back-up joints in handrails with sleeves.

2.4 FINISHING

A. Finishing exposed metal surfaces:

1. Posts and top rails - Steel: Field painted under Section 09 96 00.

PART 3 - EXECUTION

3.1 EXAMINATION/PREPARATION

A. Examine conditions and measurements affecting the work of this Section at site.
B. Correct detrimental conditions before proceeding with installation.

3.2 INSTALLATION

A. General:

1. Do not install damaged and defective components. Remove and replace members that are damaged during installation or thereafter, before the time of final acceptance.
2. See Section 05 50 00 or the installation of the posts and top bars.
3. Install this work with concealed fasteners.
4. Apply a bituminous coating, approximately 30 mils DFT, or other suitable permanent separator on surfaces in contact with cementitious materials.

B. Fastening to in-place construction:

1. Set this work accurately in location, alignment and elevation, plumb, level and true, measured from established lines and levels.
2. Provide required anchorage devices and fasteners for securing railings to in-place construction.

C. Cables: Confirm that the holes thru which the cable will pass are smooth and without sharp edges and burrs that could damage the cables. Do not install frayed cables.

1. Thread cables thru provided holes in supports.
2. Install end fittings and tension cables so they will not deform more than 1/2 inch under a concentrated load of 150 lb. applied at center of span.

D. Tolerances: Maximum deviations from theoretical locations shall not exceed 1/4 inch in plan and 1/16 inch from plumb.

3.3 FIELD QUALITY CONTROL

A. Field repair damaged components and finishes when the results are satisfactory to the Architect, otherwise replace with undamaged new components, to the Architect's satisfaction.

END OF SECTION

DIVISION 06
WOOD AND COMPOSITES

SECTION 06 10 53 - MISCELLANEOUS CARPENTRY

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:

1. Wood nailers and blockings, and plywood sheathing.
2. Rough hardware.
3. Plywood backboards for electrical and telephone equipment.

B. Related requirements: Painting plywood backboards.

1.2 SUBMITTALS

A. Wood treatment data: Treatment manufacturer’s instructions for proper use of each type of treated material.
B. Pressure treatment:

1. For each type specified, include certification by treating plant stating chemicals and process used, net amount of preservative retained and conformance with applicable standards.
2. For water-borne preservatives, include statement that moisture content of treated materials was reduced to a maximum of 19 percent prior to shipment to project site.
3.

1.3 QUALITY ASSURANCE

A. Fire-retardant wood products shall be manufactured under the independent third party inspection of UL
B. Follow-Up Service and each piece shall bear the UL classified mark indicating the extended ASTM E 84 test
C. Each piece shall be labeled kiln dried after treatment (KDAT).

1.4 HANDLING

A. Procedure: In accordance with AWPA recommendations for storage and protection of pressure-treated wood.
B. Do not store materials in wet or damp areas.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Nailers and blockings:

1. No. 1 or No. 2 grade Douglas fir, S4S, seasoned to moisture content of 19 percent maximum and stamped S-Dry, graded in compliance with WCLIB Grading Rules.
2. If specifications for pressure treatment state the maximum percentages of moisture content at the time of treatment, comply with those requirements in lieu of the above.

B. Plywood:

1. Telephone and electrical equipment backing panels: DOC PS 1, Exposure 1, C-D Plugged, fire-retardant treated, thickness indicated or, if not indicated, not less than 1/2 inch thick.
2. Elsewhere: Softwood plywood APA, Exterior Grade, C-C Plugged.

C. Rough hardware:

1. General: Use hot-dip galvanized (not electro-plated) Type 316 stainless steel fasteners complying with G185 to attach pressure-treated wood.
2. For fastening lumber-to-lumber: Cement-coated or annular threaded nails of sufficient length to penetrate a minimum of 1-1/4-inch into adjoining members, or stove or lag bolts used with washers.
3. For fastening plywood-to-lumber: Ring shank or annular threaded nails; 8d for 1/2-inch plywood and 10d for 3/4-inch plywood.
4. For fastening plywood or lumber to steel: Minimum #10 galvanized full threaded screws driven thru 5/8-inch diameter steel washers.
5. For fastening plywood or lumber to concrete or masonry: Corrosion-resistant drilled expansion type anchors or power-driven anchors by Hilti Fastening Systems, Molly Division of USM Corp., Redhead, or equal, capable of resisting a withdrawal force of 400 lb. each without failure.

2.2 TREATMENT OF LUMBER AND PLYWOOD

A. Preservative treatment by pressure process: AWPA C2 (lumber) and AWPA C9 (plywood), except that lumber not in contact with the ground and continuously protected from liquid water may be treated according to AWPA C31 with inorganic boron (SBX).

1. Kiln-dry material after treatment to maximum moisture content of 19 percent for lumber and 15 percent for plywood.
2. Mark each treated item with treatment quality mark of an inspection agency approved by the American Lumber Standards Committee Board of Review.
3. Treatment of wood nailers used in conjunction with roofing membrane shall be compatible with the roofing bitumen; oil-based preservatives are not acceptable.

B. Application: Treat items indicated on Drawings, and the following:

1. Wood cants, nailers, curbs, equipment support bases, blocking, stripping, and similar members in connection with roofing, flashing, vapor barriers, and waterproofing.
2. Wood sills, sleepers, blocking, furring, stripping, and similar concealed members in contact with masonry or concrete.
3. Wood framing members less than 18 inches above grade.
4. Wood floor plates installed over concrete slabs directly in contact with earth.

2.3 FIRE-RETARDANT TREATED WOOD

A. General: Where fire-retardant-treated materials are indicated, provide materials that comply with performance requirements in AWPA C20 (lumber) and AWPA C27 (plywood). Identify fire-retardant-treated wood with appropriate classification marking of UL, US Testing, Timber Products Inspection, or another testing and inspecting agency acceptable to AHJ.

B. Use treatment for which chemical manufacturer publishes physical properties of treated wood after exposure to elevated temperatures, when tested by a qualified independent testing agency according to ASTM D 5664 for lumber and ASTM D 5516 for plywood**.**

C. Use treatment free of halogens, sulfates, chlorides, arsenic, ammonium phosphate, formaldehyde, urea formaldehyde, and that does not promote corrosion of metal fasteners.

1. Exterior: “Exterior FRX” by Hoover Treated Wood Products (basis of design), FRX FRT Wood by Arch Wood Protection, or equal.
2. Interior: “Pyro-Guard” by Hoover Treated Wood Products, Dricon FRT by Arch Wood Protection, or equal.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine conditions and measurements affecting the work of this Section at site.
B. Correct detrimental conditions before proceeding with installation.

3.2 PREPARATION

A. Paint backboard panels before installation as specified in Section 09 90 00.

3.3 INSTALLATION

A. Subdrill holes in pieces where splitting may occur; size holes slightly smaller than diameter of nail.
B. Do not drive nails closer to edge of lumber than 1/4 length.
C. Remove lumber split in nailing and replace with sound members.
D. Make joints accurately and neatly, square, flush and tight.
E. Install wood screws and lag bolts with complete penetration to head. Bore lead holes equal to root diameter of the screw or bolt. Drive flush or recess with nailer face.
F. Pressure-treated wood products: Do not rip or mill treated lumber. End cuts, drilling holes and joining cuts are permitted. Plywood may be cut in any direction.

1. Use pressure-treated wood where required by Code and as specified above.
2. Use fire-treated wood where required for blockings and nailers located in metal-framed walls, partitions and ceilings.

G. Provide nailers and blockings where indicated and required.

1. Template and drill to match anchor bolts in steel members, concrete and masonry.
2. Where materials are applied over flush nailer surfaces, use carriage bolts with heads drawn flush into top of nailer or blockings, or counterbore holes to recess washers and heads of nuts.

3.4 ANCHORAGE

A. Fastening lumber or plywood to lumber:

1. Space nails a maximum of 12 inches o.c. and stagger across face of piece. Locate fastener also within 3 inches of each end of piece.
2. Drive nail heads flush with wood surfaces. Nails shall penetrate adjoining piece a minimum of 1-1/4-inch.

B. Fastening lumber or plywood to concrete or to masonry:

1. Space anchors a maximum of 36 inches o.c. and stagger if lumber is more than 5 inches wide.

2. Make anchor heads flat or countersunk flush with surface, but not countersunk more than 1/3 the thickness of piece to be fastened.
3. Anchor withdrawal resistance shall be a minimum of 400 lb. per anchor, or number of fasteners increased accordingly from that specified. Minimum penetration of 1-1/2-inch into concrete or masonry.

C. Fastening lumber or plywood to steel:

1. Space screws a maximum of 24 inches o.c. and stagger if lumber is more than 5 inches wide.
2. Drive screw heads flush with face of plywood or lumber.
3. Anchor shall penetrate a minimum of 1/4 inch through the steel.
4.

3.5 CLEANUP

A. Comply with the requirements of Division One.
B. Do not bury wood of any type on the jobsite.

END OF SECTION

SECTION 06 16 43 - GYPSUM SHEATHING BOARD

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes gypsum sheathing board on exterior face of exterior walls.
B. Related requirements:

1. Gypsum cover board is specified in Division 07.
2. Gypsum board is specified in Division 09.

1.2 SUBMITTALS

A. Data: Manufacturer Product Data for sheathing and fasteners. Include copies of approval for the assemblies by authorities having jurisdiction where used in fire-rated assemblies.

PART 2 - PRODUCTS

2.1 MANUFACTURER/TYPE

A. As specified below.

2.2 MATERIALS

A. Gypsum sheathing: One of the following of the thickness indicated, or equal complying with ASTM C 1177.

1. G-P Gypsum Products “Dens-Glass Gold” (Standard and Type X) sheathing board complying with ASTM C 1177 (basis of design).
2. National Gypsum “Goldbond E^2 XP.”
3. USG “Securock Glass-Mat Sheathing.”
4. Temple Inland “GreenGlass.”
5. CertainTeed “GlasRoc Sheathing.”

B. Screws: Steel drill screws with organic-polymer or other corrosion-protective coating having a salt-spray resistance of more than 800 hours according to ASTM B 117. Diameter and length to satisfy Code requirement.
C. Gypsum sheathing tape: 3M contractor sheathing tape NO.8086-inch by 3M Co., “Perm-A-Barrier” wall seam tape by WR Grace & CO., “108JTN” by Royston Laboratories, or “Polyken 610” by Polyken Technologies; use only tape approved by the sheathing manufacturers**.**

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine framing to support sheathing board and verify that the contact surface of any framing or furring member does not vary more than 1/4-inch from the plane of adjacent members.
B. Verify that studs, blocking and supporting materials are in place and ready for sheathing attachment prior to starting work.
C. Coordinate the exterior placement of electrical, mechanical and plumbing wall devices, accessories and access panels, wall signage, and other type wall construction with other trades before proceeding with work and during installation.

D. Correct detrimental conditions before proceeding with installation.

3.2 APPLICATION

A. General:

1. Use appropriate length boards to minimize end joints.
2. Place edge joints parallel to, and over framing members. Stagger end joints, if required.

B. Install boards with long edge perpendicular to framing. Butt joints between panels loosely. Do not force panels into place.
C. When fastening the board, proceed from the center towards ends and edges using power screwdriver recommended by the manufacturer to drive screws.
D. Drive fasteners to bear tight against and flush with the surface of the sheathing but do not break the fiberglass mesh.
E. Locate fasteners not closer than 3/8-inch from the edge and the ends of the sheathing panels.

END OF SECTION

SECTION 06 41 16 – PLASTIC-LAMINATE-CLAD ARCHITECTURAL CASEWORK

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:

1. Plastic laminate-clad casework. (PLAM-1 and PLAM-2)
2. Hardware for the casework.
3. Structural supports incorporated into wood casework.

B. Factory finishing.

1. Items associated or integral with architectural woodwork, including, but not limited to:

   a. Supports, reinforcement, and like components.
   b. Hardware and accessories.
   c. Concealed steel supports

C. Related requirements:

1. Other Section of Division 06 for wood blocking or grounds inside finished walls or above finished ceilings.
2. Division 23 for plumbing fixtures and fittings installed in countertops.

1.2 REFERENCES

A. Minimum standards for work in this Section shall conform to those listed and referenced in the Woodwork Institute (WI) and North American Architectural Woodwork Standards (NAAWS).

1.3 ADMINISTRATIVE REQUIREMENTS

A. Coordination: Coordinate placement of backing plates and studs in walls to receive casework with the appropriate trades. Review, and annotate where required, their Shop Drawings before those are submitted to the Architect.
B. Preinstallation Conference: Conduct conference at Project site.

1.4 SUBMITTALS

A. The Drawings are diagrammatic and show required profiles and dimensions. Assembly details are left to the Contractor and shall comply with WI standards provided the profiles and dimensions of the casework remain as indicated.

1. Comply with Woodwork Institute’s (WI) North America Architectural Standards (NAAWS) standards, current edition.
2. Furnish WI Certified Compliance Label on the first page of Shop Drawings.

3. Submit large scale, dimensioned, Shop Drawings showing location of each item of casework, dimensioned plans and elevations, large-scale details, attachment devices, finishes, and finish hardware type and location.

    a. Include hardware list, identifying each item by manufacturer, catalog number, size, finish and intended use. Include catalog cut sheets.
    b. Indicate method of seismic construction by WI-Seismic Test Codes Number.
    c. Coordinate Shop Drawings with the work of related trades which is a part of, or will be incorporated with the architectural woodwork, such as plumbing, electrical, and electronic equipment, along with adjacent and abutting materials to which this work is to be secured. Obtain the approval of the millwork Shop Drawings by these related trades (as evidenced by their stamp and signature thereon) before submitting Shop Drawings to the Architect.

B. Closeout:

1. Deliver all documentation required herein, including but not limited to:

    a. WI Certificates of Compliance.
    b. “As built” shop drawings reflecting all changes made during the project

2. Deliver a minimum of 4 keys for each lock to the District Representative. Label with individual tags indicating lock location(s).

1.5 QUALITY ASSURANCE

A. Manufacturer qualifications:

1. Firm (woodwork manufacturer) with not less than 5 years of production experience similar to this Project, whose qualifications indicate the ability to comply with the requirements of this Section.
2. The woodwork manufacturer must have at least one project in the past 5 years where the value of the woodwork was within 20 percent of the cost of woodwork for this Project.

B. Installer qualifications:

1. Manufacturer of casework, or
2. Firm licensed by WI under their "Certified Compliance Program," or
3. Firm specializing in custom millwork with 5 years’ experience in installation of custom millwork similar to that required for this Project.

C. Mockup:

1. Before starting production work, assemble a mockup of a base cabinet with one drawer and one door, and a countertop, for the Architect's review and approval. Mockup shall be complete with hardware and finished as specified.
2. Mockup must be located at the Project site.
3. Finish the mockup as intended for the finish work.
4. Approved mockup will be used as a standard for the Work.
5. Approved mockup may be used for the Project upon approval of Architect.

D. Requirements of regulatory agencies: Provide evidence of compliance with Code for architectural woodwork.

1. Particle board, MDF, and hardwood plywood used in this project must comply with California Air Resource Board standards for formaldehyde emissions.

E. Single source responsibility: A single manufacturer shall produce and install the work of this Section.
F. Certified compliance:

1. Before delivery to the jobsite the woodwork supplier shall provide a WI “Certified Compliance” Certificate indicating the millwork products being supplied and Certifying that these products meet the requirements of the Grade or Grades specified.
2. Each piece of paneling shall bear a WI Certified Compliance Label.
3. At completion of installation the woodwork installer shall provide a WI Certified Compliance Certificate indicating the products installed and certifying that the installation of these products meets the requirements of the NAAWS Grade specified.
4. Fees charged by the WI for their Certified Compliance program are the responsibility of the Contractor and shall be included in the bid.

1.6 HANDLING

A. Procedure: In accordance with NAAWS "Recommended Care and Storage of Architectural Woodwork"
B. Delivery:

1. Deliver materials to Project site in protective wrappings clearly labeled with identification of manufacturer, item name, and specific installation location.
2. Deliver millwork only when the area of operation is enclosed, all plaster and concrete work dry, and the area broom clean.

C. Storage:

1. Store in a clean storage area, well ventilated and protected from direct sunlight, excessive heat, rain or moisture, in which the relative humidity is between 45 percent and 65 percent at 60 to 90-degree F, and Equilibrium Moisture Content conditions between 8 percent and 12 percent.
2. The air conditioning or heating system shall be on and functioning and the architectural millwork shall be acclimated to these conditions for 72 hours prior to installation.
3. Do not subject casework to abnormal heat, extreme dryness, humid conditions, sudden changes in temperature, or direct sunlight.
4. Store cabinets carefully and set or store on a level floor. Protect the exposed finished portions from bumping, scratching, staining and other damage.

D. Handling: Handle with clean hands, use care not to slide one item over the other, and when primed or sealed, properly re-stack when dry.

PART 2 - PRODUCTS

2.1 COMPONENTS

A. Lumber:

1. In accordance with the NAAWS Grade specified for the product being fabricated. Moisture content shall be 6 percent to 12 percent for boards up to 2-inch nominal thickness and shall not exceed 19 percent for thicker pieces.
2. Lumber shall be Birch or Poplar.

B. Veneer:

1. In accordance with the NAAWS requirements for its use and grade(s) specified.
2. Veneer shall be any close-grained hardwood suitable to receive an opaque finish.

C. Core: MDF meeting the requirements of NAAWS.
D. Veneer core plywood: Classic Core by Columbia Forest Products, or equal void less veneer hardwood plywood.
E. Hardboard: AHA A135.4.
F. Plastic laminate:

1. Complying with the requirements of the NAAWS for its intended use.
2. Colors and textures indicated or selected by the Architect.
3. Where edge is exposed in the Work, provide color core laminate.

G. Cabinet liner: Type CLS.
H. Edgeband: PVC.
I. Adhesives: Type I.
J. Finish hardware:

1. Hinges:

a. Grade 1 (institutional), or Grade 2, concealed (European style) with 3-way independent adjustment.
b. Self-closing, 170-degree opening, except 90-degree where door opens against a wall, or otherwise limited to 90-degree.

2. Drawer slides: WI-approved, self-closing metal runners with ball-bearing rollers, full extension type, side mounted.

a. Pencil drawers: 50 lb rated.
b. General purpose drawers: 75 lb rated.
c. General purpose drawers more than 24-inch wide or 6-inch deep: 100 lb rated.
d. File drawers: 100 lb rated.
e. Lateral file drawers more than 24 inches wide: 150 lb rated.
f. Drawer guides: full extension NAAWS-approved.

3. Drawer Pulls: DP3/AM Series -Antimicrobial 4-inch tab drawer pull.

a. Finish: Matte black.

4. Shelf supports for adjustable shelves in wall-hung cabinets and the upper half of tall cabinets: Designed to prevent shelves from sliding forward in a seismic event.
5. Bored hole shelf support systems and metal shelf ladders have both been determined to provide satisfactory support.
6. Drawer and Cabinet Locks: Equal to National Cabinet Lock.

a. Cabinet Doors: C8173, C8174, or C8175.
b. Drawers: C8177, C8178 or C8179.
c. Provide a minimum of 4 keys per lock.

7. Keying:

a. Key locks inside one room alike. Furnish 3 keys for each lock keyed separately, and 2 keys for each lock in keyed alike groups. Master keys shall be tagged and delivered to the Inspector of Record (IOR). Locks and keys shall be stamped with coded set number / direct digit.

b. Cabinet locks shall be master-keyed and keyed alike. Backside of cabinet lock bolts (on visible side following installation) and change keys shall be stamped with manufacturer's code, either direct digit or coded series. Change keys shall also be stamped with set numbers direct digit.
c. Master keys shall be National GM2.

8. Elbow catches: Equal to Ives 2A.
9. Grommets in casework: Plastic, of the color selected by the Architect, with flip-top of appropriate size for wire management, by Doug Mockett & Co., Hardware Concepts, Inc., Wood Technology, Inc., Blanton & Moore, or Metcor Manufacturing Co.
10. Shelf standards: Knape & Vogt 255 series recessed steel pilaster standards with 256 series steel shelf supports or approved equal.
11. Wire manager: Plastic, of the color selected by the Architect, Doug Mockett & Co., Inc. WM-2A, Blanton & Moore WMC-4000 Series, or equal. Provide at each computer station.
12. Bolts: Surface type BBW No. 97-B6, Quality B6 or Trimco No. 4856-6.
13. Provide seismic restraints for open shelf supports.
14. Card Holders for Drawers: Corbin No. 1913-1/4H or Garcy No. 853.
15. Hanger Rods: 1-1/16 inches minimum diameter metal tubing, aluminum or stainless steel clad, KV660; heavy wall steel tubing KV770.
16. Hanger Rod Flanges: KV757, or flanges KV734, KV735; Ronther Reiss R44-55; or equal.
17. Casework door silencers: Provide at tops and bottoms of all doors.

K. Rough hardware:

1. Wood screws, nails and anchors: As selected by the fabricator provided that they result in permanent connections.
2. Toothed steel or lead expansion bolt devices for drilled-in-place anchors. Furnish inserts and anchors, as required, to be set into concrete work for anchorage.

2.2 FABRICATION

A. Casework:

1. NAAWS Custom Grade.
2. Countertops: Premium Grade.
3. Exposed interior surfaces: Low pressure melamine overlay.
4. Semi-exposed surfaces: Cabinet liner.
5. Doors, drawer fronts, and false fronts: Flush overlay.

a. Edgeband at doors, drawer fronts, and false fronts: 3mm PVC.

B. Drawers: Comply with the requirements of the NAAWS for the Grade specified.
C. Plastic laminated countertops:

1. Laminate:

a. Manufacturer: See Finish Schedule.
b. Pattern: See Finish Schedule

2. Core material: MDF.
3. Back splashes: As detailed.
4. Front edges: As detailed.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify the adequacy and proper location of any required backing or support framing.
B. Verify that mechanical, electrical, plumbing, and other building components affecting work in this Section are in place and ready.
C. Examine conditions and measurements affecting the work of this Section at site.
D. Correct detrimental conditions before proceeding with installation.

3.2 PREPARATION

A. Condition woodwork to average prevailing humidity conditions in installation areas prior to installing.

3.3 INSTALLATION GENERAL

A. Comply with requirements of WI, and Code for seismic attachment and bracing.
B. Install work plumb, level, true and straight with no distortions, to a tolerance of 1/8-inch in 8 feet from plumb and level.
C. Shim using concealed shims.
D. Scribe and cut work to fit adjoining work and refinish cut surfaces or repair damaged finish at cuts.
E. At gypsum board construction, anchor through wall surface to backing plates and studs. Indicate location of required concealed backing on casework shop drawings.
F. Furnish fillers, closures and trim as required for a complete installation. Scribe in place where required.

3.4 CASEWORK

A. Comply with WI's Architectural Woodwork Standards for custom installation unless otherwise detailed.
B. Install in a manner consistent with the specified quality grade, plumb, level, true and straight with no distortions.
C. Install without distortion so doors and drawers fit openings properly and are accurately aligned. Adjust hardware to center doors and drawers in openings and to provide unencumbered operation. Complete installation of hardware and accessory items as indicated.
D. Install cabinets with no more than 1/8 inch in 96-inch sag, bow, or other variation from a straight line.
E. Secure to ground, stripping and blocking with countersunk, concealed fasteners and blind nailing as required for a satisfactory installation. Scribe and cut for accurate fit to adjacent finished surfaces.

3.5 COUNTERTOPS

A. Comply with WI's Architectural Woodwork Standards for custom installation unless otherwise detailed.
B. Anchor securely to base units and other support systems as indicated. Fasten joints in tops with draw-bolt type fasteners let into underside of top.
C. Install countertops with ends as detailed.

D. Verify opening requirements and make cutouts for sinks, fittings, service fixtures, and equipment.
E. Scribe laminated plastic tops to walls and other adjacent items.

F. Fill gaps between solid surface tops and walls and other adjacent items with color matched sealant.

3.6 FIELD QUALITY CONTROL

A. Field touchup shall be the responsibility of the installer and shall include filling in of nail holes, refinishing of raw surfaces resulting from job fitting, repair of job inflicted scratches and mars, and final cleanup of the finished surfaces.
B. Protecting:

1. Do not use the top of casework for storage.
2. Do not store materials adjacent to woodwork unless it is protected against damage and staining.
3. When painting or touching-up surfaces contiguous to woodwork, mask it with non-staining Kraft paper and tape.

C. Replace work damaged beyond satisfactory field repair, as determined by the Architect, with satisfactory millwork.
D. Before inspection for Substantial Completion, remove protective covering and clean interior and exterior surfaces using procedures and materials recommended by manufacturer.

END OF SECTION

SECTION 06 42 00 – WOOD PANELING

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:

1. Wood paneling. (WD-1)
2. Wood trim and other decorative components of the paneling.
3. Clips and other hardware to attach paneling to concealed supports.

B. Related requirements: Division 06 for exterior and interior finish carpentry and for interior architectural woodwork.

1.2 DEFINITION

A. “Paneling” as defined in this Section includes wood trim and other decorative components at the perimeter and in the field of the paneling.

1.3 REFERENCES

A. Architectural Woodwork Institute, and the Architectural Woodwork Manufacturers of Canada (WI.) North American Architectural Woodwork Standards (NAAWS).

1.4 ADMINISTRATIVE REQUIREMENTS

A. Coordination: Indicate on Shop Drawings the exact location and type of concealed supports required to attach paneling to walls. Verify with affected trades that the supports are provided in accordance with the approved Shop Drawings before wall finish material is installed.

1.5 SUBMITTALS

A. Procedure: In accordance with the NAAWS.
B. Data: Manufacturer Product Data for adhesives, finishing system, and for clips.
C. Shop Drawings:

1. Comply with NAAWS.
2. The Drawings are diagrammatic and show required profiles and dimensions. Submit large scale, dimensioned, Shop Drawings showing paneling layout on each plane, plans and elevations, large-scale details, finishes, and attachment devices types and locations.

D. Samples:

1. Paneling:

a. Sample panels approximately 24 inches square, complete with trim, showing proposed variations in grain and color of the veneer for paneling with a transparent finish. Include at least one face-veneer seam and finish as specified.
b. Same size panels, complete with trim, with an opaque finish.

2. Clips: Full size Samples by 6 inches long.
3. Veneer: Leaves representative of and selected from flitch showing species, cuts, finishes, textures and patterns to be used.
4. Approved Samples will serve as Architect’s control Samples.

E. Product Data:

1. Evidence of no added Formaldehyde panel products.

F. Closeout: Instructions on maintenance and touching-up finish.

1.6 QUALITY ASSURANCE

A. General: Work shall be in accordance with NAAWS for the grade or grades specified.
B. Manufacturer/installer qualifications:

1. Firm licensed by WI under their "Certified Compliance Program," and/or
2. Firm with not less than 10 years of production experience similar to this Project, whose qualifications indicate the ability to comply with the requirements of this Section.
3. Firm must have at least one project in the past 5 years where the value of the woodwork was within 20 percent of the cost of woodwork for this Project.

C. Single source responsibility: A single manufacturer shall produce and install the work of this Section.
D. Special design requirements: Sequence-matched wood veneers and wood doors with face veneers that are sequence-matched with woodwork and transparent-finished wood doors and adjacent decorated trim and ornaments that are required to be of same species as woodwork.
E. Quality standard: Unless otherwise indicated, comply with AWS standards for “Premium” grade for paneling to receive a transparent finish and “Custom” grade for paneling to receive an opaque finish.
F. Requirements of regulatory agencies: Provide evidence of compliance with Code for wood paneling.

1. Formaldehyde emissions: Particle board and MDF used for the Project must comply with California Air Resource Board standards for formaldehyde emissions.
2. Fire-test-response characteristics: Provide materials and products with fire-test-response characteristics complying with Class I or A, as determined by testing identical products per test method indicated by UL, ITS, or another testing and inspecting agency acceptable to AHJ. Identify with appropriate markings of applicable testing and inspecting agency in the form of separable paper label or, where required by AHJ, imprint back of panels.

G. Mockups:

1. Before starting production work, assemble mockup consisting of 4 panels (minimum) of each type, with one corner for Architect’s review.
2. Finish the mockups as intended for the finish work.
3. Repeat mockups when the first ones are unsatisfactory.
4. Approved mockups will be used as a standard for the Work and may remain as part of the Work when protected.

1.7 HANDLING

A. Procedure: In accordance with AWS standards.
B. Delivery:

1. Deliver paneling to Project site in protective wrappings clearly labeled with identification of manufacturer, item name, panel number corresponding to the numerical sequence of the Shop Drawings, and specific installation location.
2. Deliver paneling only when the area of operation is enclosed and broom clean, and cementitious work is dry.

C. Storage:

1. Store materials in a clean, well-ventilated storage area protected from direct sunlight, excessive heat, rain and moisture; in which relative humidity is between 45 and 65 percent at 60 to 90 degrees F. and equilibrium.
2. The air conditioning or heating system shall be on and functioning and the wood paneling shall be acclimated to these conditions for 72 hours prior to installation.
3. Do not subject paneling to abnormal heat, extreme dryness, humid conditions, sudden changes in temperature, or direct sunlight.

4. Store paneling carefully and set or store on a level floor. Protect the exposed finished portions from bumping, scratching, staining and other damage.

D. Handling: Handle with clean hands, taking care not to slide one item over the other; when primed or sealed, properly re-stack when dry.

E. Fire-retardant-treated wood: Handle, store, and install fire-retardant-treated wood to comply with chemical treatment manufacturer's written instructions, including those for adhesives used to install woodwork.

1.8 PROJECT CONDITIONS

A. Acclimation: Condition materials to moisture content between 8 percent and 12 percent.

PART 2 - PRODUCTS

2.1 MATERIALS

A. General: Provide materials that comply with NAAWS for quality grade specified, unless otherwise indicated.

B. Panel core products: In compliance with section 500 of the standard.

C. Wood trim and other decorative components of the paneling: From solid wood matching face veneer for transparent finished panels; MDF or close-grained solid hardwood for opaque finish.

D. Exposed surfaces, including edges:

1. Wood species and cut: As indicated in Interior Finish Materials Schedule on Drawings.
2. Finish: As indicated and matching Architect Control Sample.

E. Concealed surfaces: Hardwood veneer compatible with face.

2.2 HARDWARE AND ACCESSORIES

A. Panel clips: Extruded aluminum 2-piece Kingclips by Brooklyn Hardware Manufacturing, or equal by Orange Aluminum or Monarch Metal Fabrication.

B. Anchors:

1. Select material, type, size, and finish required for each substrate for secure anchorage.
2. Provide nonferrous-metal or hot-dip galvanized anchors and inserts on inside face of exterior walls and elsewhere as required for corrosion resistance.

2.3 FINISHES

A. Wood fillers, sealers, stains and finish coating systems (stains and dyes), used with compliant stains and bases by one of the following manufacturers:

1. Minwax.
2. RJ McGlennon Co., Inc.
3. Sikkens.
4. Sherwin Williams.
5. WD Lockwood.

2.4 WOOD PANELING

A. General:

1. Match Architect’s Control Sample. In preparation for finish, clean woodwork.
2. Comply with AWS section 500, grade specified, and these Specifications.
3. Finish woodwork at the mill, smoothly dressed. Sand, using same sequence and grade of abrasive used in the Architect’s Control Sample to achieve the same finish. Clean woodwork thoroughly with a tack cloth.

4. Produce surfaces free from open joints, hammer and machine marks, structural defects and surface blemishes.

B. Veneer, meeting requirements of the NAAWS for the Grades specified above: Match approved Samples and mockups.

2.5 SHOP FINISHING

A. General: Finish wood paneling at fabrication shop. Defer only final touchup, cleaning, and polishing until after installation.
B. Grade: Provide finish of same grade as items to be finished.
C. Preparation for finishing: Comply with referenced AWS Quality Standard for sanding, filling, sealing concealed surfaces, and similar preparations for finishing paneling.
D. Transparent finish:

1. Grade: Premium.
2. AWS Finish System: TBD
3. Sheen: TBD.

E. Backpriming: Backprime paneling on surfaces that will be concealed with one coat of wood primer or clear varnish.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine conditions and measurements affecting the work of this Section at site.
B. Correct detrimental conditions before proceeding with installation.

3.2 PREPARATION

A. Condition paneling to average prevailing humidity conditions in installation areas prior to installing.

3.3 INSTALLATION

A. Comply with NAAWS standards requirements for Grade of the items being installed.
B. Attach continuous clips securely to back of panels.
C. Anchor the supporting clips through wall surface to backing plates and studs. Indicate location of required concealed backing on paneling Shop Drawings.
D. Install paneling plumb, level, true and straight with parallel, uniform joints, to a tolerance of 1/8-inch in 10 feet from plumb and level; lipping is not allowed; use concealed shims.

3.4 FIELD QUALITY CONTROL

A. General: Field touchup is the responsibility of the installer and shall include filling in of nail holes, refinishing of raw surfaces resulting from job fitting, repair of job inflicted scratches and mars, and final cleanup of the finished surfaces.
B. Protecting: When painting or touching-up surfaces contiguous to woodwork, mask it with non-staining Kraft paper and tape.

1. Replace millwork damaged beyond satisfactory field repair with satisfactory woodwork, as determined by the Architect.
2. During final cleaning, remove protective covering and clean interior and exterior surfaces using procedures and materials recommended by manufacturer.

3.5 ADJUSTING AND CLEANING

A. Repair damaged and defective paneling, where possible, to eliminate functional and visual defects; where not possible to repair, replace paneling. Adjust joinery for uniform appearance.
B. Clean surfaces on exposed and semi-exposed surfaces.

END OF SECTION

DIVISION 07

THERMAL & MOISTURE PROTECTION

SECTION 07 16 16 - CEMENTITIOUS WATERPROOFING

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes cementitious, crystalline waterproofing applied to:

1. Interior walls and floor of elevator pits and other pits below lowest building floor slab.
2. Exterior curbs; from behind cement plaster to 6-inches below finish floor (below grade).

B. Related requirements: All other waterproofing systems.

1.2 ADMINISTRATIVE REQUIREMENTS

A. Scheduling and sequencing: Comply with waterproofing manufacturer's recommendations for sequencing construction operations after waterproofing applications to avoid conditions detrimental to performance of waterproofing application.

B. Preinstallation meeting:

1. Prior to start of installation arrange a pre-installation meeting between the product manufacturer authorized representative, the Contractor, the Architect, and the installer to review Project conditions, the Drawings, Specifications and the manufacturer's data.
2. If more than one trade will be responsible for the successful performance of the work of this Section, these trades shall attend the meeting.
3. Record meeting minutes and distribute copy to all concerned, and the Architect, within 7 days after the meeting.

1.3 SUBMITTALS

A. Data: Waterproofing manufacturer Product Data for proposed products, and their installation method.

B. Shop Drawings: Detail waterproofing construction joints, crack treatment, corners, and penetrations in waterproofed surfaces.

C. Warranty: Sample copies of warranty for assembly to be furnished under this Section, clearly defining terms, conditions, and time periods for the warranty.

D. Letter of acceptance: From the manufacturer to verify its acceptance of the applicator and acceptance of substrates as satisfactory to receive this work.

E. Test reports: Submit complete test reports from approved, independent testing laboratories certifying that waterproofing system conforms to specified performance characteristics and testing requirements.

1.4 QUALITY ASSURANCE

A. Manufacturer Qualifications: Manufacturer shall be ISO 9001 registered, and shall have no less than 10 years’ experience in manufacturing the cementitious crystalline waterproofing materials for the required work.

B. Installer qualifications: Qualified firm authorized, approved, or licensed to install products specified and eligible to receive warranty specified, with at least 3 years experience in work of the type required by this Section.

C. Source quality: Obtain proprietary crystalline waterproofing products from a single manufacturer.

1.5 HANDLING

A. Deliver and store packaged waterproofing materials to project site in original, undamaged containers, with manufacturer's labels and seals intact.
B. Do not use materials past the manufacturer's recommended shelf life.

1.6 PROJECT CONDITIONS

A. Provide ventilation, heaters, humidifiers and water sprays as required to reach and maintain the surface and air temperatures, and humidity within the limits specified for the installation of the waterproofing materials.
B. Apply waterproofing only when air and concrete temperatures are above 40 degrees F. Do not apply to frost-covered surfaces.
C. For interior application, Provide sufficient light to properly perform this work.
D. For exterior application, shade the work areas from direct sunlight during installation, as needed to prevent rapid evaporation caused by excessive heat or wind.

1.7 SPECIAL WARRANTY

A. Warrant waterproofing against water penetration thru waterproofed surfaces for 5 years after Substantial Completion.
B. Make repairs required during this period, to restore integrity of the waterproofing, at no cost to the Owner.

PART 2 - PRODUCTS

2.1 MANUFACTURERS/SYSTEMS

A. Waterproofing materials: One of the following.

1. "Xypex Concentrate", "Xypex Modified", and "Xypex Patch'n Plug" by Xypex Chemical Corp. (basis of design).
2. "Planiseal 88" by Mapei.
3. "Hey'Di K-11" by Euclid Chemical.
4. "Permaquik Super 200" by Tremco.
5. "Kóester NB 1" by Kóester American Corp.
6. "Aquafin-IC" by Aquafin Building Product Systems.

2.2 PERFORMANCE REQUIREMENTS

A. Provide waterproofing that prevents the passage of water thru waterproofed surfaces.
B. Testing Requirements: Crystalline waterproofing system shall be tested in accordance with the following standards and conditions, and the testing results shall meet or exceed the specified performance requirements.

1. Independent Laboratory: Testing shall be performed by an independent laboratory meeting the requirements of ASTM E 329 and certified by the United States Bureau of Standards. Testing laboratory shall obtain all concrete samples and waterproofing product samples.

C. Permeability: Independent testing shall be performed according to U.S. Army Corps of Engineers CRD C48 "Permeability of Concrete".

1. Concrete samples (treated and untreated) shall have design strength of 2000 psi and thickness of 2 inches. No admixtures permitted.
2. Coatings shall have maximum thickness of 0.05 inch per coat with up to 2 coats permitted.
3. Samples shall be pressure tested to 175 psi (405 foot head of water.)

4. Treated samples, after crystalline growth has occurred, shall exhibit no measurable leakage.

D. Chemical Resistance: Independent testing shall be performed according to ASTM C 267 “Chemical Resistance of Mortars” and ASTM C 39 “Compressive Strength of Cylindrical Concrete Specimens”.

1. Concrete samples (treated and untreated) shall have design strength of 4000 psi. No admixtures permitted.
2. Coatings shall have maximum thickness of 0.05 inches per coat with up to 2 coats permitted.
3. Untreated and treated specimens shall be immersed for a minimum of 84 days in following chemical solutions: hydrochloric acid (3.5pH), brake fluid, transformer oil, ethylene glycol, toluene, caustic soda.
4. Treated specimens shall exhibit no detrimental effects after exposure, and shall have a minimum of 14 percent increase in compressive strength versus untreated control specimens.

E. Potable Water Approval: Independent testing shall be performed according to NSF Standard 61 and approval for use of waterproofing material on structures holding potable water shall be evidenced by NSF certification.

2.3 MATERIALS

A. Waterproof coating materials:

1. Walls: Xypex Concentrate and Modified.
2. Floors (Contractor’s option): Xypex Concentrate DS-1 or DS-2 (dry shake).

B. Curing agent (Contractor option in lieu of water curing): Xypex Gamma Cure.
C. Water: Potable and fresh.
D. Alternate to Xypex coatings for new cast-in-place concrete: Xypex Admix C-500 (accelerated set time), C-1000 (standard set time), or C-2000 (extended set time), or Aquafin IC Admixture.

1. Dose at 2 to 3 percent by weight of Portland cement in the mix.
2. Add admixture to the concrete when batching in accordance with its manufacturers recommendations.

2.4 MIXES

A. In accordance with the manufacturer’s recommendations.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine conditions affecting the work of this Section at site.
B. Correct detrimental conditions before proceeding with installation.

3.2 APPLICATION - GENERAL

A. Install the waterproofing in a uniform thickness, reasonably free of trowel marks, over entire areas to be waterproofed. Comply with the waterproofing manufacturer's installation instructions.

3.3 NEWLY PLACED HORIZONTAL CONCRETE SURFACE

A. Comply with manufacturer's instructions, including Product Data, technical bulletins, catalog installation instructions, and product carton instructions. When in conflict, the most stringent provision applies.
B. Newly placed concrete must be free of bleed water and be able to support the weight of a power trowel. Apply a rough wood float or broom finish.
C. Immediately after floating the surface, apply one-half of the dry shake material evenly by a hand or mechanical spreader at rate recommended by manufacturer.
D. As soon as the dry shake material absorbs moisture from the base slab, finish the concrete surface and incorporate the dry shake material into surface during the finishing process.

3.4 PREPARATION OF CURED CONCRETE

A. Prepare surfaces to be treated in accordance with waterproofing manufacturer's instructions.
B. Horizontal surfaces shall have a rough wood float or broom finish. Coordinate this requirements with the concrete finisher.
C. Clean laitance, curing compounds, excess form oil, dirt film, paint, coatings or other foreign matter harmful to the performance of waterproofing from surfaces of cured concrete to be treated.
D. Prepare cured surfaces if necessary to provide open capillary surface to provide tooth and suction for treatment; use acid etching, sandblasting, waterblasting, or other methods.
E. Defects: Rout out defects, such as cracks, faulty construction joints, honeycombing, form tie holes, and other defects to sound concrete, and repair.

1. Chip defective areas into a U-shaped slot one inch wide and minimum one inch deep.
2. Clean slot, wet, saturate with water and remove surface water.
3. Apply specified slurry coat to slot at rate recommended by manufacturer.
4. Allow slurry coat to reach initial set.
5. Fill cavity with specified dry pack repair compound.
6. Compress tightly into cavity using pneumatic packer or hammer and blocks.

F. Rock Pockets, Honeycombing, and Other Defective Concrete:

1. Rout out defective areas to sound concrete.
2. Remove loose material and saturate with water.
3. Remove surface water and apply specified slurry coat.
4. After slurry coat has set, but while still green, fill cavity to surface with specified patching compound.

G. Coves: At right-angle intersections cove the joint for smooth transition of waterproofed surface.

1. Apply specified slurry coat to slot at rate recommended by manufacturer.
2. Fill and form surfaces using specified dry pack repair compound or waterproofing material in mortar consistency while slurry coat is still green, but after slurry coat has reached initial set.
3. Trowel into a cove shape.

H. Construction Joints: Apply sealing strips at each construction joint by filling grooves coinciding with construction joint.

1. If grooves have not been preformed, at least 3/4 inch wide and minimum one inch deep, saw cut and chip grooves to that dimension.
2. Fill and form surfaces using specified dry pack repair compound.
3. Compact tightly using pneumatic packer or hammer and block.

I. Expansion Joints: Treat as indicated on drawings.

3.5 INSTALLATION ON CURED CONCRETE

A. Comply with manufacturer's instructions, including Product Data, technical bulletins, catalog installation instructions, and product carton instructions.
B. Mix materials in accordance with manufacturer's instructions.
C. Wet concrete surfaces and saturate with clean water to ensure migration of crystalline chemicals into concrete; remove free surface water before application of waterproofing treatment.
D. Exposed Surface Application: Apply waterproofing uniformly with semi-stiff bristle brush or spray under conditions and application rate recommended by manufacturer.

1. Apply second coat while first coat is still green, but after reaching initial set.
2. Use light pre-watering between coats when rapid drying conditions occur.

E. Sandwich (Topping) Slab Application: Place topping material while waterproofing application is still green, but after reaching initial set.

1. Use light pre-watering between coats when rapid drying conditions occur.

F. Curing: Cure exposed waterproofing treatment using a mist fog spray of clean water after coating has hardened sufficiently not to be damaged by spray; do not use plastic sheeting laid directly on waterproofing; air circulation is required.

1. If water curing is not possible, follow manufacturer's recommendations for curing using chemical curing agent approved by manufacturer.
2. Avoid coating damage with spray operation.
3. Spray treated surface 3 times a day for 2 to 3 days.
4. In hot climates, spray treated surfaces at intervals recommended by waterproofing manufacturer.
5. During curing period, protect treated surfaces from rainfall, ambient temperature below freezing, and puddling of water.
6. Provide supplementary air circulation as recommended by waterproofing manufacturer.
7. Concrete Structures to Hold Liquids: Cure waterproofed concrete surfaces for 3 days and allow coating to set for 12 days before filing with liquid; for hot corrosive liquids allow to set for additional 6 days before filling.

3.6 FIELD QUALITY CONTROL

A. Manufacturer's Field Services: Provide manufacturer's field service consisting of product use recommendations and periodic site visit for inspection of product installation in accordance with manufacturer's instruction.
B. Do not cover waterproofed surfaces with other construction until they have been observed by manufacturer's field representative and Architect/Engineer.
C. Flood test areas that are capable of holding water after end of curing period.

1. Plug or dam drains.
2. Fill structures intended to hold liquids with water to within 1/2 inch from top of waterproofed vertical surfaces.
3. Test slabs by constructing temporary dams where necessary, at least 2 inches high, and filling with 2 inches of water.
4. Let water stand for 24 hours.
5. Repair leaks and retest until no leaks are observed.

3.7 CLEANING AND PROTECTING

A. Clean spillage and overspray from adjacent surfaces using appropriate cleaning agents and procedures.
B. Protect installed product from damage during construction; do not allow traffic on unprotected waterproofed surfaces.
C. Do not backfill against waterproofed surfaces for at least 36 hours after installation; use moist backfill material when backfilling occurs less than 7 days after installation.
D. Do not apply paint or other coatings for at least 21 days; before applying coatings neutralize waterproofed surface as recommended by waterproofing manufacturer.
E. Touch-up, repair or replace damaged products before Substantial Completion.

3.8 SCHEDULE:

A. Provide waterproofing of concrete substrates, using surface application, in the following locations:

1. Dry side of elevator pits, sump pits, and exterior edge of slabs, behind cement plaster to 6-inches below finished grade.

END OF SECTION

SECTION 07 18 13 - PEDESTRIAN TRAFFIC COATINGS

PART 1 - GENERAL

1.1 SUMMARY

A. Provide a complete troweled waterproof neoprene composition traffic bearing deck surfacing coating system where indicated on Drawings.

1.2 RELATED SECTIONS

A. Section 03 30 00 – Cast-in-Place Concrete.
B. Section 07 62 00 – Sheet Metal Flashing & Trim.
C. Section 07 92 00 – Joint Sealers.

1.3 PREINSTALLATION MEETINGS

A. Convene a pre-application meeting before the start of application of coating system. Require attendance of parties directly affecting work of this section, including Architect, Consultant, General contractor, applicator, and authorized representative of the coating system manufacturer and interfacing trades. Review the following:

1. Drawings and specifications affecting work of this section.
2. Protection of adjacent surfaces.
3. Surface preparation and substrate conditions.
4. Application.
5. Field quality control.
6. Protection of coating system.
7. Repair of coating system.

1.4 SUBMITTALS

A. Product Data: Submit manufacturer’s product data sheets on each product and system to be used including:

1. Preparation instructions and recommendations.
2. Storage and handling requirements.
3. Installation methods.
4. Maintenance requirements.

B. Shop Drawings:

1. Show locations and extent of each traffic coating on plans/elevations with detail callouts.
2. Include details for treating substrate joints and cracks, flashings, deck penetrations, tie-ins with adjoining constructions, and other termination conditions.
3. Manufacturer's approval shall be clearly noted on the drawings.

C. Selection Samples: For each system specified, provide two sets of samples showing color, texture, thickness and surfacing.
D. Manufacturer Certification: Signed by manufacturer certifying that the system complies with requirements specified in "Materials Performance Requirements" Article.

1. Submit evidence of compliance with performance requirements.

E. Material Test Reports: Indicating test results certify compliance with “Materials Performance Requirements” below.

F. Statement of installer qualifications see Quality Assurance article below.

1.5 QUALITY ASSURANCE

A. All materials used in the traffic coating systems shall be manufactured and provided by a single manufacturer to ensure compatibility and proper bonding.
B. Use adequate numbers of skilled workmen thoroughly trained and experienced in the necessary crafts and completely familiar with the specified requirements and methods needed for proper performance of the work of this section.
C. Contractor shall have a minimum of five (5) years' experience installing pedestrian traffic coatings of this type which is required for this project and who is acceptable to the manufacturer.

1. Applicator shall designate a single individual as project foreman who shall be on site at all times during installation.
2. Contractor must show and have QCA Qualified Contractor/Applicator paperwork from the manufacturer of the coating system, as required to obtain a long-term jobsite specific warranty.

1.6 DELIVERY, STORAGE & HANDLING

A. Delivery: Materials shall be delivered to the job site in sealed, undamaged containers. Each container shall be clearly marked with manufacturer's label showing type of material, color, and lot number.
B. Storage: Store all materials in a clean, dry place with a temperature range in accordance with manufacturer's instructions.
C. Handling: Handle products carefully to avoid damage to the containers. Read all labels and Material Safety Data Sheets prior to use.

1.7 PROJECT SITE CONDITIONS

A. Maintain environmental conditions (temperature and weather) within the limits recommended by the manufacturer.
B. Concrete shall be tested for moisture before applying cementitious coating. Water vapor transmission upwards through concrete may result in loosening of cementitious coating or improper curing of materials. If moisture emissions exceed 5 pounds per 1,000 square feet contact the manufacturer before application.
C. Schedule coating work to avoid rain and excessive dust and airborne contaminates. Protect work areas from moisture and excessive airborne contaminates during coating application.
D. Before any work is started, the applicator shall examine all surfaces for any deficiencies. Should any deficiencies exist, the architect, owner or general contractor shall be notified in writing and any corrections necessary shall be made.

1.8 WARRANTY

A. Upon completion of the work in this section provide a written warranty.
B. Manufacturer Warranty: Manufacturer shall supply the Owner with a material against defect of materials for a period of 5 years for each specific system. To obtain project specific warranty the coating system applicator must be a Qualified Contractor/ Applicator and apply for warranty.
C. Installer Warranty: Contractor shall supply the Owner with a separate 2 year workmanship warranty. If any work related to the waterproofing and flashing is found to be within the contractor's warranty term, defective or otherwise not in accordance with the contract documents, the Contractor shall repair defect at no cost to the Owner.

PART 2 - PRODUCTS

2.1 MANUFACTURER

A. Basis of design is Weatherwear by Dex O Tex Weatherwear as manufactured by Crossfield Products Corp. in Rancho Dominguez, California.
B. Or equal.

2.2 SYSTEM

A. The trowel applied waterproof neoprene composition traffic bearing roof deck surfacing system shall be composed of a slip-sheet, waterproof membrane, traffic surfacing and finish coats, and shall conform to the following standards:

1. Traffic deck binder and all rubber emulsions shall be compounded with neoprene liquid and shall have a minimum neoprene solids content of 35% when tested by the dry cup method.
2. Aggregate for traffic surface coating shall be suitably graded, fine trap-rock passing a #20 mesh sieve and retained on a #40 mesh sieve.
3. Slip-Sheet shall consist of an asphalt-saturated glass fiber matting weighing not less than 20 lbs. per 100 square feet and no more than 30 lbs. per 100 square feet and contain no rag or organic fibers.
4. Fabric used as reinforcement for waterproof flashing shall be 7-1/2 oz. woven polypropylene fabric.
5. Fabric used as reinforcement for waterproof membrane on horizontal surfaces shall be a minimum 1 oz. per square foot non-directional glass fiber matting.
6. Final Finish dressing shall be a single component, water-phase acrylic latex emulsion material, pigmented and of a consistency suitable for roller application.

2.3 PROPERTIES

A. Colors: As indicated, or if not otherwise indicated, as selected by Architect from manufacturer's standard colors.

1. Physical Properties: Provide a waterproof deck covering system that meets or exceeds the listed minimum physical property requirements when tested according to the referenced standard test methods in parentheses.

a. Weight: 2.5 lbs. per sq. ft.
b. Accelerated Weathering (Atlas Twin-Arc Weatherometer) (ASTM G23): No cracking, blistering, delamination, chalking, crazing or color change under 5X magnification.
c. Cycles, Wet/Dry 2000 hours: Dry: 1450 F, 120 mins. Wet: 600 F, 18 mins
d. Accelerated Aging (Procedure D & E - 6 cycles) (ASTM D756): No cracking, blistering, delamination, chalking, crazing or color change.
e. Freeze-Thaw (ASTM C97): No breakage or weight loss > 1.0%
f. Abrasion (1,000 revolutions, 1,000 gr. No. 80 TP load aluminum oxide grit) (ASTM D1242): 4.3% Thickness Reduction
g. Percolation (ICC standard): Complies to ICC Test Method for this Standard
h. Water Absorption (ASTM D570): 6.09% No warping or cracking.
i. Wind Uplift (ICC Factory Mutual 1-52): Qualifying Wind Velocity with Safety Factor of 3. Wind Velocity 131 MPH.
j. Flammability (ASTM E108, UL 790, NFPA 256):

1)	Intermittent Flame Exposure	Class A.
2)	Spread of Flame	Class A.
3)	Burning Brand	Class A.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verification of Conditions.

1. Inspect all surfaces to receive the pedestrian traffic system. Verify that surfaces are free of ridges and sharp projections, dry, clean, and free of contaminates that would prevent coating system from properly adhering to the surface.
2. That the concrete was finished by a power or hand steel trowel followed by soft hair broom to obtain light texture or "sidewalk" finish.
3. Test for moisture according to ASTM D 4263.
4. Test for moisture content by method recommended in writing by traffic-coating manufacturer.
5. Verify that substrates have a minimum 1% slope.
6. Before starting work, report in writing to the owner any unsatisfactory conditions.

3.2 PREPARATION

A. Substrate: Perform preparation and cleaning procedures according to waterproof deck covering manufacturer's instructions for particular substrate conditions involved, and as specified. Provide clean, dry and neutral substrate for application of waterproof deck covering.
B. Materials: Mix aqueous emulsions and aggregate when required as per manufacturer's instructions. Prepare materials according to waterproof deck covering system manufacturer's instructions.

3.3 TERMINATIONS AND PENETRATIONS

A. Prepare vertical and horizontal surfaces at terminations and penetrations through traffic coatings and at expansion joints, drains, and sleeves according to ASTM C 1127 and manufacturer's written instructions.
B. Provide sealant cants at penetrations and at reinforced and nonreinforced, deck-to-wall butt joints.
C. Terminate edges of deck-to-deck expansion joints with preparatory base-coat strip.
D. Install sheet flashings at deck-to-wall expansion and dynamic joints, and bond to deck and wall substrates according to manufacturer's written recommendations.

3.4 JOINT AND CRACK TREATMENT

A. Prepare, treat, rout, and fill joints and cracks in substrates according to ASTM C 1127 and manufacturer's written recommendations. Before coating surfaces, remove dust and dirt from joints and cracks according to ASTM D 4258

1. Cracks and Cold Joints: Visible hairline cracks (less than 1/16-inch in width) in concrete and cold joints shall be cleaned, primed as required and treated with thoroughly mixed FC7500/FC7960 base coat material a minimum distance of 2-inches on each side of crack to yield a total thickness of 30 dry mils. Large cracks (greater than 1/16-inches in width) shall be routed and sealed with 70991 sealant. Sealant shall be applied to inside area of crack only, not applied to deck surface. Detail sealed cracks with thoroughly mixed FC7500/FC7960 base coat material a distance of 2-inches on each side of crack to yield a total thickness of 30 dry mils.
2. Comply with recommendations in ASTM C 1193 for joint-sealant installation.

B. Apply reinforcing strip in traffic-coating system where recommended in writing by traffic- coating manufacturer.

3.5 APPLICATION

A. General: Apply each component of waterproof neoprene composition traffic bearing roof deck surfacing system according to manufacturer's directions to produce a uniform monolithic surface of thickness indicated.
B. Prepare and prime the sheet metal or alternate flashing. Inspect all transitions and terminations for proper waterproof seal that the installation of the flashing is in accordance with the recommended application methods.
C. Apply slip-sheet over properly prepared substrate. Overlap seams a minimum of 2 inches. Apply latex bonding coat when required.
D. Apply reinforced membrane at all vertical junctures. Embed polypropylene fabric into neoprene membrane liquid.
E. Apply aqueous neoprene rubber waterproof membrane solution with glass fabric reinforcement to entire area to be coated. Overlap all seams a minimum of 2 inches.
F. Trowel apply two coats of neoprene and aggregate composition traffic surfacing over all surfaces previously covered with waterproof membrane. Sand surface to remove trowel marks or small surface imperfections.
G. Trowel apply two smoothing coats of neoprene and fine aggregate composition to achieve smooth, filled surface. Sand to remove trowel marks or small surface imperfections.
H. Roller apply two coats of final finish dressing to a uniform finish.
I. Apply clear sealer as recommended by the manufacturer.
J. Finished neoprene composition traffic-bearing roof deck surfacing shall be a nominal 3/16 inch thick, smooth and uniform in color and texture.

3.6 FIELD QUALITY CONTROL

A. Verify coatings and other materials are as specified.
B. Verify coverages and finish of the system as work progresses.
C. Manufacturer’s technical representative shall be present at beginning of the work, and provide technical assistance and guidance for surface preparation and application of coating systems.

3.7 PROTECTION AND CLEAN-UP

A. Cure waterproof neoprene composition traffic bearing roof deck surfacing materials according to manufacturer's directions, taking care to prevent contamination during application stages and before completing curing process. Close application area for a minimum of 24 hours.
B. Installation areas must be kept free from traffic and other trades during the application procedure and cure time.
C. Protect finished surfaces of coating system from damage during construction.
D. Touch-up, repair or replace damaged coating system after substantial completion.

3.8 MAINTENANCE

A. Contractor shall provide to owner, maintenance, and cleaning instructions for the floor system upon completion of work. Owner is required to clean and maintain the surfaces to maintain manufacturer’s warranty.

END OF SECTION

SECTION 07 21 00 - THERMAL BUILDING INSULATION

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes thermal insulation at locations specified below in and the following:

1. Safing insulation at edges of slabs and elsewhere as indicated.
2. Thermal insulation (board form) on the exterior face of exterior walls.
3. Thermal insulation (board form) on the exterior face of walls below grade.
4. Thermal insulation (batts) between studs in exterior walls.
5. Thermal insulation (batts) in soffits where indicated.

B. Insulation location: As a minimum, provide thermal insulation for the building envelope, as defined below

1. Building envelope (all exterior walls but excluding roof insulation specified elsewhere, at parapets and openings in walls, including louvers (where no blank-off panels occur), vision glass and doors).
2. Exterior soffits of air-conditioned spaces.

C. Perimeter fire-containment systems: Where indicated for gaps between the perimeter edge of fire-resistance-rated floor assemblies and non-fire-resistance-rated exterior curtain walls, provide a perimeter fire-containment system with the fire-test-response characteristics indicated, as determined by testing identical systems per UL 2079 or another testing and inspecting agency acceptable to authorities having jurisdiction.

D. Related requirements:

1. Division 03 & 07 for roof insulation.
2. Other Section of Division 07 for firestopping, including fire safing insulation.
3. Other Section of Division 07 for insulation in roof hatch and vents.
4. Division 09 for acoustical insulation.
5. Division 22 for pipe and duct insulation.

1.2 ADMINISTRATIVE REQUIREMENTS

A. Sequencing: Sequence and coordinate application of insulation with related work to comply with the following.

1. Provide temporary enclosures to prevent deterioration of insulation exposed to unfavorable environmental conditions.
2. After its application, avoid unnecessary exposure of insulation to damage during construction operations.
3. Do not begin application of insulation under steel deck until clips, hangers, supports, sleeves, and other items penetrating insulation are in place.
4. Defer installing ducts, piping, and other items that would interfere with the application of insulation until insulation installation is completed.
5. Do not install enclosing or concealing construction until after insulation is installed, inspected, tested, and corrections are made to provide an uninterrupted thermal barrier.

B. Pre-installation meeting:

1.3 SUBMITTALS

A. Data: Manufacturer Product Data for materials specified.
B. Shop Drawings:

1. Show each type of insulation, indicating type and manufacturer, location, extent, material, insulating value, and method of attachment.
2. Submit color-coded floor plans supplemented by elevations showing the location of each type of insulation. Identify material, manufacturer, thickness, R value, and method of fastening where applicable.

C. Samples:

1. 24 inches square Samples of each type of insulation.
2. Full size impaling pins.
3. Twelve inches long Samples of tape.

1.4 HANDLING

A. Packaging: In unopened containers and packages with labels bearing producer(s) name and source of product, date of manufacture, with UL classification on package, and R value.
B. Storage:

1. Keep insulation protected while stored; keep dry during and after installation.
2. Outdoors, store off ground on pallets, protected with breathing type covers.
3. Insulation shall be dry when installed.
4. Remove insulation that becomes wet or damp immediately from the job site.

1.5 ENVIRONMENTAL REQUIREMENTS

A. Install insulation in dry weather, unless building is enclosed and watertight.
B. If insulation will be exposed to the elements after installation, cover with waterproof membrane each day; do not enclose wet insulation.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Fiber glass batt insulation: One of the following, or equal.

1. Owens Corning.
2. CertainTeed.
3. Knauf Insulation.
4. Johns Manville.

B. Mineral wool insulation: One of the following, or equal.

1. Thermafiber (basis of design).
2. Rockwool Group.
3. Partek Insulations, Inc.
4. Rock Wool Manufacturing Co.
5. Fibrex Insulation, Inc.
6. Industrial Insulation Group, LLC.

C. Polyiso board insulation for use on above grade walls: One of the following Non-ODP, Low GWP and formaldehyde-free, complying with ASTM C578, Type XV..

1. Glass-Fiber-Mat Faced: ASTM C1289, glass-fiber-mat faced, Type II, Class 2, Grade 2 (20 psi).

a. Fire Propagation Characteristics: Passes NFPA 285 testing as part of an approved assembly.

2. Manufacturers:

a. Enverge CI foil faced by Firestone.
b. Hunter Xci CG by Hunter Panels
c. EnergyShield CGF Pro by Atlas.

D. Polystyrene board insulation for use on below grade walls: One of the following.

1. Foamular 150 by Owens Corning
2. ThermaDRain Insulated Drainage Board.
3. Insulfoam a Carlisle Co.
4. Or equal rigid insulation that also serve as a protection/drainage board.

2.2 PERFORMANCE/DESIGN CRITERIA

A. Some exterior envelope elements are based on the "Rain Screen Principle". This requires construction behind cladding to act as an air/water barrier to prevent passage of moisture laden air and diffusion of water vapor inside the building. To ensure continuity of air/waterr barrier within construction specified herein and with adjacent barrier construction is a responsibility of this Section.

B. Comply with these Specifications for thermal resistance, and to the Drawings for maximum or minimum thickness of insulation required.

1. Provide the thermal resistance (R value) indicated to limit building thermal gains and losses.
2. Select appropriate products from list of materials to provide (a) the specified thermal value for the building envelope, (b) compatibility when incorporated into finished system while ensuring substrate conditions as well as their ability to adhere components permanently, where applicable, in rigid manner, and (c) maintain flexibility where required in finished work.
3. Provide insulation materials and their facings that do not support fungal growth when tested in accordance with ASTM C1338.

2.3 THERMAL INSULATION

A. Thermal resistance (“R” value): Minimum of 19, except as noted.

B. In curtain wall:

1. Mineral fiber complying with ASTM C 612; non-combustible when tested in compliance with ASTM E 136, fire resistant when tested in compliance with ASTM E 84 and E 119, 8 pcf, dark gray color, foil-faced.
2. Fire hazard classification:

a. Flame spread: 25 maximum.
b. Fuel contributed: 5.
c. Smoke developed: 5.

3. Acceptable product: Thermafiber “FSP Curtainwall Insulation,” “FBX Curtain Wall Insulation” by Fibrex, “Pyro-Fiber Curtain Wall Insulation” by Johns-Manville, or “Paroc CW” by Partek Insulations, Inc.

C. Under floor slabs-on-grade: Extruded-polystyrene drainage panels, ASTM C 578 (Type VI) with a compressive strength of 40 psi, “Styrofoam Highload 40” by Dow Chemical Co. or Owens Corning “Foamular 400.”

D. On soffits exposed to view (not concealed by a suspended ceiling): CertaPro Commercial Board by CertainTeed Corp. with a white kraft-scrim-foil (ASJ) facing adhered to the fiber glass board.

E. Sprayed foam sealant: Fire-rated polyurethane foam insulation meeting ASTM E 84, one- or 2-component, foamed-in-place, polyurethane foam sealant, 1.5 to 2.0 pcf density; flame spread index of 25 or less according to ASTM E 162; with primer and noncorrosive substrate cleaner recommended by foam sealant manufacturer.

1. Dow.
2. Tiger Foam Insulation.
3. Fomo Products, Inc., or equal.

F. Mineral wool semi-rigid (board) insulation: Thermafiber “RainBarrier 30 or 45,” semi-rigid boards, water-repellent, or equal with the following characteristics:

1. ASTM C 665 Non-corrosive, Type I, III.
2. ASTM C 612 RainBarrier 30 Type IA.
3. ASTM C 612 RainBarrier 45 Type IA, IB, IVA.
4. ASTM E 136 Rated Non-combustible per NFPA Standard 220.
5. ASTM E 96 Unfaced, 50 Perms as tested.
6. ASTM E 84 Flame Spread 0, Smoke Developed 0.
7. ASTM C 1104 Absorbs 0.03% by volume.
8. ASTM C 356 Linear Shrinkage <2% 1200º F.

G. At all other locations:

1. Type: Glass fiber or mineral wool batt or blanket insulation complying with ASTM C 665, Type III, Class A, flame spread (FSK) 25 or less, formaldehyde-free by Johns Manville, Knauf, or equal.
2. Width: Batt width shall match the stud spacing and be sized for a friction-fit to be self-supporting.

2.4 INSTALLATION MATERIALS

A. Impaling pins and clips: Cemco 1500 Series, Tactoo Insul-Hangers Series T by AGM Industries, Inc. or equal by Eckel Industries, Inc., of appropriate length required for insulation thickness used.

B. Clips at slab perimeter: 22-gage galvanized steel closure angle at underside of slabs if gap is larger than 4 inches from slab edge to mineral wool insulation plane.

C. Strip impalement clips at slab perimeter: Thermafiber “Insulation Hangers,” or equal acceptable to AHJ, fabricated from galvanized sheet in rolls with punch out insulation securement arrows.

D. Insulation supports for between rafters insulation: 13-gage steel, IS16 and IS24 (depending on wood framing spacing) by Silver Metal Products, Inc., Southeastern Wire, Moore Products, or equal.

E. Adhesive used with impaling pins: Made, or approved by the clip manufacturer. Do not use "peel and press" hangers with self-adhesive back.

1. Where insulation is installed under concrete-filled steel deck, "Drop/Deck Nails" of the required length by Cemco may be used through the steel deck before concrete fill is cast.

F. Staples, zinc-coated wires and other devices for fastening insulation: As recommended by the insulation manufacturer.
G. Insulation tape:

1. Polyethylene Adhesive Tape: “Scotch brand No. 483” by 3M.
2. Foil Vapor Barrier Tape:

a. Pressure sensitive aluminum foil tape, 2 mils thick, 3-inch wide, “Scotch brand No. 425" by 3M.
b. “Dead Soft Aluminum Foil Tape” by Hanson Ltd.
c. “FSK Copolymer” by Compac Corp.
d. “General Purpose FSK Facing Tape” by Venture Tape.
e. Or equal FSK-faced cold weather tape.

PART 3 - EXECUTION

3.1 EXAMINATION/PREPARATION

A. Examine conditions and measurements affecting the work of this Section at site.
B. Correct detrimental conditions before proceeding with installation.
C. Before installing insulation in stud walls, thoroughly vacuum space clean of dust and debris. Also clean spandrel cavities in the same manner.

3.2 INSTALLATION

A. Install insulation where shown and specified. Cut to fit irregular spaces, butt edges into firm contact with each other and adjoining surfaces.

1. Hand pack around pipes, ducts, conduits, electrical boxes, and other penetrations as required to thoroughly fill all voids and spaces between framing members and to form a continuous fire, thermal barrier.
2. Do not compress insulation more than 10 percent.
3. Where door and window frames occur in insulated assemblies, cut additional strips of insulation and hand-pack in and around the frames or use foam insulation to fill all voids.
4. Insulate boxed headers and studs in exterior walls.
5. Use foam insulation for small spaces that are difficult to insulate otherwise. Fill space completely and trim insulation flush with face of wall when cured.
6. Comply with the National Electrical Code (NEC) for installation in proximity to light fixtures. Do not install insulation closer than recommended by NEC.
7. Where in-wall electrical conduit is parallel to the wall, slit the insulation halfway to bury the conduit in it. Where the conduit is perpendicular to the wall, do not oversize the penetration; tape the conduit to prevent heat leakage.
8. Install foil-faced insulation with foil facing the building interior.

B. Batt insulation in stud walls:

1. Install wall insulation with aluminum foil facing interior of the building, with a friction fit to studs, short joints closely butted, and with joints square, straight without warp or twist.
2. Cut and fit insulation to closely fit intersecting or penetrating surfaces.
3. Leave no voids in completed installation.
4. Provide insulation to meet the overall thermal resistance requirements of the exterior wall enclosure.

C. Rigid insulation – under radiant floor heating system:

1. Where more than one layer of insulation is required to achieve the thermal resistance specified, apply adhesive in ribbons 6 inches apart to insulation in accordance with the adhesive manufacturer's instructions so when in place, the boards are firmly adhered to each other. Adhere the bottom boards to a clean, dry substrate in the same manner. Stagger joints between boards.
2. Protect board until the radiant system is installed and has been successfully tested. Prohibit non-essential foot traffic from exposed boards.

D. Attach insulation to solid surfaces as follows:

1. Where required, install insulation fasteners before fireproofing.
2. Provide insulation fasteners at typical spacing specified, or equivalent area for panels of a different size and for any cut panel sizes, except not less than 2 fasteners for any single piece.
3. Lay out panels for minimum of joints, and with any single piece not less than 24 inches wide or less than 48 inches long, unless otherwise approved.
4. Offset intermediate end joints in adjacent panels not less than 48 inches.
5. For 48-inch wide units follow insulation manufacturer's instructions. Provide a minimum of 8 fasteners. Space edge fasteners no more than 3-inch from edges.
6. For 24-inch wide units, comply with the above, except use no less than 6 fasteners.
7. Secure each metal clip base in full bed of adhesive as recommended by their manufacturer.
8. Do not install panels until clip adhesive is fully set.
9. Cut panels in straight lines using tools which minimize fraying. Neatly and carefully precut small slots through panels to facilitate placing insulation over fasteners.
10. Install panels fully bearing against substrates, and neatly and tightly fitted at joints and around surfaces of penetrations.
11. Install fastener caps firmly against panel faces and without compressing insulation, and turn clip prongs or steps flat against caps.

E. Between rafters, support insulation with insulation supports spaced at 16 inches o.c. maximum.
F. After installation is complete and before concealing, seal joints between insulation, between insulation and intersecting or penetrating surfaces and between insulation and perimeter surfaces with 4-inch wide vapor-proof aluminum colored tape applied on the aluminum foil facing side. Seal fastener punctures with aluminum colored vapor-proof mastic or use tape used for sealing joints.
G. Cut safing insulation slightly oversized and compress in the space to be fireproofed so that no void remains. At edge of slabs, impale securely on metal clips spaced at 12 inches o.c. maximum, and attach the clips securely to the slab**.**

3.3 FIELD QUALITY CONTROL

A. Prior to closing-in of insulated assemblies, or prior to Substantial Completion for insulation that will remain exposed in the building, refit, reinstall and/or replace wet, damaged and displaced insulation.

END OF SECTION

SECTION 07 26 16 - BELOW GRADE VAPOR RETARDER

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes aggregate bed and vapor retarder (VR) under building concrete slabs-on-grade.
B. Related requirements:

1.2 ADMINISTRATIVE REQUIREMENTS

A. Scheduling and sequencing: Schedule and sequence installation of VR so it will stay exposed to construction traffic for as short a time as possible to avoid damage.

1.3 SUBMITTALS

A. Data:

1. Manufacturer Product Data, specifications, typical installation details and other data necessary to demonstrate vapor retarder compliance with the specified requirements.
2. Summary of test results, ASTM E 1745.

B. Samples: 24-inch square Samples of vapor retarder with a taped joint at third point.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Vapor retarder: By Reef Industries, Inc., or equal by one of the following complying with ASTM E 1745 Class A, and the values given below.

1. Fortifiber Corp.
2. WR Meadows.
3. Raven Industries.
4. Stego Industries, LLC.
5. Or equal.

2.2 PERFORMANCE REQUIREMENTS

A. Vapor retarder:

1. Material: 7-ply laminate, combining 4 layers of high-density polyethylene and 3 high-strength non-woven cord grid.
2. Weight: 82 lb/1,000 square feet when tested in accordance with ASTM D 3776.
3. Puncture propagation Tear: 55 lb when tested in accordance with ASTM D 2582.
4. Permeance (Perm): 0.019 grains/hr-sq ft-in Hg when tested in accordance with ASTM E 96.
5. Drop dart: 2300 g, when tested in accordance with ASTM D 1709.
6. Tensile strength: 275 lb/5,464 psi when tested in accordance with ASTM D 882, 3-inch-wide specimen.
7. Puncture strength: 72 lb when tested in accordance with ASTM D 4833.
8. Classification: Class A, when tested in accordance with ASTM E 1745.

9. Usable temperature range: Minus 45 to 170 degrees F.

2.3 MATERIALS

A. Vapor retarder: “Griffolyn Type 105”
B. Sealing material: Mastic, adhesive or pressure-sensitive adhesive tape recommended by the vapor retarder manufacturer.

1. VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

C. Repair tape: Self-adhesive tape recommended by vapor retarder manufacturer to repair holes in membrane by jobsite activities.

1. VOC content of 50 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

D. Pipe boots: Of sizes indicated, compatible with vapor retarder and adhesive materials.

E. Stone aggregates (base course): Washed, evenly graded mixture of gravel conforming to the following gradation.

Sieve size	Percent passing
3/4-inch	90 to 100
No. 4	0 to 10
No. 100	0 to 3

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine conditions affecting the work of this Section at the site.
B. Verify below-grade work and items penetrating moisture retarder are complete.
C. Verify that subgrade is level and compacted to 95 percent maximum density, determined in compliance with ASTM D 1557.
D. Correct detrimental conditions before proceeding with installation.

3.2 AGGREGATE BEDDING

A. Cover subgrade with a minimum 4-inch layer of stone aggregate.
B. Work to fill voids; vibrate to compact and leave with finished surfaces reasonably uniform at established grade.

3.3 VAPOR RETARDER

A. Cover aggregate bed with the vapor retarder.
B. Comply with ASTM E 1643 and the following:

1. Layout to minimize running and side joints with long dimension parallel with the direction of the pour.
2. Spread sheeting over undamaged vapor retarder, smooth and even; lap edge and end joints 6 inches; turn-up perimeters against concrete walls/footings to top of future slab and tape continuously to clean, dry concrete so that neither the tape nor the vapor barrier is visible when the slab is cast.

3. Offset intermediate end joints in adjacent sheets 4 feet minimum.
4. Seal laps and perimeters using continuous beads or strips of sealing material applied to bottom layer or tape. When using sealing material, apply top layer and press sufficiently to assure complete contact.

C. Penetrations:

1. Cut sheeting to fit closely and neatly.
2. Slip sheeting over penetrations where possible, otherwise slit from penetration hole to nearest edge.
3. Seal pipe penetrations with prefabricated boots made from vapor retarder and seal tight with tape to the vapor retarder.
4. Seal edges continuously around penetrations.
5. For smaller penetrations, repair slits with 12-inch wide strips of sheeting set centered on slit and sealed on each side.

D. Cuts and accidental tears: Repair with tape, or if too large, with patches of the vapor retarder continuously taped.

END OF SECTION

SECTION 07 27 26 - FLUID-APPLIED AIR BARRIER SYSTEM

PART 1 - GENERAL

1.1 SUMMARY:

A. Work of this Section includes window and door flashing, air and water-resistive barrier membrane system, and accessory materials for application to exterior building envelope, except where doors and windows occur.

B. Related requirements:

1. Section 03 30 00 – Cast-in Place Concrete.
2. Section 06 16 00 – Gypsum Board Sheathing.
3. Section 07 60 00 – Flashing and Sheet Metalwork.
4. Section 07 92 00 – Joint Sealers.

1.2 ADMINISTRATIVE REQUIREMENTS

A. Pre-installation conference: Prior to beginning installation of air and water-resistive barrier system, hold a pre-installation conference to review work to be accomplished.

1. Contractor, Architect, installer, membrane system manufacturer's representative, and other trades who have materials penetrating membrane system or finishes covering membrane system shall be present.
2. Contractor shall notify participants at least 7 days prior to time for conference.
3. Contractor shall record minutes of meeting and distribute to attending parties.
4. Agenda: As a minimum discuss the following.

    a. Surface preparation.
    b. Substrate condition and pretreatment.
    c. Minimum curing period.
    d. Special details and sheet flashing.
    e. Sequence of construction, responsibilities, and schedule for subsequent operations.
    f. Installation procedures.
    g. Inspection procedures.
    h. Protection and repair procedures.
    i. Review and approval of all glazing applications.

1.3 SUBMITTALS

A. Data: Manufacturer’s Product Data including membrane and accessory material types, technical and test data, composition, descriptions and properties, installation instructions and substrate preparation requirements.

B. Shop Drawings: Provide manufacturer’s Installation Guideline Illustrations.

C. ASTM E 2357 Compliance: If applicable, submit certification from an approved independent testing laboratory as well as the Air Barrier Association of America (ABAA).

1.4 QUALITY ASSURANCE:

A. Manufacturer qualifications: Firm with a minimum of 5 years experience in the production and sales of air and water-resistive barrier system.
B. Installer qualifications: The installer shall demonstrate qualifications to perform the work of this section by submitting the following.

1. Verification that installer has been trained by and is approved to perform work specified by the air and water-resistive barrier system manufacturer.
2. Firm experienced in applying similar materials on projects of similar size and complexity.
3. Evidence of proper equipment and trained field personnel to successfully complete the Project.

C. Inspection and testing: Cooperate and coordinate with the Owner's inspection and testing agency. Do not cover installed products or assemblies until they have been inspected, tested and approved.
D. Sole source: Obtain materials from a single manufacturer.
E. Regulations: Provide products which comply with state and local regulations controlling use of volatile organic compounds (VOC).
F. Sourcing: Components used shall be sourced from one manufacturer, including sheet membrane, water- resistive vapor permeable air barrier sealants, primers, mastics, and adhesives.

1.5 HANDLING:

A. Deliver materials and products in labeled packages. Store and handle in strict compliance with manufacturer's instructions and recommendations. Protect from damage, weather, excessive temperatures and construction operations. Remove damaged material from site and dispose of in accordance with applicable regulations.
B. Protect air and water-resistive barrier components from freezing and extreme heat. Store materials at temperatures of 40 degrees Fahrenheit to 100 degrees Fahrenheit.
C. Sequence deliveries to avoid delays, and to minimize on-site storage.

1.6 PROJECT CONDITIONS:

A. Weather conditions: Perform work only when existing and forecasted weather conditions are within the limits established by the manufacturer of the materials used.

1. Apply at surface and ambient temperatures recommended by the manufacturer.
2. Proceed with installation only when the substrate construction and preparation work are complete and in condition to receive the membrane system.

B. Exposure limitations: Schedule work to ensure that air and water-resistive barrier system is covered and protected from UV exposure within 180 days of installation. If air and water-resistive barrier membrane system cannot be covered within 180 days after installation, apply temporary UV protection as recommended by membrane manufacturer.

1.7 WARRANTY

A. Manufacturer's warranty requirements: Submit manufacturer's written warranty stating that installed air and water-resistive barrier materials are watertight, free from defects in material and workmanship, and agreeing to replace defective materials and components.
B. Warranty period: 5 years from Substantial Completion.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Performance requirements: Comply with the specified performance requirements and characteristics specified.
B. Performance description:

1. Elastomeric, acrylic, water-resistive vapor permeable air barrier membrane system shall be constructed to perform as a continuous air barrier, and as a liquid water drainage plane flashed to discharge to the exterior any incidental condensation or water penetration.
2. Membrane system shall accommodate movements of building materials by providing expansion and control joints as required, with accessory air sealant materials at such locations, changes in substrate, perimeter conditions and penetrations.
3. Joints and seals shall be securely installed in or on the joint for its entire length so as not to dislodge, loosen or otherwise impair its ability to resist positive and negative pressure from wind, stack effect and mechanical ventilation.
4. System shall be capable of withstanding positive and negative combined wind, stack and HVAC pressures on the envelope without damage or displacement.
5. System shall be installed in an airtight and flexible manner, allowing for relative movement of substrate due to building movement caused by wind, thermal and moisture variations.

C. Intent is to bridge and seal the following air leakage pathways and gaps:

1. Connections of the walls to the roof air barrier.
2. Connections of the walls to the foundations.
3. Seismic and expansion joints.
4. Openings and penetrations of window and door frames, store front, curtain wall.
5. Piping, conduit, duct and similar penetrations.
6. Masonry ties, screws, bolts and similar penetrations.
7. All other air leakage pathways in the building envelope.

D. Water-resistive vapor permeable air barrier membrane system to be applied to the minimum uniform thickness specified and as utilized in the referenced Standard Test Methods.

2.2 MANUFACTURER:

A. Basis-of-Design Manufacturer: Sika Corporation, 201 Polito Avenue, Lyndhurst NJ 07071. Toll Free 800-933-SIKA (7452), www.sikausa.com or equal.

2.3 FLUID-APPLIED MEMBRANE AIR BARRIERS

A. Air Barrier Membrane: Sikagard® 530 Liquid Applied Acrylic Vapor Permeable Air Barrier by Sika Corp, a low VOC one component elastomeric acrylic membrane that may be trowel, brush, roller or spray applied. Membrane shall have the following physical properties:

1. Color: Yellow.
2. Air permeability: less than 0.004 CFM/ft2 @ 1.57 lbs/ft2 to ASTM E 2178, passes ABAA.
3. Tested to ASTM E 2357 for Air Leakage of Air Barrier Assemblies, passes ABAA.
4. Water vapor permeance (21 mil dry thickness): 11 perms to ASTM E 96 Method B.
5. Nominal wet film thickness: 40 mils.
6. Recycled Content by weight: 25%.
7. VOC: <50g/l.
8. Fastener Sealability: Pass to ASTM D 1970.
9. Water Resistance: Pass to AATCC 127.
10. Exposure: May be exposed for up to 6 months
11. Fire Performance: Flamespread Index of 20, Smoke Developed Index of 25 and Class A rating per ASTM E 84.

2.4 SELF-ADHERING MEMBRANE SEAM TAPE

A. Self-Adhering Membrane Seam Tape: SikaMultiSeal® 515 Self-Adhered Transition Seam Tape by Sika Corp, a self-adhering polyester-backed, synthetic butyl rubber based adhesive membrane for wall construction, specifically designed to be water resistant. Use for all window jambs, headers, door openings, inside and outside corners, joint treatment and other transitions shall be Membrane shall have the following physical properties:

1. Membrane Thickness: 0.0394 inches (40 mils).
2. Low temperature flexibility: -30 degrees F.
3. Elongation: 500% to ASTM D 412-modifed.
4. LIQUID SEAM AND PENETRATION SEALANTS

B. Liquid Seam Sealant: Sikaflex® 11FC by Sika Corp, a polyurethane, elastomeric sealing compound having the following physical properties:

1. Compatible with air barrier, roofing and waterproofing membranes and substrate.
2. Set Time: 1 hour @ 72 degrees, 40% RH.
3. VOC < 50 g/l.
4. Elongation:600% to ASTM D 412.
5. Joint Movement 12.5%+/- ASTM C 719.
6. Seals construction joints.

C. Penetration Sealant: Sikaflex® 11FC by Sika Corp, a polyurethane, elastomeric sealing compound having the following physical properties (other Sikaflex sealants may apply):

1. Compatible with air barrier, roofing and waterproofing membranes and substrate.
2. Set Time: 1 hour @ 72 degrees, 40% RH.
3. VOC < 50 g/l.
4. Elongation:600% to ASTM D 412.
5. Joint Movement 12.5%+/- ASTM C 719.
6. Seals construction joints.

2.5 PRIMER AND SURFACE CONDITIONER

A. Primer: Sikagard 510® Transition Seam Tape Primer for self-adhering transition and flashing membrane at all temperatures, a high tack adhesive primer, quick setting having the following physical properties:

1. Color: White,
2. Solids by weight: 37%,
3. Drying time (initial set): 30 minutes.

B. Surface Conditioner: Sikagard® 530 or 535 Liquid Air Barrier Membrane for self-adhering transition and flashing membrane at temperatures above 40 degrees F, having the following physical properties:

1. Color: Yellow.
2. Solids by weight: 64%,
3. Application Rate: 160 sq.ft/gallon to a uniform wet film thickness of 10 mils.
4. Drying time (initial set): 60 minutes.
5. SELF-ADHERED THRU WALL FLASHING

C. Self-Adhering Thru-Wall Flashing: Sika® MultiSeal® Plus by Sika Corporation, an ethylene propylene copolymer adhesive with a UV resistant TPO membrane facer for cavity wall construction. Specifically designed to be water resistant and used as a thru-wall flashing membrane:

1. Thickness (Membrane): 0.032 inches (32 mils).
2. Elongation (ASTM D412): 600%.
3. Membrane Tensile Strength (ASTM D412): 3500 PSI.
4. Measured Flow (ASTM D5147): PASS.
5. Low Temperature Flexibility -22F (CGSB 37-GP-56M): PASS.
6. Water Vapor Permance (ASTM E96): Impermeable.
7. Adhesion to Concrete (ASTM D903): 6.0 lbf/in.
8. Adhesion to DensGlass Gold (ASTM D903): 6.0 lbf/in.
9. Moisture Absorption (ASTM D570): PASS (<1g absorption).

PART 3 - EXECUTION

3.1 EXAMINATION:

A. Verify that surfaces and conditions are ready to accept the Work of this section. Correct discrepancies.
B. Substrates to receive the work of this Section must be sound, dry, clean, and free of grease, dirt, excess mortar or other contaminants. Fill voids, gaps, and spalled areas in substrate to create an even plane. Fill masonry head joints fully and tool.
C. Where curing materials are used they must be clear resin based without oil, wax or pigments.
D. Condition materials to room temperature prior to application to facilitate extrusion and handling.

E. Do not proceed with application of air barrier membrane when rain is expected within 24 hours.

F. Condition materials to ambient temperature prior to application to facilitate handling.

3.2 SURFACE PREPARATION

A. Ensure preparatory Work is complete prior to applying primary air barrier membrane.

B. Mechanical fasteners used to secure sheathing boards or penetrate sheathing boards shall be set flush with sheathing and fastened into solid backing.

C. Mechanical penetrations such piping, conduit and vents shall be secured solid and fastened into solid backing.

3.3 INSTALLATION

A. Joint Treatment: Seal joints 1/4 inch and less between panels of sheathing (exterior grade gypsum, faced gypsum sheathing, plywood, OSB or cementitious panels) with liquid seam sealant. Fill joint between sheathing with approved liquid seam sealant ensuring contact with all edges of sheathing board.

B. Gaps and Voids: Seal gaps and voids or irregular joints greater than 1/4 inch between panels of exterior grade gypsum, faced gypsum sheathing, plywood, OSB or cementitious panels with a strip of self-adhering transition membrane lapped a minimum of 3 inches on both sides of the joint. Prepare and prime surfaces as appropriate to achieve surface adhesion and allow to dry prior to placement of self-adhering transition membrane. Align and position self-adhering transition membrane, remove protective film and press firmly into place. Ensure minimum 2 inches overlap at all end and side laps.

C. Outside Corners: Seal outside corners with a strip of self-adhering transition membrane extending a minimum of 3 inches on either side of the corner detail. Prepare and prime surfaces as appropriate to achieve surface adhesion and allow to dry prior to placement of self-adhering transition membrane. Align and position self-adhering transition membrane, remove protective film and press firmly into place. Ensure minimum 2 inches overlap at all end and side laps of membrane. Roll all laps and membrane with a counter top roller to ensure seal.

D. Inside Corners: Seal inside corners with a liberal bead of seam sealant (3/8 inch x 3/8 inch).

E. Crack Treatment for Masonry and Concrete: Seal cracks 1/4 inch and less in masonry and concrete with liquid seam sealant applied over the crack. Fill joint between sheathing with approved liquid seam sealant ensuring contact with all edges of sheathing board. Seal cracks and voids in masonry and concrete greater than 1/4 inch with a strip of self- adhering transition membrane lapped a minimum of 3 inches on both sides of the joint. Prepare and/or prime surfaces as appropriate to achieve surface adhesion and allow to dry prior to placement of self-adhering transition membrane. Align and position self-adhering transition membrane, remove protective film and press firmly into place. Ensure minimum 2 inches overlap at all end and side laps of membrane. Roll all laps and membrane with a counter top roller to ensure seal.

F. Transition Areas: Tie-in to structural beams, columns, floor slabs and intermittent floors, parapet curbs, foundation walls, roofing systems and at the interface of dissimilar materials as indicated in drawings with self-adhering transition membrane

1. Prime surfaces as per manufacturers' instructions and as appropriate to achieve surface adhesion and allow to dry prior to placement of self-adhering transition membrane.
2. Align and position self-adhering transition membrane, remove protective film and press firmly into place. Provide minimum 3 inch lap to all substrates.
3. Ensure minimum 2 inch overlap at all end and side laps of membrane. Roll all laps and membrane with a counter top roller to ensure seal.

G. Thru-Wall Flashing:

1. All surfaces must be dry and frost-free, as well as clean of oil, dust and excess mortar. Strike masonry joints flush.

2. Concrete surfaces must be smooth and without large voids, spalled areas or sharp protrusions. Concrete must be cured a minimum of 14 days and must be dry.
3. May be installed direct to concrete or Dens Glass Gold without the aid of primers or other surface conditioners.
4. Applications to wood require the use of a primer.
5. Verify priming requirements before the start of each project.
6. Cut the desired length, remove the release paper, position into place and apply positive pressure using a roller. Use care to avoid blisters or wrinkles.
7. Overlap all joints by 2 inches.
8. Keep flashing sheet back about 1/2 inch from outside face of wall or veneer.
9. At all laps, seams, penetrations, and along top edges of membrane apply a continuous feathered bead of sealant as termination seal. Form end dams as required with same sealant.
10. Apply under dry conditions when air and surface temperatures are above 25 degrees F.
11. Top or leading edge of flashing sheet should be sealed with a sealant to limit rainwater from migrating behind the membrane

H. Primary Air Barrier: Apply by brush, roller, spray or flat trowel a complete and continuous unbroken film of liquid vapor permeable air and rain barrier membrane.

1. For temperatures above 40 degrees F and rising, apply one component acrylic water-resistive vapor permeable air barrier membrane at a rate of 40 sq.ft/gallon to a uniform wet film thickness of 40 mils.
2. Spray apply or brush around all projections and penetrations ensuring a complete and continuous air barrier membrane.
3. Allow air barrier membrane to dry as per manufacturers recommendations prior to placement of cladding materials.
4. Subject to porosity of substrate, recommend to back roll spray applications.

3.4 APPLICATION OF PENETRATION SEALANT

A. Seal membrane terminations, heads of mechanical fasteners, masonry tie fasteners, around penetrations, duct work, electrical and other apparatus extending through the primary vapor permeable air and rain barrier membrane and around the perimeter edge of membrane terminations at window and door frames with specified penetration sealant.

B. Seal the leading edge of membrane terminations and reverse laps.

3.5 FIELD QUALITY CONTROL

A. Make notification when sections of work are complete to allow review prior to covering water-resistive vapor permeable air barrier system.

B. Cooperate with Owner’s independent testing agency, which will observe substrate and membrane installation prior to placement of cladding systems and provide written documentation of observations.

3.6 PROTECTION

A. Do not inhibit damp substrates from drying out. Drying time will vary depending on interior and exterior temperature, and interior and exterior relative humidity. Do not expose the backside of the substrate to moisture or rain.

B. Cap and protect exposed back-up walls against wet weather conditions during and after application of membrane. Protect uncured air barrier Work against wet weather conditions for a

minimum of 24 hours. Protect air barrier membrane from damage and inclement weather during the construction phase.

END OF SECTION

SECTION 07 42 13 - PREFORMED WALL PANELS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes preformed aluminum wall panels, their support system, special shapes, and all other panels elements for the building.
B. Related requirements:

1. Division 05 for cold-formed steel framing supporting panels.
2. Division 07 for the following:

a. Other flashing.
b. Sealants.

1.2 SYSTEM DESCRIPTION

A. General: Single-skin exposed fastener metal wall panel applied as the exterior component of an a framed wall system.

1.3 SUBMITTALS

A. Shop Drawings: Dimensioned Shop Drawings for the panel systems, including design and detailing of panel support framing elements and their attachment to the structural frame. Coordinate Drawings and their submittal with other adjacent exterior wall components.

1. Show in detail the panel layout on each plane, support framing system, panel attachment members, jointing, dimensions, sizes and locations of cut-outs, relation to work of other trades, and other pertinent data and information.
2. Indicate and dimension adjoining, abutting and penetrating work, to be performed by other trades.
3. Number each panel to correspond to the markings shown on the fabrication/shop drawings. Mark the identification number on the back of each panel.

B. Samples:

1. Prior to fabrication, submit preliminary Samples panels showing corners, special shapes, or other conditions, all finished as specified.
2. Samples will serve as the control for limiting acceptable range of appearance.

C. Data:

1. Manufacturer Product Data sheet or equivalent printed literature indicating product information for panel anchorages, setting accessories and other related materials.
2. Data shall substantiate that the materials comply with the specified requirements.

D. Manufacturer instructions: Manufacturer instructions for care, repair and replacement procedures, and Samples showing repaired panels.

1.4 QUALITY ASSURANCE

A. Fabricator/installer qualifications:

1. Single firm with a minimum of 5 years successful experience in the fabrication and erection of panel systems of similar sizes, shapes and finishes required for this Project,

and which has ample production facilities to produce, furnish and supply the panels as required for installation without delay to the Work.

2. Firm must be regularly engaged in the engineering, fabrication, finishing and installation, of similar work.

1.5 HANDLING

A. Delivery:

1. After fabrication, protect panels with strippable plastic film.
2. Deliver panels to ensure that there will be no damage or staining.
3. Deliver other materials, except bulk materials, in manufacturer's unopened containers with name, brand, type, grade and color fully indicated thereon. Store bulk materials as required to avoid any deleterious effects of weather, soiling or contamination.
4. Delivered items shall be properly boxed or crated. Mark containers with installation location, fabrication/piece numbers, shop drawings reference, etc., as applicable.

B. Storage:

1. Store above grade on suitable surfaces using polyethylene film to separate panels from supporting or protecting members.
2. Protect from weather, soiling and damage of every kind.
3. Crate panels to prevent accumulation of moisture between panels.

1.6 SPECIAL WARRANTIES

A. Warrant that wall panels and their support system elements will meet the specified performance criteria specified and will be free from defects in materials and workmanship for 2 years after Substantial Completion, except where longer warranties are specified below.

1. Certify in writing that installed work is in accordance with the Contract Documents and authorized alterations and/or additions thereto and that, should defect develop during the warranty period due to improper workmanship or materials installed as a part of this Section, such defects will upon written request, be repaired or replaced at no additional cost to the Owner.
2. If exploratory work is required to determine the cause of the defects, the cost of such work shall be borne by the Contractor when his work is found to be at fault.

B. Further warrant the Owner in writing that wall panels will not evidence delamination of any type for 10 years after Substantial Completion.

C. Warrant finish against fading, chalking, peeling, cracking, checking, chipping, or erosion to base metal of the exterior panel finish for 10 years after Substantial completion.

D. Defective materials and workmanship are hereby defined to include evidence of abnormal deterioration or aging or weathering or work, structural failure of components resulting from exposure to normal load and forces, sealant failures, deterioration or discoloration of finishes in excess of normal weathering and aging, delamination, and failure to fulfill other specified performance requirements.

E. The warranty, the enforcement or lack of enforcement thereof, shall not deprive the Owner of other actions, rights or remedies available to him. Warranty shall be in form approved by Owner.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Panel design: Design panels to meet or exceed the following structural and weather resistance requirements, as demonstrated by engineering calculations. Loads used in design shall be those prescribed by Code.

1. Structural requirements:

a. Perpendicular to the plane of the wall, net deflection of framing members shall not exceed L/175 times span, or 3/4-inch, whichever is less. Span is defined as the distance between anchor centerline. For cantilevers, span is defined as twice the distance between anchor centerline and end of cantilever.
b. Perpendicular to the plane of a soffit, net deflection of framing members shall not exceed L/600 times span under dead load support of panels. Span is defined as the distance between anchor centerlines.
c. In the plane of the wall, deflection of horizontal framing members shall not exceed L/360 or 1/8-inch, whichever is less. This includes horizontal rail sag due to dead load.
d. At connection points of framing members to anchors, combined movement of anchor relative to building structure, and framing member relative to anchor, shall not exceed 1/16-inch in any direction.
e. Stresses shall not exceed the allowable values established by the specifications listed in reference standards. In no case shall allowable values exceed the yield stress. Where permitted by Code, a 1/3 increase in allowable stress for wind or seismic load is generally acceptable, but not in combination with any reduction applied to combined loads.
f. Limit deflection of metal panels to L/120 of the span or 1/4 inch, whichever is less when tested in accordance with ASTM E 330 at specified design pressure. Measure deflection relative to the horizontal and vertical support members with the allowable deflection being determined by the lesser dimension.
g. At 150 percent of the design pressure loads for metal members supporting panels the net permanent deflection of framing members shall not exceed 1/1000 times span. There shall be no failure or gross permanent distortion of framing members, anchors, or connections. At connection points of framing members to anchors, combined movement of anchor relative to building structure, and framing member relative to anchor, shall not exceed 1/16-inch set after load is removed.
h. Vibration harmonics, wind whistles, noises caused by thermal movement, thermal movement transmitted to other building elements, loosening, weakening, or fracturing of attachments or components of system are not permitted in the installed work.
i. Design system so individual panel can be removed without removing or disrupting adjacent panels or materials.

2. Weather requirements:

a. Design wind loads shall be as indicated acting normal to the plane of the wall.
b. Wall panels shall be designed for a maximum deflection of L/180 under load.
c. Thermal Movements: Allow for thermal movements from ambient and surface temperature changes by preventing buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.

1) Temperature Change (Range): 120 deg F ambient; 180 deg F, material surfaces.

2.2 MANUFACTURER

A. Basis of Design: Morin Matrix Series Perforated Metal Wall Panels by Morin; a Kingspan Group Company. (MX-1 and MX-2).

B. Or equal.

2.3 MATERIALS

A. Aluminum Panels:

1. Coil Stock meeting ASTM B209; Alloy and temper as required for forming operations.
2. Thickness: 0.050 inch.
3. Panel Width: 12 inches.
4. Profile: MX-1. And MX-2.
5. Panel thickness: 1-1/2 inch thick.
6. Panel joint: Tongue and groove interlock joint.
7. Texture: Perforated.

a. Perforation Pattern; 3/16 inch holes: 33 percent open area - 5/16 inch hole spacing.

B. Flashing and trim: Fabricated in the same material, gage, finish, and color as the panels.

2.4 ACCESSORIES

A. Fasteners: 1/4 x 20 fasteners (per calculations).

1. Exposed fasteners shall be Bi-Flex with oversized washer per calculations bonded neoprene and stainless-steel washers coated to match the exterior panel color.

2.5 FABRICATION

A. Panel system components shall be fabricated in the factory for field-assembly to the greatest extent possible, under controlled environment in fabricator's plant in conformance with accepted shop drawings and calculations so tolerances, as stated herein, are not exceeded. Field fabrication of panels is not permitted.
B. Fabrication tolerances:

1. Panel bow: Maximum 0.2 percent of width or length, whichever is greater.
2. Width or length: Plus 0.064 to 48-inch; Plus 0.032 to 144 inch.
3. Thickness: Plus 0.008-inch
4. Squareness: 0.1875-inch difference between diagonals.
5. Camber: 0.062 inch maximum.
6. Radius of exterior bent corners: 1/16-inch maximum.

2.6 FINISHING

A. Exterior Finish: Fluropon PVDF, Mica color coat, full 70% Kynar® 500/Hylar 5000®
B. Interior Finish: Primer Coat Material: Match exterior finish.
C. Color: See Drawings.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine structure that will support the metal panel support system. Verify elevation, tolerances, offset lines, and other conditions that would affect the satisfactory installation and performance of the panels.
B. Correct unsuitable conditions before proceeding with erection.

3.2 PREPARATION

A. Examine surfaces and supports to receive panels. Make they are secure and properly aligned.

3.3 INSTALLATION

A. Install panels and panel support members in compliance with the approved shop drawings, calculations, and fabricator's published instructions.
B. Install panels so that in their final location and position joints are uniform, perfectly aligned, with flush joints, and panels are not twisted out of plane.
C. Adjust work to conform to the following tolerances (maximum variations):

1. Face width of joints: Plus 1/32 inch.
2. Joint taper: 1/100-inch/foot length, with a maximum length of tapering in one direction of 6 feet.
3. Jog in alignment of edge: Plus 1/16 inch.
4. Rough opening dimension: Plus 1/16-inch at head, Plus 1/16 inch at sill, and Plus 1/16 inch at jamb.
5. Deviation from plumb, 1/16 inch maximum per one story height and a maximum of 1/8 inch in a 45 feet run.
6. Deviation from horizontal: 1/8 inch maximum in a 30 feet run.

3.4 CLEANING AND PROTECTING

A. Leave protective film on panels in place as long as possible where doing so will not produce discoloration or other undesirable visual defects.
B. Remove protective film when, and in the manner, recommended by panel manufacturer’s instructions.
C. Clean panels in accordance with their manufacturers' published recommendations.
D. Protect panels from damage. Repair or replace damaged panels to Architect's satisfaction.

3.5 ACCEPTANCE

A. Each panel will be subject to the Architect's approval or rejection.
B. Panel or panels may be rejected after installation.
C. Carefully remove rejected panels and replace with new panels without delay and without cost to the Owner.
D. Remove panel or panels damaged in the removal of defective or rejected panels, and replace with new panels.

END OF SECTION

SECTION 07 42 19 – COMPOSITE METAL PANELS

PART 1 - GENERAL

1.1 SUMMARY

A. Work of this section includes provision of the following:

1. Aluminum Composite Material (ACM) Panel System (MT-2).
2. Fastening system.
3. Sub-girt system.
4. Engineering by Sub-Contractor.

1.2 RELATED REQUIREMENTS

A. Section 05 41 00 – Cold-Formed Steel Framing.
B. Section 06 16 43 – Gypsum Sheathing Board.
C. Section 07 05 42 – Thermally Improved Cladding Support Systems
D. Section 07 21 00 – Thermal Building Insulation.
E. Section 07 27 26 – Fluid-Applied Air Barrier System.
F. Section 07 62 00 – Flashing and Sheet Metalwork.
G. Section 07 92 00 – Joint Sealers.

1.3 ADMINISTRATIVE REQUIREMENTS

A. Convene pre-installation meeting prior to beginning work of this Section and on-site installation, with Contractor, Consultant, Panel Fabricator, Panel Installer, and ACM Manufacturer to:

1. Verify project requirements.
2. Review installation and substrate conditions.
3. Co-ordination with other building sub-trades.
4. Review installation method and warranty requirements.
5. Review field quality control procedures.

B. Coordination: Coordinate ACM panel installation with rain drainage work, flashing, trim, construction of soffits, and other adjoining work to provide a leakproof, secure, and noncorrosive installation.
C. Panel Fabricator’s representative shall also provide frequent inspection visits during the work of this Section to assure quality and competence of panel installation.

1.4 SUBMITTALS

A. Product Data:

1. Submit ACM Manufacturer's printed product literature, specifications, and datasheet.

B. Shop drawings

1. Submit dimensioned shop drawings, signed, and sealed by the Panel Fabricator’s Engineer.
2. Indicate layout, profiles and product components including anchorage, accessories, finish colors and textures.

3. Include details showing thickness and dimensions of the various system parts, fastening and anchoring methods, locations of joints and gaskets and location and configuration of movement joints. Show edge conditions, joints, corners, panel profiles, supports, anchorages, trim, flashings, closures, and special details.
4. Submit anticipated distortion measured in a diagonal line drawn from each corner.

C. Samples

1. Submit duplicates of ACM Manufacturer's standard sized samples of composite panel in specified thickness, finishes, and selected colors. Allow for review at panel fabrication facility of clips, anchors, supports, fasteners, closures, and other panel accessories for assembly approval.

D. ACM Manufacturer & Panel Fabricator's Instructions

1. Submit installation instructions
2. Submit special handling criteria and cleaning procedures.

E. Shop drawing submittals shall bear the seal of a professional engineer registered in the State of California.

F. Submit delegated design professional engineer's design notes and calculations upon request of the Architect.

G. Schedules from Panel Fabricator's Engineer:

1. Provide requisite Engineering Schedules to Consultant (CRP - Coordinating Registered Professional).

H. Manufacturer assurance submittals

1. Test Reports: certified test reports showing compliance with specified performance characteristics and physical properties.
2. Certificates: submit certificates signed by ACM Manufacturer certifying that composite wall panels comply with specified performance characteristics and physical properties.

1.5 QUALITY ASSURANCE

A. .ACM Manufacturer

1. Company specializing in manufacturing composite panel products specified by this Section.
2. Able to document minimum 20 years' experience in such manufacturing.

B. Panel Fabricator

1. Company specializing in designing, engineering, and fabricating wall panels of this Section.
2. Able to document minimum 10 years experience. Submit project contact information. Owner, General Contractor, Architect names and phone numbers including project addresses.
3. Approved Panel Fabricator: Keith Panel Systems Co. Ltd., www.keithpanel.com.

C. Panel Installer

1. Company specializing in installing work of this Section.

2. Able to document minimum 5 years experience. Submit project contact information. Owner, General Contractor, Architect names and phone numbers including project addresses.
3. Trained and authorized by Panel Fabricator as qualified to perform work of this Section.
4. Approved Panel Installer

    a. Pacific Erectors Inc., https://www.pacificerectors.com/

D. Retain a professional engineer, registered in the state of the Work, to provide structural engineering for fabrication and erection of the Work of this Section.
E. Building Code and Contract Document requirements including, but not limited to, the following:

1. Seal and signature to shop drawings and design submittals requiring structural engineering.
2. Field review of installed components.

1.6 MOCK-UPS

A. Construct mock-ups if necessary, in accordance with Division 01 Requirements.
B. Cost of mock-up(s) are separate from Sub-trade Contract Price and are to be submitted to Contractor for review and approval by Owner.
C. Construct mock-ups in locations as directed by Architect:

1. Provide mock-up for evaluation of surface finishes and workmanship.
2. Construct mock-up indicating relationship between wall panels, air spaces, air/vapour retarder membrane, windows, and doors.
3. Remove and replace units which are not accepted.
4. Do not proceed with remaining work until workmanship, color, and finish are reviewed by consultant.
5. Refinish mock-up area as required to produce acceptable work.
6. When accepted, mock-up will demonstrate minimum standard of quality required for this work.

    a. Approved mock-up may remain as part of finished work.

1.7 DELIVERY, STORAGE AND HANDLING

A. Deliver components, aluminum composite material panels, and other manufactured items so as not to be damaged or deformed. Package aluminum composite material panels for protection during transportation and handling.
B. Unload, store, and erect aluminum composite material panels in a manner to prevent bending, warping, twisting, and surface damage.
C. Stack aluminum composite material panels horizontally on platforms or pallets, covered with suitable weathertight and ventilated covering. Store aluminum composite material panels to ensure dryness, with positive slope for drainage of water. Do not store aluminum composite material panels in contact with other materials that might cause staining, denting, or other surface damage.
D. Retain strippable protective covering on aluminum composite material panels during installation.

1.8 WASTE MANAGEMENT AND DISPOSAL

A. Separate waste materials for recycling and disposal in accordance with Division 01 Requirements.

1.9 WARRANTY

A. Workmanship Warranty

1. Installer agrees to repair or replace components of the panel system that fail in workmanship within specified warranty period. Failures include all items in relation to the following:

a. Structural failures.
b. Rainscreen performance failures.

2. Warranty Period: One year from date of Substantial Completion.

B. Aluminum Composite Material (ACM) Warranty

1. ACM Manufacturer's standard warranty in which Manufacturer agrees to repair finish or replace aluminum composite material panels that show evidence of deterioration Deterioration of finish includes, but is not limited to, color fade, chalking, cracking, peeling of factory-applied finishes within specified warranty period under the following criteria:

a. Color fading more than 5 Hunter units when tested according to ASTM D 2244.
b. Chalking in excess of a No.8 rating when tested according to ASTM D 4214.
c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.

2. Finish Warranty Period: 20 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 SYSTEM DESCRIPTION

A. An ICC-ES Evaluation Report is required, this systems report is ESR-1185.
B. Factory-formed and assembled, site installed, aluminum composite material wall panels fabricated from two metal facings bonded to a solid mineral core; formed into profile for installation method indicated.
C. Attachment components including perimeter frame, tracks and clips to be extruded aluminum
D. Panel perimeter frame shall consist of factory-installed hidden dry rubber gaskets that reduces moisture entry into the Rainscreen cavity and minimizes noise from movement.
E. System shall be of pressure-equalized Rainscreen design as tested per AAMA 508. Lag time between the cavity and cyclic wind pressure (5 PSF to 25 PSF) shall not exceed 0.08 seconds. The maximum differential between the cavity pressure and the external wind pressure shall not exceed 8%
F. Wall panel system shall be designed for positive drainage of water leakage and condensation to exterior of wall panel system, including gutter system and hidden lashing at each horizontal joint.

2.2 PERFORMANCE/DESIGN CRITERIA

A. Structural Performance: Provide aluminum composite material panel systems capable of withstanding the effects of the following loads, based on testing according to ASTM E 330:

1. Wind Loads: As indicated on Drawings.
2. Other Design Loads: As indicated on Drawings.
3. Deflection Limits: For wind loads, no greater than 1/100 for frame elements and 1/60 for panel materials.

B. Seismic Performance

1. Aluminum composite material wall panels shall withstand the effects of earthquake motions determined according to ASCE/SEI 7.

C. Air Infiltration

1. When tested according to ASTM E 283, air leakage of not more than 0.02 cfm/sq. ft. (0.1 L/s per sq. m) at a test-pressure difference of 6.24 lbs/sq. ft. (300 Pa).

D. Water Penetration under Static Pressure

1. When tested according to ASTM E 331, no water penetration under static pressure differential of 20% of inward acting design load at a test-pressure difference of 12 lbs/sq. ft. (600 Pa).

E. Water Penetration under Dynamic Pressure

1. Tested according to AAMA 501.1:
2. No evidence of water penetration through fixed glazing and framing areas when tested at dynamic pressure equal to 20 percent of positive wind-load design pressure, but not less than 12 lbs/sq. ft. (600 Pa).
3. Water leakage does not include water controlled by flashing and gutters, or water that is drained to exterior.

F. Pressure Equalized Rainscreen

1. Tested to AAMA 508-07

a. The panel Fabricator must provide an official test report from an independent testing agency that graphs the performance of the panel system when subject to the AAMA 508-07 test criteria
b. Lag time between the cavity and cyclic wind pressure (5 PSF to 25 PSF) shall not exceed 0.08 seconds. The maximum differential between the cavity pressure and the external wind pressure shall not exceed 8%. For example, at 25 PSF External Wind Pressure, the cavity pressure should not fall below 23 PSF.

G. Thermal Movements

1. Allow for thermal movements from ambient and surface temperature changes by preventing buckling, opening of joints, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects. Base calculations on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.

a. Temperature Change (Range): 120 deg F (67 deg C), ambient; 180 deg F (100 deg C), material surfaces.

H. Fire Performance

1. For Combustible Construction permitted

a. Tested to ASTM E 84
b. Max. Flame Spread 25, Max. Smoke Developed 450

2. For Non-Combustible Construction

a. Panels shall meet requirements of the Intermediate Scale Multi Story Fire Evaluation

1) USA: NFPA 285
2) Canada: CAN/ULC-S134

2.3 COMPOSITE METAL PANEL SYSTEM MATERIALS

1. Aluminum Composite Material (ACM): aluminum sheets thermally bonded in continuous process, under tension, to fire rated core with no glues or adhesives between dissimilar materials, and as follows:

a. Basis of Design

1) 3A Composites USA Inc.; Alucobond

b. 4mm Total Composite Thickness
c. Aluminum face sheets:

1) Thickness: 0.51 mm.
2) Alloy: AA 5005.
3) Factory Finish: coil coated with fluoropolymer paint to AAMA 620 and AAMA 2605.

d. Fire rated core in accordance to CAN/ULC S-134 in Canada and NFPA 285 in the United States
e. Bond Integrity

1) When tested, in accordance with ASTM D1781 (simulating resistance to panel delamination), there shall not be an adhesive failure of the bond between the core and the skin or a cohesive failure of the core itself according to the following values:

a) Bond Strength: 1160 psi to ASTM C297/C297M.
b) Peel Strength: 100 N mm/mm minimum to ASTM D1781.
c) No degradation in bond performance after 8 hours of submersion in boiling water and after 21 days of immersion in water at 21 degrees C.

2. Panel System for MT-2:

a. Basis of Design

1) KPS System A by Keith Panel Systems
2) KPS System A Plus by Keith Panel Systems for curved panels

b. Attachment assembly components

1) Perimeter frame, tracks and clips to be formed of aluminum extrusions

a) Alloy AA 6063
b) Color: Exposed: best match to panel color, Unexposed: mill finish

2.4 SYSTEM BACK-UP MATERIALS

A. Fasteners: corrosion resistant; standard Leland

B. Thermally broken façade substructure (if required by jurisdiction):

1. Attributes:

a. Non-combustible
b. Meet requirements of ASHRAE 90.1 for project location
c. Adjustable to permit façade alignment to meet installation tolerances.
d. Suitable for rear ventilated Rainscreen façade design.

C. Acceptable product:

1. KPS ThermaSmart Clip 3.0 by Keith Panel Systems Co. Ltd.

D. Girts and sub-girts as detailed: custom manufactured z-girts, Galvalume steel to ASTM A792/A792M, 18 Ga. (1.2 mm) thickness, profiles as indicated, AZM 150 coating.
E. Isolation Tape: ACM Manufacturers standard material for separating dissimilar metals from direct contact.

2.5 ACCESSORIES

A. System Sealants: Panel system to be dry-joint Rainscreen with no reliance on surface applied sealants.
B. Gaskets: Santoprene or EPDM as recommended by Panel Fabricator.
C. Flashings: Fabricate flashing from 0.040-inches minimum thickness aluminum sheet. Where exposed to view, finish to match adjacent panels. Provide lap strip under flashing at abutted conditions; with lapped surfaces sealed with a full-bed of non-hardening sealant.

2.6 FINISH

A. Prefinished sheet with factory applied coating to AAMA 2605, Polyvinylidene Fluoride (PVDF) or Fluoroethylene Vinyl Ether (FEVE).

1. Color: Alucobond Steel City Silver Mica Cool PVDF-2 Gloss level 20.
2. Coating thickness: two coat system not less than 30 micrometres (1.2 mils).

2.7 FABRICATION

A. Panels and components shall comply with details as indicated on drawings and as indicated in reviewed shop drawings.
B. Panel system shall be shop fabricated – field fabrication or assembly not acceptable.
C. Components shall match quality and installation of accepted mock-up specified above.
D. Drill 0.25 inch drainage weep holes every 16 inches on center along length of horizontally oriented bottom end frames located at base of panelized wall areas.
E. Tolerances:

1. Panel bow shall not exceed 0.8% of panel overall dimension in width or length.
2. Panel dimensions shall allow for field adjustment and thermal movement.
3. Panel lines, breaks and curves shall be sharp, smooth and free of warps or buckles.
4. Panel shall be visually flat.
5. Panel surfaces shall be free of scratches or marks caused during fabrication.

2.8 INSULATION

A. Insulation: as specified in Section 07 21 00 Thermal Building Insulation.

PART 3 - EXECUTION

3.1 ACM MANUFACTURER'S INSTRUCTIONS

A. Compliance: comply with ACM Manufacturer's written recommendations or specifications, including product technical bulletins, handling, storage and installation instructions, and datasheets.

3.2 PREPARATION

A. Obtain dimensions from job site.
B. Ensure all structural support is aligned and condition is acceptable.
C. Building surfaces shall be smooth, clean and dry, and free from defects detrimental to the installation of the system. Notify Contractor of conditions not acceptable for installation of system.
D. Inspect wall system and components before installation and verify that there is no shipping damage.
E. Do not install damaged panels; repair or replace as required for smooth and consistent finished appearance.

3.3 INSTALLATION

A. Install composite panels in accordance with ACM Manufacturer's written instructions and shop drawings.
B. Ensure continuity of building envelope air barrier and vapour retarder systems.
C. Erect panels plumb, level and true.
D. Do not install component parts that are observed to be defective, including warped, bowed, dented, scraped and broken members.
E. Adjust assembly to secure panels safely to wall while allowing for expansion and contraction of components.
F. Do not cut, trim, weld, or braze component parts during erection in manner which would damage finish, decrease strength, or result in visual imperfection or failure in performance.
G. Return component parts which require alteration to shop for fabrication, if possible, or for replacement with new parts.
H. Ensure panels aligned vertically and horizontally.
I. Separate dissimilar metals: use appropriate gaskets and tapes to minimize corrosive or electrolytic action between metals.
J. Install flashings to divert all moisture and condensation to exterior. Trim and flash around doors, louvers, and windows. Use only membrane flashing supported by insulation per architectural details.
K. Site Tolerances:

1. Variation from plane or location shown on shop drawings: 0.4 inches over 33-foot length to maximum of 0.79 inches over 328 feet.
2. Deviation of vertical and horizontal members: 0.12 inches over 28-feet run.
3. Offset between two adjacent members abutted end-to-end, in line: maximum 0.03 inch from true alignment

L. Touch-Up Painting: Inspect completed wall system and apply matching touch-up paint as needed to correct minor paint flaws.

3.4 FIELD QUALITY CONTROL

A. Panel Fabricator's Field Services:

1. Panel Fabricator to provide field services consisting of product use recommendations and periodic site visits for inspection of product installation in accordance with Panel Fabricator's instructions.

3.5 CLEANING

A. Clean in accordance with ACM Manufacturer's instructions.
B. Remove and replace panels damaged beyond repair as direct result of panel installation.
C. Repair panels with minor damage.
D. Remove protective film from finish panels immediately once installation is complete or as otherwise directed by consultant.
E. Provide additional protection required after installation to protect assembly and finishes during construction.
F. Weep holes and drainage channels shall be unobstructed and free of dirt and sealants.
G. Upon final acceptance of installation, remove surplus and protective materials, excess materials, rubbish, tools and equipment from site.
H. General Contractor to leave panels clean and free of debris and residue. Where required, clean exposed panel surfaces using non-abrasive detergent and clean water in accordance with ACM Manufacturer's instructions.

END OF SECTION

SECTION 07 54 19 - PVC ROOFING

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:

1. Vapor Control Layer.
2. Adhesive for Cover Board and Insulation.
3. Tapered and Flat Polyisocyanurate (ISO) Rigid Insulation.
4. Approved Gypsum Roof Cover board.
5. Water Based Adhesive for membrane attachment.
6. Glass Fiber Reinforced 80 mils PVC Roof Membrane.
7. Low VOC Contact Adhesive for Flashings.
8. 60 mils Glass Fiber Reinforced PVC Flashing Membrane.
9. Other Metal Flashings.
10. Sealants.
11. 60 mils Glass Fiber Reinforced PVC Membrane For Roof Logo.

B. Related requirements:

1. Section 06 10 53 for miscellaneous carpentry.
2. Section 07 62 00 for other sheet metal flashings.
3. Section 07 21 00 for insulation.

1.2 ADMINISTRATIVE REQUIREMENTS

A. Scheduling and sequencing:

1. Sequence work to avoid traffic by equipment or personnel over completed roofing. Where such access is inevitable, provide necessary protection and/or barriers to segregate the work area and to prevent damage to adjacent areas.
2. Do not store materials on completed membrane surfaces. Where storage or traffic is unavoidable provide plywood, additional protection boards or similar protection to prevent damage to the membrane. Notify the membrane manufacturer that traffic or storage is anticipated.
3. All conduit, utilities boxes, inserts, penetrations and drains shall be in place, grouted where required and permanently fixed to the substrate before the insulation and membrane are installed.

B. Pre-installation meeting:

1. Prior to start of installation arrange a pre-installation meeting between the waterproofing manufacturer authorized representative, the Contractor, the Architect, and the installer of to review Project conditions, the Drawings, Specifications and the waterproofing manufacturer data.
2. If more than one trade will be responsible for the successful performance of the work of this Section, these trades shall attend the meeting.
3. Identify areas of concern and remedial measures.
4. Record meeting minutes and distribute PDF copy to all concerned, including the Architect, within 48 hours after the meeting.

1.3 SUBMITTALS

A. Product data:

1. Roofing system: Describe each material, and include installation instructions.
2. Insulation: Written approval by the insulation manufacturer for use and performance of the product in the proposed system.

B. Shop drawings:

1. Show outline of roof and its respective size.
2. Show roof topography, identify slopes and gradients.
3. Provide large scale details of roof drains, each flashing component, penetrations and terminations, and locations of stone ballast and walking pads.

C. Samples: Samples of each material to be used in the roof system including each component manufacturer's literature.

1. Make roof membrane Samples a minimum of 24 inches square with one welded joint.
2. Make flashing Samples a minimum of 6 inches long.
3. Bagged roof ballast of sufficient quantity to demonstrate average sizes, colors and textures.

D. Copy of the ASTM Certification for the named flashing product showing Type II Class I fiberglass reinforced membranes.

E. Warranty:

1. Roofing membrane manufacturer warranty form.
2. Roofer warranty form.

1.4 QUALITY ASSURANCE

A. Unreinforced or polyester reinforced membrane base flashings are prohibited.

B. Acceptance:

1. Technical acceptance from roofing membrane manufacturer of the roofing system.
2. Certifications by producers of roofing and insulating materials that materials supplied comply with requirements of the identified ASTM and industry standards.
3. Certification that system specifications meet all identified code and insurance requirements.

C. Roofer qualifications:

1. Roofing system shall be applied only by a firm authorized in writing, by the roofing membrane manufacturer, to apply roof membrane specified.
2. Upon completion of installation, and delivery to roofing membrane manufacturer by the Contractor of a certification that work was done in accordance with Specifications and roofing membrane manufacturer requirements, an inspection shall be made by a technical representative of roofing membrane manufacturer to observe the roof system.
3. Work pertaining to the installation of roofing membrane and flashings shall only be completed by applicator personnel trained and authorized by roofing membrane manufacturer in those procedures.

D. Code requirements: Submit evidence that the proposed roof system will meet Code requirements and has been tested and approved or listed by the following testing organizations.

1. FM (Factory Mutual Research Corp.) FM I-90 wind uplift resistance.
2. UL (Underwriters Laboratories, Inc.) Class A membrane.

E. Base flashings and penetrations must have a minimum 8-inch height above the finished roof assembly. Care must be taken to ensure this is possible when installing equipment pads and making allowances for associated crickets.

1.5 REGULATORY REQUIREMENTS

A. These requirements are minimum standards. Do not start roofing work without written documentation of the system's compliance, as required in the "Submittals" section of this specification.
B. Field and Flashing membranes shall conform to ASTM D4434 (latest version), "Standard for Polyvinyl Chloride Sheet Roofing". Classification: Type II Grade I.
C. Roofing System shall meet Factory Mutual Research Corporation (FM) - Norwood, MA: Class 1-90 when completed.
D. Roofing System shall have a Underwriters Laboratories, Inc. - Northbrook, IL Class A assembly rating.

1.6 HANDLING

A. Delivery: In original unopened containers or wrappings.
B. Storage:
    1. Handle materials to prevent damage. Place materials on pallets and fully protected from moisture.
    2. Store membrane rolls lying down on pallets, and fully protected from moisture with clean canvas tarpaulins. Unvented polyethylene tarpaulins are unacceptable.
    3. Store adhesives above 40-degree F.
    4. Store flammable materials in a cool, dry area away from sparks and open flames.
    5. Load materials on the rooftop in such a manner to eliminate risk of deck overload due to concentrated weight.
    6. Remove damaged materials from the job site and replace at no cost to the Owner.

1.7 JOB CONDITIONS

A. Install materials when environmental conditions are within range acceptable to the roofing membrane manufacturer.
B. Install only materials as much of new roofing as can be made weathertight each day, including all flashing and detail work.
C. Surfaces to receive insulation, membrane, and flashings shall be dry. Should surface moisture occur, provide the necessary equipment to dry surface prior to application.
D. Install uninterrupted waterstops at the end of each day’s work, and completely remove them before proceeding with the next day’s work.
E. Prior to and during application of insulation and roofing membrane, remove dirt, debris and dust from surfaces either by vacuuming, sweeping or blowing with compressed air and/or similar methods.
F. Conduct fastener pullout tests in accordance with industry standards to help verify condition of deck/substrate and to confirm expected pullout values.

1.8 SEQUENCING

1.9 Arrange work sequence to avoid use of newly constructed roofing as a walking surface or for equipment movement and storage. Where such access is absolutely required, provide all necessary protection and barriers to segregate the work area and to prevent damage to adjacent areas. Provide a substantial protection layer consisting of plywood over Sarnafelt or plywood over insulation board for all roof areas that receive concentrated rooftop traffic during construction.

1.10 SPECIAL WARRANTIES

A. Special warranties: The manufacturer and the roofer, as noted below, shall repair defects within the warranty period at no cost to the Owner. If work related to roofing, flashing, or metal is found to be within the roofer and/or manufacturer warranty term, defective or otherwise not in accordance with the Contract Documents, the roofer and/or manufacturer, as specified below, shall repair defect(s) at no cost to the Owner.

1. Defects are defined as follows:

    a. Failure of the roof and flashings to remain weathertight during the warranty period.
    b. Discoloration of the roof membrane other than caused by normal aging; uneven discoloration will be deemed a defect.
    c. Lack of adhesion to substrate, such as evidenced by bubbles (trapped air) under the roof membrane.

2. Manufacturer warranty: Provide a “No Dollar Limit” non-prorated warranty that does not exclude ponding or standing water or contain time limits for standing water. No additional fees or roofing manufacturer inspections will be required to maintain the warranty. The System Warranty includes membrane, insulation, coverboard and attachment components of the roofing system provided by the Manufacturer.
3. Roofer’s warranty: Roofer shall supply the Owner with a separate 2-year workmanship warranty. The installer's warranty obligation shall run directly to the Owner, and a copy shall be sent to the manufacturer.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Provide roofing membrane that prevents the passage of water in the building.

2.2 MEMBRANE SYSTEM

A. Basis of design: Sika Sarnafil 80 mils thick G410 fiberglass reinforced membrane with a lacquer coating. Membrane shall conform to ASTM D 4434, "Standard for Polyvinyl Chloride Sheet Roofing" Classification: Type II, Grade I.
B. Other acceptable manufacturers:

1. Elvaloy alloyed PVC membranes: Seaman Corp. “Fibertite.
2. PVC membrane: Durolast.
3. Or equal.
4. No "Private Label" or third party membrane manufacturers are approved alternates.

C. Color: T24 compliant White.

2.3 FLASHING MATERIALS

A. Flashing Membranes - Sika Sarnafil G410-15 (Basis Of Design) 60 mils thickness with fiberglass reinforcement. Color to match field sheet.
B. As supplied by roofing membrane manufacturer.
C. Flashing materials shall be same material as roofing membrane, except that the metal portion of the flashing shall be Type 316 stainless steel.

2.4 ADHESIVES

A. Surface Conditioner 150: Concrete primer for G476SA membranes.
B. Water-based adhesive for membrane attachment to cover board substrate.

C. Low rise foam adhesive for insulation and cover board attachments.
D. Adhesives must be acceptable to the roof membrane manufacturer for the conditions of use.

1. PVC surfaces: Sarnacol 2121 VOC-compliant adhesive for vertical concrete and steel deck surfaces.
2. Gypsum underlayment board and insulation adhesive: OlyBond 500 by Olympic Manufacturing Group, or equal polyurethane foam adhesive acceptable to the roofing manufacturer.
3. Stabond Adhesive.: Low VOC reactivating-type adhesive used to attach membrane to flashing substrate.

2.5 INSULATION

A. Uniform Thickness complying with ASTM C1289 Type II, Class 1 Grade 2. Provide 2.7-inch maximum thickness.
B. Polyisocyanurate 20 psi compressive strength 4 feet x 4 feet boards.
C. R30 Long-Term Thermal Resistance (LTTR)
D. Provide one or more layers where overall thickness exceeds 2.7-inch.
E. Sarnatherm tapered system and tapered crickets.
F. Tapered rigid Polyisocyanurate foam Sarnatherm complying with ASTM C1289 Type II, Class 1 Grade 2, 20 psi compressive strength and ¼ inch per foot slope. Cricket valleys slope should be maximized are not expected to achieve the major ¼ inch per foot slope.

2.6 COVER BOARD

A. Cover Board (Basis Of Design): 1/2 in. Dens Deck Prime manufactured by Georgia-Pacific, 1/2 in. Fiberglass Mat Faced Gypsum Roof Board. Or equal.
B. Provide only fire-tested, Fiberglass Mat Faced Gypsum Roof Board with EONIC™ Technology for improved moisture resistance.

1. Tested to exceed ASTM C473 with only 1-gram maximum surface moisture absorption and 5% total moisture absorption by weight.
2. Acceptable Product: GP Gypsum, Dens Deck Prime ® Roof Boards.
3. Thickness: 1/2 inch.
4. Width: 4 feet.
5. Length: 8 feet
6. Surfacing: Primed Fiberglass Mat.
7. Flexural Strength, Parallel (ASTM C473): 40 lbf, minimum.
8. Permeance (ASTM E96): Greater than 30 perms.
9. Compressive Strength (Applicable Sections of ASTM C472): Nominal 900 pounds per square inch.
10. Flame Spread/ Smoke Development (ASTM E84): Not more than 0 Flame Spread, 0 Smoke Development
11. Combustibility (ASTM E136): Noncombustible
12. Fire resistance rating (UL 790 and ASTM E108): Class A
13. Mold Resistance (ASTM D3273): Scored a 10

2.7 VAPOR CONTROL LAYER

A. Vapor Retarder SA 31 Primer WB: A polymer emulsion-based primer designed to improve the adhesion of Sarnavap Self Adhered Vapor Control Layers.
B. Vapor Retarder SA 31: A 31 mil self-adhesive vapor barrier that can also serve as temporary roof protection. Vapor Retarder SA 31 is available in rolls 44.9 in. x 133.8 ft. Consult Product Data Sheet for additional information.

2.8 COMPONENTS

A. Sarnaclad PVC Laminated Metal
B. Sarnareglet - A heavy-duty, extruded aluminum flashing termination reglet used at walls and large curbs.
C. Universal PVC Prefabricated stack - A prefabricated vent pipe flashing made from 0.060-inch thickness PVC.
D. Prefabricated Corners - Prefabricated outside and inside flashing corners made of 0.060-inch-thick PVC.
E. Sarnacircles "G": Circular 0.060-inch thick G410 membrane patches welded at T-joints formed
F. by overlapping thicker membranes.

2.9 ATTACHMENT COMPONENTS

A. Membrane Adhesives: Sarnacol 2121 Adhesive, a water-based adhesive used to attach the membrane to horizontal or near-horizontal substrates. Consult Product Data Sheets for additional information.
B. Flashing Adhesive: Stabond U148A Adhesive, a low VOC reactivating-type adhesive used to attach membrane to flashing substrate.
C. Peelstop: An extruded aluminum, low profile bar used with certain fasteners to attach to the roof deck or to walls/curbs at terminations, penetrations and at incline changes of the substrate.
D. Insulation Board Adhesive: Sarnacol 2163/Sarnacol AD/OM Adhesive, a one step low-rise polyurethane foam used to attach insulation to approved compatible substrates. Adhesive is applied with a gravity fed applicator or by hand with a dual component caulk gun in bands 12 in. on center. Additional adhesive may be required for rougher surfaces. Consult Product Data Sheets for additional information. Application rates as recommended by the membrane manufacturer.
E. Sarnafasteners:

    1. #15, heavy-duty, corrosion-resistant fastener used with Sarnastop termination bar for secondary perimeter attachment to steel or wood substrates
    2. #12, fastener used with Sarnaplates to attach boards to steel or wood roof decks for 20 year warranty systems.

F. Sarnaplate: Used with various Sarnafasteners to attach insulation boards to roof deck. Sarnaplate is a 3 inch square or round, 26 gauge stamping of SAE 1010 steel with an AZ 55 Galvalume coating.

2.10 WALKWAY PROTECTION

A. Sarnatred V: Polyester reinforced, 0.096 inch, weldable membrane with surface embossment. Used as a protection layer. Sarnatred is supplied in rolls of 39.3 inches wide and 50 feet long.

2.11 SEALANTS

A. Multi-Purpose Sealant (for termination details). Sika 1A or approved equal.
B. Approved two-component urethane adhesive sealant.
C. Depending on substrates, the following sealants are options for temporary overnight tie-ins:

    1. Spray-applied, water-resistant urethane foam.
    2. Mechanical attachment with rigid bars and compressed sealant.

2.12 MISCELLANEOUS FASTENERS AND ANCHORS

A. Provide only post-galvanized steel, aluminum or stainless-steel fasteners. Take precautions to avoid galvanic corrosion. Install expansion type fasteners with stainless steel pins for the attachment of metal to masonry. The minimum embedment for all concrete fasteners and

anchors is 1¼ inch and for all miscellaneous wood fasteners and anchors used for flashings 1 inch.

2.13 EQUIPMENT PLATFORM WATERPROOFING

A. Sikalastic RoofPro 641 by Sika Corporation - provide fully reinforced waterproofing membrane RoofPro 641 20 system 80 mils wft. Galvanized Sheet metal covers may be used but are not required with this system.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Manufacturer’s inspections:

1. Request the manufacturer's presence before start of this work to verify substrate acceptability, and as required thereafter to review installation procedures and completed work, and to issue warranty specified.
2. Unsatisfactory conditions disclosed by the manufacturer visits to the site shall be documented, and promptly and satisfactorily repaired and the areas re-inspected by the manufacturer before work starts or resumes in affected areas.

B. Examine substrates, conditions and surfaces to/under which materials will be applied/installed to receive materials.
C. Inspect deck for defects that will adversely affect the quality of work.
D. Conduct fastener or adhesion pullout tests in accordance with industry standards to help verify condition of deck/substrate and to confirm expected pullout or adhesion values.
E. Correct detrimental conditions before proceeding with installation.

3.2 PREPARATION

A. Clean substrate of dust, debris, moisture, and other substances detrimental to roofing installation according to roofing system manufacturer's instructions. Remove sharp projections.
B. Prevent materials from entering and clogging roof drains and conductors and from spilling or migrating onto surfaces of other construction. Ensure that drains are functioning normally prior to starting this work. Remove roof-drain plugs when no work is taking place or when rain is forecast.
C. Complete terminations and base flashings and provide temporary seals to prevent water from entering completed sections of roofing system at the end of the workday or when rain is forecast. Remove and discard temporary seals before beginning work on adjoining roofing.
D. Coordinate the installation so that each roofed area is made watertight at the end of each day.

3.3 SUBSTRATE PREPARATION

A. Vapor retarder SA 31 primer WB application at concrete decks:

1. Shake well before use. Minimum application temperature is 41 deg F. Application rates will vary according to substrate. Apply with a brush roller or spray to a clean dry substrate at an average rate of 1 gallon per 100 square feet for porous surfaces and ½ gallon per 100 square feet for non porous surfaces.

B. Vapor control layer (VCL) installation at concrete decks:

1. Verify the substrate is completely dry and the surface has a smooth finish and is free of voids, sharp protrusions, loose aggregate, spalled areas, laitance and form release agents. In the event of rain, allow the concrete to dry before primer is applied.
2. Apply VCL Membrane from low point to high point, in a shingle fashion, so laps will shed water. Overlap all edges at least 21/2 inches. Stagger end laps. Place membrane carefully to avoid wrinkles and fish-mouths. Immediately after installation, roll with a weighted foam covered

3.4 WOOD NAILERS

A. Install continuous treated wood nailers, of same thickness as insulation height, at the perimeter of the entire roof and around roof projections and penetrations.
B. Anchor nailers to resist a minimum force of 300 lb./linear foot in any direction.
C. Provide a 1/2-inch space between nailer lengths.
D. Individual nailer lengths shall not be less than 3-foot long.
E. Space fasteners at 12-inch o.c. Stagger fasteners 1/3 the nailer width and install within 6-inch of each end.
F. Nailer attachment shall meet this requirement and current FM Loss Prevention Data Sheet 1-49.

3.5 INSULATION & COVER BOARD INSTALLATION

A. Mechanically-attach insulation with approved fasteners to the decks as recommended by roofing membrane manufacturer and in compliance with FM for fastening rates and patterns.
B. Install tapered insulation around drains creating a drain sump.
C. Do not install more insulation board than can be covered with membrane by the end of the day or the onset of inclement weather.
D. Use at least 2 layers of insulation when the total thickness exceeds 2.5-inch. Stagger joints at least 12-inch between layers.
E. Attach insulation as recommended by the insulation manufacturer, FM and roofing membrane manufacturer instructions, and so that insulation boards rest evenly on the substrate. Install each insulation board tightly against the adjacent boards on all sides.
F. Install cover board over the insulation with tight, flush joints, in accordance with the roof membrane manufacturer’s instructions. Break joints between the insulation and the cover board.

3.6 ROOFING MEMBRANE

A. Install roof membrane over clean, dry substrate in accordance with its manufacturer’s instructions.
B. Hot air-weld seams continuously.
C. Install walkway pads in the pattern indicated over the completed roof membrane. Adhere fully to roof membrane as recommended by the membrane manufacturer or lay loose when acceptable for the product selected.

3.7 FLASHINGS

A. Install concurrently with roof membrane as the work progresses, in accordance with the roofing membrane manufacturer instructions, to seal all edges and penetrations.

3.8 WALKWAY INSTALLATION

A. Verify the lap welds to be covered are continuous and the membrane is clean and dry before installing Sarnatred. Apply a continuous coat of Stabond U148A adhesive to the deck sheet and the back of the Sarnatred and press Sarnatred into place with a water-filled, foam-covered lawn roller. Hot-air weld the overlaps and the perimeter. Do not apply adhesive to the seam area.

3.9 EQUIPMENT PLATFORM WATERPROOFING

A. Prepare the equipment platform to receive the Sikalastic EP Primer
B. Apply Sikalastic EP Primer at 200-250 ft2/gallon and allow to cure (typically 8-12 hours).
C. Apply the base coat of RoofPro 641 resin within 72 hours of EP Primer application, if this time is exceeded clean and re-apply EP Primer to the cured primer.
D. Apply 50 mils base coat of RoofPro 641 resin with a roller and immediately saturate the Reemat Premium into the wet RoofPro 641 resin and backroll to ensure complete embedment. Allow the 641 resin to cure 12-18 hours. Apply the 30 mils RoofPro 641 top coat over the cured base coat and allow to cure fully (typically 24 hours) before applying roof top equipment to the platform.

3.10 LOGO INSTALLATION

A. Verify the lap welds to be covered are continuous and the membrane is clean and dry before installing logo. Apply a continuous coat of Stabond U148A adhesive to the deck sheet and the back of the logo membrane and press logo membrane into place with a water-filled, foam-covered lawn roller. Hot-air weld the overlaps and the perimeter. Do not apply adhesive to the seam area.

3.11 TEMPORARY CUT-OFF

A. Construct all temporary waterstops to provide a 100% watertight seal. Maintain the stagger of insulation joints by installing partial panels of insulation. Carry the new membrane into the waterstop. Seal the waterstop to the deck and/or substrate so that water will not be allowed to travel under the new or existing roofing. Seal the edge of the membrane in a continuous heavy application of sealant. Cut out all contaminated membrane before resuming work.

3.12 COMPLETION

A. Correct all punch-list items to the satisfaction of the Owner's Representative and Manufacturer prior to demobilization.

3.13 FIELD QUALITY CONTROL

A. Seams:

1. Check welded seams for continuity daily where directed by roofing membrane manufacturer’s representative. Take one inch wide cross-section samples of welded seams at least three times a day. Correct welds display failure from shearing of the membrane prior to separation of the weld. Each test cut shall be patched by the Applicator at no extra cost to the Owner.
2. Correct welds displaying failure from shearing of membrane prior to separation of weld. Patch each test cut.

B. Interim and Final Inspections - Upon completion of the installation and the delivery to Manufacturer by the Applicator of a certification that all work has been done in strict accordance with the contract specifications and Manufacturer's requirements, a warranty inspection shall be made by the manufacturers Specialist Technical Representative no personnel with a sales role/function within the company shall be permitted to inspect contractors work. Water test all drains to confirm they are functioning properly after roofing work is completed.

1. Note defects and non-compliance with Specifications and itemize roofing membrane manufacturer’s recommendations in a punch list.
2. These items must be corrected immediately to the satisfaction of the Architect and roofing membrane manufacturer prior to demobilization.

3.14 DEMONSTRATION

A. Provide maintenance documents and personal instruction to the Owner for the following:

1. Access restrictions and precautions.
2. Avoiding mechanical damage.
3. Potential contaminants and rectification.
4. Cleaning.
5. Emergency repairs.

END OF SECTION

SECTION 07 62 00 - FLASHINGS AND SHEET METALWORK

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:

1. Gravel stops.
2. Gutters, conductor heads and downspouts.
3. Copings.
4. Prefabricated counterflashing assemblies.
5. Flashing collars for roof screen supports.
6. Air intake louver.
7. Storefronts and curtain wall sill pans and dams.
8. All other flashings and sheet metal items shown or required to make the building weathertight and not specified in other Sections.

B. Related requirements:

1. Section 07 42 13 for flashing related to metal wall panels.
2. Section 07 72 33 for roof hatch.
3. Division 08 for flashings in connection with window wall and skylights, and counterflashings at perimeter of skylights.
4. Division 23 for mechanical sheet metal work, and flashings and collars for mechanical and electrical work, except as specified herein for roof drains.

C. Definitions:

1. In general, flashings visible by the public shall be prefinished aluminum.
2. All other flashings shall be stainless steel.

1.2 ADMINISTRATIVE REQUIREMENTS

A. Scheduling and sequencing:
B. Pre-installation meeting:

1. Prior to starting installation, arrange a pre-installation meeting between trades responsible for flashings and trades whose systems interface with flashings.
2. Attendees shall also include, but are not necessarily limited to the following:

    a. Contractor.
    b. Architect.
    c. Project roofing and waterproofing consultant.
    d. Roofing material manufacturer’s technical representative.
    e. Representatives of waterproofing, fenestration, exterior building envelope, weatherproofing and exterior cladding systems.

3. Those present shall review the Drawings and Specifications, and typical flashing details.
4. Identify areas of concern and proposed remedial measures. Take photographs of the areas of concerns, before and after remedial measures are taken.
5. Record meeting minutes and distribute PDF copy to all concerned, including the Architect, within 48 hours of the meeting.

1.3 SUBMITTALS

A. Data: Manufacturer Product Data, specifications, installation instructions and general recommendations for installation of prefabricated assemblies.

B. Shop Drawings:

1. Show typical and atypical details, including, but not limited to sheet metal components as well as all transitional and interface flashings between the various roofing, waterproofing and exterior building envelope weatherproofing assemblies, such as wall cladding and fenestration. Include material weight, methods of joining and attachment, and relationship with adjacent materials and supports of all sheet metal assemblies.
2. Detail interface with adjacent materials. For interface between flashings with different profiles and conditions difficult to illustrate in 2-dimension, furnish isometric drawings. Key sheet metal components, transitional and interface flashings, and associated materials to the Drawings, and show typical locations and profiles.

C. Samples: Assembled Samples of the following at least 6 inches long, except as otherwise specified. Mount on plywood and include all components to be installed under this Section for each Sample.

1. Complete coping, including inside and outside corner condition, with legs at least 12 inches long; include typical moving and non-moving joints. Inside and outside corners must be fully soldered; sealant joints at those locations are unacceptable.
2. Gravel stop and/or roof termination.
3. Scupper.
4. Gutter including holding strap.
5. Conductor head and downspout.
6. Counterflashing with receiver.
7. Rain bonnet.

1.4 QUALITY ASSURANCE

A. Design criteria and performance requirements: Fabricate and install the work of this Section to withstand wind loads, structural movement, thermally induced movement, and exposure to weather without failing, rattling, leaking, excessive oil-canning, and fastener disengagement.

1. Thermal movements:

a. Provide sheet metal flashing and trim that allow for thermal movements resulting from the following maximum change (range) in ambient and surface temperatures by preventing buckling, opening of joints, hole elongation, overstressing of components, failure of joint sealants, failure of connections, and other detrimental effects.
b. Provide clips that resist rotation and avoid shear stress as a result of sheet metal and trim thermal movements.
c. Base engineering calculation on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
d. Temperature change (range) of 120-degree F ambient; 180-degree F, material surfaces.

2. Water infiltration: Provide sheet metalwork and flashings that do not allow water infiltration to building interior, and to damage materials, such as insulation, in exterior walls.

1.5 HANDLING

A. Do not store sheet metal flashing and trim materials in contact with other materials that might cause staining, denting, or other surface damage. Store sheet metal flashing and trim materials away from uncured concrete and masonry.
B. Protect strippable protective covering on sheet metal flashing and trim from exposure to sunlight and high humidity, except to the extent necessary for the period of sheet metal flashing and trim installation.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. General: Sheet metal flashing and trim assemblies, including cleats, anchors, and fasteners, shall withstand wind loads, structural movement, thermally induced movement, and exposure to weather without failure due to defective manufacture, fabrication, installation, or other defects in construction. Completed sheet metal flashing and trim shall not rattle, leak, or loosen, and shall remain watertight.
B. Sheet Metal Standard for Flashing and Trim: Comply with NRCA's "The NRCA Roofing Manual: Architectural Metal Flashing, Condensation and Air Leakage Control, and Reroofing" and SMACNA's "Architectural Sheet Metal Manual" (for gravity loading only) requirements for dimensions and profiles shown unless more stringent requirements are indicated.
C. SPRI Wind Design Standard: Manufacture and install copings tested in accordance with ANSI/SPRI/FM 4435/ES-1 and capable of resisting the following design pressure:

1. Design Pressure: As indicated on Drawings.

2.2 MATERIALS

A. Sheet steel: Commercial quality carbon steel sheets complying with ASTM A 653, lock-forming grade, galvanized with a G90 zinc coating, 24-gage (0.025 inch) minimum unless otherwise indicated, known commercially as "Satincoat", or "Galvanneal." Steel sheet thicknesses specified are base metal thicknesses prior to galvanizing.
B. Increase gage of galvanized sheet steel for larger sheet applications, such as gutters, curbs, etc.

1. Sheet lead for roof drains: 4 lb./square-foot, ASTM B 29 desilverized pig lead.

C. Stainless steel at concealed locations only: ASTM A240/A240M, Type 304, dead soft, fully annealed; with smooth, flat surface.

1. Finish: ASTM A480/A480M, No. 2D (dull, cold rolled).

a. Surface Preparation: Remove tool and die marks and stretch lines, or blend into finish.
b. Polished Finishes: Grind and polish surfaces to produce uniform finish, free of cross scratches.

1) Run grain of directional finishes with long dimension of each piece.
2) When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.

D. Aluminum:

1. Sheet aluminum: ASTM B 209, alloy as standard with manufacturer for finish required, with temper as required to suit forming operations and performance required; with smooth, flat surface. (0 .03 inch thick.)

2. Aluminum extrusions: ASTM B 229.

    a. Clear Anodic Finish, Coil Coated at concealed locations only: AAMA 611, AA-M12C22A41, Class I, 0.018 mm or thicker.

3. Exposed Coil-Coated Finish:

    a. Metallic Fluoropolymer: AAMA 2605. Three-coat fluoropolymer finish with suspended metallic flakes containing not less than 70 percent polyvinylidene fluoride (PVDF) resin by weight in both color coat and clear topcoat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions. Match coating on metal in Section 07 42 13.

4. Color: Match Architect's sample As indicted on Drawings.
5. Concealed Finish: Pretreat with manufacturer's standard white or light-colored acrylic or polyester backer finish, consisting of prime coat and wash coat with minimum total dry film thickness of 0.5 mil.

E. Nails:

1. For attaching sheet steel to wood: Large flat head "stronghold" type roofing nails with barbed point, formed of hot-dip galvanized steel of sufficient length to penetrate a minimum of one-inch into the wood nailer.
2. For attaching sheet steel to concrete: 1-1/4-inch by 8d hot-dip galvanized hardened steel nails with lead washers.

F. Hot dip galvanized self-tapping screws, self-locking rivets and bolts, and other suitable fasteners designed to withstand design loads.

1. Fasteners for flashing and trim: Blind fasteners or self-drilling screws, gasketed with hex washer head.
2. Blind fasteners: High-strength aluminum or stainless-steel rivets.

G. Solder and flux:

1. Galvanized sheet metal: 50-50 lead/tin solder complying with ASTM B 32, used with a non-corrosive flux.
2. Lead: ASTM B 32, Grade Sn50, 50 percent tin and 50 percent lead.
3. Copper: ASTM B 32, Grade Sn50, 50 percent tin and 50 percent lead.
4. Lead-coated copper: ASTM B 32, Grade Sn60, 60 percent tin and 40 percent lead.
5. Stainless steel: ASTM B 32, Grade Sn60, with an acid flux of type recommended by stainless-steel sheet manufacturer.

H. Sealing tape: Pressure-sensitive, 100 percent solids, polyisobutylene compound sealing tape with release-paper backing.

1. Provide permanently elastic, nonsag, non-toxic, non-staining tape.
2. Tremco 440, Schnee-Morehead, Inc. SM5700, or equal.

I. Expansion-joint sealant: For hooked-type expansion joints, which must be free to move, provide non-setting, non-hardening, non-migrating, heavy-bodied polyisobutylene sealant.

J. Bituminous coating:

1. Cold-applied asphalt mastic, SSPC-Paint 12, compounded for 15-mil dry film thickness per coat.
2. Provide inert-type noncorrosive compound free of asbestos fibers, sulfur components, and other deleterious impurities.

K. Insect screens: 14 by 18 mesh, 0.063-inch diameter aluminum wire crimped screen material.

L. Slip sheet: Red Rosin Building paper, minimum 12 lb./100 square feet by W.R. Meadows or equal.

1. Size: 36 inches by 150 feet.

2.3 UNDERLAYMENT MATERIALS

A. Felt: ASTM D226/D226M, Type II (No. 30), asphalt-saturated organic felt; nonperforated.
B. Source Limitations: Obtain underlayment from single source from single manufacturer.
C. Slip sheet: Red Rosin Building paper, minimum 12 lb./100 square feet by W.R. Meadows or equal.

1. Size: 36 inches by 150 feet.

2.4 FLEXIBLE FLASHING

A. Flexible flashing materials installed under, or interface with sheet metal. Protect flexible flashing materials from UV exposure; do not leave uncovered in excess of the material manufacturer's published exposure limits.
B. Self-adhering waterproofing membrane materials shall be either manufactured by the Air and Water Barrier material manufacturer as part of their system or approved for use as being compatible with the Air and Water Barrier system specified in Section 07 27 26.

1. General: For use in high temperature environments (temperatures in excess of 225 degrees F.), provide flashing rated by the flexible flashing manufacturer as "high temperature resistant" and suitable for its intended use and application.
2. For use on exterior walls, where neither metal flashing, air and water barrier, or high-temperature flashings occur:

a. Perm-A-Barrier by GCP Applied Technologies.
b. Window and Door Flashing by Carlisle Coatings & Waterproofing.
c. Fast Flash by Protecto Wrap Co.
d. Sealtight Air-Shield by WR Meadows, Inc.
e. Seam Seal Tape by SafSeal Innovations.
f. TW Moisture Wrap by Tamko Waterproofing.
g. Or equal.

3. For use under copings and other sheet metal assemblies: Self-adhering (peel and stick) flexible high-temperature resistant, self-adhering waterproofing flashings by one of the following, and shall include primers, sealants and mastics, liquid membrane and accessories required for complete systems.

a. WIP 300HT-by Carlisle Coatings & Waterproofing.
b. PW 100/40 HT by Protecto Wrap Co.
c. Grace Ultra by GCP Applied Technologies.
d. Or equal.

2.5 PREFABRICATED ASSEMBLIES

A. Counterflashing assemblies: Formed of 24-gage galvanized sheet steel of the profiles shown on the Drawings, complete with factory-formed internal and external corners, and end closures by one of the following.

1. Basis of design is for Fry Reglet Corp. Type ST (stucco), CO (concrete), SM (surface mounted).]
2. Keystone Flashing Co.
3. CF Cheney Flashing Co.
4. MM Systems Corp.
5. Or equal.

B. Strainer units for conductor heads: Removable beehive design fabricated from 0.062-inch diameter galvanized steel wire or wire mesh with openings not more than 1/2-inch.
C. Prefabricated expansion gutter joints: “Expansion Joint” by Wilco, or “T-Pren Expansion Joint” by Matthew Hebden.
D. Sheet metal curbs:

1. Of the sizes and profiles indicated, by Thybar Corp., Pate Co. or Custom Curb, Inc., with an 18-gage galvanized steel shell and base plate fully welded, factory installed insulation, and continuous wood nailer.
2. Reinforce curb as required to safely support the equipment thereon.

2.6 FABRICATION

A. General:

1. Shop fabricate flashings and sheet metal work to comply with profiles and sizes indicated on the Drawings and standard Sheet Metal and Air Conditioning Contractors National Association, Inc. (SMACNA) detail plates of the "Architectural Sheet Metal Manual" as follows, unless otherwise indicated.

    a. Gravel stops and roof edging: Figure 2-5C.
    b. Laps: J2.
    c. Copings: Figure 3-4A. Miter and solder inside and outside corners continuously to make watertight; the use of sealant for that purpose is unacceptable.
    d. Gutter: Style A. Butt expansion joint Figure 1-7.
    e. Downspout: Figure 1-32A round; Figure 1-32B rectangular.
    f. Downspout hanger: Figure 1-35 to match shape of gutters.
    g. Scupper and conductor head: Figure 1-27A.

2. Form sheet metal on bending brake with straight, sharp edges. Shape, trim, and hand seam sheet metal on bench; keep job site forming to a minimum.
3. Comply with metal producers' recommendations for tinning, soldering, and cleaning flux from metal.
4. Fabricate with joints and corners accurately machined, filed and fitted, and rigidly framed together and connected.

B. Galvanized Sheet Metal flashing: See Section 09 90 00.
C. Fabricate in as long length as possible to minimize field joints.
D. Prefabricate intersections, including counterflashings, with mitered, riveted joints. Make corners and intersections with legs a minimum of 24-inch long extending in each direction.
Tinning and soldering:

1. Tin edges on both sides of sheet steel to be soldered.
2. Perform soldering slowly, thoroughly heating seams and completely sweating solder through full width of seams.

E. Exposed edges: Neatly double back sheet metal 1/2-inch to stiffen edges and to provide a finished appearance.
F. Provisions for attachment to structure: Furnish supports, hangers, bracing, anchors and other devices shown, specified or necessary for reinforcement and proper attachment of flashings and sheet metal to building.

2.7 FINISHES

A. Galvanized Sheet Metal flashing: See Section 09 90 00.

B. Exposed aluminum-fabricated copings and running flashing: Two-Coat Fluoropolymer: AAMA 2605. Fluoropolymer finish containing not less than 70 percent PVDF resin by weight in color coat. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.

1. Custom color and Gloss as selected by Architect. Finish to be non-reflective.

C. Concealed aluminum: Mill finish.

PART 3 - EXECUTION

3.1 EXAMINATION

Examine conditions and measurements affecting the work of this Section at site. Correct detrimental conditions before proceeding with installation.

3.2 GENERAL REQUIREMENTS

A. In addition to the assemblies listed above, provide required sheet metal flashings, counterflashings, transitional and interface flashings required to achieve a properly weatherproofed, flashed and counterflashed building envelope, including sheet metal flashings in the angles formed where exterior waterproofed decks abut walls, and as well at curbs, platforms, ventilators, pipes, roof hatches, and other vertical and horizontal surfaces, where indicated and necessary to make the Work weatherproof.

B. Comply with manufacturer’s installation instructions where applicable, and applicable SMACNA and NRCA details, except as indicated and specified.

C. Install counterflashing assemblies at a constant height above the roof.

1. Anchor counterflashing securely into reglet by friction, or provide lead wedges spaced 2-foot o.c. maximum.
2. Use manufacturer standard splice plates and preformed corners for a weathertight assembly.

D. Coordinate this work with other trades whose work penetrates, intersects and adjoins flashings and sheet metal work, to permit the correct sequencing and the watertightness of the assemblies.

E. Isolate copper from dissimilar metals and pressure-treated wood.

F. Isolate aluminum from cementitious materials and dissimilar metals.

3.3 INSTALLATION

A. General:

1. Install sheet metal work in accordance with the approved Shop Drawings.
2. Fasten coping on inside wall with hex head screws and bonded sealing washers through oversized holes in the back of the coping. Except as specified, lap and solder corners and angles; lapping and sealant method is not an acceptable substitute for coping corners; provide for thermal movement no more than 10 feet from corner.
3. Slope copings and sills with a minimum slope of 10 percent to drain away form walls and building interior. Slope gutters 1/4-inch per foot to drain.
4. Solder joints of window flashings (pans) and saddles.
5. Attach work securely to supporting construction, plumb, level, with tight, flush joints allowing for thermal movements.
6. Install work with lines, arises, and angles sharp and true.
7. Fold exposed edges neatly to form a 1/2-inch hem on the concealed side; hem all exposed edges, unless otherwise indicated.

8. Assemble work so that face of metal in contact has hairline joints, except where required for expansion or fitting. Provide back-up plates at joints.
9. Conceal fastenings and reinforcement where they would be visible by the public and the building occupants.
10. Vulcanize joints of the roof expansion joint covers and lap the sheet metal portion, after sealing for water tightness.
11. Finish work shall be straight, smooth and continuous, without dimples, dents and other damage.

B. Soldering:

1. Protect underlying waterproof membrane (flexible flashing) when soldering sheet metal.
2. Except as specified, solder all joints not intended for expansion and contraction.
3. Clean material and tin prior to soldering.
4. Solder slowly. Heat the seams thoroughly, and completely fill with solder.
5. Make exposed soldering on finish surfaces neatly, full flowing and smooth.
6. Wash acid flux with a soda solution after soldering and remove soldering flux on exposed surfaces.

C. Nailing:

1. Confine nailing of sheet metal generally to sheet metal having a maximum width of 18-inches. Nailing of flashings shall be confined to one edge only.
2. Space nails evenly not over 12-inches o.c, and approximately 2-inches from the edge.
3. Face nailing is not permitted. Do not nail sheet metal assemblies on horizontal surfaces.
4. Where sheet metal is applied to surfaces other than wood, furnish detailed Shop Drawings showing locations of required sleepers and nailing strips specified in Section 06 10 53 (06 10 00).

D. Cleats:

1. Provide cleats for sheet metal 18-inch and over in width. Space cleats evenly not over 12-inches o.c
2. Make cleats not less than 2-inch wide by 3-inch long, and of the same material and thickness as the sheet metal being installed.
3. Secure one end of the cleat with 2 nails and the cleat folded back over the nail heads. Lock the other end into the seam. Pre-tin cleats for soldered seams.

E. Bolts, rivets, and screws:

1. Install bolts, rivets, and screws where required. Space equally and symmetrically.
2. Use fastener sizes that penetrate substrate not less than recommended by fastener manufacturer to achieve maximum pull-out resistance.
3. Conceal fasteners and expansion provisions where possible in exposed work and locate to minimize possibility of leakage. Cover and seal fasteners and anchors as required for a tight installation.
4. Provide compatible washers to protect surface of sheet metal and to provide a watertight connection.

F. Dissimilar material protection:

1. Protect sheet metal in contact with dissimilar metals, concrete, masonry and plaster with a heavy coating of bituminous paint, approved separation tape, or building felt or paper.
2. Set sheet metal assemblies supported by pressure-treated wood on building paper or felt attached to the wood nailer, except set copings on flexible flashing specified. Lap on vertical surfaces at least 2 inches.

G. Seams - general: Make seams straight, uniform in width and height, with no solder showing on the face.

1. Flat-lock seams: Finish not less than 3/4-inch wide made in the direction of water flow.
2. Lap seams: Finish soldered seams not less than one-inch wide. Overlap seams not soldered at least 3-inches.
3. Loose-lock expansion seams: No less than 3 inches wide, designed to provide minimum one-inch movement within the joint. Fill joint completely with sealant applied at not less than 1/8-inch thick bed.
4. Standing seams: Not less than one-inch high, double locked without solder.

H. Expansion and contraction:

1. Provide for thermal and building movement without over-stressing the material, breaking connections or producing wrinkles and distortion in finished surfaces. Make sheet metal installations weathertight at all locations.
2. Provide expansion and contraction joints at not more than 40-foot intervals, except that where the distance between the last expansion joint and the end of the continuous run is more than half the required interval spacing, provide an additional joint. Where expansion and contraction joints are exposed to view, their location is subject to the Architect's approval.
3. Exposed surfaces shall be free from visible wave, warp, and buckle.

I. Flexible flashing: Install under all parapet caps. Lap joints 2-inches. Carry flexible flashing down wall as far as the edge of the coping; overlap wall weather barrier at least 2-inches.

J. Install curbs and gravity roof vents level and square with tight, waterproof joints; attach securely to deck.

K. Completed flashings and sheet metal work shall be watertight, free of tool marks, dents, scratches and other damages, with joints and corners accurately machined, filed and fitted, and rigidly framed together and connected. Non-complying work shall either be repaired, when repairs are acceptable to the Architect, or replaced with new, undamaged flashings and sheet metal work.

END OF SECTION

SECTION 07 72 33 - ROOF HATCH

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:

1. Single leaf roof hatch.
2. Hatch railing and gate.
3. Safety post.

B. Related requirements:

1. Division 05 for “Safety Post” attached to ladder and for all other railings.

1.2 COORDINATION

A. Coordinate layout and installation of roof hatch with roofing membrane and base flashing and interfacing and adjoining construction to provide a leakproof, weathertight, secure, and noncorrosive installation.
B. Coordinate dimensions with rough-in information or Shop Drawings of equipment to be supported.

1.3 SUBMITTALS

A. Project Data:

1. Manufacturer Product Data for the hatch and railing.
2. Supplement with details showing attachment to supports and interface with adjacent construction, including roof membrane.

B. Shop Drawings:

1. Large scale, dimensioned Shop Drawings, showing fabrication and installation details. Indicate dimensions, weights, loading, required clearances, method of field assembly, and components.
2. Include plans, elevations, sections, details, and attachments to other work.

C. Samples: Provide samples with available manufacturer standard color for the Architect’s selection.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Type L by the Bilco Co., basis of design.
B. Acceptable manufactures include the following, provided the product meets or exceeds these specified requirements:

1. Babcock-Davis Hatchways, Inc.
2. J.L. Industries.

3. Lane-Aire Manufacturing Corp.
4. Or equal.

2.2 PERFORMANCE REQUIREMENTS

A. Design loads:

1. Hatch: Design, fabricate, and install so that the completed assembly will be weathertight when closed, will withstand dead and live loads caused by personnel and wind pressure and wind uplift Provide additional support and reinforcement to manufacturer standard assembly as required to conform to specified performance requirements.

    a. FM rating: Comply with insurance rating bureau requirements for class and securement rating (wind uplift resistance) of Factory Mutual (FM) Class I-90 requirements.
    b. Live load: 40 psf minimum.
    c. Concentrated load: 250 lb.
    d. Internal pressure: 20 psf.
    e. Design loads shall be supported without permanent deformation, or disengagement of seals or anchors.
    f. Hatch to be thermally broken.

2. Railing and gate: Design, fabricate, and install to comply with California Building Code and CALOSHA.

2.3 MATERIALS/CONSTRUCTION HATCH

A. Size: 30-inches by 96-inches.
B. Cover: 14-gage hot-dip galvanized steel with 3-inch beaded and welded flange, insulated with one-inch thick fiber glass insulation, and lined with a 22-gage galvanized steel liner.
C. Curb:

1. Fabricate curbs to minimum height of 12 inches above roofing surface unless otherwise indicated.
2. Fabricate from 14-gage hot-dip galvanized steel with integral flanges.
3. Continuously weld the curb at corners to insure watertightness.
4. Insulate the exterior face of the curb with one-inch thick rigid fiberboard or Perlite insulation.

D. Hardware: Assemble the hatch with heavy pintle hinges and compressive spring operators enclosed in telescopic tubes.

1. Provide positive snap latch with turn handles and padlock hasps inside and outside.
2. Equip cover with an automatic hold-open arm complete with vinyl grip handle for one hand release, and weatherstrip with neoprene draft seals.

E. Finishes:

1. Hardware: Zinc- or cadmium-plating standard with the manufacturer.
2. All other surfaces: Bonderized for paint adhesion and painted with manufacturer's standard rust-inhibitive primer followed by a powder coat finish of the color selected by the Architect from the manufacturer’s palette.

2.4 SAFETY POST

A. Provide Bilco "LadderUp" safety post or "Extend-A-Rail" (ER-1) by Precision Ladders, Ltd., or equal, complete with hardware and fasteners required for installation.

2.5 RAILING

A. Safety Railing System: Roof-hatch manufacturer's standard system including rails, clamps, fasteners, safety barrier at railing opening, and accessories required for a complete installation; attached to roof hatch and complying with 29 CFR 1910.23 requirements and authorities having jurisdiction.

1. Height: 42 inches above finished roof deck.
2. Posts and Rails: Galvanized-steel pipe, 1-1/4 inches in diameter or galvanized-steel tube, 1-5/8 inches (41 mm) in diameter.
3. Flat Bar: Galvanized steel, 2 inches high by 3/8 inch thick.
4. Maximum Opening Size: System constructed to prevent passage of a sphere 21 inches in diameter.
5. Chain Passway Barrier: Galvanized proof coil chain with quick link on fixed end.
6. Self-Latching Gate: Fabricated of same materials and rail spacing as safety railing system. Provide manufacturer's standard hinges and self-latching mechanism.
7. Post and Rail Tops and Ends: Weather resistant, closed or plugged with prefabricated end fittings.
8. Provide weep holes or another means to drain entrapped water in hollow sections of handrail and railing members.
9. Fabricate joints exposed to weather to be watertight.
10. Fasteners: Manufacturer's standard, finished to match railing system.
11. Finish: Manufacturer's standard.

a. Color: As selected by Architect from manufacturer's full range.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine adjacent construction and supports.
B. Verify that opening is within allowable tolerances, plumb, level, will provide a solid anchoring surfaces.
C. Correct detrimental conditions before proceeding with installation.

3.2 INSTALLATION

A. Comply with the hatch manufacturer’s instructions.
B. Install the hatch over the opening, plumb, level and square.
C. Attach securely to supporting structure with a minimum of 2 bolts per side.
D. Mount railing securely to curbs in accordance with its manufacturer’s instructions; do not attach to, or on roof.
E. Verify operation of hatch cover and railing gate; adjust and lubricate the cover for ease of operation and watertightness where applicable.
F. Safety post:

1. Attach to the ladder side rails in accordance with the post manufacturer’s instructions.
2. Verify that post locks securely in “up” position.
3. Adjust and lubricate for smooth operation.

END OF SECTION

SECTION 07 84 00 – PENETRATION, JOINTS & PERIMETER FIRE BARRIERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes: firestop systems consisting of a material, or combination of materials installed to maintain the integrity of the fire-resistance rated construction by maintaining an effective barrier against the spread of flame, smoke, and hot gases through penetrations, blank openings, construction joints, or at the gap created at the building perimeter of the horizontal fire resistance rated assembly and non-fire-resistance rated exterior wall and in or adjacent to either fire-resistance or non-fire-resistance rated barriers in accordance with Authorities Having Jurisdiction (AHJ) requirements. Use firestop systems at locations including, but not limited to, the following:

1. Protected openings including both empty openings and openings that contain penetrations.
2. Penetrations through fire-resistance-rated wall assemblies including both empty openings and openings that contain penetrations.
3. Membrane penetrations in fire-resistance-rated wall assemblies where items penetrate one side of the barrier.
4. Joints in fire-resistance-rated assemblies that to allow independent movement.
5. Perimeter of the horizontal fire-resistance rated assembly and exterior wall between a rated floor/roof and an exterior wall assembly that is not fire-resistance rated.
6. Joints, through penetrations and membrane penetrations in Smoke Barriers, Smoke Partitions and those assemblies required to limit, restrict or retard the passage of smoke.

B. Related requirements: Divisions 07 and 09 for all other sealants.

1.2 REFERENCES

A. Comply with applicable requirements of the following standards. Where these standards conflict with other specified requirements, the most restrictive requirement governs.

1. American Society for Testing and Materials (ASTM).

    a. E 84 Test Method for Surface Burning Characteristics of Building Materials
    b. E 119 Test Method for Fire Tests of Building Construction and Materials
    c. E 136 Test Method for Behavior of Materials in a Vertical Tube Furnace at 750F
    d. E 814 Fire Tests of Through-Penetration Fire Stops
    e. E 1399 Cyclic Movement and Measuring Minimum and Maximum Joint Widths
    f. E 1966 Test Method for Resistance of Building Joint
    g. E 2174 Standard Practice for On-Site Inspection of Installed Fire Stops
    h. E 2393 Standard Practice for On-Site Inspection of Installed Fire Stop Joint Systems
    i. E 2307 Standard Test Method for Determining the Fire Endurance of Perimeter Fire Barrier Systems Using the Intermediate-Scale, Multi Story Test Apparatus (ISMA)
    j. E 2837 Standard Test Method for Determining the Fire Resistance of Continuity Head-of-Wall Joint Systems Installed Between Rated Wall Assemblies and Nonrated Horizontal Assemblies.

2. Factory Mutual (FM) Approvals:

    a. FM Approval Standard of Firestop Contractors – Class 4991
    b. FM Firestop Exam
    c. FM Approvals Standard for Firestops – Class 4990

3. Firestop Contractors International Association (FCIA):

    a. MOP – FCIA Firestop Manual of Practice
    b. FCIA Recommended Professional Practice RPP-L-2018-1, for the Identification of Fire-Resistance Rated and Smoke Resistant Penetration and Joint Firestopping
    c. International Accreditation Services: iAS Accreditation Criteria for Special Inspection Agencies AC-291.

4. International Firestop Council (IFC):

    a. Ref. 1 Recommended IFC Guidelines for Evaluating Firestop Engineering Judgments
    b. Ref. 2 Inspectors Field Pocket Guide
    c. Ref. 3 IFC Recommended Guidelines for Performing Destructive Testing for Installed Penetration Firestop Systems, Fire Resistive Joint Systems, or Perimeter Fire Barrier Systems.

5. National Fire Protection Association (NFPA):

    a. NFPA 1 – The Fire Code
    b. NFPA 70 - National Electric Code
    c. NFPA 101 - Life Safety Code
    d. NFPA 221 - Fire Walls and Fire Barriers (preliminary to be released)
    e. NFPA 251 - Fire Tests of Building Construction and Materials

6. Underwriters Laboratories, Inc. (UL):

    a. UL Qualified Firestop Contractor Program
    b. UL Firestop Exam
    c. UL 263 Fire Tests of Building Construction and Materials
    d. UL 723 Surface Burning Characteristics of Building Materials
    e. UL 1479 Fire-Tests of Through-Penetration Fire Stops
    f. UL 2079 Tests for Fire Resistance of Building Joint Systems

1.3 SUBMITTALS

A. Data: Manufacturer Product Data and installation instructions for materials and prefabricated devices.
B. Shop Drawings: Large scale Drawings indicating materials, installation methods, and interfaces with adjoining construction for each penetration firestop system.

    1. Include qualified testing and inspecting agency’s penetration firestop design designation evidencing compliance with requirements for each condition indicated.
    2. Include qualified testing and inspecting agency’s applicable illustrations showing each penetration firestop configuration at every construction assembly penetrated for each type of penetrating item.
    3. Where Project conditions require modification of qualified testing and inspecting agency's tested assembly to suit a particular penetration firestop condition, obtain acceptance of AHJ for the modification prior to submitting Shop Drawings.

C. Test reports: Certified laboratory test report demonstrating the material or combination of materials proposed for use meets the requirements specified in ASTM E 814, are so classified in UL Building Materials Directory and are approved by the AHJ.
D. Certificates: Product certificates signed by firestopping product manufacturers certifying their products comply with specified requirements.

E. Documentation

1. Provide details of installations, with Listed Systems and/or EJ/EFRRA's and locations on Life Safety Drawings for restoring the fire resistance rating or smoke resistant properties where a breach in an assembly occurs for a fire-resistance rated joint, penetration and/or safing slot, perimeter interior fire containment system.
2. Deliver such documentation as a binder, electronic or software application/program to the Architect at the end of construction.
3. Make this information part of the closeout documents.

1.4 QUALITY ASSURANCE

A. Uniformity: Obtain firestopping materials and components from a single manufacturer for each kind of penetration and construction condition indicated. Do not mix manufacturer's materials in the same assembly
B. Compatibility: Provide firestop systems compatible with one another, and with the assemblies into which they are installed.
C. Regulatory requirements: Materials proposed for use shall be approved by the AHJ for their intended use.
D. Installer's qualifications:

1. FM-approved in accordance with FM 4991 – Standard for the Approval of Firestop Contractors, or.
2. UL Qualified Firestop Contractor, and,
3. Firestop Contractors International Association Contractor Member in good standing.
4. Licensed by AHJ, where applicable.
5. Shown to have successfully completed not less than 5 comparable scale projects

E. Special Inspectors credentials: Special Inspectors with experience in the same type and complexity of work inspected. In addition, both with the competence and experience shall be acceptable to the AHJ.
F. Repairs: Provide a narrative that lists materials to be used and clearly explains repairs procedures to maintain the safing capabilities of the assemblies.

PART 2 - PRODUCTS

2.1 HANDLING

A. Store materials to prevent deterioration or damage.

2.2 SYSTEM PERFORMANCE REQUIREMENTS

A. Penetrations: Provide firestop products that when installed to the tested and listed system or engineering judgment (EJ)/equivalent fire-resistance rated assembly (EFRRA) to become firestop systems or EJ/EFRRA's produced to resist the spread of fire, and/or the passage of smoke through breaches, gaps, openings, in fire-resistance-rated and smoke-resistant assemblies according to requirements indicated, including but not limited to the following.

1. Firestop all breaches made in fire-resistance rated assemblies for penetrating items passing through fire-resistance-rated wall and floor assemblies and other locations as indicated on the Drawings.
2. Provide complete penetration firestopping systems tested and approved by a nationally recognized third-party testing agency to the listing and the manufacturers installation instructions.
3. F - Rated Through-Penetration Firestop Systems: Provide through-penetration firestop systems with F ratings indicated, as determined through testing in accordance with ASTM

E 814 or UL 1479, but not less than one hour or the no less than the fire-resistance rating of the construction assembly being penetrated by the penetrating item.

4. T - Rated Through-Penetration Firestop Systems: Provide firestop systems with T (temperature) ratings, in addition to F ratings, as determined per ASTM E 814 or UL 1479, where indicated and required by the applicable Building Code. T-rated assemblies are required where the following conditions exist.

    a. Where firestop systems protect floor penetrations located outside of wall cavities.
    b. Where firestop systems protect floor penetrations located outside fire-resistive shaft enclosures.
    c. Where firestop systems protect penetrations located in fire-resistive construction that have doors required to have a temperature-rise rating.
    d. Where firestop systems protect penetrating items larger than a 4-inch diameter nominal pipe or 16 square inches in overall cross-sectional area.

5. L – Rated Through-Penetration Firestop Systems: Provide firestop systems with Air Leakage (L) ratings, in addition to F and T ratings, as determined in accordance with UL 1479, where indicated.
6. Fire-resistive joint sealants: Provide joint sealants with a fire-resistance rating, determined in compliance with ASTM E 119, equaling or exceeding the fire-resistance rating of the construction penetrated but not less than one hour.

B. For firestopping exposed to view, traffic, moisture, or physical damage: Provide products that will not deteriorate when exposed to these conditions.

1. For plumbing and wet-pipe sprinkler system piping penetrations provide moisture-resistant penetration firestop systems.
2. For floor penetrations with annular spaces exceeding 4 inches or more in any dimension, and for penetrations exposed to possible loading and traffic: Provide penetration firestop system capable of supporting the floor load involved without damage to the firestop system.
3. For penetrations with insulated piping: Provide penetration firestop systems not requiring removal of piping insulation.

C. For firestop exposed to view: Provide products with a flame-spread rating of than 25 or less and a smoke-developed value of 450 or less, as determined in compliance with ASTM E 84.

2.3 MANUFACTURERS

A. Provide materials from one or a combination of the following, as selected by the installer, depending on the condition of use:

1. 3M Fire Protection Products.
2. Graber Construction Products.
3. Hilti Construction Chemicals, Inc.
4. STI Firestop.
5. Specified Technologies, Inc.
6. Tremco Inc.
7. Emseal Joint Systems Ltd.
8. Rectorseal/CSW Industrials

2.4 MATERIALS

A. Ceramic-fiber and mastic coating: Ceramic fibers in bulk form formulated for use with mastic coating, and ceramic fiber manufacturer's mastic coating.
B. Ceramic-fiber sealant: Single-component formulation of ceramic fibers and inorganic binders.
C. Endothermic, latex compound sealant: Single-component, endothermic, latex formulation.

D. Intumescent, latex sealant: Single-component, intumescent, latex formulation.
E. Intumescent putty: Non-hardening, dielectric, water-resistant putty containing no solvents, inorganic fibers, or silicone compounds.
F. Intumescent wrap strips: Single-component, elastomeric sheet with aluminum foil on one side.
G. Job-mixed vinyl compound: Prepackaged vinyl-based powder product for mixing with water at the Project site to produce a paintable compound, passing ASTM E 136, with flame-spread and smoke-developed ratings of zero per ASTM E 84.
H. Mortar: Prepackaged dry mix composed of a blend of inorganic binders, fillers, and lightweight aggregate formulated for mixing with water at the Project site to form a non-shrinking, homogenous mortar.
I. Pillows/bags: Re-usable, heat-expanding pillows/bags composed of glass-fiber cloth cases filled with a combination of mineral-fiber, water-insoluble expansion agents and fire-retardant additives.
J. Silicone foam: 2-component, silicone-based liquid elastomer that, when mixed, expands and cures in place to produce a flexible, non-shrinking foam.
K. Silicone sealant: Moisture-curing, single-component, silicone-based, neutral-curing elastomeric sealant.
L. Solvent-release-curing intumescent sealant: Solvent release curing, single-component, synthetic polymer based sealant.
M. Color: Where firestopping/firesafing material is exposed to view, provide material color selected by the Architect from the manufacturer's palette, unless the material will be field painted.

2.5 ACCESSORIES

A. Provide accessories as required to install fill materials and complying with the system description above.

1. General: As specified by the firestopping manufacturer and approved by the qualified testing and inspecting agency for the designated fire-resistive assembly.
2. Permanent forming/damming/backing materials:

a. Semi-refractory fiber (mineral wool) insulation.
b. Ceramic fiber.
c. Sealants used in combination with other forming/damming materials to prevent leakage of fill materials in liquid state.
d. Fire-rated form board.
e. Joint fillers for joint sealants.

3. Temporary forming materials:

a. Substrate primers.
b. Collars.
c. Steel sleeves.

2.6 MIXING

A. For products that require field mixing prior to application, comply with firestopping manufacturer's directions.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions under which penetration firestop systems will be installed.
B. Verify that surfaces to be in contact with firestopping materials are clean of dirt, grease, oil, loose materials, rust, and other substances that may affect proper fitting or the required fire resistance.

C. Correct detrimental conditions before proceeding with installation.

3.2 INSTALLATION

A. General: Install materials in conformance with their manufacturer's instructions and to comply with UL Fire Resistance Directory.
B. Surface cleaning: Clean openings and joints immediately prior to installing firestopping in accordance with the recommendations of firestopping manufacturer and the following:

1. Remove foreign materials from surfaces of opening and joint substrates and from penetrating items that could interfere with adhesion of firestopping materials.
2. Clean opening and joint substrates and penetrating items to produce clean, sound surfaces capable of developing optimum bond with firestopping. Remove loose particles remaining from cleaning operation.
3. Remove laitance and form release agents from concrete.

C. Priming: Prime substrates where recommended by the firestopping manufacturer using that manufacturer's recommended products and methods. Confine primers to areas of bond; do not allow spillage and migration onto exposed surfaces.
D. Masking tape:

1. Use masking tape to prevent firestopping from contacting adjoining surfaces that will remain exposed and that would otherwise be permanently stained or damaged by such contact or by cleaning methods used to remove smears from firestopping materials.
2. Remove tape as soon as it is possible to do so without disturbing firestopping's seal with substrates.

3.3 PENETRATION FIRESTOP SYSTEMS

A. Forming/damming materials and accessories:

1. Install as required to support fill materials during their application to produce the cross-sectional shapes and depths required to achieve fire ratings of firestop systems.
2. After installing fill materials, remove combustible forming materials and other accessories not indicated as permanent components of firestop systems.

B. Install fill materials for penetration firestop systems to produce the following results:

1. Completely fill voids and cavities formed by openings, forming materials, accessories, and penetrating items.
2. Apply materials so they contact and adhere to substrates formed by openings and penetrating items.
3. For fill materials that will remain exposed after completing Work, finish to produce smooth, uniform surfaces that are flush with adjoining finishes.

3.4 FIRE-RESISTIVE JOINT SEALANTS

A. Install joint fillers to provide support of sealants during application, produce the cross sectional shapes and depths of installed sealants for optimum sealant movement capability, and develop fire-resistance rating required.
B. Install sealants so they will directly contact and fully wet joint substrates. Completely fill recesses provided for each joint configuration, and provide uniform, cross- sectional shapes and depths relative to joint width. Install sealants at the same time joint fillers are installed.
C. Tool non-sag sealants immediately after sealant application and before skinning or curing begins; form smooth, uniform beads. Eliminate air pockets to ensure contact and adhesion of sealants with sides of joint.

1. Remove excess sealant from surfaces adjacent to joint.

2. Do not use tooling agents that will discolor sealants or adjacent surfaces, or that are not approved by the sealant manufacturer.

3.5 FIELD QUALITY CONTROL

A. Examine penetration firestop systems to ensure proper installation prior to concealing or enclosing firesafed and firestopped areas.
B. Repair damaged areas and restore the integrity of the assembly.
C. Keep areas of work accessible until inspection and approval by applicable authorities having jurisdiction.

3.6 CLEANING

A. Cleanup spills of liquid components.
B. Cut and trim excess materials neatly, flush with adjacent surfaces.

3.7 ON SITE FIRESTOP IDENTIFICATION SYSTEMS:

A. Wall and floor identification system, shall be permanent, affixed, labels made that self-destruct upon removal, consisting of paper, metal or ceramic fiber materials, or hanging tags in accordance with CBC 703.7 and FCIA Recommended Professional Practice RPP-L-2018-1, for the Identification of Fire-Resistance Rated and Smoke Resistant Penetration and Joint Firestopping. The firestop system identification device shall be located within 6” of the firestop system edge, each side of the wall, accessible side of horizontal assemblies, in or out of view. Firestop identification systems shall be installed as each firestop system is completed. Firestop Identification system shall have the following minimum information:

1. The words – “Warning - Firestop System – Do Not Remove or Tamper”
2. UL or other laboratory tested and listed system number.
3. Date of Installation.
4. Installing subcontractor Company name, contact information.
5. Manufacturer Company Name
6. Installing Individual Identifier
7. Fire Resistance Rated Assembly Markings
8. Provide identification for all vertical fire resistance rated and smoke resistant assemblies.

    a. Identification markings: Adhesive tamper evident stickers, stencil painted with lettering at least 3 inches high with a minimum 3/8-inch stroke in contrasting color.
    b. Marking to incorporate the assembly’s fire-resistance rating and the type of assembly that the wall is. Examples below are from the IBC and NFPA:

        1) Fire Barrier – DO NOT BREACH - PROTECT ALL OPENINGS.
        2) Smoke Barrier – DO NOT BREACH - PROTECT ALL OPENINGS.
        3) Fire Wall – DO NOT BREACH - PROTECT ALL OPENINGS.
        4) Fire Partition – DO NOT BREACH - PROTECT ALL OPENINGS.
        5) Smoke Partition – DO NOT BREACH - PROTECT ALL OPENINGS.

END OF SECTION

SECTION 07 92 00 - JOINT SEALERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes requirements pertaining to all sealants required for the Project (except as specified below and becomes an integral part of all Sections containing references to this Section, as well as all locations where sealants are indicated on the Drawings and required to make the building weathertight.

B. Section also includes sealants for interior joints in vertical applications, where required to close gap between different materials (paintable and non-paintable), and horizontal traffic surfaces as follows:

1. Control and expansion joints on exposed interior surfaces of exterior walls.
2. Perimeter joints of exterior openings.
3. Joints between tops of non-load-bearing unit masonry walls and underside of cast-in-place concrete slabs and beams.
4. Tile control and expansion joints.
5. Vertical control joints on exposed surfaces of interior unit masonry and concrete walls and partitions.
6. Joints on underside of precast concrete beams and planks.
7. Perimeter joints between interior wall surfaces and frames of interior doors, windows, and elevator entrances.
8. Perimeter joints of toilet fixtures.
9. Other joints indicated.

C. In addition, the work of this Section also includes air sealing to supplement and provide continuity of main and primary air barrier assemblies, including sealing and/or filling perimeter of door and window openings, crevices, gaps, cracks in walls, roof/wall connections, mechanical and electrical penetrations in walls, floors, roofs, exterior glazed assemblies mullions, beams, columns enclosures and similar locations with foam to provide air barrier integrity and a permanent barrier against air infiltration and loss.

D. Section includes:

1. Exterior joints in vertical surfaces and non-traffic horizontal surfaces as indicated below:

   a. Control and expansion joints in cast-in-place concrete.
   b. Control and expansion joints in unit masonry.
   c. Control and expansion joints in Portland cement plaster.
   d. Joints between different materials listed above.
   e. Perimeter joints between materials listed above and frames of doors and glazed assemblies.
   f. Control and expansion joints in ceiling and overhead surfaces.
   g. Other joints as indicated and required to make the building weathertight.

2. Exterior joints in horizontal traffic surfaces as indicated below:

   a. Control, expansion, and isolation joints in cast-in-place concrete slabs.
   b. Tile control and expansion joints.
   c. Joints between different materials listed above.
   d. Other joints as indicated and required to make the building weathertight.

3. Interior joints in vertical surfaces and horizontal non-traffic surfaces as indicated below:

a. Control and expansion joints on exposed interior surfaces of exterior walls.
b. Perimeter joints of exterior openings where indicated.
c. Joints between tops of non-load-bearing unit masonry walls and underside of cast-in-place concrete slabs and beams.
d. Tile control and expansion joints.
e. Vertical control joints on exposed surfaces of interior unit masonry and concrete walls and partitions.
f. Perimeter joints between interior wall surfaces and frames of interior doors, windows, and elevator entrances.
g. Perimeter joints of toilet fixtures.
h. Other joints as indicated.

4. Interior joints in horizontal traffic surfaces as indicated below:

a. Control and expansion joints in cast-in-place concrete slabs.
b. Control and expansion joints in tile flooring.
c. Other joints as indicated.

E. Related requirements:

1. Division 03 for preformed compressible expansion joint fillers for concrete slabs.
2. Division 07 for firestopping sealants.
3. Division 08 for storefronts and glazing sealants.
4. Division 09 for acoustical sealants.
5. Division 23 for duct sealants.

1.2 ADMINISTRATIVE REQUIREMENTS

A. Scheduling and sequencing:
B. Pre-installation meeting:

1. Prior to start of installation of exterior vertical sealants, arrange a pre-installation meeting between the sealant manufacturer authorized representative, the Contractor, the installer , and the Architect to review conditions of surfaces to be sealed, as well as other conditions that would affect the quality of this work, the Drawings and Specifications, and the sealant manufacturer’s data.
2. If more than one trade will be responsible for the successful performance of the work of this Section, these trades shall attend the meeting.
3. Review all typical and atypical details to verify the method of sealing joints that the Contractor will follow, as well as corrective actions that are required.
4. Special conditions not specifically referenced or addressed by the Project Drawings, manufacturer’s typical details, or the Shop Drawings, shall also be identified, reviewed and discussed.
5. Take photographs and notes of unresolved conditions, if any, along with sketches of the same unresolved conditions so that a determination can be made of actions to be taken to assure an installation that will be acceptable, watertight and acceptable to the sealant material manufacturer for issuance of the warranty.
6. Record meeting minutes and distribute PDF copy to all concerned, and the Architect, within 48 hours after the meeting.

1.3 DEFINITIONS

A. Substrates:

1. M type substrates: Concrete, concrete masonry units, brick, mortar, natural stone. The term "masonry" means brick, stone, and concrete masonry work.
2. G type substrates: Glass and transparent plastic glazing sheets.
3. A type substrates: Metals, porcelain, glazed tile, and smooth plastics.
4. O type substrates: Wood, unglazed tile; substrates not included under other categories.

1.4 SUBMITTALS

A. Data:

1. Manufacturer Product Data and published instructions for each type of sealant, backing, bond breaker, and other accessory materials, together with statement that the proposed materials comply with these Specifications.
2. Include manufacturers' recommendations for surface preparation and priming for all substrates to be in contact with sealant on the Project.

B. Certification: Sealant manufacturer certification that sealants, backing rods, and other materials proposed for use in the application of sealants, are chemically compatible with the materials which will come in contact with the sealants and will not cause deterioration, premature aging and staining of adjacent materials, or the sealants.

C. Test results: Results of adhesion and staining tests performed on same materials as those intended for use on the Project.

D. Samples: Cured Samples of the various types and colors of materials proposed for use, approximately 12 inches long, mounted on hardboard backing.

1.5 QUALITY ASSURANCE

A. Uniformity: All sealants used in or on the exterior walls of the building(**s**) shall be made by the same manufacturer.

B. Installer qualifications: Firm with a minimum 5 years of experience with joint sealant applications similar in material, design, and extent to that indicated for Project that have resulted in construction with a record of successful in-service performance.

C. Color selection:

1. Final color selection of sealants to be used for exterior locations will be made by the Architect from job-applied Samples on in-place materials.
2. The Architect will select locations and extent of these Samples, but their lengths will not exceed 10 feet for vertical and horizontal joints of each sealant color.

D. Quality control by sealant manufacturer:

1. Submit statements on the manufacturer's letterhead, dated no earlier than one year prior to submittal, for tests listed below.
2. Test data more than a year old will be acceptable provided manufacturer states that formulations or manufacturing methods have not changed sufficiently to change test results.
3. Submit Samples of materials to be used for the Project to the manufacturer as required for tests.

4. Test methods: The following ASTM standards methods apply to sealants to be provided for the Project.

    a. C 794: Sealant compatibility and adhesion to each substrate to be encountered on the Project.
    b. Compliance with C 920 for elastomeric sealants. Include test results for hardness, stain resistance, adhesion and cohesion under cyclic movement (ASTM C 719), low temperature flexibility, modulus of elasticity at 100 percent strain, effects of heat aging, and effects of accelerated weathering.
    c. C 1087: Sealant compatibility with backing.
    d. C 1087: Sealant compatibility and lack of adhesion to bond breaker.
    e. C 1184: Structural Glazing Specifications.
    f. C 1193: Guide for Use of Sealants.
    g. C 1247: Durability of sealants exposed to continuous water immersion.
    h. C 1248: Stain Test Method.
    i. C 1401: Guide for Structural Glazing.
    j. C 1472: Guide for Calculating Joint Movement.

5. Include identification of any special substrate cleaning process and required adhesion promoter or primer.

E. Preconstruction field testing: Prior to installation of joint sealants, field-test their adhesion to joint substrates as follows.

1. Locate test joints where indicated or, if not indicated, as directed by Architect.

    a. Each type of elastomeric sealant and joint substrate for exterior joints only.
    b. Each type of non-elastomeric sealant and joint substrate indicated.

2. Notify Architect one week in advance of the dates and times when mockups will be erected.
3. Arrange for tests to take place with joint sealant manufacturer's technical representative present.
4. Test method: Test joint sealants by hand pull method described below:

    a. Install joint sealants in 5-foot joint lengths using same materials and methods for joint preparation and joint sealant installation required for completed Work. Allow sealants to cure fully before testing.
    b. Make knife cuts horizontally from one side of joint to the other followed by 2 vertical cuts approximately 2 inches long at side of joint and meeting horizontal cut at top of 2-inch cuts. Place a mark one-inch from top of 2-inch piece.
    c. Use fingers to grasp a 2-inch piece of sealant just above one-inch mark; pull firmly down at a 90-degree angle or more while holding a ruler along side of sealant. Pull sealant out of joint to the distance recommended by sealant manufacturer for testing adhesive capability, but not less than that equaling specified maximum movement capability in extension; hold this position for 10 seconds.

5. Report whether or not sealant in joint connected to pulled-out portion failed to adhere to joint substrates or tore cohesively. Include data on pull distance used to test each type of product and joint substrate.
6. Evaluation of field test results: Sealants not evidencing adhesive failure from testing, in absence of other indications of non-compliance with requirements, will be considered satisfactory. Do not use sealants that fail to adhere to joint substrates during testing.

1.6 HANDLING

A. Store sealant containers in a protected location in compliance with their manufacturer's instructions until their use. Do not store at temperature higher than 80-degree F.

1.7 JOB CONDITIONS

A. Do not install sealants under adverse weather conditions, or when temperatures are beyond manufacturer's recommended limits.
B. Proceed with the installation only when forecasted weather conditions are favorable for proper sealant cure and development of early bond strength.

1.8 WARRANTY

A. Warrant sealants against defective materials and workmanship for the following length of time after Substantial completion:

1. Manufacturer:

a. Exterior vertical sealant: Manufacturer’s 20-year weatherseal warranty, including non-staining warranty for Dowsil 795 and 756 SMS.
b. All other exterior locations: Manufacturer’s 5 years weatherseal warranty.

2. Installer: 5 years labor and material warranty.

B. Warranty shall further state that installed sealants are warranted against the following:

1. Water leakage through exterior sealed joints.
2. Adhesive or cohesive failure of sealant.
3. Staining of adjacent surfaces caused by migration of sealants or primer.
4. Chalking or visible color change of the cured sealants.

C. Make repairs during the 5-year warranty period at no cost to the Owner.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. Exterior joint sealants are required to establish and maintain airtight and waterproof continuous seals on a permanent basis, with recognized limitations of wear and aging as indicated for each application.
B. Sealant VOC limits shall conform to Table 5.504.4.2.of CALGreen, current edition.

2.2 MANUFACTURER/TYPE - SEALANTS

A. Colors: Match sealant color to color of adjacent materials as closely as possible using colors selected from the manufacturer's standard palette, as approved by the Architect.
B. General:

1. Do not mix multiple component materials until required for use.
2. Use materials “as received” from manufacturer, without additions, deletions and adulterations of materials.
3. Do not use sealants that have started to cure and those whose shelf life expired.

C. Compatibility: Provide joint sealers, joint fillers and other related materials as follows:

1. That will not cause staining, degradation and premature aging of the adjacent surfaces and the sealant itself, when in contact with these surfaces.
2. Compatible with one another and with joint substrates under conditions of service and application, as demonstrated by sealant manufacturer based on testing and field experience.

D. Bulk sealants:

1. For interior slabs where heavy wheeled traffic will occur: One of the following.

   a. L&M:

      1) “Epoflex” (epoxy).
      2) “Joint Tite” (urea).

   b. Atlas “Epoxy Joint Filler.”
   c. Nox-Crete:

      1) “Dynaflex JF-85.”
      2) “High-Mod 602LD.”
      3) “Nox-Crete “Dynaflex 502.”

   d. VersaFlex, Inc.: SL Series (polyurea) as recommended by the manufacturer after surveying the conditions at the site.

2. For interior and exterior horizontal application subject to pedestrian or vehicular traffic: Single component silicone sealant.

   a. Type and grade: S (single component) SL (self-leveling).
   b. Class: 25.
   c. Use related to exposure: T (traffic).
   d. Uses related to joint substrates: M, A, and, as applicable to joint substrates indicated, O.
   e. Products:

      1) Dowsil; “888”” or “SL Parking Structure Sealant” (basis of design).
      2) Pecora Corp.; “300 SL Pavement Sealant.”
      3) Crafco Inc.; “RoadSaver Silicone SL.”

3. For all other exterior applications, except where stone occurs:

   a. Type and grade: S (single component) and NS (nonsag), neutral- and basic-curing silicone sealant.
   b. Class: 100/50.
   c. Use related to exposure: NT (non-traffic).
   d. Uses related to joint substrates: M, G, A, and, as applicable to joint substrates indicated, O.
   e. Products:

      1) Dowsil “795” (basis of design).
      2) General Electric “Silpruf,” “Silpruf LM,” “Silpruf NB.”
      3) Tremco “Spectrem 1.”

4. For stone joints where sealant will contact stonework (interior and exterior):

   a. Type and grade: S (single component) and NS (nonsag), neutral- and basic-curing silicone sealant.
   b. Class: 100/50.
   c. Use related to exposure: NT (non-traffic).

d. Uses related to joint substrates: M, G, A, and, as applicable to joint substrates indicated, O.
e. Products:

1) Dowsil “756 SMS,” (basis of design).

a) Dowsil “795” may be used if tested on stone prior to final installation and no staining is observed.

2) General Electric “GE SC S9000 SMS.”
3) Tremco “Spectrem 3.”
4) Pecora “895 NST.”

5. For interior damp, wet and semi-wet locations, other than floors, such as toilet rooms where a mildew-resistant sealant is required: Provide white sealant, unless otherwise noted. Single-component mildew-resistant neutral-curing silicone sealant:

a. Type and Grade: S (single component) and NS (nonsag).
b. Class: 25.
c. Use related to exposure: NT (non-traffic).
d. Uses related to joint substrates: M, G, A, and, as applicable to joint substrates indicated, O.
e. Products:

1) Dowsil. “786” basis of design.
2) Pecora Corp. “898.”
3) General Electric Corp. “1700.”

6. For all other interior applications (paintable sealant): Latex sealant complying with ASTM C 834, Type P, Grade NF.

a. Pecora Corp. “AC-20+.”
b. Schnee-Morehead, Inc. “SM 8200.”
c. Sonneborn, Division of ChemRex Inc. “Sonolac.”
d. Tremco “Tremflex 834” or “Acrylic Latex 384.”

7. Acoustical sealant: See Section 09 80 00.

E. Tape sealants: American Saint-Gobain “Norseal 730” or “Norseal 770,” or equal by Pres-On Tape & Gasket Corp. or Schnee-Morehead.

2.3 ACCESSORY MATERIALS

A. Sprayed polyurethane foam sealant: One- or 2-component, foamed-in-place, polyurethane foam sealant, 1.5 to 2.0 pcf density; flame spread index of 25 or less according to ASTM E 162; with primer and noncorrosive substrate cleaner recommended by foam sealant manufacturer.
B. Joint cleaner, primer and sealer: As recommended by the sealant manufacturer, for the surfaces to be cleaned, primed or sealed.
C. Bond breaker tape:

1. Polyethylene or other plastic tape recommended by the sealant manufacturer to prevent 3-sided adhesion where backer rod cannot be used, except for non-moving joints.
2. Use self-adhering tape wherever possible.

D. Backer rod:

1. General: Provide size, density and shape of rod which will control the joint depth for sealant placement, break bond of sealant at bottom of joint, form optimum shape of sealant bead on back, and provide a highly compressible backer to minimize the possibility of sealant extrusion when joint is compressed.
2. Type: ASTM C 1330, of type indicated below:

    a. Type C: Closed-cell material with a surface skin, Nomaco “SOF ROD/Dual Rod,” or equal.
    b. For sealant in vehicular traffic areas, provide solvent-resistant backer rods, Nomaco HBR/Green Rod, or equal.
    c. For fillet and cove joints, Nomaco “HBR” 1/4-inch Round.”

3. Elastomeric tubing sealant backings:

    a. Neoprene, butyl, EPDM, or silicone tubing complying with ASTM D 1056, non-absorbent to water and gas, and capable of remaining resilient at temperatures down to minus 26-degree F.
    b. Provide products with low compression set.

4. In paving subject to traffic: Provide hard joint filler such as cork; prevent 3-sided adhesion by using bond breaker tape.

E. Masking tape: Non-staining, non-absorbent material compatible with joint sealants and surfaces adjacent to joints.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine conditions and measurements affecting the work of this Section at site.
B. Correct detrimental conditions before proceeding with installation.

3.2 JOINT PREPARATION

A. Clean-out joints immediately before installing sealants to comply with recommendations of joint sealant manufacturer and the following.
B. Remove foreign material from joint substrates that could interfere with adhesion of sealant, including dust, paints (except for permanent, protective coatings tested and approved for sealant adhesion and compatibility by sealant manufacturer),oil, grease, waterproofing, water-repellents, water, surface dirt, and frost.
C. Clean concrete, masonry, unglazed surfaces of ceramic tile, and similar porous joint substrate surfaces by brushing, grinding, blast cleaning, mechanical abrading, or a combination of these methods to produce a clean, sound substrate capable of developing optimum bond with joint sealants.

    1. Remove loose particles remaining from above cleaning operations by vacuuming or blowing out joints with oil-free compressed air.

D. Remove laitance and form release agents from concrete.
E. Clean metal, glass glazed surfaces of ceramic tile, and other non-porous surfaces with chemical cleaners or other means that do not stain, harm substrates, or leave residues capable of interfering with adhesion of joint sealants.

F. Do not proceed with sealant installation over surfaces that have been painted, waterproofed or treated with water-repellent or other coating unless specifically approved in writing by the sealant manufacturer.
G. Use masking tape or other protection to limit coverage of sealant to joints to be sealed. Remove tape immediately after tooling without disturbing joint seal.

3.3 INSTALLATION

A. Comply with sealant manufacturer's instructions and ASTM C 1193, except where more stringent requirements are specified herein. At the Architect's option, ASTM C 1193 may also be used for rejection of unacceptable installations.
B. Prime or seal surfaces when recommended by the sealant manufacturer; when the manufacturer's instructions on priming are optional, prime the surface. Do not allow primer/sealer to spill or migrate onto adjacent surfaces.
C. Install backer rod for all sealants, except (1) for exterior sealants subject to traffic (verify that joint filler in paving is installed at the proper depth), (2) where the size of joint prevents the insertion of a backer rod, and (3) where recommended otherwise by the sealant manufacturer.

    1. Install backer rods with blunt or rounded tools to avoid puncturing the material.
    2. Do not twist, stretch or braid the backer rod.

D. Install bond breaker tape where space limitation does not permit use of a backer rod.
E. In no case shall sealant have 3-sided adhesion, except for non-moving joints.
F. Employ only proven installation techniques that will ensure that sealants are installed in uniform, continuous ribbons without gaps or air pockets and with complete "wetting" of the rabbet surfaces equally on opposite sides.

    1. Fill concave joints to the configuration shown on Figure 8A of ASTM C 1193.
    2. Provide flush joints to the configuration shown on Figure 8B of ASTM C 1193.
    3. Provide recessed joints configuration as shown on Figure 8C of ASTM C 1193, unless otherwise indicated or required to match adjacent non-moving joint.
    4. Where horizontal joints occur between horizontal and vertical surfaces, fill joints to form a slight cove to prevent trapping moisture and dirt.
    5. Immediately after sealant application and prior to beginning of skinning or curing, tool sealant using tooling agents that will not discolor sealants or adjacent surfaces and are approved by sealant manufacturer.

G. Do not allow sealant or other compound to overflow, spill or migrate into voids of adjacent construction.
H. Remove excess sealant spillage promptly as this work progresses. Clean adjacent surfaces by recommended means to remove sealant, but not damage the surfaces.

3.4 CURING/PROTECTING

A. Cure sealants in compliance with their manufacturer's instructions to obtain high early bond strength, internal cohesive strength and durability.
B. Protect sealants during and after curing period from contact with contaminating substances or from damage resulting from construction operations or other causes so that they are without deterioration or damage at time of Substantial Completion.

END OF SECTION

DIVISION 08
OPENINGS

SECTION 08 11 13 – HOLLOW METAL DOORS AND FRAMES

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:

1. Flush steel doors.
2. Stile and rail full louvered steel doors.
3. Transom panels.
4. Steel door and window frames, including sidelights and transom panels.
5. Louvers and vision panel frames in steel doors.

B. Work furnished but installed in other Sections: Division 04 for building-in of anchors and grouting of frames in masonry.
C. Work installed but furnished in other Sections: Division 08 for finish hardware.
D. Related requirements:

1. Division 08 for access panels and frames, glazing vision panels in steel doors, and glazing steel windows.
2. Division 09 for finish painting the work of this Section.
3. Division 14 for elevator doors and frames.

1.2 REFERENCES

A. SDI 117, Manufacturing Tolerances Standard Steel Doors and Frames.

1.3 ADMINISTRATIVE REQUIREMENTS

A. Scheduling and sequencing:
B. Pre-installation meeting:

1.4 SUBMITTALS

A. Shop Drawings: Show the following.

1. Door and frame elevations, materials, construction, gage, finish, anchoring for each wall condition, conditions of openings, vision panel and louver sizes and locations, and accessories.
2. Location and size of reinforcement for finish hardware.
3. Locations of field splice joints, including associated details to assure proper assembly at Project site.
4. Identify work that cannot be permanently factory-assembled before shipment.
5. Details of removable stops, and glazing.
6. Details of conduit and preparations for power, signal, and control systems in doors and frames.
7. Use same reference numbers for openings and details as shown on Contract Drawings.

B. Schedule: Door schedule indicating opening identification symbol, door and frame types, sizes, including thickness, swing, label requirements, louvers, vision and transom panels, and undercuts.

C. Samples:

1. Twenty-four-inch square Sample of door illustrating typical head, bottom and jamb conditions, cutouts for hinge, lock/latch and magnetic contact, and vision panel centered in sample.
2. Frames showing profile, welded corner joint, welded hinge reinforcement, dust cover boxes, floor and wall anchors, and silencers. Include panel and louver sections and glazing stops where applicable.

D. Data: Manufacturer or fabricator Product Data for doors, frames and shop primer**,** and louvers.

1.5 QUALITY ASSURANCE

A. Uniformity: Provide all steel doors and frames for the Project made by a single firm, unless otherwise acceptable to the Architect.
B. Regulatory requirements:

1. Fire-rated doors shall be listed by a nationally recognized testing and certification agency acceptable to AHJ. The listed doors shall meet or exceed the requirements of UL10B, NFPA 252 and NFPA 80. Doors shall carry either a UL or ITS (Intertek Testing Services-Warnock Hersey) label.
2. Comply with CBC requirements. Provide tested products that passed, as an assembly, the CBC Standard 7-2 positive pressure smoke testing requirements.
3. Comply with ASTM E 2074, Standard Test Method for Fire Tests of Door Assemblies, Including Positive Pressure on Side-Hinged and Pivoted Swinging Door Assemblies.
4. Doors in exit enclosures shall bear an “S” label.

C. Oversize fire-rated door assemblies: For units exceeding sizes of tested assemblies, provide a label or a certificate of inspection, by a testing agency acceptable to AHJA, that doors comply with standard construction requirements for tested and labeled fire-rated door assemblies except for size.

1.6 HANDLING

A. Procedure: In accordance with SDI recommendations.
B. Packing: Deliver doors and frames cardboard-wrapped or crated to provide protection during transit and job storage. Provide additional protection to prevent damage to finish of factory-finished doors and frames.
C. Delivery:

1. Inspect doors, frames, and accessories delivered to the site for damage. Unload and store, as specified, with a minimum of handling.
2. During delivery, provide temporary steel spreaders securely fastened to the bottom of each frame.
3. Replace doors and frames damaged before installation. Do not install damaged doors and frames.

D. Storage:

1. Store doors and frames carefully under cover. Provide a minimum of 1/2-inch space between doors. Do not stack doors and frames.
2. The storage spaces shall be dry and accessible, adequately ventilated and free from dust or water, and shall permit easy access for inspection and handling.
3. Do not use non-vented plastic or canvas shelters that create a humidity chamber.
4. If doors are shipped with fiberboard wrapper and it becomes wet, remove it immediately.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. One of the following, or equal:

1. Door Components, Inc.
2. CECO.
3. Curries Co.
4. Security Metal Products.
5. Steelcraft Manufacturing Co.
6. Stiles Hollow Metal.

2.2 MATERIALS

A. Cold rolled steel: ASTM A 1008, “Standard Specification for Steel Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy and High-Strength Low-Alloy with Improved Formability” and A 568, “Standard Specification for Steel Sheet, Carbon, and High-Strength, Low-Alloy, Hot-Rolled and Cold-Rolled, General Requirements for.”

B. Hot rolled, pickled and oiled steel: ASTM A 1011, “Standard Specification for Steel Sheet and Strip, Hot-Rolled, Carbon, Structural, High-Strength Low-Alloy and High-Strength Low-Alloy with Improved Formability” and A 568, “Standard Specification for Steel Sheet, Carbon, and High-Strength, Low-Alloy, Hot-Rolled and Cold-Rolled, General Requirements for.”

C. Hot dip zinc coated steel: Alloyed type complying with ASTM A 924, “Standard Specification for General Requirements for Steel Sheet, Metallic-Coated by the Hot-Dip Process” and A 653, “Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.” The coating weight shall meet or exceed the minimum requirements for coatings having 0.4 oz/ft² total both sides, i.e., A40 (ZF120). Comply also with SDI-112 “Zinc-Coated (Galvanized/Galvannealed) Standard Steel Doors and Frames”.

1. When zinc-coated steel is specified for anchors and accessories, and electrolytically deposited zinc coated steel is provided, it shall comply with ASTM A 591, “Standard Specification for Steel Sheet, Electrolytic Zinc-Coated, for Light Coating Weight [Mass] Applications.” The minimum coating weight shall be a class “B”, i.e., 0.075 oz/ft².

    a. Coated steel sheets: ASTM A 653, QC classification, with a G60 or A60 zinc coating, mill-phosphatized.

2. Inserts, bolts and fasteners: Manufacturer standard units, except hot-dip galvanize all items in exterior walls.

D. Paints:

1. Shop primer: Rust-inhibitive enamel or paint, either air-drying or baking, suitable as a base for specified finish paints complying with ANSI A250.10, "Test Procedure and Acceptance Criteria for Prime Painted Steel Surfaces for Steel Doors and Frames", and compatible with finish paint system specified in Section 09 90 00.
2. For touchup of damaged galvanized surfaces: SSPC Paint No. 20, Type II (Organic) zinc -rich primer by Tnemec, Porter International, Valspar Corp., Ameron Protective Coatings or DuPont Co.
3. For back-coating frames: 3M Undercoating Black 08881, or fibrous asphaltic compound.

E. Door filler: In compliance with SDI 250.8, except use UL-listed materials in fire-rated doors.

2.3 FABRICATION - GENERAL

A. Do not begin fabrication until the fabricator has received the hardware schedule approved by the Architect and submitted by the hardware supplier.
B. Fabricate work to required profiles by roll-forming, brake-forming and welding to produce hollow metal work with straight and square edges, with surfaces free from warp, wave, buckle, oil-canning and other defects.
C. Fabricate without grind marks, hollow or other out-of-plane areas, holes, burned-out spots, weld build-up and other defacing work. Fill to close cracks and to preserve shapes. Tightly fit loose stops, to hairline joints.
D. Comply with SDI 250.8 and SDI 117, Manufacturing Tolerances Standard Steel Doors and Frames, except for the following:

    1. 0.005-inch in 3-inch span anywhere on the exposed surfaces. Fill depressions with Bondo or other automotive type filler. Sand bumps down, flush with adjacent surfaces.

E. Conform to AWS standards for welding. Face weld frames with exposed welds ground flush and smooth with parent metal. Welded joints shall be invisible after assembly is painted.
F. Fabricate doors, frames and sidelights at the following locations from coated steel; garage, assemblies in exterior walls, toilet rooms and shower rooms. Elsewhere, fabricate doors and frames from coated or uncoated steel.
G. Finish hardware preparation:

    1. Prepare doors to receive finish hardware, including cutouts, reinforcement as specified below, mortising, drilling, and tapping in compliance with templates provided by hardware supplier.
    2. Reinforce doors to receive hardware; provide internal reinforcement of sufficient size to avoid the use of through bolts that are not permitted. Drilling and tapping for surface-applied hardware may be done at Project site.
    3. Provide 16-gage (0.053-inch) stainless steel reinforcement for pull plates and bars. Provide internal reinforcement for closers on all door frames. Thru bolts (Chicago fasteners) are not permitted.
    4. Locate finish hardware as accepted on final Shop Drawings.

H. Except on weatherstripped frames, drill stops to receive 3 silencers on strike jambs of single-door frames and 2 silencers on heads of double-door frames. Surface-applied (adhesively-applied) stops are not allowed.
I. Provide minimum 26-gage (0.0179-inch) steel plaster guards or mortar boxes at back of hardware cutouts where mortar or other materials might obstruct hardware operation and to close off interior of openings.
J. Steel members shall be pre-straightened, free of wind or twist. Factory-align to a diagonal tolerance of plus or minus 1/16-inch.

2.4 FLUSH DOORS

A. Standards: Comply with the following, except as specified. Note that the following applies to swinging doors; for sliding doors, assemble and finish the doors same as the swinging doors, except that the doors shall comply with Level 3 (Extra Heavy Duty, Performance Level A).

    1. SDI 250.8, Specifications for Standard Steel Doors and Frames (SDI-100).
    2. SDI 117, Manufacturing Tolerances for Standard Steel Doors and Frames.
    3. SDI 118, Basic Fire Door, Fire Door Frame, Transom/Sidelight Frame, and Window Frame Requirements.

B. Steel doors:

1. SDI Level 2 and Physical Performance Level 2 and Physical Performance level B (Heavy Duty), Model 2 (Seamless), 18-gage (0.042-inch) for doors up to 3-foot wide, and Level 3 and Level 3 Extra Heavy Duty, Performance Level A, model 2 (Seamless), 16-gage (0.053-inch) for doors wider than 3 feet Provide doors with seamless welded edges ground to be invisible from adjacent surfaces; do not use Bondo or similar material to close gap between face sheets at door edge.
2. Close the top and bottom of doors with an inverted flush channel, minimum thickness of 0.042-inch thick.
3. Close openings for vision panels and louvers with an inverted flush channel, minimum thickness of 0.042-inch thick.
4. Insulate exterior doors to provide a U factor of 0.24 BTU/hr. by square foot by degree F when tested in compliance with ASTM C 236.

2.5 STILE AND RAIL LOUVERED DOORS

A. Standard: Complying with SDI 250.8, Recommended Specifications Standard Steel Doors and Frames, Level 3 (Extra Heavy Duty, Performance Level A), except as specified.
B. Stiles and rails:

1. Minimum 16[14]-gage galvanized steel.
2. Miter or butt door corners.
3. Internally-reinforce joints, then weld and grind smooth so that joints are invisible after painting.
4. Intermediate rails shall be butted and internally welded to door stiles.
5. Hardware reinforcements shall be specified in table 4 of table 5 of SDI 250.8.

C. Louver blades:

1. Not less than 18-gage galvanized steel sheet formed into stationary; weatherproof Zee shaped blades and U-shaped frames, not less than 1-3/8-inch thick.
2. Space louver blades not more than 1-1/2-inch o.c.
3. Assemble by welding continuously all joints and grinding welds so they will be invisible when the door is painted.
4. Provide removable insect screens on interior side of frame, consisting of 14 by 18 aluminum wire mesh in rigid, formed metal frame.

2.6 FRAMES

A. General:

1. Fabricate frames to the dimensions and profiles indicated in compliance with SDI 250.8, Specifications for Standard Steel Doors and Frames (SDI-100), except as noted.
2. Reinforce and miter corners, interlock and/or weld internally. Weld faces continuously and grind smooth.

B. Stand alone door frames: Fabricate with coped or mitered, fully welded corners of steel 2-gage heavier than door face in same opening, minimum 16-gage (0.053-inch), corners reinforced, mitered, interlocked and/or welded, and visible joints continuously welded and ground smooth; non-welded joints visible in the finish work are not permitted.
C. Integral windows, glazed transom panels, and sidelights frames: For door frames with integral sidelights and transom panels, fabricate of same gage as the door frame.
D. Stand alone window frames: Fabricate of 18-gage (0.042-inch) steel.

E. Windows and glazed sidelights and transom panels: Provide integrally-formed glass stops on security side of glazed assemblies, and removable glass stops on opposite side.

1. Size rabbet to fit glass thickness indicated.
2. Miter glass stop corners; square, butt joints are unacceptable.
3. Attach removable glass stops securely with countersunk oval head machine screws spaced equally and symmetrically at not more than 12 inches o.c. and 2 inches from corners.

F. Mullions and transom bars:

1. Closed or tubular mullions and transom bars where indicated.
2. Join mullions and transom bars at crossings and to jambs by butt-welding.
3. Reinforce joints between frame members with concealed clip angles or sleeves of same metal and thickness as frame.
4. Provide false head member to receive lower ceiling where frames extend to finish ceilings of different heights.

2.7 DOOR LOUVERS

A. V, Y or Z shaped louver blades formed of 18-gage (0.042-inch) sheet steel welded to surrounding frame set flush with both sides of doors, by Air Louvers, Inc., Airolite Co., Anemostat Products Div/Dynamics Corp. of America, or Ventilouver Co. Provide same shape louver blade (V, Y or Z) throughout the Project.
B. When installed in fire-rated doors provide UL labeled, spring-actuated louver blades activated by a fusible link, or Zero International “Advantage Intumescent AI” louvers.

2.8 VISION PANELS IN DOORS

A. Make cutouts for vision panels square and parallel with door edges.
B. Provide integrally-formed glass stops on security side of doors and removable glass stops on opposite side.

1. Size rabbet to fit glass thickness indicated.
2. Miter glass stop corners; square, butt joints are unacceptable.
3. Attach removable glass stops securely in place with countersunk oval head machine screws spaced equally at not more than 12 inches o.c. and 2 inches from corners.

2.9 WINDOWS AND SIDELIGHT FRAMES

A. Fabricate as specified for door frames.

2.10 FLUSH TRANSOM PANELS

A. Clearly mark door and associated transom panel to assist in installation.
B. Fabricate as specified for door in same opening, except for hardware blocking and preparation.
C. No visible fasteners allowed when panel is in place.

2.11 SHOP PRIMING

A. After assembly, clean and prepare steel surfaces by removing mill scale, rust, oil, grease, dirt, and other foreign materials before painting. For coated steel, comply with ASTM D 2092 and the primer manufacturer’s instructions.

1. Grind welds and fabrication marks flush and smooth with parent metal.
2. Fill depressions with metal filler before applying the shop primer.

3. Apply one or more coats of epoxy mineral filler to conceal spot welds.
4. Where zinc coating is damaged, touchup with zinc-rich primer.

B. Acid-etch galvanized surfaces before pretreating.
C. Apply shop primer, within time limits recommended by pretreatment manufacturer, to provide a smooth coat of even consistency and to produce a dry film thickness of not less than 1-1/2 mils.
D. Assemblies with visible spot welds before or after application of finish paint will be unacceptable.

2.12 BACK COATING FRAMES

A. For frames installed in concrete and CMU openings, and frames in contact with plaster, factory-coat surfaces that will be concealed after installation with the back-coating material specified applied in a uniform thickness, without holidays.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine adjacent construction and supports.
B. Verify that openings are within allowable tolerances, plumb, level, clean, and will provide a solid anchoring surface for frames.
C. Correct detrimental conditions before proceeding with installation.

3.2 INSTALLING FRAMES

A. Set frames accurately in their scheduled locations, plumb, straight, square and rigid.

1. Comply with these Specifications, the Drawings; ANSI/SDI A250.11, Recommended Erection Instructions for Steel Frames, the approved Shop Drawings and UL tested procedures and NFPA 80 for fire-rated openings. When in conflict, the most restrictive provision applies.
2. Brace frames to prevent their displacement during erection of adjacent walls.
3. Coordinate the installation of built-in anchors for wall and partition construction with related trades. Refer to Division 04 for frames in CMU walls.
4. Provide 2 anchors at head of frames exceeding 42 inches in width for frames mounted in steel stud walls.
5. Provide 3/8-inch by 2-inch vertical steel struts extending from top of frame at each jamb to supporting construction above, unless frame is anchored to masonry, continuous boxed studs, or to other structural support at each jamb.

    a. Bend top of struts to provide flush contact for securing to supporting construction above.
    b. Provide adjustable wedged or bolted anchorage to frame jamb members in compliance with UL 63.

B. Frame anchors: 18-gage (0.0478-inch) galvanized steel.

1. CMU construction: Adjustable, flat, corrugated, or perforated, Tee-shaped to suit frame size, with leg not less than 2 inches wide by 10 inches long. Provide at least 3 anchors per jamb up to 7 feet high; 4 anchors up to 8 feet height; one additional anchor for each 24 inches or fraction thereof over 8-foot high.
2. Stud partitions: Insert “nail-on” type with notched clip to engage stud, welded to back of frames. Provide at least 4 anchors for each jamb for frames up to 90 inches high; 5 anchors up to 96 inches high; one additional anchor each 24 inches or fraction thereof

over 96 inches. Attach jamb anchors to studs with a minimum of four 3/8-inch diameter self-tapping screws or bolts (2 per side).

3. In-place concrete or CMU: Anchor frame jambs with minimum 3/8-inch concealed bolts into expansion shields or inserts at 6 inches from top and bottom and 26 inches o.c., unless otherwise shown. Reinforce frames at anchor locations. Except for fire-rated openings, apply removable stop to cover anchor bolts unless otherwise indicated.

C. Provide UL-tested adjustable floor clips for all frames. Anchor clips to floor with powder-driven pins or bolts in expansion shields.
D. Leave frame spreader bars intact, wherever possible, until frames are set perfectly square and plumb and all anchors are securely attached and grouted where required.
E. Installation tolerances: Adjust door frames for squareness, alignment, twist, and plumb to the following tolerances:

1. Squareness: Plus or minus 1/16-inch, measured at door rabbet on a line 90 degrees from jamb perpendicular to frame head.
2. Alignment: Plus or minus 1/16-inch, measured at jambs on a horizontal line parallel to plane of wall.
3. Twist: Plus or minus 1/16-inch, measured at opposite face corners of jambs on parallel lines, and perpendicular to plane of wall.
4. Plumbness: Plus or minus 1/16-inch, measured at jambs at floor.

3.3 HANGING DOORS

A. Install finish hardware in compliance with its manufacturer's templates and instructions.
B. Hang doors in compliance with their manufacturer's instructions, and adjust to the clearances specified in SDI 250.8, except as specified below, as indicated on the Drawings, or as required by UL listing and NFPA 80 for fire-rated doors.
C. Do not install doors warped, bowed, dented or otherwise damaged.
D. Adjust hardware so that doors operate freely for their entire travel, but not loosely, without sticking or hinge binding, with hardware adjusted and functioning properly.
E. Fit doors accurately in frames, within clearances specified below. Shim as necessary.

1. Non-fire-rated standard steel doors:

a. Jambs and head: 1/8-inch plus or minus 1/16-inch.
b. Between edges of pairs of doors: 1/8-inch plus or minus 1/16-inch.
c. Between bottom of door and top of threshold: Maximum 3/8-inch.
d. Between bottom of door and top of finish floor (no threshold): Maximum 3/4-inch.

2. Fire-rated doors: Install doors with clearances as required by UL listing and complying with NFPA 80.
3. Smoke-control doors: Install doors according to NFPA 105.

F. Glazing:

1. Comply with installation requirements in Section 08 80 00 and with standard steel door and frame manufacturer's instructions.
2. Secure stops with countersunk flat- or oval-head machine screws spaced equally and symmetrically not more than 8 inches o.c., and not more than 2 inches from each corner.

3.4 TOUCHUP

A. Clean damaged primer, sand smooth, re-clean and spot-prime with paint compatible with the primer and the scheduled finish coats.

B. Before application of primer, touchup galvanized surfaces with zinc-rich coating where zinc coating is removed or damaged.

END OF SECTION

SECTION 08 14 16 - FLUSH WOOD DOORS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:

1. Flush wood doors.
2. Louvers and vision panel frames in wood doors.

B. Work installed but furnished in other Sections: Division 08 for finish hardware.
C. Related requirements:

1. Section 09 90 00 for finish painting wood doors schedule to receive an opaque finish.

1.2 SUBMITTALS

A. Shop Drawings:

1. Door schedule indicating opening identifying number, door type, grade, size, thickness, swing, label requirements, and undercuts.
2. Door elevations indicating hand of each door, and type of construction
3. Prefitting and premachining requirements, including dimensions and locations of mortises and holes for hardware.
4. Rating for fire-rated doors.
5. Use same reference numbers for openings and details as Contract Drawings.

B. Data: Manufacturer Product Data for the finish system.
C. Certificate: Manufacturer’s certificate showing door compliance with these Specifications and the AWI.
D. Warranty: Warranty form from the door manufacturer.

1.3 QUALITY ASSURANCE

A. Regulatory requirements:

1. Fire rated doors shall be listed by a nationally recognized testing and certification agency acceptable to authorities having jurisdiction. The listed doors shall meet or exceed the requirements of UL10B, NFPA 252 and NFPA 80. Doors requiring fire-rating shall carry either a UL or ITS (Intertek Testing Services-Warnock Hersey) label.
2. Comply with CBC requirements. Provide tested products that have passed as an assembly in compliance with CBC Standard 7-2 positive pressure smoke testing requirements.
3. Comply with ASTM E 2074, Standard Test Method for Fire Tests of Door Assemblies, Including Positive Pressure on Side-Hinged and Pivoted Swinging Door Assemblies.

B. Uniformity: the same manufacturer shall make all flush wood doors for the Project.

1.4 HANDLING

A. Procedure: In accordance with WI Bulletin No. 416-R and Recommended Handling and Finishing Instructions for Wood Fire Doors.
B. Marking: Mark each door on top and bottom rail with opening number used on Shop Drawings.

C. Delivery:

1. Deliver prefinished doors factory-wrapped in polyethylene bags, unitized and palletized. Shrink-wrap each pallet and provide corner guards for protection.
2. Mark each door with architectural opening number in distribution and installation.
3. Do not deliver doors to the Project until proper storage space is available.

D. Storage:

1. Store doors in an assigned space having controlled temperature and humidity as recommended by WI.
2. Store doors flat on factory pallets.
3. Protect doors from construction activity and store away from direct sunlight.

E. Handling:

1. Handle doors with clean hands, except that doors to receive a transparent finish shall be handled with clean white gloves.
2. Do not drag doors across one another.
3. When provided, maintain factory packaging or other means of protection of doors until Substantial Completion.

1.5 JOB CONDITIONS

A. Do not deliver or install doors until conditions for temperature and relative humidity have been stabilized and will be maintained in storage and installation areas during remainder of construction period.
B. Comply with referenced WI quality standard including Technical Bulletin 419 for moisture content and relative humidity.

1.6 WARRANTY

A. Special warranty:

1. Furnish to the Owner the door manufacturer written warranty against doors delaminating, telegraphing core through face veneer and against non-conformance with tolerance limitations of referenced quality standards for life of the installation 5 years after installation.
2. Include reinstallation that may be required due to repair or replacement of defective doors, during the warranty period, when defect was not apparent prior to hanging.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. One of the following, or equal:

1. Eggers Industries.
2. Marshfield-Algoma Door Systems by Masonite Architectural.
3. Haley Brothers, Inc.
4. VT Industries.
5. Western Oregon Doors.
6. Or equal.

2.2 DOORS

A. Flush wood doors - general: The following complying with AWS “Heavy Duty” “Extra Heavy Duty” classification.

B. Non-rated doors:

1. Grade: Premium.

2. Wood veneer for doors scheduled to receive a transparent finish:

a. Specie: TBD.
b. Face veneer grade:
c. “A” Grade.
d. Face veneer match: Bookmatch.
e. Face veneer assembly: Center balance.

3. Face veneer for doors scheduled to receive an opaque finish:

a. Medium density overlay (**MDO**).
b. Close grained Maple, Birch or other close-grain hardwood; no horizontal joints.

C. Labeled, flush, fire-rated doors complying with Code as follows. Provide concealed (built-in blockings) for all hardware; thru bolting (Chicago fasteners) are not acceptable.

1. Model: FD *.

2. Grade: Premium.
3. Face: As scheduled and specified for non-rated doors above.
4. Fire seals: Category A
5. Rating: As scheduled.

2.3 FACTORY-MACHINING/FINISHING

A. Factory-machine doors by manufacturer or qualified distributor for cutouts, hinges, louvers, vision panels, locks and all hardware requiring routing or mortising.

1. When machining labeled doors comply with UL 10C and use caution to avoid voiding the manufacturer warranty.
2. Refer to Article 3.2 below for door clearances.

B. Prepare doors to receive finish hardware as follows:

1. Pilot drill screw and bolt holes.
2. Rout-out hinge locations.
3. Bore accurately for locks and latches.
4. Locate hardware where indicated on the Drawings as specified for steel doors in Section 08 11 13.

C. Factory-finish doors scheduled to receive a transparent finish to match Architect’s control sample. Comply with WDMA TR-6 or OP-6 Catalyzed Polyurethane.

D. Factory-finish all faces and edges of doors to receive an opaque finish. Use painting system equivalent to WI North America Architectural Woodwork Standards section 5, Custom Grade System 2 “Water Reducible Acrylic Lacquer.

EXECUTION

2.4 EXAMINATION

A. Examine frames, adjacent construction and supports.
B. Verify that openings are within allowable tolerances, plumb, level, clean, will provide a solid anchoring surface.
C. Correct detrimental conditions before proceeding with installation.

2.5 INSTALLING FINISH HARDWARE/HANGING DOORS

A. Install finish hardware in compliance with its manufacturer's instructions and the requirements of Section 08 71 00. Fit accurately to doors.
B. Condition doors to average prevailing humidity in installation area prior to hanging.
C. Factory-fit doors to suit frame opening sizes indicated, with uniform clearances and bevels. Comply with clearance requirements of referenced quality standard for fitting. Comply with requirements in NFPA 80 for labeled doors.

1. Trim non-fire rated doors by cutting equally at both edges
2. Trim door height by cutting bottom edge, maximum 3/4-inch; trim fire rated doors at bottom edges only, in accordance with fire rating requirements

D. Hang doors to operate freely for their entire travel, but not loosely, without sticking or hinge binding, with all hardware adjusted and functioning properly.

2.6 REPLACING DAMAGED DOORS

A. Replace doors showing chips, scratches, unbonded face veneers, glue stains, excessive warp or other damage that cannot be satisfactorily repaired, as determined by the Architect, with acceptable doors.

END OF SECTION

SECTION 08 32 13 - ALUMINUM-FRAMED SLIDING GLASS DOORS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:

1. Sliding glass doors complete with hardware.
2. Glass and glazing for the work of this Section.

B. Related requirements: All other exterior glass assemblies and door hardware.

1.2 SUBMITTALS

A. Data: Manufacturer Product Data for doors, including the following.

1. Construction details and fabrication methods.
2. Profiles and dimensions of individual components.
3. Data on hardware, accessories, and finishes.
4. Energy Model Submissions

    a. Provide a copy of the project ENV-1 form.
    b. Provide evidence that the proposed products can meet or exceed the energy values listed on the ENV-1 form. Preferred method is an NFRC site certificate, but a simulation report by an independent NFRC certified simulator will be considered. AAMA test reports and or simulations will not be accepted as they are not allowed under the current code.
    c. Provide a statement of who will be the “responsible party” in issuing the NFRC site certificates.

B. Shop Drawings: Large scale dimensioned Drawings: Include information not fully detailed in manufacturer's standard Product Data and the following.

1. Layout and installation details, including anchors.
2. Elevations of units at 3/4-inch scale.
3. Full-size section details of typical composite members, including reinforcement.
4. Hardware, including operators.
5. Glazing details.
6. Accessories.

C. Samples: 12-inch long sections of door frame with specified finish. Where finish involves normal color variations, include sample sets showing the full range of variations expected.

D. Certification:

1. Certification by a recognized independent testing laboratory or agency showing that each type, grade, and size of unit complies with performance requirements indicated.
2. Where reports are not available, engage a recognized independent testing laboratory or agency to perform tests specified. Provide certified test results showing that unit complies with performance requirements indicated.

E. Closeout: Recommendations for maintenance and cleaning of surfaces.

1.3 QUALITY ASSURANCE

A. Installer qualifications: Firm who has completed installation of sliding glass doors similar in design and extent to those required for the Project and whose work has resulted in construction with a record of successful in-service performance.
B. Standards: Requirements for doors, terminology and standards of performance, and fabrication workmanship are those specified and recommended in AAMA 101 and applicable general recommendations published by AAMA.
C. Single source responsibility: Provide all sliding aluminum doors from one source and produced by a single manufacturer.

1.4 HANDLING

A. Transport, store and handle assemblies to prevent damage. Store off the floor in a protected location.

PART 2 - PRODUCTS

2.1 MANUFACTURER/TYPE

A. Design is based on the following:

1. Arcadia, Inc. ULT5920 thermal, Multi-Sliding Doors (basis of design).

B. Acceptable manufacturers: Provide either the product identified as "Basis of Design" or an equivalent product of another manufacturer

1. For any product not identified as "Basis of Design", submit information as specified for substitutions.
2. Substitution may or may not be accepted after Architect and District review with complete evaluation for content and schedule impact.
3. Substitutions shall include all costs for redesign with consequential changes by other trades along with the Architect and related approvals by governing agencies.

a. Revision to shop drawings illustrating changes is not considered adequate for DSA review and approval.

4. Substitutions may be acceptable, based on Architect's review and approval, for submittal to DSA.

a. If substituted manufacturer cannot reproduce design and DSA approval in a timely manner, then they shall be subject to a time and material back charge for any delays in the project.
b. Architect approval is required prior to DSA submittal and DSA approval is required prior to installation.

2.2 PERFORMANCE REQUIREMENTS

A. General: Provide doors that comply with performance requirements specified, as demonstrated by testing manufacturer's corresponding stock systems according to test methods indicated.
B. Design requirements:

1. Comply with structural performance, air infiltration, and water penetration requirements indicated in AAMA 101 SGD-R15.
2. Comply with Code for design wind velocity at the Project site as indicated.

2.3 MATERIALS

A. Windows & doors fabricated from aluminum extrusions of 6063-T5 alloy and temper with a minimum wall thickness of 0.090" for the door frame sill member and a minimum of 0.072" for all other members including frame, panel and optional horizontal muntins. The aluminum shall be free of defects which impair strength and appearance.
B. Component parts and accessories shall be of aluminum alloy, stainless steel or non-metallic materials which will neither deteriorate nor promote corrosion.
C. Thermal break barrier shall provide a continuous uninterrupted thermal separation around the entire perimeter of the panel only which shall consist of a two-part, chemically curing, high-strength urethane.
D. Sill shall have a full-length nylon track cap.
E. Panel members shall have a minimum of 5/8" glass penetration into the aluminum.
F. Operable panel shall be equipped with two adjustable steel tandem ball bearing rollers (all stainless-steel tandem rollers and housings optional).
G. Locking device Adams-Rite maximum security lock MS+1850 with stainless steel hook bolt standard. Multi-slider doors & windows including all pocket windows can be supplied with locking flush pulls and an Adams-Rite MS+1847 stainless steel mortise lock-optional.
H. Operating panels shall have an extruded 3/4" diameter - 8" O.C. aluminum wire pull handle set in either clear or black architect finish - other colors available.
I. Operating panels shall contain a bottom rail vinyl sweep.
J. Horizontal members shall have two contact points incorporating silicone treated woven pile with mylar center fins. All vertical members shall have four contact points of silicone treated woven pile with mylar center fins. All shall be held in integral extruded slots and secured to prevent movement or loss while operating sash.
K. Fixed and/or sliding panels shall be constructed to allow for either factory or field glazing. Panel glazing shall be accomplished using a "marine" style reusable, wraparound black flexible PVC or EPDM material per commercial standard CS23060 without the need for separate glazing beads or putty style bedding compounds. The glazing channel shall be provided with the unit for either 1" insulating glass or 3/16" or 1/4" single glazing.
L. All assembly and installation screws shall be 18-8 or 410 stainless steel.
M. Fasteners: Aluminum, non-magnetic stainless steel, epoxy adhesive, or other materials warranted by the manufacturer to be non-corrosive and compatible with aluminum members, trim, hardware, anchors, and other components of units.

    1. Reinforcement: Where fasteners screw-anchor into aluminum less than 0.125-inch thick, reinforce the interior with aluminum or non-magnetic stainless steel to receive screw threads, or provide standard non-corrosive pressed-in splined grommet nuts.
    2. Exposed fasteners: Except where unavoidable for application of hardware, do not use exposed fasteners. For the application of hardware, use fasteners that match the finish of member or hardware being fastened.

        a. Provide Phillips flat-head machine screws for exposed fasteners.

N. Anchors, clips, and accessories: Fabricate of aluminum, non-magnetic stainless steel, hot-dip zinc-coated steel or iron, complying with the requirements of ASTM B 633; provide sufficient strength to withstand design pressure indicated.
O. Compression weatherstripping: Manufacturer's standard replaceable compressible weatherstripping gaskets of molded neoprene complying with ASTM D 2000 or molded PVC complying with ASTM D 2287.
P. Sliding weatherstripping: Manufacturer's standard replaceable weatherstripping of wool, polypropylene, or nylon woven pile, with nylon fabric or aluminum strip backing, complying with AAMA 701.2.
Q. Glass and glazing materials: As indicated and specified in Section 08 80 00.

R. Sealants and back-up rods:

1. Within assemblies: Manufacturer's standard non-drying, non-skinning sealant complying with AAMA 809.2.
2. Between assemblies and adjacent materials: As specified in Section 07 92 00.
3. Glazing sealants: Refer to Section 08 80 00.

S. Glazing gaskets: Manufacturer standard black gaskets.
T. Hardware: Manufacturer standard hardware fabricated from aluminum, stainless steel, or other corrosion-resistant material compatible with aluminum and of sufficient strength to perform the function for which it is intended.

2.4 FABRICATION

A. Primary frame must be a minimum of 2" deep per panel required.
B. Frame sections interlock together to form any number of repetitious sections, each capable of accommodating a panel.
C. Each frame corner joint shall be secured with two stainless steel screws.
D. Profile of the fixed jamb and the latching jamb shall include two weather-stripped pockets to receive the fixed and latching stiles.
E. Fixed and sliding panels shall have a nominal 1-1/2" depth and shall have overlapped joints of the mortise type to provide extra strength and interlocking mechanically fastened hairline joints.
F. Interlocks and latching stiles shall be heavy gauge tubular sections assuring precise alignment and to resist twisting under load conditions.
G. Glazing: Factory-glaze doors. Comply with glass manufacturer's recommendations and requirements of Section 08 80 00.

2.5 FINISH:

A. PPG Duranar® 70% PVDF Solid Extrusion Coatings in accordance with AAMA 2605.

1. Color: See Drawings.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine adjacent construction and supports.
B. Verify that openings are within allowable tolerances, plumb, level, clean, will provide a solid anchoring surface.
C. Correct detrimental conditions before proceeding with installation.

3.2 INSTALLATION

A. Install in accordance with approved shop drawings and manufacturers installation instructions.
B. Do not install components that are bowed, dented, abraded, broken or otherwise defective.
C. Install doors level, plumb, square and with tight fitting joints. Attach to supporting construction with non-staining and non-corrosive shims, anchors, fasteners and spacers.
D. Install sills in a full bed of sealant.
E. Separate aluminum and other corrodible surfaces from sources of corrosion or electrolytic action at points of contact with other materials by complying with the requirements specified under "Dissimilar Materials" in the Appendix to AAMA 101.
F. Provide all accessories such as fasteners, sealants and concealed anchorage needed for a complete, weatherproof installation.

3.3 ADJUSTING

A. Adjust operating panels, and hardware to provide a tight fit at contact points and weatherstripping for smooth operation and weathertight closure.
B. Weatherstrips shall not bind or prevent sash or ventilator from closing easily and tight with weathertight contact between metal.
C. Lubricate hardware and moving parts.

3.4 FIELD QUALITY CONTROL & CLEANING

A. Clean aluminum surfaces immediately after installing sliding aluminum-framed glass doors. Avoid damaging finish.
B. Remove protective coating and excess glazing and sealants, dirt, and other substances.
C. Clean glass immediately after installing doors. Comply with manufacturer's recommendations for final cleaning and maintenance. Remove nonpermanent labels from glass surfaces.
D. Remove and replace glass broken, chipped, cracked, abraded, or damaged during the construction period.

END OF SECTION

SECTION 08 33 23 - OVERHEAD COILING DOORS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes power-operated coiling doors complete with Pass door, hardware, operators and accessories.
B. Work installed but furnished in other Sections: Division 08 for lock cylinders.
C. Related requirements:

1. Division 09 for finish painting doors.
2. Division 26 for power and disconnect switch for door motors, and conduits between motors and controls.
3. Division 28 for security system.

1.2 ADMINISTRATIVE REQUIREMENTS

A. Pre-installation meeting:

1.3 SUBMITTALS

A. Data: Manufacturer Product Data, including specifications, roughing-in diagrams, and installation instructions.
B. Shop Drawings:

1. For special components and installation conditions not fully dimensioned or detailed on manufacturer's data sheets.
2. Show attachment details to support and interface with adjacent construction.

C. Wiring diagrams: Detail wiring for power, signal, and control systems. Differentiate between manufacturer-installed and field-installed wiring and between components provided by door manufacturer and those provided by other trades.
D. Samples: 12-inch long Samples of slat.
E. Installer’s certificates: Signed by manufacturer certifying that installer complies with specified requirements.
F. Closeout submittals: Operating and maintenance instructions for the door.

1.4 QUALITY ASSURANCE

A. Installer qualifications: Manufacturer authorized representative trained and approved for both installation and maintenance of units required for this Project.
B. Source limitations:

1. Obtain overhead coiling doors through one source from a single manufacturer.
2. Obtain operators and controls from overhead coiling door manufacturer.

C. Fire-test-response characteristics: Provide assemblies complying with NFPA 80 that are identical to door and frame assemblies tested for fire-test-response characteristics per UL 10b and NFPA 252, and that are listed and labeled for fire ratings indicated by UL, FMG, ITS, or another testing and inspecting agency acceptable to authorities having jurisdiction.
D. Oversize fire-rated door assemblies: For units exceeding sizes of tested assemblies, provide certification by a testing agency acceptable to authorities having jurisdiction that doors comply

with all standard construction requirements of tested and labeled fire-rated door assemblies except for size.

E. Electrical components, devices, and accessories: Listed and labeled as defined in NFPA 70, Article 100.

1.5 WARRANTY

A. Warranty: Manufacturer's limited door and operator system, except the counterbalance spring and finish, to be free from defects in materials and workmanship for 3 years or 20,000 cycles, whichever occurs first.
B. PowderGuard Finish
   1. PowderGuard Max: Applied to curtain, guides, bottom bar, headplates: Manufacturer's limited Max Finish warranty for 5 years.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Model 625 Rolling Steel Service Doors by the Overhead Door Corp. (basis of design).
B. Cornell/Cookson
C. Pacific Rolling Door Co.
D. Lawrence Doors.

2.2 PERFORMANCE REQUIREMENTS

A. Wind load: Design, engineer and fabricate doors to safely support a wind load of 20 psf without failure, and with a maximum deflection on curtain and guides of L/240 of span.
B. Operation-cycle requirements: Design overhead coiling door components and operator for a useful life of 10,000 cycles, at a minimum of 10 operations per day and a speed of not less than 2/3 fpm.
C. Motor size: Adequate to open or close the door from any position in its travel at a speed of 2/3 fpm.

2.3 INSULATED ROLLING SERVICE DOORS

A. Stormtite Insulated Rolling Service Doors: Overhead Door Corporation Model 625.
   1. Curtain: Interlocking roll-formed slats as specified following. Endlocks shall be attached to each end of alternate slats to prevent lateral movement.
      a. Flat profile type F-265i for doors up to 40 feet (12.19 m) wide.
      b. Front slat fabricated of 20 gauge galvanized steel.
   2. Performance:
      a. Through Curtain Sound Rating: Sound Rating: STC-28 (STC-30+ with HZ noise generator) as per ASTM E 90.
      b. Installed System Sound Rating: STC-21 as per ASTM E 90.
      c. U-factor: 0.91 NFRC test report, maximum U-factor of no higher than 1.00.
      d. Air Infiltration: Meets ASHRAE 90.1 & IECC 2012/2015 C402.4.3 Air leakage <1.00 cfm/ft2.

3. Slats and Hood Finish and exposed parts:

    a. Galvanized Steel: Slats and hood galvanized in accordance with ASTM A 653 and receive rust-inhibitive, roll coating process, including 0.2 mils 08330-6 thick baked-on prime paint, and 0.6 mils thick baked-on polyester top coat.
    b. Topcoat: PowderGuard Max.

2.4 MATERIALS

A. Basic materials:

1. Sheet steel: ASTM A 653, Grade 33, galvanized.
2. Structural shapes and plates: ASTM A 36.

B. Component materials:

1. Endlocks and windlocks: Heavy malleable iron castings.
2. Hood:

    a. Galvanized steel, nominal 0.028-inch thick, hot-dip galvanized steel sheet with G90 (Z275) zinc coating, complying with ASTM A 653.
    b. Include automatic drop baffle on fire-rated doors to guard against passage of smoke or flame.

3. Barrel: Steel pipe.
4. Brackets: Cold-formed galvanized steel plates or hot-rolled sections.
5. Smoke seals: Equip each fire-rated door with smoke-seal perimeter gaskets for smoke and draft control as required for door listing and labeling by a qualified testing agency.
6. Weatherseals: Equip exterior door with weather-stripping gaskets fitted to entire perimeter of door for a weathertight installation.

    a. At door head, use 1/8-inch- thick, replaceable, continuous sheet secured to inside of hood.
    b. At door jambs, use replaceable, adjustable, continuous, flexible, 1/8-inch- thick seals of flexible vinyl, rubber, or neoprene.

2.5 FABRICATION

A. Curtain:

1. Provide with endlocks securely attached to both ends of alternate slats with a minimum of 2 galvanized rivets.
2. Use windlocks where required to meet design criteria.
3. Reinforce bottom slat with 2 steel angles and provide angled closure plate where required to affect a weathertight closure at sloping surfaces.

B. Guides:

1. Three continuous steel angles bolted together to form a groove for the curtain and extended above door opening to support coil brackets.
2. Top of each guide shall be flared to facilitate entry of curtain and provided with removable stops.

C. Brackets: Manufacturer standard design, with bellmouth guide groove for curtain.
D. Gears:

1. Cast iron with teeth cast from machine cut patterns.

2. The pinion gears shall not be less than 3-inch pitch diameter.
3. Gear ratio shall be designed for a maximum manual effort of 30 lb.

E. Barrel:

1. Not less than 4-inch diameter steel tubing designed to limit maximum deflection, when fully loaded with door in the retracted position, to 0.03-inch/ft.
2. Oil-tempered torsion springs capable of correctly counterbalancing weight of curtain and adjustable by an exterior wheel.

F. Hood: Formed to fit the curvature of the brackets and attached securely thereto. Roll and reinforce top and bottom edges. Brace to limit deflection to 0.25-inch.

2.6 OPERATION

A. Motorized operation: Door shall be electrically operated, driven by an integral power unit enclosed in NEMA 1 housing. Components shall be as follows.

1. Gear reducer; belt or chain drives are not acceptable.
2. Enclosed emergency hand-chain operator and electrical device.
3. Motor: High torque, totally enclosed with thermal protective device, UL listed.
4. Disc brake.
5. Geared limit switch.
6. Magnetic reversing contactor encased in power unit and prewired as required by legal requirements.
7. Motor and brake removable without affecting chain operator or limit switch setting. Power unit connected to operating shaft to raise and lower door not less than 1/2-foot per second.

    a. Equip motor with an endless cadmium-plated steel hand chain for emergency operation when the power is off. Design chain hoist with a self-locking mechanism to allow curtain to be stopped at any point in its travel, and to remain in position until movement is reactivated.

8. Flush-mounted control station, unless otherwise indicated, key-operated "OPEN" and "CLOSE," NEMA 3R enclosure, with stop button.
9. Electrical leads between motor, brake, interlock and limit switch factory prewired.
10. Pass Door(s): Hinged frame with lockset.
11. Pass Door(s): Swinging-door and frame assembly constructed integrally with the coiling-door assembly[and bearing the same fire rating]. Comply with the accessibility standard of authorities having jurisdiction.

    a. Door Frame and Integral Jamb Guide: Fabricate of angles or channels and angles of same material and finish as curtain slats unless otherwise indicated, with sufficient depth and strength to retain curtain, to allow curtain to operate smoothly, and to withstand loading.
    b. Hinged Frame: Hinged pass door and frame that swings out of the way, as a unit, to allow use of the full coiling-door opening width. One jamb of the pass-door frame is hinged and the other jamb includes a guide for the lower, narrower part of the coiling-door curtain.
    c. Locking Hardware: As specified in Section 08 71 00 "Door Hardware".
    d. Thresholds: Equip pass doors with integral thresholds that comply with the accessibility standard of authorities having jurisdiction.

12. Except as otherwise indicated on Drawings, required by electrical power source (junction box) locations, or required for obstruction clearances, locate motor operators on the right side of door assembly when viewed from the "interior" side.

B. Automatic closing operation:

1. Equip fire-rated door assemblies with manufacturer's standard, UL or FM listed, electronically controlled, automatic door release (closing) device with delay feature. Provide with governor to limit closing speed to not more than 24 inches/second.

    a. Replaceable fusible links with temperature rise and melting point of 165 deg F; interconnected and mounted on both sides of door opening.

2. Provide a time-delay device, equivalent to Cookson Co. "Firefly" to prevent closing due to momentary interruption of the electrical current.
3. Provide ADA-compliant audible/visible warning device for fire release closure.

C. Safety device:

1. Provide safety edge to automatically reverse the door if the device detects an obstruction in the downward travel of the door.
2. The system shall operate with airwave technology and shall not rely on pneumatic pressure or electrical strip contacts to operate properly, and shall not be subject to interference by temperature, barometric pressure, water infiltration or cuts in the rubber boot.
3. Connecting electrical cable attached to the sensor is not acceptable.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine adjacent construction and supports.
B. Verify that opening is within allowable tolerances, plumb, level, clean, will provide solid anchoring surfaces.
C. Correct detrimental conditions before proceeding with installation.

3.2 INSTALLATION

A. Install doors and their operating equipment in compliance with the door manufacturer's instructions, plumb, in true alignment, free of springing, forcing, racking or distortion.
B. Provide necessary hardware, jamb and head mold stops, anchors, inserts, hanger, equipment supports, and other accessories required for a complete installation.
C. Attach door guide assembly to walls with galvanized bolts (in expansion shields for masonry walls) for a rigid installation of the door curtain and operating equipment. Place anchor bolts to be concealed from exterior when doors are closed.

3.3 TOUCHUP

A. Touchup damaged shop primer by cleaning and sanding the damaged area and applying the same paint as that used for shop painting.

3.4 FIELD QUALITY CONTROL/DEMONSTRATION

A. Touchup: Touchup damaged finish to match adjacent undamaged surfaces, when the results are satisfactory to the Architect, otherwise return the damaged component to the shop for refinishing.

B. Demonstration: Engage a factory-authorized service representative to perform startup services and to train Owner’s maintenance personnel as specified below:

1. Startup:

    a. Test and adjust controls and safeties.
    b. Replace damaged and malfunctioning controls and equipment.
    c. Test door closing when activated by detector or alarm connected fire-release system. Reset door-closing mechanism after successful test.

2. Training:

    a. Schedule training with the Owner with at least 7 days' advance notice.
    b. Train Owner’s maintenance personnel on procedures and schedules related to startup and shutdown, troubleshooting, servicing, preventive maintenance, and procedures for testing and resetting release devices.
    c. Review data in the maintenance manuals.

END OF SECTION

SECTION 08 41 23 - FIRE RATED GLASS AND FRAMING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Fire rated window and framing systems for installation as windows in interior openings.

1.2 DEFINITIONS

A. Manufacturer: A firm that produces primary glass, fabricated glass or framing as defined in referenced glazing publications.

1.3 SUBMITTALS

A. Product Data:

1. Technical Information: Submit latest edition of manufacturer's product data providing product descriptions, technical data, Underwriters Laboratories, Inc. listings and installation instructions.

B. Shop Drawings:

1. Include plans, elevations and details of product showing component dimensions; framed opening requirements, dimensions, tolerances, and attachment to structure

C. Samples: For following products:

1. Glass sample-as provided by manufacturer
2. Sample of frame
3. Verification of sample of selected finish.

D. Warranties: Submit manufacturer's warranty.

E. Certificates of compliance from glass and glazing materials manufacturers attesting that glass and glazing materials furnished for project comply with requirements.

1. Separate certification will not be required for glazing materials bearing manufacturer's permanent label designating type and thickness of glass, provided labels represent a quality control program involving a recognized certification agency or independent testing laboratory acceptable to authority having jurisdiction.

1.4 QUALITY ASSURANCE

A. Testing Agency Qualifications: Qualified according to

1. International Accreditation Service for a Type A Third-Party Inspection Body (Field Services ICC-ES Third-Party Inspections Standard Operating Procedures, 00-BL-S0400 and S0401)
2. International Accreditation Service for Testing Body-Building Materials and Systems
    a. Fire Testing
        1) ASTM Standard E 119
        2) CPSC Standard 16 CFR 1201
        3) NFPA Standards 251, 252, 257
        4) UL Standards 9, 10B, 10C, 1784, UL Subject 63
        5) BS 476; Part 22: 1987
        6) EN 1634-1

B. Installer Qualifications: An experienced installer who has completed glazing similar in material, design, and extent to that indicated for Project and whose work has resulted in construction with a record of successful in-service performance.

C. Source Limitations for Glazing Accessories: Obtain framing system, glazing and glazing accessories from one source for each product and installation method indicated.

D. Fire-Rated Window Assemblies: Assemblies complying with NFPA 80 that are classified and labeled by UL, for fire ratings indicated, based on testing according to NFPA 257. Assemblies must be factory-welded or come complete with factory-installed mechanical joints and must not require job site fabrication.

E. Listings and Labels - Fire Rated Assemblies: Under current follow-up service by Underwriters Laboratories® maintaining a current listing or certification. Label assemblies' accordance with limits of manufacturer's listing.

1.5 DELIVERY, STORAGE AND HANDLING

A. Deliver, store and handle under provisions specified by manufacturer.

1.6 PROJECT CONDITIONS

A. Obtain field measurements prior to fabrication of frame units. If field measurements will not be available in a timely manner coordinate planned measurements with the work of other sections.

1. Note whether field or planned dimensions were used in the creation of the shop drawings.

B. Coordinate the work of this section with others effected including but not limited to: other interior and/or exterior envelope components and door hardware beyond that provided by this section

1.7 WARRANTY

A. Provide the Fireframes® Designer Series standard five-year manufacturer warranty.

PART 2 - PRODUCTS

2.1 MANUFACTURERS - FIRE RATED WINDOW

A. Glass Material: Pilkington Pyrostop® fire-rated glazing as fabricated and distributed by Technical Glass Products, 8107 Bracken Place SE, Snoqualmie, WA 98065 phone (800.426.0279) fax (425.396.8300) e-mail sales@fireglass.com, web site http://www.fireglass.com.

B. Frame System: "Fireframes® Designer Series by TGP" fire-rated steel frame system as manufactured and supplied by Technical Glass Products, 8107 Bracken Place SE, Snoqualmie, WA 98065 phone (800.426.0279) fax (425.396.8300) e-mail sales@fireglass.com web site http://www.fireglass.com.

C. Substitutions: Substitutions for Glazing Material and Frame System not permitted.

2.2 PERFORMANCE REQUIREMENTS

A. Fire Rating Requirements

1. Duration-- Window Assembly: Capable of providing a fire rating for 60 minutes.

B. Design Requirements:

1. Dimensions -- Window Assembly:

a. Perimeter framing face dimension: 2 3/4-inch at head, sill and jamb.
b. Horizontal and/or vertical mullions: 3 9/16-inch on the face.
c. Depth of perimeter and mullion: 1 15/16-inch.

C. Structural Performance

1. Member deflection: Limit deflection of the edge of the glass normal to the plane of the glass to flexure limit of glass of any framing member
2. Accommodate movement between storefront and adjoining systems

D. Air infiltration: Provide systems that allow a maximum air leakage through fixed glazed openings of 0.06 cfm/sq. ft. of area when tested per ASTM E 283 at a static air differential of 1.57 lbf/sq ft

2.3 MATERIALS - GLASS

A. Fire Rated Glazing: ASTM C 1036 and ASTM C 1048; composed of laminated glass with intumescent interlayers glazing material.

B. Thickness of Glazing Material:

1. 7/8-inch Pilkington Pyrostop® Optiwhite.

C. Approximate Visible Transmission: Varies with thickness (approximate range 88 percent).

D. Logo: Each piece of fire-rated glazing shall be labeled with a permanent logo including name of product, manufacturer, testing laboratory (UL® only), fire rating period, safety glazing standards, and date of manufacture.

E. Performance: Glass must be rated to stop fire from either direction and must meet all testing requirements including the required hose-stream test (where fire-rating exceeds 20 minutes).

2.4 MATERIALS – STEEL FRAMES

A. Steel Framing System including 60-minute rated windows.

1. Frame: Steel profiled formed tubing.
2. Fasteners: As recommended by manufacturer
3. Glazing Accessories: calcium silicate setting blocks.
4. Glazing Compounds:

a. Pilkington Pyrostop®: Approved, Fibrefrax, or pure silicone sealant.

1) When glazed with Pilkington Pyrostop (60-90 minutes) glazing products, doors meet the maximum transmitted temperature rise of not more than 450 degrees Fahrenheit (250 degrees Celsius) at the end of 30 minutes of the standard fire test exposure.

2.5 Fabrication

A. Furnish frame assemblies pre-welded.

1. When necessary, splice frames too large for shop fabrication or shipping or to fit in available building openings.
2. Fit with suitable fasteners.
3. Knock-down frames are not permitted

B. Furnish interior welded frame assemblies.

1. When necessary, splice frames too large for shop fabrication or shipping or to fit in available building openings.

2. Fit with suitable fasteners.

C. Field glaze window and frame assemblies.

D. Fabrication Dimensions: Fabricate to fire-rated field dimensions.

E. Obtain approved shop drawings prior to fabrication.

2.6 FINISHES, GENERAL

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Finish frames after assembly.

C. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable. Noticeable variations in the same piece are not acceptable.

2.7 POWDERCOAT FINISHES

A. Finish after fabrication.

B. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces are acceptable. Noticeable variations in the same piece are not acceptable.

C. Interior Steel Finishes.

1. Powder-Coat Finish: Polyester Super Durable powder coating which meets AAMA 2604 for chalking and fading. Apply manufacturer's standard powder coating finish system applied to factory-assembled frames before shipping, complying with manufacturer's recommended instructions for surface preparation including pretreatment, application, and minimum dry film thickness.
2. Color and Gloss: Match Architect's sample.
3. Acceptable Manufacturers:

a. Tiger Drylac
b. Additional manufacturers as approved by TGP

2.8 ACCESSORY MATERIALS

A. Bituminous Paint: Cold-applied, asphalt-mastic paint complying with SSPC-Paint 12 requirements except containing no asbestos; formulated for 30-mil thickness per coat.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and members to which the work of this section attaches or adjoins prior to frame installation.

B. Provide openings plumb, square and within allowable tolerances.

1. Provide 3/8 inch shim space at all walls

C. Notify Architect of any conditions which jeopardize the integrity of the proposed fire wall / door system.

D. Do not proceed until such conditions are corrected.

3.2 INSTALLATION

A. See Fireframes Designer Series Installation Manual

3.3 REPAIR AND TOUCH UP

A. Limited to minor repair of small scratches. Use only manufacturer's recommended products.

1. Such repairs shall match original finish for quality or material and view.

B. Remove and replace glass that is broken, chipped, cracked, abraded, or damaged.

3.4 ADJUSTING

A. Adjust door function and hardware for smooth operation. Coordinate with other hardware suppliers for function and use of any other attached hardware.

3.5 PROTECTION AND CLEANING

A. Protect glass from damage immediately after installation by attaching crossed streamers to framing held away from glass. Do not apply markers to glass surface. Remove nonpermanent labels, and clean surfaces.

1. Do not clean with astringent cleaners. Use a clean "grit free" cloth and a small amount of mild soap and water or mild detergent.
2. Do not use any of the following:

a. Steam jets.
b. Abrasives.
c. Strong acidic or alkaline detergents, or surface-reactive agents.
d. Detergents not recommended in writing by the manufacturer.
e. Do not use any detergent above 77 degrees F.
f. Organic solvents including but not limited to those containing ester, ketones, alcohols, aromatic compounds, glycol ether, or halogenated hydrocarbons.
g. Metal or hard parts of cleaning equipment must not touch the glass surface.

B. Protect glass from contact with contaminating substances resulting from construction operations, including weld splatter. If, despite such protection, contaminating substances do come into contact with glass, remove them immediately as recommended by glass manufacturer.

C. Wash glass on both exposed surfaces in each area of Project not more than four days before date scheduled for inspections that establish date of Substantial Completion. Wash glass as recommended by glass manufacturer.

END OF SECTION

SECTION 08 43 13 - ALUMINUM-FRAMED STOREFRONTS AND ENTRANCES

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:

1. Storefront framing.
2. Aluminum-framed glass doors.
3. Mullion covers, subframes, reinforcement and anchors, and sealants for the work of this Section.
4. Supplementary parts and components, such as inserts, clips, fasteners, anchors, bracing and other miscellaneous supports required for a complete, weatherproof installation.

B. Work installed but furnished in other Sections:

1. Division 08 for finish hardware on doors.

C. Related work:

1. Division 08 for glazing requirements for the work of this Section.

1.2 ADMINISTRATE REQUIREMENTS

A. Structural and Energy design of the system has already been used as a basis of approval by Division of the State Architect and other agencies. If a substitution is proposed, then the Contractor is responsible for the re-approval of the documents in a timely manner within the original project schedule, along with all professional and agency fees related to this substitution. See Section 01 60 00 - Product Requirements.

1.3 PREINSTALLATION MEETINGS

A. Preinstallation Conference: Conduct conference at Project site.

1.4 SUBMITTALS

A. Data: For each type of product.

1. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.
2. Energy Model Submissions

a. Provide a copy of the project ENV-1 form.
b. Provide evidence that the proposed products can meet or exceed the energy values listed on the ENV-1 form. Preferred method is an NFRC site certificate, but a simulation report by an independent NFRC certified simulator will be considered. AAMA test reports and or simulations will not be accepted as they are not allowed under the current code.
c. Provide a statement of who will be the “responsible party” in issuing the NFRC site certificates.

B. Shop drawings:

1. Large scale dimensioned shop and erection drawings for the work of this Section showing the following:

a. Elevations.
b. Detail sections of typical composite members.
c. Hardware mounting heights.

d. Hardware schedule and indicate operating hardware types, quantities, and locations.
e. Expansion provisions.
f. Glazing details.

2. Include full-size isometric details of each type of vertical-to-horizontal intersection of aluminum-framed entrances and storefronts, showing the following:

a. Joinery, including concealed welds.
b. Anchorage.
c. Expansion provisions.
d. Glazing.
e. Flashing and drainage.

3. Show connection to and continuity with adjacent thermal, weather, air, and vapor barriers.
4. Identify shop and field sealants by product name and locate on shop drawings.
5. Identify welds, both shop and field, by AWS welding symbols.

C. Samples:

1. Cutaway sample: Of each vertical-to-horizontal framing intersection of systems, made from minimum 6-inch lengths of full-size components and showing details of the following.

a. Joinery.
b. Anchorage.
c. Expansion provisions.
d. Glazing.
e. Identify samples gage, alloy, color and finish.

2. Glazing gaskets: 12-inch long samples.
3. Finish Sample: 2 x 3 inches in size illustrating finished aluminum surface

D. Qualification Data: For Installer.
E. Hardware Schedule: Complete itemization of each item of hardware to be provided for each door, cross-referenced to door identification numbers in Contract Documents.
F. Certification: Certified test results showing that entrance and storefront systems have been tested by a recognized testing laboratory or agency and comply with specified performance characteristics.

1.5 QUALITY ASSURANCE

A. Fabricator/installer’s qualifications: Single firm with a minimum of 5 years of successful experience fabricating and erecting work similar to that required for this Project.
B. Product Options: Information on Drawings and in Specifications establishes requirements for aesthetic effects and performance characteristics of assemblies. Aesthetic effects are indicated by dimensions, arrangements, alignment, and profiles of components and assemblies as they relate to sightlines, to one another, and to adjoining construction.

1. Do not change intended aesthetic effects, as judged solely by Architect, except with Architect's approval. If changes are proposed, submit comprehensive explanatory data to Architect for review.

1.6 MOCKUPS

A. Build mockups to verify selections made under Sample submittals and to demonstrate aesthetic effects and set quality standards for fabrication and installation.

1. Build mockup of typical wall area as shown on Drawings.

2. Testing shall be performed on mockups according to requirements in "Field Quality Control" Article.
3. Approval of mockups does not constitute approval of deviations from the Contract Documents contained in mockups unless Architect specifically approves such deviations in writing.
4. Subject to compliance with requirements, approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

1.7 HANDLING

A. Procedure: "Care and Handling of Architectural Aluminum from Shop to Site" published by AAMA.

1.8 WARRANTY

A. Special Warranty: [Manufacturer] agrees to repair or replace components of aluminum-framed entrances and storefronts that do not comply with requirements or that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Structural failures, including, but not limited to, excessive deflection.
b. Noise or vibration created by wind and thermal and structural movements.
c. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
d. Water penetration through fixed glazing and framing areas.
e. Failure of operating components.

2. Warranty Period: Five years from date of Substantial Completion.

B. Special Finish Warranty, Factory-Applied Finishes: Standard form in which manufacturer agrees to repair finishes or replace aluminum that shows evidence of deterioration of factory-applied finishes within specified warranty period.

1. Deterioration includes, but is not limited to, the following:

a. Color fading more than 5 Delta E units when tested according to ASTM D2244.
b. Chalking in excess of a No. 8 rating when tested according to ASTM D4214.
c. Cracking, checking, peeling, or failure of paint to adhere to bare metal.

2. Warranty Period: 20 years from date of Substantial Completion.

C. Warrant the work of this Section against defective materials and workmanship for 2 years after Substantial Completion. Refer to Section 07 92 00 for sealant warranty.
D. Repair or replace, when repairs are acceptable to the College, defective materials, and workmanship during the warranty period at no cost to the College.

PART 2 - PRODUCTS

2.1 MANUFACTURER

A. Source Limitations: Obtain all components of aluminum-framed entrance and storefront system, including framing and accessories, from single manufacturer.
B. Basis of Design: Arcadia.

1. AFG601T Series (2-inches by 6-inches).
2. AFG451T Series, (2-inches by 4-1/2-inches).
3. AR450 (interior for 1/4-inch. glass).
4. AR450+ (interior for 1/2-inch glass).

C. Acceptable manufacturers: Provide either the product identified as "Basis of Design" or an equivalent product of another manufacturer

1. For any product not identified as "Basis of Design", submit information as specified for substitutions.
2. Substitution may or may not be accepted after Architect and District review with complete evaluation for content and schedule impact.
3. Substitutions shall include all costs for redesign with consequential changes by other trades along with the Architect and related approvals by governing agencies.

    a. Revision to shop drawings illustrating changes is not considered adequate for DSA review and approval.

4. Substitutions may be acceptable, based on Architect's review and approval, for submittal to DSA.

    a. If substituted manufacturer cannot reproduce design and DSA approval in a timely manner, then they shall be subject to a time and material back charge for any delays in the project.
    b. Architect approval is required prior to DSA submittal and DSA approval is required prior to fabrication.

D. Aluminum-framed doors:

1. Type: WS512HD.

E. Fixed storefront sections: Of the dimensions and profiles indicated.

2.2 PERFORMANCE REQUIREMENTS

A. General: Provide aluminum entrance and storefront systems capable of withstanding loads, and thermal, seismic and structural movement indicated without failure, based on testing manufacturer standard units in assemblies similar to those indicated for this Project. Failure includes the following.

1. Air infiltration and water penetration exceeding specified limits for exterior assemblies.
2. Framing members transferring stresses, including those caused by thermal and structural movement, to glazing units.

B. Glazing: Physically and thermally isolate glazing from framing members.

C. Glazing-to-glazing joints: Provide glazing-to-glazing joints that accommodate thermal and mechanical movements of glazing and system, prevent glazing-to-glazing contact, and maintain required edge clearances.

D. Air infiltration:

1. Provide exterior storefront systems with permanent resistance to air leakage of not more than 0.06 cfm/square foot of fixed wall area when tested according to ASTM E 283 at a static air pressure difference of 6.24 psf.
2. Provide exterior single acting offset doors with air infiltration not exceeding 0.50 cfm/lineal foot of perimeter crack. A pair of 6-foot by 7-foot doors and frame shall not exceed 1 cfm/linear foot of perimeter crack.

E. Water penetration:

1. Provide exterior storefront systems that do not evidence water leakage through fixed glazing and frame areas when tested according to ASTM E 331 at minimum differential pressure of 20 percent of inward-acting wind-load design pressure as defined by ASCE 7, "Minimum Design Loads for Buildings and Other Structures," but not less than 8 psf.
2. Water leakage is defined as uncontrolled water infiltrating systems or appearing on systems' normally exposed interior surfaces from sources other than condensation.

3. Water controlled by flashing and gutters that is drained back to the exterior and cannot damage adjacent materials or finishes is not water leakage.

F. Thermal movements:

1. Provide exterior assemblies, including anchorage, that accommodate thermal movements of systems and supporting elements resulting from the following maximum change (range) in ambient and surface temperatures without buckling, damaging stresses on glazing, failure of joint sealants, damaging loads on fasteners, failure of doors or other operating units to function properly, and other detrimental effects.
2. Temperature change (range): 120-degree F. ambient, 180-degree F. material surfaces.

G. Movements of the structural-support: Provide assemblies that accommodate structural movements including, but not limited to, sway and deflection.

H. Dimensional tolerances: Provide entrance and storefront systems that accommodate dimensional tolerances of building frame and other adjacent construction.

I. Performance requirements for doors: Resistance to corner racking shall be tested by the "Dual Moment Load" test as follows.

1. Test section shall consist of a standard top door corner assembly. Side rail section shall be 24 inches long; top rail section shall be 12 inches long.
2. Anchor "top rail" positively to test bench so that corner protrudes 3 inches beyond the bench edge.
3. Anchor a lever arm positively to "side rail" at a point 19 inches from the inside edge of "top rail." Attach weight support pad at a point 19 inches from inner edge of "side rail".
4. Test section shall withstand a load of 170 lb. on the lever arm before reaching the point of a 1/18 inch gap at the stile/rail, joint or a 3-degree rotation in the stile. Further failure, defined as a rotation of the lever arm in excess of 45, shall not be reached before 270 lb.

2.3 STOREFRONT SYSTEMS

A. Framing Members: Manufacturer's extruded- or formed-aluminum framing members of thickness required and reinforced as required to support imposed loads.

1. Exterior Framing Construction: Thermally broken.
2. Interior Vestibule Framing Construction: Nonthermal.
3. Glazing System: Retained mechanically with gaskets on four sides.
4. Glazing Plane: As detailed.
5. Finish: .
6. Fabrication Method: Field-fabricated stick system.
7. Aluminum: Alloy and temper recommended by manufacturer for type of use and finish indicated.
8. Steel Reinforcement: As required by manufacturer.

2.4 ENTRANCE DOOR SYSTEMS

A. Entrance Doors: Manufacturer's standard glazed entrance doors for manual-swing or automatic operation.

1. Door Construction: 1-3/4-inch (44.5-mm) overall thickness, with minimum 0.188-inch-thick, extruded-aluminum tubular rail and stile members. Mechanically fasten corners with reinforcing brackets that are deeply penetrated and fillet welded or that incorporate concealed tie rods.
2. Door Design Wide stile; 5-inch nominal width.
3. Glazing Stops and Gaskets: Square, snap-on, extruded-aluminum stops and preformed gaskets.

   a. Provide nonremovable glazing stops on outside of door.

4. Finish: Match adjacent storefront framing finish.

2.5 ENTRANCE DOOR HARDWARE

A. Entrance Door Hardware: Hardware not specified in this Section is specified in Section 08 71 00 "Door Hardware."

B. General: Provide entrance door hardware and for each entrance door, to comply with requirements in this Section.

1. Entrance Door Hardware Sets: Provide quantity, item, size, finish, or color indicated, and named manufacturers' products.
2. Sequence of Operation: Provide electrified door hardware function, sequence of operation, and interface with other building control systems indicated.
3. Opening-Force Requirements:

a. Egress Doors: Not more than 15 lbf (67 N) to release the latch and not more than 30 lbf (133 N) to set the door in motion and not more than 15 lbf (67 N) to open the door to its minimum required width.
b. Accessible Interior Doors: Not more than 5 lbf (22.2 N) to fully open door.

C. Designations: Requirements for design, grade, function, finish, quantity, size, and other distinctive qualities of each type of entrance door hardware are indicated in "Entrance Door Hardware Sets" Article. Products are identified by using entrance door hardware designations as follows:

1. Named Manufacturers' Products: Manufacturer and product designation are listed for each door hardware type required for the purpose of establishing minimum requirements. Manufacturers' names are abbreviated in "Entrance Door Hardware Sets" Article.
2. References to BHMA Standards: Provide products complying with these standards and requirements for description, quality, and function.

D. Pivot Hinges: BHMA A156.4, Grade 1.

1. Offset-Pivot Hinges: Provide top, bottom, and intermediate offset pivots at each door leaf.

E. Automatic and Self-Latching Flush Bolts: BHMA A156.3, Grade 1.

F. Cylinders:

1. As specified in Section 08 71 00 "Door Hardware."

G. Strikes: Provide strike with black-plastic dust box for each latch or lock bolt; fabricated for aluminum framing.

H. Operating Trim: BHMA A156.6.

I. Closers: BHMA A156.4, Grade 1, with accessories required for a complete installation, sized as required by door size, exposure to weather, and anticipated frequency of use; adjustable to comply with field conditions and requirements for opening force.

J. Concealed Overhead Holders and Stops: BHMA A156.8, Grade 1.

K. Door Stops: BHMA A156.16, Grade 1, floor or wall mounted, as appropriate for door location indicated, with integral rubber bumper.

L. Weather Stripping: Manufacturer's standard replaceable components.

1. Compression Type: Made of ASTM D2000 molded neoprene or ASTM D2287 molded PVC.
2. Sliding Type: AAMA 701/702, made of wool, polypropylene, or nylon woven pile with nylon-fabric or aluminum-strip backing.

M. Weather Sweeps: Manufacturer's standard exterior-door bottom sweep with concealed fasteners on mounting strip.

N. Thresholds: BHMA A156.21 raised thresholds beveled with a slope of not more than 1:2, with maximum height of 1/2 inch (12.7 mm).

O. Finger Guards: Manufacturer's standard collapsible neoprene or PVC gasket anchored to frame hinge-jamb at center-pivoted doors

2.6 GLAZING

A. Glazing: Comply with Section 08 80 00 - Glazing.

2.7 MATERIALS

A. Aluminum: Alloy and temper recommended by the manufacturer for strength and application of required finish, complying with ASTM B 221 for extrusions and ASTM B 209 for sheet or plate.

B. Steel mullion reinforcement, if required by wind loading and other considerations: Proprietary bent steel plate or structural steel shape complying with the following.

1. Hot-rolled sections: ASTM A 36.
2. Structural tube framing: ASTM A 500, Grade B.

C. Fasteners: 300 Series (18-8) non-magnetic stainless steel for all screws, bolts, nuts, washers and rivets, except for the following applicable to Self-drilling and self-tapping screws.

1. Comply with SAE J78, except shanks and heads of fasteners shall comply with SAE i429, Grade 5 with 827 MPa (120 ksi) tensile strength and Rockwell C34 maximum hardness.
2. Where additional corrosion resistance is required, such as where fastener heads are exposed to aggressive environments, shanks and heads of fasteners shall be made of Series 300 (18-8) stainless steel complying with ASTM F 593, Condition CW (i.e. cold-worked), 689 to 1034 MPa (100 to 150 ksi) tensile strength, Rockwell 895 to C32 hardness.
3. Emboss fastener heads with manufacturer’s mark for inspection purpose and to indicate fasteners comply with Specifications.
4. Carbon steel fasteners shall have corrosion-resistant, hexavalent chrome-free coating with a zinc-rich base coat and an aluminum-pigmented organic topcoat. Fastener shall withstand 800 hours test, without forming red rust, when tested according to ASTM B 11 7.
5. Emboss 300 series stainless steel fasteners with the manufacturers mark for inspection purpose and to indicate fasteners comply with Specifications and applicable standards. Fasteners shall have a galvanically-compatible finish and coating, hexavalent chrome-free, zinc plate base and an aluminum-pigmented organic topcoat.

D. Reinforcement: Where fasteners screw-anchor into aluminum less than 0.125-inch thick, reinforce the interior with aluminum or non-magnetic stainless steel to receive screw threads, or provide standard non-corrosive pressed-in splined grommet nuts.

1. Welding electrodes: As recommended by AWS for the type of metal to be welded and the conditions of use.

E. Brackets: Where feasible, provide high-strength aluminum brackets and reinforcements; otherwise provide non-magnetic stainless steel or steel complying with ASTM A 386.

F. Compression weatherstripping: Manufacturer's standard replaceable compressible weatherstripping gaskets of molded neoprene complying with ASTM D 2000 or molded silicone of the color selected by the City Engineer.

G. Sliding weatherstripping: Manufacturer's standard replaceable weatherstripping of wool, polypropylene, or nylon woven pile, with nylon fabric or aluminum strip backing, complying with AAMA 701.2.

H. Glass and glazing materials: As indicated on the Drawings and specified in Section 08800.

I. Sealants and backup rods:

1. Within assemblies: Manufacturer standard non-drying, non-skinning sealant complying with AAMA 809.2.
2. Between assemblies and adjacent materials: As specified in Section 07 9200.
3. Glazing sealants: Refer to Section 08 80 00.

J. Paint:

1. Exposed aluminum finishes: See below.
2. Shop primer for ferrous metal: Manufacturer or fabricator standard, fast-curing, lead-free, universal rust-inhibitive alkyd primer complying with performance requirements of FS TT-P645.
3. Shop primer for concealed aluminum surfaces: Alkyd barium metaborate made by one of the manufacturers listed in Section 09900, or bituminous paint.
4. Galvanizing repair paint: SSPC Paint No. 20, Type II (Organic), by Tnemec, Porter International, Valspar Corp., Ameron Protective Coatings, or DuPont Co.
5. Bituminous paint: Cold-applied asphalt mastic complying with SSPC Paint 12, but containing no asbestos fibers.

2.8 FABRICATION

A. Furnish shop drawings, inserts and similar items to other trades, at appropriate times as required for proper sequence of construction.

1. Verify dimensions of the supporting structure and other elements that precede this work before fabrication of the required components.
2. Provide erection tolerances corresponding with specified tolerances for other work wherever field measurements cannot be obtained.

B. Maintain the visual design concept shown, including member sizes, profiles and alignment of components.

C. Fabricate and assemble components with proper and acceptable provision for noiseless thermal expansion and contraction, fabrication and erection tolerances, adjoining building component tolerances, and dynamic movements.

D. Fabricate and assemble components with minimum perimeter clearances and shim spacing but enable installation and dynamic movement of perimeter seals.

E. Removable members such as glass stops, fillers or closures shall be extruded, and securely engaged into adjacent components. Fabricate extrusions to eliminate edge projection, bowing, and misalignment at joints.

F. Design and construct expansion joints so that they will be, and remain, permanently watertight, and will accommodate weather and building dynamics.

G. For surfaces exposed to view employ only materials which are free from alloy defects, die marks, scratches, streaks and other surface blemishes.

H. When using aluminum sheets, use material light enough to permit workability but heavy enough to accurately retain the brake shape or contour without oil-canning when fastened to backing or blocking.

I. Complete the fabrication and assembly of the components in the shop to the greatest extent possible to minimize field cutting, splicing, fastening, sealing and finishing.

1. Maintain provisions for expansion and movement.
2. Disassemble only as necessary for shipment and erection.
3. Provide secure attachment and support at joints, with hairline, flush fit between contacting members.

J. Complete the cutting, fitting, forming, drilling and grinding of metal before cleaning and applying specified finish. Remove arrises from cut edges and ease edges and corners to a radius of approximately 1/64 inch minimum, 1/32 inch maximum.

K. Welding:

1. Comply with industry standards for assembly and fabrication using system and rods for exposed metals that will provide texture match with materials being joined.
2. Grind exposed welds smooth and flush with parent metal using clean grinding wheels of a type that will not result in stains or discoloration.

L. Hardware:

1. Cut, reinforce, drill and tap doors and frames at the factory to receive hardware.
2. Provide hardware reinforcement of stainless steel or hot-dip galvanized steel secured by welding or stainless-steel screws.

M. Door fabrication:

1. Make proper allowance for clearances at jambs, head and threshold thickness and clearance.
2. Close the top of out-swinging doors with a plate or inverted channel.
3. Cut, reinforce, drill and tap doors and frames at the factory to receive hardware. Provide hardware reinforcement of stainless steel or hot-dip galvanized steel secured by welding or stainless-steel screws.

2.9 EXPOSED ALUMINUM FINISHES

A. Superior-Performance Organic Finish, Four-Coat PVDF: Fluoropolymer finish complying with AAMA 2605 and containing not less than 70 percent PVDF resin by weight in both color coat and clear topcoat.

1. Prepare, pretreat, and apply coating to exposed metal surfaces to comply with coating and resin manufacturers' written instructions.
2. Color and Gloss: As indicated on Drawings.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine adjacent construction and supports.
B. Verify that openings are within allowable tolerances, plumb, level, clean, will provide a solid anchoring surface, and that other conditions detrimental to the proper or timely completion of this work are corrected before proceeding with installation.

3.2 INSTALLATION

A. General:

1. Do not install defective components, including warped, bowed, dented, abraded and broken members, and glass with damaged edges.
2. Remove and replace members that have been damaged during installation or thereafter before final acceptance.
3. Do not cut, trim, or weld components during erection in a manner that would damage the finish, decrease their strength, or result in a visual imperfection or a failure in performance of the work.
4. Return components that require alteration to the shop for refabrication or replacement.
5. Install components level, plumb, true to line and with uniform tight joints and reveals. Attach to structure with non-staining and non-corrosive shims, anchors, fasteners and spacers.
6. Provide all accessories such as fastenings, sealants and concealed anchorage needed for a complete weatherproof installation.

B. Erection tolerances:

1. Provide adjustment within the assemblies to accommodate job variations.

2. Install the work of this Section within the following tolerances:

    a. Deviation from established vertical, horizontal, or designed position shall not exceed 1/8 inch in 12 feet of length of any member, or 1/4 inch in any total run in any line.
    b. Maximum offset from true alignment between 2 consecutive members placed end-to-end shall not exceed 1/16 inch.
    c. Maximum offset between glass framing members at corners of glazing pocket must not exceed 1/32 inch.

C. Assembly and anchorage:

1. Anchor components securely by bolting, welding or other permanent mechanical attachments system that will comply with specified requirements and permit movements that are intended or necessary.
2. Install slip-joint linings where required to ensure movement without damage of the components.
3. Provide tape separator between contact surfaces of dissimilar materials where there is a possibility of corrosive or electrolytic action.
4. Remove weld slag and apply primer over welds. Touchup shop applied paint damaged by welding or other causes.

D. Glazing:

1. Glaze assemblies as specified in Section 08800.
2. Carefully match joints of glazing beads.

E. Hanging doors:

1. Install finish hardware on doors in compliance with its manufacturer's instructions.
2. Hang doors with minimum clearance to frame and threshold to meet the performance criteria specified.
3. Hang doors and adjust hardware so doors operate freely for their entire travel, without sticking or binding, and with minimum clearance to frame to comply with performance criteria specified.

3.3 SEALANTS

A. The requirements of Section 07 9200 apply to sealants used in this work. Seal all joints between the work of this Section and adjacent construction to be weathertight.

3.4 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections.
B. Field Quality-Control Testing: Perform the following test on representative areas of aluminum-framed entrances and storefronts.

1. Water-Spray Test: Before installation of interior finishes has begun, areas designated by Architect shall be tested according to AAMA 501.2 and shall not evidence water penetration.

    a. Perform a minimum of three tests in areas as directed by Architect.

C. Aluminum-framed entrances and storefronts will be considered defective if they do not pass tests and inspections.
D. Prepare test and inspection reports.

3.5 ADJUSTING

A. Adjust door hardware for smooth operation according to hardware manufacturers' instructions.
B. Adjust closers to provide a 3-second closer sweep period for doors to move from a 70-degree open position to 3 inches from the latch measured to the leading door edge.

END OF SECTION

SECTION 087100 - DOOR HARDWARE

PART 1 - GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.2 SUMMARY

A. This Section includes commercial door hardware for the following:

1. Swinging doors.
2. Sliding doors.
3. Other doors to the extent indicated.

B. Door hardware includes, but is not necessarily limited to, the following:

1. Mechanical door hardware.
2. Electromechanical door hardware.
3. Cylinders specified for doors in other sections.

C. Related Sections:

1. Division 08 Section “Hollow Metal Doors and Frames”.
2. Division 08 Section “Flush Wood Doors”.
3. Division 08 Section “Aluminum-Framed Entrances and Storefronts”.

D. Codes and References: Comply with the version year adopted by the Authority Having Jurisdiction.

1. ANSI A117.1 - Accessible and Usable Buildings and Facilities.
2. ICC/IBC - International Building Code.
3. NFPA 70 - National Electrical Code.
4. NFPA 80 - Fire Doors and Windows.
5. NFPA 101 - Life Safety Code.
6. NFPA 105 - Installation of Smoke Door Assemblies.
7. State Building Codes, Local Amendments.

E. Standards: All hardware specified herein shall comply with the following industry standards as applicable. Any undated reference to a standard shall be interpreted as referring to the latest edition of that standard:

1. ANSI/BHMA Certified Product Standards - A156 Series.
2. UL10C - Positive Pressure Fire Tests of Door Assemblies.
3. ANSI/UL 294 - Access Control System Units.
4. UL 305 - Panic Hardware.
5. ANSI/UL 437- Key Locks.

1.3 SUBMITTALS

A. Product Data: Manufacturer's product data sheets including installation details, material descriptions, dimensions of individual components and profiles, operational descriptions and finishes.

B. Door Hardware Schedule: Prepared by or under the supervision of supplier, detailing fabrication and assembly of door hardware, as well as procedures and diagrams. Coordinate the final Door Hardware Schedule with doors, frames, and related work to ensure proper size, thickness, hand, function, and finish of door hardware.

1. Format: Comply with scheduling sequence and vertical format in DHI's "Sequence and Format for the Hardware Schedule."

2. Organization: Organize the Door Hardware Schedule into door hardware sets indicating complete designations of every item required for each door or opening. Organize door hardware sets in same order as in the Door Hardware Sets at the end of Part 3. Submittals that do not follow the same format and order as the Door Hardware Sets will be rejected and subject to resubmission.

3. Content: Include the following information:

   a. Type, style, function, size, label, hand, and finish of each door hardware item.
   b. Manufacturer of each item.
   c. Fastenings and other pertinent information.
   d. Location of door hardware set, cross-referenced to Drawings, both on floor plans and in door and frame schedule.
   e. Explanation of abbreviations, symbols, and codes contained in schedule.
   f. Mounting locations for door hardware.
   g. Door and frame sizes and materials.
   h. Warranty information for each product.

4. Submittal Sequence: Submit the final Door Hardware Schedule at earliest possible date, particularly where approval of the Door Hardware Schedule must precede fabrication of other work that is critical in the Project construction schedule. Include Product Data, Samples, Shop Drawings of other work affected by door hardware, and other information essential to the coordinated review of the Door Hardware Schedule.

C. Shop Drawings: Details of electrified access control hardware indicating the following:

1. Wiring Diagrams: Upon receipt of approved schedules, submit detailed system wiring diagrams for power, signaling, monitoring, communication, and control of the access

control system electrified hardware. Differentiate between manufacturer-installed and field-installed wiring. Include the following:

a. Elevation diagram of each unique access controlled opening showing location and interconnection of major system components with respect to their placement in the respective door openings.
b. Complete (risers, point-to-point) access control system block wiring diagrams.
c. Wiring instructions for each electronic component scheduled herein.

2. Electrical Coordination: Coordinate with related sections the voltages and wiring details required at electrically controlled and operated hardware openings.

D. Keying Schedule: After a keying meeting with the owner has taken place prepare a separate keying schedule detailing final instructions. Submit the keying schedule in electronic format. Include keying system explanation, door numbers, key set symbols, hardware set numbers and special instructions. Owner must approve submitted keying schedule prior to the ordering of permanent cylinders/cores.

E. Proof of Compliance: (California located Projects): Provide a list of product(s) containing chemicals known to cause cancer or reproductive toxicity as defined by the Office of Environmental Health Hazard Assessment (OEHHA) under Proposition 65 (CA Code of Regulations, Title 27, Section 27001). The list includes the specific chemical(s), if the chemical will be exposed to consumers, the means of warning, and an illustration of the label.

F. Informational Submittals:

1. Product Test Reports: Indicating compliance with cycle testing requirements, based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified independent testing agency.

G. Operating and Maintenance Manuals: Provide manufacturers operating and maintenance manuals for each item comprising the complete door hardware installation in quantity as required in Division 01, Closeout Procedures.

1.4 QUALITY ASSURANCE

A. Manufacturers Qualifications: Engage qualified manufacturers with a minimum 5 years of documented experience in producing hardware and equipment similar to that indicated for this Project and that have a proven record of successful in-service performance.

B. Certified Products: Where specified, products must maintain a current listing in the Builders Hardware Manufacturers Association (BHMA) Certified Products Directory (CPD).

C. Installer Qualifications: A minimum 3 years documented experience installing both standard and electrified door hardware similar in material, design, and extent to that indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.

D. Door Hardware Supplier Qualifications: Experienced commercial door hardware distributors with a minimum 5 years documented experience supplying both mechanical and electromechanical hardware installations comparable in material, design, and extent to that indicated for this Project. Supplier recognized as a factory direct distributor by the manufacturers of the primary materials with a warehousing facility in Project's vicinity. Supplier to have on staff a certified Architectural Hardware Consultant (AHC) available during the course of the Work to consult with Contractor, Architect, and Owner concerning both standard and electromechanical door hardware and keying.

E. Automatic Operator Supplier Qualifications: Power operator products and accessories are required to be supplied and installed through the Norton Preferred Installer (NPI) program. Suppliers are to be factory trained, certified, and a direct purchaser of the specified power operators and be responsible for the installation and maintenance of the units and accessories indicated for the Project.

F. Source Limitations: Obtain each type and variety of door hardware specified in this section from a single source unless otherwise indicated.

1. Electrified modifications or enhancements made to a source manufacturer's product line by a secondary or third party source will not be accepted.

2. Provide electromechanical door hardware from the same manufacturer as mechanical door hardware, unless otherwise indicated.

G. California Building Code: Provide hardware that complies with CBC Section 11B.

1. All openings as a part of an accessible route shall comply with CBC Section 11B-404.

2. The clear opening width for a door shall be 32” minimum. For a swinging door it shall be measured between the face of the door and the stop, with the door open 90 degrees. There shall be no projections into it below 34” and 4” maximum projections into it between 34” and 80” above the finish floor or ground. Door closers and stops shall be permitted to be 78” minimum above the finish floor or ground. CBC Section 11B-404.2.3.

3. Operable hardware on accessible doors shall comply with CBC Section 11B-309.4 and shall be operable with one hand and shall not require tight grasping, pinching, or twisting of the wrist. Operable parts of such hardware shall be 34” minimum and 44” maximum above finish floor or ground. Where sliding doors are in the fully open position, operating hardware shall be exposed and usable from both sides.

4. Hardware (including panic hardware) shall not be provided with “nightlatch” function for any accessible doors or gates unless the following conditions are met:

   a. Such hardware has a ‘dogging’ feature and is dogged during the time the facility is open.
   b. All ‘dogging’ operation is performed only by employees as their job function (non-public use).

5. The force for pushing or pulling open a door shall be in accordance with CBC Section 11B-404.2.9.

a. Interior hinged doors, sliding or folding doors, and exterior hinged doors: 5 pounds (22.2 N) maximum. Required fire doors: the minimum opening force allowable by the DSA authority, not to exceed 15 pounds (66.7N). These forces do not apply to the force required to retract latch bolts or disengage other devices that hold the door in a closed position.
b. The force required for activating any operable parts, such as lever hardware, or disengaging other devices shall be 5 pounds (22.2N) maximum to comply with CBC Section 11B-309.4.
c. The 5 pound (22.2 N) maximum force shall be validated for the size of the door used. The Building Materials Listing of the California State Fire Marshal shall indicate that the door hardware meets the 5 pound (22.2 N) force and shall also list the largest door that can be used.

6. Door closing speed shall comply with CBC Section 11B-404.2.8. Closers shall be adjusted so that the required time to move a door from an open position of 90 degrees to a position of 12 degrees from the latch is 5 seconds minimum. Spring hinges shall be adjusted so that the required time to move a door from an open position of 70 degrees to the closed position is 1.5 seconds minimum.

7. Floor stops shall not be located in the path of travel and 4” maximum from walls.

8. Thresholds shall comply with CBC Section 11B-404.2.5.

H. Each unit to bear third party permanent label demonstrating compliance with the referenced standards.

I. Keying Conference: Conduct conference to comply with requirements in Division 01 Section "Project Meetings." Keying conference to incorporate the following criteria into the final keying schedule document:

1. Function of building, purpose of each area and degree of security required.
2. Plans for existing and future key system expansion.
3. Requirements for key control storage and software.
4. Installation of permanent keys, cylinder cores and software.
5. Address and requirements for delivery of keys.

J. Pre-Submittal Conference: Conduct coordination conference in compliance with requirements in Division 01 Section "Project Meetings" with attendance by representatives of Supplier(s), Installer(s), and Contractor(s) to review proper methods and the procedures for receiving, handling, and installing door hardware.

1. Prior to installation of door hardware, conduct a project specific training meeting to instruct the installing contractors' personnel on the proper installation and adjustment of their respective products. Product training to be attended by installers of door hardware (including electromechanical hardware) for aluminum, hollow metal and wood doors. Training will include the use of installation manuals, hardware schedules, templates and physical product samples as required.
2. Inspect and discuss electrical roughing-in, power supply connections, and other preparatory work performed by other trades.
3. Review sequence of operation narratives for each unique access controlled opening.

4. Review and finalize construction schedule and verify availability of materials.
5. Review the required inspecting, testing, commissioning, and demonstration procedures

K. At completion of installation, provide written documentation that components were applied to manufacturer's instructions and recommendations and according to approved schedule.

1.5 DELIVERY, STORAGE, AND HANDLING

A. Inventory door hardware on receipt and provide secure lock-up and shelving for door hardware delivered to Project site. Do not store electronic access control hardware, software or accessories at Project site without prior authorization.

B. Tag each item or package separately with identification related to the final Door Hardware Schedule, and include basic installation instructions with each item or package.

C. Deliver, as applicable, permanent keys, cylinders, cores, access control credentials, software and related accessories directly to Owner via registered mail or overnight package service. Instructions for delivery to the Owner shall be established at the "Keying Conference".

1.6 COORDINATION

A. Templates: Obtain and distribute to the parties involved templates for doors, frames, and other work specified to be factory prepared for installing standard and electrified hardware. Check Shop Drawings of other work to confirm that adequate provisions are made for locating and installing hardware to comply with indicated requirements.

B. Door and Frame Preparation: Doors and corresponding frames are to be prepared, reinforced and pre-wired (if applicable) to receive the installation of the specified electrified, monitoring, signaling and access control system hardware without additional in-field modifications.

1.7 WARRANTY

A. General Warranty: Reference Division 01, General Requirements. Special warranties specified in this Article shall not deprive Owner of other rights Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by Contractor under requirements of the Contract Documents.

B. Warranty Period: Written warranty, executed by manufacturer(s), agreeing to repair or replace components of standard and electrified door hardware that fails in materials or workmanship within specified warranty period after final acceptance by the Owner. Failures include, but are not limited to, the following:

1. Structural failures including excessive deflection, cracking, or breakage.
2. Faulty operation of the hardware.
3. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
4. Electrical component defects and failures within the systems operation.

C. Standard Warranty Period: One year from date of Substantial Completion, unless otherwise indicated.

D. Special Warranty Periods:

1. Ten years for mortise locks and latches.
2. Five years for exit hardware.
3. Twenty five years for manual overhead door closer bodies.
4. Five years for motorized electric latch retraction exit devices.
5. Two years for electromechanical door hardware, unless noted otherwise.

1.8 MAINTENANCE SERVICE

A. Maintenance Tools and Instructions: Furnish a complete set of specialized tools and maintenance instructions as needed for Owner's continued adjustment, maintenance, and removal and replacement of door hardware.

PART 2 - PRODUCTS

2.1 SCHEDULED DOOR HARDWARE

A. General: Provide door hardware for each door to comply with requirements in Door Hardware Sets and each referenced section that products are to be supplied under.

B. Designations: Requirements for quantity, item, size, finish or color, grade, function, and other distinctive qualities of each type of door hardware are indicated in the Door Hardware Sets at the end of Part 3. Products are identified by using door hardware designations, as follows:

1. Named Manufacturer's Products: Product designation and manufacturer are listed for each door hardware type required for the purpose of establishing requirements. Manufacturers' names are abbreviated in the Door Hardware Schedule.

C. Substitutions: Requests for substitution and product approval for inclusive mechanical and electromechanical door hardware in compliance with the specifications must be submitted in writing and in accordance with the procedures and time frames outlined in Division 01, Substitution Procedures. Approval of requests is at the discretion of the architect, owner, and their designated consultants.

2.2 HANGING DEVICES

A. Hinges: ANSI/BHMA A156.1 butt hinges with number of hinge knuckles and other options as specified in the Door Hardware Sets.

1. Quantity: Provide the following hinge quantity:

a. Two Hinges: For doors with heights up to 60 inches.

b. Three Hinges: For doors with heights 61 to 90 inches.
c. Four Hinges: For doors with heights 91 to 120 inches.
d. For doors with heights more than 120 inches, provide 4 hinges, plus 1 hinge for every 30 inches of door height greater than 120 inches.

2. Hinge Size: Provide the following, unless otherwise indicated, with hinge widths sized for door thickness and clearances required:

a. Widths up to 3’0”: 4-1/2” standard or heavy weight as specified.
b. Sizes from 3’1” to 4’0”: 5” standard or heavy weight as specified.

3. Hinge Weight and Base Material: Unless otherwise indicated, provide the following:

a. Exterior Doors: Heavy weight, non-ferrous, ball bearing or oil impregnated bearing hinges unless Hardware Sets indicate standard weight.
b. Interior Doors: Standard weight, steel, ball bearing or oil impregnated bearing hinges unless Hardware Sets indicate heavy weight.

4. Hinge Options: Comply with the following:

a. Non-removable Pins: With the exception of electric through wire hinges, provide set screw in hinge barrel that, when tightened into a groove in hinge pin, prevents removal of pin while door is closed; for the all out-swinging lockable doors.

5. Manufacturers:

a. Hager Companies (HA) - AB Series, 2 knuckle.
b. McKinney (MK) - TA Series. 2 knuckle.
c. No Substitution.

6. Manufacturers:

a. Hager Companies (HA) - AB Series, 3 knuckle.
b. Ives (IV) - 3CB Series, 3 knuckle.
c. McKinney (MK) - TA Series, 3 knuckle.
d. dormakaba Best (ST) - CB Series, 3 knuckle.
e. No Substitution.

7. Manufacturers:

a. Hager Companies (HA) - BB Series, 5 knuckle.
b. Ives (IV) - 5BB Series, 5 knuckle.
c. McKinney (MK) - TA/T4A Series, 5 knuckle.
d. dormakaba Best (ST) - F/FBB Series, 5 knuckle.
e. No Substitution.

B. Pin and Barrel Continuous Hinges: ANSI/BHMA A156.26 Grade 1-600 pin and barrel continuous hinges with minimum 14 gauge Type 304 stainless steel hinge leaves, concealed stainless pin, and twin self-lubricated nylon bearings at each knuckle separation. Factory trim hinges to suit door height and prepare for electrical cut-outs.

1. Manufacturers:

    a. Markar Products; ASSA ABLOY Architectural Door Accessories (MR).
    b. Pemko (PE).

2.3 POWER TRANSFER DEVICES

A. Electrified Quick Connect Transfer Hinges: Provide electrified transfer hinges with Molex™ standardized plug connectors and sufficient number of concealed wires (up to 12) to accommodate the electrified functions specified in the Door Hardware Sets with a 1-year warranty. Connectors plug directly to through-door wiring harnesses for connection to electric locking devices and power supplies. Wire nut connections are not acceptable.

    1. Manufacturers:

        a. Ives (IV) - Connect.
        b. McKinney (MK) - QC (# wires) Option.

B. Concealed Quick Connect Electric Power Transfers: Provide concealed wiring pathway housing mortised into the door and frame for low voltage electrified door hardware. Furnish with Molex™ standardized plug connectors and sufficient number of concealed wires (up to 12) to accommodate the electrified functions specified in the Door Hardware Sets. Connectors plug directly to through-door wiring harnesses for connection to electric locking devices and power supplies. Wire nut connections are not acceptable.

    1. Manufacturers:

        a. Pemko (PE) - EL-CEPT Series.
        b. Securitron (SU) - EL-CEPT Series.

C. Electric Door Wire Harnesses: Provide electric/data transfer wiring harnesses with standardized plug connectors to accommodate up to twelve (12) wires. Connectors plug directly to through-door wiring harnesses for connection to electric locking devices and power supplies. Provide sufficient number and type of concealed wires to accommodate electric function of specified hardware. Provide a connector for through-door electronic locking devices and from hinge to junction box above the opening. Wire nut connections are not acceptable. Determine the length required for each electrified hardware component for the door type, size and construction, minimum of two per electrified opening.

    1. Provide one each of the following tools as part of the base bid contract:

        a. McKinney (MK) - Electrical Connecting Kit: QC-R001.
        b. McKinney (MK) - Connector Hand Tool: QC-R003.

    2. Manufacturers:

        a. Falcon (FA) - Connect.
        b. McKinney (MK) - QC-C Series.
        c. Schlage (SC) - Connect.

d. Dormakaba Best (ST) - WH Series.
e. Von Duprin (VD) - Connect.

2.4 DOOR OPERATING TRIM

A. Flush Bolts and Surface Bolts: Provide products conforming to ANSI/BHMA A156.3 and A156.16, Grade 1.

1. Flush bolts to be furnished with top rod of sufficient length to allow bolt retraction device location approximately six feet from the floor.
2. Furnish dust proof strikes for bottom bolts.
3. Surface bolts to be minimum 8” in length and U.L. listed for labeled fire doors and U.L. listed for windstorm components where applicable.
4. Provide related accessories (mounting brackets, strikes, coordinators, etc.) as required for appropriate installation and operation.

5. Manufacturers:

a. Burns Manufacturing (BU).
b. Door Controls International (DC).
c. Rockwood (RO).

B. Coordinators: ANSI/BHMA A156.3 door coordinators consisting of active-leaf, hold-open lever and inactive-leaf release trigger. Model as indicated in hardware sets.

1. Manufacturers:

a. Burns Manufacturing (BU).
b. Door Controls International (DC).
c. Rockwood (RO).

C. Door Push Plates and Pulls: ANSI/BHMA A156.6 door pushes and pull units of type and design specified in the Hardware Sets. Coordinate and provide proper width and height as required where conflicting hardware dictates.

1. Push/Pull Plates: Minimum .050 inch thick, size as indicated in hardware sets, with beveled edges, secured with exposed screws unless otherwise indicated.
2. Door Pull and Push Bar Design: Size, shape, and material as indicated in the hardware sets. Minimum clearance of 2 1/2-inches from face of door unless otherwise indicated.
3. Offset Pull Design: Size, shape, and material as indicated in the hardware sets. Minimum clearance of 2 1/2-inches from face of door and offset of 90 degrees unless otherwise indicated.
4. Fasteners: Provide manufacturer's designated fastener type as indicated in Hardware Sets.

5. Manufacturers:

a. Burns Manufacturing (BU).
b. Hiawatha, Inc. (HI).
c. Rockwood (RO).

2.5 CYLINDERS AND KEYING

A. General: Cylinder manufacturer to have minimum (10) years experience designing secured master key systems and have on record a published security keying system policy.

B. Source Limitations: Obtain each type of keyed cylinder and keys from the same source manufacturer as locksets and exit devices, unless otherwise indicated.

C. Cylinder Types: Original manufacturer cylinders able to supply the following cylinder formats and types:

1. Threaded mortise cylinders with rings and cams to suit hardware application.
2. Rim cylinders with back plate, flat-type vertical or horizontal tailpiece, and raised trim ring.
3. Bored or cylindrical lock cylinders with tailpieces as required to suit locks.
4. Tubular deadlocks and other auxiliary locks.
5. Mortise and rim cylinder collars to be solid and recessed to allow the cylinder face to be flush and be free spinning with matching finishes.
6. Keyway: Match Facility Standard.

D. Removable Cores: Provide removable cores as specified, core insert, removable by use of a special key, and for use with only the core manufacturer's cylinder and door hardware.

E. Keying System: Each type of lock and cylinders to be factory keyed.

1. Supplier shall conduct a "Keying Conference" to define and document keying system instructions and requirements.
2. Furnish factory cut, nickel-silver large bow permanently inscribed with a visual key control number as directed by Owner.
3. Existing System: Field verify and key cylinders to match Owner's existing system.

F. Key Quantity: Provide the following minimum number of keys:

1. Change Keys per Cylinder: Two (2)
2. Master Keys (per Master Key Level/Group): Five (5).
3. Construction Keys (where required): Ten (10).

G. Construction Keying: Provide temporary keyed construction cores.

H. Key Registration List (Bitting List):

1. Provide keying transcript list to Owner's representative in the proper format for importing into key control software.
2. Provide transcript list in writing or electronic file as directed by the Owner.

2.6 KEY CONTROL

A. Key Control Cabinet: Provide a key control system including envelopes, labels, and tags with self-locking key clips, receipt forms, 3-way visible card index, temporary markers, permanent

markers, and standard metal cabinet. Key control cabinet shall have expansion capacity of 150% of the number of locks required for the project.

1. Manufacturers:

    a. Lund Equipment (LU).
    b. MMF Industries (MM).
    c. Telkee (TK).

P. Electronic Key Management System: Provide an electronic key control system with Stand-alone Plug and Play features including advanced RFID technology. Touchscreen interface with PIN access for keys individually locked in place. Minimum 1,000 system users and 21 iFobs for locking receptors. System shall have a minimum 250,000 audit events screen displayed or ability to be exported via USB port.

1. Manufacturers:

    a. Medeco (MC).
    b. Traka (TA).

2.7 MECHANICAL LOCKS AND LATCHING DEVICES

A. Mortise Locksets, Grade 1 (Heavy Duty): ANSI/BHMA A156.13, Series 1000, Operational Grade 1 Certified Products Directory (CPD) listed. Locksets are to be manufactured with a corrosion resistant steel case and be field-reversible for handing without disassembly of the lock body.

1. Extended cycle test: Locks to have been cycle tested in ordinance with ANSI/BHMA 156.13 requirements to 14 million cycles or greater.

2. Manufacturers:

    a. Sargent Manufacturing (SA) - 8200 Series.
    b. No Substitution.

2.8 ELECTROMECHANICAL LOCKING DEVICES

A. Electromechanical Mortise Locksets, Grade 1 (Heavy Duty): ANSI/BHMA A156.13, Series 1000, Operational Grade 1 Certified Products Directory (CPD) listed, subject to same compliance standards and requirements as mechanical mortise locksets, electrified locksets to be of type and design as specified below and in the hardware sets.

1. Electrified Lock Options: Where indicated in the Hardware Sets, provide electrified options including: outside door lock/unlock trim control, latchbolt and lock/unlock status monitoring, deadbolt monitoring, and request-to-exit signaling. Support end-of-line resistors contained within the lock case. Unless otherwise indicated, provide electrified locksets standard as fail secure.

2. Energy Efficient Design: Provide lock bodies which have a holding current draw of 15mA maximum, and can operate on either 12 or 24 volts. Locks are to be field configurable for fail safe or fail secure operation.

3. Manufacturers:

   a. Sargent Manufacturing (SA) - 8200 Series.
   b. No Substitution.

2.9 AUXILIARY LOCKS

A. Mortise Deadlocks, Large Case: ANSI/BHMA A156.13 Grade 1 Certified Products Directory (CPD) listed large case mortise type deadlocks constructed of heavy gauge wrought corrosion resistant steel. One piece stainless steel bolts with a 1" throw. Deadlocks to be products of the same source manufacturer and keyway as other locksets.

   1. Manufacturers:

      a. Sargent Manufacturing (SA) - 8200 Series.
      b. No Substitution.

B. Behavioral Health, Cylindrical: ANSI/BHMA A156.2, Series 4000, Operational and Security Grade 1 Certified Products Directory (CPD) listed cylindrical locks that exceed 3,100 in-lb with no entry; lock to maintain egress functionality in compliance with BHMA certification requirements. Locksets shall be listed for low, medium and high risk areas in the NYS-OMH Patient Safety Standard. Latch retraction with preload shall exceed 100 lb. while maintaining ANSI/BHMA requirements for operation in warped doors. Locksets shall be provided standard with Torx® fasteners and with optional lead-lining and antimicrobial coating as specified in Hardware Sets.

   1. Manufacturers:

      a. Corbin Russwin (RU) - CLX3300 BHSS Series.
      b. Sargent Manufacturing (SA) - 10X BHW Series.
      c. No Substitution.

2.10 LOCK AND LATCH STRIKES

A. Strikes: Provide manufacturer's standard strike with strike box for each latch or lock bolt, with curved lip extended to protect frame, finished to match door hardware set, unless otherwise indicated, and as follows:

   1. Flat-Lip Strikes: For locks with three-piece antifriction latchbolts, as recommended by manufacturer.
   2. Extra-Long-Lip Strikes: For locks used on frames with applied wood casing trim.
   3. Aluminum-Frame Strike Box: Provide manufacturer's special strike box fabricated for aluminum framing.

4. Double-lipped strikes: For locks at double acting doors. Furnish with retractable stop for rescue hardware applications.

B. Standards: Comply with the following:

1. Strikes for Mortise Locks and Latches: BHMA A156.13.
2. Strikes for Bored Locks and Latches: BHMA A156.2.
3. Strikes for Auxiliary Deadlocks: BHMA A156.36.
4. Dustproof Strikes: BHMA A156.16.

2.11 CONVENTIONAL EXIT DEVICES

A. General Requirements: All exit devices specified herein shall meet or exceed the following criteria:

1. At doors not requiring a fire rating, provide devices complying with NFPA 101 and listed and labeled for "Panic Hardware" according to UL305. Provide proper fasteners as required by manufacturer including sex nuts and bolts at openings specified in the Hardware Sets.

2. Where exit devices are required on fire rated doors, provide devices complying with NFPA 80 and with UL labeling indicating "Fire Exit Hardware". Provide devices with the proper fasteners for installation as tested and listed by UL. Consult manufacturer’s catalog and template book for specific requirements.

3. Except on fire rated doors, provide exit devices with hex key dogging device to hold the pushbar and latch in a retracted position. Provide optional keyed cylinder dogging on devices where specified in Hardware Sets.

4. Devices must fit flat against the door face with no gap that permits unauthorized dogging of the push bar. The addition of filler strips is required in any case where the door light extends behind the device as in a full glass configuration.

5. Lever Operating Trim: Where exit devices require lever trim, furnish manufacturer's heavy duty escutcheon trim with threaded studs for thru-bolts.

   a. Lock Trim Design: As indicated in Hardware Sets, provide finishes and designs to match that of the specified locksets.
   b. Where function of exit device requires a cylinder, provide a cylinder (Rim or Mortise) as specified in Hardware Sets.

6. Vertical Rod Exit Devices: Where surface or concealed vertical rod exit devices are used at interior openings, provide as less bottom rod (LBR) unless otherwise indicated. Provide dust proof strikes where thermal pins are required to project into the floor.

7. Rim Exit Devices: Exit device rails shall release with less than 5 pounds of pressure per the California Building Code.

8. Narrow Stile Applications: At doors constructed with narrow stiles, or as specified in Hardware Sets, provide devices designed for maximum 2” wide stiles.

9. Dummy Push Bar: Nonfunctioning push bar matching functional push bar.

10. Rail Sizing: Provide exit device rails factory sized for proper door width application.

11. Through Bolt Installation: For exit devices and trim as indicated in Door Hardware Sets.

B. Conventional Push Rail Exit Devices (Heavy Duty): ANSI/BHMA A156.3, Grade 1 Certified Products Directory (CPD) listed panic and fire exit hardware devices furnished in the functions specified in the Hardware Sets. Exit device latch to be stainless steel, pullman type, with deadlock feature.

1. Manufacturers:

a. Sargent Manufacturing (SA) - 80 Series.
b. No Substitution.

2.12 ELECTROMECHANICAL EXIT DEVICES

A. Electromechanical Push Rail Exit Devices (Heavy Duty): ANSI/BHMA A156.3, Grade 1 Certified Products Directory (CPD) listed panic and fire exit hardware devices subject to same compliance standards and requirements as mechanical exit devices. Electrified exit devices to be of type and design as specified below and in the hardware sets.

1. Energy Efficient Design: Provide devices which have a holding current draw of 15mA maximum, and can operate on either 12 or 24 volts. Locks are to be field configurable for fail safe or fail secure operation.

2. Where conventional power supplies are not sufficient, include any specific controllers required to provide the proper inrush current.

3. Motorized Electric Latch Retraction: Devices with an electric latch retraction feature must use motors which have a maximum current draw of 600mA. Solenoid driven latch retraction is not acceptable.

4. Manufacturers:

a. Sargent Manufacturing (SA) - 80 Series.
b. No Substitution.

2.13 DOOR CLOSERS

A. All door closers specified herein shall meet or exceed the following criteria:

1. General: Door closers to be from one manufacturer, matching in design and style, with the same type door preparations and templates regardless of application or spring size. Closers to be non-handed with full sized covers.

2. Standards: Closers to comply with UL-10C for Positive Pressure Fire Test and be U.L. listed for use of fire rated doors.

3. Size of Units: Comply with manufacturer's written recommendations for sizing of door closers depending on size of door, exposure to weather, and anticipated frequency of use. Where closers are indicated for doors required to be accessible to the Americans with Disabilities Act, provide units complying with ANSI ICC/A117.1.

4. Closer Arms: Provide heavy duty, forged steel closer arms unless otherwise indicated in Hardware Sets.

5. Closers shall not be installed on exterior or corridor side of doors; where possible install closers on door for optimum aesthetics.

6. Closer Accessories: Provide door closer accessories including custom templates, special mounting brackets, spacers and drop plates as required for proper installation. Provide through-bolt and security type fasteners as specified in the hardware sets.

B. Door Closers, Surface Mounted (Heavy Duty): ANSI/BHMA A156.4, Grade 1 Certified Products Directory (CPD) listed surface mounted, heavy duty door closers with complete spring power adjustment, sizes 1 thru 6; and fully operational adjustable according to door size, frequency of use, and opening force. Closers to be rack and pinion type, one piece cast iron or aluminum alloy body construction, with adjustable backcheck and separate non-critical valves for closing sweep and latch speed control. Provide non-handed units standard.

1. Manufacturers:

   a. Norton Rixson (NO) - 7500 Series.
   b. Sargent Manufacturing (SA) - 351 Series.

C. Door Closers, Overhead Concealed Double Acting (Heavy Duty): Center pivot, double acting ANSI/BHMA 156.4 Grade 1 Certified Products Directory (CPD) overhead door closers. UL Listed and ADA-compliant for interior or exterior doors up to 250 lbs. Closers are non-handed, with adjustable spring strength, hydraulic back check, and two closing speed adjustments for sweep and latch. Latch speed can be independently adjustable per door direction. Cast iron body construction with 1-1/4" dual pistons and an optional hold open feature. Closer bodies shall fit in a 1-3/4" x 4" metal or aluminum transom and 2-1/2" x 4-1/2" wood frame.

1. Manufacturers:

   a. dormakaba (DO) - RTS88 Series.
   b. LCN Closers (LC) - 6030 Series.
   c. Norton Rixson (RF) - 73 Series.
   d. No Substitution.

D. Door Closers, Overhead Concealed Single Acting (Heavy Duty): Single Acting (Heavy Duty): Center pivot, single acting ANSI/BHMA 156.4 Grade 1 Certified Products Directory (CPD) overhead door closers. UL Listed and ADA-compliant for interior or exterior doors up to 250 lbs. Closers are non-handed, with adjustable spring strength, hydraulic back check, and two closing speed adjustments for sweep and latch. Latch speed can be independently adjustable per door direction. Cast iron body construction with 1-1/4" dual pistons and an optional hold open feature. Closer bodies shall fit in a 1-3/4" x 4" metal or aluminum transom and 2-1/2" x 4-1/2" wood frame.

1. Manufacturers:

    a. dormakaba (DO) - RTS88 Series.
    b. LCN Closers (LC) - 2030 Series.
    c. Norton Rixson (RF) - 93 Series.
    d. No Substitution.

2.14 ARCHITECTURAL TRIM

A. Door Protective Trim

1. General: Door protective trim units to be of type and design as specified below or in the Hardware Sets.

2. Size: Fabricate protection plates (kick, armor, or mop) not more than 2" less than door width (LDW) on stop side of single doors and 1” LDW on stop side of pairs of doors, and not more than 1" less than door width on pull side. Coordinate and provide proper width and height as required where conflicting hardware dictates. Height to be as specified in the Hardware Sets.

3. Where plates are applied to fire rated doors with the top of the plate more than 16” above the bottom of the door, provide plates complying with NFPA 80. Consult manufacturer’s catalog and template book for specific requirements for size and applications.

4. Protection Plates: ANSI/BHMA A156.6 protection plates (kick, armor, or mop), fabricated from the following:

    a. Stainless Steel: 300 grade, 050-inch thick.

5. Options and fasteners: Provide manufacturer's designated fastener type as specified in the Hardware Sets. Provide countersunk screw holes.

6. Manufacturers:

    a. Burns Manufacturing (BU).
    b. Hiawatha, Inc. (HI).
    c. Rockwood (RO).

2.15 DOOR STOPS AND HOLDERS

A. General: Door stops and holders to be of type and design as specified below or in the Hardware Sets.

B. Door Stops and Bumpers: ANSI/BHMA A156.16, Grade 1 door stops and wall bumpers. Provide wall bumpers, either convex or concave types with anchorage as indicated, unless floor or other types of door stops are specified in Hardware Sets. Do not mount floor stops where they will impede traffic. Where floor or wall bumpers are not appropriate, provide overhead type stops and holders.

1. Manufacturers:

a. Burns Manufacturing (BU).
b. Hiawatha, Inc. (HI).
c. Rockwood (RO).

C. Overhead Door Stops and Holders: ANSI/BHMA A156.8, Grade 1 Certified Products Directory (CPD) listed overhead stops and holders to be surface or concealed types as indicated in Hardware Sets. Track, slide, arm and jamb bracket to be constructed of extruded bronze and shock absorber spring of heavy tempered steel. Provide non-handed design with mounting brackets as required for proper operation and function.

1. Manufacturers:

a. Norton Rixson (RF).
b. Rockwood (RO).
c. Sargent Manufacturing (SA).

2.16 ARCHITECTURAL SEALS

A. General: Thresholds, weatherstripping, and gasket seals to be of type and design as specified below or in the Hardware Sets. Provide continuous weatherstrip gasketing on exterior doors and provide smoke, light, or sound gasketing on interior doors where indicated. At exterior applications provide non-corrosive fasteners and elsewhere where indicated.

B. Smoke Labeled Gasketing: Assemblies complying with NFPA 105 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for smoke control ratings indicated, based on testing according to UL 1784.

1. Provide smoke labeled perimeter gasketing at all smoke labeled openings.

C. Fire Labeled Gasketing: Assemblies complying with NFPA 80 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire ratings indicated, based on testing according to UL-10C.

1. Provide intumescent seals as indicated to meet UL10C Standard for Positive Pressure Fire Tests of Door Assemblies, and NPFA 252, Standard Methods of Fire Tests of Door Assemblies.

D. Sound-Rated Gasketing: Assemblies that are listed and labeled by a testing and inspecting agency, for sound ratings indicated.

E. Replaceable Seal Strips: Provide only those units where resilient or flexible seal strips are easily replaceable and readily available from stocks maintained by manufacturer.

F. Manufacturers:

1. Pemko (PE).
2. Reese Enterprises, Inc. (RE).

2.17 ELECTRONIC ACCESSORIES

A. Door Position Switches: Door position magnetic reed contact switches specifically designed for use in commercial door applications. On recessed models the contact and magnetic housing snap-lock into a 1" diameter hole. Surface mounted models include wide gap distance design complete with armored flex cabling. Provide SPDT, N/O switches with optional Rare Earth Magnet installation on steel doors with flush top channels.

1. Manufacturers:

a. Securitron (SU) - DPS Series.

2.18 FABRICATION

A. Fasteners: Provide door hardware manufactured to comply with published templates generally prepared for machine, wood, and sheet metal screws. Provide screws according to manufacturers recognized installation standards for application intended.

2.19 FINISHES

A. Standard: Designations used in the Hardware Sets and elsewhere indicate hardware finishes complying with ANSI/BHMA A156.18, including coordination with traditional U.S. finishes indicated by certain manufacturers for their products.

B. Provide quality of finish, including thickness of plating or coating (if any), composition, hardness, and other qualities complying with manufacturer's standards, but in no case less than specified by referenced standards for the applicable units of hardware

C. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine scheduled openings, with Installer present, for compliance with requirements for installation tolerances, labeled fire door assembly construction, wall and floor construction, and other conditions affecting performance.

B. Notify architect of any discrepancies or conflicts between the door schedule, door types, drawings and scheduled hardware. Proceed only after such discrepancies or conflicts have been resolved in writing.

3.2 PREPARATION

A. Hollow Metal Doors and Frames: Comply with ANSI/DHI A115 series.

B. Wood Doors: Comply with ANSI/DHI A115-W series.

3.3 INSTALLATION

A. Install each item of mechanical and electromechanical hardware and access control equipment to comply with manufacturer's written instructions and according to specifications.

1. Installers are to be trained and certified by the manufacturer on the proper installation and adjustment of fire, life safety, and security products including: hanging devices; locking devices; closing devices; and seals.

B. Mounting Heights: Mount door hardware units at heights indicated in following applicable publications, unless specifically indicated or required to comply with governing regulations:

1. Standard Steel Doors and Frames: DHI's "Recommended Locations for Architectural Hardware for Standard Steel Doors and Frames."
2. DHI TDH-007-20: Installation Guide for Doors and Hardware.
3. Where indicated to comply with accessibility requirements, comply with ANSI A117.1 "Accessibility Guidelines for Buildings and Facilities."
4. Provide blocking in drywall partitions where wall stops or other wall mounted hardware is located.

C. Retrofitting: Install door hardware to comply with manufacturer's published templates and written instructions. Where cutting and fitting are required to install door hardware onto or into surfaces that are later to be painted or finished in another way, coordinate removal, storage, and reinstallation of surface protective trim units with finishing work specified in Division 9 Sections. Do not install surface-mounted items until finishes have been completed on substrates involved.

D. Thresholds: Set thresholds for exterior and acoustical doors in full bed of sealant complying with requirements specified in Division 7 Section "Joint Sealants."

E. Storage: Provide a secure lock up for hardware delivered to the project but not yet installed. Control the handling and installation of hardware items so that the completion of the work will not be delayed by hardware losses before and after installation.

3.4 FIELD QUALITY CONTROL

A. Field Inspection (Punch Report): Reference Division 01 Sections “Closeout Procedures”. Produce project punch report for each installed door opening indicating compliance with approved submittals and verification hardware is properly installed, operating and adjusted. Include list of items to be completed and corrected, indicating the reasons or deficiencies causing the Work to be incomplete or rejected.

1. Organization of List: Include separate Door Opening and Deficiencies and Corrective Action Lists organized by Mark, Opening Remarks and Comments, and related Opening Images and Video Recordings.
2. Submit documentation of incomplete items in the following formats:

    a. PDF electronic file.
    b. Electronic formatted file integrated with the Openings Studio™ door opening management software platform.

3.5 ADJUSTING

A. Initial Adjustment: Adjust and check each operating item of door hardware and each door to ensure proper operation or function of every unit. Replace units that cannot be adjusted to operate as intended. Adjust door control devices to compensate for final operation of heating and ventilating equipment and to comply with referenced accessibility requirements.

3.6 CLEANING AND PROTECTION

A. Protect all hardware stored on construction site in a covered and dry place. Protect exposed hardware installed on doors during the construction phase. Install any and all hardware at the latest possible time frame.

B. Clean adjacent surfaces soiled by door hardware installation.

C. Clean operating items as necessary to restore proper finish. Provide final protection and maintain conditions that ensure door hardware is without damage or deterioration at time of owner occupancy.

3.7 DEMONSTRATION

A. Instruct Owner's maintenance personnel to adjust, operate, and maintain mechanical and electromechanical door hardware.

3.8 DOOR HARDWARE SETS

A. The hardware sets represent the design intent and direction of the owner and architect. They are a guideline only and should not be considered a detailed hardware schedule. Discrepancies, conflicting hardware and missing items should be brought to the attention of the architect with corrections made prior to the bidding process. Omitted items not included in a hardware set should be scheduled with the appropriate additional hardware required for proper application and functionality.

1. Quantities listed are for each pair of doors, or for each single door.

2. The supplier is responsible for handing and sizing all products.

3. Where multiple options for a piece of hardware are given in a single line item, the supplier shall provide the appropriate application for the opening.

B. Manufacturer's Abbreviations:

1. MK - McKinney
2. OT - Other
3. MR - Markar
4. SU - Securitron
5. RO - Rockwood
6. AD - Adams Rite
7. SA - SARGENT
8. RF - Rixson
9. PE - Pemko

END OF SECTION 087100

Five Knuckle Heavy Weight Full Mortise Series

Recommended for use on high frequency and/or heavy wood or metal doors in schools, hospitals or other public buildings where heavy traffic is experienced.

- Heavy weight hinges should be used on all extra heavy doors or those exposed to high frequency use
- T4A3386- Stainless steel base or available in brass base material polished
- T4A3786- Steel base material
- For Beveled Edge, where doors are beveled on hinge side, specify T4A4386 or T4A4786
- For available finishes see page 28

Note: 8" x 6" and 8" x 8" have six bearings. Specify T6B3386 or T6B3786.

* Not available in brass base material.
** Available in steel only.
***Available in stainless steel only.
****FT tips not offered on 6" and 8" sizes, BT and ST not offered on 8" sizes.

Options:

Code	Description
NRP	Non-Removable Pin
T4B	Ball Bearing
TCA	Concealed Bearing
RC	Round Corner – 1/4" radius furnished unless specified otherwise
HT	Hospital Tip
BT**	Ball Tip
FT **	Flat Tip
ST**	Steeple Tip
SSF	Safety Stud Feature
RB	Raised Barrel*
QC	ElectroLynx® Hinge – 4, 8 or 12 wire available
CC	Concealed Circuit – 4, 8 or 12 wire available
CC-18	Concealed Circuit – 2, 4, 6, 8 or 10 wire available (2-18AWG wires and the remainder 28AWG wires)
MM	Magnetic Monitoring

* Refer to page SP-3 for Raised Barrel.

Hinge Pins

Pins, by design, are non-rising.

Two Knuckle

Pins on bearing hinges are furnished in stainless steel.

Three Knuckle

Pin stems in all non-ferrous bearing hinges are stainless steel.
Pins in all ferrous hinges are steel.

Five Knuckle

Pins on all non-ferrous bearing hinges are stainless steel with button tips.

Pins on all ferrous hinges are steel.

Non-Removable Pins

NRP

A set screw is driven into the barrel of the hinge that is inaccessible when the door is in the closed position. To order, add the suffix "NRP" to the hinge number.

NRD

Two knuckle hinges are available with a non-removable pin which features a dowel which is force fitted into the jamb leaf. When the door is hung, the pin is completely concealed and impossible to remove. One doweled hinge is usually furnished per set of three. To order, add the suffix "NRD" to the hinge number.

Markar 300 Series Pin & Barrel Type Continuous Stainless Steel Hinges

Short Form Architectural Specification:

Continuous hinges shall be full height piano-type hinge providing full height door support.

- Supports weights up to 600 lbs. 4' 0" maximum door width
- Material to be 14 gauge Stainless Steel
- .187" diameter Stainless Steel pin (rod)
- Exterior barrel diameter .438" ($^{7}/_{16}$")
- Each knuckle 2", including nylon bearing at each separation for a quiet, smooth, self-lubricating operation
- Finish: US32D Satin Stainless Steel (630)
  Optional Finish: US32 Bright Stainless Steel (629), Scratch-Resistant Powder Coated Paint.
- All hinges shall be furnished with manufacturer's recommended hardware pack per specific model application
- Must be able to carry Warnock Hersey Int. or UL for fire rated doors and frames up to 3 hours
- Hinges shall meet ANSI/BHMA Standard A 156.26 Grade 1
- Symmetrically templated hole pattern

Note: 25-Year Warranty on Continuous Pin & Barrel Hinges

Note: Fire label for doors and frames should be placed on the header and top rail of fire rated doors and frames

Markar FM300 Edge Mount Hinge

Standard Features

Barrel Type Hinge
.187" diameter Stainless Steel pin (rod)
Medical bearings
Stainless Steel end pins

Material
Heavy-duty 14 gauge Stainless Steel

Finishes
US32D Satin Stainless Steel (630)

Standards
ANSI/BHMA Standard A156.26 Grade 1

Hole Pattern
Symmetrically templated

Mounting Hardware
Fasteners concealed when door is closed
Custom 12-24 x $^{11}/_{16}$" S.S Phillips Flat Head Undercut TEK Screws

Capacity
Supports weights up to 600 lbs.
4'0" maximum door width

Standard Sizes
6'8", 7'0", 7'2", 8'0", 10'0"

Handing
Handing not required on standard hinges. Specify handing when ordering a hinge with modification.

Rating
3 hours- hollow metal doors
90 minutes- hollow metal and composite core wood fire doors
20 minutes- wood doors

Classified in accordance with UL10C for positive pressure

Fire-rated label

Windstorm
Evaluated in accordance with TAS 201-94, TAS 202-94, TAS 203-94, ASTM E330, ASTM E1886, ASTM E1996 and ANSI A250.13

Optional Features

Finishes
Scratch-Resistant Powder Coated Paint

Fasteners
Tamper-proof security screws

Other Features
Custom lengths- specify in inches
Custom hole pattern

Dutch door hinges- suffix "DDP"
Hospital tips - suffix "HT"
Raised barrel - suffix "RB"
Welded end pins
Security studs.

Electrical Modifications
Adjustable Monitoring Switch - "AMS"

Current Transfer Prep - suffix "CTP"
Electrical Transfer Access Prep - suffix "ETAP"

ElectroLynx®
EL4 (4 wire), EL8 (8 wire), EL12 (12 wire)

This edge-mounted pin & barrel hinge is used on many of today's high traffic, high abuse doors. The hinge works well in locations that would normally call out for anchor hinges, pivot reinforcement hinges or thrust pivot unit and hinge sets. This hinge saves on special door and frame preparation charges and makes the installer's job easier. It can be used on both fire labeled and non-labeled openings.

CEPT

Concealed Electrical Power Transfer

Beautifully Crafted, Compact, Secure Power Transfer

The heavy-duty, tamper-resistant Concealed Electrical Power Transfer (CEPT) securely transfers power and data from the hinge side of the frame to electrified hardware on the door. The unit is discreetly concealed between the frame and door when the door is closed. Available in three multi-wire configurations and four finishes, the CEPT complements any architectural setting.

PRODUCT FEATURES

- Mortises into the edges of the door and frame
- Direct retrofit for competitor products
- Tamper resistant
- All metal construction including back boxes
- 7/8" knockouts on back boxes accommodate EMF-type fittings
- Tested to 1,000,000 cycles
- Compatible with butt hinges up to 6" and continuous hinges with cutout
- MagnaCare® lifetime replacement, no fault warranty

PRODUCT OPTIONS

- CEPT-10 includes 8-22 AWG wires plus 2-18 AWG wires for higher-current devices
- CEPT-C5E includes CAT5E compatible with 9 - 22 AWG wire stranded conductor, Molex connectors
- EL-CEPT is ElectroLynx® compatible with 12-22 AWG wires, ElectroLynx® connectors

SPECIFICATIONS

- ANSI/UL 10C Listed, 3 hour rated
- ULC-S318 Listed, 3 hour rated
- ANSI/SDI-BHMA A250.13 (+/- 150 psi) Windstorm Listed
- Florida Building Code Approved
- Patents: 8,448,382; 2,714,685 (Canada)

Dimensions:
CEPT Housing
9-1/16"L x 1-3/16"W x 1-7/16"D

Shipping Weight:
2.40 lbs [1.09kg]

Finishes:
US32D/630 - Stainless Steel
US04/606 - Dull Brass
US10/612 - Dull Bronze
US10B/613 - Oil Rubbed Bronze

Automatic Flush Bolt No. 2940 (Automatic Top Bolt Only) No. 2942 (Set) (replaces No. 1840 and No. 1842)

Material: Brass, stainless steel

Finishes: US3, US4, US10, US10B, US26, US26D, US32D

Fastener: No. 2940: 6 ea. #8 x 3/4" FH combo screws, 2 ea. #8 - 32 x 1/2" FH MS, 3 ea. #10 x 1" FH WS
NOTE: No plastic anchor required for top only.
No. 2942: 12 ea. #8 x 3/4" FH combo screws, 4 ea. #8 - 32 x 1/2" FH MS, 6 ea. #10 x 1" FH WS, 2 ea. #6 - 8 plastic anchors

Features:
- For Wood Doors labeled B, C, D & E up to 4'w x 8''h
- Non-handed
- Fully automatic—opening active door retracts top and bottom bolts
- Override feature prevents damage to doors or bolts if bolt heads are blocked from entering strikes
- Bolt head rods are adjustable up to 1/2"
- Thermal lock automatically locks the inactive door under high heat conditions due to fire

Options: No. 2942 can be used with the No. 570 Dust Proof Strike (shown on page E4).

No.	Size	Weight	ANSI A156.3
2940	1" x 8 1/2"	1.5 lbs.	Type 25
2942	1" x 8 1/2"	2.9 lbs.	Type 25

Combination Flush Bolts No. 2905 (Self Latching Top Bolt Only) No. 2945 (Set) (replaces No. 1905 and No. 1945)

Material: Brass, stainless steel

Finishes: US3, US4, US10, US10B, US26, US26D, US32D

Fastener: Top: 4 ea. #8 x 3/4" FH combo screws, 2 ea. #8 - 32 x 1/2" FH MS, 3 ea. #10 x 1" FH WS.
NOTE: No plastic anchor required for top only.
Bottom (No. 2945 only): 10 ea. #8 x 3/4" FH combo screws, 4 ea. #8 - 32 x 1/2" FH MS, 6 ea. #10 x 1" FH WS, 2 ea. #6 - 8 plastic anchors

Features:
- For Wood Doors labeled B, C, D & E up to 4'w x 8'h

Top Bolt
- Automatically engages when the inactive door closes. When the active door is opened, the inactive door stays latched at the top until the top bolt is released by pressing the plunger button on the bolt face

Bottom Bolt (No. 2945 only)
- Non-handed
- Fully automatic — opening active door retracts bottom bolt
- Override feature prevents damage to door or bolt if bolt head is blocked from entering strike
- Bolt head rod is adjustable up to 1/2"
- Thermal lock automatically locks the inactive door under high heat conditions due to fire

Options: No. 2945 can be used with the No. 570 Dust Proof Strike (shown on page E4).

No.	Size	Weight	ANSI A156.3
2905	1" x 8 1/2"	1.5 lbs.	Type 27
2945	1" x 8 1/2"	2.9 lbs.	Type 27

ASSA ABLOY

The global leader in door opening solutions

Automatic Flush Bolts No. 2840 (Automatic Top Bolt Only) No. 2842 (Set) (replaces the No. 1840 and No. 1842)

Material: Brass, stainless steel

Finishes: US3, US4, US10, US10B, US26, US26D, US32D

Fastener: No. 2842: 20 ea. #8 x 3/4" FH combo screws, 2 ea. #6 - 8 plastic anchors
No. 2840: 10 ea. #8 x 3/4" FH combo screws. NOTE: No plastic anchor required for top only

Features:
- For Fire Rated Metal Doors labeled A, B, C, D & E up to 4'w x 8'h
- Non-handed
- Fully automatic– opening active door retracts top and bottom bolts
- Override feature prevents damage to doors or bolts if bolt heads are blocked from entering strikes
- Bolt head rods are adjustable up to 1 1/2"
- Thermal lock automatically locks the inactive door under high heat conditions due to fire

Options: No. 2842 can be used with the No. 570 Dust Proof Strike (shown on page E4).

No.	Size	Weight	ANSI A156.3
2840	1" x 6 3/4"	1.2 lbs.	Type 25
2842	1" x 6 3/4"	2.4 lbs.	Type 25

Combination Flush Bolts No. 2805 (Self Latching Top Bolt Only) No. 2845 (Set) (replaces No. 1805 and No. 1845)

Material: Brass, stainless steel

Finishes: US3, US4, US10, US10B, US26, US26D, US32D

Fastener: Top: 8 ea. #8 x 3/4" FH combo screws. *NOTE: No plastic anchor required for top only.*
Bottom (No. 2845 only) 18 ea. #8 x 3/4" FH combo screws, 2 ea. #6 - 8 plastic anchors.

Features:
- For Fire Rated Metal Doors labeled A, B, C, D & E up to 4'w x 8'h

Top Bolt
- Automatically engages when the inactive door closes. When the active door is opened, the inactive door stays latched at the top until the top bolt is released by pressing the plunger button on the bolt face

Bottom Bolt (No. 2845 only)
- Non-handed
- Fully automatic — opening active door retracts bottom bolt
- Override feature prevents damage to door or bolt if bolt head is blocked from entering strike
- Bolt head rod is adjustable up to 1 1/2"
- Thermal lock automatically locks the inactive door under high heat conditions due to fire

Options: No. 2845 can be used with the No. 570 Dust Proof Strike (shown on page E4)

No.	Size	Weight	ANSI A156.3
2805	1" x 6 3/4"	1.2 lbs.	Type 27
2845	1" x 6 3/4"	2.4 lbs.	Type 27

Lever Extension Flush Bolt With Bottom Fire Bolt No. 557 x 19BFB

Material: Flush bolt – brass
Bottom fire bolt – stainless steel

Finishes: Available in standard architectural finishes (see page 9)

Fastener: 7 ea. #8 x 3/4" FH combo screws
4 ea. #8 - 32 x 1/2" FH MS
4 ea. #8 counter sunk washer

Features:
- For Fire Rated Plastic & Wood Covered Fire Doors measuring up to 4'w x 9'h rated up to 20 minutes
- 3/4" bolt throw, 3/4" backset; door strength maintained by corner reinforcing plate
- When door is subjected to 230°F the plug and black plastic cover will melt allowing the bolt to project, locking the leaves together
- Bottom fire bolt eliminates need for floor prep
- Oversize fire bolt strike hole allows for slight door misalignment

No.	Size	Weight
557 x 19BFB	Top bolt: 1" x 6 3/4" Bottom bolt: 13/16" dia.	0.9 lbs.

Dust Proof Strike No. 570

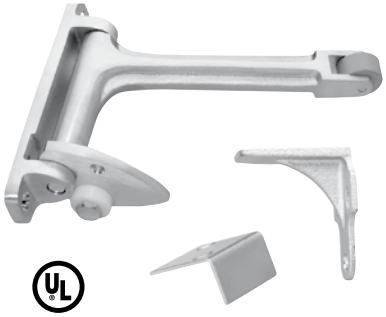
Material: Brass

Finishes: Available in standard architectural finishes (see page 9)

Fastener: Adjustment nut
Spanner wrench
2 ea. #8 x 1 OH SMS, 2 ea. plastic anchors
2 ea. #8 - 32 x 3/4" OH MS, 2 ea. lead anchors

Features:
- Works with all Rockwood manual and automatic flush bolts
- Removable face plate for use with thresholds
- Adjustable height for carpeted areas

No.	Size	Weight	ANSI A156.16
570	Face plate: 1 3/8" x 2 7/8" Barrel: 7/8" dia. x 2" depth	0.4 lbs.	L04021



Gravity Door Coordinator No. 576

Material: Cast brass

Finishes: Available in standard architectural finishes (see page 9).

Fastener: Body: 2 ea. #10 x 1" FH SMS, 2 ea. #10 - 24 x 1" FH MS
Strike: 5 ea. #8 x 1" FH SMS

Other:
- For use on door sizes:
  - with Astragal on active door – 18" to 48"
  - with Astragal on inactive door – 18" to 34"
  - with Astragal on both doors – 18" to 30"
- The overlap of the astragal is maximum 7/8" with door hung on standard hinges. Customer must contact the factory for all other astragal situations

Features: Non-handed reversible. Prevents the active door from closing until the inactive door is closed

No.	Size	Projection	Weight	ANSI A156.3
576	1" x 5 7/16"	7"	2.2 lbs.	Type 21

Mortise Locks

ASSA ABLOY, the global leader
in door opening solutions

Specifications & Certifications

8200/R8200/7800 Mortise Locks

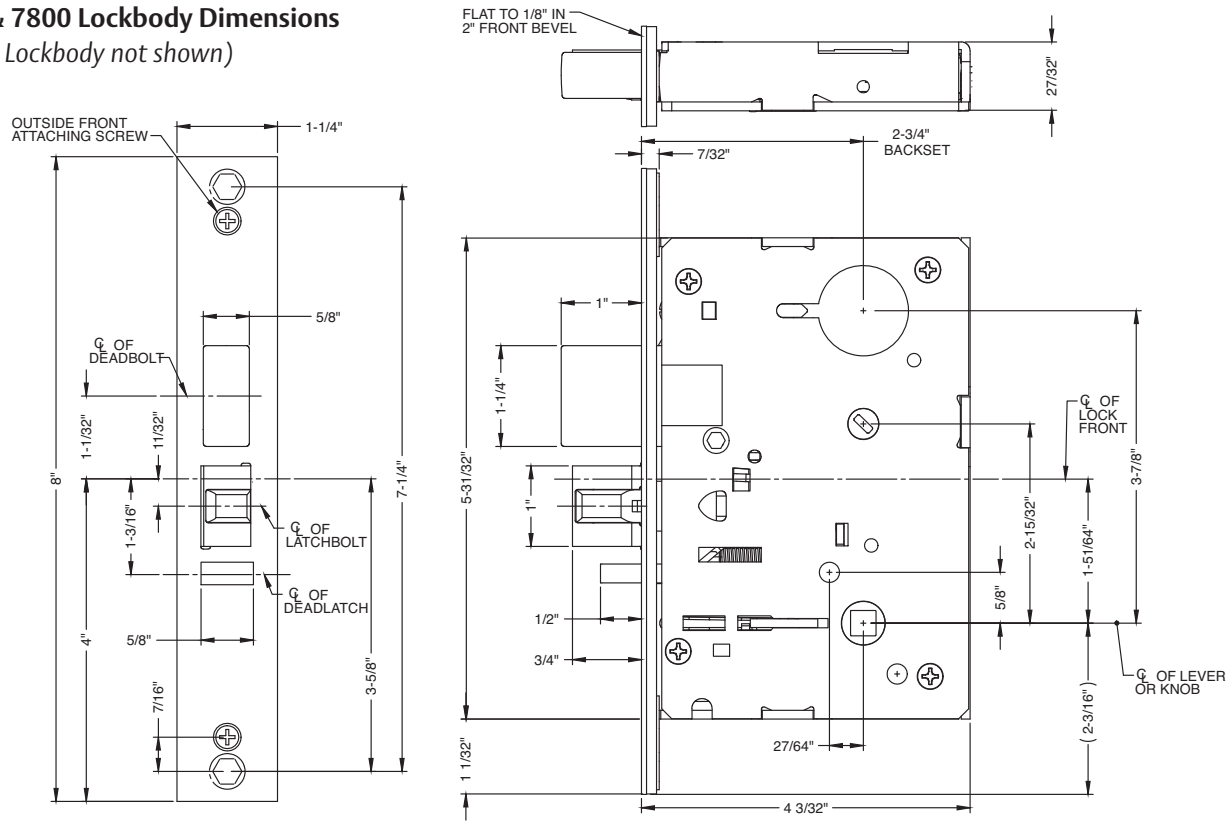
Certification Compliance

ANSI/BHMA	Certified to ANSI/BHMA A156.13 Series 1000 Operational Grade 1 and Security Grade 1 with all standard trims. ANSI/ASTM F476-84 Grade 40 with concealed mortise cylinder. **Note:** LFIC (Removable) Cylinders and SFIC Cylinders do not meet Security Grade 1 requirements.
ADA	Meets A117.1 Accessibility Code. Meets BOMA International 4.13.8 Complies with American Disability Act; Consult local authorities
UL-cUL	UL and cUL Listed to US and Canadian safety standards for A label 4 x 10 single and 8 x 10 double (3 hour fire door) and lesser class doors, stamped letter F and UL symbol on armored front indicate listing
Positive Pressure	Meets ANSI/UL 10C, Positive Pressure Fire Test of Door Assemblies
California	California State Reference Code (Formerly Title 19, California State Fire Marshal Standard) All levers with returns comply; levers return to within 1/2" (13mm) of door face
Tornado and Hurricane Codes	See page 4

Any retrofit or other field modification to a fire rated opening can potentially impact the fire rating of the opening, and Sargent Manufacturing Company makes no representations or warranties concerning what such impact may be in any specific situation. When retrofitting any portion of an existing fire rated opening, or specifying and installing a new fire-rated opening, please consult with a code specialist or local code official (Authority Having Jurisdiction) to ensure compliance with all applicable codes and ratings.

8200 & 7800 Lockbody Dimensions

(R8200 Lockbody not shown)



Note: R8200 and 8200 lockbodies are dimensionally the same except for the through-bolt locations

Explanation of the 8200/7800 Lockbody types:

Lockbody Type[1]	Trim Available x Lockbody type	Standard 8200 Door Prep	Through Bolted Trim	Multi-function lockbody available	How to order lockbody only
8200	Lever x Rose/Escutcheon	Yes	Yes	Yes	82 x Function x Finish[3]
7800	Knob x Rose/Escutcheon	Yes	Yes	Yes	78 x Function x Finish[3]
R8200	Simpli™ roseless trim	No	Yes[2]	Yes	R82 x Function x Finish[3]
8200 for ALP	ALP Push/Pull Trim	Yes	Yes	Yes	Six Digit Part # determined by function*
7800 PT	PT Push/Pull Trim	Yes	Yes	Yes	Six Digit Part # determined by function*

[1] Lockbodies can only be used with the specified trim
[2] Through Bolt locations are different from standard trim, special door prep required
[3] **Note:** Cylinder and trim not included. Outside front, strike and screw pack are included
* See Price book; **Note:** Outside Fronts, Strikes, Cylinders and Trim are NOT included

Windstorm Certifications

SARGENT
ASSA ABLOY

Windstorm Certifications: Florida Building Codes & UL Listings

SARGENT Manufacturing's products meet building codes that require hurricane, windstorm and FEMA certifications, including some of the most stringent building codes as specified in the Florida Building Code, Miami Dade Code and the International Building Code. Listed below are certifications and standards met by the 7800/8200 lock.

Florida Building Code: FL2998
UL Certification Directory: ZHEM.R21744 – Latching Hardware

ANSI/SDI-BHMA A250.13	"Testing and Rating of Severe Windstorm Resistant Components for Swinging Door Assemblies"
ANSI/ASTM E330	"Standard Test Method for Structural Performance of Exterior Windows, Doors, Skylights and Curtain Walls by Uniform Static Air Pressure Difference"
ANSI/ASTM E1886	"Standard Test Method for Performance of Exterior Windows, Curtain Walls, Doors, and Impact Protective Systems Impacted by Missile(s) and Exposed to Cyclic Pressure Differentials"
ASTM E1996	"Standard Specification for Performance of Exterior Windows, Curtain Walls, Doors and Impact Protective Systems Impacted by Windborne Debris in Hurricanes"
(TAS) 201	"Impact Test Procedures"*
(TAS) 202	"Criteria for Testing Impact and Non-Impact Resistant Building Envelope Components Using Uniform Static Air Pressure"
(TAS) 203	"Criteria for Testing Products Subject to Cyclic Wind Pressure Loading"*

* Published in the "Florida Building Code"

UL Certification Directory: ZHLL.R21744 – Products for Use in Windstorm-rated Assemblies

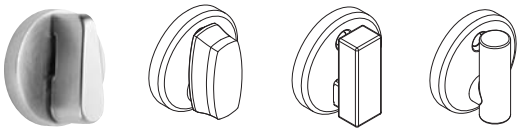
Certifications to meet assembly requirements are done in conjunction with doors from ASSA ABLOY Group companies CECO DOOR and CURRIES.

ASTM E330	"Standard Test Method for Structural Performance of Exterior Windows, Doors, Skylights and Curtain Walls by Uniform Static Air Pressure Difference"
ANSI/ASTM E1886	"Standard Test Method for Performance of Exterior Windows, Curtain Walls, Doors, and Impact Protective Systems Impacted by Missile(s) and Exposed to Cyclic Pressure Differentials"
ASTM E1996	"Standard Specification for Performance of Exterior Windows, Curtain Walls, Doors and Impact Protective Systems Impacted by Windborne Debris in Hurricanes"
AAMA/WDMA/CSA 101/I.S.2/A440	"Standard/Specification for Windows, Doors, and Unit Skylights"

Thumbturn Designs

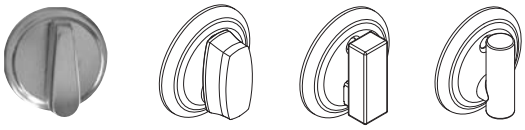
8200/R8200/7800 Mortise Locks

130KB Round Backplate
(Shown with Standard Turn)



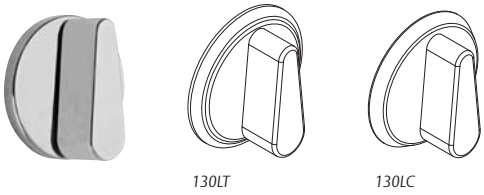
- Round backplate supplied standard with L, O, LN roses and R8200 roseless trim
- Standard turn automatically supplied with sectional trim for R8200 & 8200 locks
- Specify T1, T2 or T3 as an option for decorative turns
- 1-1/2" (38mm) round brass or stainless steel plate
- Meets ADA Requirements

130KT Traditional Backplate
(Shown with Standard Turn)



- Dual radii edge backplate supplied standard with TO and TR roses
- Standard turn automatically supplied with sectional trim for R8200 & 8200 locks
- Specify T1, T2 or T3 as an option for decorative turns
- 1-3/4" (44mm) round brass plate
- Meets ADA Requirements

130LB Large Round Backplate
(Shown with Large ADA Turn)

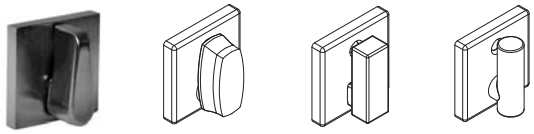


- Available with R8200 & 8200 with sectional trim
- 40% larger than standard thumbturn
- Specify LB as an option for ADA turn
- 2" (51mm) round brass, zinc, or stainless steel plate & turn
- 130LT - Traditional backplate, 130LC — Contemporary backplate
- Meets ADA Requirements

126 T-Turn
(7892 function only)

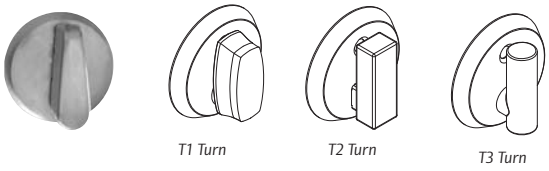
- 2-3/16" (56mm) round stainless steel backplate
- 2-3/8" (61mm) tall thumbturn
- Available in brass or bronze finishes only
- Surface mounted with three screws
- Order as "SST" trim with 7892 function

130KA Square Backplate
(Shown with Standard Turn)



- Square backplate supplied standard with E, E2, E3 or E4 roses
- Standard turn automatically supplied with sectional trim for R8200 & 8200 locks
- Specify T1, T2 or T3 as an option for decorative turns
- 1-1/2" (38mm) round brass or stainless steel plate
- Meets ADA Requirements

130KC Contemporary Backplate
(Shown with Standard Turn)



- Beveled edge backplate supplied standard with CO and CR roses
- Standard turn automatically supplied with sectional trim for R8200 & 8200 locks
- Specify T1, T2 or T3 as an option for decorative turns
- 1-3/4" (44mm) round brass or stainless steel plate
- Meets ADA Requirements

130KBHA Turn for use with 8200 Mortise BHW, ALP, BHL and BHD Trim

- 3-3/4" x 2-1/2" rectangular shape
- Stainless steel housing
- Meets ADA and OMH Requirements

130W Round Backplate
(Shown with Standard Turn)

- Used with 7800 with sectional trim
- 1-1/2" (38mm) round brass or stainless steel plate

Emergency Releases & Accessories

8200/R8200/7800 Mortise Locks

SARGENT
ASSA ABLOY

Emergency Releases

184KB Emergency Release (used with R8200 & 8200 with sectional trim)

- 1-1/2" (38mm) round brass, bronze or stainless steel plate
- For 65, 66 and 68 functions only

Studio Collection Emergency Release

- 184KC Emergency Release Contemporary
- 184KT Emergency Release – Traditional

184W Emergency Release (used with 7800 with sectional trim)

- 1-1/2" (38mm) round brass, bronze or stainless steel plate
- For 65, 66 and 68 functions only

184KA Emergency Release (used with E rose)

- 1-1/2" (38mm) square brass, bronze or stainless steel plate
- For 65, 66 and 68 functions only

Emergency Key 14-0057

- Carbon steel
- For 65, 66 and 68 functions only
- Must be ordered separately

184KBHA Emergency Release (used with BHW, ALP, BHL and BHD trim)

- 3-3/4" x 2-1/2" rectangular shape
- Stainless steel housing
- Meets ADA and OMH Requirements

Accessories

130KBCVR Cap

- Thumbturn plate
- Covers hole in door when thumb turn is no longer needed

82-4023 Cap

- 2" round
- Covers hole for levers and roses

Door Thickness	Part Number
1-3/8"	82-4022
1-3/4"	82-4023
2"	82-4024
2-1/4"	82-4025

Trim One Side Kit

Refer to page 42 for a complete list of kits

Indicators and Escutcheon Engraving

8200/R8200/7800 Mortise Locks

SARGENT
ASSA ABLOY

Sectional Trim - Indicators

49- Option Visual Status Indicator for Non Secure Applications

- Designed to work with Classroom security functions
- Red/White indicator plate standard
- Mounts on inside of door
- Functions and Roses available:
  – 30, 36 & 37 Functions with 7800, 8200 and R8200 locks, CR, L, LN, TR, E & O Roses
  – 26, 29, 38, 39, 40 and 41 Functions with 7800, 8200, and R8200 locks & LN Roses Only
- As retrofit, order 185C x finish

Inside Only

185C

49- Option Occupancy Indicator with Emergency Release

- Ideal for restrooms or conference rooms where easy determination of use needs to be made
- OCC/VAC indicator plate standard
- Mounts on outside of door
- Emergency coin operated release standard
- Functions and Roses available:
  – 65, 66, 68 Functions with 7800, 8200, and R8200 locks, CR, E, L, LN, O & TR Roses
- As retrofit, order 185P x finish

185P

50- Option Secured Indicator Rose

- Non-handed with lever and mounting posts field reversible
- VAC/OCC indicator plate standard
- Mounts on outside of door
- Available for the following functions: 24, 25, 26, 28, 29, 30, 36, 37, 38, 39, 40, 41, 43, 45, 50, 51, 52, 57, 58, 67 - with Rose Trim only
- Patent pending design
- Not available with Roseless trim (R8200)
- For retrofit, order 185S x suffix x finish:

Suffix	Door Thickness
-1	1-3/8" (35mm)
-2	1-3/4" (44mm)
-3	2" (51mm)
-4	2-1/4" (57mm)

Note: For 49- and 50- Options, key will not retract latch when used with 37 and 38 functions

Escutcheon Trim - Indicators

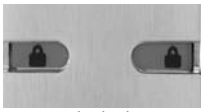
- Red/white plate with locked/unlocked icons
- Available with LE1/KE1 Escutcheons only
- Available finishes: 03, 04, 09, 10, 10B, 10BE, 10BL, 14, 15, 20D, 26, 26D, 32, 32D, BSP, WSP
- Available with MicroShield®
- Windows allow 180° view
- See chart for function availability

Options:

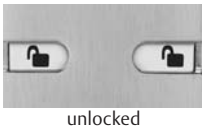
VNA - Indicator located on outside of door

VNB - Indicator located on inside of door

VNC - Indicator located on inside and outside of door



locked



unlocked

Escutcheon Trim - Engraving

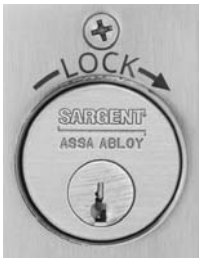
- Laser engraving with "LOCK" and directional arrow
- Available with LE1/KE1 Escutcheons only
- Available finishes: 03, 04, 14, 15, 26, 26D, 32, 32D
- Available with MicroShield®
- Door handing must be specified
- See chart for function availability

Options:

EMA - Engraving located on outside of door

EMB - Engraving located on inside of door

EMC - Engraving located on inside and outside of door



Note: If indicators and engraving are ordered together, finish offering is limited to 03, 04, 14, 15, 26, 26D, 32, 32D

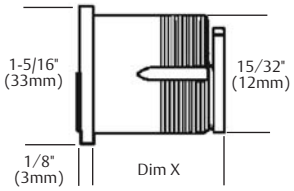
40 Series Type Cylinder

- Cylinder body: Solid brass
- Cap: Brass, bronze or stainless steel
- All functions take a Standard Cam Functions
- Standard Cam 13-0664
- 16 & 92 Inside Cam -105
- 50 Hotel Cam -115 supplied standard with all Hotel Function Cylinders



7850/8250 Function Hotel Cylinder

- When door is locked by deadbolt, only emergency key is able to unlock
- Must request emergency key separately (14-0036 x keying info)
- Supplied with Cam suffix -115 for Hotel Functions

78- Option Exposed Barrel

- Standard for use only with SARGENT Escutcheon Trims KE3, KE4, LE3, LE4
- Available 6-Pin standard or 7-Pin optional
- NOT available with 50-, 60-, 70- or other specialty or higher security options
- See function table for cam required
- Not available in 50 function
- Plug finishes: 4, 15 (similar to 26 finish)

124 Series Mortise Cylinder Turn Lever

- Turn lever: Brass, bronze or aluminum
- Cap: Brass, bronze or stainless steel
- Must be ordered separately

10- Option Signature Series

- The protected system offers the building owner full control over duplication of keys. Highly pick-resistant cylinders
- 10-63- Option — Signature cylinder with Large Format Interchangeable Cores

F1-82- and 82- Option KESO

- The system offers the building owner full control over duplication of keys
- Highly pick-resistant cylinders
- Expanded levels of masterkeying
- F1-83- & 83- Option — Keso removable core
- 84- Option — Keso construction core cylinder

11- Option XC Key System

- Patented system works with existing SARGENT keyway adding increased security
- 11- XC standard cylinder
- 11-63- Large format interchangeable core
- 11-73- Small format interchangeable core

DG1, DG2, DG3 - Degree Series

- Utility patented, bump resistant and requires the use of a patented key
- All three locking mechanisms within the same system to be operated with just one key
- See Degree Key System Catalog for available options

For complete cylinder information, see Cylinders & Components, Degree, Signature, Keso, Keso F1 or XC catalogs.

51- Option Old Style Removable Core

- Available for **existing systems only** Permanent Removable Cores
- Control key used to remove core, must request control key separately

60- or 70- Option Plastic Construction Core

- For doors that do not require key locking during the construction period
- Operate with coin or flat screw driver
- For use with LFIC (removable) (60- Option) or SFIC (70- Option) core

63- Option Large Format Interchangeable (Removable) Core

- Allows immediate removal of the core. Virtually unlimited key changes
- Available 10-63-, 11-60-, 11-63- & 11-64-
- For disposable core, see 60- Option
- 64- Option- LFIC 6-Pin construction core
- Control key used to remove core, must request control key separately

7300B Interchangeable Core

- Small Format Interchangeable Core
- SARGENT Interchangeable Core cylinders and MasterKey Systems are available for increased security through quick change of keying. It is unnecessary to remove a cylinder
- SARGENT 7300B Interchangeable Cores are available in SARGENT 4A and 4B keyways, as well as the following standard competitor keyways: A, B, C, D, E, F, G, H, J, K, L, M
- For disposable core, see 70- Option
- 65-73 Option — 6-Pin Small Format Interchangeable Cores-uncombinated
- 65-73-7P Option — 7-Pin Small Format Interchangeable Cores-uncombinated
- 70- Option — Small Format Interchangeable disposable core
- 72- Option — Small Format Interchangeable construction core
- 11-72- Construction core provided for use with 11-7300 cylinder housing

  11-70- temporary plastic core prepared to accept 11-7300 core
- 73- Option — 6-Pin Small Format Interchangeable core, SARGENT 4A, 4B keyways
- 73-7P Option — 7-Pin Small Format Interchangeable core, SARGENT 4A, 4B keyways
- Control key used to remove core (provided separately)

1SB Cylinder Collar

- Standard for 7800 BHD, 8200 BHL & BHW mortise locks
- Stainless steel
- 1-29/32" diameter
- Finishes: 32, 32D
- Available in 4 sizes. See page 36 for specifics on collar sizes and measurements

21- Option Lost Ball Construction System

- The SARGENT construction keying system protects the building owner by providing temporary masterkeying during the construction period

1KB Rosette with 8200 & R8200 sectional trim

- Used with mortise cylinders and No. 90 blocking rings when cylinders project from door
- Furnished standard with L, O, LN, CO, CR, TO and TR roses
- Brass, bronze or stainless steel
- 1-1/2" (38mm) diameter, includes compression spring
- Finishes: 3, 4, 10, 10B, 10BE, 10BL, 20D, 26, 26D, 32, 32D, BSP, WSP
- Projection from door:

1KB-1	5/16" (8mm) — Standard
1KB-2	7/16" (11mm)
1KB-3	9/16" (14mm)

IKA Rosette with 8200 sectional trim

- Used with mortise cylinders
- Furnished standard with the E, E2, E3 and E4 roses
- Brass, bronze or stainless steel
- 1-1/2" (38mm) Square, includes compression spring
- Projection from door:

1KA-1	5/16" (8mm) — Standard
1KA-2	7/16" (11mm)
1KA-3	9/16" (14mm)
1KA-4	11/16" (16mm)

- Finishes: 3, 4, 10, 10B, 10BE, 10BL, 20D, 26, 26D, 32, 32D, BSP, WSP

No. 97 Rosette

- Standard for cylinders ordered separately from hardware
- Standard for 7800 knob mortise & 4870 deadbolt
- Brass, bronze or stainless steel
- 1-11/16" diameter (43mm), 9/32" (7mm) projection, includes compression spring
- Finishes: 3, 4, 10, 10B, 10BE, 10BL, 20D, 32, 32D, BSP, WSP

No. 90 Blocking Ring

- Used with 1KB rosettes as spacer when mortise cylinder projects from face of door
- Brass, bronze or stainless steel
- Finishes: 3, 4, 10, 10B, 10BE, 10BL, 20D, 26, 26D, 32, 32D, BSP, WSP

1KB-5 Cylinder Retaining Cap

- Required for double cylinder functions on KS and LS Escutcheon *only*
- Steel or stainless steel
- 1-15/32" (37mm) diameter
- 9/16" (14mm) projection
- Finishes: 3, 4, 9, 10, 10B, 10BE, 10BL, 20D, 26, 26D, 32, 32D, BSP, WSP

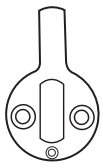
-105 Cam (13-0665) 16 & 92 Function Inside Cylinder Cam



-115 Cam (13-2045) 50 Function Hotel Cam, supplied with 50 function cylinders

See Cylinder catalogs for additional information

SARGENT Large Format Interchangeable Core Cylinders

- 6300 Cams are factory installed and are not removable
- 6300 Cams are not sold separately
- Specify required Cam as a suffix: 63-44-105 cam
- For Standard Cam: no suffix is required

Std 6300 Cam for all functions except for 50 and the Inside cam for 16 & 92 function locks

-105 Cam for 6300 Series 16 & 92 function I/S Cylinder

-115 Cam for 6300 Series 50 (Hotel) function, supplied with 50 function cylinders

Mechanical Options

8200/R8200/7800 Mortise Locks

SARGENT®
ASSA ABLOY

Mechanical Options:

Available mechanical options by lock type

Categories	How to Specify	Detailed Description	8200	R8200	7800
1-3/8" Door	1-	1-1/16" (27mm) wide front for 1-3/8" (35mm) doors (not available with RX-Option) (1- for 93 + 94 function is a special order)	X	-	X
Add Strength	3-	Stainless steel hubs with in the mortise lock	X	-	
Strike Option	23-	4-7/8" (124mm) ANSI flat lip strike	X	X	X
	OBS-	Open back strike	X	X	X
	WBS-	Wrought box strike	X	X	X
Thick Doors	31-	For doors 1-7/8" (48mm) to 2-1/4" (57mm) thick — see cylinder options for limitations on door thickness. When ordering the following information is required: Location of lock within the door, door thickness -IF PANELED -must specify panel thickness & panel location (inside or outside of the door) For doors thicker than 2-1/4" — consult factory.	X	X	X
Security Fasteners	36-	6 Lobe head security screws (Torx® type)	X	-	X
	37-	Spanner head security screw (not available with Studio levers)	X	-	X
Visual Indicators	49-	Visual Status Indicator or Occupancy indicator with emergency release (not available with escutcheon trim; see page 16 for details)	X	X	X
	50-	Secured indicator rose (available with rose trim only; see page 16)	X	-	X
	EMA	Engraving, Outside (Engraved with "LOCK" and directional arrow. Available with escutcheon trim LE1/KE1 only)	X	-	X
	EMB	Engraving, Inside (Engraved with "LOCK" and directional arrow. Available with escutcheon trim LE1/KE1 only)	X	-	X
	EMC	Engraving, Both Sides (Engraved with "LOCK" and directional arrow. Available with escutcheon trim LE1/KE1 only)	X	-	X
	VNA	Visual Status Indicator, Outside (Escutcheon trim LE1/KE1 only)	X	-	X
	VNB	Visual Status Indicator, Inside (Escutcheon trim LE1/KE1 only)	X	-	X
	VNC	Visual Status Indicator, Both Sides (Escutcheon trim LE1/KE1 only)	X	-	X
Electrical Options	DX-	Deadbolt monitoring — Monitor deadbolt position (not available with LX-)	X	X	X
	LX-	Latchbolt monitor — Monitors latchbolt position (not available with deadbolt functions)	X	X	X
	RX-**	Request to Exit — Monitors each lever independently (not available with LB-option)	X	X	X
	TL-	SARGuide illuminated inside WT trim with the word EXIT illuminated (4-1/2" pocket depth required)	X	-	-
Lever/Knob Combination	68-	8200 Lock furnished w/lever handle outside x knob inside (not available with the AV-Option or FE Trim)	X	-	-
	69-	8200 Lock furnished w/lever handle inside x knob outside (not available with the AV-Option or FE Trim)	X	-	-
Lead Lining	74-**	Lead lining or wrapping available with sectional trim only (not available with DX-or LX- Options)	X	-	X
Tactile Warnings	75-	Tactile Warning — Milled levers or knurled knobs. Inside trim only (not available with Studio & Coastal levers, the A lever & K, N & D knobs)	X	-	X
	76-	Tactile Warning — Milled levers or knurled knobs. Outside trim only (not available with Studio & Coastal levers, the A lever & K, N & D knobs)	X	-	X
	77-	Tactile Warning — Milled levers or knurled knobs. Inside & outside trim (not available with Studio & Coastal levers, the A lever & K, N & D knobs)	X	-	X
	85-	Tactile Warning — Abrasive coating inside trim only (not available with D knobs)	X	X	X
	86-	Tactile Warning — Abrasive coating outside trim only (not available with D knobs)	X	X	X
	87-	Tactile Warning — Abrasive coating inside & outside trim (not available with D knobs)	X	X	X
Anti-Vandal Trim	AV-	Anti-Vandal pull trim (not available with LS & FE trim and Options 1-, 31-, 49-, 50-, 68-, 69-, 76-, 77-, 86-, 87-, DX-or SG-)	X	-	X
Finish Protection	CPC-	Clear Powder Coat (available for 32 & 32D finishes)	X	X	X
	SG-*	MicroShield® antimicrobial clear powder coat	X	X	X
Thumbturns (See page 14)	LB-	ADA Extra large thumbturn; backplate matches rose design chosen	X	X	X
	T1-	Decorative thumbturn; backplate matches rose design chosen	X	X	-
	T2-	Decorative square thumbturn; backplate matches rose design chosen	X	X	-
	T3-	Decorative cylinder thumbturn; backplate matches rose design chosen	X	X	-

* Available on 15, 26D, and 32D Finishes only

** Not available in combination

	DG3-60-*	Degree Level 3 Removable Disposable Construction Core	41-44, 46
	DG3-63-*	Degree Level 3 Removable Core	41-44, 46
	DG3-64-*	Degree Level 3 Removable Construction Keyed LFIC	41-44, 46
Signature Key System	**10-***	SARGENT Signature Key System (not available with other key systems)	41-44,46,48,50,52,54,56
	10-21-*	SARGENT Signature Construction Key System (Lost Ball)	41-44,46,48,50,52,54,56
Signature Large Format Interchangeable Core (Removable Core)	**10-63-***	SARGENT Signature LFIC (removable) Core Cylinder	42, 43, 44 & 46
XC- Key System	**11-***	XC Key System (not available with other key systems, unless specified)	41-44,46,48,50,52,54,56
	11-21-*	XC- Construction Key System (Lost Ball)	41-44,46,48,50,52,54,56
XC- Large Format Interchangeable Core (Removable Core)	**11-60-***	Hardware to accept XC- Permanent LFIC (removable core), disposable plastic core provided	42, 43, 44 & 46
	11-63-*	Hardware provided with XC- LFIC (removable core) cylinder — (Includes masterkeying, grand masterkeying)	42, 43, 44 & 46
	11-64-*	Hardware provided with keyed construction core to accept XC- LFIC (removable) permanent core ordered separately	42, 43, 44 & 46
XC- Small Format Interchangeable Cores	**11-70-7P-***	Hardware to accept XC- SFIC (7-Pin) XC- permanent cores, disposable plastic core provided	43 & 46
	11-72-7P-*	Hardware to accept XC- SFIC (7-Pin keyed construction core provided) cylinder permanent core ordered separately	43 & 46
	11-73-7P-*	Hardware provided with XC- Small format 7-Pin interchangeable core (Includes masterkeying, grand masterkeying)	43 & 46
	11-65-73-7P-*	Hardware provided to accept XC- Uncombinated 7-Pin SFIC (permanent) core — (packed loose)	43 & 46
Construction Key System	**21-***	SARGENT Lost Ball Construction keying for conventional, XC and Signature Series (N/A with 63- or 73-)	–
	22-*	SARGENT Construction Split Key System for conventional cylinders (existing systems only) (N/A with 10-, 11-, 63- or 73-)	–
Old Style Removable Core	**51-***	Removable core cylinder (Old style) provided (existing systems only)	142,143,144,146
	52-*	Removable construction core (Old style) permanent core ordered separately (existing systems only)	142,143,144,146

* Options not available with 50 function lockout cylinder

+ Not available with R8200 Series

Note: Interchangeable core and removable core cylinders do not meet Security Grade 1 requirements

Cylinder Options

8200/R8200/7800 Mortise Locks

SARGENT®
ASSA ABLOY

Cylinder Options:

Categories	How to Specify	Detailed Description	Cylinder Sizes Available
Large Format Interchangeable Core	**60-**	Hardware to accept SARGENT permanent LFIC (removable core), disposable plastic core provided (permanent cores ordered separately)	42, 43, 44 & 46
	63-	Hardware provided with LFIC (removable core) cylinder - (Includes masterkeying, grand masterkeying)	42, 43, 44 & 46
	64-	Hardware provided with Keyed construction core to accept LFIC (removable) permanent core (ordered separately)	42, 43, 44 & 46
Small Format Interchangeable Cores	**70-***	Hardware to accept 6- or 7-Pin SFIC permanent cores, disposable plastic core provided	43 & 46
	72-*	Hardware to accept 6- or 7-Pin SFIC (keyed construction core provided) cylinder (permanent core ordered separately)	43 & 46
	73-*	Hardware provided with 6-Pin SFIC (Includes masterkeying, grand masterkeying)	43 & 46
	65-73-*	Hardware provided to accept uncombinated 6-Pin SFIC (permanent) core — (packed loose for field keying)	43 & 46
	65-73-7P-*	Hardware provided to accept uncombinated 7-Pin SFIC (permanent) core — (packed loose for field keying)	43 & 46
	73-7P-*	Hardware provided with Small Format 7-Pin interchangeable core (Includes masterkeying, grand masterkeying)	43 & 46
Keso & Keso F1	**81-***	Hardware provided with housings to accept Keso (83) & Keso F1 (F1-83-) removable cores (permanent cores ordered separately)	172-174,176
	82-	Hardware provided with SARGENT Keso security cylinder	71-74,76
	F1-82-	Hardware provided with SARGENT Keso F1 security cylinder (patented)	71-74,76
	83-*	Hardware provided with SARGENT Keso security removable core cylinder	172-174,176
	F1-83-*	Hardware provided with SARGENT Keso F1 security removable core cylinder (patented)	172-174,176
	84-*	Hardware provided with SARGENT Keso construction cores (permanent cores ordered separately)	172-174,176
Additional Security	**BR-**	Bump resistant cylinder (available with conventional & conventional XC cylinders only)	–
Less Cylinder	**LC-**	Less cylinder – SARGENT supplies standard blocking rings for 1-1/8" cylinders (for longer cylinders order collars/rings separately)	–
Schlage Keyways	**SC-*^**	Schlage C keyway cylinder, 0 bitted	#41 Only
	SE-*^	Schlage E keyway cylinder, 0 bitted	#41 Only
Note: For V-10 Cylinders and information contact ASSA			

^ Options not available with Freewheeling Trim

* Options not available with 50 function lockout cylinder

Note: When using Interchangeable Core Cylinders, the ANSI/BHMA Cylinder Grade determines the grade of the lock, even if the lock is certified ANSI/BHMA Grade 1 with a standard cylinder

Coastal Series
(8200 & R8200 Series)

Features
- All levers meet ADA compliance for national codes
- Not available with CO and TO roses
- Levers are solid cast brass
- Finishes available – 3, 4, 9, 10, 10B, 10BE, 10BL, 14, 15, 20D, 26, 26D, BSP, WSP
- All lever height (+/- 1/16") measurements represent total distance from door face

G - Gulfport™ (Handed)			S - Sanibel™ (Handed)		
R - Rockport™			Y - Yarmouth™ (Handed)		

Standard Levers
(8200 Series Only)

Features
- All levers meet ADA compliance for national codes
- Solid forged or cast
- Lever designs J, L and P have lever returns within 1/2" (13mm) or less of door face and meet California State Reference Fire Code
- All lever height (+/- 1/16") measurements represent total distance from door face

A (Handed)			J

E			P		
F			W		

Electrical Functions & Monitoring Options

8200/R8200/7800 Mortise Locks

SARGENT 8200 Electromechanical Mortise locks are designed to handle single opening, stand alone applications, or can be readily integrated into sophisticated access control systems. They meet ANSI/BHMA A156.13 Grade 1 requirements, are UL listed on fire doors, and satisfy industry standards for operating temperature, shock and fire hazard.

Featuring EcoFlex® Technology*

- **Reduces energy consumption up to 96%, as certified by GreenCircle**
  - Lower operating costs
  - Assists with load reduction in optimizing energy performance credit in LEED
  - Reduces number of power supplies required
- **Field configurable to fail-safe or fail-secure**
- **Operates from 12-24VDC, offering greater flexibility in system design**
- **Innovative actuator design provides superior reliability**
  - Higher performance and reduced maintenance
  - Ability to have longer cable runs without negatively impacting lock function
  - Reduces risk of voltage drops and eliminates inductive kickback
  - Lower total cost of ownership

**Patent pending*

Electrical Requirements for electromechanical functions:

Voltage: Operates from 12-24VDC Regulated. Full wave rectification installed inside the lockbody.

Current:

- Actuator draw = .015 Amp continuous
- Maximum (2) locks per 1 Amp power supply (1/2 Amp peak current draw)

Operating Temp.: Max. 151°F (66°C), Min –31°F (-35°C)

UL and CUL listed for use on Fire Doors

Note: Repeated operation at voltage exceeding +/- 10% is not recommended

Warning:

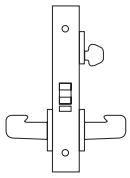
- **Do not** connect locks to a circuit sharing an additional electromagnetic device as the lock may be damaged
- Transient voltage must be suppressed at the source or before connecting with the lock
- Varistor rated at 35 volts (peak) may be used for transient voltage protection

Note: Opening the lockbody or the actuator replacement in the field by non-authorized personnel voids UL label and lock warranty

Electromechanical Functions

70 Electrical (Fail Safe)
71 Electrical (Fail Secure)

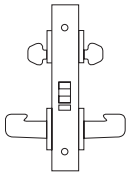
8200 & R8200



- 70 function — Power ON, locks outside lever
- 71 function — Power ON, unlocks outside lever
- Specify voltage: 12VDC or 24VDC (operates from 12-24VDC)
- Key outside retracts latchbolt
- Lever outside retracts latchbolt, except when locked
- Lever outside can only be locked electronically
- Lever inside always retracts latchbolt
- Auxiliary deadlatch

72 Electrical (Fail Safe)
✦73 Electrical (Fail Secure)

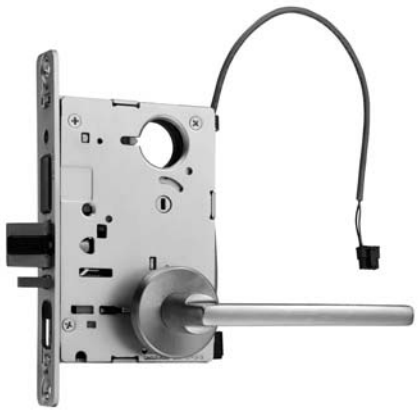
8200 & R8200



- 72 function — Power ON, locks both levers
- 73 function — Power ON, unlocks both levers
- Specify voltage: 12VDC or 24VDC (operates from 12-24VDC)
- Key on either side retracts latchbolt
- Lever from either side retracts latchbolt, except when levers are locked
- Both Levers can only be locked & unlocked electronically
- Levers can not be locked separately, only together
- Auxiliary deadlatch

Electrified Mortise Locks with Standard Monitoring Options

- Single Pole Double Throw (SPDT) type C switches
- **RX- option — Request-to-Exit or Enter Signaling Switch**
  - Two switches mounted internally in lockbody that provide independent monitoring of inside and outside lever rotation
  - Available in all functions with non rigid levers
  - Not available for the following options: 1-, 3P, 74
  - Not available for the following trims: LS or FE
- **LX- option — Latchbolt Monitor**
  - Single switch mounted within lockbody signaling latchbolt position
  - Available for all non deadbolt functions
  - Not available with DX
- **DX- option — Deadbolt Monitor**
  - Switch mounted internally in lockbody that indicates deadbolt position
  - Not available for the following options: 3P-, 74 or LX
  - Available in all deadbolt functions

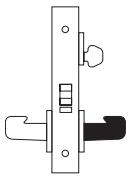


✦**CAUTION**: Not recommended for use on any door used for Life Safety egress

Single Cylinder without Deadbolt

*‡04 Storeroom or Closet

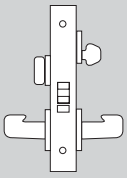
8200, R8200 & 7800



- Key outside retracts latchbolt
- Trim outside locked at all times
- Trim inside always retracts latchbolt
- Auxiliary deadlatch
- A Multi-Function 8200/R8200/7800 Lockbody
- **ANSI F07**

*05 Office or Entry

8200, R8200 & 7800



- Key outside retracts latchbolt, also locks & unlocks outside trim
- Trim inside always retracts latchbolt, trim outside remains locked
- Thumbturn inside locks & unlocks outside trim
- Auxiliary deadlatch
- A Multi-Function 8200/R8200/7800 Lockbody
- **ANSI F04**

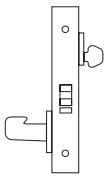
The Multi-Function Advantage with rose trim:

1. Lock will accommodate 04, 05, 15 & 37 functions without additional parts.
2. By adding an additional cylinder, lock will accommodate 38 function.
3. By adding a Trim One Side Kit, lock will accommodate 06, 13, 31 & 36 functions.

NOTE: Office/Entry Function with toggle is a 55 function.

06 Storeroom or Service

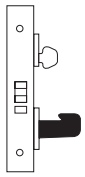
8200, R8200 & 7800



- No trim outside, cylinder only
- Key outside retracts latchbolt
- Trim inside always retracts latchbolt
- Auxiliary deadlatch
- A Multi-Function 8200/R8200/7800 Lockbody
- Same as 04 Function without trim outside

✦*31 Utility

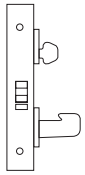
8200, R8200 & 7800



- Key outside retracts latchbolt
- Trim outside is always locked
- No inside trim or cylinder
- A Multi-Function 8200/R8200/7800 Lockbody
- Auxiliary deadlatch

*✦36 Closet

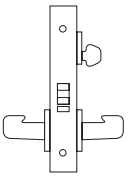
8200, R8200 & 7800



- Key locks and unlocks trim
- No inside trim or cylinder
- A Multi-Function 8200/R8200/7800 Lockbody
- Auxiliary dead latch

*‡37 Classroom

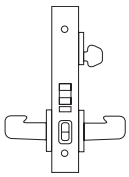
8200, R8200 & 7800



- Key outside retracts latchbolt, also locks & unlocks outside trim
- Trim inside always retracts latchbolt
- Auxiliary deadlatch
- A Multi-Function 8200/R8200/7800 Lockbody
- **ANSI F05**

55 Office or Entry

8200, R8200 & 7800



- Key outside retracts latchbolt
- Trim inside always retracts latchbolt, outside trim remains locked
- Trim outside is locked & unlocked by the toggle only
- Auxiliary deadlatch

*8200 Available with Freewheeling Trim
‡ 7800 Available with Push/Pull Trim

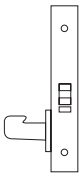
If shaded, knob or lever rigid at all times

✦**CAUTION**: Not recommended for use on any door used for Life Safety egress

Non-Keyed

13 Exit Latch

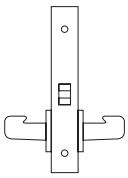
8200, R8200 & 7800



- No outside trim or cylinder
- Trim inside retracts latchbolt
- A Multi-Function 8200/R8200/7800 Lockbody
- Auxiliary deadlatch
- **ANSI F31**

‡15 Passage or Closet

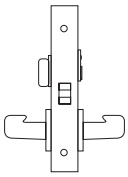
8200, R8200 & 7800



- Trim from either side retracts latchbolt at all times
- **ANSI F01**

*‡ 65 Privacy Bath/Bedroom

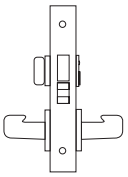
8200, R8200 & 7800



- Trim outside retracts latchbolt except when locked by thumbturn
- Trim inside retracts latchbolt and unlocks outside trim
- Emergency Release locks/unlocks trim outside- by coin, screwdriver or Emergency key (14-0057) ordered separately
- Thumbturn locks and unlocks trim outside
- Closing the door will unlock outside trim
- **ANSI F22**

*66 Privacy Bath/Bedroom

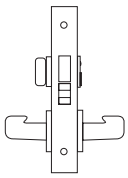
8200, R8200 & 7800



- Trim outside retracts latchbolt except when deadbolt is projected
- Trim inside retracts both latchbolt and deadbolt simultaneously, unlocking the outside trim
- Emergency Release retracts and projects deadbolt — by coin, screw driver or Emergency key (14-0057) ordered separately
- Thumbturn retracts and projects deadbolt
- **ANSI F19**

✦68 Privacy Bath/Bedroom

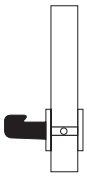
8200, R8200 & 7800



- Trim from either side retracts latchbolt at all times
- Thumbturn retracts and projects deadbolt
- Emergency release retracts and projects deadbolt — by coin, screwdriver or Emergency key (14-0057) ordered separately
- Latchbolt and deadbolt are independent of each other
- **ANSI F02**

93 Trim Dummy

8200, R8200 & 7800



- Trim on inside of door is always rigid
- Trim only used as door pull
- For double door applications, installed on the inactive door, use template #4298 to accept latchbolt from active door

Note: Lever is through-bolted

*8200 Available with Freewheeling Trim
‡ 7800 Available with Push/Pull Trim

If shaded, knob or lever rigid at all times

✦**CAUTION**: Not recommended for use on any door used for Life Safety egress

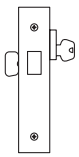
Functions

03 Classroom

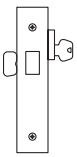


- Key outside operates deadbolt
- Thumb turn inside retracts deadbolt, but will not project it

20 Deadlock

*** 
- Key outside operates deadbolt
- No inside operation
- **ANSI F18**

21 Deadlock

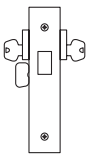


- Key outside operates deadbolt
- Thumb turn inside operates deadbolt
- **ANSI F17**

22 Deadlock

*** 
- Key from either side operates deadbolt
- **ANSI F16**

23 Classroom



- Key from either side operates deadbolt
- Thumb turn inside will retract deadbolt, but will not project it

***** For use only on rooms with more than one exit**

NOTE: For deadbolt function locks with levers see the 8200 Mortise Lock Catalog

Windstorm Certifications

80 Series

SARGENT
ASSA ABLOY

Windstorm Certifications: Florida Building Codes & UL Listings

SARGENT Manufacturing's products meet building codes that require hurricane, windstorm and FEMA certifications, including some of the most stringent building codes as specified in the Florida Building Code, Miami Dade Code and the International Building Code. Listed below are certifications and standards met by the 80 Series lock.

Florida Building Code: FL2998
UL Certification Directory: ZHEM.R21744 – Latching Hardware

ANSI/SDI-BHMA A250.13	"Testing and Rating of Severe Windstorm Resistant Components for Swinging Door Assemblies"
ANSI/ASTM E330	"Standard Test Method for Structural Performance of Exterior Windows, Doors, Skylights and Curtain Walls by Uniform Static Air Pressure Difference"
ANSI/ASTM E1886	"Standard Test Method for Performance of Exterior Windows, Curtain Walls, Doors, and Impact Protective Systems Impacted by Missile(s) and Exposed to Cyclic Pressure Differentials"
ASTM E1996	"Standard Specification for Performance of Exterior Windows, Curtain Walls, Doors and Impact Protective Systems Impacted by Windborne Debris in Hurricanes"
(TAS) 201	"Impact Test Procedures"*
(TAS) 202	"Standard Test Method for Structural Performance of Exterior Windows, Doors, Skylights and Curtain Walls by Uniform Static Air Pressure Difference"
(TAS) 203	"Criteria for Testing Products Subject to Cyclic Wind Pressure Loading"*

* Published in the "Florida Building Code"

Any retrofit or other field modification to a fire rated opening can potentially impact the fire rating of the opening, and Sargent Manufacturing Company makes no representations or warranties concerning what such impact may be in any specific situation. When retrofitting any portion of an existing fire rated opening, or specifying and installing a new fire-rated opening, please consult with a code specialist or local code official (Authority Having Jurisdiction) to ensure compliance with all applicable codes and ratings.

UL Certification Directory: ZHLL.R21744 – Products for Use in Windstorm-rated Assemblies

Certifications to meet assembly requirements are done in conjunction with doors from ASSA ABLOY Group companies CECO DOOR and CURRIES.

ASTM E330	"Standard Test Method for Structural Performance of Exterior Windows, Doors, Skylights and Curtain Walls by Uniform Static Air Pressure Difference"
ANSI/ASTM E1886	"Standard Test Method for Performance of Exterior Windows, Curtain Walls, Doors, and Impact Protective Systems Impacted by Missile(s) and Exposed to Cyclic Pressure Differentials"
ASTM E1996	"Standard Specification for Performance of Exterior Windows, Curtain Walls, Doors and Impact Protective Systems Impacted by Windborne Debris in Hurricanes"
AAMA/WDMA/CSA 101/I.S.2/A440	"Standard/Specification for Windows, Doors, and Unit Skylights"
FEMA Publication 320 (2014)	"Taking Shelter From the Storm: Building a Safe Room for Your Home or Small Business", investigated with respect to impact and pressure requirements only.
FEMA Publication 361 (2015)	"Design and Construction Guidance for Community Safe Rooms", investigated with respect to impact and pressure requirements only.
ICC 500 (2014)	"ICC/NSSA Standard for the Design and Construction of Storm Shelters", investigated with respect to impact and pressure testing. Minimum missile impact speeds vary with the design wind speed desired for a particular product. The information below correlates design wind speed to the minimum missile speeds as discussed in Table 305.1.1 of ICC 500

Any retrofit or other field modification to a fire rated opening can potentially impact the fire rating of the opening, and Sargent Manufacturing Company makes no representations or warranties concerning what such impact may be in any specific situation. When retrofitting any portion of an existing fire rated opening, or specifying and installing a new fire-rated opening, please consult with a code specialist or local code official (Authority Having Jurisdiction) to ensure compliance with all applicable codes and ratings.

***Note:** Cylinder Kits must be ordered separately

Note for HC980/12-HC980 Mullions:

- Designed for severe wind load conditions due to hurricanes or tornadoes
- Tested to Dade County protocols and ANSI 250.13 ASTM Standards and FEMA 361
- 12- Fire labeled version
- Replacement lock kits are available for lockable mullions Part numbers for each model are listed in the price book

HCL980 Mullion Information

- Model 12-HC-L980 may be supplied for doors UL fire rated up to and including 3 hrs not exceeding 8 ft in width and height
- Meets the following standards: ANSI 250.13, ASTM E330, ASTM 1886, ASTM 1996, TAS 201, TAS 202 & TAS 203
- Designed for use with UL Classified HC8810, HC8800 and 12-HC8800 rim exit devices

Mullion Accessories and Stabilizers

80 Series

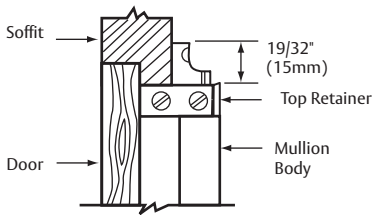
SARGENT
ASSA ABLOY

Mullion Accessories

RK980
Latchbolt assembly retrofit kit with top and bottom retainers for 980 aluminum mullion

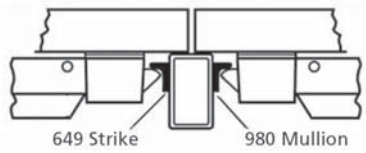
507 Narrow Transom Bars Adapter

- Available with 980 and 980A
- Required when soffit is 1-1/4" (32mm) to 2" (51mm) wide
- Order as a: 507 for 980 mullion or 507A for 980A mullion



980S Mullion Application

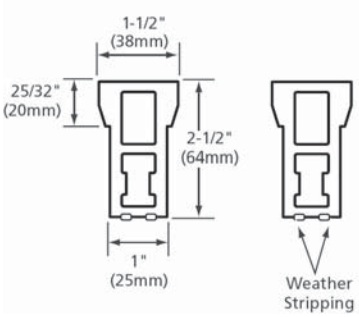
- All steel mullions are 2" x 3"



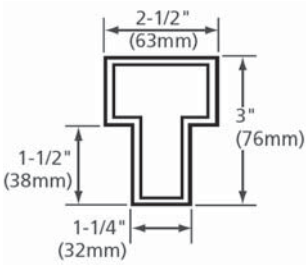
651 Mullion Stabilizer Kit

- Stabilizer block
- Furnished standard w/650A Mullion
- Order as a 651 Kit

650A Mullion



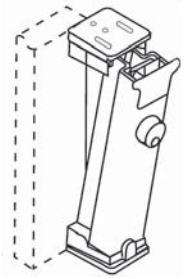
980 Mullion & L980 Lockable Mullion



980C1 Cylinder Mullion Kit

- Lockable mullions only
- Aluminum and steel
- Includes cylinder and collar
- Available in 26D & 10B finish

Lockable Mullion



Lockable Mullion Cylinder Kit Options*

L980, L980A, L980S & HC-L980 mullions are available with these options: 10, 10-21-, 10-63-, 11-, 11-21-, 11-60, 11-63-, 11-64-, 11-72-7P-, 11-65-73-7P-, 11-73-7P-, 21-, 22-, 60-, 63-, 64-, 70, 72-, 73-, 65-73-, 65-73-7P-, 73-7P-, 81-, 82-, F1-82-, 83-, F1-83-, 84-, SC- & SE-.

EL980 mullion is available with these options: 10, 10-21-, 10-63-, 11-, 11-21-, 11-60, 11-63-, 11-64-, 11-72-7P-, 11-65-73-7P-, 11-73-7P-, 21-, 22-, 60-, 63-, 64-, 70, 72-, 73-, 65-73-, 65-73-7P-, 73-7P-, 81-, 82- & F1-82-.

*Lockable mullions are shipped without cylinders. Order Cylinder Mullion Kit separately.

980C2 Cylinder Mullion Kit

- Lockable mullions
- Electrified only
- Includes cylinder and collar
- Available in 26D finish only

Mullion Weights & Packaging

Product	Avg Wt	Case
Exit Device with Trim	15 lbs	1 ea
980 Mullion	18 lbs	1 ea
12-980 Mullion	40 lbs	1 ea
650A Mullion	18 lbs	1 ea

Mechanical Options and Descriptions

80 Series

SARGENT®
ASSA ABLOY

Mechanical Options:

Categories	How to Specify	Detailed Description
Fire Rated	**12-**	UL Fire Label Exit hardware (not available with 16- & HK-)
SVR Bolt	**14-**	Sliding bolt bottom case for 8700
Cylinder Dogging	**16-**	Cylinder lockdown with # 41 Cylinder & # 97 Ring (not available with 12-, 57, 59-, AL- or BT- Option)
	LD-	Less dogging for non fire rated devices
Less Touch Pad	**19-**	Pushbar without Lexan touchpad (not available TL-)
8900/8300 Strike	**23-**	4-7/8" (124mm) ANSI flat lip strike (for 8900 & 8300 Series Mortise Lock Exit Devices)
Thick Doors	**31-**	Doors over 1-3/4" and/or Panels (Specify door thickness, panel thickness & location as required) Not available for HC8700, FM8700, PP, PR & SP8700, PP, PR & SP8600, LP, LR & LP8700 Extended lip strike supplied for 8300 & 8900 Series
Security Fasteners	**36-**	Six lobe security head screws
	37-	Spanner head screws
Flush End cap	**43-**	Flush End Cap (Not available with LP, LR & LS Devices)
Indicator	**49-**	Indicator (Available on 8816 and 8866 functions only)
Electrical Options	**53-**	Latchbolt monitoring switch (not available with 59-, GL-, HC-, WS- or on FM8700, PP/PR/SP8600 & LP/LR/LS8600 Exit Devices)
	54-	Monitors ET Lever movement with Internal micro switch in ET Control
	55-	Request to Exit - Signal Switch in Rail (not available with 59- & FM8700)
	56-	Remote Latch Retraction (not available 57-, 58-, 59-, AL- or BT- Option)
	56-HK-	Remote Latch Retraction with manual Hex Key dogging (not available 12-, 57-, 58-, 59-, AL- or BT- Option)
	57-	Delayed Egress (Electromagnetic Lock required & purchased separately) (not available 16-, 53-, 56-, 56-HK, 58-, 59-, AL, Bc-59 - or BT, GL, TL Prefixes) (NB, 54- are available on request)
	58-	Electric Rail Dogging (Not available 56- & 59-)
	59-	Electroguard® Self Contained Delayed Egress Device (not available with 16-, 53-, 55-, 56-, 57-, 58-, AL-, BT-, GL-, HC- & WS Option Prefixes, PP/PR/SP8600, LP/LR/LS8600 Exit Devices) (NB, 54- are available upon request)
	AL-	Alarmed Exit (Not available 16-, 56-, 57-, 59-, BT-, GL-, HC- & WS-)
	BC-59-	Electroguard® Boca Code (Door Status Switch required) (not available with 16-, 55-, 56-, 57-, 58-, AL-, BT-, GL-, HC- & WS-Options and on NB8700, PP/PR/SP8600 & LP/LR/LS8600 Exit Devices)
	TL-	SARGuide Electro-Luminescent Touchpad (not available 19-, 85-, 87- & PL-)
Tactile Warning Options	**76-**	Tactile Warning - Milled Outside Lever (not available with Studio & Coastal Levers and the A Lever)
	85-	Tactile Warning - Abrasive strip on Push Rail (Not available with PL- & TL-)
	86-	Tactile Warning - Abrasive coating on Outside Lever
	87-	Tactile Warning - Abrasive strip on Push Rail & Abrasive coating on Outside Lever (not available with PL- & TL-)
Finish Protection	**CPC-**	Clear Powder Coat (Available for 32 & 32D Finishes)
	SG-	MicroShield® antimicrobial clear powder coat (only available with 15, 26D and 32D finishes)
Top Rod Only	**NB-**	Less Bottom Rod & Bolt (for SVR & CVR Devices)
Guarded Latch	**GL-**	Guarded Latch for Rim Exit Devices (not available 53-, 56-, 59-, AL-, HC- & WS-)
SARGuide	**PL-**	SARGuide™ PL – Photoluminescent Coated Push Rail – (Touchpad eliminated) (not available 85, 87 & TL-)
Through Bolts	**TB-**	Through Bolts for 8300, 8500, 8600, 8700, 8800 & 8900 Devices
Rail Force	**5CH-**	5lb. Pressure Release (8800 only)

Cylinder Options and Descriptions

80 Series

SARGENT®
ASSA ABLOY

Cylinder Options:

Conventional Cylinder	-	SARGENT Conventional Cylinders Supplied Standard (Unless Otherwise Specified)
Degree Key System	**DG1-**	SARGENT Degree Key System Level 1 (bump resistant with patented keys)
	DG1-21-	Degree Level 1 Construction Master Keying
	DG1-60-	Degree Level 1 Removable Disposable Construction Core
	DG1-63-	Degree Level 1 Removable Core
	DG1-64-	Degree Level 1 Removable Construction Keyed LFIC
	DG1-65-	Degree Level 1 Unassembled/Uncombined Core
	DG2-	SARGENT Degree Key System Level 2 (geographically exclusive; bump and pick resistant)
	DG2-21-	Degree Level 2 Construction Master Keying
	DG2-60-	Degree Level 2 Removable Disposable Construction Core
	DG2-63-	Degree Level 2 Removable Core
	DG2-64-	Degree Level 2 Removable Construction Keyed LFIC
	DG2-65-	Degree Level 2 Unassembled/Uncombined Core
	DG3-	SARGENT Degree Key System Level 3 (geographically exclusive; UL437 certified; bump and pick resistant)
	DG3-21-	Degree Level 3 Construction Master Keying
	DG3-60-	Degree Level 3 Removable Disposable Construction Core
	DG3-63-	Degree Level 3 Removable Core
	DG3-64-	Degree Level 3 Removable Construction Keyed LFIC
	DG3-65	Degree Level 3 Unassembled/Uncombined Core
Signature Key System	**10-**	SARGENT Signature Key System (Not Available with other Key Systems)
	10-21-	SARGENT Signature Construction Key System (Lost Ball)
Signature- LFIC	**10-63-**	SARGENT Signature Large Format Interchangeable Core Cylinder (Removable)
XC- Key System	**11-**	XC Key System (Not available with other Key systems unless specified)
	11-21-	XC- Construction Key System (Lost Ball)
XC- Large Format Interchangeable Core (Removable Core)	**11-60-**	Device to accept XC- Permanent Large Format Interchangeable Core, Disposable plastic Core- provided
	11-63-	Device provided with XC- Large Format Interchangeable Core Cylinder - (Includes masterkeying, grand masterkeying)
	11-64-	Device provided with Keyed construction core to accept XC- Permanent Large Format Interchangeable Core (ordered separately)
XC- Small Format Interchangeable Core	**11-70-7P-**	Device to accept XC- SFIC (7-Pin) XC- Permanent Cores, plastic disposable core provided
	11-72-7P-	Device to accept XC- SFIC (7-Pin Keyed Construction Core provided) cylinder Permanent core ordered separately
	11-73-7P-	Device provided with XC- Small Format 7-Pin interchangeable core (Includes masterkeying, grand masterkeying)
	11-65-73-7P-	Device provided to accept XC- Uncombinated 7-Pin SFIC (Permanent) Core - (Packed Loose)
Construction Key Systems	**21-**	SARGENT Lost Ball Construction Keying for Conventional, XC and Signature Series (N/A with 63- or 73-)
	22-	SARGENT Construction Split Key System for Conventional Cylinders (Existing Systems Only) (N/A with 10-, 11-, 63- or 73-)
Old Style Removable Core	**51-**	Removable Core Cylinder (Old Style) provided (existing systems only)
	52-	Removable Construction Core (Old Style) Permanent core ordered separately (existing systems only)
Large Format Interchangeable Core (Removable Core)	**60-**	Device to accept SARGENT Permanent Large Format Interchangeable Core, Disposable plastic Core provided (Permanent Cores ordered separately)
	63-	Device provided with Large Format Interchangeable Core Cylinder - (Includes masterkeying, grand masterkeying)
	64-	Device provided with Keyed construction core to accept Permanent Large Format Interchangeable Core (ordered separately)
Small Format Interchangeable Core	**70-**	Device to accept 6- or 7-Pin SFIC Permanent Cores, plastic disposable core provided
	72-	Device to accept 6- or 7-Pin SFIC (6-Pin Keyed Construction Core provided) Cylinder (Permanent Core ordered separately)
	73-	Device provided with 6-Pin SFIC (Includes masterkeying, grand masterkeying)
	65-73-	Device provided to accept Uncombinated 6-Pin SFIC (Permanent) Core - (Packed Loose for field keying)
	65-73-7P-	Device provided to accept Uncombinated 7-Pin SFIC (Permanent) Core - (Packed Loose for field keying)
	73-7P-	Device provided with Small Format 7-Pin Interchangeable Core (Includes masterkeying, grand masterkeying)
Keso & Keso F1	**81-**	Device provided with housings to accept Keso (83) & Keso F1 (F1-83-) removable cores. (Permanent Cores ordered separately)
	82-	Device provided with SARGENT Keso Security Cylinder
	F1-82-	Device provided with SARGENT Keso F1 Security Cylinder (Patented)
	83-	Device provided with SARGENT Keso Security Removable Core cylinder
	F1-83-	Device provided with SARGENT Keso F1 Security Removable Core cylinder (Patented)
	84-	Device provided with SARGENT Keso Construction Cores (Permanent Cores ordered separately)
Added Security	**BR-**	Bump Resistant Cylinder (Available with Conventional & Conventional XC Cylinders Only)
Less Cylinder	**LC-**	Less Cylinder - SARGENT supplies standard blocking rings for 1-1/8" Cylinders (For longer cylinders order collars/rings separately)
Schlage Keyways	**SC-**	Schlage C keyway cylinder, 0 bitted (not available with: 8904, 8916, 8944, 8975, 8976, 8866, 8304, 8344, 8375 & 8376)
	SE-	Schlage E keyway cylinder, 0 bitted (not available with: 8904, 8916, 8944, 8975, 8976, 8866, 8304, 8344, 8375 & 8376)
Lever to Accept Schlage	**SF-**	L Lever to accept MEDECO KeyMark Large Format Interchangeable and Schlage Full Size Interchangeable Core (Supplied Less Cylinder, but with tailpiece needed) (Available for 88-KLL & 88-CLL)

Note: For V-10 Cylinders and information, contact ASSA

8800 Rim Exit Device

80 Series

SARGENT®

ASSA ABLOY

8800 Series
Rim Exit Device

8800 Features

- Designed for standard width stile applications on wood and metal doors
- Also available as an HC8800 or WS8800 for hurricane-resistant applications, see Hurricane-Resistant section of this catalog
- Single point rim latching device
- Single door & double door applications with mullions
- Quiet operation and solid security
- ANSI/BHMA A156.3 - Grade 1
- UL10C (Fire) and UL305 (Panic) Listed

Specifications — 8800 Series Rim Exit Device

Door Type	Metal Doors
Door Thickness	1-3/4" (44mm) minimum thickness. For doors over 1-3/4" to 2 1/4" thick, specify thickness and order as 31-
Rail sizes as determined by door width	Rails are available in 4 sizes, use door width to determine size needed. Rails will be factory cut to size, if door width is supplied • E Rail for 24" to 32" door widths, No cutting required for 32" door • F Rail for 33" to 36" door widths, No cutting required for 36" door • J Rail for 37" to 42" door widths, No cutting required for 42" door • G Rail for 43" to 48" door widths, No cutting required for 48" door
Strike	649 Standard Black Nylon Coated
Optional Strikes	642, 644 and 613
Dogging Feature	Hex key dogging standard on non fired rated devices; specify 16- for cylinder dogging (#41 cylinder supplied)
Electric Options	AL- Alarm PL- SARGuide Photoluminescent Coated TL- SARGuide Illuminated Touchpad
	49- Indicator 53- LX Latchbolt Monitor 54- Outside Lever Monitoring 55- Request-to-Exit Signal - Rail Monitoring 56- Remote Latch Retraction 57- Delay Egress & Electromagnets 58- Electric Dogging 59- Electroguard – Self Contained Delayed Egress
Mounting Fasteners	Supplied standard with wood and machine screws Available with through-bolts and mortise (sex) nuts
Latch Bolt	Stainless steel, 3/4" (19mm) throw
Device Centerline from Finished Floor	41" (1041 mm) for Standard Applications
Center Case Dimensions	8-3/8" (213mm) x 2-5/8" (67mm)
Projection	Pushbar Neutral – 3" (76 mm) Pushbar Depressed – 2-1/8" (54 mm)
Fire Exit Hardware	See Chart – Page 6

49- Lock/Unlock Indicator Option

- Displays whether the door has been secured by the inside cylinder.
- Red icon indicates locked
- White icon indicates unlocked
- Dogging overrides 49- functionality (must order less dogging)
- Available on 8816 and 8866 functions only

649 Strike

- Supplied standard for panic & fire rated openings
- Surface applied
- Black nylon coated

688 Trim Retrofit Kit

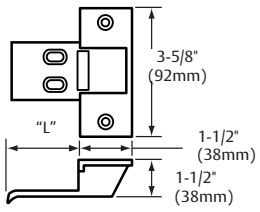
- 688 Trim Retrofit kit allows an 8800* Series rim exit with an ET to replace Von Duprin's 98/99 Series exit with trim with minimal door prep.

* Except for 16 function

- Order as: 688 Kit

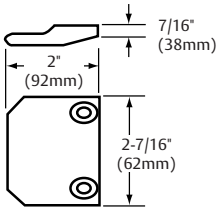
Alternate Strikes For 8800 Rim Devices

642 Strike



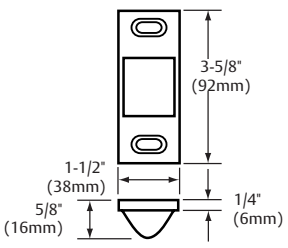
- Mortised. Dimension "L" equals door thickness plus 1/2" (13mm). Black nylon coated on lip only

644 Strike



- Surface applied. For use on pairs of doors without mullion. Ductile Iron. Black nylon coated

613 Strike



- Half mortised. Black nylon coated

700 Series ET Trim

Exits with ET Trim, specify lever design after the ET designation (e.g., ETL)

Lever Designs for ET Controls

A, B, E, F, J, L, P, W

Also available with Coastal Series & Studio Collection Levers

ET Designation with Suffix (Used to order ET without device)

8800 Series: 704, 706-8, 710, 713-8, 715-8, 716, 740, 743-8, 744, 746-8, 773-8, 774-8, 775-8 & 776-8

Freewheeling Trim

The lever rotates when the door is locked preventing excessive force from being applied to the horizontal lever

Electrified ET Trim

Voltage must be specified for the following functions: 73, 74, 75 and 76. Specify: 12VDC or 24VDC

SARGENT Function Numbers	ANSI Function Numbers	Description & Cylinder Info (1-3/4" Door)	ANSI Type 1 8800 Panic & Fire

Windstorm Certifications

80 Series

SARGENT
ASSA ABLOY

Windstorm Certifications: Florida Building Codes & UL Listings

SARGENT Manufacturing's products meet building codes that require hurricane, windstorm and FEMA certifications, including some of the most stringent building codes as specified in the Florida Building Code, Miami Dade Code and the International Building Code. Listed below are certifications and standards met by the 80 Series lock.

Florida Building Code: FL2998
UL Certification Directory: ZHEM.R21744 – Latching Hardware

ANSI/SDI-BHMA A250.13	"Testing and Rating of Severe Windstorm Resistant Components for Swinging Door Assemblies"
ANSI/ASTM E330	"Standard Test Method for Structural Performance of Exterior Windows, Doors, Skylights and Curtain Walls by Uniform Static Air Pressure Difference"
ANSI/ASTM E1886	"Standard Test Method for Performance of Exterior Windows, Curtain Walls, Doors, and Impact Protective Systems Impacted by Missile(s) and Exposed to Cyclic Pressure Differentials"
ASTM E1996	"Standard Specification for Performance of Exterior Windows, Curtain Walls, Doors and Impact Protective Systems Impacted by Windborne Debris in Hurricanes"
(TAS) 201	"Impact Test Procedures"*
(TAS) 202	"Standard Test Method for Structural Performance of Exterior Windows, Doors, Skylights and Curtain Walls by Uniform Static Air Pressure Difference"
(TAS) 203	"Criteria for Testing Products Subject to Cyclic Wind Pressure Loading"*

* Published in the "Florida Building Code"

Any retrofit or other field modification to a fire rated opening can potentially impact the fire rating of the opening, and Sargent Manufacturing Company makes no representations or warranties concerning what such impact may be in any specific situation. When retrofitting any portion of an existing fire rated opening, or specifying and installing a new fire-rated opening, please consult with a code specialist or local code official (Authority Having Jurisdiction) to ensure compliance with all applicable codes and ratings.

UL Certification Directory: ZHLL.R21744 – Products for Use in Windstorm-rated Assemblies

Certifications to meet assembly requirements are done in conjunction with doors from ASSA ABLOY Group companies CECO DOOR and CURRIES.

ASTM E330	"Standard Test Method for Structural Performance of Exterior Windows, Doors, Skylights and Curtain Walls by Uniform Static Air Pressure Difference"
ANSI/ASTM E1886	"Standard Test Method for Performance of Exterior Windows, Curtain Walls, Doors, and Impact Protective Systems Impacted by Missile(s) and Exposed to Cyclic Pressure Differentials"
ASTM E1996	"Standard Specification for Performance of Exterior Windows, Curtain Walls, Doors and Impact Protective Systems Impacted by Windborne Debris in Hurricanes"
AAMA/WDMA/CSA 101/I.S.2/A440	"Standard/Specification for Windows, Doors, and Unit Skylights"
FEMA Publication 320 (2014)	"Taking Shelter From the Storm: Building a Safe Room for Your Home or Small Business", investigated with respect to impact and pressure requirements only.
FEMA Publication 361 (2015)	"Design and Construction Guidance for Community Safe Rooms", investigated with respect to impact and pressure requirements only.
ICC 500 (2014)	"ICC/NSSA Standard for the Design and Construction of Storm Shelters", investigated with respect to impact and pressure testing. Minimum missile impact speeds vary with the design wind speed desired for a particular product. The information below correlates design wind speed to the minimum missile speeds as discussed in Table 305.1.1 of ICC 500

Any retrofit or other field modification to a fire rated opening can potentially impact the fire rating of the opening, and Sargent Manufacturing Company makes no representations or warranties concerning what such impact may be in any specific situation. When retrofitting any portion of an existing fire rated opening, or specifying and installing a new fire-rated opening, please consult with a code specialist or local code official (Authority Having Jurisdiction) to ensure compliance with all applicable codes and ratings.

* Inside Cylinders
Chart shows cylinder type and size for conventional SARGENT cylinders.
Note: Cylinder sizes & types are limited, as noted: SC- & SE- cylinders are available in size 41
60-, 63- & 64- cylinders are available in sizes 42, 43, 44 & 46
70-, 11-70-, 72-, 11-72-, 73- & 11-73 cylinders are available in sizes 43 & 46
Note: The 8888's Lever & Rose Trim cylinder standard is the standard SARGENT 10 Line cylinder (13-3266)
Note: 41 Cylinder is 1-1/8" in length; For each additional digit, the cylinder is a 1/8" longer. Example: 42 is 1-1/4"; 43 is 1-3/8" and 46 is 1-3/4"
Note: SARGENT supplies standard blocking rings. Specify if using competitor cylinders

***Note:** Cylinder Kits must be ordered separately

Note for HC980/12-HC980 Mullions:

- Designed for severe wind load conditions due to hurricanes or tornadoes
- Tested to Dade County protocols and ANSI 250.13 ASTM Standards and FEMA 361
- 12- Fire labeled version
- Replacement lock kits are available for lockable mullions Part numbers for each model are listed in the price book

HCL980 Mullion Information

- Model 12-HC-L980 may be supplied for doors UL fire rated up to and including 3 hrs not exceeding 8 ft in width and height
- Meets the following standards: ANSI 250.13, ASTM E330, ASTM 1886, ASTM 1996, TAS 201, TAS 202 & TAS 203
- Designed for use with UL Classified HC8810, HC8800 and 12-HC8800 rim exit devices

Mullion Accessories and Stabilizers

80 Series

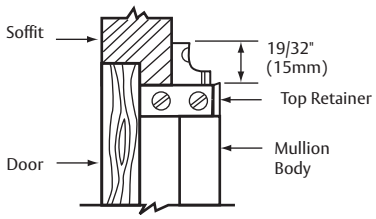
SARGENT
ASSA ABLOY

Mullion Accessories

RK980
Latchbolt assembly retrofit kit with top and bottom retainers for 980 aluminum mullion

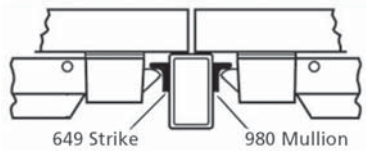
507 Narrow Transom Bars Adapter

- Available with 980 and 980A
- Required when soffit is 1-1/4" (32mm) to 2" (51mm) wide
- Order as a: 507 for 980 mullion or 507A for 980A mullion



980S Mullion Application

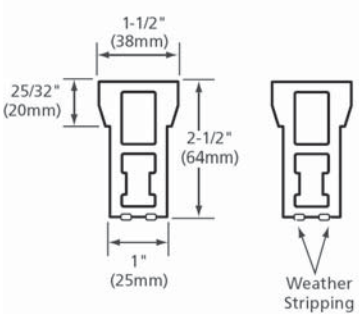
- All steel mullions are 2" x 3"



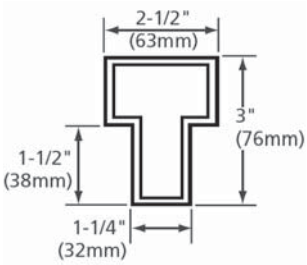
651 Mullion Stabilizer Kit

- Stabilizer block
- Furnished standard w/650A Mullion
- Order as a 651 Kit

650A Mullion



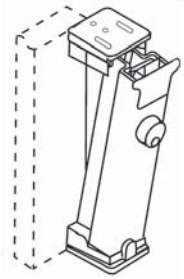
980 Mullion & L980 Lockable Mullion



980C1 Cylinder Mullion Kit

- Lockable mullions only
- Aluminum and steel
- Includes cylinder and collar
- Available in 26D & 10B finish

Lockable Mullion



Lockable Mullion Cylinder Kit Options*

L980, L980A, L980S & HC-L980 mullions are available with these options: 10, 10-21-, 10-63-, 11-, 11-21-, 11-60, 11-63-, 11-64-, 11-72-7P-, 11-65-73-7P-, 11-73-7P-, 21-, 22-, 60-, 63-, 64-, 70, 72-, 73-, 65-73-, 65-73-7P-, 73-7P-, 81-, 82-, F1-82-, 83-, F1-83-, 84-, SC- & SE-.

EL980 mullion is available with these options: 10, 10-21-, 10-63-, 11-, 11-21-, 11-60, 11-63-, 11-64-, 11-72-7P-, 11-65-73-7P-, 11-73-7P-, 21-, 22-, 60-, 63-, 64-, 70, 72-, 73-, 65-73-, 65-73-7P-, 73-7P-, 81-, 82- & F1-82-.

*Lockable mullions are shipped without cylinders. Order Cylinder Mullion Kit separately.

980C2 Cylinder Mullion Kit

- Lockable mullions
- Electrified only
- Includes cylinder and collar
- Available in 26D finish only

Mechanical Options and Descriptions

80 Series

SARGENT®
ASSA ABLOY

Mechanical Options:

Categories	How to Specify	Detailed Description
Fire Rated	**12-**	UL Fire Label Exit hardware (not available with 16- & HK-)
SVR Bolt	**14-**	Sliding bolt bottom case for 8700
Cylinder Dogging	**16-**	Cylinder lockdown with # 41 Cylinder & # 97 Ring (not available with 12-, 57, 59-, AL- or BT- Option)
	LD-	Less dogging for non fire rated devices
Less Touch Pad	**19-**	Pushbar without Lexan touchpad (not available TL-)
8900/8300 Strike	**23-**	4-7/8" (124mm) ANSI flat lip strike (for 8900 & 8300 Series Mortise Lock Exit Devices)
Thick Doors	**31-**	Doors over 1-3/4" and/or Panels (Specify door thickness, panel thickness & location as required) Not available for HC8700, FM8700, PP, PR & SP8700, PP, PR & SP8600, LP, LR & LP8700 Extended lip strike supplied for 8300 & 8900 Series
Security Fasteners	**36-**	Six lobe security head screws
	37-	Spanner head screws
Flush End cap	**43-**	Flush End Cap (Not available with LP, LR & LS Devices)
Indicator	**49-**	Indicator (Available on 8816 and 8866 functions only)
Electrical Options	**53-**	Latchbolt monitoring switch (not available with 59-, GL-, HC-, WS- or on FM8700, PP/PR/SP8600 & LP/LR/LS8600 Exit Devices)
	54-	Monitors ET Lever movement with Internal micro switch in ET Control
	55-	Request to Exit - Signal Switch in Rail (not available with 59- & FM8700)
	56-	Remote Latch Retraction (not available 57-, 58-, 59-, AL- or BT- Option)
	56-HK-	Remote Latch Retraction with manual Hex Key dogging (not available 12-, 57-, 58-, 59-, AL- or BT- Option)
	57-	Delayed Egress (Electromagnetic Lock required & purchased separately) (not available 16-, 53-, 56-, 56-HK, 58-, 59-, AL, Bc-59 - or BT, GL, TL Prefixes) (NB, 54- are available on request)
	58-	Electric Rail Dogging (Not available 56- & 59-)
	59-	Electroguard® Self Contained Delayed Egress Device (not available with 16-, 53-, 55-, 56-, 57-, 58-, AL-, BT-, GL-, HC- & WS Option Prefixes, PP/PR/SP8600, LP/LR/LS8600 Exit Devices) (NB, 54- are available upon request)
	AL-	Alarmed Exit (Not available 16-, 56-, 57-, 59-, BT-, GL-, HC- & WS-)
	BC-59-	Electroguard® Boca Code (Door Status Switch required) (not available with 16-, 55-, 56-, 57-, 58-, AL-, BT-, GL-, HC- & WS-Options and on NB8700, PP/PR/SP8600 & LP/LR/LS8600 Exit Devices)
	TL-	SARGuide Electro-Luminescent Touchpad (not available 19-, 85-, 87- & PL-)
Tactile Warning Options	**76-**	Tactile Warning - Milled Outside Lever (not available with Studio & Coastal Levers and the A Lever)
	85-	Tactile Warning - Abrasive strip on Push Rail (Not available with PL- & TL-)
	86-	Tactile Warning - Abrasive coating on Outside Lever
	87-	Tactile Warning - Abrasive strip on Push Rail & Abrasive coating on Outside Lever (not available with PL- & TL-)
Finish Protection	**CPC-**	Clear Powder Coat (Available for 32 & 32D Finishes)
	SG-	MicroShield® antimicrobial clear powder coat (only available with 15, 26D and 32D finishes)
Top Rod Only	**NB-**	Less Bottom Rod & Bolt (for SVR & CVR Devices)
Guarded Latch	**GL-**	Guarded Latch for Rim Exit Devices (not available 53-, 56-, 59-, AL-, HC- & WS-)
SARGuide	**PL-**	SARGuide™ PL – Photoluminescent Coated Push Rail – (Touchpad eliminated) (not available 85, 87 & TL-)
Through Bolts	**TB-**	Through Bolts for 8300, 8500, 8600, 8700, 8800 & 8900 Devices
Rail Force	**5CH-**	5lb. Pressure Release (8800 only)

Cylinder Options and Descriptions

80 Series

SARGENT®
ASSA ABLOY

Cylinder Options:

Conventional Cylinder	-	SARGENT Conventional Cylinders Supplied Standard (Unless Otherwise Specified)
Degree Key System	**DG1-**	SARGENT Degree Key System Level 1 (bump resistant with patented keys)
	DG1-21-	Degree Level 1 Construction Master Keying
	DG1-60-	Degree Level 1 Removable Disposable Construction Core
	DG1-63-	Degree Level 1 Removable Core
	DG1-64-	Degree Level 1 Removable Construction Keyed LFIC
	DG1-65-	Degree Level 1 Unassembled/Uncombined Core
	DG2-	SARGENT Degree Key System Level 2 (geographically exclusive; bump and pick resistant)
	DG2-21-	Degree Level 2 Construction Master Keying
	DG2-60-	Degree Level 2 Removable Disposable Construction Core
	DG2-63-	Degree Level 2 Removable Core
	DG2-64-	Degree Level 2 Removable Construction Keyed LFIC
	DG2-65-	Degree Level 2 Unassembled/Uncombined Core
	DG3-	SARGENT Degree Key System Level 3 (geographically exclusive; UL437 certified; bump and pick resistant)
	DG3-21-	Degree Level 3 Construction Master Keying
	DG3-60-	Degree Level 3 Removable Disposable Construction Core
	DG3-63-	Degree Level 3 Removable Core
	DG3-64-	Degree Level 3 Removable Construction Keyed LFIC
	DG3-65	Degree Level 3 Unassembled/Uncombined Core
Signature Key System	**10-**	SARGENT Signature Key System (Not Available with other Key Systems)
	10-21-	SARGENT Signature Construction Key System (Lost Ball)
Signature- LFIC	**10-63-**	SARGENT Signature Large Format Interchangeable Core Cylinder (Removable)
XC- Key System	**11-**	XC Key System (Not available with other Key systems unless specified)
	11-21-	XC- Construction Key System (Lost Ball)
XC- Large Format Interchangeable Core (Removable Core)	**11-60-**	Device to accept XC- Permanent Large Format Interchangeable Core, Disposable plastic Core- provided
	11-63-	Device provided with XC- Large Format Interchangeable Core Cylinder - (Includes masterkeying, grand masterkeying)
	11-64-	Device provided with Keyed construction core to accept XC- Permanent Large Format Interchangeable Core (ordered separately)
XC- Small Format Interchangeable Core	**11-70-7P-**	Device to accept XC- SFIC (7-Pin) XC- Permanent Cores, plastic disposable core provided
	11-72-7P-	Device to accept XC- SFIC (7-Pin Keyed Construction Core provided) cylinder Permanent core ordered separately
	11-73-7P-	Device provided with XC- Small Format 7-Pin interchangeable core (Includes masterkeying, grand masterkeying)
	11-65-73-7P-	Device provided to accept XC- Uncombinated 7-Pin SFIC (Permanent) Core - (Packed Loose)
Construction Key Systems	**21-**	SARGENT Lost Ball Construction Keying for Conventional, XC and Signature Series (N/A with 63- or 73-)
	22-	SARGENT Construction Split Key System for Conventional Cylinders (Existing Systems Only) (N/A with 10-, 11-, 63- or 73-)
Old Style Removable Core	**51-**	Removable Core Cylinder (Old Style) provided (existing systems only)
	52-	Removable Construction Core (Old Style) Permanent core ordered separately (existing systems only)
Large Format Interchangeable Core (Removable Core)	**60-**	Device to accept SARGENT Permanent Large Format Interchangeable Core, Disposable plastic Core provided (Permanent Cores ordered separately)
	63-	Device provided with Large Format Interchangeable Core Cylinder - (Includes masterkeying, grand masterkeying)
	64-	Device provided with Keyed construction core to accept Permanent Large Format Interchangeable Core (ordered separately)
Small Format Interchangeable Core	**70-**	Device to accept 6- or 7-Pin SFIC Permanent Cores, plastic disposable core provided
	72-	Device to accept 6- or 7-Pin SFIC (6-Pin Keyed Construction Core provided) Cylinder (Permanent Core ordered separately)
	73-	Device provided with 6-Pin SFIC (Includes masterkeying, grand masterkeying)
	65-73-	Device provided to accept Uncombinated 6-Pin SFIC (Permanent) Core - (Packed Loose for field keying)
	65-73-7P-	Device provided to accept Uncombinated 7-Pin SFIC (Permanent) Core - (Packed Loose for field keying)
	73-7P-	Device provided with Small Format 7-Pin Interchangeable Core (Includes masterkeying, grand masterkeying)
Keso & Keso F1	**81-**	Device provided with housings to accept Keso (83) & Keso F1 (F1-83-) removable cores. (Permanent Cores ordered separately)
	82-	Device provided with SARGENT Keso Security Cylinder
	F1-82-	Device provided with SARGENT Keso F1 Security Cylinder (Patented)
	83-	Device provided with SARGENT Keso Security Removable Core cylinder
	F1-83-	Device provided with SARGENT Keso F1 Security Removable Core cylinder (Patented)
	84-	Device provided with SARGENT Keso Construction Cores (Permanent Cores ordered separately)
Added Security	**BR-**	Bump Resistant Cylinder (Available with Conventional & Conventional XC Cylinders Only)
Less Cylinder	**LC-**	Less Cylinder - SARGENT supplies standard blocking rings for 1-1/8" Cylinders (For longer cylinders order collars/rings separately)
Schlage Keyways	**SC-**	Schlage C keyway cylinder, 0 bitted (not available with: 8904, 8916, 8944, 8975, 8976, 8866, 8304, 8344, 8375 & 8376)
	SE-	Schlage E keyway cylinder, 0 bitted (not available with: 8904, 8916, 8944, 8975, 8976, 8866, 8304, 8344, 8375 & 8376)
Lever to Accept Schlage	**SF-**	L Lever to accept MEDECO KeyMark Large Format Interchangeable and Schlage Full Size Interchangeable Core (Supplied Less Cylinder, but with tailpiece needed) (Available for 88-KLL & 88-CLL)

Note: For V-10 Cylinders and information, contact ASSA

MD8600(Windstorm Rated) and NB-MD8600 Concealed Vertical Rod Exit Device for Metal Doors

80 Series

SARGENT®
ASSA ABLOY

MD8600 Series

Concealed Vertical Rod Exit Device for Metal Doors

Features

- Designed for standard width stile applications on hollow metal doors
- Concealed rods for security and aesthetics
- Single and double door applications
- Specify NB- for less bottom rod
  – NB not available with HC and WS options
- Devices are ANSI A156.3 - Grade 1
- UL Fire and Panic listed

Specifications for MD8600 & NB-MD8600 Series Exit

Door Type	Metal Doors
Door Thickness	1-3/4" (44mm) minimum thickness. For doors over 1-3/4" to 2-1/4" thick, specify thickness and order as 31-
Cladding	Available for 1/4" on 1/2" panels. Specify 31- and panel thickness on order. Only available on 1-3/4" door thickness. Must be noted separately from door thickness on order string.
Stile	4-1/2" (114mm) minimum stile width
Rail sizes as determined by door width	Rails are available in 4 sizes, use door width to determine size needed. Rails will be factory cut to size, if door width is supplied • E Rail for 24" to 32" door widths, No cutting required for 32" door • F Rail for 33" to 36" door widths, No cutting required for 36" door • J Rail for 37" to 42" door widths, No cutting required for 42" door • G Rail for 43" to 48" door widths, No cutting required for 48" door
Strike	650 Top Strike & 606 Bottom Strike (Panic and Fire Rated)
Dogging Feature	Hex key dogging standard on non fired rated devices; specify 16- for cylinder dogging (#41 cylinder supplied)
Electric Options	AL- Alarm PL- SARGuide™ Photoluminescent Coated TL- SARGuide™ Illuminated Touchpad 53- LX Latchbolt Monitor 54- Outside Lever Monitoring 55- Request-to-Exit Signal - Rail Monitoring 56- Remote Latch Retraction 57- Delay Egress & Electromagnets 58- Electric Dogging 59- Electroguard – Self Contained Delayed Egress
Mounting Fasteners	Supplied standard with machine screws
Top Bolt	Stainless steel
Device Centerline from Finished Floor	41" (1041mm) for Standard Applications 38" (965mm) for elementary schools
Door/Opening Height	**Must be specified** - 120" (3048mm) Max Door Opening 96" max door height for HC and WS options
Center Case Dimensions	8-3/8" (213mm) x 2-5/8" (67mm)
Projection	Pushbar Neutral – 3" (76mm) Pushbar Depressed – 2-1/8" (54mm)
Fire Exit Hardware	See Chart – Page 6

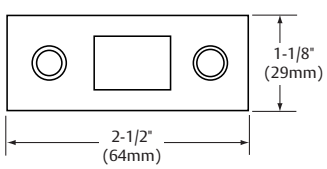
Note: MD8600 & 12-MD8600 can be used as NB- Device by simply not installing the bottom rod/bolt
Note: 12-NB Applications require thermal pin. Thermal Pin supplied when ordered as a 12-NB Device.

100 Series Aux Control

- Available as an 06 or 13 function
- Supplied with a SARGENT #41 Mortise Cylinder
- Can be used with any SARGENT Mortise Key System

650 Top Strike

- For application in hollow metal frames
- Stainless steel nylon coated



606 Bottom Strike

- Furnished with expansion shields
- Mortised into floor
- Stainless steel

Concealed Vertical Rod Exit Device for Metal Doors

Features

- Designed for standard width stile applications on hollow metal doors
- Concealed rods for security and aesthetics
- Single and double door applications
- Specify NB- for less bottom rod
  – NB not available with HC and WS options
- Devices are ANSI A156.3 - Grade 1
- UL Fire and Panic listed

Specifications for MD8600 & NB-MD8600 Series Exit

Door Type	Metal Doors
Door Thickness	1-3/4" (44mm) minimum thickness. For doors over 1-3/4" to 2-1/4" thick, specify thickness and order as 31-
Cladding	Available for 1/4" on 1/2" panels. Specify 31- and panel thickness on order. Only available on 1-3/4" door thickness. Must be noted separately from door thickness on order string.
Stile	4-1/2" (114mm) minimum stile width
Rail sizes as determined by door width	Rails are available in 4 sizes, use door width to determine size needed. Rails will be factory cut to size, if door width is supplied • E Rail for 24" to 32" door widths, No cutting required for 32" door • F Rail for 33" to 36" door widths, No cutting required for 36" door • J Rail for 37" to 42" door widths, No cutting required for 42" door • G Rail for 43" to 48" door widths, No cutting required for 48" door
Strike	650 Top Strike & 606 Bottom Strike (Panic and Fire Rated)
Dogging Feature	Hex key dogging standard on non fired rated devices; specify 16- for cylinder dogging (#41 cylinder supplied)
Electric Options	AL- Alarm PL- SARGuide™ Photoluminescent Coated TL- SARGuide™ Illuminated Touchpad 53- LX Latchbolt Monitor 54- Outside Lever Monitoring 55- Request-to-Exit Signal - Rail Monitoring 56- Remote Latch Retraction 57- Delay Egress & Electromagnets 58- Electric Dogging 59- Electroguard – Self Contained Delayed Egress
Mounting Fasteners	Supplied standard with machine screws
Top Bolt	Stainless steel
Device Centerline from Finished Floor	41" (1041mm) for Standard Applications 38" (965mm) for elementary schools
Door/Opening Height	**Must be specified** - 120" (3048mm) Max Door Opening 96" max door height for HC and WS options
Center Case Dimensions	8-3/8" (213mm) x 2-5/8" (67mm)
Projection	Pushbar Neutral – 3" (76mm) Pushbar Depressed – 2-1/8" (54mm)
Fire Exit Hardware	See Chart – Page 6

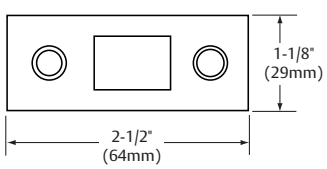
Note: MD8600 & 12-MD8600 can be used as NB- Device by simply not installing the bottom rod/bolt
Note: 12-NB Applications require thermal pin. Thermal Pin supplied when ordered as a 12-NB Device.

100 Series Aux Control

- Available as an 06 or 13 function
- Supplied with a SARGENT #41 Mortise Cylinder
- Can be used with any SARGENT Mortise Key System

650 Top Strike

- For application in hollow metal frames
- Stainless steel nylon coated



606 Bottom Strike

- Furnished with expansion shields
- Mortised into floor
- Stainless steel

8800 Rim Exit Device

80 Series

SARGENT®

ASSA ABLOY

8800 Series
Rim Exit Device

8800 Features

- Designed for standard width stile applications on wood and metal doors
- Also available as an HC8800 or WS8800 for hurricane-resistant applications, see Hurricane-Resistant section of this catalog
- Single point rim latching device
- Single door & double door applications with mullions
- Quiet operation and solid security
- ANSI/BHMA A156.3 - Grade 1
- UL10C (Fire) and UL305 (Panic) Listed

Specifications — 8800 Series Rim Exit Device

Door Type	Metal Doors
Door Thickness	1-3/4" (44mm) minimum thickness. For doors over 1-3/4" to 2 1/4" thick, specify thickness and order as 31-
Rail sizes as determined by door width	Rails are available in 4 sizes, use door width to determine size needed. Rails will be factory cut to size, if door width is supplied • E Rail for 24" to 32" door widths, No cutting required for 32" door • F Rail for 33" to 36" door widths, No cutting required for 36" door • J Rail for 37" to 42" door widths, No cutting required for 42" door • G Rail for 43" to 48" door widths, No cutting required for 48" door
Strike	649 Standard Black Nylon Coated
Optional Strikes	642, 644 and 613
Dogging Feature	Hex key dogging standard on non fired rated devices; specify 16- for cylinder dogging (#41 cylinder supplied)
Electric Options	AL- Alarm PL- SARGuide Photoluminescent Coated TL- SARGuide Illuminated Touchpad
	49- Indicator 53- LX Latchbolt Monitor 54- Outside Lever Monitoring 55- Request-to-Exit Signal - Rail Monitoring 56- Remote Latch Retraction 57- Delay Egress & Electromagnets 58- Electric Dogging 59- Electroguard – Self Contained Delayed Egress
Mounting Fasteners	Supplied standard with wood and machine screws Available with through-bolts and mortise (sex) nuts
Latch Bolt	Stainless steel, 3/4" (19mm) throw
Device Centerline from Finished Floor	41" (1041 mm) for Standard Applications
Center Case Dimensions	8-3/8" (213mm) x 2-5/8" (67mm)
Projection	Pushbar Neutral – 3" (76 mm) Pushbar Depressed – 2-1/8" (54 mm)
Fire Exit Hardware	See Chart – Page 6

49- Lock/Unlock Indicator Option

- Displays whether the door has been secured by the inside cylinder.
- Red icon indicates locked
- White icon indicates unlocked
- Dogging overrides 49- functionality (must order less dogging)
- Available on 8816 and 8866 functions only

649 Strike

- Supplied standard for panic & fire rated openings
- Surface applied
- Black nylon coated

688 Trim Retrofit Kit

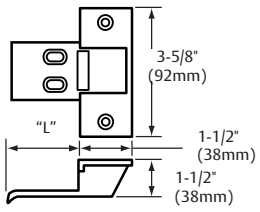
- 688 Trim Retrofit kit allows an 8800* Series rim exit with an ET to replace Von Duprin's 98/99 Series exit with trim with minimal door prep.

* Except for 16 function

- Order as: 688 Kit

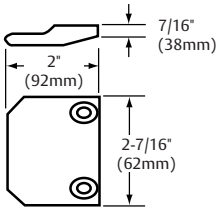
Alternate Strikes For 8800 Rim Devices

642 Strike



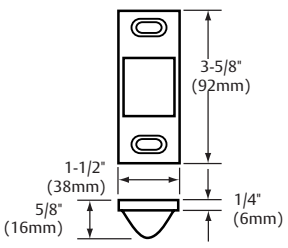
- Mortised. Dimension "L" equals door thickness plus 1/2" (13mm). Black nylon coated on lip only

644 Strike



- Surface applied. For use on pairs of doors without mullion. Ductile Iron. Black nylon coated

613 Strike



- Half mortised. Black nylon coated

in door opening solutions

Windstorm Certifications

80 Series

SARGENT
ASSA ABLOY

Windstorm Certifications: Florida Building Codes & UL Listings

SARGENT Manufacturing's products meet building codes that require hurricane, windstorm and FEMA certifications, including some of the most stringent building codes as specified in the Florida Building Code, Miami Dade Code and the International Building Code. Listed below are certifications and standards met by the 80 Series lock.

Florida Building Code: FL2998
UL Certification Directory: ZHEM.R21744 – Latching Hardware

ANSI/SDI-BHMA A250.13	"Testing and Rating of Severe Windstorm Resistant Components for Swinging Door Assemblies"
ANSI/ASTM E330	"Standard Test Method for Structural Performance of Exterior Windows, Doors, Skylights and Curtain Walls by Uniform Static Air Pressure Difference"
ANSI/ASTM E1886	"Standard Test Method for Performance of Exterior Windows, Curtain Walls, Doors, and Impact Protective Systems Impacted by Missile(s) and Exposed to Cyclic Pressure Differentials"
ASTM E1996	"Standard Specification for Performance of Exterior Windows, Curtain Walls, Doors and Impact Protective Systems Impacted by Windborne Debris in Hurricanes"
(TAS) 201	"Impact Test Procedures"*
(TAS) 202	"Standard Test Method for Structural Performance of Exterior Windows, Doors, Skylights and Curtain Walls by Uniform Static Air Pressure Difference"
(TAS) 203	"Criteria for Testing Products Subject to Cyclic Wind Pressure Loading"*

* Published in the "Florida Building Code"

Any retrofit or other field modification to a fire rated opening can potentially impact the fire rating of the opening, and Sargent Manufacturing Company makes no representations or warranties concerning what such impact may be in any specific situation. When retrofitting any portion of an existing fire rated opening, or specifying and installing a new fire-rated opening, please consult with a code specialist or local code official (Authority Having Jurisdiction) to ensure compliance with all applicable codes and ratings.

UL Certification Directory: ZHLL.R21744 – Products for Use in Windstorm-rated Assemblies

Certifications to meet assembly requirements are done in conjunction with doors from ASSA ABLOY Group companies CECO DOOR and CURRIES.

ASTM E330	"Standard Test Method for Structural Performance of Exterior Windows, Doors, Skylights and Curtain Walls by Uniform Static Air Pressure Difference"
ANSI/ASTM E1886	"Standard Test Method for Performance of Exterior Windows, Curtain Walls, Doors, and Impact Protective Systems Impacted by Missile(s) and Exposed to Cyclic Pressure Differentials"
ASTM E1996	"Standard Specification for Performance of Exterior Windows, Curtain Walls, Doors and Impact Protective Systems Impacted by Windborne Debris in Hurricanes"
AAMA/WDMA/CSA 101/I.S.2/A440	"Standard/Specification for Windows, Doors, and Unit Skylights"
FEMA Publication 320 (2014)	"Taking Shelter From the Storm: Building a Safe Room for Your Home or Small Business", investigated with respect to impact and pressure requirements only.
FEMA Publication 361 (2015)	"Design and Construction Guidance for Community Safe Rooms", investigated with respect to impact and pressure requirements only.
ICC 500 (2014)	"ICC/NSSA Standard for the Design and Construction of Storm Shelters", investigated with respect to impact and pressure testing. Minimum missile impact speeds vary with the design wind speed desired for a particular product. The information below correlates design wind speed to the minimum missile speeds as discussed in Table 305.1.1 of ICC 500

Any retrofit or other field modification to a fire rated opening can potentially impact the fire rating of the opening, and Sargent Manufacturing Company makes no representations or warranties concerning what such impact may be in any specific situation. When retrofitting any portion of an existing fire rated opening, or specifying and installing a new fire-rated opening, please consult with a code specialist or local code official (Authority Having Jurisdiction) to ensure compliance with all applicable codes and ratings.

* Inside Cylinders
Chart shows cylinder type and size for conventional SARGENT cylinders.
Note: Cylinder sizes & types are limited, as noted: SC- & SE- cylinders are available in size 41
60-, 63- & 64- cylinders are available in sizes 42, 43, 44 & 46
70-, 11-70-, 72-, 11-72-, 73- & 11-73 cylinders are available in sizes 43 & 46
Note: The 8888's Lever & Rose Trim cylinder standard is the standard SARGENT 10 Line cylinder (13-3266)
Note: 41 Cylinder is 1-1/8" in length; For each additional digit, the cylinder is a 1/8" longer. Example: 42 is 1-1/4"; 43 is 1-3/8" and 46 is 1-3/4"
Note: SARGENT supplies standard blocking rings. Specify if using competitor cylinders

***Note:** Cylinder Kits must be ordered separately

Note for HC980/12-HC980 Mullions:

- Designed for severe wind load conditions due to hurricanes or tornadoes
- Tested to Dade County protocols and ANSI 250.13 ASTM Standards and FEMA 361
- 12- Fire labeled version
- Replacement lock kits are available for lockable mullions Part numbers for each model are listed in the price book

HCL980 Mullion Information

- Model 12-HC-L980 may be supplied for doors UL fire rated up to and including 3 hrs not exceeding 8 ft in width and height
- Meets the following standards: ANSI 250.13, ASTM E330, ASTM 1886, ASTM 1996, TAS 201, TAS 202 & TAS 203
- Designed for use with UL Classified HC8810, HC8800 and 12-HC8800 rim exit devices

Mullion Accessories and Stabilizers

80 Series

SARGENT
ASSA ABLOY

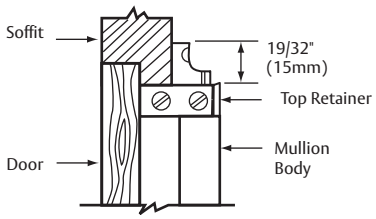
Mullion Accessories

RK980
Latchbolt assembly retrofit kit with top and bottom retainers for 980 aluminum mullion

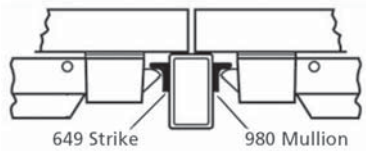
507 Narrow Transom Bars Adapter

- Available with 980 and 980A
- Required when soffit is 1-1/4" (32mm) to 2" (51mm) wide
- Order as a: 507 for 980 mullion or 507A for 980A mullion



980S Mullion Application

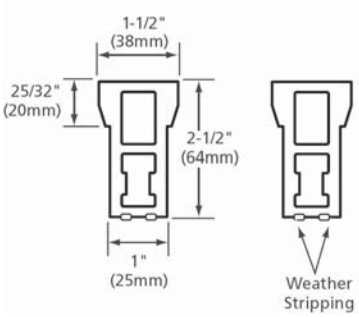
- All steel mullions are 2" x 3"



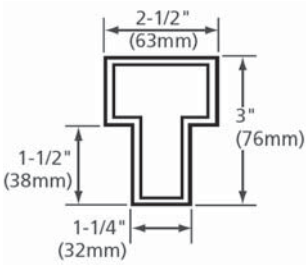
651 Mullion Stabilizer Kit

- Stabilizer block
- Furnished standard w/650A Mullion
- Order as a 651 Kit

650A Mullion



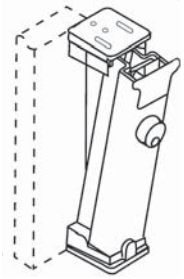
980 Mullion & L980 Lockable Mullion



980C1 Cylinder Mullion Kit

- Lockable mullions only
- Aluminum and steel
- Includes cylinder and collar
- Available in 26D & 10B finish

Lockable Mullion



Lockable Mullion Cylinder Kit Options*

L980, L980A, L980S & HC-L980 mullions are available with these options: 10, 10-21-, 10-63-, 11-, 11-21-, 11-60, 11-63-, 11-64-, 11-72-7P-, 11-65-73-7P-, 11-73-7P-, 21-, 22-, 60-, 63-, 64-, 70, 72-, 73-, 65-73-, 65-73-7P-, 73-7P-, 81-, 82-, F1-82-, 83-, F1-83-, 84-, SC- & SE-.

EL980 mullion is available with these options: 10, 10-21-, 10-63-, 11-, 11-21-, 11-60, 11-63-, 11-64-, 11-72-7P-, 11-65-73-7P-, 11-73-7P-, 21-, 22-, 60-, 63-, 64-, 70, 72-, 73-, 65-73-, 65-73-7P-, 73-7P-, 81-, 82- & F1-82-.

*Lockable mullions are shipped without cylinders. Order Cylinder Mullion Kit separately.

980C2 Cylinder Mullion Kit

- Lockable mullions
- Electrified only
- Includes cylinder and collar
- Available in 26D finish only

Mullion Weights & Packaging

Product	Avg Wt	Case
Exit Device with Trim	15 lbs	1 ea
980 Mullion	18 lbs	1 ea
12-980 Mullion	40 lbs	1 ea
650A Mullion	18 lbs	1 ea

Mechanical Options and Descriptions

80 Series

SARGENT®
ASSA ABLOY

Mechanical Options:

Categories	How to Specify	Detailed Description
Fire Rated	**12-**	UL Fire Label Exit hardware (not available with 16- & HK-)
SVR Bolt	**14-**	Sliding bolt bottom case for 8700
Cylinder Dogging	**16-**	Cylinder lockdown with # 41 Cylinder & # 97 Ring (not available with 12-, 57, 59-, AL- or BT- Option)
	LD-	Less dogging for non fire rated devices
Less Touch Pad	**19-**	Pushbar without Lexan touchpad (not available TL-)
8900/8300 Strike	**23-**	4-7/8" (124mm) ANSI flat lip strike (for 8900 & 8300 Series Mortise Lock Exit Devices)
Thick Doors	**31-**	Doors over 1-3/4" and/or Panels (Specify door thickness, panel thickness & location as required) Not available for HC8700, FM8700, PP, PR & SP8700, PP, PR & SP8600, LP, LR & LP8700 Extended lip strike supplied for 8300 & 8900 Series
Security Fasteners	**36-**	Six lobe security head screws
	37-	Spanner head screws
Flush End cap	**43-**	Flush End Cap (Not available with LP, LR & LS Devices)
Indicator	**49-**	Indicator (Available on 8816 and 8866 functions only)
Electrical Options	**53-**	Latchbolt monitoring switch (not available with 59-, GL-, HC-, WS- or on FM8700, PP/PR/SP8600 & LP/LR/LS8600 Exit Devices)
	54-	Monitors ET Lever movement with Internal micro switch in ET Control
	55-	Request to Exit - Signal Switch in Rail (not available with 59- & FM8700)
	56-	Remote Latch Retraction (not available 57-, 58-, 59-, AL- or BT- Option)
	56-HK-	Remote Latch Retraction with manual Hex Key dogging (not available 12-, 57-, 58-, 59-, AL- or BT- Option)
	57-	Delayed Egress (Electromagnetic Lock required & purchased separately) (not available 16-, 53-, 56-, 56-HK, 58-, 59-, AL, Bc-59 - or BT, GL, TL Prefixes) (NB, 54- are available on request)
	58-	Electric Rail Dogging (Not available 56- & 59-)
	59-	Electroguard® Self Contained Delayed Egress Device (not available with 16-, 53-, 55-, 56-, 57-, 58-, AL-, BT-, GL-, HC- & WS Option Prefixes, PP/PR/SP8600, LP/LR/LS8600 Exit Devices) (NB, 54- are available upon request)
	AL-	Alarmed Exit (Not available 16-, 56-, 57-, 59-, BT-, GL-, HC- & WS-)
	BC-59-	Electroguard® Boca Code (Door Status Switch required) (not available with 16-, 55-, 56-, 57-, 58-, AL-, BT-, GL-, HC- & WS-Options and on NB8700, PP/PR/SP8600 & LP/LR/LS8600 Exit Devices)
	TL-	SARGuide Electro-Luminescent Touchpad (not available 19-, 85-, 87- & PL-)
Tactile Warning Options	**76-**	Tactile Warning - Milled Outside Lever (not available with Studio & Coastal Levers and the A Lever)
	85-	Tactile Warning - Abrasive strip on Push Rail (Not available with PL- & TL-)
	86-	Tactile Warning - Abrasive coating on Outside Lever
	87-	Tactile Warning - Abrasive strip on Push Rail & Abrasive coating on Outside Lever (not available with PL- & TL-)
Finish Protection	**CPC-**	Clear Powder Coat (Available for 32 & 32D Finishes)
	SG-	MicroShield® antimicrobial clear powder coat (only available with 15, 26D and 32D finishes)
Top Rod Only	**NB-**	Less Bottom Rod & Bolt (for SVR & CVR Devices)
Guarded Latch	**GL-**	Guarded Latch for Rim Exit Devices (not available 53-, 56-, 59-, AL-, HC- & WS-)
SARGuide	**PL-**	SARGuide™ PL – Photoluminescent Coated Push Rail – (Touchpad eliminated) (not available 85, 87 & TL-)
Through Bolts	**TB-**	Through Bolts for 8300, 8500, 8600, 8700, 8800 & 8900 Devices
Rail Force	**5CH-**	5lb. Pressure Release (8800 only)

Cylinder Options and Descriptions

80 Series

SARGENT®
ASSA ABLOY

Cylinder Options:

Conventional Cylinder	-	SARGENT Conventional Cylinders Supplied Standard (Unless Otherwise Specified)
Degree Key System	**DG1-**	SARGENT Degree Key System Level 1 (bump resistant with patented keys)
	DG1-21-	Degree Level 1 Construction Master Keying
	DG1-60-	Degree Level 1 Removable Disposable Construction Core
	DG1-63-	Degree Level 1 Removable Core
	DG1-64-	Degree Level 1 Removable Construction Keyed LFIC
	DG1-65-	Degree Level 1 Unassembled/Uncombined Core
	DG2-	SARGENT Degree Key System Level 2 (geographically exclusive; bump and pick resistant)
	DG2-21-	Degree Level 2 Construction Master Keying
	DG2-60-	Degree Level 2 Removable Disposable Construction Core
	DG2-63-	Degree Level 2 Removable Core
	DG2-64-	Degree Level 2 Removable Construction Keyed LFIC
	DG2-65-	Degree Level 2 Unassembled/Uncombined Core
	DG3-	SARGENT Degree Key System Level 3 (geographically exclusive; UL437 certified; bump and pick resistant)
	DG3-21-	Degree Level 3 Construction Master Keying
	DG3-60-	Degree Level 3 Removable Disposable Construction Core
	DG3-63-	Degree Level 3 Removable Core
	DG3-64-	Degree Level 3 Removable Construction Keyed LFIC
	DG3-65	Degree Level 3 Unassembled/Uncombined Core
Signature Key System	**10-**	SARGENT Signature Key System (Not Available with other Key Systems)
	10-21-	SARGENT Signature Construction Key System (Lost Ball)
Signature- LFIC	**10-63-**	SARGENT Signature Large Format Interchangeable Core Cylinder (Removable)
XC- Key System	**11-**	XC Key System (Not available with other Key systems unless specified)
	11-21-	XC- Construction Key System (Lost Ball)
XC- Large Format Interchangeable Core (Removable Core)	**11-60-**	Device to accept XC- Permanent Large Format Interchangeable Core, Disposable plastic Core- provided
	11-63-	Device provided with XC- Large Format Interchangeable Core Cylinder - (Includes masterkeying, grand masterkeying)
	11-64-	Device provided with Keyed construction core to accept XC- Permanent Large Format Interchangeable Core (ordered separately)
XC- Small Format Interchangeable Core	**11-70-7P-**	Device to accept XC- SFIC (7-Pin) XC- Permanent Cores, plastic disposable core provided
	11-72-7P-	Device to accept XC- SFIC (7-Pin Keyed Construction Core provided) cylinder Permanent core ordered separately
	11-73-7P-	Device provided with XC- Small Format 7-Pin interchangeable core (Includes masterkeying, grand masterkeying)
	11-65-73-7P-	Device provided to accept XC- Uncombinated 7-Pin SFIC (Permanent) Core - (Packed Loose)
Construction Key Systems	**21-**	SARGENT Lost Ball Construction Keying for Conventional, XC and Signature Series (N/A with 63- or 73-)
	22-	SARGENT Construction Split Key System for Conventional Cylinders (Existing Systems Only) (N/A with 10-, 11-, 63- or 73-)
Old Style Removable Core	**51-**	Removable Core Cylinder (Old Style) provided (existing systems only)
	52-	Removable Construction Core (Old Style) Permanent core ordered separately (existing systems only)
Large Format Interchangeable Core (Removable Core)	**60-**	Device to accept SARGENT Permanent Large Format Interchangeable Core, Disposable plastic Core provided (Permanent Cores ordered separately)
	63-	Device provided with Large Format Interchangeable Core Cylinder - (Includes masterkeying, grand masterkeying)
	64-	Device provided with Keyed construction core to accept Permanent Large Format Interchangeable Core (ordered separately)
Small Format Interchangeable Core	**70-**	Device to accept 6- or 7-Pin SFIC Permanent Cores, plastic disposable core provided
	72-	Device to accept 6- or 7-Pin SFIC (6-Pin Keyed Construction Core provided) Cylinder (Permanent Core ordered separately)
	73-	Device provided with 6-Pin SFIC (Includes masterkeying, grand masterkeying)
	65-73-	Device provided to accept Uncombinated 6-Pin SFIC (Permanent) Core - (Packed Loose for field keying)
	65-73-7P-	Device provided to accept Uncombinated 7-Pin SFIC (Permanent) Core - (Packed Loose for field keying)
	73-7P-	Device provided with Small Format 7-Pin Interchangeable Core (Includes masterkeying, grand masterkeying)
Keso & Keso F1	**81-**	Device provided with housings to accept Keso (83) & Keso F1 (F1-83-) removable cores. (Permanent Cores ordered separately)
	82-	Device provided with SARGENT Keso Security Cylinder
	F1-82-	Device provided with SARGENT Keso F1 Security Cylinder (Patented)
	83-	Device provided with SARGENT Keso Security Removable Core cylinder
	F1-83-	Device provided with SARGENT Keso F1 Security Removable Core cylinder (Patented)
	84-	Device provided with SARGENT Keso Construction Cores (Permanent Cores ordered separately)
Added Security	**BR-**	Bump Resistant Cylinder (Available with Conventional & Conventional XC Cylinders Only)
Less Cylinder	**LC-**	Less Cylinder - SARGENT supplies standard blocking rings for 1-1/8" Cylinders (For longer cylinders order collars/rings separately)
Schlage Keyways	**SC-**	Schlage C keyway cylinder, 0 bitted (not available with: 8904, 8916, 8944, 8975, 8976, 8866, 8304, 8344, 8375 & 8376)
	SE-	Schlage E keyway cylinder, 0 bitted (not available with: 8904, 8916, 8944, 8975, 8976, 8866, 8304, 8344, 8375 & 8376)
Lever to Accept Schlage	**SF-**	L Lever to accept MEDECO KeyMark Large Format Interchangeable and Schlage Full Size Interchangeable Core (Supplied Less Cylinder, but with tailpiece needed) (Available for 88-KLL & 88-CLL)

Note: For V-10 Cylinders and information, contact ASSA

WD8600 and NB-WD8600 Concealed Vertical Rod Exit Device for Wood Doors

80 Series

SARGENT®
ASSA ABLOY

WD8600 Series

Concealed Vertical Rod Exit Device for Wood Doors

Features

- Designed for standard width stile applications on wood doors
- Concealed rods offer security
- Single and double door applications
- Specify NB- for less bottom rod
- Devices are ANSI/BHMA A156.3 - Grade 1
- UL10C (Fire) and UL305 (Panic) listed

Specifications for WD8600 & NB-WD8600 Series Exit

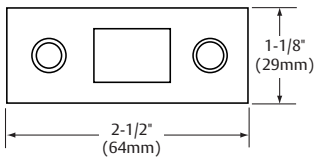
Door Type	Wood Doors
Door Thickness	1-3/4" (44mm) minimum thickness. For doors over 1-3/4" to 2-1/4" thick, specify thickness and order as 31-
Stile	4-1/2" (114mm) minimum stile width
Rail sizes as determined by door width	Rails are available in 4 sizes, use door width to determine size needed. Rails will be factory cut to size, if door width is supplied • E Rail for 24" to 32" door widths, No cutting required for 32" door • F Rail for 33" to 36" door widths, No cutting required for 36" door • J Rail for 37" to 42" door widths, No cutting required for 42" door • G Rail for 43" to 48" door widths, No cutting required for 48" door
Strike	650 Top Strike & 606 Bottom Strike (Panic and Fire Rated)
Dogging Feature	Hex key dogging standard on non fired rated devices; specify 16- for cylinder dogging (#41 cylinder supplied)
Electric Options	AL- Alarm PL- SARGuide™ Photoluminescent Coated TL- SARGuide™ Illuminated Touchpad 53- LX Latchbolt Monitor 54- Outside Lever Monitoring 55- Request-to-Exit Signal - Rail Monitoring 56- Remote Latch Retraction 57- Delay Egress & Electromagnets 58- Electric Dogging 59- Electroguard – Self Contained Delayed Egress
Mounting Fasteners	Supplied standard with wood screws
Top Bolt	Stainless steel
Device Centerline from Finished Floor	41" (1041mm) for Standard Applications 38" (965mm) for elementary schools
Door/Opening Height	**Must be specified** - 108" (2743mm) Max Door Opening - Fire rated doors 120" (3048mm) Max Door Opening - Non-fire rated doors
Center Case Dimensions	8-3/8" (213mm) x 2-5/8" (67mm)
Projection	Pushbar Neutral – 3" (76mm) Pushbar Depressed – 2-1/8" (54mm)
Fire Exit Hardware	See Chart – Page 6

Note: WD8600 & 12-WD8600 can be used as NB- Device by simply not installing the bottom rod/bolt
Note: 12-NB applications require thermal pin. Thermal pin supplied when ordered as a 12-NB device

100 Series Aux Control

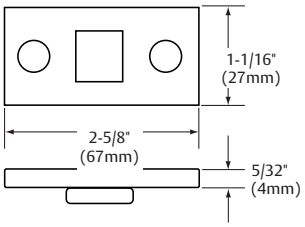
- Available as an 06 or 13 function
- Supplied with a SARGENT #41 Mortise Cylinder
- Can be used with any SARGENT Mortise Key System

650 Top Strike



- For application in hollow metal frames
- Stainless steel

606 Bottom Strike



- Furnished with expansion shields
- Mortised into floor
- Stainless steel

WD8600 and NB-WD8600 Functions and Trims for Wood Doors

80 Series

SARGENT®
ASSA ABLOY

How to order:	Options	Series	Function	Rail Lgth	Trim	Hand	Outside Finish	Inside Finish	Door Width	Door Height	AFF
	58-NB-	WD86	13	F	ETL	RHR	26D	32D	36"	84"	41"

700 Series ET Trim

Exits with ET Trim, specify lever design after the ET designation (e.g., ETL)

Lever Designs for ET Controls

A, B, E, F, J, L, P, W
Also available with Coastal Series & Studio Collection Levers

ET Designation with Suffix (Used to order ET without device)

MD8600 & NB-MD8600 Series:
706-4, 710-4, 713-4, 715-4, 740-4, 743-4, 746-4, 773-4, & 774-4

Freewheeling Trim

The lever rotates when the door is locked preventing excessive force from being applied to the horizontal lever

Electrified ET Trim

Voltage must be specified for the following functions: 73 and 74.
Specify: 12VDC or 24VDC

SARGENT Function Numbers	ANSI Function Numbers	Description & Cylinder Info (1-3/4" Door)	ANSI Type 7 WD8600 Panic & Fire

Concealed Mount Pull Plate Sets
No. 107 x 73B/73BL, 110 x 73C/73CL, 111 x 73C/73CL

Material: Stainless steel

Finishes: US32D

Fastener: Type 9. Stud welded lugs on the back of the push plate are permanently attached to the 1/8" thick push plate. Cone head MS attached to selected door pull

Features:
- This set has no perimeter screw holes in either plate
- Concealed mounting system. Any of the rod type door pulls from No. 105 to No. 118 are appropriate for this application

Options:
- Engraving on plates 4" wide or wider. Specify copy. See page B1 for standard engraving locations
- Cylinder cutouts (CFC) and turn knob cutouts (CFTT). See page B1 for standard locations and sizes
- *Other overall sizes available upon request

No.	Pull	Pull Size	Pull CTC	Pull Plate	Push Plate	Overall*	Weight	ANSI A156.6

Side Elevation

Security Door Pull No. 110-6SP

Material: Stainless steel

Finishes: US32D

Fastener: 3/8 - 16 hex head MS with nylon patch

Features: For use on security hollow metal doors with reinforcing plate and access hole cover plate with TORX - security Torx screws — all to be supplied by door manufacturer

No.	Material Size	CTC	Overall	Base	Projection	Clearance	Weight	ANSI A156.6
110 - 6SP	1" dia.	6"	7"	1"	3"	2"	2.4 lbs.	J401

Door Coordinators No. 2600 Series

Material: Steel

Finishes: Black prime coat, silver powder coat

Fastener: 7 ea. #12 - 24 x 1 1/4 TH type C tapping screws

Size: Standard device size 5/8" x 1 5/8" x 52"

Features: Non-handed. Override protection to prevent damage in case of abnormal force on door Mechanism and filler bar completely fill width of opening and when painted to match frame it becomes virtually invisible

Options: Specify make and model of exit device for vertical rod preparation

Ordering: Stock Sizes

No.	Opening	Weight	ANSI A156.3
2660	60"	7.0 lbs.	Type 21A
2672	72"	8.0 lbs.	Type 21A
2696	96"	9.75 lbs.	Type 21A

Custom Sizes — The 2600 Series coordinators are manufactured in different housing lengths to coordinate the full range of door sizes:

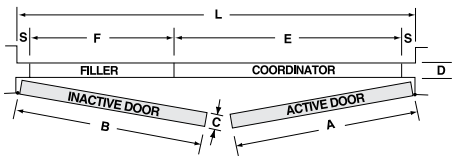
- NX2600 Series: For jamb opening widths (A + B dimension) from 48" - 54". E dimension, 42"
- 2600 Series: For jamb opening widths (A + B dimension) from 54" - 96". E dimension, 52"

Determining Coordinator Item Number

- Active door widths A plus inactive door width B equals the last two or three digits of all 2600 Series coordinator item numbers (2680 is for 80" door opening)
- Less than 48" jamb widths = N2600 Series (N2644 = 44" opening).
- Larger sizes are available (XL, XXL). Contact the factory

NOTE: Some panic hardware requires the coordinator to be factory prepped. Contact factory.

No.	Jamb Widths	Coordinator Length	ANSI A156.3
NX2648- NX2654	48"-54"	42"	Type 21A
2655 - 2660	55" - 60"	52"	Type 21A
2661 - 2672	61" - 72"	52"	Type 21A
2673 - 2696	73" - 96"	52"	Type 21A



Fillers are usually supplied precut from the factory (filler bars shown on page E14).

NOTE: If "S" dimension is other than 5/8" advise the factory.

Concealed Mount – Interior or Exterior – High Traffic Doors

Product Description & Features

- Doors may be single or double acting
- Non-handed
- Slide track design
- Recommended for high traffic, heavy abuse installations
- Heavy shock absorber spring provides 5 -7° compression before dead stop
- LS option omits spring for special applications
- Surface on/off knob on hold open models
- Stop, friction stay or hold open functions
- Complete screw packet for installation in wood and machine screws for door and frame.
- For security areas, Torx® screws available for exposed fasteners
- Standard architectural finishes
- Durable slider cam and shock block
- 110° maximum opening
- 1-3/4" minimum door thickness, for thicker doors, note thickness when ordering
- 1-3/16" square channel
- Stop function UL listed for fire door assemblies
- Hanging means other than standard butts or offset pivots require special templating and pricing. Consult factory

Checkmate® Stops and Holders Options, Certifications, Limited Warranty, Specifications

Options

Less Spring – Suffix LS

Heavy duty slide track type stops have a spring in the end of the channel that keeps the slider from deadstopping. If these units are being used with electromechanical closer, where the door must deadstop, the LS option is needed. For non-adjustable models 1 and 9 only.

Angle Jamb Bracket Adapter –
Standard-duty models suffix 5258 (non-handed)
Heavy-duty models suffix 5458 (LH) or 5459 (RH)

When surface mounted units are mounted on a rabbeted door on the push side, flush door and transom on the push side, or in a reverse installation on the pull side of the door a special bracket is needed. Note that not all models can be mounted on the pull side of the door (*See specific model numbers in catalog.*)

5258

5458

Security Screws – Suffix Torx

Security screws can be supplied for exposed fasteners.

Certifications

All Rixson Checkmate® overhead stops and holders are in compliance with ANSI/BHMA 156.8, Grade 1 and 2 Standards. See individual products for sub sections. See individual models for UL Listing.

Limited Warranty

Rixson Checkmate® stops and holders are warranted for 2 years for defect. See *Rixson* price book for specific details of the limited warranty

Specifications

All overhead stops and holders shall be from a single manufacturer.

Standard-duty models used for interior or low to medium traffic doors.

Heavy-duty models used for exterior or high traffic doors or doors subject to abuse.

For extremely abusive areas or high winds use double lever arm type.

Coordinate deadstop and/or hold open location with concealed floor closers.

Checkmate products provide hold open and/or deadstop.

Product Catalog

SARGENT
ASSA ABLOY

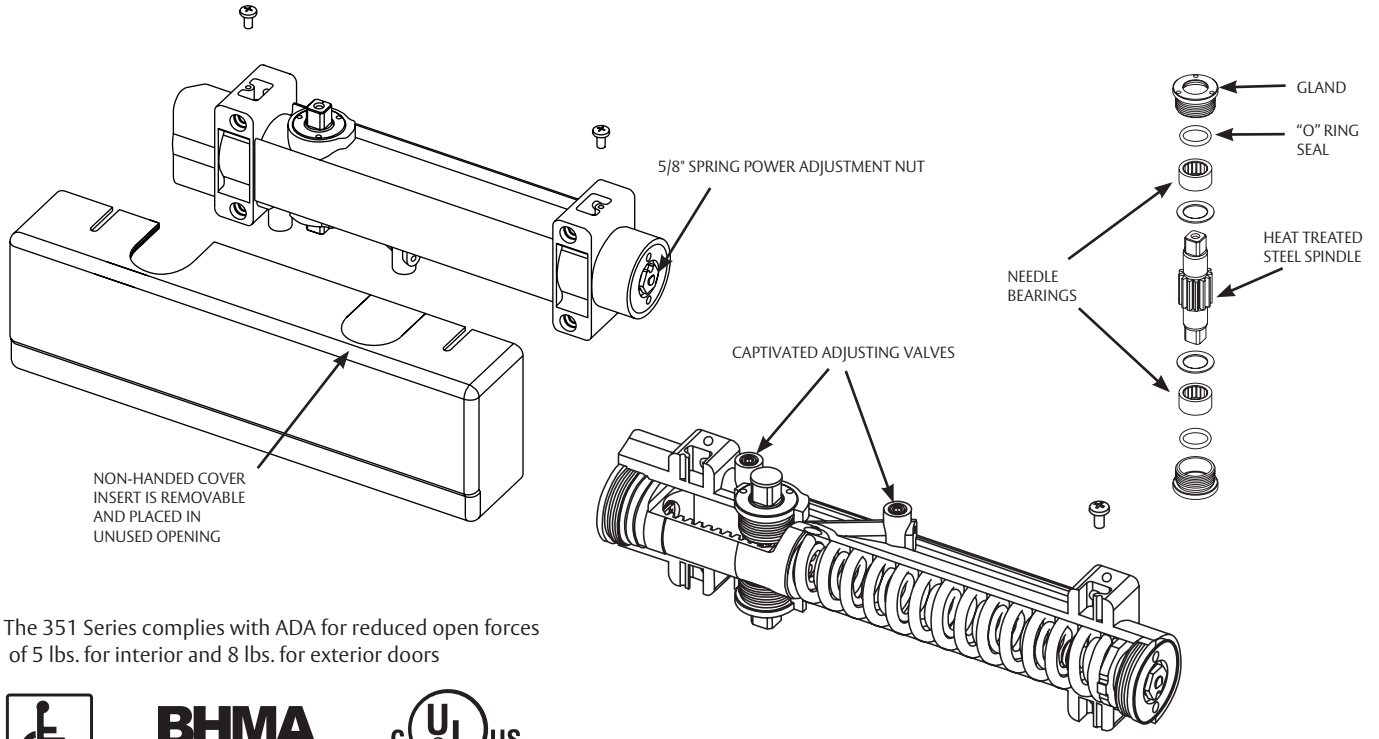
351 Series

Powerglide® Door Closer

Experience a safer
and more open world

Features and Benefits

351 Series Powerglide®



The 351 Series complies with ADA for reduced open forces of 5 lbs. for interior and 8 lbs. for exterior doors

BHMA CERTIFIED

c UL us LISTED

Features

- Certified ANSI/BHMA A156.4 Grade 1
- UL 10C listed for positive pressure fire test
- UL /cUL listed for use on fire rated doors
- 25 year limited warranty
- User friendly versatile mounting applications permit standard, top jamb, parallel and track installations
- Self sticking templates supplied for most applications
- Adjustable spring power allows 351 closers a size range of 1 through 6. They are adjusted to size 3 before leaving the factory
- One door closer body for all applications. All 351 are non-handed
- Meets ADA requirements in all applications, except Push Side Track application (except track)
- High impact non-corrosive plastic covers with two machine screws standard, metal covers and lead lined are optional
- All weather fluid allows closer to operate effectively in extreme temperatures without readjustment
- 1-1/2" diameter piston for superior door control
- Standard pressure relief valves for both opening and closing cycles protect the door & frame from damage caused by abuse

Heavy Duty Construction

- Heat treated full closed rack and pinion provide control from the full open position
- Heavy duty one piece die cast aluminum silicon alloy body with 14% silicon provides superior strength and wear resistance
- 1/2" arm engagement over a 7/16 square spindle ensures a wear-resistant tight joint

Fasteners

- Machine Screws and self tapping screws provided for closer and arm

Valves

- Brass body low sensitivity control valves offer separate regulating for door speed, latching, backcheck and optional delayed action
- All valves are controlled by an 1/8" allen wrench to discourage tampering and are captivated to prevent removing valves from the body and damaging door closer
- Adjustable backcheck (standard) protects the door and hardware from damage during the opening cycle
- Adjustable delayed action (optional) permits easy access for physically impaired individuals
- Valves are captivated to prevent accidental removal

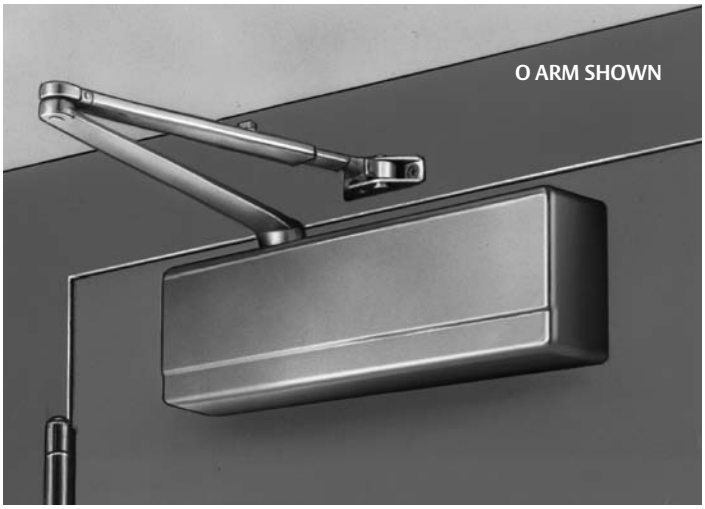
Full Complement of Arm Types

- Interchangeable forged steel arms
- Standard and parallel arms
- Push and pull track arms (including double egress)
- Heavy duty forged steel arms are finely finished and interchangeable between SARGENT 351, 1431 and 281 Series

Standard Applications

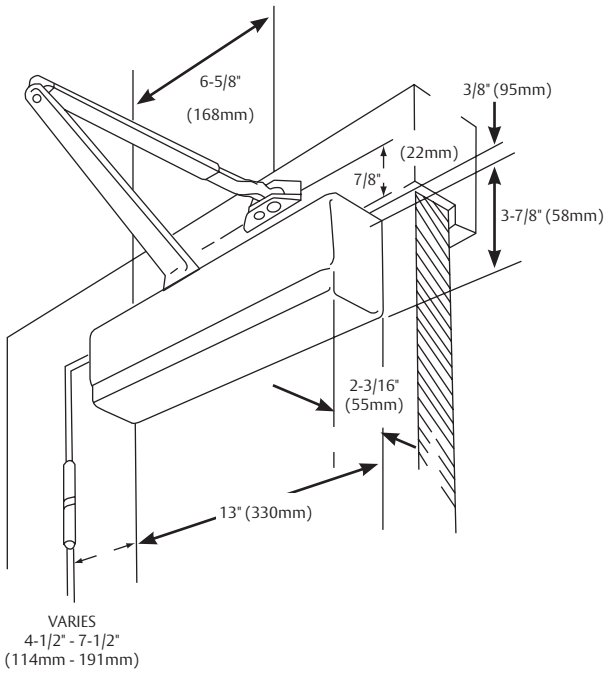
351 Series Powerglide®

SARGENT
ASSA ABLOY



The standard application of the 351 door closer is the most common and the most desirable. The closer mounts on the hinge (pull) side of door (except when the W Corner Bracket is used). **Note:** This application is not recommended on exterior doors (the closer is not protected from weather). The cover projection normally limits the door opening to a maximum of 160°.

351-0 Standard Application



351 Standard Application for:

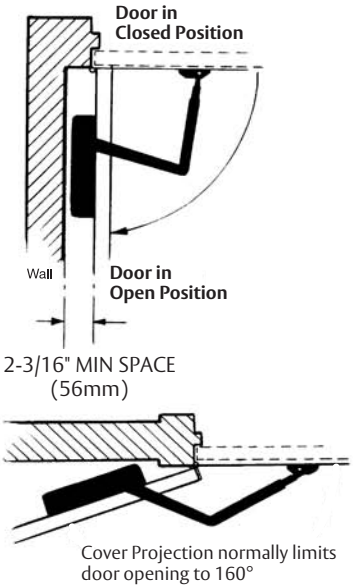
- Interior Doors Opening In or Out
- Exterior Doors Opening In
- Maximum Reveal 7/16"
- Non-hand universal body

351 Standard Application Door Opening Range

(Range based on Mounting Position)

- O- Standard Arm: 120° – 180°
- H- Hold Open Arm: 90° – 160°

Wall Clearance Requirement

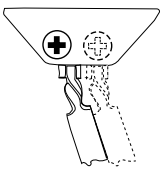


Adjustable Closing Force

- Interior doors to 5'0" wide
- Exterior doors to 4'0" wide
- Shipped factory preset for 3'0" door
- Factory pre-sized upon request

Arm Leverage Adjustment

Closers using "O" arms have the provision to increase closing power by 15% by adjusting foot pivot



Arms and Accessories for Standard Applications

351 Series Powerglide®

SARGENT
ASSA ABLOY

O - Standard Arm

- Forged Steel Main Arm
- Non-handed
- Permits 120° door opening with standard mounting
- Permits 180° door opening with alternate mounting or corner bracket
- Can be used with the 351L retrofit plate when replacing a LCN 4040 closer

Order as 25-O x finish for arm only
Includes: 63-2607 - Main arm
63-2216 - Foot assembly
63-3684 - Screw pack

H - Hold Open Arm

- Forged Steel Main Arm
- Non-handed
- Hand is changed by inverting the foot assembly
- Friction type holder easily adjusted by a wrench
- Permits 180° door opening
- Holds open from 80° – 180°

Order as 25-H x finish for arm only
Includes: 63-2229 - Main arm
61-2303 - Foot assembly
63-3684 - Screw pack

O8 - Mortise Foot Arm

- Forged Steel Main Arm
- Non-handed
- Permits 120° door opening
- Commonly used with bull nose frames

Order as 25-O8 x finish for arm only
Includes: 63-2607 - Main arm and link assembly
63-2273 - Foot assembly
63-2391 & 63-3684 - Screw packs

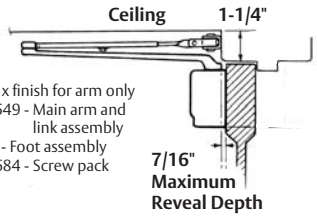
H8 - Mortise Foot Hold Open Arm

- Forged Steel Main Arm
- Handed same as door
- Friction type holder easily adjusted by a wrench
- Holds open from 80° – 180°

Order 25 R-H8 for right hand and 25 L-H8 for left hand x finish for arm only
Includes: 63-2289 - Left hand foot assembly
63-2290 - Right hand foot assembly
63-2229 - Main Arm and Link Assembly
63-2391 & 63-3684 - Screw packs

OLC - Standard Arm for Low Ceiling

- Forged Steel Main Arm
- Non-handed
- 1-1/4" between the top of door to ceiling is required for OLC Arm
- Permits 120° door opening with standard mounting



Order as 25-OLC x finish for arm only
Includes: 63-2549 - Main arm and link assembly
2216 - Foot assembly
63-3684 - Screw pack

UH Package

- Universal hold open arm package provides brackets and arms to install closer in top jamb, standard or parallel applications
- Order closer as 351-UH x finish
- 351-UH not available with (MC) metal cover or plated finishes

Screw packs
63-3684

125-PH9

UO Package

- Universal arm package provides brackets and arms to install closer in standard top jamb or parallel applications
- Order closer as 351-UO x finish
- 351-UO not available with (MC) metal cover or plated finishes

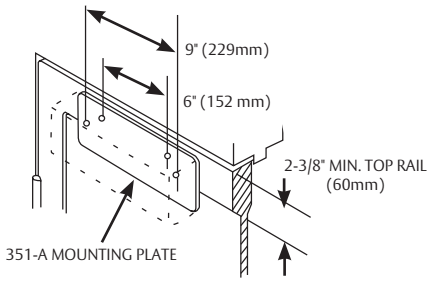
Screw packs
63-3684 &
63-2391

125-P9

351-A Mounting Plate

Allows the mounting of a 351 Closer onto a door with a minimum top rail of 2-3/8"

Order as: 351-A x finish



351- LCN Retrofit Plate

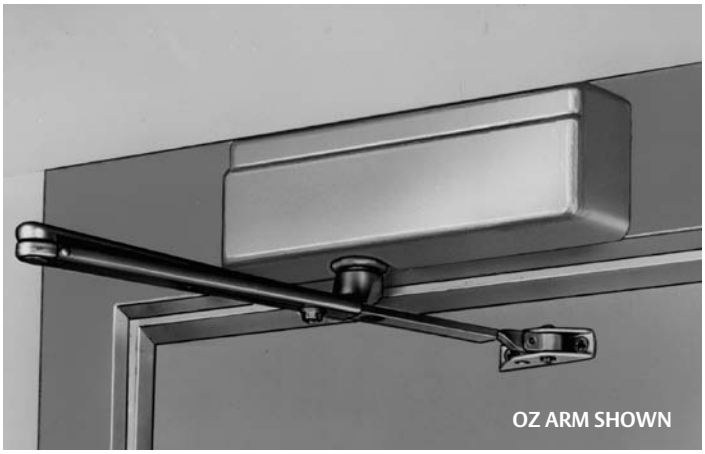
Allows an LCN 4040 closer body to be replaced with a SARGENT 351 with an O Arm without drilling new holes in door (NOTE: New holes required for arm bracket only)

Order as: 351L x finish

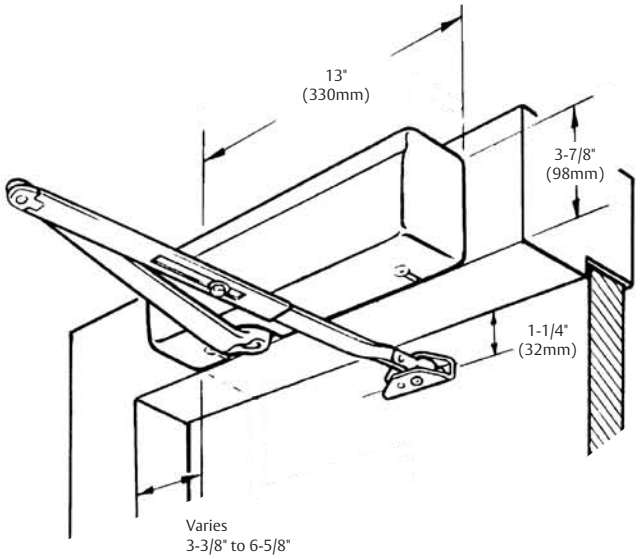
Top Jamb Applications

351 Series Powerglide®

SARGENT
ASSA ABLOY



351-0 Top Jamb Mounting Position



Top Jamb applications - The 351 closer is mounted on the frame face above the door. The foot is mounted on the push side of door. This application is for use on exterior doors opening out to protect the closer from the weather.

Minimum Frame Face Required

- 3-7/8" minimum required for 351 Top Jamb applications for both single and double rabbeted frames

Minimum Door Top Rail Required to Mount Closer Foot

- 2" (51mm) minimum
- Rail height used will vary depending on type and make of auxiliary holder

Adjustable Closing Force

- Interior doors to 5'0" wide
- Exterior doors to 4'0" wide
- Shipped factory preset for 3'0" door
- Factory pre-sized upon request

351 Typical Reveal Top Jamb Applications

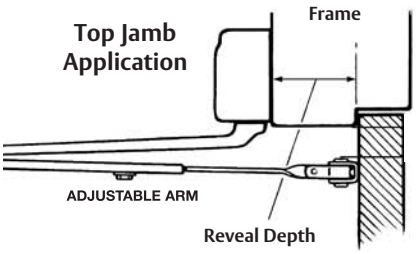
For reveals up to 2" (51mm) maximum

- O Arm - Max. Door Opening: 180°
- H Arm - Hold Open Range: 80° – 180°

351 Extra Deep Reveal Top Jamb Applications

For reveals from 5-1/8" (130mm) to 8" (230mm)

- OZA Arm - Max. Door Opening: 140°
- HZA Arm - Hold Open Range: 80° – 130°



351 Deep Reveal Top Jamb Applications

For reveals from 2-1/8" (54mm) to 5" (127mm)

- OZ Arm - Max. Door Opening: 140°
- HZ Arm - Hold Open Range: 80° – 140°

351-A & 351-B Mounting Plates

These Mounting Plates permits closers to be mounted for special applications when overhead auxiliary door holders are used or in low ceiling applications for both single and double rabbeted frames.

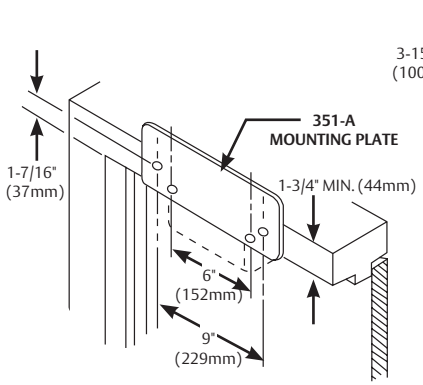
351-A Mounting Plate

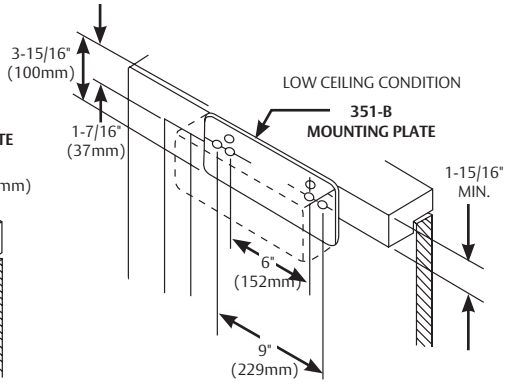
The 351-A allows top jamb mounting of a 351 with a 1-3/4" minimum frame clearance.

351-B Mounting Plate

The 351-B for low ceiling applications allows top jamb mounting of a 351 with a minimum 1-15/16" frame.

- Plates are painted or plated steel to match closer
- Plates are non-handed
- Order as 351-A x finish or 351-B x finish





Arms for Top Jamb Applications

351 Series Powerglide®

SARGENT
ASSA ABLOY

Narrow Reveal

O - Standard Arm

- Forged Steel Main Arm
- For reveals up to 2" (51mm)
- Non-handed
- Permits 180° door opening

Order as 25-O x finish for arm only
Includes: 63-2607 - Main arm assembly
63-2216 - Foot assembly
63-3684 - Screw pack

H - Hold Open Arm

- Forged Steel Main Arm
- For reveals up to 2" (51mm)
- Adjustable friction holder
- Non-handed
- Permits 180° door opening

Order as 25-H x finish for arm only
Includes: 63-2229 - Main arm assembly
61-2303 - Foot assembly
63-3684 - Screw pack

Deep Reveal Arms

OZ - Standard Arm for Deep Reveals

- Forged Steel Main Arm
- For reveals from 2-1/8" (54mm) to 5" (127mm)
- Non-handed
- Permits 140° door opening

Order as 25-OZ x finish for arm only
Includes: 63-2607 - Main arm assembly
63-2217 - Foot assembly
63-3684 - Screw pack

HZ - Hold Open Arm for Deep Reveals

- Forged Steel Main Arm
- For reveals from 2-1/8" (54mm) to 5" (127mm)
- Adjustable friction holder
- Non-handed
- Permits 140° door opening

Order as 25-HZ x finish for arm only
Includes: 63-2230 - Main arm assembly
61-2303 - Foot assembly
63-3684 - Screw pack

Extra Deep Reveal Arms

OZA - Standard Arm for Extra Deep Reveal

- Forged Steel Main Arm
- For reveals 5-1/8" (130mm) to 8" (203mm)
- Non-handed
- Permits 140° door opening

Order as 25-OZA x finish for arm only
Includes: 63-2607 - Main arm assembly
63-2218 - Foot assembly
63-3684 - Screw pack

HZA - Hold Open Arm for Extra Deep Reveal

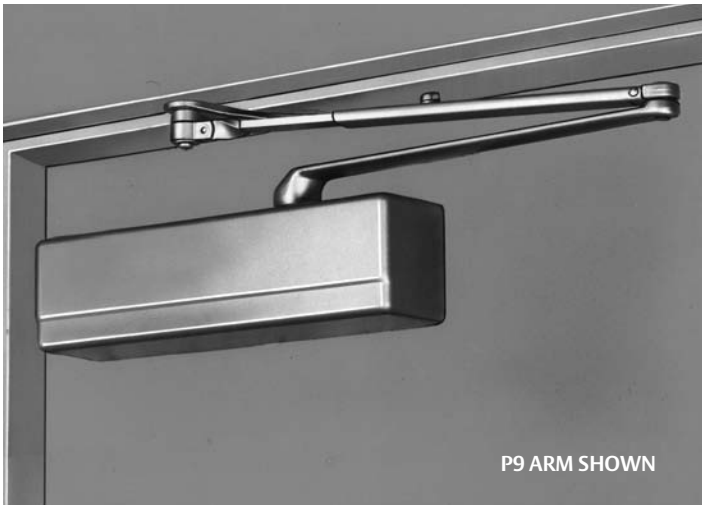
- Forged Steel Main Arm
- For reveals 5-1/8" (130mm) to 8" (203mm)
- Adjustable friction holder
- Non-handed
- Permits 140° door opening

Order as 25-HZA x finish for arm only
Includes: 63-2231 - Main arm assembly
61-2303 - Foot assembly
63-3684 - Screw pack

Parallel Arm Applications

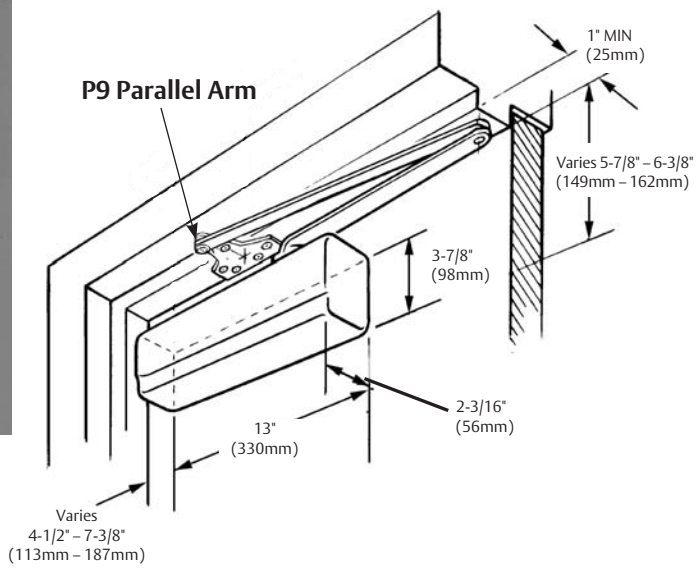
351 Series Powerglide®

SARGENT
ASSA ABLOY



Parallel Arm Applications - The 351 closer is mounted on the push side of the door. As the door opens, the closer swings with the door and gives full headroom in the door opening. Other advantages: the closer arm does not project into the room; the frame can be quite narrow and the door can be swung open much farther than in Top Jamb Applications.

351-P9 Regular Duty Parallel Arm



Heavy Duty Parallel Arms

For use in high traffic and abusive environments

- Forged steel arm and cast iron foot bracket for strength and durability
- Oiled bronze bearings for superior wear resistance
- 2 piece rigid arms for ease of installation
- Friction and positive hold open arms available
- Use friction hold open arms for doors subject to moderate hold open use
- Dead stop and compression stop arms available
- Security non-hold open arms available

Non hold-open arms

- Two mounting positions for 120° and 180° maximum door openings

Stop arms

- 6 mounting positions with PS or CPS arms to allow stop from 85°–110°

Regular Duty Parallel Arms

Available Arms for institutional installations:

- Regular duty parallel arms
- Offset bracket arms for use with Auxiliary Holders & Stops
- Parallel flush frame arms
- Flush frame arms for use with Auxiliary Holders & Stops
- Flush frame, friction Hold Open Arms

NON HOLD OPEN ARMS

- Two mounting positions for 120° and 180° maximum door opening

HOLD OPEN ARMS

- Friction hold open arms available for doors subject to moderate hold open use
- 6 mounting positions to hold open from 85° – 110° with PSH or CPSH arms

Heavy Duty Parallel Arms

351 Series Powerglide®

SARGENT
ASSA ABLOY

P10 - Heavy Duty Parallel Arm

- Forged Steel Constructions
- Non-Handed
- Easily installed
- Permits 120° opening at standard mounting
- Permits 180° opening at alternate mounting
- Can be used with the 351L retrofit plate when replacing a LCN 4040 closer

Order as 25-P10 x finish for arm only
25-P10 Includes: 63-0641 - Main arm
63-3727 - P10 foot assembly
63-3684 & 63-2392 - Screw packs

PS - Heavy Duty Parallel Arm with Positive Stop

- Forged Steel Constructions
- Handed arm is field-reversible
- Provides built in stop from 85° – 110°
- Permits 110° opening maximum
- Easily installed
- Permits 85° – 110° door opening

Order as 25-PS x finish for arm only
Includes: 63-0641 - Main arm
63-3837 - PS foot assembly
63-3684 & 63-2398 - Screw packs

CPS - Heavy Duty Parallel Arm with Compression Stop

- Forged Steel Constructions
- Provides built in compression stop from 85° – 105°
- Permits 105° opening maximum
- Easily installed
- Handed arm is field-reversible
- Dead stop within 3°

Order as 25-CPS x finish for arm only
Includes: 63-0641 - Main arm
63-3830 - CPS foot assembly
63-0516 - Bumper holder
63-3493 - Bumper
63-3684 & 63-2398 - Screw packs

SP10 Heavy Duty Security Arm

- Same as P10, except factory assembled at arm joint (elbow) to prevent disassembly in SSP package along with metal cover

PH10 - Heavy Duty Friction Hold Open Parallel Arm

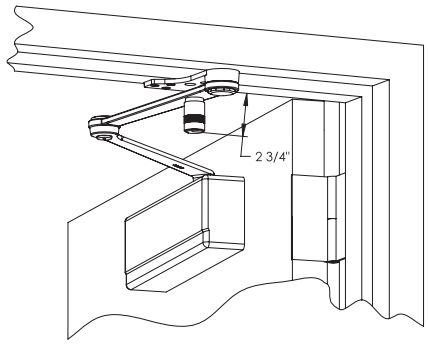
- Forged Steel Constructions
- Adjustable hold open from 75° – 180°
- Forged steel arm 11-1/4" (286mm) long
- Handed same as door
- Use friction hold open arms for doors subject to moderate hold open use

Order as 25-PH10 x finish for arm only
25-PH10 Includes: 63-0641 - Main arm
63-3839 - Left hand PH10 foot assembly
63-3840 - Right hand PH10 foot assembly
63-3684 & 63-2392 - Screw packs

PSH - Heavy Duty Parallel Hold Open Arm with Positive Stop

- Forged Steel Constructions
- Provides holder and stop features
- Handed arm is field-reversible
- Easily installed/adjusted
- Permits 85° – 110° door opening

Order as 25-PSH x finish for arm only
Includes: 63-0641 - Main arm
63-3833 - PSH foot assembly
63-3684, 63-2392 & 63-2398 - Screw packs



The PSH and CPSH arms project 2-3/4" below the head stop

CPSH - Heavy Duty Hold Open Parallel Arm with Compression Stop

- Forged Steel Constructions
- Handed arm is field-reversible
- Provides built in compression stop and holder mechanism from 85° – 105°
- Easily installed/adjusted
- Permits 105° opening maximum
- Dead stop within 3°

Order as 25-CPSH x finish for arm only
Includes: 63-0641 - Main arm
63-3836 - CPSH foot assembly
63-0516 - Bumper holder
63-3493 - Bumper
63-3684, 63-2392 & 63-3487 - Screw packs

Positive Stop Hold Open Arms (PSH & CPSH ARMS)

- Use on doors subject to repetitive hold open use
- 6 hold open positions from 85° – 110° determined by mounting position
- Hold open function may be disengaged
- Hold open tension is easily adjustable

Regular Duty Parallel Arms

351 Series Powerglide®

SARGENT
ASSA ABLOY

Standard Arms

P9 - Standard Parallel Arm

- Forged Steel Main Arm
- Non-handed
- Can be used with the 351L retrofit plate when replacing a LCN 4040 closer

Order as 25-P9 x finish for arm only
Includes: 63-2607 - Main arm
63-3405 -Foot assembly
63-3684 & 63-2391 - Screw packs

Regular Duty Hold Open Arms

PH9 - Friction Hold Open Arm

- Forged Steel Main Arm
- Holds open from 75° – 180°
- Easily adjusted by wrench
- Non-handed

Order as 25-PH9 x finish for arm only
Includes: 63-2229 - Main arm
61-2303 - Foot assembly
64-0039 - Foot bracket (125 PH9)
63-3684 & 63-2391 - Screw packs

PH4 - Flush Frame, Friction Hold Open Arm

- Forged Steel Main Arm
- Holds open from 75° – 180°
- Easily adjusted by wrench
- Non-handed
- Use on frames where stop or soffit is too narrow to mount the standard hold open foot bracket

Order as 25-PH4 x finish for arm only
Includes: 63-2229 - Main arm
61-2303 - Foot assembly
64-0050 - Foot bracket
63-3684 & 63-2391 - Screw packs

Offset Brackets for use with overhead stops, holders and door coordinators

P3 - 1" Offset Bracket for use with Auxiliary Holder/Stop

- Forged Steel Main Arm
- For use with auxiliary surface overhead stops and holders
- Foot bracket is offset 1" more than P-9, allowing door closer to be lowered on door face
- Non-handed

Order as 25-P3 x finish for arm only
Includes: 63-2607 - Main arm
63-2270 - Foot assembly
63-3684 & 63-2391 - Screw packs

P3A - 1-3/4" Offset Bracket for use with Auxiliary Holder/Stop

- Forged Steel Main Arm
- For use with auxiliary surface overhead stops and holders and door coordinators
- Foot bracket lowers door closer an additional 3/4" below P3 bracket
- Non-handed

Order as 25-P3A x finish for arm only
Includes: 63-2607 -Main arm
63-2274 - Foot assembly
63-3684 & 63-2391 - Screw packs

P4 - Parallel Flush Frame Arm

- Forged Steel Main Arm
- Foot bracket is attached to frame or transom face
- For use where stop or soffit is too narrow for the standard P9
- Permits 120° opening with standard mounting
- Permits 180° opening with alternate mounting
- Non-handed

Order as 25-P4 x finish for arm only
Includes: 63-2607 - Main arm
63-2295 - Foot assembly
63-3684 & 63-2391 - Screw pack

P4A - Flush Frame Arm for use with Auxiliary Holder/Stop

- Forged Steel Main Arm
- For use with auxiliary surface overhead stops and holders
- Foot bracket is attached to frame or transom face
- Foot bracket lowers door closer an additional 3/4" below P4 bracket
- Non-handed

Order as 25-P4A x finish for arm only
Includes: 63-2607 - Main arm
63-2272 - Foot assembly
63-3684 & 63-2391 - Screw packs

Tri-Packs

UO Package

- Universal arm package provides arms and brackets to install closer in standard top jamb or parallel application

351-UO not available with (MC) metal cover or plated finishes

Screw pack 63-3684

125-P9

UH Package

- Universal hold open arm package provides brackets and arms to install closer in top jamb, standard or parallel applications

351-UH not available with (MC) metal cover or plated finishes

Screw pack 63-3684

125-PH9

Heavy Duty Parallel Arm Accessories

581-2 Blade Stop Spacer Kit

- For frames with 1/2" blade stops
- For use with P10, PH10, PS, PSH, CPS and CPSH arms
- 125-V bracket included
- Packed with 1-1/4" long screws

Use P/N 63-0756 to order blade stop only

125-V/125-VF Brackets

125-V

125-VF

- For use with all heavy duty parallel arms
- Use 125-V for narrow stop and frame conditions
- Use 125-VF for flush door and frame conditions

Spacer 63-0191

- 1/2" x 5/8"
- Included standard with PS, PSH, PH10, P-10 CPS and CPSH arm for use with rabbited frames

Regular Duty Parallel Arm Accessories

125-P3 Arm Conversion Unit

- Converts O or P9 arm to P3 Parallel Arm

125-P3A Arm Conversion Unit

- Converts O or P9 Arm to P3A Parallel Arm

125-PH9 Parallel Arm Foot

- Converts standard hold open (H) arm to PH9 Parallel Hold Open Arm

125-P4 Conversion Unit

- Converts O or P9 Arm to P4A Arm

125-P4A Arm Conversion Unit

- Converts O or P9 arm to P4A Arm

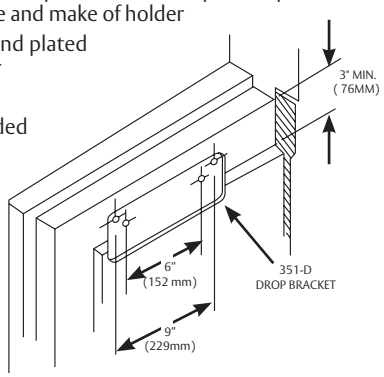
581-1 Blade Stop Spacer Kit

- For frames with 1/2" blade stops
- For use with P9, PH9 and PF9 arms only
- Packed with 1-1/4" long screws

Regular Duty Parallel Arm Accessories

351-D Drop Plate

- Permits mounting parallel arm 351 Series Closer applications on doors with narrow top rails
- Requires 3" (76mm) minimum top rail
- For closers used with overhead stops and holders, top rail requirements will vary depending upon type and make of holder
- Available with powder coat and plated finishes to match door closer
- Plates are not handed
- Plate mounting screws included
- Order as 351-D x finish



351L - LCN RETROFIT Plate

The 351L allows replacement of LCN 4040 closer body with a SARGENT 351 without drilling new holes in door (**Note:** New mounting holes required for arm bracket only)

- 351L Retrofit Plate:
  Can be used with these parallel arms
  - P9 – Regular Duty Parallel Arm
  - P10 – Heavy Duty Parallel Arm
- Plates are non-handed
- Available in powder coat and plated finishes
- Order as: 351L x finish

Track Type Applications

351 Series Powerglide®

SARGENT
ASSA ABLOY

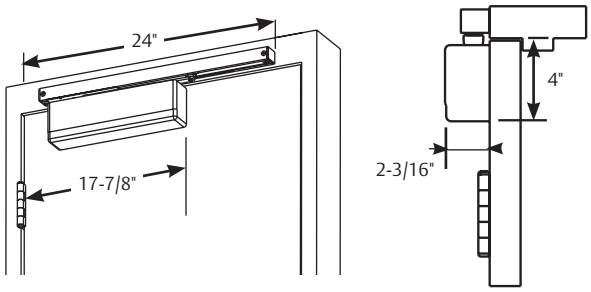
Pull Side Mounting (Hinge Side)

The closer is for use on interior doors opening in or out. As the door opens, the closer swings with the door. This affords a variable hold-open feature option.

Pull Side Track Application

Arm & Track	Description
OT	Pull Standard pull side
OTB	Pull Track with bumper
HT	Pull Holder
HTB	Pull Holder with bumper

Track Arm Applications



Pull Hinge Side Mounting (Track mounts on frame face)

- Minimum top rail required with a 351-A plate = 2-1/4" (57mm)
- Minimum top rail required without mounting plate = 4" (102mm)

Maximum Door Opening

- 160° with standard track
- 120° with optional bumper track
- 180° with standard track if frame conditions permit

Hold Open Range

- 85° – 120°

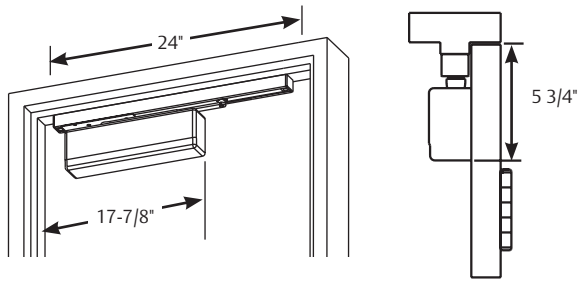
Push Side Mounting (Stop Side)

The closer is for use on interior doors opening in or out. As the door opens, the closer swings with the door. This affords a variable hold-open feature option.

Push Side Track Application

Arm & Track	Description
POT	Push Standard
POTB	Push Bumper
PHT	Push Holder
PHTB	Push Holder and bumper

Track Arm Applications



Push Stop Side Mounting (Track mounts on frame stop)

- Minimum top rail required without drop plate = 5-3/4" (146mm)
- 3" (76mm) minimum top rail required with 351-D Drop Plate

Minimum Stop Required

- 1-9/16" (40mm) wide

Maximum Door Opening

- 100° with standard track
- 95° with optional bumper track

Hold Open Range

- 85° – 95°

Common Features

Standard Finishes

- EAB, EB, ED, EN, EP, powder coated on all exposed surfaces
- Architectural plated arms and covers optional

Track

- Extruded aluminum track

Arm

- Forged steel

Bumper (optional)

- Mounts in track to assist backcheck
- Not designed to be used as a stop
- Auxiliary stop is required
- Available for both regular or hold open tracks

Holder (optional)

- Mounts within the track (adjustable)

Non Sized-Adjustable

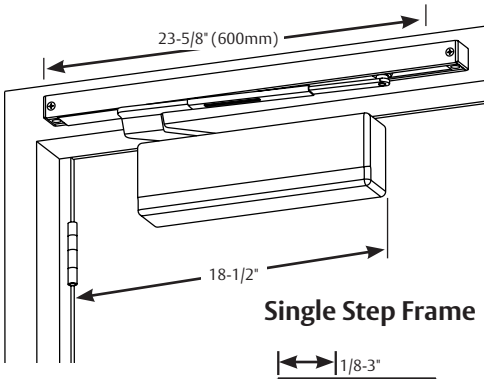
- Interior doors to 5'0" wide
- Shipped factory preset for 3'0" door
- Factory pre-sized upon request

Double Egress Applications

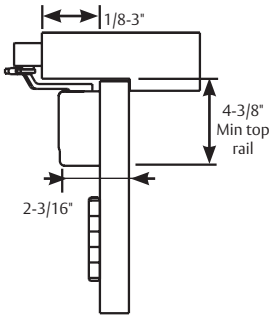
351 Series Powerglide®

SARGENT
ASSA ABLOY

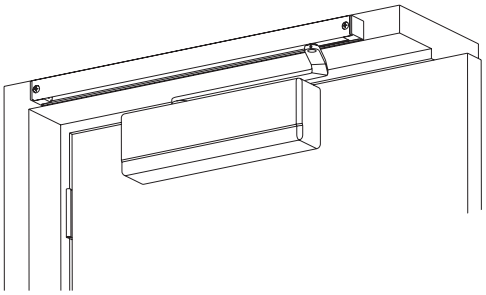
ODS - Single Step Double Egress Arm



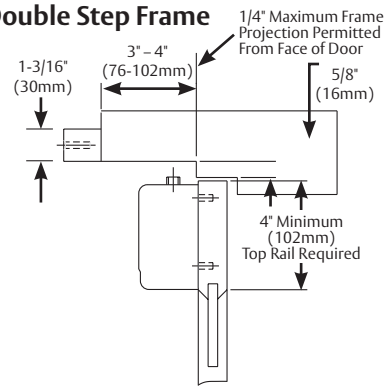
Single Step Frame



OD - Double Step Double Egress Arm



Double Step Frame



ODS Applications

- 160° maximum door opening
- 120° opening with bumper option
- Range of hold open 85°–120°
- Used with reveals 1/8" – 3" (3mm-76mm)

Track

- Extruded aluminum track
- End caps finished to match track

Arm

- Forged steel
- Bearing roller
- Arm handed same as door

Non Handed

- Universal body

Finishes (Powder Coat)

- EAB, EB, ED, EN, EP (standard for all exposed surfaces)

Bumper (optional)

- Mounts in track to assist backcheck
- Not designed to be used as a stop
- Auxiliary stop is required
- Available for both regular or hold open tracks

Holder (optional)

- Mounts within the track (adjustable)

Non Sized-Adjustable

- Interior doors to 5'0" wide
- Shipped factory preset for 3'0" door
- Factory pre-sized upon request

Double egress track arms are used when the aesthetics of a track application is required on the pull side of a deep reveal frame.

This application is commonly used on cross corridor openings.

Double Egress Track Applications

OD	Double step double egress
ODB	Double step double egress with bumper
HD	Double step double egress with holder
HDB	Double step double egress with bumper and holder
ODS	Single step double egress
ODSB	Single step double egress with bumper
HDS	Single step double egress with holder
HDSB	Single step double egress with bumper and holder

OD Applications

- 160° maximum door opening
- 120° opening with bumper option
- Range of hold open: 85° – 120°
- Used with reveals 3" – 4" (76mm-101mm)

Track

- Extruded aluminum track
- End caps finished to match track

Arm

- Forged steel
- Bearing roller
- Arm is handed same as door

Non Handed

- Universal Body

Finishes (Powder Coat)

- EAB, EB, ED, EN, EP (standard for all exposed surfaces)

Bumper (optional)

- Mounts in track to assist backcheck
- Not designed to be used as a stop
- Auxiliary stop is required
- Available for both regular or hold open tracks

Holder (optional)

- Mounts within the track (adjustable)

Non Sized-Adjustable

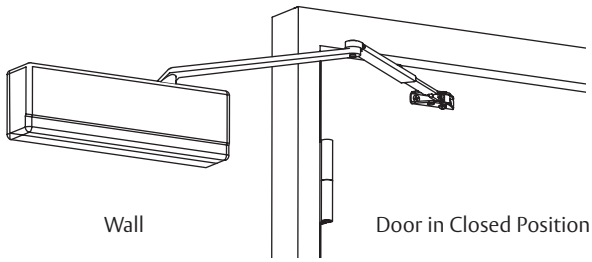
- Interior doors to 5'0" wide
- Shipped factory preset for 3'0" door
- Factory pre-sized upon request

Pocket Door Applications

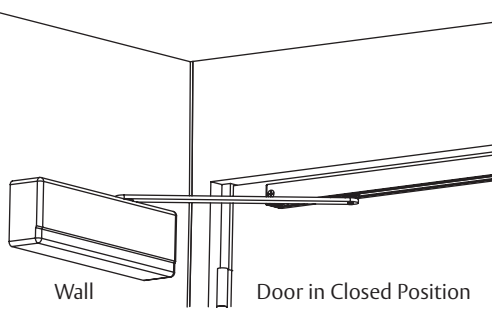
351 Series Powerglide®

SARGENT
ASSA ABLOY

OP - Double Lever Arm Application



OTP - Track Type Application



Pocket Door Applications

The 351 Series Powerglide Door Closer body is mounted on the wall and installed so that it pushes the door closed. This application is typically used with fire doors that are held open. In this application when the door is open, the closer and arms are completely hidden from view.

OP - Pocket Arm Application

- 180° Maximum Opening
- Non handed

Note: 90° Maximum Opening, use OTP Track Type

Arm

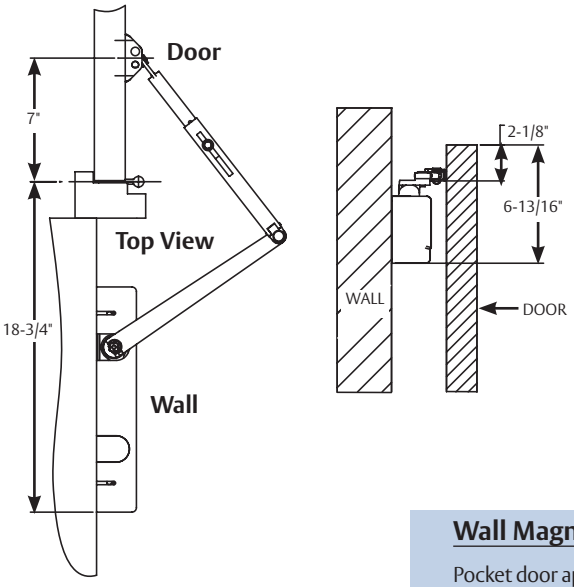
- Forged steel

Non Handed

- Universal Body

Finishes (Powder Coat)

- EAB, EB, ED, EN, EP (standard for all exposed surfaces)
- Plated Covers and arms available



OTP - Track Type Application

- 90° Maximum Opening
- Extruded Aluminum Track
- Non handed

Arm

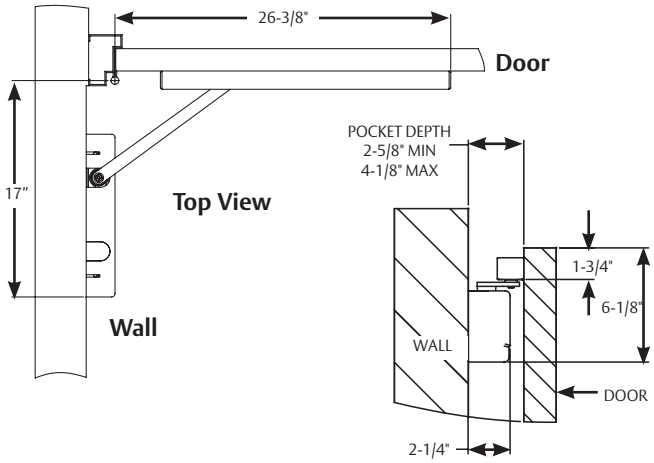
- Forged steel
- Bearing roller

Non Handed

- Universal Body

Finishes (Powder Coat)

- EAB, EB, ED, EN, EP (standard for all exposed surfaces)
- Plated Covers and arms available



Wall Magnets - see SARGENT holders and stops catalog

Pocket door applications commonly use wall mounts (wall magnets).

1560 Surface Mount

1561 Flush Mount

How to Order, Options and Finishes

351 Series Powerglide®

SARGENT
ASSA ABLOY

Packing

All closer assemblies are packaged 4 per carton. On request, door closers will be packed 2 per carton.

Series	Number per Carton	Approx. wt per Carton
351	4-Standard (2 upon request)	19 lbs. per 4

How To Order

CPC-DA	351	P4H	26	LH
Options	**Series**	**Closer Arm**	**Finish**	**Hand**
31- 36- 74- CPC- DA- MC- SG- SRI- TB-	351	Standard Page 7 Top Jamb Page 9 Parallel Pages 11 & 12 Track Type Page 14 & 15	EB ED EN EP EAB 03* 04* 09* 10* 10B* 10BE 10BL* 14* 15* 20D* 26* 26D* BSP	LH RH

* These finishes are automatically provided with a metal cover

Options Available

Specify	Detailed Description
31-	For doors 1-7/8" – 2-1/4" thick, specify door thickness, doors over 2-1/4" thick contact factory
36-	Security Torx Screws
74-	Lead lined cover
CPC-	Clear Powder Coat (available on 26 & 26D)
DA-	Delayed Action
MC-	Handed Metal Cover
SRI-	Special Rust Inhibitor finish for powder coated finishes only (arm)
TB-	Through Bolt (1-3/4" Std) For others, specify 31-TB- & door thickness

Note:

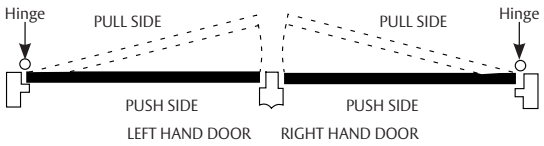
- The MC- option is used when a metal cover is desired on a powder coated finish
- When MC- is added to a plated finish, the MC- option indicates that only the cover is to be plated, the arms will be powder coated to match
- Do not specify the MC suffix if both the cover and arms are to be plated

How To Order Accessories

Accessories	Example	
Arm Only	Specify arm required and finish	25-PSH EN
Closer Body Only	Specify: CB-351*	CB-351
Arm conversion Units	Specify unit and finish	125-P4 EB
Cover Only (Standard)	351-C x finish	351-C EN
Cover Only (Metal)	351-CMC x finish and hand & arm type	351-CMC + 26D + LH + P10

Note: When complete closer assembly is ordered with an accessory, order accessory as a separate item

*DA (Delay Action) option is available with closer body

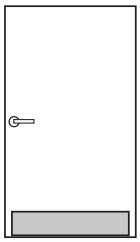


Finishes

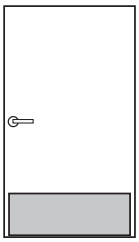
Finishes	ANSI/BHMA	Description
EB	695	Bronze powder coated to match finish 10B
EN	689	Aluminum powder coated
ED	693	Black powder coated to match finish 20D
EAB	696	Brass powder coated
EP	691	Bronze powder coated to match finish 10
03	605	Bright brass, clear coated
04	606	Satin brass, clear coated
09	611	Bright bronze, clear coated
10	612	Satin bronze, clear coated
10B	613	Dark oxidized satin bronze, oil rubbed
10BE	613E	Dark oxidized satin bronze - equivalent
10BL	614	Oxidized satin, bronze, clear coated
14	618	Bright nickel plated, clear coated
15	619	Satin nickel, clear coated
20D	624	Statuary dark bronze, clear coated
26	625	Bright chromium plated
26D	626	Satin chromium plated
BSP	—	Black Suede Powder Coat

Special Rust Inhibitor Process (SRI)

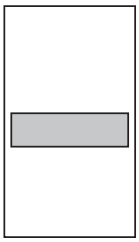
Additional process available for bracket and arms provides an extra layer of protection for extreme corrosive environments. Available with powder coated finishes only, specify SRI- as an option when ordering.



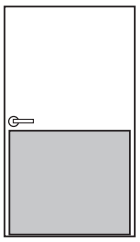
Mop Plate
Up to 6" h x 48" w



Kick Plate
6" to 12" h x 48" w



Stretcher Plate
6" to 12" h and up to 48" w



Armor Plate
Up to 48" h x 48" w and available in most finishes

OPTIONAL Self-Drilling TEK Screws: Cuts door plate installation time in half.

Width of Plates:
Push Side: 2" less than door width.
Pull Side: 1 1/2" less than door width.

NFPA 80 STANDARDS — 2-4.5 Protection Plates: Factory-installed protection plates shall be installed in accordance with the listing of the door. Field-installed protection plates shall be labeled and installed in accordance with their listing.

Exception: Labeling is not required where the top of the protection plate is not more than 16" (406 mm) above the bottom of the door.

Metal Door Plate – Economy Duty No. K1038

Material: .038" aluminum, stainless steel
Finishes: US32D
Fastener: #6 x 5/8" OH SMS
Ordering: Specify height x width x finish code. Add any options
Weight: 8" x 34" = 3.2 lbs
Options:
- SA – self-adhesive mounting
- TORX – security Torx screws
- TEK – self-drilling screws
- Cutouts for locks, louvers, or windows (see worksheets on pages C14-C15 for details on how to order)

Metal Door Plate - Standard Duty No. K1050

Material: .050" Stainless Steel
Finishes: US32D
Fastener: #6 x 5/8" OH SMS
Ordering:

Size	High	Width
8x34BEV.32D	8"	34"
10x34BEV.32D	10"	34"
34x34BEV.32D	34"	34"

Options:
- Beveled Edge and Counter Sink included
- One day shipping available
- Door markings are not available on quick ship

Metal Door Plate – Standard Duty No. K1050, K1050F

Material: .050" aluminum, brass, bronze, stainless steel
Finishes: US10BE, US32D, US32DMS
Fastener: #6 x 5/8" OH SMS
Ordering: Specify height x width x finish code. Add any options
Weight: 8" x 34" = 4.0 lbs
ANSI: J101 - metal armor plate, J102 - metal kick plate, J103 - metal stretcher & mop plate

Options:
- SA – self-adhesive mounting
- TEK – self-drilling screws
- Beveled 3 or 4 edges, specify B3E or B4E
- Cutouts for locks, louvers, or windows (see worksheets on pages C14-C15 for details on how to order)
- Heavy bevel available, specify HVBEV
- Screw mounting (K1050F) and UL listed for use on 90-minute label wood doors and 3-hour label metal doors
- CSK – countersunk holes
- TORX – security Torx screws

Windstorm Plate – K1050WS

Material: 050" Aluminium, Brass, Bronze, Stainless Steel
Finishes: Standard Architectural Finishes
Fastener: #10x5/8" Pan Head Tek Screws
Ordering: Part # when ordering is K1050WS
All plates are UL and Windstorm rated

Options:
- Cutouts for locks, louvers or windows
- Rounded Corners
- Heavy Bevel
- Screw Mount only

Certified to the below standards:
- ICC-500 (2014)
- FEMA Guideline 320 (2014)
- FEMA Guideline 361 (2015)

Part of windstorm assembly cards: ZHLA.45, ZHLA.46, ZHLA.47, ZHLA.51, ZHLA.53, ZHLA.54

Solid Cast Wall Stops No. 400, 401, 402

Material: Cast brass with DuraFlex bumper

Finishes: Available in standard architectural finishes (see page 9)

Features: Concealed mounting, convex bumper. Back plate prevents damage to wall

No.	Bumper	Fastener	Size	Projection	Weight	ANSI A156.16
400	Convex	#6 x 1 1/2" FH SMS, plastic toggle	2 7/16" dia.	1"	3.3 lbs./10	L02101

Solid Cast Wall Stops No. 403, 404, 405

Material: Cast brass with DuraFlex bumper

Finishes: Available in standard architectural finishes (see page 9)

Features: Concealed mounting, concave bumper. Back plate prevents damage to wall

No.	Bumper	Fastener	Size	Projection	Weight	ANSI A156.16
403	Concave	#6 - 1 1/2" FH SMS, plastic toggle	2 7/16" dia.	1"	3.3 lbs./10	L02251
404	Concave	#8 x 1" RH WS, plastic anchor	2 7/16" dia.	1"	3.3 lbs./10	L02251
405	Concave	#8 - 32 x 1" TH MS, lead anchor	2 7/16" dia.	1"	3.3 lbs./10	L02251

Wrought Wall Stops No. 406

Material: Wrought brass, bronze, and stainless steel with DuraFlex bumper

Finishes: Available in standard architectural finishes (see page 9)

Features:
- Concealed mounting, convex bumper. Back plate prevents damage to wall
- Accepted by the New York State Office of Mental Health (OMH) for use in high risk areas

No.	Bumper	Fastener	Size	Projection	Weight	ANSI A156.16
406	Convex	#8 x 1 1/4" TH SMS, plastic toggle	2 1/2" dia.	3/4"	1.8 lbs./10	L02101

Wrought Wall Stops No. 409

Material: Wrought brass, bronze, and stainless steel with DuraFlex bumper

Finishes: Available in standard architectural finishes (see page 9)

Features:
- Concealed mounting, concave bumper. Back plate prevents damage to wall
- Accepted by the New York State Office of Mental Health (OMH) for use in high risk area

Options: DuraFlex bumper available in standard gray or optional black

No.	Bumper	Fastener	Size	Projection	Weight	ANSI A156.16
409	Concave	#8 x 1 1/4" TH SMS, plastic toggle	2 1/2" dia.	3/4"	1.8 lbs./10	L02251

Heavy Duty Door Stop No. 466

Material: Flame resistant molded rubber bumper

Finishes: Black

Mounting: Drill 1" dia. x 2 1/2" deep hole, fill with anchoring grout

Features:
- Ideal for use in high vandalism or security areas
- No exposed fasteners

No.	Diameter	Height	Mounting Bolt	Weight
466	2" dia.	x 1 1/2" h	5/8" x 2 1/2"	0.6 lbs.

Heavy Duty Door Stop No. 467

Material: Flame resistant molded rubber bumper

Finishes: Black

Mounting: Drill 1" dia. x 2 1/2" deep hole, fill with anchoring grout

Features:
- Suitable for concrete floor or wall mounting
- Ideal for use in high vandalism or security areas
- No exposed fasteners
- Accepted by the New York State Office of Mental Health (OMH) for use in high risk areas

No.	Diameter	Height	Mounting Bolt	Weight
467	2" dia.	x 3 1/2" h	5/8" x 2 1/2"	0.9 lbs.

Heavy Duty Door Stop No. 468

Material: Wrought stainless steel and black rubber bumper

Finishes: US32D

Mounting: Drill 1 1/2" dia. x 7" deep hole, fill with anchoring grout

Features:
- Ideal for use in high vandalism or security area
- No exposed fasteners
- Accepted by the New York State Office of Mental Health (OMH) for use in high risk areas

No.	Diameter	Height	Mounting Bolt	Weight
468	2" dia.	x 3" h	1" x 7"	2.6 lbs.

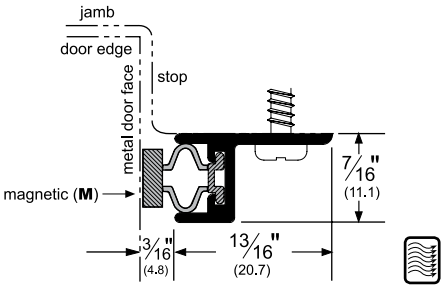
REPLACEMENT INSERT: **2815MAG**



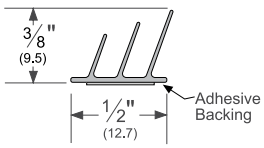
Adhesive Perimeter Gasketing

For more information on these perimeter gasketing products, please see the Adhesive Gasketing section.

S773_

AVAILABLE FINISHES: **BL, D, GR, W**
AVAILABLE LENGTHS: **17', 18', 20', 21', 25', 30', 250', 500'**
ANSI: **R0E154, R0E155**

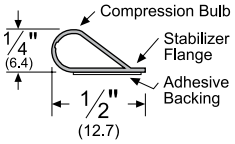
- Triple-fin design blocks light and sound from infiltrating a room
- Product designed as hospitality gasketing (see more hospitality products in the Hospitality Products section)
- Seal begins compressing at 3/8"; compresses to seal up to a 1/16" gap



S88_

AVAILABLE FINISHES: **BL, C, D, GR, TAN, W**
AVAILABLE LENGTHS: **17', 18', 20', 21', 25', 30', 204', 510'**
ANSI: **R0E154, R0E155**

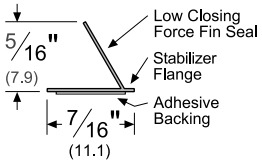
- Seal begins compressing at 1/4"; compresses to seal up to a 1/16" gap
- Available with perforations for Behavioral Health applications. Substitute "P" in place of "S" to order this option.



S44_

AVAILABLE FINISHES: **BL, C, D, GR, W**
AVAILABLE LENGTHS: **17', 18', 20', 21', 25', 30', 204', 510'**
ANSI: **R0E154, R0E155**

- Designed for tighter frames.
- Demonstrates extremely low closing force.
- Seal begins compressing at 5/16"; compresses to seal up to a 1/16" gap
- Available with perforations for Behavioral Health applications. Substitute "P" in place of "S" to order this option.



NOTE: Products shown in this section may not be drawn to scale.
AVAILABLE FINISHES FOR PRODUCTS SHOWN ON THIS PAGE (see General Information section for finish chart)
Adhesive Gasketing Colors: **BL** (Black) **C** (Clear) **D** (Dark Brown) **GR** (Light Gray) **TAN** (Tan) **W** (White)

ASSA ABLOY

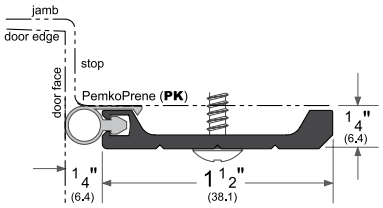
The global leader in door opening solutions

Heavy Duty Perimeter Gasketing - Standard Jamb

- For the head section of the frame where a parallel arm closer bracket or other hardware is required. Supplied undrilled (36") or drilled (80" and above) and supplied with sheet metal screws for mounting
- If used as a stop, flat head machine screws can be provided upon request and take a countersunk #10 hole. PEMKO will drill the head member only if drilling instructions for countersink holes are provided
- All gasketing shown below is sold individually

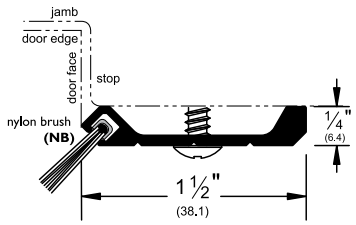
290_PK

AVAILABLE FINISHES: **A, D, G**
REPLACEMENT INSERT: **PK47 (BL, GR)**
ANSI: **R3G164, R3G165**



29045_NB

AVAILABLE FINISHES: **A, D, G**
REPLACEMENT INSERT: **P14050 (BL, GR)**
ANSI: **R3A164, R3A165**



Alternate Inserts For 290

290_S

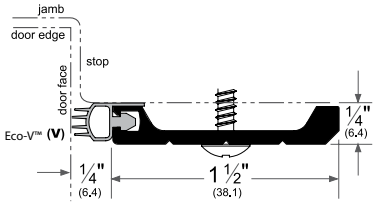
AVAILABLE FINISHES: **A, D, G**
REPLACEMENT INSERT: **S3 (BL, GR, W)**
ANSI: **R3E164, R3E165**

290_V

AVAILABLE FINISHES: **A, D, G**
REPLACEMENT INSERT: **EV47 (BL, GR, W)**

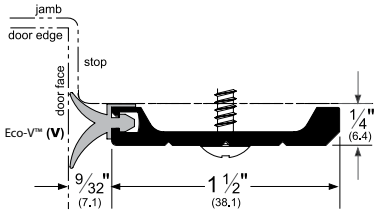
2902_V

AVAILABLE FINISHES: **A, D, G**
REPLACEMENT INSERT: **EV59 (BL, GR, W)**



2903_V

AVAILABLE FINISHES: **A, D, G**
REPLACEMENT INSERT: **EV60 (GR)**

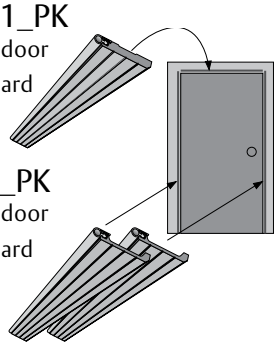


2891_PK

1 per door standard

290_PK

2 per door standard



When ordering a head section such as 2891_PK, two corresponding side sections (i.e. 290_PK) should also be ordered for the latch and hinge sides of the frame.

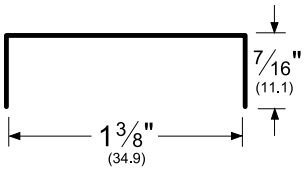
NOTE: Products shown in this section may not be drawn to scale.
AVAILABLE FINISHES FOR PRODUCTS SHOWN ON THIS PAGE (see General Information section for finish chart)
A (Mill Finish Aluminum) **D** (Dark Bronze Anodized) **G** (Gold Anodized)

Door Top Weatherstrip

_343

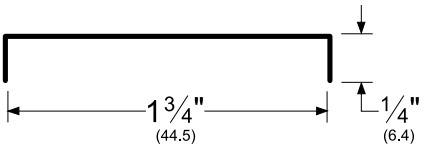
AVAILABLE FINISHES: **PA**
AVAILABLE LENGTHS: **36", 48"**

- For top of 1 3/8" wood doors



_344

AVAILABLE FINISHES: **PA**
AVAILABLE LENGTHS: **36", 48"**



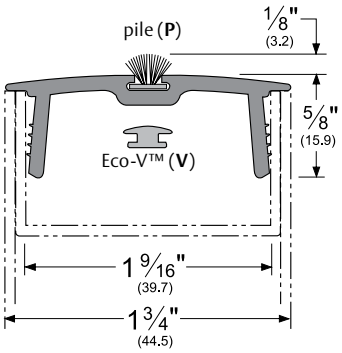
377VP_

REPLACEMENT INSERT: **P2 (BL, GR)**

377V_

REPLACEMENT INSERT: **EV38 (Tan)**

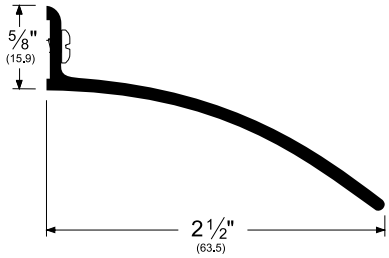
Rigid tan colored Eco-V™ with Eco-V™ (V) insert or pile (P) insert used as a door top (or bottom) filler strip for hollow metal doors



346_

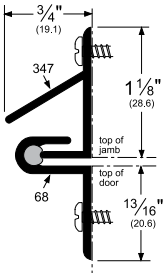
AVAILABLE FINISHES: **C, D, G, PW**

- Overhead rain drip with slotted holes
- Should be ordered a minimum of 4" longer than the door width



347_
68_R

AVAILABLE FINISHES: **A, D, G**



Heavy Duty Door Bumper

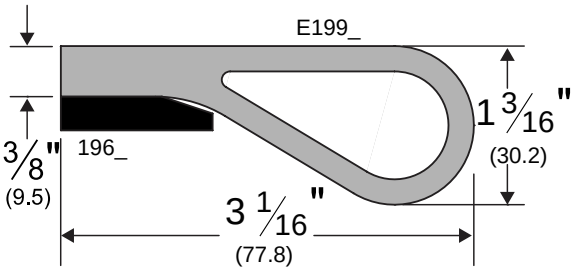
- Heavy duty door bumper extruded from black EPDM (E)
- Order 196_ separately; furnished undrilled unless requested otherwise

E199_

AVAILABLE COLOR: **BL**

196_

AVAILABLE COLOR: **A**



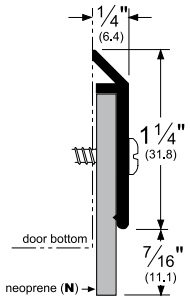
NOTE: Products shown in this section may not be drawn to scale.

AVAILABLE FINISHES FOR PRODUCTS SHOWN ON THIS PAGE (see General Information section for finish chart)
A (Mill Finish Aluminum) **C** (Clear Anodized) **D** (Dark Bronze Anodized) **G** (Gold Anodized) **PA** (Painted Aluminum) **PW** (Painted White)
Non-Metal Finish: **BL** (Black)

Door Bottom Sweeps

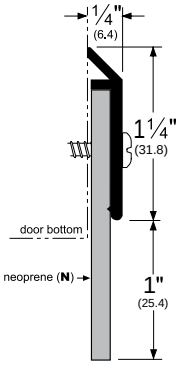
315_N

AVAILABLE FINISHES: **B, C, D, G, PW, SN**
REPLACEMENT INSERT: **N8 (BL, GR)**
ANSI: **R3B434, R3B435**



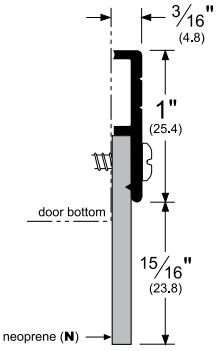
3151_N

AVAILABLE FINISHES: **C, D, G**
REPLACEMENT INSERT: **N9 (BL)**
ANSI: **R3B434**



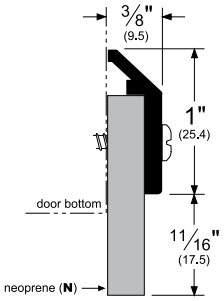
321_N

AVAILABLE FINISHES: **C, D, G**
REPLACEMENT INSERT: **N8 (BL)**
ANSI: **R3B434, R3B435**



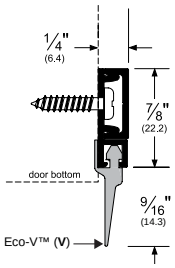
368_N

AVAILABLE FINISHES: **C, D, G**
REPLACEMENT INSERT: **N10 (BL)**
ANSI: **R3B434, R3B435**



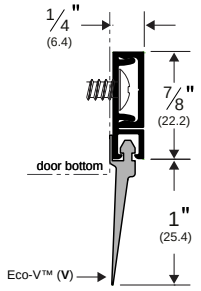
29326_V

AVAILABLE FINISHES: **C, D, G**
REPLACEMENT INSERT: **EV65 (BL, GR, W)**
ANSI: **R3D434**



293100_V

AVAILABLE FINISHES: **C, D, G**
REPLACEMENT INSERT: **EV54 (BL, GR, W)**
ANSI: **R3D434**



NOTE: Products shown in this section may not be drawn to scale.

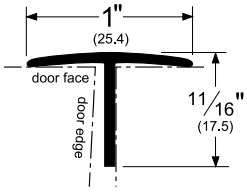
AVAILABLE FINISHES FOR PRODUCTS SHOWN ON THIS PAGE (see General Information section for finish chart)
B (Mill Finish Extruded Bronze [Brass]) **BDG** (Bright Dip Gold Anodized) **C** (Clear Anodized)
D (Dark Bronze Anodized) **G** (Gold Anodized) **PW** (Painted White) **SN** (Satin Nickel Anodized)

"T" and Overlapping Astragals

359_

AVAILABLE FINISHES:
A, BDG, D

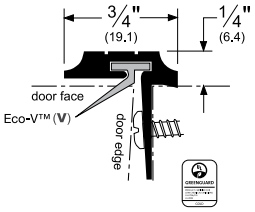
- Supplied with weatherstrip nails for installation



356_V

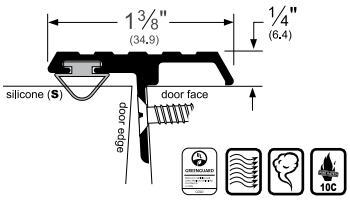
AVAILABLE FINISHES:
A, BDG, D, PW, SN
REPLACEMENT INSERT:
EV17 (BL, GR, W)

- Countersink drilling with countersunk flathead screws also available upon request at no extra charge



355_S

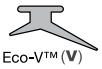
AVAILABLE FINISHES:
B, BDG, C, D, G, PW, SN
REPLACEMENT INSERT:
S4 (BL, GR)



Alternate Inserts For 355

355_V

AVAILABLE FINISHES:
B, BDG, C, D, G, PW, SN
REPLACEMENT INSERT:
EV7 (BL, GR, W)



355_P

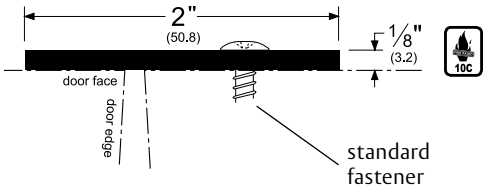
AVAILABLE FINISHES:
B, BDG, C, D, G, PW, SN
REPLACEMENT INSERT:
P2 (BL, GR)

357_
357_ND

AVAILABLE FINISHES:
C, D, G, SP, SS (#4 Finish & #4 Edge)

11 GAUGE

- "ND" denotes "no drill" (unless specified "ND", astragals are drilled)
- Standard fastener is #10 x 1" Truss Head SMS
- Lead-line option available

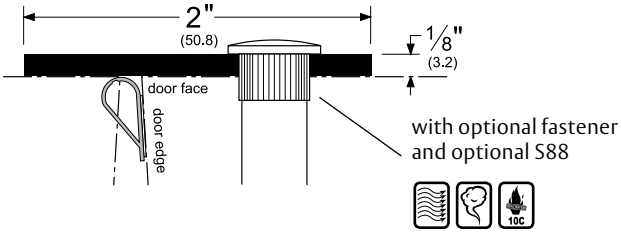


357_ with S88

AVAILABLE FINISHES:
SP, SS (#4 Finish & #4 Edge)

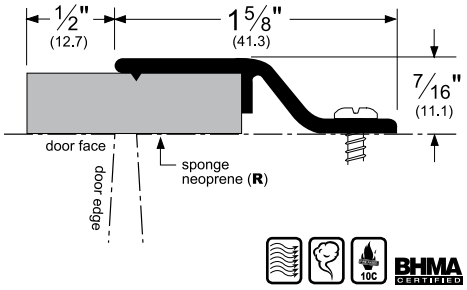
11 GAUGE

- Standard fastener is #10 x 1" Truss Head SMS
- 1/4" - 20 machine screws and thru-bolts must be ordered separately at additional cost
- S88 seal must be ordered separately at an additional cost, if required
- If specifications state that an astragal is required to satisfy a fire and / or smoke opening, then a thru-bolted 357SP or SS in conjunction with S88 seal is the only configuration that can be used.



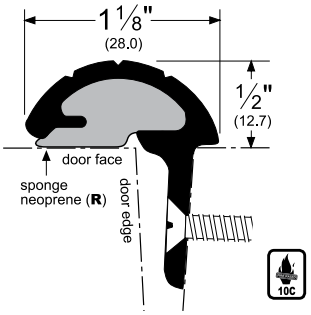
375_R

AVAILABLE FINISHES: **B, C, D, G**
REPLACEMENT INSERT: **R4 (BL)**
ANSI: **R3C634, R3C635**

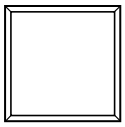


352_R

AVAILABLE FINISHES: **C, D, G**
REPLACEMENT INSERT: **R8 (BL)**
For reverse bevel doors



AVAILABLE FINISHES FOR PRODUCTS SHOWN ON THIS PAGE (see General Information section for finish chart)
A (Mill Finish Aluminum) **B** (Mill Finish Extruded Bronze [Brass]) **BDG** (Bright Dip Gold Anodized) **C** (Clear Anodized) **D** (Dark Bronze Anodized) **G** (Gold Anodized) **PW** (Painted White) **SN** (Satin Nickel Anodized) **SP** (Galvannealed Steel) **SS** (See Individual Part) Special finishes available upon request



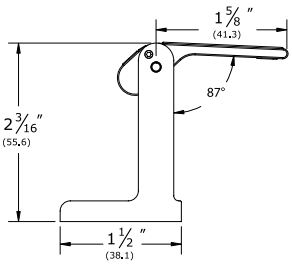
Wall Guard No. 606

Material: Clear rubber

Other: Sold in sheets of 55

Features: Self-adhesive mounting

No.	Fastener	Size	Weight
606	Self-adhesive back	1" x 1"	0.4 lbs./55



Privacy Door Latch No. PDL (formerly 607)

Material: Zinc die cast

Finishes: BRS, DBRS, STNN, CRM, DCRM, ORB

Features:
- ADA compliant
- Enhanced in room privacy
- Easy to install
- For use with UL Classified fire doors for use with hollow metal steel composite type fire doors rated up to and including 3 hrs Wood composite type fire doors rated up to and including 1 1/2 hrs and 20 minutes without hose stream

No.	Fastener	Size	Weight
PDL	#12 x 1 1/4" FH SMS	1 1/2 " x 2 13/16"	0.75 lbs.

Door Silencer No. 608CA

Material: Clear rubber

Other: Sold in packages of 300

Features: Self-adhesive mounting

No.	Fastener	Size	Weight
608CA	3/8" dia. x 1/8"	Metal or wood	0.2 lbs./300

608

609

Door Silencers No. 608, 609

Material: DuraFlex gray rubber

Other: Sold in packages of 100

No.	Size	Frame Type	Weight	ANSI A156.16
608	1/2" dia. x 5/8"	Metal	1.3 lbs./500	L03011
609	3/8" x 3/4"	Wood	1.3 lbs./500	L03021

ASSA ABLOY

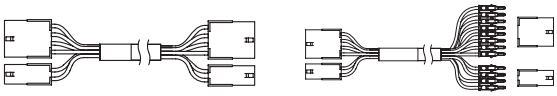
The global leader in door opening solutions

ElectroLynx® Retrofit Cables

If you are not ordering ASSA ABLOY Door Group doors with the ElectroLynx® cable pre-installed in the door, you must order an ElectroLynx® retrofit cable to go between ANY hardware and the hinge. This includes 3" cables to go from the hinge to an exit device and up to a 15' cable to go up and around a full lite metal door.

QC-C1500P Shown

Standard ElectroLynx® Retrofit Cable Sizes



Actual Cable Length	12 Conductor and Molex both ends	12 Conductor and Molex one end, pinned one end	Typical Application
3"	QC-C003	QC-C003P	Between hinge and the end of an exit device.
6"	QC-C006	QC-C006P	
12"	QC-C012	QC-C012P	
26"	QC-C200	QC-C200P	Between hinge and through the door to the lockset or exit device trim.
32"	QC-C206	QC-C206P	
38"	QC-C300	QC-C300P	
44"	QC-C306	QC-C306P	
50"	QC-C400	QC-C400P	
15' 2"	QC-C1500	QC-C1500P	From the hinge location, up the jamb to above the ceiling, or up and around full lite or half lite metal door.
25'	-	QC-C2500P	
30'	-	QC-C3000P	

Custom lengths available.

ACCESS CONTROL »PRODUCTS

SECURITRON®

ASSA ABLOY

ASSA ABLOY, the global leader in door opening solutions

DPS
Door Position Switches

DPS-W and DPS-M door position switches enable access control systems to monitor the open or closed state of a door. These switches can transmit an initiate signal to Securitron's XDT delayed exit logic timers and DPA door prop logic timers.

DPS-W

Concealed Door Position Switch for Wood Doors:

- Mated magnetic switch and cylindrical magnetic contact
- Recesses into door and frame
- 3/4" [19mm] round installation, 15/16" deep
- Provides Normally Closed SPST switch
- Works with door gap up to 3/4" [18mm]
- MagnaCare® lifetime replacement, no fault warranty

PRODUCT OPTIONS

- Available in white, gray or black

DPS-M

Concealed Door Position Switch for Metal Doors:

- Mated magnetic switch and magnetic contact
- Recessed into door and frame
- 3/4" [19mm] round installation, 1/2" deep
- Larger cylindrical magnet counters shielding effect of steel
- Provides Normally Closed SPST switch
- Works with door gap up to 3/4" [18mm]
- MagnaCare® lifetime replacement, no fault warranty

SPECIFICATIONS

Electrical:
Switching Current AC/DC (max): 0.4A

Operating Temperature:
-40 to +150F [-40 to +65C]

MODELS

PART #	Description
DPS-M-BK	DPS for Metal Doors - Black
DPS-M-GY	DPS for Metal Doors - Grey
DPS-M-WH	DPS for Metal Doors - White
DPS-W-BK	DPS for Wood Doors - Black
DPS-W-GY	DPS for Wood Doors - Grey
DPS-W-WH	DPS for Wood Doors - White

MAGNACARE WARRANTY

DPA
Door Prop Alarm

The DPA complements door position/door state detection with timed logic and relays that provide escalating alerts when a door is held, propped or unsecure after a defined time period. This unit promotes safety and loss prevention at ancillary exits for healthcare, commercial and retail facilities, and dorms.

PRODUCT FEATURES

- Multi-functional control timer provides relay action for alarms and alerts
- Monitors whether a door remains open after a defined time frame
- Includes three 5A SPDT outputs providing local and remote signaling
- Digital time settings from 30 to 240 seconds
- Detects attempts to tamper with lock or door status
- Multiple time ranges for escalating alerts
- Bypass mode for valid access/ egress needs
- Comes with Piezo sounder and LED
- MagnaCare® lifetime replacement, no fault warranty

SPECIFICATIONS

Electrical:
Max draw 100 mA at 12 VDC
Max draw 50 mA at 24 VDC

Operating Temperature:
+32 to +120F [0 to +49C]

Shipping Weight:
2.05 lbs [0.93kg]

ASSA ABLOY, the global leader in door opening solutions

Securitron® AQD Series

Dual-voltage switching power supplies

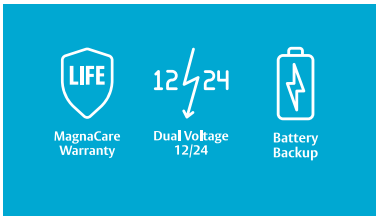
A full line of highly efficient power supplies that protect devices from over voltage.

The Securitron AQD Series of switching power supplies are dual voltage supervised units with a battery charger designed to power magnetic locks, electric strikes, card readers, sensors, access control boards and other devices in access control systems. The Securitron AQD Series can also be used to power DC cameras and other DC locking equipment. These units provide field selectable 12 or 24 VDC with up to 16 independently controlled power limited outputs.

Features

Standard Features

- Dual voltage 12 or 24 VDC field selectable continuous output
- Tolerates brownout or overvoltage input ± 15% of nominal voltage
- Thermal shutdown protection with auto restart
- Circuit breaker protects against overcurrent and reverse battery faults (batteries sold separately)
- Dedicated battery charging circuit prevents overvoltage on locking devices (except AQD1)
- Expandable up to 16 outputs in the standard enclosure
- Outputs are Class 2 limited when used with PTC Polyswitch output distribution boards
- Available with a single relay fire trigger or individually fire trigger relayed outputs
- MagnaCare® lifetime replacement, no-fault, no questions asked warranty
- Low noise design provides better than linear performance
- Mix and match configuration allows for UL compliance even when used in other UL Listed enclosures



Specifications

Certifications

- UL 294 Listed
- UL 603 Listed
- ULC-S318 Listed
- ULC-S533 Listed
- RoHS Compliant
- REACH Compliant

Dimensions

- Enclosure: 14" x 14" x 4-3/4" [356mm L x 356mm W x 121mm D]

Electrical

- 12 VDC or 24 VDC field selectable output
- 115 or 230 VAC input*
- Supports up to two (2) sealed gel, AGM or wet lead acid batteries
- Up to 90% efficiency
- Low voltage ripple design as low as 240mV p-p

Environmental

- Operating Temperature: -4˚ to 122˚F [-20˚ to 50˚C]

Shipping Weight

- 12.7 lbs [5.76kg]

**AQD1 115VDC only*

Models

Model	Amperage	Rated Voltage (12 or 24 VDC)	Input Voltage	Typical Voltage	Class 2 Outputs	Replaces
AQD1	1	12 or 24 VDC	115	13.7 / 27.4	Yes	AQD3
AQD2	2	12 or 24 VDC	115/230	12.5 / 25.0	Yes	AQD3
AQD4	4	12 or 24 VDC	115/230	12.5 / 25.0	Yes	AQD5
AQD6	6	12 or 24 VDC	115/230	12.5 / 25.0	Available*	AQD6

** Outputs are class 2 limited when used with 4 or 8 output PTC distribution boards*

Updated 1/23/19 Patent pending and/or patent www.assaabloydss.com/patents

SECTION 08 80 00 - GLAZING

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:

1. Glazing for the Project except as noted below.
2. Glazing accessories.
3. Glazing sealants.

B. Related requirements:

1. Division 08 for framed mirrors.

1.2 SUBMITTALS

A. Data: Manufacturer Product Data for glass, sealants, gaskets and glazing accessories.
B. Samples:

1. Twelve-inch square labeled Samples of each type and color of glass, with taped or ground edges.
2. Coated glass Samples shall show extremes of color range.
3. Glass indicated or required to be “heat-treated” need not be when submitting Samples.

C. Certification: Glass manufacturer’s certification as specified.

1. Product certificates signed by glazing materials manufacturers certifying that their products comply with specified requirements. Include wind pressure analysis, thermal stress analysis, including shading effects, and review of Shop Drawings stating that details are suitable for proposed glass products.
2. Separate certifications are not required for glazing materials bearing the manufacturer's permanent label designating type and thickness of glass, provided labels represent a quality control program of a recognized certification agency or independent testing agency acceptable to authorities having jurisdiction.

D. Glazing schedule: Use same designations indicated on Drawings for glazed openings in preparing a schedule listing glass type and thickness for each size opening and location.
E. Preconstruction adhesion and compatibility test report: From glazing sealant manufacturer indicating glazing sealants were tested for adhesion to glass and glazing channel substrates and for compatibility with glass and other glazing materials.
F. Product test reports: From a qualified testing agency indicating the following products comply with requirements, based on comprehensive testing of current products:

1. Tinted float glass.
2. Coated float glass.
3. Insulating glass.
4. Monothetic glass
5. Glazing sealants.
6. Glazing gaskets.

G. Labels: Provide NFRC Rating Labels as required by the California Energy Code. Reference compliance guide for information required

1.3 QUALITY ASSURANCE

A. Glazier qualifications: Experienced installer who has completed glazing similar in material, design, and extent to that indicated for this Project; whose work has resulted in glass installations with a record of successful in-service performance; and who employs glass installers for this Project who are certified under the National Glass Association Glazier Certification Program as Level 2 (Senior Glaziers) or Level 3 (Master Glaziers).
B. Fabricator qualifications: When the glass manufacturer has a certification program, the fabricator shall have a current “Certified Fabricator” certificate form the glass manufacturer.
C. Source limitations for clear glass: Obtain clear float glass from one primary glass manufacturer.
D. Source limitations for tinted glass: Obtain tinted, heat absorbing, and light reducing float glass from one primary glass manufacturer for each tint color indicated.
E. Source limitations for coated glass: Obtain coated glass from one manufacturer for each type of coating and each type and class of float glass indicated.
F. Source limitations for insulating glass: Obtain insulating-glass units from one manufacturer using the same type of glass and other components for each type of unit indicated.
G. Source limitations for glazing accessories: Obtain glazing accessories from one source for each product and installation method indicated.
H. Tempered or Laminated safety glass, noted as SG on Door and Window Schedule on Drawings:

    1. Category II materials complying with testing requirements in 16 CFR 1201 or ANSI Z97.1.
    2. Subject to compliance with the above, provide a permanent mark on safety glass with certification label of Safety Glazing Certification Council or another certification agency acceptable to AHJ.

I. Insulating glass certification program: Permanently marked either on spacers or on at least one component lite of units with appropriate certification label of the following inspecting and testing agency.

    1. Insulating Glass Certification Council.
    2. Associated Laboratories, Inc.
    3. National Accreditation and Management Institute.

J. Mockups: Before glazing, build mockups for each glass product indicated below in accordance with the following requirements, using materials indicated for the completed Work.

    1. Build mockups in the location and of the size indicated or, if not indicated, as directed by Architect.
    2. Build mockups with the following kinds of glass to match glazing systems required for Project, including typical lite size, framing systems, and glazing methods:

        a. Heat-strengthened coated glass.
        b. Tempered glass.
        c. Coated insulating glass.

    3. Obtain Architect's approval of mockups before starting fabrication.
    4. Maintain mockups during construction in an undisturbed condition as a standard for judging the completed Work.
    5. Demolish and remove mockups when directed.
    6. Approved mockups may become part of the completed Work if undisturbed at time of Substantial Completion.

K. Manufacturer certification: Submit manufacturer certification that.

1. All materials to be used in the glazing system such as sealants, setting blocks, spacers, backing rods, metal finishes, etc. have been reviewed by the glass manufacturer.
2. These materials are compatible with the glass supplied to the Project site.
3. These materials will not cause deterioration, premature aging, and staining of adjacent materials.

L. Labeling:

1. Submit a certificate stating that the glass furnished for the Project complies with the Specifications.
2. Label each piece of heat-treated glass with a permanent logo etched in one corner to identify the fabricator.

1.4 HANDLING

A. Storage: Prevent damage to glass and glazing materials from condensation, temperature changes, direct exposure to sun, run-off, and other causes.

1.5 PROJECT CONDITIONS

A. Do not proceed with installation of bulk sealants under adverse weather conditions, or when temperatures are below or above manufacturer's recommended limitations for installation.

1.6 SPECIAL WARRANTIES

A. Warrant insulating glass for 5 years after Substantial Completion against fogging and loss of transparency and frost build-up between the glass panes due to defective materials or sealant failure.
B. Replace defective materials and workmanship during the warranty period at no cost to the Owner.

PART 2 - PRODUCTS

2.1 PRIMARY GLASS MANUFACTURERS

A. Basis of Design: Vitro Architectural Glass (formerly PPG Glass.)
B. AGC Flat Glass North America Ltd.
C. Guardian Glass.
D. Pilkington Group.
E. Or equal.

2.2 CRITERIA AND PERFORMANCE REQUIREMENTS

A. General: Installed glazing systems shall withstand normal thermal movement and wind and impact loads (where applicable) without failure, including loss or glass breakage attributable to the following: defective manufacture, fabrication, or installation; failure of sealants or gaskets to remain watertight and airtight; deterioration of glazing materials; or other defects in construction.

B. Confirm glass thicknesses by analyzing Project loads and in-service conditions. Provide glass lites for various size openings in nominal thicknesses indicated, but not less than thickness and in strengths (annealed or heat-treated) required to meet or exceed the criteria specified below and with the CBC and ASTM E 1300.

1. Design wind pressures:

   a. Positive: As indicated on structural Drawings. If not indicated, comply with ASCE/SEI “Minimum Design Loads for Buildings and Other Structures,” unless otherwise prescribed by Code.
   b. Negative: 20 psf, unless otherwise indicated.

2. Vertical glazing: For glass surfaces sloped 15 degrees or less from vertical, design glass to resist design wind pressure based on glass type factors for short-duration load.
3. Sloped glazing: For glass surfaces sloped more than 15 degrees from vertical, design glass to resist each of the following combinations of loads.

   a. Outward design wind pressure minus the weight of the glass. Base design on glass type factors for short-duration load.

4. Probability of breakage for glass surfaces sloped less than 15 degrees from vertical: Design glass for a probability of breakage not greater than 0.008.
5. Probability of breakage for glass surfaces sloped more than 15 degrees from vertical: Design glass for a probability of breakage not greater than 0.001.
6. Maximum lateral deflection: For glass supported on all 4 edges, limit center-of-glass deflection at design wind pressure to not more than 1/50 times the short-side length or one-inch, whichever is less.
7. Differential shading: Design glass to resist thermal stresses induced by differential shading within individual glass lites.

C. Thermal movements: Allow for thermal movements from ambient and surface temperature changes acting on glass framing members and glazing components.

1. Temperature change: 120 deg F, ambient; 180 deg F, material surfaces.
2. Thermal and optical performance properties: Provide glass with performance properties specified based on manufacturer's published test data, as determined according to procedures indicated below:

   a. For monolithic glass lites, properties are based on units with lites 6 mm thick.]For insulating glass units, properties are based on units with lites 6 mm thick and a nominal 1/2-inch-wide interspace.
   c. Center of glass U values: NFRC 100 methodology using LBL-35298 WINDOW 4.1 computer program, expressed as Btu/ sq.-foot by hour by -degree F.
   d. Center of glass solar heat gain coefficient: NFRC 200 methodology using LBL-35298 WINDOW 4.1 computer program.
   e. Solar optical properties: NFRC 300.

2.3 GLASS MATERIALS-GENERAL

A. General:

1. Float glass: Shall comply with ASTM C 1036; heat-treated glass shall comply with ASTM A 1048.
2. ASTM E 1300 Standard Practice for Determining Load Resistance of Glass in Buildings
3. ASTM E 2190 Standard Specification for Insulating Glass Unit Performance and Evaluation.

4. Provide glass free from bubbles, smoke vanes, air holes, scratches and other defects.
5. Laminated glass shall comply with ASTM C 1172. Glass in the lamination shall be from the same manufacturer when heat strengthened.
6. The same manufacturer shall make all tinted and reflective glass.
7. Fabricate tempered glass by horizontal (roller hearth) process with roll wave distortion parallel to bottom edge of glass as installed, unless otherwise indicated.

    a. Comply with Category II of CPSC 16 CFR Part 1201 or Class A of ANSI Z97.1. (2408.3.).

8. Comply with Code and the Drawings for glass in hazardous locations. Laminated glass subject to human impact shall comply with Category II of CPSC 16 CFR Part 1201 or Class A of ANSI Z97.1. (2408.3.).

    a. Note that safety glass shall be installed where required by the CBC including 2406 and 2408.3 as well as other requirements in Chapter 24.

9. Unless otherwise indicated or specified, overall thickness of each glass type and composite thickness of multiple layer glass types shall be consistent throughout the Project.
10. Provide insulating glass assemblies CBA rated by IGCC when tested in compliance with ASTM E 774, and permanently labeled with the appropriate certification label of IGCC, ALI or NCTL.

2.4 EXTERIOR GLASS

A. Glass Types: See the architectural exterior elevation Drawings.
B. GL-1- IGU at main entrance to Gym: Solar Control Low-E Clear Insulating Glass “Solarban®” 70 (2) “Solarblue ®” + Clear by Vitro Architectural Glass.

    1. Outdoor Lite: Fully tempered “Solarblue®” Glass by Vitro Architectural Glass, Sputter Coated on second surface (2).
    2. Indoor Lite: Fully Tempered clear (transparent) Float Glass.
    3. Low-E Coating: “Solarban®” 70 Solar Control (Sputtered) by Vitro Architectural Glass. Location: Second Surface (2).
    4. Performance Values:

        a. Visible Light Transmittance: 42%.
        b. U-Value Winter: 0.28.
        c. U-Value Summer: 0.26.
        d. SHGC: 0.23.
        e. Shading Coefficient: 0.26.
        f. Outdoor Visible Light Reflectance: 8%.

C. GL-2 - Typical Insulated Glass Units (IGU); Solar Control Low-E Clear Insulating Glass “Solarban®” 70 (2) Clear + Clear by Vitro Architectural Glass.

    1. Outdoor Lite: Fully tempered float Glass by Vitro Architectural Glass, Sputter Coated on second surface (2).
    2. Indoor Lite: Clear (transparent) Fully tempered float glass.
    3. Low-E Coating: “Solarban®” 70 Solar Control (Sputtered) by Vitro Architectural Glass. Location on second surface (2).
    4. Performance Values

        a. Visible Light Transmittance: 64%
        b. U-Value Winter: 0.28

c. U-Value Summer: 0.26
d. SHGC: 0.27
e. Shading Coefficient: 0.32
f. Outdoor Visible Light Reflectance: 13%.

D. GL-3 – IGU at exterior entrance: Solar Control Low-E Insulating Glass “Solarban®” 70 (2) clear + translucent by Vitro Architectural Glass.

1. Outdoor Lite: Fully tempered float glass by Vitro Architectural Glass, Sputter Coated on second surface (2).
2. Indoor Lite: Equal to fully tempered Pavia Clear/Color acid etched float glass by Vitro.

2.5 INTERIOR GLASS

A. GL-4: Clear Glass: Fully tempered, float glass.

1. Thickness: 1/4-inch minimum.

B. GL-5: Clear Glass: Fully tempered, float glass.

1. Thickness: 1/2-inch minimum.

C. GL-6: Laminated Glass: Two plies of fully tempered, float glass.

1. Basis of Design: Pulp Studio Laminated Glass ref # 5099.
2. Thickness 5/16” minimum.
3. Or equal.

D. GL-7: Interior Mirror - See Section 08 86 00.
E. GL-8: Fire Rated glass - See Section 08 41 23.

2.6 GLAZING MATERIALS

A. Setting block: Neoprene or, in the case of structural silicone glazing, dense extruded silicone; both with a hardness of 80 to 90 durometer Shore A with a minimum length of 4-inch or as required by GANA guidelines. For flush glazed skylights, provide L shaped setting blocks.
B. Side blocks: Neoprene or dense silicone with a hardness of 65 ±5 durometer Shore A.
C. Spacer: Neoprene, silicone, or EPDM, 50 to 60 durometer hardness, compatible with sealants used.
D. Sealants:

1. For primary seal of insulating units: Manufacturer standard sealant.
2. For all other conditions: Medium and low modulus (weatherseal) silicone sealant, one-part, non-acidic, neutral curing, Type S, Grade NS, Class 25, Use NT, capable of withstanding movements from plus 50 to minus 50 for medium modulus and plus 100 to minus 50 percent for low modulus based on original joint design.

a. Color: Match Architect’s paint color for sealant.
b. Acceptable products:

1) Dowsil “795” and “790.”
2) General Electric “Silpruf,” “Silpruf LM.”

c. Only low modulus sealant, such as Dowsil “790” or GE “Silpruf LM,” shall be used when sealing to cementitious substrate.

E. Glazing gasket: Resilient, continuous neoprene, (except as specified below) extrusions, 40 to 60 Shore A durometer hardness, meeting the requirements of ASTM C 509 for cellular (closed-cell) material, and AAMA SG-1 for non-cellular (dense) material, with molded corners.

1. Gaskets shall have a continuous mechanical engagement to framing members and factory molded corners.
2. Gasket corners, whether molded or not, shall be bedded in elastomeric sealant compatible with glazing gaskets.
3. When in direct contact with silicone sealants, gaskets, spacers and setting blocks shall be heat cured silicone rubber-based material chemically compatible with the silicone sealant and with sufficient hardness for the specific purpose intended. Compatibility testing by the silicone sealant supplier/manufacturer shall be required.
4. Design interior and exterior gasket profiles to produce a glass edge pressure of 12 psf unless otherwise recommended by the glass manufacturer.

F. Compressible filler rod:

1. Closed cell or waterproof jacketed rod stock of synthetic rubber or plastic foam compatible with sealants used, flexible and resilient, with 5 to 10 psi compressive strength at 25 percent deflection.
2. Do not use vinyl foam stock.

G. Cleaner, primer and sealer: Type recommended by sealant or gasket manufacturer.

H. Partition closure: Michael Rizza Co., LLC “Partition Closures” consisting of an extruded aluminum retainer channel and a compressible solid silicone closure.

I. Sealer for acid-etched and sandblasted glass: Etch Sealer by Skyline (773.278.4660), or equal wax-free, specially formulated sealer to resist fingerprints and stains.

2.7 FABRICATION

A. Cutting:

1. Obtain sizes from Shop Drawings or by field measurement. Cut glass to fit each opening with at least the minimum edge clearance and bite on glass recommended by glass manufacturer.
2. When glass will be precut to sizes obtained from Shop Drawings, take field measurements of each opening before glazing to verify adequate bite on glass and minimum edge clearance.
3. Glaze openings, which do not fall within tolerances for which precut glass has been sized only with glass specially cut to fit such openings.
4. Do not nip glass edges. Edges may be wheel cut or sawed and seamed at manufacturer's option.

B. Edge quality of annealed and heat-strengthened glass:

1. Shark teeth shall not penetrate more than half of glass thickness.
2. Serration hackle shall not penetrate more than 10 percent of glass thickness.
3. Flare shall not exceed 0.062-inch as measured perpendicular to glass surface edge.
4. Bevel shall not exceed 0.062-inch.
5. Flake chip depth shall not exceed 0.031-inch and length, or diameter shall not exceed 0.25-inch.
6. Rough chips are not permitted. Rough chips are those that exceed dimensional limits for flake chips.
7. For glass to be cut at site, provide glass 2-inch larger than required, in both dimensions, to facilitate cutting of clean-cut edges without seeming or nipping.

8. Do not cut, seam, nip, or abrade tempered and heat strengthened glass after tempering.
9. Provide flat ground edges with arised corners where glass edge is not covered by a metal stop.

C. When full height vision glass is shown (without intermediate horizontals or rails), safety glazing is only required on the inboard lite for Code compliance except on the ground floor or other areas where there is a walking surface on both sides. Alternately, if an aluminum rail is used on the interior of the framing, neither lite need not be safety glazing.
D. Glass in sloped glazing conditions (15 degrees or more from vertical) shall be laminated with both lites heat-strengthened. Fully tempered glass is not allowed, whether monolithic, laminated, or as the inboard lite of an insulated glass unit.
E. Insulating glass:

1. Provide black aluminum spacers with bent (not mitered or spliced) corners; only one seam is allowed in each spacer of each unit.
2. The date of the manufacture of the unit shall be discretely identified on the spacer (top of unit, left or right corner).

F. Identification: Identify tempered glass with a manufacturer-installed, removable paper designation as required by CBC section 2406.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine conditions and measurements affecting the work of this Section at site.
B. Verify that openings and frames to be glazed are within allowable tolerances, plumb, level and square.
C. Inspect framing joint intersections to ensure that the offset in the joinery will not impose undue edge pressure on the glass in compliance with GANA, Glazing Manual, and Sealant Manual, guidelines.
D. Correct other detrimental conditions before proceeding with glazing.

3.2 STANDARDS AND PERFORMANCE

A. Watertight and airtight installation is required for each piece of glass installed in an exterior wall and skylight.
B. Each installation must withstand normal temperature changes, wind loading, and impact from normal operation for doors and windows, without failure of any kind including loss or breakage of glass, failure of sealants or gaskets to remain watertight and airtight, deterioration of glazing materials and other defects in the Work.
C. Installed glass shall be free from rattle.
D. Protect glass from damage at all times during handling, installation and operation of the building until Substantial Completion.
E. Comply with combined recommendations of glass manufacturer and manufacturer of sealants and other materials used in glazing, except where more stringent requirements are specified.
F. Except as recommended otherwise by the manufacturers of the glass and glazing materials, comply with GANA Glazing Manual and the following:

1. Provide minimum nominal glass bite of 0.375-inch on monolithic lites; 1/2-inch on insulated glass units.
2. Where joint movement will result in variable glass bite, increase nominal bit to provide 0.375-inch minimum bite and 0.25-inch minimum edge clearance.

G. Inspect each piece of glass immediately before installation and eliminate those with edge damage or face imperfections.
H. Unify appearance of each series of lights by setting each piece to match others as nearly as possible. Inspect each piece and set with pattern, draw and bow oriented in the same direction as other pieces.

3.3 PREPARATION FOR GLAZING

A. Immediately before glazing, clean the glazing channel and other framing members to receive glass.

1. Remove coatings not firmly bonded to the substrate.
2. Verify that framing is satisfactory to receive the glass.

B. Apply primer or sealer to joint surfaces when recommended by sealant manufacturer.

3.4 GLASS INSTALLATION

A. Structural glazing: Comply with the sealant manufacturer's instructions and the following ASTM standards.

1. C 794: Sealant compatibility and adhesion to each substrate to be encountered on the Project.
2. C 1087: Sealant compatibility with backing.
3. C 1087: Sealant compatibility and lack of adhesion to bond breaker.
4. C 1184: Structural Glazing Specifications.
5. C 1401: Guide for Structural Glazing.

B. Erect each pane of glass square, plumb, and with uniform clearances between panel and rebates.
C. Follow glass manufacturer's instructions and GANA Standards. Maintain minimum bed clearance between glass and frame.
D. Do not nip glass. Do not install glass with edge damage.
E. Install glass with required glass markings right side up so they can be read from the exterior.
F. Setting blocks:

1. Minimum length of 4 inches or as required by GANA guidelines; minimum width shall correspond to the glass thickness and retaining member but, in no case less than the glass thickness at point of contact.
2. Locate at quarter points, or in accordance with GANA glazing guidelines.
3. Secure against migration.
4. Shims used in conjunction with setting blocks must be of the same material, hardness, length and width as the setting blocks.

G. Side blocks:

1. Locate side blocks where required within the upper half of each jamb for each light.
2. Install block with 1/8-inch clearance between block and glass bearing surface.
3. Block shall be sufficient length to prevent point loading on the glass.
4. Side blocks are not required where an individual glass light is continuously sealed with silicone at 2 or more edges, when the sealant is installed immediately following the setting of the glass.

H. Provide spacers inside and out unless continuous gaskets are used. Use glass manufacturer recommended size and spacing.

I. Prevent exudation of sealant or compound by forming voids or installing filler rods in the channel at the heel of jambs and head (do not leave voids in the sill channels, except as needed for drainage and weep holes) depending on light size, thickness, and type of glass, and complying with manufacturer's recommendations.
J. Sealant shall not be adhered to, or placed against, the edge of a laminated glass unit interlayer.
K. Force sealants into channel to eliminate voids and to assure complete "wetting" or bond of sealant to glass and channel surfaces.
L. Tool exposed surfaces of sealants to provide a substantial "wash away" from the glass.
M. Install pressurized gaskets to protrude slightly out of the channel, so as to eliminate dirt and moisture pockets.
N. Clean and trim excess glazing materials from the glass, stops and frames promptly after installation, and eliminate stains and discolorations.
O. Where wedge shaped gaskets are driven into one side of the channel to pressurize the sealant or gasket on the opposite side, provide adequate anchorage to ensure that gasket will not "walk" out when subjected to dynamic movement.

    1. Anchor gasket to stop with matching ribs, or with adhesive.

P. Clean, prime and mask structural silicone joints the same day when silicone is applied.

3.5 MIRROR INSTALLATION

A. Apply one additional coat of mirror backing to the back of the mirror, allow to dry, then apply mirror mastic in compliance with the mastic manufacturer's instructions.
B. Fasten supporting angles securely to the studs; do not attach to gypsum board with toggle or Molly bolts.
C. Set mirrors in supporting angles and press against substrate to ensure bond with mastic.]
D. Leave open space of 1/8-inch or more between mirror and substrate. Do not seal ventilation space at edges of mirror.

3.6 CURING/PROTECTING/CLEANING

A. Cure glazing sealants and compounds in compliance with their manufacturer's instructions and recommendations, to obtain high early bond strength, internal cohesive strength and surface durability.
B. Protect glass from breakage immediately upon installation. Do not apply markers of any type to glass.
C. Before Substantial Completion, remove and replace glass that is broken, chipped, cracked, abraded, stained or damaged in other way, including natural causes, accidents and vandalism.
D. Maintain glass in a clean condition during construction so that it will not be damaged by corrosive action and will not contribute (by wash-off) to the deterioration of glazing materials and other work.
E. Remove remaining labels and wash and polish glass on both faces not more than 4 days prior to Owner's acceptance of the work in each area. Comply with GANA 01-0300 and the glass manufacturer's recommendations.

END OF SECTION

SECTION 08 86 00 - MIRRORED GLASS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:

1. Unframed mirrors.
2. Adhesives, sealers and accessories.

B. Related requirements: Section 10 28 00 for framed mirrors.

1.2 ADMINISTRATIVE REQUIREMENTS

A. Scheduling and sequencing:
B. Pre-installation meeting:

1.3 SUBMITTALS

A. Data: Manufacturer Product Data for mirrors, sealers, adhesive, and trim.
B. Samples: 6-inch square, with finished edges.

1.4 QUALITY ASSURANCE

A. Label back of each mirror as required by ASTM C 1503.

1.5 SPECIAL WARRANTY

A. Warrant mirrors against silver spoilage for 5 years after Substantial Completion.
B. Replace defective materials and workmanship during the warranty period at no cost to the Owner.

PART 2 - PRODUCTS

2.1 MIRRORS

A. General:

1. Glass shall comply with ASTM C 1036.
2. Mirrors shall comply with ASTM C 1503.

B. Mirrors:

1. Tempered clear glass mirrors: Comply with ASTM C 1503, Mirror Glazing Quality, for blemish requirements in annealed float glass before silver coating is applied, for coating requirements, and with other requirements not affected by tempering process; and complying with ASTM C 1048 for Kind FT, Condition A, tempered float glass before silver coating is applied. Nominal Thickness 6.0 mm.
2. Nominal thickness: 6.0 mm unless indicated otherwise.

2.2 MISCELLANEOUS GLAZING MATERIALS

A. Adhesive: Mirror Mastic by Palmer, Ultra/Bond by C. Gunther Co. or Titebond Fast Set Polyurethane Construction Adhesive.
B. Backing and cut edge sealer: Primary Mirror Backing by CR Lawrence, Mirro-Bac by Palmer, Seal-Kwik by C. Gunther Co., or equal by Lilly Industries or Peacock Laboratories.
C. J moldings: Polished chrome (US 26) finished "J" moldings model 541 by JW Goss Co. or equal by CR Lawrence Co., Trident Consolidated Industries or A. Geo Diack.
D. Edge sealer: Coating compatible with glass coating and approved by mirror manufacturer for use in protecting against silver deterioration at mirrored glass edges.

2.3 FABRICATION

A. Obtain sizes from Shop Drawings or by field measurement.
B. Precut mirrors to sizes obtained from Shop Drawings, take field measurements before cutting. Fabricate mirrors in one piece for each toilet room, except as otherwise authorized by the Architect due to mirror size.
C. Cutouts: Fabricate cutouts before tempering for notches and holes in mirrors without marring visible surfaces. Locate and size cutouts so they fit closely around penetrations in mirrors.
D. Edge treatment:

1. Do not nip edges. Edges may be wheel cut or sawed and seamed at manufacturer's option.
2. Grind and polish exposed edges.
3. Edges when concealed by a continuous channel may be clean cut.
4. Seal edges of mirrors after edge treatment or require mirror manufacturer to perform edge treatment and sealing in factory immediately after cutting to final sizes.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine conditions and measurements affecting the work of this Section at site.
B. When laminating directly to gypsum board, verify that gypsum board is sealed with an acrylic sealer prior to installing mirrors.
C. Correct detrimental conditions before proceeding with installation.

3.2 INSTALLATION

A. Apply one additional coat of mirror backing to the back of the mirror, allow the backing to dry, and then apply mirror mastic in compliance with the mastic manufacturer's instructions.
B. Fasten the J-channels to the studs. Level and countersink the fastener heads so they do not contact the mirror backing. Shim the J-channels where depressions in the wall occur so the mirror will be centered in the channel without distortion.
C. Tape the screw heads and the wall edge of the J-channel if it protrudes from the wall.
D. Place setting blocks at 2 locations for each mirror in the lower J-channel, approximately 6 inches from edges.
E. Paint the seam line of the mirror butt joint black to prevent the white wall from showing through the seams if applicable.
F. Dry fit each mirror to assure a secure fit. Adjust the setting blocks if necessary. Verify that mirror edges are sealed before installing to avoid black edge problems.
G. Apply mastic to the mirror according to the mastic manufacturer’s instructions by pats, a minimum of one per square foot and a maximum of 4. Compensate at the depressions and bows in the wall to make the installation flat.

H. Install the mirror with vacuum cups. Set the top of the mirror inside the upper J-channel and drop in the lower J channels on the setting blocks.
I. Leave open space of 1/8-inch or more between mirror and substrate. Do not seal ventilation space at edges of mirror.

3.3 CURING/PROTECTING/CLEANING

A. Protect mirrors from breakage immediately upon installation.
B. Maintain mirrors in a clean condition during construction.
C. Do not permit edges of mirrors to be exposed to standing water.
D. Maintain environmental conditions that will prevent mirrors from being exposed to moisture from condensation or other sources for continuous periods of time.
E. Remove remaining labels and wash and polish mirrors not more than 4 days prior to Owner's acceptance of the work in each area. Comply with GANA MD 01-0105 and mirror manufacturer's recommendations.
F. Before Substantial Completion, remove and replace mirrors which are broken, chipped, cracked, abraded, stained or damaged in other way, including natural causes, accidents and vandalism.

END OF SECTION

SECTION 08 87 00 - GLASS FILM

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes decorative film applied to monolithic glass.
B. Related Requirements: Section 08 80 00 for glass.

1.2 DEFINITIONS

A. Visible Light Transmittance: The ratio of the amount of visible light (380-780 nm) that is allowed to pass through a glazing system to the amount of visible light falling on the glazing system. The value is expressed as a percentage.
B. Diffuse Visible Light Reflectance (exterior): The percentage of visible light falling on a flat, non-mirrored surface that is neither transmitted nor absorbed but scattered backwardly at random angles from that surface. This value is also known as “non-specular reflectance”.
C. Privacy Film Rating: This number, between 0 (clear) and 10 (opaque), represents the relative difficulty an observer has in identifying the nature and character of an object located on the opposite side of the window, with the observer and the object both located at least 2 feet from the pane upon which the product has been installed.
D. Specialty Series: These films mask light, add privacy, or give a pop of color to any space. Bold, graphic hues and distinctive designs enliven retail spaces and commercial properties. Unique combinations of specialty films allow for endless customizable possibilities.

1.3 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation meeting:

1. Arrange for a Preinstallation meeting between the Contractor, TJPA Representative, and Installer, at least a week prior to the start of installation to review proposed methods and processes.
2. Review Project schedule, scope of work indicated to receive the film, coordination between glazier and film Installer, scheduled finish, acceptability of glass, submittals and approvals.
3. Review procedures to be followed for protection of film during and after installation.
4. Record minutes of the meeting, decisions made and corrective measures to be taken before application starts. Send copy of the minutes to those present and the TJPA Representative no later than 3 days following the meeting.

1.4 SUBMITTALS

A. Shop Drawings: Where joints will occur in the film due to the size of the glass, submit Shop Drawings showing joint locations which are subject to rejection by the Architect.
B. Samples:

1. Submit full range of colors available to match GL-6, see Section 08 80 00 for Architect’s selection.
2. Submit three 24-inch square Samples of clear glass with the film applied to one half of the glass on both glass surfaces.

C. Product Data: Manufacturer Product Data sheets on each product to be used, including.

1. Physical properties and independent testing agency reports showing compliance with specified tests.
2. Preparation instructions and recommendations.
3. Storage and handling requirements and recommendations.
4. Provide detailed description of the installation method.

D. Closeout Submittals:

1. Film manufacturer’s instructions for maintenance and precautions to be used to clean film without damaging it.
2. Minimum quantity of film properly packaged and labeled, equal to one percent of the quantity installed.
3. Name, address (physical and email), and telephone number of Installer.

1.5 QUALITY ASSURANCE

A. Fire Performance: Surface burning characteristics when tested in accordance ASTM E 84:

1. Flame Spread: 25, maximum.
2. Smoke Developed: 450, maximum.

B. Manufacturer Qualifications: All primary products specified in this section will be supplied by a single manufacturer with a minimum of 10 years’ experience.

C. Installer’s Qualifications: Firm and individuals with a minimum of 5 consecutive years experience in installation of window films for projects similar in material, design, complexity and extent to this Project, and whose work has resulted in applications with a record of successful in-service performance.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Store products indoors, off the floor, in manufacturer's unopened packaging until ready for installation.

1.7 PROJECT CONDITIONS

A. Maintain environmental conditions {temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's absolute limits.

1.8 WARRANTY

A. Film shall be warranted for 12 years when installed indoors.

PART 2 - PRODUCTS

2.1 MANUFACTURER

A. Basis-of-Design Product: 3M – Window Films.
B. Or equal.

2.2 DECORATIVE SPECIALTY FILMS

A. Decorative Film: Color to match GL-6 in Section 08 80 00.

2.3 DECORATIVE FILM ACCESSORIES

A. General: Provide accessories either manufactured by or acceptable to Decorative film manufacturer for application indicated, and with a proven record of compatibility with surfaces contacted in installation.
B. Pressure Sensitive Adhesive: This adhesive is activated by pressure and water. It is characterized by its permanently tacky nature and its installation ease.
C. Cleaners, Primers, and Sealers: Types recommended by film manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION`

A. Examination: Examine conditions affecting the work of this Section. Reject excessively pitted and rusted components.

3.2 PREPARATION

A. Clean surfaces thoroughly prior to installation.
B. Prepare surfaces using methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions,

3.3 INSTALLATION

A. Install film in accordance with its manufacturer's instructions by recognized professional installers of film. Completed work must meet IWFA and these Specifications visual acceptance standard; in case of conflicts, the most stringent requirement shall take precedence.
B. Install without bubbles, ripples, drips, dirt, cuts, tears or gaps between film and frame and between film panels when the length or width exceeds manufacturer’s standard size; in all cases obtain the Architect’s approval of joint locations.
C. Clean newly installed film and window frames immediately after installation, using caution, do not displace the film.
D. Clean up cleaning solutions, run-off cleaning water and adhesive mounting solution.

3.4 CLEANING AND PROTECTING

A. Protect installed products until completion of Project.
B. Where installed film could be damaged by subsequent construction provide tape warning strips or barricades to prevent contact. Do not apply tape directly to film.
C. Touch-up, repair or replace damaged products before Substantial Completion.
D. After application of film, wash film using common window cleaning solutions, including ammonia solutions. Do not use abrasive type cleaning agents and bristle brushes to avoid scratching films. Use synthetic sponges or soft cloths.

END OF SECTION

SECTION 08 91 19 - EXTERIOR ALUMINUM WALL LOUVERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes design/build prefinished exterior aluminum wall louvers.
B. Related requirements: Division 23 for interior louvers connected to ductwork.

1.2 SUBMITTALS

A. Data: Manufacturer Product Data and specifications, air performance and water penetration graphs (AMCA Certified Ratings), anchorage details and installation instructions, including specifications for finishing materials.
B. Shop Drawings:

1. Detail the fabrication and erection of louvers not shown in the manufacturer data.
2. Include details of sections and connections.
3. Show interface with adjacent materials, anchorage and accessories.

C. Samples: 6-inch-long finished Samples of each profile of aluminum extrusions with the specified finish.

1.3 QUALITY ASSURANCE

A. Welding:

1. Qualify procedures and personnel according to AWS D1.1, Structural Welding Code-Steel, and AWS D1.3, ”Structural Welding Code-Sheet Steel”.
2. Welders shall have satisfactorily passed AWS qualification tests.
3. If recertification of welders is required, retesting will be Contractor's responsibility.

PART 2 - PRODUCTS

2.1 MANUFACTURER

A. Airolite Co., Inc., Construction Specialties, Inc., Industrial Louvers, Inc., Cesco Products, Greenheck, or equal.

2.2 PERFORMANCE REQUIREMENTS

A. Structural performance: Provide assemblies capable of withstanding the effects of gravity loads and the following loads and stresses within limits and under conditions indicated without permanent deformation of louver components, noise or metal fatigue caused by louver blade rattle or flutter, or permanent damage to fasteners and anchors. Wind pressures shall be considered to act on vertical projection of louvers.

1. Wind loads: As indicated on the Structural Drawings.

B. Seismic performance: The building is in Seismic Design Category (SDC) indicated on the Structural Drawings as defined by the CBC. Engineer, fabricate and Install assemblies requiring special bracing or mounting to meet the Seismic Design Category without failure or damage.
C. Thermal movements:

1. Provide louvers that allow for thermal movements resulting from the following change (range) in ambient and surface temperatures without buckling, opening of joints, overstressing of components, failure of connections, and other detrimental effects.
2. Base engineering calculation on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
3. Temperature change (range) of 120-degree F, ambiant, 180-degree F, material surfaces.

D. Air performance, water-penetration, air-leakage, and wind-driven rain ratings: Provide louvers complying with performance requirements indicated, as demonstrated by testing manufacturer's stock units identical to those provided, except for length and width according to AMCA 500-L.

1. Wind Driven Water Penetration Performance:

a. Based on testing 39 inches x 39 inches core area, 41 inches x 44 inches nominal size unit in accordance with AMCA 500-L.
b. Wind Velocity: 29 mph.

1) Rainfall Rate: 3 inches/hour.
2) Free Area Velocity: 1190 feet per minute.
3) Water Resistance Effectiveness: 99.% (AMCA Class A).

c. Wind Velocity: 50 mph.

1) Rainfall Rate: 8 inches/hour.
2) Free Area Velocity: 759 feet per minute.
3) Water Resistance Effectiveness: 99.3%.

E. Beginning point of water penetration above 1,250 fpm free area velocity.
F. Free Area: 60%.
G. Airborne sound transmission loss: Provide acoustical louvers complying with airborne sound transmission loss ratings indicated, as demonstrated by testing manufacturer's stock units identical to those specified, except for length and width according to ASTM E 90.

2.3 MATERIALS

A. Aluminum blades and frame: 6063-T52 alloy.
B. Blank-off panels: Sheet aluminum, ASTM B 209.
C. Steel reinforcement: ASTM A 36.
D. Fasteners: Stainless steel or aluminum for aluminum-to-aluminum, galvanized steel for anchorage to supporting structure. Use Phillips flat-head machine screws for exposed fasteners.
E. Welding electrodes: As recommended by the aluminum producer and AWS.
F. Anchors and inserts:

1. Non-ferrous metal or hot-dip galvanized anchors and inserts.
2. Use steel or lead expansion bolt devices for drilled-in-place anchors.
3. Furnish inserts, as required, to be set into concrete and masonry.

G. Birdscreen: 1/2-inch mesh, 0.063-inch diameter galvanized wire, crimped aluminum screen material.
H. Paint:

1. For aluminum finish on exposed locations, see Section 07 42 13.
2. For concealed ferrous metal surfaces: Tneme-Zinc 90-93 by Tnemec, Zinc-Lock 308 by Porter International, or MZ-4 Epoxy Zinc-Rich Primer by Valspar Corp.
3. Bituminous paint: Cold-applied asphalt mastic paint complying with SSPC-Paint 12, except containing no asbestos, and formulated for 30-mil thickness per coat.

I. Sealants: As specified in Section 07 92 00.

2.4 FABRICATION

A. Fabricate louvers with continuous horizontal, weather type blades; minimum blade thickness shall be 0.125-inch unless Contractor demonstrates that the following criteria can be met with a lesser thickness (but not less than 0.062-inch.

1. Mid span deflection of louver can be limited to L/175.
2. Aerodynamic shudder or displacement does not occur at design wind load plus design throughput of louver.

B. Form blades and frames to the profiles, sizes and spacing indicated from minimum 0.08-inch aluminum extrusions. Overlap blades and "hook" both edges to prevent blow-through of water.

1. Provide concealed vertical stiffener assemblies of plates, angles, tees or shapes as required for rigidity, welded or fastened to the inside face of each blade.
2. Form ends of blades flat against frame jamb for fastening.

C. Frame louvers with mitered or coped and continuously welded or riveted and soldered joints.

1. Weld or rivet and solder blades to frames at each end, so that all joints will be watertight.
2. Reinforce frames and blades as required for stiffness and to comply with the design criteria.

D. Blank-off panels:

1. Provide blank-off where indicated.
2. Fabricate from 0.064-inch aluminum sheet.
3. Locate on inside face of louver.
4. Install on continuous foam tape, specified in Section 07 92 00, to provide an airtight seal.
5. Attach to louver frames with machine screws at each corner and spaced at 12-inches o.c. maximum between.

E. Provide sill extensions and loose sills of same material as louvers, where indicated or required for drainage to exterior and to prevent water penetration to interior.
F. Form frame to provide tolerances for installation, with sealants in joints between louvers and adjoining work.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine adjacent construction and supports.
B. Verify that openings are within allowable tolerances, plumb, level, clean, will provide a solid anchoring surface.
C. When areas behind louvers will be difficult to access after installation, clean free of debris and dust.
D. Correct detrimental conditions before proceeding with installation.

3.2 INSTALLATION

A. Place louvers plumb, level and in proper alignment with adjacent work.
B. Anchor securely to adjacent construction as indicated on the approved Shop Drawings. Use concealed anchorages wherever possible.
C. Form tight, flush joints with exposed connections accurately fitted together.
D. Protect unpainted aluminum surfaces that will be in contact with cementitious and dissimilar metals from corrosion and galvanic action by applying a heavy coating of bituminous paint or by separating surfaces with waterproof gaskets or nonmetallic flashing.
E. Install removable bird screens in louver frames.
F. Install blank-off panels on continuous ribbons of tape sealant to affect a weathertight seal.
G. Repair finish damaged by cutting, welding, soldering and grinding operations required for fitting and jointing. Restore finish so that there is no evidence of corrective work or return damaged parts to the shop for refinishing.
H. Seal joints between louvers and adjacent construction as specified in Section 07 92 00.

DIVISION 09
FINISHES

SECTION 09 05 16 - WATER VAPOR EMISSION CONTROL SYSTEM

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes system for the reduction of moisture vapor transmission and alkalinity control for Interior concrete slabs.

1.2 SUBMITTALS

A. Submit the following product data:

1. Manufacturer’s Specification.
2. Installation Instructions.
3. Independent Test Data.
4. Certification Requirements.
5. Warranty Information.

B. Test results: Submit anhydrous calcium chloride testing according to ASTM F 1869 and/or RH Probe Test according to ASTM F 2170 from independent testing agency.

1.3 QUALITY ASSURANCE

A. Manufacturer qualifications: Firm with not less than 10 years experience in manufacturing water vapor reduction systems.

1. The water vapor reduction system must be specifically formulated and marketed for water vapor reduction and alkalinity control without change of system design for a minimum period of five (5) years.
2. Submit list of product use and performance history, for the same formulation and system design, listing reference sources for at least 3 projects dating back for a minimum of 5 years.

B. Applicator qualifications: Entity currently approved by the manufacturer, experienced in surface preparation and application of the material and subject to inspection of the manufacturer.

C. Independent testing: Manufacturer must provide Independent lab test reports documenting performance per the following:

1. ASTM E 96, Water Vapor Transmission (wet method) Performance shall be documented by an independent testing laboratory at a minimum of 97% water vapor transmission reduction compared to untreated concrete.
2. ASTM E96- Perm Rating - Standard Test Method for Water Vapor Transmission of Materials – Perm Rate results must not exceed 0.1 Perms.
3. ASTM D 1308; Insensitivity to alkaline environment up to, and including, pH 14. A 14 day test is required with no degradation of sample reported.
4. Certify acceptance and exposure to continuous topical water exposure after final cure.

1.4 DELIVERY, STORAGE AND HANDLING

A. Deliver products to the job site in their original unopened containers, clearly labeled with the manufacturer's name and brand designation.
B. Store products in an approved ventilated dry area; protect from dampness, freezing, and direct sun light. Product should not be stored in areas with temperatures in excess of 90 degrees F or below 50 degrees F.
C. Handle product in a manner that will prevent breakage of containers and damage products.

1.5 PROJECT/SITE CONDITIONS

A. Environmental conditions

1. Do not apply moisture vapor reduction system to unprotected surfaces or when water is accumulated on the surface of the concrete.
2. Do not apply water vapor reduction system when temperature is lower than 50 degrees F or expected to fall below this temperature within 24 hours from time of application.

B. Protection: Protect water vapor reduction system to prevent damage from active rain or topical water for a minimum period of 24 hours from time of application.

1.6 SCHEDULING

A. Before installation of VCT, sheet vinyl, rubber flooring, wood, carpet and/or epoxy flooring systems over the interior concrete slabs, anhydrous calcium chloride testing ASTM F 1869 (latest revision) and/or RH Probe Tests ASTM F 2170 shall be performed by the Owner's Special Inspector as outlined In Article 3.1 below.
B. The Owner's Special Inspector will coordinate with the Owner scheduling water vapor reduction system testing and allowing enough time to test, submit and install the water vapor reduction system before installation of floor finish.
C. The Owner's Special Inspector will allow for as much time as is reasonable for the concrete slab to dry before installing anhydrous calcium chloride tests and/or RH Probe Tests. All mastics, glues, and/or contaminants shall be removed to provide a clean, sound, concrete substrate prior to installing anhydrous calcium chloride tests as per ASTM F 1869 (latest revision).
D. The water vapor reduction system must allow installation as early as 7 days after concrete placement.

1.7 WARRANTY

A. Provide manufacturer’s warranty against defects in materials and workmanship for 10 years from Substantial Completion.
B. Correct failures during the warranty period at no cost to Owner.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Water vapor reduction system, which may be incorporated in the work, shall be the product of a single manufacturer.

1. VAP I® 2000 System by KOSTER American Corporation;

2.2 MATERIALS

A. General: Use materials of one manufacturer throughout the project.
B. Koster “VAP I 2000”, 100 percent solids epoxy coating, containing specifically formulated chemicals and resins to provide the following characteristics and properties in a one coat system, complying with the following:

1. Minimum 97 percent water vapor transmission reduction compared to untreated concrete, ASTM E 96, Water Vapor Transmission (wet methods).
2. Not exceeding one perm rating, ASTM E 96 Perm Rating.
3. Insensitivity to alkaline environment up to, and including, pH 14 in a 14-day bath test, ASTM D 1308.
4. Certified acceptance and exposure to continuous topical water exposure after final cure.
5. Water Vapor reduction system shall be a single coat, stand alone system with no requirements for additional components such as sand broadcast for adhesion of flooring systems.
6. Reduce Calcium Chloride readings of up to 25lbs/1000 ft2/24 hrs by 97 percent in one coat.
7. Perform as required with RH Probe readings of 100 percent.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Calcium Chloride and/or RH Probe test requirements:

1. Conduct anhydrous calcium chloride tests according ASTM F 1869 protocols.
2. Provide RH Probe Tests according to ASTM F 2170 protocols.
3. Only conduct calcium chloride tests at the same temperature and humidity expected during normal use. If this is not possible, then the test conditions should be 75 degrees F +/-10 degrees F and 50+/-10 percent relative humidity. Maintain these conditions 48 hours prior to and during testing. Water vapor transmission levels are directly affected by ambient room temperature and readings conducted without a sustained ambient temperature are not acceptable.
4. Submit test results with a marked up floor finish plan showing test results along with a written clarification on status of the ambient air temperature and humidity before start of testing.

B. Concrete Slab Inspection:

1. Test existing slabs (primarily), for concrete deficiencies and contaminates such as un-reacted water-soluble silicates, chlorides, A.S.R. (alkali-silica reaction), to avoid bonding issues. This testing shall be performed by Owner’s independent testing agency using standard coring methods and review of the history of the slab installation if available. Concrete shall conform to ACI Committee 201 Report “Guide to Durable Concrete.”

C. Floor treatment calcium chloride tests: After proper cure (>72 hrs min.) of the moisture vapor reduction system, conduct calcium chloride tests to determine if the level of water vapor transmission and alkalinity are reduced to the Owner's specified levels in conjunction with the flooring manufacturer’s installation requirements.
D. Adhesion tests: Verify proper adhesion of flooring adhesives, coatings, and leveling compounds to the final vapor reduction coating system for acceptability.

3.2 PREPARATION

A. Inspect all surfaces with regard to their suitability to receive moisture vapor reduction system with manufacturer's representative.
B. Clean all surfaces to receive moisture vapor reduction system. Shot blast all floors to a Concrete Surface Profile (CSP) #3 or #4 and clean surfaces with an industrial vacuum cleaner and remove all residues from the substrate. Grinding is allowed only in areas not accessible by shot blasting. Remove defective materials, and foreign matter such as dust, adhesives, leveling compounds, paint, dirt, floor hardeners, bond breakers, oil, grease, curing agents, form release agents, efflorescence, laitance, Shot blast bee bees. Repair cracks, expansion joints, control joints, and open surface honeycombs and fill in accordance with vapor reduction manufacturer's recommendations. If concrete additives such as chlorides or any other soluble compounds that may contaminate surfaces have been used in the concrete mix do not use this product on that floor without written approval from the vapor reduction system manufacturer. Reinforcing fibers that are visible after shot blasting must be removed and vacuumed leaving no fibers left on the concrete surfaces. Provide an uncontaminated, sound surface. Do not acid-etch.
C. Repair concrete prior to vapor reduction system installation by using system manufacturer-recommended bonding agent with approved concrete repair materials. Comply with all requirements as listed in vapor reduction manufacturer's technical data information.
D. Ensure surfaces to be treated with moisture vapor reduction system have not previously been treated with other materials such as underlayments, screeds, penetrating sealants, or silicates. If this is the case, consult with the manufacturer prior to any application of moisture vapor reduction system.
E. Testing for concrete deficiencies or contamination such as alkali silica reaction, untreated silicates, or organic residue is recommended.
F. Shot blast a small test area and inspect surface profile with the finished flooring applicator. As the specified vapor reduction system is not a leveling material, make sure the flooring installer is aware that a feather finish or leveling material may be required to "flatten" or level the vapor reduction-treated concrete prior to flooring installation.

3.3 APPLICATION

A. Coverage rates depend on the surface profile and porosity of the concrete substrate as well as the measured level of moisture. On average, a coverage rate of 75-150 ft2/gal.
B. Apply one coat, using a squeegee and or 3/8 inch nap roller leaving no areas untreated. Allow to cure a minimum of 12 hours before installing flooring system.

3.4 PROTECTION

A. Protect each coat during specified cure period from traffic, topical water and contaminants.

END OF SECTION

SECTION 09 22 16 - NON-STRUCTURAL METAL FRAMING

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes non-structural metal framing (NSMF) as follows:

1. Interior steel studs and furring.
2. Shaftwall framing.
3. Pocket door framing.
4. Horizontal steel suspension systems for support of lath/plaster and gypsum board assemblies.
5. Resilient sound clips.
6. Resilient channels.
7. Backing plates not provided by other trades for support of items attached to metal framing system.

B. Work installed but furnished in other Sections:

1. Access panels furnished by electrical and mechanical trades for access to their work.
2. Backing plates furnished with fixtures and equipment attached to or supported by metal framing system.

C. Related requirements:

1. Division 05 for cold-formed steel framing (exterior walls).
2. Division 09 for gypsum board shaftwall systems.
3. Division 09 for ceiling and soffit suspension systems.

1.2 REFERENCES

A. Lath and plaster framing: Specifications for Metal Lathing and Furring, and Specification Guide For Cold-Formed Lightweight Steel Framing published by the Steel Studs Manufacturers Association.
B. Gypsum board framing: ASTM C 754, Installation of Steel Framing Members to Receive Screw Attached Gypsum Wallboard, Backing Board or Water-Resistant Backing Board.
C. Welding: AWS D1.1, Structural Welding Code, Steel, and D1.3, Structural Welding Code, Sheet Steel.
D. Studs and runners:

1. ASTM C 955, Specifications for Load Bearing (Transverse and Axial) Steel Studs, Runners (Tracks), and Bracing or Bridging, for Screw Application of Gypsum Board and Metal Plaster Bases.
2. ASTM C 645, Specifications for Non-Load (Axial) Steel Studs, Runners (Track), and Rigid Furring Channels for Screw Application of Gypsum Board.

1.3 ADMINISTRATIVE REQUIREMENTS

A. Pre-construction meeting: Prior to starting erection of the NSMF, but not later than one week prior to commencing work, arrange a preliminary meeting with trades associated with the work of this Section.

1. Presided over by Contractor, include subcontractor performing work of this Section, testing company representative, as appropriate, and a representative of the Fire Marshall.
2. Review locations of access panels, fire hose cabinets and fire extinguisher cabinets; the latter with a representative of the Fire Marshall.
3. Identify those locations on the slab. Use a removable marker where the slab is scheduled to remain exposed in the Work.
4. Review installation methods, procedures, time schedule and conditions under which work will proceed, including stud manufacturer's instructions and coordination required with related work.
5. Review and verify availability of materials and installer’s experience.
6. Record meeting minutes and distribute PDF copy to all concerned, including the Architect, within 48 hours of the meeting.

B. Coordination:

1. Notify concerned trades of items required to be incorporated into work of other Sections. Certain components specified under this Section includes items which are closely integrated with doors, glazing assemblies and work specified in other Sections that require close coordination with the work of this Section.
2. Be responsible for coordination required to ensure correct installation procedures and results.
3. Verify actual locations of embeds and existing adjacent structural supports by field measurements before erection and indicate measurements on Shop Drawings. Coordinate tolerances of other trades that may affect the work of this Section prior to start of Shop Drawings preparation.

1.4 SUBMITTALS

A. Data: Manufacturer Product Data consisting of a complete list of materials together with brochures and descriptive data of all items proposed for use.
B. Load tables: Load tables and deflection table properly annotated for anticipated use for all studs.
C. Shop Drawings: Large scale, dimensioned Shop Drawings of all assemblies showing the following.

1. Component details, framing layout, framed openings, anchorage to structure, seismic bracing, type, and location of fasteners and welds, and accessories required of related requirements.
2. Framing member size and gage designations, number, type, location, and spacing.
3. Indicate attachments, clips, strapping, bracing, splices, bridging, accessories, and details required for proper installation. Show and dimension all concealed backing plates required for wall-attached or wall-mounted items indicated; obtain dimensions from trades that will provide these items.
4. Indicate and identify all fasteners and welds (with AWS symbols).

D. Certificates:

1. Mill certificates signed by framing member/accessory manufacturer certifying compliance with material requirements.
2. Welders' certificates.

1.5 QUALITY ASSURANCE

A. Code-Compliance Certification of Studs and Tracks: Provide documentation that framing members are certified according to the product-certification program of the Certified Steel Stud Association, the Steel Framing Industry Association, or the Steel Stud Manufacturers Association.
B. Fire resistance: Where a fire resistance classification is indicated, provide materials, accessories, and application procedures listed by UL, or tested according to ASTM E 119 for the type of construction shown, and acceptable to authorities having jurisdiction.
C. Welding work qualifications:

1. Qualify welding procedures and welding operators in compliance with AWS "Qualification" requirements for AWS D1.3.
2. Use qualified welders experienced in welding light gage steel, and comply with AWS D1.1 and D1.3.
3. Verify that welders to be employed in this work have satisfactorily passed AWS qualification tests.
4. If recertification of welders is required, retesting will be Contractor's responsibility.

1.6 HANDLING

A. Store materials under cover, off the ground or floor, in a dry, ventilated space.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. General: One of the following systems of the size indicated and gage required to comply with criteria specified.
B. Shaftwalls:

1. ClarkDietrich Building Systems.
2. Marino\Ware.
3. USG J-runners, E and C-H studs.
4. SCAFCO Corp. Shaftwall Studs.

C. Elsewhere:

1. CEMCO.
2. ClarkDietrich Building Systems.
3. Marino\Ware.
4. SCAFCO Corp.

2.2 PERFORMANCE REQUIREMENTS

A. Unless otherwise indicated, NSMF requires deferred submittal (design/build). The Contractor is required to design, within the dimensional parameters indicated, engineer and install the NSMF assemblies to withstand the following loads, applied perpendicular to walls at the point of largest deflection, within the specified deflection limits.

1. At stairs, elevator hoistways, and other vertical shafts: 10 psf.
2. At ground floor lobbies opening to the outside: 15 psf.
3. At partitions to receive stone cladding and lath and plaster: 15 psf.
4. Elsewhere: 5 psf.

2.3 STUDS, RUNNERS AND FURRING

A. Studs:

1. Shaftwalls: As specified above.
2. For low (Pony) walls: Scafco Corp. “Pony Walls” assemblies, or equal.
3. Elsewhere: Channel type cold-formed steel members with punched web, complying with the following, as applicable.

a. Roll-formed from galvanized steel meeting ASTM A 653, Classification SQ, Grade 33; galvanized meeting G60 for 18-gage and lighter gage.
b. For 16-gage and heavier, provide ASTM A 653, Classification SQ, Grade 50; galvanized meeting G60.
c. Protective coating: ASTM A 653, G40 zinc coating.
d. Bracing: Where the wall finish does not adequately brace both flanges of studs, add bracing or reduce allowable stresses in computing stud heights in compliance with Code.

B. Top and bottom runner, and bridging:

1. As recommended by the manufacturer of each stud type and of same-gage as stud in same wall or partition, unless otherwise indicated on the Drawings. Provide unpunched, screwable tracks, gage to match studs, 1-1/2-inch flanges.
2. For shaftwalls: Where studs extend to the underside of floor or roof slabs, secure at top with “Fire Trak Cavity Shadowline” track by Fire Trak Corp. or other Code-compliant assemblies acceptable to the Architect.
3. For other fire-rated partitions: “MaxTrk” or “Blazeframe” both by ClarkDietrich Building Systems, “Fire Trak” by Fire Trak Corp., "Sliptrack Systems, Inc. "Slip-Trk" for fire-rated partitions, Fire Trak Corp. “VertiTrack VTD VTX” by the Steel Network, Runners by Blaze Frame, or other Code-compliant assemblies acceptable to the Architect.
4. Elsewhere: Use either “Slip Track 250” by ClarkDietrich Building Systems, or equal track matching (as a minimum) the stud gage in same wall but with a 2-1/2 inch leg, or a deep leg 54 mils thick (16-gage) minimum slip connection to accommodate slab deflection.

C. Joist framing:

1. Steel Joists: Manufacturer standard C-shaped steel joists, of web depths indicated, punched or unpunched, with stiffened flanges, and as follows.

a. Minimum base-metal thickness: 20-gage minimum.
b. Flange width: 1-5/8-inch, minimum.

2. Steel joist track: Manufacturer standard U-shaped steel joist track, of web depths indicated, unpunched, with unstiffened flanges, and as follows:

   a. Minimum base-metal thickness: 20-gage minimum.
   b. Flange width: 1-5/8-inch, minimum.

D. Furring channels:

1. For gypsum board and soffit board:

   a. Zee furring channels: 30 mils thick (20-gage) model ZFN3 by Dietrich Industries, Inc. of depth to match insulation thickness, or equal.]
   b. All others (except resilient channels): 18 mils thick (25-gage) minimum, galvanized, hat-shaped.

2. For lath/plaster: 3/4-inch size as specified hereafter for runner channels.

E. Prefabricated headers: At the Contractor's option, ProX Header assemblies by Dietrich Industries or Cemco may be used in lieu of job-assembled headers.

F. Horizontal stiffener, runner channels and bridging: 54 mils thick (16-gage) channels fabricated of cold-rolled steel, ASTM A 366, with flanges not less than 7/16-inch wide. Minimum weights as follows:

Channel Size	Flange Width	Pounds/1000 linear foot
3/4-inch	7/16-inch	300
1-1/2-inch	7/16-inch	475
2-inch	19/32-inch	590

G. Resilient channels: RC-1 by USG, R/FC-1 by Dale Industries, Resilient Channels by Scafco, fabricated from steel sheet complying with ASTM A 924 or ASTM A 568.

H. Resilient sound clips: Super Soundproofing Co., "SSP Sound Isolation Clips" or Acoustical Surfaces, Inc. "Noise STOP clips RSIC-1."

2.4 FASTENERS AND ACCESSORIES

A. For low (Pony) walls: Use "Floor Anchor" stud reinforcement by Pinquist Tool & Die Co., Inc. at every stud.

B. Screws:

1. ASTM C 1002 for metal framing 18 mils thick (25-gage) and lighter, ASTM C 954 for heavier metal framing, 3/8-inch head diameter, corrosion-resistant pan head screws; length and gage required by Code, or recommended by the metal framing manufacturer when not prescribed by Code.
2. For soffits and overhead surfaces, use with appropriate washers but not less than one-inch OD by 1/4-inch ID by 54 mils thick (16-gage) cut washer.
3. Screws for gypsum board mounted on resilient channels shall have a maximum length of one-inch for one layer and 1-5/8-inch for 2 layers.

C. Shot pins: 0.140-inch diameter low velocity powder-actuated drive pins equivalent to Ramset/Red Head No. 1508, or equal, with 7/8-inch minimum penetration into concrete.

D. Anchor bolts: ASTM A 307, non-headed type.

E. Expansion shields: FS FF-S-325, except do not use lead, fiber and plastic shields.

F. Furring channel clips: Manufacturer standard clips for attaching gypsum board furring channels to runner channels.

G. Welding electrodes: ASTM A 233, as recommended by AWS for the conditions of use and the metals to be welded.
H. Wire: ASTM A 641, galvanized, soft-annealed steel, minimum gage as follows.

1. Ceiling and soffit suspension system: 8 BW gage.
2. Furring channel to runner channel: 16 BW gage.
3. Ties and splices in channels: 18 BW gage.

I. Pocket door framing: By Pemko, or equal, complete with extruded aluminum track and aluminum-reinforced studs.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine conditions and measurements affecting the work of this Section at site.
B. Correct detrimental conditions before proceeding with installation.

3.2 PREPARATION

1. Ceiling anchorage:

   a. Coordinate installation of ceiling suspension systems with installation of overhead structural assemblies to ensure that inserts and other provisions for anchorage to building structure have been installed to receive ceiling hangers that will develop their full strength and at spacing required to support ceilings.
   b. Furnish concrete inserts and other devices indicated to other trades for installation well in advance of time needed for coordination with other construction.

2. Before fireproofing is applied, attach offset anchor plates or ceiling runners (tracks) to surfaces indicated to receive sprayed-on fireproofing. Where offset anchor plates are required, provide continuous units fastened to building structure not more than 24 inches o.c.
3. After fireproofing has been applied, remove only as much fireproofing as needed to complete installation of metal framing assemblies without reducing thickness of fireproofing below that required to obtain fire-resistive rating indicated. Protect remaining fireproofing from damage.

3.3 INSTALLATION VERTICAL FRAMING

A. General:

1. Erect metal framing systems in compliance with their manufacturer's recommendations, the reference standards, the Drawings and these Specifications.
2. Use minimum 33 mils thick (20-gage) studs at the following locations:

   a. Door openings.
   b. Studs supporting cement backer boards.
   c. Studs supporting backing plates, plumbing fixtures and wall-supported cabinets.
   d. Elsewhere as indicated.

3. Do not attach metal framing and suspension wires to ducts, conduits or pipes. Do not allow metal framing and suspension wires to contact pipes.
4. Isolate framing from transfer of structural loading, both horizontally and vertically. Provide slip or cushioned type joints to attain lateral support and avoid axial loading.

5. Cut framing components squarely for a tight fit against abutting members. Erect framing plumb and level to provide solid backing for finish materials. Install all steel studs in a wall/partition so that their flanges point in the same direction.
6. Do not exceed a 1/8-inch in 10 feet deviation (non-cumulative) from true lines and levels, or 1/4-inch from true position. Perform necessary remedial work on framing to achieve specified tolerances.

B. Wall/partition framing:

1. Layout partitions, soffits and ceiling breaks, and permanently mark on slabs and soffits.
2. Align and securely anchor ceiling and floor tracks to building construction.
3. Space anchors within 6 inches of ends of each track segment and at 24 inches o.c. maximum. Do not drive fasteners closer than 2 inches to slab or curb edge.
4. Frame all openings in stud walls. Provide double studs, closer spacing, and additional reinforcement as detailed or required at door frames, borrowed light frames (interior windows), and recesses for equipment.
5. Frame both sides of control joints in gypsum board surfaces, and Portland cement plaster surfaces with separate studs and discontinuous runner; do not bridge the joint with system components or accessories.
6. Assemble corners using a minimum of 3 studs.
7. Install studs in single length, without joints, extending from floor to underside of floor or roof structure above, except where indicated on the Drawings to stop at or above suspended ceilings. Splicing studs is not permitted without the Architect's approval.
8. Where studs stop at or above suspended ceilings, unless otherwise indicated, brace every fourth stud (maximum) with opposite stud bracing at 45-degree angle securely anchored to the floor or roof above.
9. Offset studs where required so that finished wall surface will be flush.
10. Where curved walls are indicated, space studs at no more than 9 inches o.c.; space stud closer where radius requires it. Cut outside leg and entire web of runners at 2 inches intervals for the length of the arc then attach a 1-inch wide by 18 mils thick (25-gage) steel strip securely inside the cut leg of runners lapping uncut leg a minimum of 4 inches.

    a. As an option to the above, Contractor may use curved runners by Radius Track or Flex-C Trac by Flex-Ability Concepts.
    b. Position a stud at the beginning and end of each arc, with intermediate studs equally spaced between end studs of arc.

11. Attaching studs to runner:

    a. +Attach studs to tracks by friction fit for single stud gypsum board partitions.
    b. Attach the following studs to runner tracks with screws or with a crimping tool in compliance with the stud manufacturer's printed instructions, except where indicated to be welded.

        1) Studs with gypsum board on only one side.
        2) Studs in curved walls.
        3) Studs supporting lath/plaster assemblies.
        4) Studs supporting stone veneer**.**
        5) Studs on each side of doors and windows.
        6) Studs supporting wall hung plumbing fixtures.
        7) Studs supporting wall hung urinal screens, toilet compartments, cabinets and equipment.

    c. Attach corner studs, partition intersections, studs on each side of door jambs, and other openings in walls/partitions as specified in Paragraph "b" above.
    d. Weld studs where indicated on the Drawings.

12. Unless otherwise indicated, provide horizontal stiffeners consisting of 3/4-inch channels spaced at not more than 54 inches o.c. maximum in all partitions/walls supporting wall supported cabinets and lath/plaster assemblies, and stone. Tack-weld stiffeners to each stud.

    a. Provide an additional 3/4-inch channel 6 inches above door head and extend 2 stud spaces beyond jamb studs.
    b. Install channels in longest possible lengths; lap 12 inches and wire-tie at joints. Do not tie channels on opposite sides of staggered and double stud partitions together.

13. Double gypsum board studs (face to face to form a tube) adjacent to doors and openings. Extend studs at door openings to slab or deck above and anchor securely to bottom track (as specified in subparagraph 10.b. above) and to top slab or deck with clip angles.

    a. Locate additional studs not more than 2 inches from door and window frames, abutting partitions, partition corners, and other construction.
    b. Install a section of track over door and window frames with a clip angle at each end and attach securely to the adjacent vertical studs.
    c. Install cut-to-length studs at the location of vertical joints and at standard spacing over the door frame header extending to the ceiling track.

14. Install studs 2 inches away from abutting concrete, steel columns or other structural elements. Extend the horizontal stiffeners and attach it to the structural element.
15. Provide additional framing, as required, for attachment of electrical boxes, fire extinguisher cabinets and similar items located in stud walls.

C. Resilient furring channels:

    1. Install, with mounting flange down, at right angle to studs, starting within 2 inches of floor and 6 inches from ceiling.
    2. Splice channels directly over studs and attach through both flange to studs.
    3. Space channels as indicated on the Drawings.
    4. Drive screws through channel attachment flange and studs at each intersection.

D. Resilient sound clips: Install the resilient clips in accordance with their manufacturer's instructions, and the following at the spacing indicated.

    1. Install clips level and aligned on each wall.
    2. Space bottom clips (and supported channel) no more than 3 inches from floor.
    3. Space top clips (and supported channel) no more than 6 inches from ceiling.
    4. Install furring channels securely in each clip.

3.4 SUSPENDED FRAMING FOR LATH/PLASTER AND GYPSUM BOARD ASSEMBLIES

A. Space 1-1/2-inch main runners not over 4 feet o.c. in any dimension so that hanger wires do not support more than 12 square foot of ceiling. Attach hanger wires from in-place floors and roof as indicated on the Drawings. Do not use shot pins.
B. Hang suspended framing independent of walls, columns, pipes, ducts, and conduits, and their insulation.
C. Do not attach wires to, or bend around, interfering material such as ductwork, pipes and conduits. Provide trapeze, or equivalent devices substantiated by detailed Shop Drawings and calculations, where obstructions interfere with direct suspension.
D. Space runner channels not more than 6 inches from parallel walls or beams. Align runner channels accurately relative to indicated ceiling height and saddle-tie with hanger wires. Lap channels 12 inches at splices and tie at each end of lap.

E. Attach furring channels to runner channels with 16-gage tie wire or clips. Space at not over 12 inches o.c. for lath/plaster assemblies, and 16 inches o.c. for gypsum board. Locate approximately 2 inches from parallel walls. Lap channels 12 inches at splices and tie at each end of lap.
F. Assemble and install metal grillage so that it is rigid, square, and free of movement, and level within the tolerances specified.
G. Provide seismic bracing and compression struts as required by Code.

3.5 FURRING

A. Provide furring attached to concrete and metal framing to conceal utilities, furred soffits, and other furring as indicated.
B. Furring to receive gypsum board shall be screw-on channels directly attached to backing material, or applied over runner channels as applicable.
C. Furring to receive plaster shall be 3/4-inch cold-rolled channels wire tied to 1-1/2-inch runner channels.
D. Space furring as indicated for studs.

3.6 WELDING

A. Perform welding in compliance with AWS recommendations. Welders shall be qualified to weld lightgage metal. Provide stitch plates where studs are burned-through.

3.7 BACKING PLATES

A. Backing plates may be omitted if anchorage for wall-hung items is directly into steel studs of 43 mils thick (18-gage) or heavier, or items are furnished with equal mounting devices.
B. Wall-mounted and wall-hung items that require backing plates, without limitation, include the following:

1. Wall supported railings.
2. Grab bars.
3. Toilet compartments and screens.
4. Toilet room accessories.
5. Lockers
6. Wall and base cabinets.
7. Plumbing fixtures.
8. Ladders.
9. Elevator screens.
10. Wall mounted door stops.
11. Bracket-mounted fire extinguishers.
12. Signage.
13. Window shades.
14. Wall mounted furniture.
15. Wall mounted bench in the shower stall.
16. Visual display and tack boards.

C. Unless otherwise indicated, plates not provided with fixtures and equipment shall be long enough to span, as a minimum, across 3 studs and may be one of the following:

1. Fifty-four mils thick (16-gage) minimum steel plate by 4 inches wide.
2. Fifty-four mils thick (16-gage) unpunched wide flange stud by 4 inches wide.

D. Notch studs so that backing plate will be flush with exterior face of stud.
E. Weld plates continuously along all contact surfaces at each stud crossing, or secure with 2 countersunk machine screws at each stud.

END OF SECTION

SECTION 09 22 26 - CEILING & SOFFIT SUSPENSION SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes ceiling and soffit suspension systems for gypsum wallboard assemblies.
B. Related requirements:

1. Division 08 for access panes and their frames.
2. Division 09 for the following:

a. Light gage metal support wall systems.

1.2 DESCRIPTION

1. Metal grillage suspended from floor structure above and designed to support a finished ceiling consisting gypsum boards and lath and plaster.

1.3 REFERENCES

A. Comply with the following:

1. DSA IR-25-2.
2. DSA IR 25-3.

1.4 SUBMITTALS

A. Shop Drawings:

1. Dimensioned Shop Drawings of all ceiling and soffit suspension and framing system at 1:48 scale for plans and 1:24 for details.
2. Show plan layout.
3. Detail attachment to overhead construction.
4. Identify and dimension adjacent materials and supports.

B. Data: Manufacturer’s Product Data, specifications and installation instructions for each type of suspension system, including provisions for fixture and equipment anchorage.

1.5 HANDLING

A. Store materials undercover, off the ground or floor, in a dry, ventilated space.

PART 2 - PRODUCTS

2.1 PERFORMANCE CRITERIA

A. Ceiling suspensions systems shall safely support dead loads (ceiling, work of other trades supported by the ceilings such as annunciators, fire alarm and their accessories) with a maximum deflection of finished ceilings of L/360 for lath/plaster and L/240 for gypsum board.
B. Ceiling suspensions systems shall be designed and constructed to safely resist seismic loads and movements without failure of their components, except minor damage (cracks) to the ceiling finish.

2.2 MATERIALS

A. Metal channels: ASTM C 645, galvanized in compliance with ASTM A 924, G60 coating designation.

1. Framing, furring and stiffening:

Size	Type	Pounds per 1,000 linear feet
3/4-inch with 7/16-inch flanges	Cold-rolled	300
One-inch	Hot-rolled	410
1-1/2-inch with 7/16-inch flanges	Hot-rolled	475
2-inches	Cold-rolled	590

2. Furring channels: Minimum 16 mils thick (26-gage) galvanized steel with knurled faces, hat-shaped or Zee section as required.

B. Hanger wire: Galvanized, soft, mild annealed steel, 0.145-inch diameter (8 BW gage) unless otherwise indicated.
C. Diagonal bracing wire: Galvanized, soft, mild annealed steel, 0.109-inch (12 BW gage) unless otherwise indicated.
D. Tie-wire: 0.0598-inch (16-gage), galvanized, single-strand annealed steel or 0.0478-inch (18-gage), galvanized, double-strand annealed steel.
E. Fasteners and attachments:

1. Screws: ASTM C 1002, 3/8-inch head diameter, cadmium-plated pan head screws; length and gage required by CBC or recommended by recommended by manufacturer for uses and materials involved.
2. Furring channel clips: Manufacturer standard clips for attaching gypsum board furring channels to runner channels.
3. Welding electrodes: ASTM A 233, as recommended by AWS for the conditions of use and the metals to be welded.
4. Hanger and bracing wire fasteners for concrete and metal deck with structural concrete fill: Unless otherwise indicated, provide ITT Phillips Drill Div., Red Head Sleeve Anchor No. TW-1614, 5/16-inch diameter, minimum 2-1/4-inch embedment.

F. Uplift stiffeners: 0.0209-inch (25-gage) channel studs, 1-1/2-inch or compression posts indicated on the Drawings.
G. Grid Suspension System for Gypsum Board Ceilings: ASTM C645, direct-hung system composed of main beams and cross-furring members that interlock.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine conditions and measurements affecting the work of this Section at site.
B. Correct detrimental conditions before proceeding with installation.

3.2 CEILING SUSPENSION FRAMING

A. Space main runners as indicated so that hanger wires do not support more than 12 square feet of ceiling.
B. Hang suspended framing independent of walls, columns, pipes, ducts, and conduits, and their insulation.

C. Do not attach wires to, or bend around, interfering material such as ductwork, pipes and conduits. Provide trapeze, or equivalent devices substantiated by detailed Shop Drawings and calculations, where obstructions interfere with direct suspension.

D. Space runner channels not more than 6 inches from parallel walls or beams.

1. Align runner channels accurately relative to indicated ceiling height and saddle tie with hanger wires.
2. Lap channels 12 inches at splices and tie at each end of lap.

E. For gypsum board ceilings, install 7/8-inch hat channels perpendicular to carrying channels, spaced 16 inches o.c. and within 6 inches of walls.

1. Provide one-inch clearance between furring channels and abutting walls and partitions.
2. Attach to carrying channels with furring channel clips or wire-tie with triple wrap and triple twist.
3. At splices, nest furring channels with a minimum 8 inches overlap and wire-tie each end.

F. Install 4-way, 45-degree diagonal bracing wires in a 12-foot grid maximum.

G. Stiffener:

1. For gypsum board ceiling/soffits, install uplift stiffener for each 144 square feet of ceiling, consisting of a vertical metal stud occurring at the junction of the carrier and furring channel. Wire-tie to carrier or screw to channel and secure to overhead structure.
2. For exterior plaster ceilings/soffits, use either 2 channels back-to-back wire-tied together, or rigid electrical conduit. In both cases, make the stiffener shorter than the hanger wires to accommodate ceiling/soffit movement.

H. At control joints, provide discontinuous lap in main runners occurring over joints.

1. Do not bridge joints with cross furring where joints run perpendicular to furring.
2. Where joints run parallel to furring, provide furring to support each side of joint.

I. Provide recesses and openings where indicated for lighting fixtures, registers, access panels and other items to be installed in ceilings. Provide additional furring channels where required by opening condition.

J. Grid Suspension Systems: Attach perimeter wall track or angle where grid suspension systems meet vertical surfaces. Mechanically join main beam and cross-furring members to each other and butt-cut to fit into wall track.

K. Installation Tolerances: Install suspension systems that are level to within 1/8 inch in 12 feet measured lengthwise on each member that will receive finishes and transversely between parallel members that will receive finishes.

END OF SECTION

SECTION 09 24 00 - LATH AND PORTLAND CEMENT PLASTER

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:

1. Lath and lathing accessories.
2. Portland cement plaster (ST-1, ST-2).

B. Related requirements:

1. Section 09 90 00 for field painting over integral color plaster.

1.2 SUBMITTALS

A. Data: Manufacturer Product Data for fiber reinforcement, additives, metal lath and metal trim members.
B. Shop Drawings: Dimensioned drawings showing the following.

1. Windows and other openings and penetrations in plaster walls.
2. Proposed locations and types of metal lathing accessories (screeds, control joints, etc.) in plaster surfaces.
3. Schedule of proposed control joints and metal trim items keyed to minimum 1/8-inch scale building elevations.

C. Affidavit: Signed by materials supplier stating that sand delivered to jobsite complies with the requirements of this Section.

1.3 QUALITY ASSURANCE

A. Mockups: Assist in building composite mockup for each glass product indicated below in accordance with the following requirements, using materials indicated for the completed Work.

1. See Section 01 48 38 for composite mockup.
2. Build mockup in the location and of the size indicated or, if not indicated, as directed by Architect; finish as specified.
3. The Architect will inspect the mockup for color and texture. Make all corrections required, including the construction of additional mockups if the first one is disapproved, until Architect's approval is secured.
4. Promptly remove rejected mockup(s) from the jobsite and dispose of it (them) off the site.
5. The remainder of the cement plaster installed on the job shall match the approved mockup finish.

1.4 HANDLING

A. Delivery: Deliver materials, except sand and water, to the site in sealed containers or bags clearly identified with manufacturer's name, brand, type and grade.
B. Storage: Store lathing materials on platforms under plastic sheeting. Store plastering materials, including sand, on platforms under plastic sheeting to prevent hydration or contamination.

1.5 JOB CONDITIONS

A. Protect adjacent surfaces from damage as a result of plastering operations.
B. Protect plaster against extreme climatic conditions, including uneven and excessive evaporation from hot dry air.

PART 2 - PRODUCTS

2.1 LATHING MATERIALS

A. Paper weather barrier: 2 layers complying with UBC 94 Standard y14-1 and FS UU-B-790, Type I, Grade D (vapor permeable), Style 2, except with a water resistance of 60 minutes; Fortifiber Corp. "Super Jumbo Tex" or equal.
B. Lath:

1. Comply with DSA's IR 25-4 requirements.
2. Vertical applications – three coat system: Structa-Mega Lath.

a. Weight 1.95 lb/yd² (1.1 kg/sq.m).
b. Finish – Class 1 Galvanized Coating complying with ASTM A641.
c. Alternate lath to 3.4 lb/yd² diamond mesh metal lath specified in ASTM C847.
d. As per IAPMO – UES 2017.

3. Horizontal applications without sheathing: V Truss Wall & Ceiling – Rib Lath.

a. Weight 2.2 lb/yd² (1.2 kg/sq.m).
b. Finish – Class 1 Galvanized Coating complying with ASTM A641.
c. Alternate lath to 3.4 lb/yd² rib metal lath specified in ASTM C847.
d. As per IAPMO – UES 2017.

4. Horizontal applications with sheathing: Structa-Mega Lath.

a. Weight 1.95 lb/yd² (1.1 kg/sq.m).
b. Finish - Class 1 Galvanized Coating complying with ASTM A641.
c. Alternate lath to 3.4 lb/yd² diamond mesh metal lath specified in ASTM C847.
d. As per IAPMO - UES 2017.

C. Tie-wire: Galvanized, annealed steel wire 16-gage for lath-to-supports and 18 gage for accessories-to-lath.
D. Fasteners for Attaching Metal Lath to Substrates: ASTM C1063.

2.2 PLASTERING MATERIALS

A. Pre-mixed, fiber-reinforced brown and scratch coats: "Fiber 47 Fastwall Scratch and Brown" by La Habra/Parex, "BMI 690 Plaster, Standard with Fibers" by Sika/BMI Products, or equal.
B. Pre-mixed finish coat:

1. 534 Sand Fine standard acrylic finish (16/20), custom colors selected by the Architect at specific locations shown on drawings.

C. Fiber glass reinforcing mesh: Heavy-duty glass fiber mesh with a coating compatible with Portland cement plaster, "CrackShield" by LaHabra, or equal by Omega Products International, Cota Industries, Inc., or Dryvit. Provide 48 inches wide rolls.
D. Acrylic admixture: "Acrylic Bonder" by La Habra, or equal by Synergy, C-Cure or Standard Drywall Products, Inc. Use same manufacturer's products for all plaster coats.
E. Reinforcing mesh adhesive: "Stucco Level Coat" by Parex, or equal compatible adhesive with brown and finish coats, as recommended by the mesh manufacturer.
F. Pipe and electrical boxes flashing: Quickflash assemblies by Quickflash Products – no known equal.
G. Sealant: Silicone sealant as specified in Section 07 92 00.
H. Water: Potable and fresh, from domestic source.

2.3 PLASTER MIXES

A. General:

1. Mix each batch for the same amount of time.
2. Mix batches the same size, using the same amount of water, to ensure consistency.
3. Briefly re-mix before using (approximately 2 minutes).
4. Use immediately after mixing. Do not retemper.
5. Add admixture after dry components and the majority of the water have been mixed. Mix no longer than required to provide a uniform mixture. DO NOT OVER-MIX.
6. Do not re-temper mixes over 20 minutes old.

B. Plaster proportions:

1. Base coats: Mix bagged sand/fibers with acrylic admixture (one quart for an 80 lbs bag of premixed scratch and brown coats, unless other proportions are recommended by the manufacturer.
2. Finish coat: Specified premixed finish coat.

C. Mixing: Mix as accurately as possible. Add ingredients to the mixer from calibrated containers. Do not use materials that are caked, lumpy, dirty or contaminated by foreign materials.

2.4 ACCESSORIES

A. General: Galvanized steel, unless otherwise specified.
B. Aluminum reveals molding: Fry-Reglet, sizes and location as shown on the drawings. Aluminum shall be extruded alloy 6063 T5. See RV-1 through RV-4 on Drawings for shapes.

1. Shop prime reveals to receive final paint under Section 09 90 00.

C. Reinforcement

1. Interior Corners: No. 30
2. Exterior Corners: V Truss Corners – Exterior Corner Reinforcements.

a. Bullnose, & One Coat profiles.
b. Finish – Class 1 Galvanized Coating complying with ASTM A641.
c. As per IAPMO – UES 2017.

3. Screeds and Molds: Per Plaster and Drywall Systems Manual, size and profile as indicated on the Drawings and as necessary to suit application.
4. 22-gauge galvanized steel. Hem exposed edges. Furnish in longest possible lengths.
5. Furnish drip screeds with weep holes every 2-inches.

D. Trim:

1. Hot-dip galvanized steel trim: Basis of design is for minimum 26-gage, supplied in longest obtainable sing lengths to minimize joints, by CEMCO or Stockton Products as indicated, or equal by Amico, Brand X Metals Inc., Keene/Metalex Corp., Superior or Unimast Inc.
2. At locations where new trim will contact or continuation of existing trim, shapes shall be identical.

a. Control joint expanded wing control joint: “No. XJ15” by CEMCO.
b. Drip: "DHF" by Stockton.
c. Casing: “J-B with 3-1/2-inch solid flange” by Stockton.
d. Weep screed: “WWW-S” by Stockton.

PART 3 - EXECUTION

3.1 EXAMINATION/PREPARATION

A. Examine conditions and measurements affecting the work of this Section at site.
B. Before plastering begins, insure that adjacent finish work is well protected with waterproof covers securely taped in place and Air & Water Barrier is installed to provide a watertight installation.
C. Before enclosing stud walls, thoroughly clean space of debris.
D. Correct other detrimental conditions before proceeding with installation.

3.2 GENERAL

A. The applicable provisions of ASTM C 1063 and ASTM C 926, govern the work of this Section, except as specified herein.

3.3 PAPER WEATHER BARRIER

A. Install over the gypsum sheathing and framing members with a minimum of fasteners.
B. Lap shingle fashion 2 inches at horizontal joints and 6 inches at vertical joints. No weather barrier is required on soffits. Stagger vertical joints.
C. Continue weather barrier uninterrupted behind control joints.
D. Lap over flange of accessories to prevent direct contact between lath and accessories and to ensure water tightness.
E. Interface weather barrier with flashing materials at windows, doors, and elsewhere, to properly discharge water to the exterior face of the wall. Absence of flashing must be corrected prior to installing weather barrier.
F. Interface weather barrier with flashing materials to properly discharge water to the exterior. Correct absence of flashing prior to installing weather barrier.
G. Seal unused holes from fasteners in weather barrier with silicone sealant specified in Section 07 92 00.

3.4 LATHING

A. Comply with ASTM C 1063, except as specified below, and where Code requirements are more stringent.
B. Apply lath taut, with long dimension at right angle to supports. Work from right to left, extend both horizontal and vertical factory flaps. Make sure that paper weather barrier encloses all surfaces to be plastered.
C. Apply first course at bottom and work up. Make overlaps shingle fashion to assure waterproof joints; lap paper-to-paper and lath-to-lath. Stagger vertical joints. Lap joints one-inch minimum and horizontal joints 1/2-inch minimum. Wire-tie intermediate horizontal joints at 9 inches o.c. maximum.
D. Vertical applications – three coat system: Structa-Mega Lath.

1. Attach lath to metal supports, thru weather barrier and waterproof membrane where applicable, at 6-inches o.c.
2. Installation as per UES 2017 - The lath shall be applied to vertical surfaces having metal supports. For use as an alternative to the 1.95 lb/yd² (0.993 kg./m²) welded wire lath specified in ASTM C933 the maximum support spacing shall be in accordance with Table 3 of ASTM C1063 for 1.95 lb/yd² (1.1 kg./m²) welded wire lath.
3. Fastener type and spacing shall be as specified in ASTM C1063 or IRC Section R703.6.1 as applicable for 1.95 lb/yd² (1.1 kg./m²) welded wire lath, except that the fasteners shall attach to the lath to the framing supports either between the primary and secondary

longitudinal wires, or there shall be a staple over any longitudinal wire. The lath shall be lapped a minimum of one mesh at sides.

4. Ends shall be lapped a minimum of one mesh and shall occur over supports. Refer to current manufacturer's instructions.

E. Horizontal applications without sheathing: V Truss Wall & Ceiling - Rib Lath.

1. Installation as per UES 2017 - The lath shall be applied to to horizontal metal supports. For use as an alternative to the 3/8-inch (9.6 mm), 3.4 lb/yd2 (1.8 kg/m2) rib metal lath, the maximum support spacing shall be in accordance with Table 3 of ASTM C1063 for 3/8-inch (9.6 mm), 3.4 lb/yd2 (1.8 kg/m2) rib metal lath.
2. Fastener type and spacing shall comply with ASTM C1063 or IRC Section R703.6.1 as applicable for rib metal lath, except that the fasteners shall attach the lath to the framing supports at every second rib, either at the furring crimps on the vertical cross wires, at the intersection of the longitudinal wire and cross wire, or at any point along the longitudinal wire that is welded to the furring crimp.
3. The lath shall be lapped a minimum of one mesh at sides. End laps shall be a minimum of one mesh and shall occur over supports. The ends of sheets shall be staggered between courses. Refer to current manufacturer's instructions.

F. Horizontal applications with sheathing: Structa-Mega Lath.

1. Attach lath to metal supports, thru weather barrier and waterproof membrane where applicable, at 6-inches o.c.
2. Installation as per UES 2017 - The lath shall be applied to vertical surfaces having metal supports. For use as an alternative to the 1.95 lb/yd² (0.993 kg./m²) welded wire lath specified in ASTM C933 the maximum support spacing shall be in accordance with Table 3 of ASTM C1063 for 1.95 lb/yd² (1.1 kg./m²) welded wire lath.
3. Fastener type and spacing shall be as specified in ASTM C1063 or IRC Section R703.6.1 as applicable for 1.95 lb/yd² (1.1 kg./m²) welded wire lath, except that the fasteners shall attach to the lath to the framing supports either between the primary and secondary longitudinal wires, or there shall be a staple over any longitudinal wire. The lath shall be lapped a minimum of one mesh at sides.
4. Ends shall be lapped a minimum of one mesh and shall occur over supports. Refer to current manufacturer's instructions.

G. At control joints, cut lath but continue paper backing uninterrupted behind lath.
H. Hold lath 1/4-inch clear of electrical boxes, columns and similar items projecting through the plaster.

3.5 METAL TRIM

A. Wire-tie at no more than 24 inches o.c. to metal lath or studs. Fastening accessories with screws is not acceptable.
B. Use trim in single length wherever length of run does not exceed longest standard stock length available. Miter or cope at corners with hairline joints, and seal with sealant specified in Section 07 92 00.
C. Set accessories level, plumb and true to line with a tolerance of not more than 1/8-inch in 5 feet. Shim as required and align joints with concealed splice or tie plates.

1. Where joints meet, make sure that design is uninterrupted, and that joints between accessories are flush, in-line and hairline tight. Where joints occur between parallel stud or channel supports, install an additional support for the individual flanges.
2. Accessories that butt each other need to be lapped, sealed, soldered or welded, and/or stripped with flexible flashing.

D. Install corner reinforcement at external corners.

E. Provide casing beads at the following locations:

1. Where plaster termination abuts other finishes, isolate casing bead from contact with adjacent finishes with 1/4-inch thick tape sealant specified in Section 07 92 00.
2. Where plaster termination is not covered by another finish or applied trim, provide cased opening by installing casing bead around perimeter of opening as detailed.

F. Control joints:

1. Install vertical control joint first, continuous from top to bottom of wall; install horizontal control joints second and split where it meets the vertical control joint.
2. Install joints plumb, level, evenly spaced where so indicated, and in one piece at the spacing indicated.
3. Follow manufacturer's directions for their installation.
4. Maximum area of plaster without control joints shall not exceed 144 sq. ft. within a ratio of 2 to 1.5 (width vs. height). Horizontal or vertical expansion joints shall be located and coordinated with Structural.

3.6 PLASTERING

A. General: Comply with ASTM 926, except as specified below, and where Code requirements are more stringent.
B. Type: Smooth-finished Portland cement plaster installed on metal lath; one-inch total thickness.
C. Allowable tolerances: Maximum deviation from true planes of finish plaster shall not exceed 1/8-inch in 10 feet when measured with a straightedge placed at any point on the plaster.
D. Protection:

1. Protect adjacent surfaces from damage as a result of plastering operations.
2. Protect plaster against extreme climatic conditions, including uneven and excessive evaporation from hot dry air.

E. Application - general:

1. Provide sufficient manpower and equipment to ensure a continuous operation free of cold joints, scaffold lines, texture variations, and other objectionable conditions.
2. Plaster surfaces in one operation once the application of any coat begins.
3. Stop plaster at control joints, edges or corners only. Plaster in one operation, full height and width between control joints.
4. Plaster flush with metal trim members and make corners square and true.
5. Where permanent grounds are too far apart to serve as guides for rodding, provide supplemental plaster screeds as required. Establish true surfaces with rods before setting the screeds. Keep grounds clean and free of plaster.
6. Finish plaster in a true, plumb or level plane flush with grounds.

F. Plastering:

1. Scratch coat: Apply with sufficient material and pressure to form good full keys, and to cover well.

a. Thickness of scratch coat shall be 1/2-inch when measured from backing to crest of scored plaster.
b. Scratch before plaster hardens to provide sufficient mechanical key for brown coat.
c. Cure acrylic-modified plaster in accordance with its manufacturer's instructions, including holidays and weekends. Do not over-wet by excessive curing, unless hot conditions exist.

2. Brown coat:

    a. Dampen the scratch coat thoroughly and apply the brown coat to a 3/8-inch thickness.
    b. Bring to a true, even surface by rodding and floating, and leave slightly rough to receive the reinforcing mesh.
    c. Begin floating only after hydration of the cement has commenced and sufficient moisture has evaporated, so that surface sheen has disappeared, but before plaster has become too rigid to be moved under the float.
    d. Cure acrylic-modified plaster in accordance with its manufacturer's instructions, including holidays and weekends. Do not over-wet by excessive curing, unless hot conditions exist.

3. Reinforcing mesh adhesive:

    a. After the brown coat is properly cured, apply a layer of reinforcing mesh over the brown coat in a 1/8-inch thick bed of cement adhesive.
    b. Cement adhesive may be a proprietary adhesive as specified, or a job-mixed preparation consisting of 48 lb. of common Portland cement, 10 lb. of plaster grit silica sand, and emulsified acrylic admixture mixed with water.

4. Reinforcing mesh: The mesh is required over the brown coat and shall be completely embedded as follows by 3 different methods as selected by the Contractor and successfully demonstrated on the approved mockup. In all cases, completely embed the mesh into the base coat free of wrinkles and fish mouths, and trowel smooth, ensuring that no mesh is visible. A minimum 2-inch overlap is required at mesh joints.

    a. Method One: After application of brown coat and before final set occurs, fully embed mesh into the brown coat.
    b. Method Two: After brown coat has properly cured, apply the base coat over the brown coat a minimum of 1/6-inch thick and completely embed mesh.
    c. Method Three: The finish surface must be clean and free of loose debris, dirt, dust, efflorescence, grease, oil, curing agents and cleaning solutions. Painted or glossy surfaces may need to be roughened to ensure proper bond of the base coat. The substrate must be structurally sound. Apply the base coat over the existing finish a minimum of 1/6-inch thick and completely embed mesh.
    d. After embedding mesh, the surface shall be left suitable for the application of the finish.

5. Finish coat: Apply finish coat when temperatures are between 65 and 90 degrees F.

    a. Apply the finish coat in a double back operation to a total minimum thickness of 3/16-inch.
    b. Trowel on a tight first finish coat a minimum of 1/16-inch thick and draw it up to an even surface before applying the double back coat.
    c. When the finish coat sets, trowel it to smooth and even surface free of tool marks, blemishes or cracks, matching the approved mockup in all respects, as approved by the Architect.

G. Plaster flush with metal frames and other built-in metal items or accessories which act as plaster grounds. Provide a "V" cut with the edge of the trowel where plaster abuts metal frames.

H. Where permanent grounds are too far apart to serve as guides for rodding, provide supplemental plaster screeds as required.

1. Establish true surfaces with rods before setting the screeds.
2. Keep grounds clean and free of plaster.
3. Finish plaster in a true, plumb or level plane flush with grounds.

I. Entire plaster must be flush with top of accessories; wavy finish (higher at accessories than in the field) is not acceptable.

3.7 FIELD QUALITY CONTROL

A. The curing periods recommended by the manufacturer shall be considered as minimum requirements. Be responsible for determining the most effective procedure for curing and time lapse between application of coats, based on climatic and job conditions.
B. Completed plaster shall match approved mockup, be within the tolerances specified, be uniform in thickness, texture and color when applicable, free of cracks, blisters, pits, checks and other defects.
C. Repair, or remove and replace, as determined by the Architect, lath/plaster that does not meet these requirements, with materials satisfactory to the Architect.

3.8 FINISH

A. Finishes for the cement plaster: Sand Float finish throughout the project.

3.9 REPAIRING/CLEANING/PROTECTING

A. Cut, patch, repair and point-up defective plaster. Repair cracks and indented surfaces by moistening plaster and filling with new material, troweled or tamped flush with adjoining surfaces. Point-up finish plaster surfaces around items built into or penetrating the plaster.
B. Promptly remove plaster spatter and droppings from adjacent surfaces. Repair surfaces which have been stained, marred or otherwise damaged during plastering operations at no additional cost to the Owner.

END OF SECTION

SECTION 09 28 13 – CEMENTITIOUS BACKER BOARDS

PART 1 GENERAL

1.1 SECTION INCLUDES

A. Waterproof board for [interior and exterior] [restroom] [countertops] [shower] [utility room] [steam room] [swimming pool] [mechanical rooms] [wet areas] where [tiling] is being installed.
   1. Install at [floor] [wall] [ceilings]

1.2 RELATED SECTIONS

A. Section 09 21 16.33 - Gypsum Board Area Separation Wall Assemblies

B. Section 09 30 00 – Tiling

C. Section 22 41 23 Residential Showers

D. Section 22 42 23 Commercial Showers

E. Section 22 43 23 Healthcare Showers

F. Section 22 45 13 Emergency Showers

G. Section 22 46 19 Security Showers

1.3 REFERENCES

   3. C1629 - Standard Classification for Abuse-Resistant Non-decorated Interior Gypsum Panel Products and Fiber-Reinforced Cement Panels

C. Tile Council of North America (TCNA):
   1. TCNA Handbook.

1.4 SUBMITTALS

A. Submit under provisions of Section [01 30 00] - Administrative Requirements.

B. Manufacturer's data:
   1. Each product to be installed
   2. Accessory data
   3. Installation requirements
   4. Installer acceptance

1.5 QUALITY ASSURANCE

A. Manufacturer Qualifications: Ten (10) years manufacturing moisture resistant backer boards.

B. Installer Qualifications: Five (5) years tiling, drywall or sheathing installation experience and approved by manufacturer.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Deliver, store and handle product following manufacturer and industry requirements.

B. Store indoors in manufacturer's packaging and protect from damage prior to installation.

C. Inspect panels for damage and notify manufacturer of materials requiring replacement.

1.7 PROJECT CONDITIONS

A. Weatherproof and enclose building to maintain a maintained a minimum of 60 degrees F (15 degrees C) and 60% relative humidity.

1.8 WARRANTY

A. Manufacturers Standard: Provide manufacturer's standard thirty (35) year repair or replacement warranty.

PART 2 PRODUCTS

2.1 MANUFACTURERS

A. Acceptable Manufacturer: FinPan, Inc. Hamilton, OH 45015; (800) 544-7398; www.finpan.com

B. Substitutions: [Not permitted] [In accordance with Section 01 16 00]

2.2 MATERIALS

A. Lightweight Waterproof, Insulated Polystyrene Polymer Cement Coated Board
   1. Product: ProPanel by FinPan, Inc.
   2. Composition: High-density expanded polystyrene, double sided cement reinforced panel
   3. Areas of Use: Interior and exterior
   4. Tolerance: Moisture, mold and steam resistant
   5. ANSI A118.10: Section 4-5 Waterproofness
   6. Thickness: [1/4 inch (6mm)] [1/2 inch (13mm)]
   7. Weight: 6 pounds per panel
   8. Width: 3 feet (914 mm).
   9. Length: 5 feet (1524 mm).
   10. Edges: Square.
   11. Density: 2 lb. Density EPS Core
   12. ASTM D4068: Pass, hydrostatic Water Pressure Test
   13. ASTM G21: <10% , resistance to Fungi
   14. ASTM C-627: Light commercial and Residential

B. General High Density Waterproof, Moisture and Mold Resistant Backer Board
   1. Product: ProTec by FinPan, Inc.
   2. Use: Interior and exterior
   3. Tolerance: Moisture, mold and steam resistant
   4. Base: Reinforced cementitious board
   5. Thickness: [1/4 inch] [1/2 inch] [5/8 inch]

6. Width: 3 feet (914 mm)
7. Length: +5 feet (1524 mm)
8. Edges: Wrapped and tapered
9. Density: 88 lb. per cubic foot
10. ASTM C1325: Type A and B

C. High Impact Resistant, Water, Moisture and Steam Resistant board:
1. Product: Util-A-Crete by FinPan, Inc.
2. Base: Alkaline resistant reinforced cementitious board
3. Use: Interior and exterior
4. Tolerance: Moisture, mold and steam resistant
5. Thickness: [1/4 inch] [1/2 inch] [5/8 inch]
6. Width: 3 feet (914 mm).
7. Length: +5 feet (1524 mm).
8. Edges: Wrapped and Tapered
9. Density: 88 lb. per cubic foot
10. ASTM C1325: Type A and B
11. Compressive Strength: >2,600 psi
12. Flexural Strength: >1,500 psi
13. Fire Rating: 1-hr Rating (minimum 7/16 thickness)
14. Surface Burning: Flame Spread 5
Smoke Level 0

2.3 ACCESSORIES

A. Fasteners
1. Manufacturers recommended corrosion resistant screws.

B. Sealant/Adhesive:
1. Manufacturer recommended SIKA Flex 11 FC one part advanced polyurethane elastomeric sealant/adhesive.

D. Liquid Waterproofing:
1. Manufacturers Water Armor AWB VOC compliant, 100% acrylic air and water barrier for interior and exterior applications.

E. Seaming Tape:
1. Alkali-resistant 2-inch (51 mm) wide fiberglass mesh tape for joint reinforcement.

PART 3 EXECUTION

3.1 EXAMINATION

A. Verify framing is level, plumb and adjacent surfaces meet tolerances for installation.

B. For Floors, verify wall substrates are not to exceed maximum deflection allowed under all live, dead and impact and concentrated loads: "L" equals span length in inches.
1. L inches / 360 (L mm / 9144): For thin bed ceramic tile and brick installations.
2. L inches /480 (L mm / 12192): For thin bed stone installations.

C. Verify floor joists spacing do not exceed 19 inches on center.

D. For Countertops, verify surfaces are framed and within countertop manufacturers tolerances.

E. Do not proceed with installation until unsatisfactory conditions have been corrected.

Installation deems acceptance.

3.2 INSTALLATION

A. Review manufacturers instructions and review approved submittals prior to installation.

B. Apply boards horizontally, with ends occurring over supports. Stagger end joints in adjacent rows on walls, ceilings and floors.

C. Cut boards to fit around openings and projections.

D. Mechanically fasten boards, using manufacturers recommend fastener, 8 inches on center.

E. For Tile Installation:
   1. Install tile using a modified thinset, in accordance with the Tile Council of North America (TCNA) guidelines.
   2. Refer to related Division 09 Sections for installing tile using a modified thinset.

D. Apply manufacturers sealant, adhesive, seaming tape and liquid waterproofing as recommended by manufacturer for a warranted installation.

3.3 CLEANING

A. Repair or replace items damaged prior to installing final finished surfaces.

3.4 SCHEDULE

A. Levels of Finish:
   1. High Impact Resistant board [enter location] [showers] [swimming pool walls] [janitor closets] installed at up to 6’ room height and all exterior locations.
   2. General High Density board [at ceilings locations]
   3. Lightweight Waterproof Insulated board [at perimeter wall locations for improved insulation values]

END OF SECTION

SECTION 09 29 00 - GYPSUM BOARD

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:
   1. Gypsum board.
   2. Fasteners, joint reinforcing and finishing compound.
   3. Skim coating of concrete soffits and ceilings.

B. Related requirements:
   1. Division[**s 05 and**] 09 for metal framing supporting gypsum board (except for framing specified herein).
   2. Division 06 for gypsum sheathing board.
   3. Division 08 for access panels in gypsum board surfaces.

1.2 ADMINISTRATIVE REQUIREMENTS

A. Scheduling and sequencing:
B. Pre-installation meeting:

1.3 SUBMITTALS

A. Data: Manufacturer Product Data for all materials to be used in gypsum board construction.
B. Shop Drawings: Show proposed locations of control joints. Joint locations is subject to the Architect’s approval and shall be relocated, when requested, at no cost to the Owner.
C. Samples: Three 24-inch square Samples with the medium orange peel spatter coat specified for architect’s approval. Approved sample will become Architect’s control sample.

1.4 QUALITY ASSURANCE

A. Requirements of regulatory agencies:
   1. Comply with fire resistance ratings indicated and required by Code.
   2. Provide materials, accessories and application procedures listed by UL or tested in compliance with ASTM E 119 for the type of construction shown.

B. Mockup:
   1. Where directed, construct a mockup of a gypsum board wall and ceiling inside the building. Make mockup full height (minimum 8 feet high by 8 feet wide) with a 4-foot return.
   2. Tape and finish joints, trim and screw heads as specified for Level 5 herein. Refer to Section 09 90 00 for painting of the mockup with a semi-gloss paint.
   3. The Architect will review the mockup under various light conditions for defects and improperly finished joints, trim and screw heads. Provide a portable light for that purpose when so requested.
   4. Make corrections requested by the Architect, or remove and replace mockup when the corrective work is not acceptable to the Architect.
   5. The approved mockup shall remain in the building until its removal is directed, and will be used as a standard for the gypsum board work for the Project.

1.5 HANDLING

A. Procedure: In accordance with GA 801 "Handling and Storage of Gypsum Panel Products."

B. Storage: Do not overload the floors with localized concentration of gypsum board.

1.6 JOB CONDITIONS

A. Comply with the gypsum board manufacturer's recommendations and GA “Application and Finishing of Gypsum Board” for temperature limitations and ventilation before, during and after installation of gypsum board.
B. Protect installed materials from drafts during hot, dry weather.
C. Illuminate work areas during installation to provide the same or greater level of illumination required to properly perform the work and as will occur in the room or space after the building is in operation.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. American Gypsum.
B. CertainTeed Gypsum.
C. Continental Building Products LLC.
D. G-P Gypsum Products.
E. National Gypsum Co./Goldbond Building Products Division.
F. PABCO Gypsum.
G. US Gypsum Co.

2.2 INTERIOR GYPSUM BOARD

A. General:
   1. Provide boards complying with ASTM C 1396 as follows and in maximum lengths available to minimize end butt joints.
   2. Unless otherwise acceptable to the Architect, no end-to-end butt joints are allowed on walls or ceilings less than 12feet long or wide.

B. Gypsum Wallboard: ASTM C1396/C1396M.
   1. Thickness: 5/8-inch.
   2. Long Edges: Tapered.

C. Gypsum Board, Type X: ASTM C1396/C1396M.
   1. Thickness: 5/8 inch.
   2. Long Edges: Tapered.

D. Gypsum Ceiling Board: ASTM C1396/C1396M.
   1. Thickness: 1/2 inch.
   2. Long Edges: Tapered.

E. Abuse-Resistant Gypsum Board: ASTM C1396/C1396M gypsum board, tested according to ASTM C1629/C1629M.
   1. Core: 5/8 inch, Type X.
   2. Surface Abrasion: ASTM C1629/C1629M, meets or exceeds Level 2 requirements.
   3. Indentation: ASTM C1629/C1629M, meets or exceeds Level 2 requirements.
   4. Soft-Body Impact: ASTM C1629/C1629M, meets or exceeds Level 3 requirements.
   5. Hard-Body Impact Resistance: ASTM C1629, meets or exceeds Level 3.
   6. Long Edges: Tapered.
   7. Mold Resistance: ASTM D3273, score of 10 as rated according to ASTM D3274.

F. Glass-Mat Interior Gypsum Board: ASTM C1658/C1658M. With fiberglass mat laminated to both sides. Specifically designed for interior use.
   1. Core: [As indicated] [1/2 inch (12.7 mm), regular type] [1/2 inch (12.7 mm), Type C] [5/8 inch (15.9 mm), Type X] [5/8 inch (15.9 mm), abuse resistant].
   2. Long Edges: Tapered.
   3. Mold Resistance: ASTM D3273, score of 10 as rated according to ASTM D3274.
   4.

G. Under ceramic tile: CertainTeed “GlasRoc,” G-P Gypsum “Dens-Shield Fireguard Tile Backer,” or equal paperless, mold-resist gypsum board complying with ASTM D 3273. Gold Bond “eXP Tile Backer” by National Gypsum complying with ASTM C1178 is also acceptable.

H. In unlined air shafts and plenums: USG Sheetrock “Mold Tough,” National Gypsum “XP Mold & Moisture Resistant Gypsum Board, or equal meeting ASTM D 3273 for mold-resistance.

I. Core board: One-inch thick equivalent to USG “Sheetrock Brand Gypsum Liner Panels” or Gold Bond “Shaftliner”.

J. On ceilings: Contractor may use “Gypsum Ceiling Boards.”
   1. ASTM C 1658/C 1658M. With fiberglass mat laminated to both sides. Specifically designed for interior use.
   2. Thickness: 1/2 inch (12.7 mm).
   3. Long Edges: Tapered.

K. For surfaces to be painted in toilet rooms: CertainTeed “Glasroc,” National Gypsum eXP Tile Backer, or equal embedded glass mat gypsum panels.

L. Elsewhere where gypsum board is exposed and painted: Standard, Type X or C boards, as applicable to the assembly. Provide boards with paper face suitable to receive decorative finish, and long edges tapered to receive joint compound.

M. Within 8 feet of floor, except in closets: Abuse-resistant board equivalent to US Gypsum Co. “Fiberock Abuse-Resistant” or equal.

N. Flexible board for curved surfaces:
   1. USG Sheetrock Brand 1/4-inch “Flexible Gypsum Panels” (basis of design)
   2. National Gypsum Co. “High Flex Wallboard”.
   3. Lafarge “Gypsum Flexboard”.
   4. Celotex Flextek.
   5. CertainTeed “ProRoc ¼-inch thick Flex.”]
   6. Georgia-Pacific 1/4-inch “ToughRock Flexroc.

2.3 EXTERIOR GYPSUM BOARD FOR CEILINGS AND SOFFITS

A. Exterior Gypsum Soffit Board: ASTM C1396/C1396M, with manufacturer's standard edges.
   1. Core: [As indicated] [1/2 inch (12.7 mm), regular type] [5/8 inch (15.9 mm), Type X].

B. Glass-Mat Gypsum Sheathing Board: ASTM C1177/C1177M, with fiberglass mat laminated to both sides and with manufacturer's standard edges.
   1. Core: [As indicated] [1/2 inch (12.7 mm), regular type] [5/8 inch (15.9 mm), Type X].

2.4 TILE BACKING PANELS

A. Tile backing panels may be specified in this Section or in Section 093013 "Ceramic Tiling."
   1. Glass-Mat, Water-Resistant Backing Board: ASTM C1178/C1178M, with manufacturer's standard edges.
   2. Core: [As indicated on Drawings] [1/2 inch (12.7 mm), regular type] [5/8 inch (15.9 mm), Type X].
   3. Mold Resistance: ASTM D3273, score of 10 as rated according to ASTM D3274.

B. Cementitious Backer Units: ANSI A118.9 and ASTM C1288 or ASTM C1325, with manufacturer's standard edges.
   1. Thickness: [1/4 inch (6.4 mm)] [1/2 inch (12.7 mm)] [5/8 inch (15.9 mm)] [As indicated].
   2. Mold Resistance: ASTM D3273, score of 10 as rated according to ASTM D3274.
   3. According to the International Building Code, water-resistant gypsum backing board is not permitted for use as a backing board for tile in tub and shower areas or as wall board or ceiling panels in shower areas.

C. Water-Resistant Gypsum Backing Board: ASTM C1396/C1396M, with manufacturer's standard edges.
   1. Core: [As indicated on Drawings] [1/2 inch (12.7 mm), regular type] [5/8 inch (15.9 mm), Type X] [Type C as required by fire-resistance-rated assembly indicated on Drawings].
   2.

2.5 ACCESSORIES

A. Screws: The following sized in compliance with the gypsum board manufacturer's instructions and Code requirements.
   1. ASTM C 954 for fastening to supporting studs and furring.
   2. ASTM C 1002, Type G for gypsum board-to-gypsum board.

B. Metal trim: Except where extruded aluminum reveals are indicated, provide Galvanized steel of the types specified hereafter complying with ASTM C 1047.
   1. Extruded aluminum trim: Profiles and dimensions indicated, by Fry Reglet Corp., Stockton Products, or Gordon, Inc.
      a. Reveal picture hangers: Fry Reglet model DRMH-50, 3/4-inch wide aluminum heavy duty aluminum picture hanger track with one-inch wide snap-in clip for picture wires.
   2. LC-Bead: J-shaped; exposed long flange to receive joint compound; use at exposed panel edges.
   3. CB corner bead: Square corner bead.
   4. L-Bead: L-shaped; exposed long leg to receive joint compound; use where indicated.
   5. U-Bead: J-shaped; exposed short flange not to receive joint compound; use at exposed panel edges.
   6. Curved-edge cornerbead: With notched or flexible flanges; use at curved openings.
   7. Control joint: USG No. 093, Goldbond Building Products E-Z Strip or Trim-Tex 093V.

C. Resilient channels: RC-1/FC-1 by Dale Industries, or equal, fabricated from steel sheet complying with ASTM A 924 or ASTM A 568.

D. Zee furring members: Manufacturer's standard Z-shaped furring members with slotted or non-slotted web, fabricated from steel sheet complying with ASTM A 924 or ASTM A 568; with a minimum base metal (uncoated) thickness of 0.0179-inch, face flange of 1-1/4-inch, wall-attachment flange of 7/8-inch, and of depth required to fit insulation thickness indicated.

E. Laminating Adhesive: Adhesive or joint compound recommended for directly adhering gypsum panels to continuous substrate

F. Column and beam clips: “Claw” by Claw International, or equal.

G. Joint treatment for paperless assemblies: 2-inch wide fiberglass mesh tape and ToughRock 90 Setting Type joint compound, or equal.

H. Joint tape, compound and laminating adhesive: ASTM C 475, low or very low shrinkage, type recommended by the manufacturer, by Hamilton Materials, basis of design, USG or one of the gypsum board manufacturers named above.
   1. Taping, and fastener and metal trim concealment: Sheetrock Brand Taping Joint Compound, Ready-Mixed by USG.

2. Topping, finish and skim coats: Sheetrock Brand Topping Joint Compound, Ready-Mixed by USG.
3. Joint tape complying with ASTM C475: Sheetrock Joint Tape – Heavy by USG.

I. Gypsum board primer: Flat latex, USG Sheetrock Brand First Coat, Hamilton Prep Coat, La Habra Stucco Zygoplast, or Gold Bond Drywall Primer.
J. Spatter coats (orange peel): USG “Sheetrock Brand Wall and Ceiling Texture,” Beadex FasTex Ready Mix Texture,” or equal by one of the gypsum board manufacturers named above.
K. Skim coat (for concrete soffits/ceilings): Cover Coat or Durabond Setting Type Joint Compound by USG, or equal by one of the gypsum board manufacturers named above.
L. Sealants: As specified in Section 09 80 00.

PART 3 - EXECUTION

3.1 EXAMINATION/PREPARATION

A. Examine conditions affecting the work of this Section at site.
B. Verify framing members’ straightness and alignment.
C. Correct detrimental conditions before proceeding with installation.
D. Before enclosing stud walls and spaces that will be inaccessible after gypsum board is installed, thoroughly clean [**floor tracks and**]spaces of debris and dust.

3.2 RESILIENT FURRING CHANNELS

A. General:
1. Splice channels directly over studs and attach through flange to studs.
2. Space channels as indicated on the Drawings.
3. Drive screws through channel attachment flange and studs at each intersection.

B. Walls: Install channels, with mounting flange down, at right angle to studs, starting within 2 inches of floor and 6 inches from ceiling.
C. Ceilings:
1. Install channels perpendicular to the joists and space at 16 inches o.c. maximum, unless otherwise indicated.
2. Start perimeter channels no more than 2 inches from the intersection of ceiling-to-wall.

3.3 GYPSUM BOARD INSTALLATION - GENERAL

A. Comply with the applicable provisions of the references standards and the following.
B. Use only full size boards above door and window openings; joints at corners of heads are not acceptable.
C. Minimize butt joints and avoid butt joints centered on walls, over protruding studs, and above doors and windows. Avoid abutting end joints in the central area of each ceiling.
D. Install all panels, including those in non-rated applications, with joints in moderate contact.
E. Locate both edge or end joints over supports, except in ceiling applications where intermediate supports or gypsum board back blocking is provided behind end joints.
F. Position adjoining panels so that tapered edges abut tapered edges, and field-cut edges abut field-cut edges and ends.
1. Do not place tapered against cut edges or ends.
2. Where square (non-tapered) joints abut on ceilings, use Trim-Tex “Buttboard” behind the joint in accordance with Trim-Tex recommendations.

G. Stagger vertical joints over different studs on opposite sides of partitions.

H. Attach gypsum panels to steel studs so that the leading edge or end of each panel is attached to open (unsupported) edges of stud flanges first.
I. Attach gypsum panels to framing provided at openings and cutouts.
J. Provide perimeter relief where board abuts structural decks, ceilings, vertical structural elements, or glazed assembly.
K. Install horizontal boards first. Butt joints between boards loosely. Do not force boards into place. Place tapered or wrapped edges next to one another.
L. Attach boards to all studs and furring members with power-driven screws securely engaging supporting member, and with fastener heads uniformly depressed not over 1/32-inch below surface of board (except for first layer of multiple layer assembly) without breaking face paper.
M. After boards have been installed over screws and backing plates, tap boards with a rubber mallet to depress backside of board over heads to eliminate unacceptable bulges.

3.4 SINGLE LAYER APPLICATION

A. Horizontal surfaces:
   1. Install board with long dimension at right angle to supports, with end joints located over supports.
   2. Use maximum practical length boards to minimize end joints. Stagger end joints in alternate boards.

B. Vertical surfaces: [**Except as specified for curved surfaces below, and**]Unless otherwise acceptable to the Architect, install board vertically. Use floor-to-ceiling length boards (unless height exceeds 12-foot) with vertical joints located over supports.
   1. At [**stairwells and other**] high walls, install panels horizontally, unless otherwise indicated or required by fire-resistance-rated assembly.
   2. Offset joints at least one stud on opposite sides of partition/walls.
   3. Extend gypsum board continuously from finish floor to underside of structure above, except where indicated otherwise on the Drawings.

3.5 MULTIPLE LAYER APPLICATION

A. On vertical surfaces:
   1. Install board vertically using floor-to-ceiling length boards (unless height exceeds 12 feet) with vertical joints located over studs.
   2. Offset joints at least one stud spacing on opposite sides of partitions and between subsequent layers of gypsum board.
   3. Fasten all layers of gypsum board to metal framing with screws.

B. Where gypsum board will be applied to curved surfaces, use multiple layers of 1/4-inch thick panels specified above.
   1. Select board length and cut board to allow one unbroken board to cover curved surface and 12-inch minimum tangents at each end.
   2. Install boards with long edge at right angle to framing on the convex side of the assembly and attach to support from one end to other; on the concave side start attaching the boards from the center to the edges.
   3. Make cutouts for penetrations after the boards are in place, not before installation.
   4. Completed installation shall present smooth, unbroken curves. Segmented surfaces are not acceptable.

3.6 ALLOWABLE TOLERANCES

A. Do not exceed 3/16-inch in 8 feet, and 1/8-inch in 4 feet from plumb, level and flat (all directions) in gypsum board surfaces.
B. Do not exceed 1/8-inch from geometry indicated for vaults and other curved surfaces.

C. Do not exceed 1/16-inch offset at joints between boards.
D. Shim boards as necessary to comply with these tolerances.

3.7 SEALANTS

A. The following is required at perimeter and penetrations of all gypsum boards in pressurized stair shafts and air plenums. These areas must be air-tight at the design pressures indicated.
   1. Clean space to be calked of debris, dust and powdered materials which would prevent the sealant from adhering properly.
   2. Seal openings between gypsum board and the perimeter of items penetrating gypsum board, such as electrical boxes, continuously using sealant specified.
   3. Seal openings between the gypsum board, and floors and ceilings along gypsum board assemblies continuously, and along those intersecting assemblies for a minimum distance of 3-foot on each side. When multiple layers occur, seal the perimeter of each layer continuously.

3.8 FINISHING

A. Finish gypsum board surfaces with exposed joints, corners and edges reinforced or trimmed in compliance with GA-216, the following and to match approved mockup where applicable.
B. General:
   1. Fill joints, fastener heads, trim accessory flanges and surface defects with joint compound in compliance with the gypsum board manufacturer's recommendations to obtain a smooth, flush surface.
   2. All joints, fastener heads and trim flanges in surfaces which will remain exposed to view in the building, shall be invisible after application of joint tape and compound.
   3. Fill and finish gypsum board-clad columns with a straightedge from corner bead to corner bead to eliminate concave surfaces between beads.

C. Trim: Install in single unjointed length, unless length exceeds manufacturer's standard. Attach to gypsum board in compliance with their manufacturer's instructions.
   1. Install Type CB trim at external corners.
   2. Install Type LC trim where gypsum board edges are exposed in the finish work.
   3. Install Type CB or LC trim where gypsum board abuts a different material, and the edges are not covered by a finish material.
   4. Install control joints at no more than 30 feet o.c. in any direction (full height door frames count as control joints). Joint locations are subject to the Architect's approval. When "through wall" control joints are required in fire-rated assemblies, comply with WH International, Inc. Report WHI 651-0318.1.

D. Joints: Reinforce joints between gypsum boards, and interior corners and angles with tape set in joint compound.
   1. Apply skim coat over tape in one application.
   2. Where space greater than 1/16-inch occurs between abutting gypsum boards (except at control joints and for concealed layers of multiple layer assemblies), pre-fill joints with joint compound and allow to dry before applying joint tape.
   3. All joints and interior angles shall have tape embedded in joint compound and 2 separate coats of joint compound applied over all flat joints and one separate coat of joint compound applied over interior angles.

E. Joint compound:
   1. Lap each coat not less than 4 inches over the preceding coat (2 inches on each edge). Width of joint compound on tapered board edges shall be not less than 12 inches; width of joint compound on square board edges not less than 18-inch.
   2. Cover fastener heads and accessories with 3 separate coats of joint compound.

3. Allow at least 24 hours drying time between applications of joint compound.
4. Finish joint compound so that little or no sanding is required. When sanding, use sandpaper or mesh cloth with grit as fine as possible; do not scuff face paper. Remove sanding dust before painting or applying other finishes.

F. Finishing levels:
1. Level 0: Use for first layer of multiple layer construction and gypsum board ledge guards in elevator shaft.
2. Level 1: Use in plenum areas above ceilings, interior faces of shafts, in attics, and in areas where the assembly will generally be concealed.
3. Level 2: Use where gypsum tile backer board is used as a substrate for tile, in storage and similar areas where surface appearance is not of primary concern.
4. Level 3: Use in areas to receive heavy or medium texture (spray or hand-applied) finishes before final painting, or where heavy grade wall coverings are to be applied as the final decoration.
5. Level 4: Use for all other areas to be painted and where light texture or backed lightweight wall covering will be applied.
6. Light orange peel wall and ceiling coat: Spray-apply in long, even strokes as uniformly as possible avoiding lap marks, and to achieve spatter sizes and density to match approved mockup.
7. Level 5 – skim coat (spray and roller-applied finish is not acceptable):

    a. Use for all other areas to be painted. Finish, including joints and fasteners as follows to match approved mockup.
    b. Apply a thin skim coat of joint compound to the entire surface to result in a smooth surface free of tool marks and ridges. Use setting-type, sandable topping compound or drying-type; do not use all-purpose compound consisting of high-build interior coating product designed for application by airless sprayer.

G. Skim coat on concrete surfaces: Apply over clean, dry concrete surfaces to a smooth, uniform finish free of trowel marks and other defects. Match approved mockup.
H. Leave gypsum board surfaces smooth, undamaged and ready to receive scheduled finishes.

END OF SECTION

SECTION 09 30 00 - TILING

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:

1. Stone floor tile. (STF-1).
2. Stone wall base. (STB-1).
3. Exterior porcelain wall tile. (TL-1a, 1b, and 1c)
4. Interior porcelain floor tile and base. (TL-2, TLB-2 and TLB-2A)
5. Interior ceramic wall tile. (TL-3)
6. Interior Accent wall porcelain mosaic tile. (TL-4)
7. Interior porcelain mosaic tile. (TL-5)
8. Interior porcelain wall mosaic tile. (TL-6)
9. Waterproofing membrane.
10. Setting materials, grouts and sealants.
11. Floor sealer.

B. Related requirements:

1. Divisions 07 and 09 for sealants other than specified herein.
2. Division 09 for lath and scratch coat on walls.

1.2 ADMINISTRATIVE REQUIREMENTS

A. Scheduling and sequencing:
B. Pre-installation meeting:

1. Prior to start of installation arrange a pre-installation meeting between the waterproofing manufacturer authorized representative, the Contractor, and the tile installer to review Project conditions, the Drawings, Specifications and the waterproofing manufacturer data. The Architect may attend.
2. If more than one trade will be responsible for the successful performance of the work of this Section, these trades shall attend the meeting.
3. Identify areas of concern and remedial measures.
4. Record meeting minutes and distribute copy to all concerned, including the Architect, within 48 hours after the meeting.

C. Manufacturer’s inspections:

1. Request the manufacturer's presence before start of this work to verify substrate acceptability, and as required thereafter to review installation procedures and completed work, and to issue warranty specified.
2. Unsatisfactory conditions disclosed by the manufacturer visits to the site shall be promptly and satisfactorily repaired and the areas re-inspected by the manufacturer before work starts or resumes in affected areas.

1.3 SUBMITTALS

A. Data: Manufacturer Product Data for waterproofing membrane, pre-mixed mortars and grouts, with certification that they meet ANSI standards specified.

B. Shop Drawings:

1. Show locations of each type of tile and tile pattern; widths, details, and locations of expansion, contraction, control, and isolation joints in tile substrates and finished tile surfaces.
2. If joints occur in substrate to be tiled, show their locations on the Shop Drawings.

C. Samples:

1. Twenty-four-inch square Samples of each type and color of tile glued to hardboard backing; grout joints, if less than 24-inch tiles.
2. Each type, color and shape of trim and base.
3. Six-inch long transition threshold between stone and sports flooring, finished as specified.

D. Test Results: Submit test results in accordance with the test methods specified performed by a certified testing laboratory for each material specified.

1.4 QUALITY ASSURANCE

A. Uniformity:

1. Obtain each color, grade, finish, type, composition, and variety of tile from a single source with resources to provide products of consistent quality in appearance and physical properties without delaying progress of the Work.
2. Obtain materials of a uniform quality from one manufacturer for each cementitious and admixture component and from one source or producer for each aggregate.

B. Installer qualifications: Experienced firm who has successfully completed tile installations similar in material, design, and extent to that indicated for Project for at least 5 years.

C. Mockups: Before starting tile installation, erect one mockup for each form of construction and finish required. Build mockups complying with the following, using materials indicated for final Work.

1. Make each mockup a minimum of 6-foot square. Locate on site where directed by the Architect.
2. Mockups many remain part of the building where approved by the Architect.

D. Master grade certificate: Submit, bearing the Certification Mark of the Tile Council of North America, Inc. (TCNA), signed by the tile manufacturer, stating the type and quality of each type of tile delivered to the job site.

1.5 HANDLING

A. Procedure: In accordance with ANSI A137.1 for labeling sealed tile packages.
B. Delivery: Deliver tile cartons with grade seals unbroken.

1.6 JOB CONDITIONS

A. Set and grout this work when ambient temperature is at least 50-degree F or higher. Do not install materials on surfaces (or when ambient temperature) is less than 40-degree F.
B. Illuminate work areas during installation to provide the same or greater level of illumination required to properly perform this work and as will occur in the room or space after the building is in operation.

1.7 MANUFACTURER SPECIAL WARRANTY

A. Warrant tile installation, including grout and waterproofing (system warranty), against faulty materials and workmanship for 15 years after Substantial Completion.
B. Make repairs required during the warranty period at no cost to the Owner.

1.8 MAINTENANCE

A. Furnish one full box of each type, color and size of tile properly packaged and identified, by room or area.

PART 2 - PRODUCTS

2.1 PREFORMANCE REQUIRMENTS

A. Dynamic Coefficient of Friction: For tile installed on walkway surfaces, provide products with the following values as determined by testing identical products per ANSI B101.3:

1. Level Surfaces: Minimum 0.42 (Wet).
2. Step Treads: Minimum 0.42 (Wet).
3. Ramp Surfaces: Minimum 0.60 (Wet).

B. Static Coefficient of Friction: For tile installed on walkway surfaces, provide products with the following values as determined by testing identical products per ANSI B101.1:

1. Level Surfaces: Minimum 0.60 (Wet).
2. Step Treads: Minimum 0.60 (Wet).
3. Ramp Surfaces: Minimum 0.80 (Wet).

2.2 MATERIALS – GENERAL

A. All components of the waterproofing and tile setting assemblies must be made or distributed by the same manufacturer to obtain warranty specified.

2.3 TILE

A. Tile: Make, size, and colors indicated on Drawings.

1. Trim: Provide matching base, caps, stops, returns, trimmers required to complete the installation.

B. Factory-blending: For tile exhibiting color variations within the ranges selected during sample submittals, factory-blend tiles and package accordingly so that tiles taken from one package show the same color range as those taken from other packages, and match approved Samples.

2.4 STONE THRESHOLDS

A. White veined marble, MIA Group A complying with ASTM C 503 for exterior use and abrasion, uniform in color, with a minimum H_a of 12 when tested in accordance with ASTM C 1353.
B. Fabricate with a uniform honed (400 to 1,200 grit abrasive) finish on exposed surfaces for a tight fit against door jambs and a smooth transition between tile and adjoining floor surface.
C. Bevel edges at 1:2 slope, aligning lower edge of bevel with adjacent floor finish. Limit height of bevel to 1/2-inch or less.

2.5 SETTING MATERIALS AND GROUT

A. Portland cement: ASTM C 150, Type 1.
B. Sand: ASTM C 144.
C. Water: Potable, fresh.
D. Setting bed reinforcing mesh: 2-inch by 2-inch by 16/16, 3-inch by 3-inch by 13/13 or 1-1/2-inch by 2-inch by 16/13 wire complying with ASTM A 82 or A 185.
E. Thin set, latex modified dry-set mortar: The following or equal with physical properties equaling or exceeding those of the products specified. Do not apply more than 1/4 inch thick and do not use for tiles larger than 15 inches complying with ANSI A118.15, A118.4, A118.11 and ISO 13007 C2EP1.

1. Thin set:

a. MerKrete “705” and “735,” Mapei “Ultraflex 1 and 3,” or MerKrete “750 RS” or “Granirapid” as selected by the installer for the conditions of use.
b. MerKrete “Integra” or Mapei “Adesilex” white for glass tile, glass mosaic and marble mosaic.
c. MerKrete “200/211” or Mapei “Kerabond/Keralastic” for water features.

2. Medium bed: MerKrete “720 Marble Pro” or Mapei “Granirapid” for tiles over 15 inches in any dimension, and as specified for other locations.
3. Custom (basis of design): FlexBond.
4. Mapei: Ultra Flex III.
5. Laticrete: 254 Platinum.

F. Medium bed: latex modified dry-set mortar: The following or equal with physical properties equaling or exceeding those of the products specified. For setting bed from 1/4- to 3/4-inch thick and for tiles larger than 15 inches in any dimension complying with ANSI A118.15, A118.4, A118.11 and ISO 13007 C2EP1.

1. Custom (basis of design): ProLite Tile & Stone Mortar.
2. Mapei: Ultraflex LFT.
3. Laticrete: 220 Marble & Granite w/3701 Mortar Ad-Mix.

G. Portland cement grout: One of the following, or equal with physical properties equaling or exceeding those of the products specified, sanded or unsanded as applicable to the joint width and recommended by the grout manufacturer.

1. Custom (basis of design): Sure Color Grout.
2. Mapei: Ultracolor Plus.
3. Laticrete: Perma Color.

2.6 MISCELLANEOUS MATERIALS

A. Crack-Isolation Membrane: ANSI A118.12.
B. Transition strip between stone flooring and sports flooring: Schiene by Schluter or equal.

1. Material: Brushed stainless steel.

C. Wall outside corners: Schiene by Schluter or equal.

1. Material: Brushed stainless steel.

D. Acoustical underlayment: “Sound Shield 7000” by Merkrete/Parex USA, Inc., or equal with the following characteristics.

1.	Weight	30.15 oz./yard^2.
2.	Thickness	0.10-inch.
3.	Density	25.5 lbs./cubic foot.
4.	Compression resistance at 25 percent	145.4 psi.
5.	Compression resistance at 50 percent	exceeds machine limit.
6.	Breaking strength	Length 78.4 lbs.; width 63.3 lbs.
7.	Compression set at 25 percent	20.7 percent.
8.	R value at 0.10-inch thickness	4.2 inch.
9.	Custom (basis of design): Shower Slope System.	

E. Patching mortar: Quick-setting, polymer-modified, fiber-reinforced, cementitious rendering, patching, ramping and leveling mortar; can be applied from 1/8 inch to 1-1/4 inches (3 mm to 3.2 cm).

1. Product: MAPEI, Planitop 330 Fast, or equal.

F. Sealant and backup for control joints in tiles: Refer to Section 07 92 00.
G. Cleavage membrane: 10-mil thick polyethylene complying with ASTM D 2103, Type 13300.
H. Waterproof membrane: One of the following that complies with ANSI A118.10 and ANSI A118.12. Include reinforcement and accessories recommended by manufacturer at exterior applications.

1. Hydro-Guard SP-1 by MerKrete.
2. Mapei: Mapelastic 315.
3. Hydro Ban by Laticrete.
4. Redgard by Custom Building Products.
5. Custom 9240 by Custom Building Products.
6. Or equal.

I. Reinforcing fabric: Custom (basis of design): Antifracture Membrane Mesh.
J. Floor Sealer: Manufacturer's standard product for sealing grout joints and that does not change color or appearance of grout.

PART 3 - EXECUTION

3.1 EXAMINATION/PREPARATION

A. Examine conditions and measurements affecting the work of this Section at site.
B. Remove glaze and contaminants, including remaining adhesive and setting bed, from floors by scraping, wire-brushing or with a self-contained bead blasting apparatus.
C. Verify that surfaces to be tiled are firm, dry, clean, and free from oil or waxy films and curing compounds, and within the following tolerances:

1. Thin-set tiles:

a. 1/8-inch in 10 feet for floors and 1/8-inch in 8 feet for walls for tiles longer than 15 inches.
b. 1/4 inch for smaller tiles.

2. Mortar-set tiles: 1/4-inch in 10 feet for floors and 1/4-inch in 8 feet for walls.
3. Maximum deflection of walls to be tiled: L/360 under loads prescribed by Code. Coordinate this requirement with other design criteria specified in Section 09 22 16.

4. Maximum deflection of floors to be tiled: L/360 when measured under a 300 lb. concentrated load (ASTM C 627).

D. Examine that installation of grounds, anchors, recessed frames, electrical and mechanical work, and similar items located in or behind tile have been completed before installing tile.
E. At the Contractor's option, "Grout Easy" by Aldon Corp., or equal water-based, water soluble product may be used prior to installing porous and quarry tile.
F. Correct detrimental conditions before proceeding with installation.

3.2 WATERPROOFING MEMBRANE

A. General: Application: Comply with the waterproofing membrane manufacturer's instructions, ANSI A 108.13, and the following.
B. Surface preparation:

1. Mask adjacent areas not to be waterproofed.
2. Prepare surfaces to be waterproofed so that they are clean, smooth and free of contamination.
3. Repair defects such as honeycombs, rock pockets, cracks, gaps, penetrations and protrusions. Remove glaze from concrete as recommended by the waterproofing manufacturer.
4. Prime/seal concrete and vertical substrates.

C. Apply waterproofing in 2 coats when substrate temperature is above 40-degrees F.
D. Install reinforcing fabric, where recommended by the waterproofing manufacturer, in waterproofing liquid at drains, coves, corners, over cracks and gaps in substrate.
E. Avoid interruptions during installation of membrane; if interrupted, clean interface surfaces to assure adhesion.
F. Completed membrane shall be uniform in thickness and texture, monolithic and waterproof.
G. Keep traffic on completed membrane to a minimum. Cover traffic path until tile is installed.
H. Set tile no sooner than 24 but no more than 72 hours after membrane installation.

3.3 GENERAL TILE INSTALLATION REQUIREMENTS

A. General: Install proprietary materials in compliance with their manufacturer's instructions. Press or beat the tiles to obtain 90 percent coverage of mortar on back of tile, except for the following which requires 100 percent coverage:

1. Tiles in "wet" areas.
2. Edges and corners of all tiles regardless of location.
3. Back butter tile if necessary.

B. Environmental conditions: Maintain minimum temperature limits and installation practices recommended by waterproofing membrane, mortar and grout materials manufacturers in areas where this work is performed.
C. Terminations: Terminate work neatly at obstructions, edges and corners without disrupting pattern or joint alignment. Saw-cut and drill tiles to obtain tight fitting, clean, sharp, undamaged cut edges.

1. Rub cuts smooth with fine abrasive stone.
2. Cut and drill so that electrical outlets, plumbing fixtures, pipes, fixtures and fittings standard plates, escutcheon and collars will overlap the tile.
3. Do not cut or split tile at penetrations.

D. Visual requirements:

1. Install tile in patterns indicated with uniform joints and perimeter units not less than 1/2 unit wide. Adjust to minimize cutting.
2. Accurately set tile with flush well-fitted joints, finished in true planes, plumb, square, sloped or level as required.
3. Form corners, returns, and exposed tile edges with approved trimmers.
4. Where tiles selected by the Architect are installed in the same plane, but are of a different thickness, it is the Contractor responsibility to adjust the setting bed or mortar thickness so that all tiles are flush.
5. Under no circumstances will glazed tile installations be accepted if any part of unglazed tile body remains exposed after tile is installed.
6. Provide matching tile trimmers of all types required to prevent such condition.

E. Tolerances: Maximum deviation from true lines and levels shall not exceed 1/8-inch in 10 feet for floors, and 1/8-inch in 8-foot for walls.

F. Sealant: Calk penetrations in tile with sealant and backing rod specified in Section 07 92 00. Provide movement joints where indicated or as recommended by TCNA Method EJ171-13.

G. Tile blending:

1. For tile exhibiting color variations within the ranges selected during sample submittals, verify that tiles have been factory-blended and packaged accordingly so that tiles taken from one package show the same color range as those taken from other packages, and match approved Samples.
2. If not factory-blended, either return to manufacturer or blend tiles at Project site before installing.

H. Floor Sealer: Apply floor sealer to grout joints in tile and stone floors according to floor-sealer manufacturer's written instructions. As soon as floor sealer has penetrated grout joints, remove excess sealer and sealer from tile faces by wiping with soft cloth.

3.4 TILE INSTALLATION METHODS

A. Exterior wall (vertical) installation: Apply a mortar bed over CMU, a crack-isolation membrane with a waterproof membrane under ceramic tile as described in TCNA W211.

B. Exterior soffit installation: Provide a cementitious backer board with bond coat and ceramic tile as described in TCNA C315.

C. Wall tile: Install over gypsum backer board over waterproofing membrane in compliance with ANSI A108.5 and TCNA installation method W245, modified to be used over waterproofing membrane.

D. Floor tile: Install over waterproof membrane (installed on a dry setting bed) and TCNA installation method F121. Lay setting bed on cleavage membrane on suspended slabs.

E. Floor tile: Install over waterproof membrane in compliance with ANSI A108.5 and TCNA installation method F122.

F. Sound tile after setting. Replace or reset hollow sounding units.

G. Install marble thresholds as specified for tiles above and in compliance with TCNA installation method TR611.

3.5 GROUTING/CURING

A. Grouting: Comply with ANSI A108.10. Finish joints of square edge tiles flush with tile surfaces; finish joints of cushion edge tiles to depth of cushion. Finish grout free of voids and pits.

1. Fill epoxy-filled joints flush with tile edges. The epoxy will cure to a slight depression.

3.6 SEALANTS

A. Comply with sealant manufacturer's instructions and ASTM C 1193.
B. Install backing rod and fill joints completely with sealant tooled below surface of tile. Do not disturb until fully cured.

3.7 FIELD QUALITY CONTROL

A. Plug drains and dam door and other openings after waterproofing is installed and flood the floor with approximately 2-inch of water.

1. Let the water stand undisturbed for 48 hours and check for leaks.
2. Repair discovered leaks and retest; repeat as necessary to stop leaks before proceeding with tile installation

3.8 CLEANING/PROTECTING

A. Cleaning:

1. Clean tile and repair faulty grouting. Sponge and clean surfaces with clean water and soft brushes.
2. Polish glazed tile after cleaning with clean, dry cloths.

B. Protect completed installations until acceptance by the Owner.
C. Protect floor tiles with reinforced Kraft paper or other heavy covering securely taped in place during the construction period to prevent damage and stains. Remove protection when no longer needed.
D. When recommended by tile manufacturer, apply a coat of neutral protective cleaner to completed tilework.
E. Prohibit foot and wheel traffic from tiled floors for at least 7 days after grouting is completed.
F. Before final inspection, remove protective coverings and rinse neutral cleaner from tile surfaces.
G. Leave finished installation clean and free of cracked, chipped, broken, unbonded, or otherwise defective tiles.

END OF SECTION

SECTION 09 51 13 - ACOUSTICAL PANEL CEILINGS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:

1. Acoustical ceiling panels. (ACT-1, ACT-1A, ACT-2, ACT-2A, ACT-3).
2. Metal suspension system.

B. Related requirements:

1. Other Section of Division 09 for metal suspension systems for gypsum board ceilings.
2. Divisions 21 and 26 for mechanical and electrical work in acoustical ceilings.

1.2 SUBMITTALS

A. Shop drawings:

1. Show ceiling layouts, seismic bracing (lateral and vertical), method of suspension where interference such as ducts and pipes exists, with light fixtures, grilles, sprinkler heads, speakers accurately located, and typical details of constructions and installation.
2. Where pipes, ducts and conduits prevent direct suspension, and trapezes have to be used, justify the suspension system with structural calculations.
3. Reproduction of the Contract Drawings as Shop Drawings is not acceptable; take necessary measurements at the job site.

B. Data:

1. Manufacturer product specifications and installation instructions for ceiling materials, and suspension system.
2. Include satisfactory test data certifying that the acoustical units comply with Code requirements.
3. Evidence that acoustical units comply with Code for flammability, combustibility and toxicity.

C. Samples:

1. Full size acoustical units showing the full range of color and texture to be expected in the completed work. Where actual size exceeds 2 ft by 2 ft, provide 2 ft by 2 ft samples.
2. Twelve-inch long Samples of each linear component of the suspension systems and Samples of connectors.

D. Coordination Drawings: Reflected ceiling plans, drawn to scale, on which the following items are shown and coordinated with each other, using input from installers of the items involved:

1. Ceiling suspension-system members.
2. Structural members to which suspension systems will be attached.
3. Method of attaching hangers to building structure.
4. Carrying channels or other supplemental support for hanger-wire attachment where conditions do not permit installation of hanger wires at required spacing.
5. Size and location of initial access modules for acoustical panels.

6. Items penetrating finished ceiling and ceiling-mounted items including the following:

    a. Lighting fixtures.
    b. Diffusers.
    c. Grilles.
    d. Speakers.
    e. Sprinklers.
    f. Access panels.
    g. Perimeter moldings.

7. Show operation of hinged and sliding components covered by or adjacent to acoustical panels.
8. Minimum Drawing Scale: 1/8 inch = 1 foot (1:96).

E. Warranty: Proposed warranty form.
F. Closeout: Manufacturer recommendations for cleaning and refinishing ceiling materials, including precautions against materials and methods that may be detrimental to finishes and acoustical performances.
G. Seismic restraint: Include calculations for seismic restraints including analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.3 QUALITY ASSURANCE

A. Design criteria: Suspension system shall have a “Heavy Duty” classification when tested in compliance with ASTM C 635.
B. Sample panel:

1. Install a 10-foot square sample panel of the acoustical ceiling for the Architect's approval before proceeding with this work.
2. Locate where directed by the Architect in the building.
3. Do not proceed with remainder of this work until Architect’s approval is obtained.
4. The finished work shall match approved sample panel and, if properly identified for future reference, may remain a part of the finished work, when approved by the Architect.

1.4 HANDLING

A. Delivery: Deliver UL labeled cartons of acoustical units bearing label classification of acoustical and flammability characteristics.
B. Storage:

1. Store acoustical panel cartons open at each end to stabilize moisture content and temperature, in fully enclosed space(s), in well-ventilated area protected from weather, moisture, soiling, extreme temperatures and humidity.
2. Before installing acoustical tiles, permit them to reach room temperature and a stabilized moisture content.

C. Handling: To avoid chipping edges or otherwise staining or damaging units.

1.5 JOB CONDITIONS

A. Do not install acoustical ceilings until the space to receive them is enclosed and weathertight, until work above ceilings is completed, and until ambient conditions of temperature and humidity will be continuously maintained at values near those indicated for final occupancy.

B. Illuminate work areas during installation to provide the same or greater level of illumination required to properly perform the work and as will occur in the room or space after the building is in operation.
C. Do not use ceiling panels in extreme or continuous high humidity, or areas exposed directly to weather or water.
D. Allow time for dimensional changes in ceiling panels stored at temperature/humidity conditions well outside of those recommended for service; with increases in temperature/humidity, these products expand (up to 1/64-inch/foot at 85-degree F and 90 percent RH) and may not fit into a fixed grid.

1.6 SPECIAL WARRANTY

A. Submit a warranty, on manufacturer’s letterhead, stating that manufacturer agrees to repair or replace acoustical panels that fail within the warranty period. Failures include, but are not limited to:

1. Acoustical panels: Sagging and warping.
2. Grid system: Rusting and manufacturer's defects.

B. Warranty period:

1. Acoustical panels: 10 years from date of Substantial Completion.
2. Grid: 10 years from date of Substantial Completion.

C. The warranty shall not deprive the Owner of other rights the Owner may have under other provisions of the Contract Documents and will be in addition to and run concurrent with other warranties made by the Contractor under the requirements of the Contract Documents.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS:

A. Design ceiling components to ensure that light fixtures and installed accessories will not induce concentrated loads.
B. Where components may induce rotation of ceiling system components, provide stabilizing reinforcement.
C. Design ceiling components to limit deflection of completed ceilings to L/360.

2.2 ACOUSTICAL UNITS

A. Manufacturers:

1. Basis of Design: Armstrong World Industries.

a. See Drawings for list of ACT panels.

2. Or equal. Other manufacturer’s products must meet similar specified quality and be approved by Architect.

2.3 SUSPENSION SYSTEM

A. Grillage:

1. Configurations as indicated, by Armstrong World Industries, USG Corp., Chicago Metallic Corp., or equal. See Drawings for type of systems required.
2. Components die-cut and interlocking.
3. Cope cross runners to lay flush with main runners, except at edge moldings.

B. Hanger wires: Galvanized carbon steel, ASTM A 641 soft-temper, prestretched, yield-stress load of at least 3 times design load, 12-gage minimum.

C. Accessories:

1. Devices for attachment to overhead construction, secondary members, splines, splicers, connection slips, wall connectors and all other accessories required for a complete installation.
2. Field assembled compression post (strut):

    a. Cold-or hot-rolled angles, steel studs, EMT or rigid conduit, or black iron.
    b. Cold-rolled steel section with maximum L/R ratio of 200.

3. Seismic compression struts: As detailed in Drawings.

D. Trim:

1. As required by details, construction, and compatible with design and appearance of ceiling.
2. Provide perimeter trim not less than 2 inches wide at tile support point.

    a. Depth of trim a detailed.

3. Perimeter trim and trim in ceiling penetrations shall permit lateral adjustment of at least 1/2-inch to accommodate irregularities in vertical surfaces interrupting ceiling.

E. Finish:

1. Concealed ferrous metal surfaces: Galvanized, cadmium-plated or coated with a factory-applied rust-inhibitive paint.
2. Exposed metal surfaces: Prime and apply a satin baked-on enamel finish matching the color of the acoustical units, as approved by the Architect.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine conditions and measurements affecting the work of this Section at site.
B. Correct detrimental conditions before proceeding with installation.

3.2 INSTALLATION

A. General:

1. Install materials in compliance with the approved Shop Drawings, the Specifications, and the ceiling panel and suspension system manufacturers' instructions. In case of conflict, the most stringent provisions apply.
2. Comply with ASTM C 636 and E 580, governing regulations and industry standards applicable to this work.
3. Install materials so that the sound insulation of adjacent construction materials and assemblies is not compromised by locally reducing their surface mass, or creating unsealed penetrations.
4. Plan layout to balance border widths at opposite edges of each ceiling area.
5. Avoid use of less than half-width acoustical units wherever possible.
6. Comply with reflected ceiling plans shown on the Contract Drawings.

3.3 SUSPENDED GRILLAGE INSTALLATION

A. Anchor hanger wires to overhead construction as indicated on the Drawings.
B. Attach hanger wires at not more than 4-foot o.c. along each member supported directly from hanger, with a hanger not more than 8 inches from wall and end of each member.
C. Hang ceiling system independent of walls, columns, pipes, ducts, and conduits, and their insulation; maintain minimum distance from end of grid to wall of 3/4-inch.
D. Do not attach wires to, or bend around, interfering material such as ductwork, pipes and conduits. Provide trapeze or equivalent devices where obstructions interfere with direct suspension.
E. Connection device from vertical wire to the structure above must sustain, without failure, a minimum of 100 lb. load.
F. Assemble and install metal grillage so that it is rigid, square, and free of lateral movement, level within the tolerances specified, with hairline, flush joints at abutting members, and with all members accurately aligned. Grid connection to perimeter must be attached on 2 adjacent walls.
G. Tie perimeter Tee ends together
H. Provide seismic bracing as indicated, (splay wires or rigid bracing) within 2 inches of intersection and splayed 90-degree apart at 45-degree angle.
I. Install perimeter and edge trim level with flush, hairline joints:

1. Screw-attach trim to studs at not over 16 inches o.c. and not more than 3 inches from ends, leveling with ceiling suspension system to a tolerance of 1/8-inch in 12 feet. Miter corners accurately and connect securely.
2. Do not use exposed fasteners, including pop rivets, on moldings and trim.

J. Tolerance of completed grillage shall be limited to 1/8-inch for entire ceiling in each area.

3.4 ACOUSTICAL UNITS

A. Match tile for color and pattern by using tile from cartons in the same sequence as manufactured.
B. Scribe and cut acoustical units for accurate fit at borders and around work which penetrates ceilings. Install with flush, tight joints.
C. For square-edged units, install units with edges fully hidden from view by flanges of suspension system runners and moldings.
D. For reveal-edged units on suspension system runners, install units with bottom of reveal in firm contact with top surface of runner flanges.

E. For reveal-edged units on suspension system members with box-shaped flanges, install units with reveal surfaces in firm contact with suspension system surfaces and panel faces flush with bottom face of runners.
F. Paint cut edges of panel remaining exposed after installation; match color of exposed panel surfaces using coating recommended for this purpose by acoustical panel manufacturer.
G. Duplicate Tegular edges at partial panels with straight, square cuts.

3.5 ERECTION TOLERANCES

A. Suspended Ceilings: Install main and cross runners level to a tolerance of 1/8 inch in 12 feet, non-cumulative.
B. Moldings and Trim: Install moldings and trim to substrate and level with ceiling suspension system to a tolerance of 1/8 inch in 12 feet, non-cumulative.

3.6 FIELD QUALITY CONTROL

A. Remove and replace units that are damaged or cannot be cleaned, to the Architect's satisfaction.

3.7 CLEANING

A. Clean soiled acoustical units and their suspension systems in compliance with their manufacturer's instructions.

END OF SECTION

SECTION 09 64 40 – WOOD ATHLETIC FLOORING

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Athletic wood flooring (WDF-1).
2. Floor Inserts

1.2 REFERENCES

A. Maple Flooring Manufacturer's Association (MFMA): MFMA Hardwood Flooring Installation Manual.

1.3 SYSTEM DESCRIPTION

A. Athletic wood strip anchored flooring system applied directly over structural concrete slab

1. Floor system nominal thickness: 3-inches.

B. Concrete and Concrete Finishing Refer to Section 03 30 00.

1. Concrete Slab Depression: 3-inches using 25/32” flooring and subfloor.
2. Surface Finish: steel troweled and finished smooth.
3. Concrete Tolerance: +/-1/8” in radius of 10 feet.
4. Floor Flatness and Floor Levelness (FF and FL) numbers are not recognized.
5. Compressive strength: Concrete shall be a minimum of 3,000 psi and a maximum of 4000 psi compressive strength after 28 days. Concrete shall be free of washed river gravel, pea gravel, flint or hardener additives. No lightweight concrete.
6. High spots shall be ground level and low spots shall be filled in with approved leveling compound by the general contractor to meet the tolerance above.

1.4 SUBMITTALS

A. Product Data: Manufacturer’s specifications and technical data including the following.

1. Detailed specification of construction and fabrication.
2. Manufacturer's installation instructions.
3. Manufacturer's detailed recommendations for handling, storage, installation, finishing, protection, and maintenance.
4. Concrete guidelines: Submit MFMA recommendations for correct preparation, finishing and testing of concrete subfloor surfaces to receive wood flooring.
5. Submit a copy of maintenance guidelines.

B. Shop Drawings: Manufacturers shop drawings.

C. Samples: Submit 2 sets of the following:

1. Color samples: For color selection or verification for the following.
2. Submit one sample of specified floor system.
3. Submit samples of border units where borders of different color, texture, or pattern are indicated using finish products specified.

D. Quality Control Submittals:

1. Statement of qualifications.
2. Manufacturer's field reports.

E. Contract Closeout Submittals: Comply with Division 01.

1. Operating and maintenance manuals.

1.5 QUALITY ASSURANCE

A. Manufacturer's Qualifications:

1. Not less than 5 years of experience in the actual production of specified products.
2. Manufacturer must be a member in good standing with the MFMA.

B. Installer's Qualifications: Firm with 3 experiences in installation of systems similar in complexity to those required for this Project, including specific requirements indicated.

1. Acceptable to or licensed by manufacturer.
2. Submit a list of at least three completed projects of similar magnitude and complexity.

C. Field Mock-Ups: Installer to provide mock-ups using the products specified. Mock-ups may be created as part of the actual floor installation and used in the final floor installation. Approval by Owner is required before proceeding installation past mock-up.

1.6 DELIVERY, STORAGE, AND HANDLING

A. Packing and Shipping: Deliver products in original unopened packaging with legible manufacturer's identification.

B. Storage and Protection: Comply with manufacturer's recommendations.

1. Store in a cool, dry place out of direct sunlight.
2. Protect from the elements and from damage.
3. Store at a temperature range of 55 degrees to 80 degrees.
4. Materials shall not be stored at the install site if moisture content of concrete slab exceeds 4 percent.

1.7 PROJECT CONDITIONS

A. Environmental Requirements:

1. Maintain room temperature above 65 degrees F. and below 80 degrees F. for 7 days prior to delivery of materials, during installation and continuous after installation.
2. Do not install wood flooring system until wet construction work is completed and surrounding air has a moisture content less than 35 percent or above 50 percent relative humidity.
3. Do not install floor system until concrete has been cured 60 days.
4. Contractor is responsible to ensure slab is clean and free of all dirt and debris prior to floor installation beginning.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Acceptable Manufacturers and Products:

1. Specifications are written around manufacturer's proprietary specifications from Connor Sports. Other manufacturer's products must meet similar specified quality and be approved by Architect. See the Interior Finish Materials sheet on Drawings.

a. Connor-Permaflex wood flooring system (WDF-1).

2.2 MATERIALS (Anchored floor)

A. Vapor Barrier - 6-mil polyethylene.
B. Resilient Pads

1. Connor 1/2-inch Rezill DIN pads

C. PermaFlex Sleepers

1. Upper Flex Sleeper – 8-feet X 3-3/4-inch X 25/32-inches APA rated plywood Exposure 1.
2. Lower Perma Base Sleeper – 8-feet X 4-inches X 23/32-inches APA rated plywood Exposure 1.
3. PermaFlex Channel - 16 gauge coated steel.
4. PermaFlex channel anchor clips.
5. 16-gauge (1.5mm) steel Z clips.

D. Subfloor

1. Subfloor sheeting shall be 15/32-inches APA rated plywood sheathing Exposure 1.
2. Optional (specify or delete) - Subfloor sheeting shall be 23/32-inches APA rated sheathing Exposure 1.

E. Flooring (Connor Laytite Maple)

1. 25/32-inches X 2-1/4-inches, Second & Better Grade, Northern Hard Maple Flooring, TGEM, MFMA Grade marked and stamped as manufactured by Connor Sports, Amasa, MI.
2. Optional grades (specify above or delete) - First Grade, Third Grade

F. Fasteners

1. Flooring Fasteners - 1-3/4-inch barbed cleats or coated staples.
2. Subfloor Fasteners - 1-1/4-inch subfloor staples or screws, and PL400 adhesive or equal. Substitute
3. 1-1/2-inch subfloor staples when installing 23/32-inches plywood.
4. Clip Anchors - 1-1/4-inch long steel pins, or length as dictated by site conditions, achieving a minimum 900 lbs. pullout strength applied with an air driven or low velocity powder actuated tool.

G. Finish Materials - Connor oil modified polyurethane seal and finish or equal.
H. Game Lines - Game line paint shall be compatible with finish.
I. Wall Base – 3-inches X 4-inches, heavy duty, molded, vented cove base with pre-molded outside corners.

2.3 ACCESSORIES

A. Finish: Manufacturer recommended and approved finish. (Must be compatible with Game-line paint and must meet VOC limits).
B. Game line paint: High gloss paint approved for use by flooring manufacturer. (Must be compatible with Finish and must meet VOC limits stated in applicable code.
C. Perimeter Wall Base: 3/4-inches ventilating type. Color selected by Architect.
D. Aluminum Threshold Plate with Ventilation: Model #8147. See Drawings for installation.
E. Refer to Drawings for locations and details of removable flooring/ cover plates for access to power/data boxes.
F. Volleyball Floor Sleeves: 3-1/2-inches diameter x 8-1/2-inches cast-in steel floor sleeve.

2.4 ALLOWANCE

A. Painted logo at center court (12-feet square)

1. Provide allowance of $2,500 for (1) 12-feet square logo to be painted on floor
2. Logo will be two (2) colors.
3. Final graphic image and location on floor to be coordinated with Owner.

B. Custom border around court

1. Provide an allowance for a custom 3’-0” wide border around court. There will be 2’-0”H lettering at each baseline and sideline.
2. Final graphic image and location on floor to be coordinated with Owner.

C. Painted logo at half court

1. Provide an allowance of $2,500 for (4) 6-feet square logos to be painted on floor.
2. Logo will be two (2) colors.
3. Final graphic image and location on floor to be coordinated with Owner.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verification of Conditions: Examine areas and conditions under which Work is to be performed and identify conditions detrimental to proper or timely completion.
B. Inspect concrete slab for proper tolerance and dryness. Report any discrepancies to the contractor and Architect in writing. Slab will be level to within 1/8 inch in 10 feet. Moisture content of the concrete slab not exceed 85% in accordance to an in-slab relative humidity test.
C. All work required to put the concrete subfloors in acceptable condition shall be the responsibility of the Contractor.
D. Subfloor shall be broom cleaned by Contractor.
E. Installer shall document all working conditions provided in the Specifications prior to commencement of installation.

3.2 PREPARATION

A. Surface Preparation: As recommended by flooring manufacturer plus the following:

1. Brush, clean, and vacuum substrate to remove mortar droppings, dust, and miscellaneous debris.

2. Patching and leveling: If patching or leveling is required, use latex patching compound as recommended by wood flooring manufacturer.

    a. Do not use asphalt underlayment.
    b. Do not skim coat over large or entire areas.
    c. Use leveling compounds when substrate floor tolerances exceed 1/8 inch in 10'-0".

B. Conditioning: Place material in open cartons within room scheduled for installation at least 72 hours before starting installation.

3.3 INSTALLATION

A. Comply with manufacturer's recommendations.
B. Cover concrete floor with vapor barrier and lap joints minimum of 6 inches.
C. PermaFlex Channels

1. Place PermaFlex channels 16-inches on center at right angle to finished flooring, staggering end joints by 4-feet in adjacent rows. Provide 1-1/2-inches expansion void at perimeter and at all vertical obstructions. Install solid blocking at doorways, under bleachers in the stacked position, and below portable goals.
2. Attach plywood subfloor with 8-feet edges parallel to and resting on sleepers. Set plywood in staggered brick pattern with ends offset by 4-feet in adjacent rows. Offset plywood ends by 2-feet) from sleeper end joints, and space 1/4-inches at all edges. Fasten plywood to sleepers using a single ribbon of adhesive and 1-1/4-inches staples fastened 12-inches on center. Provide 1-1/2-inches expansion void at perimeter and at all vertical obstructions.

D. Subfloor:

1. Install shock absorbing pad per manufacturer’s recommendations over 6 mil poly.
2. Following manufacturer’s guidelines, place subfloor assembly in end-to-end manner, staggering end joints in adjacent rows. Allow for a 1/4 gap between panels. Panels shall be placed on a 45-degree angle to the direction of the maple flooring. Provide 1-1/2 to 2-inch expansion void at perimeter and all vertical obstructions.
3. Install solid blocking at doorways, under bleachers in the stacked position, and below portable goals.
4. Install bleacher blocking per manufacturers recommendations.
5. Place metal anchor channel in each factory-prepared location in the panel.
6. Anchor each anchor channel in the center pre-routed hole only., unless trimming at wall or vertical obstruction requires relocation in adjacent location to anchor.

E. Flooring:

1. Install maple flooring parallel to main playing court by power nailing or stapling approximately 12-inches on center. Do not allow flooring fasteners to contact steel channel.
2. If required, size joints between flooring strips to allow for intermediate expansion in accordance with local humidity conditions.
3. Provide 1-1/2-inch expansion voids at perimeter and at all vertical obstructions.

F. Finishing: (Refer to manufacturer’s published recommendations)

1. Sanding

    a. Sand per manufacturer’s recommendations.
    b. After sanding, buff entire floor using 100 grit screen or equal grit sandpaper, with a heavy-duty buffing machine.

c. Inspect entire area of floor to ensure the floor presents a smooth surface without drum stop marks, gouges, streaks or shiners.
d. Vacuum and/or tack floor before first coat of seal.
e. Floor should be clean and completely free of dirt and sanding dust.

2. Finishing

a. Apply two (2) coats of approved seal and two (2) coats of approved finish per manufacturer’s instructions.
b. Buff and clean floor between coats.
c. Buff and vacuum and/or tack between each coat after it dries.
d. Apply custom colored game lines accurately after the buffing and vacuuming the coated surfaces. Game lines shall be painted between seal coats and finish coats. Layout in accordance with Drawings and review with College. For game lines, use current NCAA rules and guidelines. Lines shall be straight with sharp edges in colors selected by Architect.

3.4 BASE INSTALLATION

A. Install vent cove base to walls with base cement or screws. Use pre-molded outside corners and mitered inside corners.

3.5 FIELD QUALITY CONTROL

A. Inspections: Test moisture content of concrete substrate prior to installation of wood flooring to ensure moisture content of substrate is within manufacturer's recommendations.

3.6 CLEANING

A. Clean up all unused materials and debris and remove it from premises.

END OF SECTION

SECTION 09 65 10 - RESILIENT WALL BASE

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:

1. Rubber base. (RB-1 and RB-1)
2. Adhesive.

B. Related requirements: Other Sections of Division 09 for resilient flooring.

1.2 ADMINISTRATIVE REQUIREMENTS

A. Scheduling and sequencing:
B. Pre-installation meeting:

1.3 SUBMITTALS

A. Samples: 12-inch long Samples of each type and color of base.
B. Data: Proof of compliance with specified requirements.

1.4 HANDLING

A. Store materials indoors at a temperature above 60-degree F for at least 24 hours before use.

1.5 JOB CONDITIONS

A. Illuminate work areas during installation to provide the same or greater level of illumination required to properly perform the work and as will occur in the room or space after the building is in operation.
B. Maintain temperature in spaces to receive resilient bases between 70-degree and 90-degree F for not less than 24 hours before and 48 hours after its installation.
C. Maintain minimum temperature of 60-degree F after bases have been installed, except as specified above.

1.6 MAINTENANCE

A. Furnish 100 feet of each type and color of base for future maintenance.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Rubber bases at perimeter of wood floor: Vented rubber base with premolded corners, color selected by the Architect, 1/8-inch thick by 4-inch high with a 4-inch toe, by Johnsonite, Horner Flooring Co. or equal.

1. One-eight-inch thick, by height indicated on the Drawings, ASTM F 1861, Type TS (thermoset vulcanized rubber), Group 1 (homogeneous).
2. Top set base where no flooring and resilient flooring occur; straight (carpet) base at all other locations; do not use preformed corners.
3. In rolls minimum 100-foot long. Walls 20-foot or less in one piece; do not use short pieces.
4. Base shall be from same batch and run number for each color.

B. Rubber bases elsewhere: See Drawings,
C. Adhesive: Type and brand recommended by base manufacturer for the conditions of use.

PART 3 - EXECUTION

3.1 EXAMINATION/PREPARATION

A. Examine walls for excessive moisture content and unevenness which would prevent the proper execution of the work of this Section. Fill cracks and sand down bumps.
B. Remove dirt, oil, grease, or other foreign matter from surfaces to receive bases.
C. Correct detrimental conditions before proceeding with installation.
D. Do not install bases until they are same temperature as space where they are to be installed. Move bases and installation materials into spaces where they will be installed at least 48 hours in advance of installation.

3.2 ADHESIVE

A. Mix and apply adhesive in compliance with its manufacturer’s instructions.
B. Provide safety precautions during mixing and application as recommended by the adhesive manufacturer.
C. Apply adhesive uniformly over backing surfaces, but only on areas which can be covered by bases within the recommended working time of the adhesive.
D. Tape adjacent surfaces to prevent migration and misapplication of adhesive.
E. Remove adhesive which dries or films over. Do not soil walls, bases, and other adjacent surfaces with adhesive. Promptly remove spillage from adjacent surfaces without damaging those surfaces.

3.3 BASE

A. At masonry surfaces, fill voids along top edges of base with base manufacturer’s recommended adhesive filler material.
B. Match edges at seams or double cut adjoining lengths. Install with hairline, flush butt joints.
C. Locate end of runs not less than 36 inches from a corner, except where impossible due to length of wall.
D. Do not use pieces less than 6-foot long, except where impossible due to length of wall.

E. Do not use preformed corner pieces, except for vented base.

1. Form inside corners on job from straight pieces of maximum lengths possible by cutting an inverted V-shaped notch in toe of wall base at the point where corner is formed. Shave back of base where necessary to produce snug fit to substrate.
2. Form outside corners on job from straight pieces of maximum lengths possible by shaving back of base at point where bending will occur. Remove a strip perpendicular to length of base and only deep enough to produce a snug fit without bends whitening or removal of more than half the thickness of base.
3. Form without producing discoloration (whitening) at bends.

F. Scribe base accurately to abutting materials.

3.4 FIELD QUALITY CONTROL

A. After adhesive sets, clean bases with a neutral cleaner recommended by the base manufacturer.
B. Verify that there are no open joints and that base is completely adhered for its full length. Re-install in fresh adhesive where applicable.
C. Protect completed installations from damage until final acceptance.

END OF SECTION

SECTION 09 65 19 - RESILIENT TILE FLOORING

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:

1. Luxury vinyl tile. (LVT-1, LVT-2)
2. Edging and reducer strips.
3. Accessories, and installation and finishing materials.

B. Related requirements: Section 09 65 10 for Resilient base.

1.2 ADMINISTRATIVE REQUIREMENTS

A. Pre-installation meeting: Prior to start of installation, survey floors with the concrete finisher to verify acceptability of concrete substrate to receive flooring. Refer to Part 3 for corrective work.

1.3 SUBMITTALS

A. Data: Manufacturer Product Data and test reports for the flooring and adhesive.
B. Samples: Full size Samples of each type of floor tile, and 12-inch long Samples of each linear material.
C. Tests: Moisture and pH tests results.
D. Closeout:

1. Furnish the Owner 2 copies of the tile manufacturer recommended maintenance products, and recommended maintenance methods and procedures.
2. Include precautions against cleaning materials and methods detrimental to finishes and their performance.

1.4 QUALITY ASSURANCE

A. Uniformity:

1. Provide tile, adhesive and maintenance materials from one manufacturer.
2. If required, provide accessories including leveling and patching compounds supplied from one manufacturer.

B. Installer: Firm competent in installation of resilient flooring, with a minimum of 5 years of successful experience installing flooring of the kind and scope specified.

1.5 HANDLING

A. Store materials indoors above 60 degrees F for at least 24 hours before use.

1.6 JOB CONDITIONS

A. Illuminate work areas during installation to provide the same or greater level of illumination required to properly perform the work and as will occur in the room or space after the building is in operation.
B. Maintain temperature in spaces to receive resilient flooring between 70 and 90 degrees F for not less than 24 hours before and 48 hours after installation.
C. Maintain minimum temperature of 60 degrees F after resilient flooring has been installed, except as specified above.

1.7 MAINTENANCE

A. Furnish the Owner one percent of the quantity of tiles and planks installed on the Project, but not less than 1/2 box, properly boxed and labeled.
B. Coordinate selection of floor polish with the Owner's maintenance service.

1.8 SPECIAL WARRANTY

A. Manufacturer shall warrant materials and workmanship for 5 years and agree to make repairs and replacements due to faulty materials and workmanship during the warranty period at no cost to the Owner.

PART 2 - PRODUCTS

2.1 RESILIENT PLANKS

A. See Finish Schedule on Drawings.
B. Materials: ASTM F 1066, Composition 1, Class 2. ADA-compliant, with a coefficient of friction of finish flooring, with the applied finish, of 0.6 minimum when tested in compliance with ASTM D 2047.

2.2 ACCESSORIES

A. Accessories:

1. Edging and reducer strip: Tapered hard rubber edging strip made specifically for termination of resilient tile flooring, by Mercer Products Co., Inc., Macklanburg-Duncan, Johnsonite or equal of the color selected by the Architect.

2.3 ADHESIVES AND FLOOR FINISH

A. Primer, adhesive and crack filler: Type and brand recommended by floor covering manufacturer for the conditions of use.
B. Patching, smoothing, and leveling compound: As specified in Section 09 65 15.
C. Floor finish: Commercially available product acceptable to flooring manufacturer which, when cured, shall have a coefficient of friction of 0.6 or greater when tested in accordance with ASTM D 2047.

PART 3 - EXECUTION

3.1 EXAMINATION/PREPARATION

A. Prepare substrates according to adhesive manufacturer's instructions and the following to ensure adhesion of floor coverings.
B. Concrete: Prepare according to ASTM F 710.

1. Verify that substrate is dry and free of curing compounds, sealers, and hardeners.
2. Remove substrate coatings and other substances that are incompatible with adhesives and that contain soap, wax, oil, or silicone, using mechanical methods recommended by manufacturer. Do not use solvents.
3. Perform alkalinity and adhesion tests recommended by manufacturer. Proceed with installation only after substrates passes testing.
4. Moisture testing: Perform tests recommended by manufacturer and as follows. Proceed with installation only after substrates pass testing.

    a. Perform anhydrous calcium chloride test, ASTM F 1869, or equivalent test recommended by the flooring manufacturer. Proceed with installation only after substrates have maximum moisture-vapor-emission rate of 3 lb of water/1000 square foot in 24 hours.
    b. Perform relative humidity test using in situ probes, ASTM F 2170. Proceed with installation only after substrates have a maximum 75 percent relative humidity level measurement.

5. Check pH level and correct until it is within range recommended by the adhesive manufacturer.
6. Fill cracks, holes, and depressions in substrates with trowelable leveling and patching compound and remove bumps and ridges to produce a uniform and smooth substrate.
7. Level surfaces to be covered with flooring by grinding bumps and filling-in depressions to a tolerance an overall value of flatness, F(F) 35; and levelness, F(L) 25; with minimum local values of flatness, F(F) 24; and levelness, F(L) 17. Use fill material compatible with both substrates.

C. Sweep and vacuum clean substrates to be covered with flooring before installation.
D. Move resilient flooring and installation materials into spaces where they will be installed at least 48 hours in advance of installation. Do not install resilient flooring until materials are the same temperature as space where they will be installed.
E. Correct other detrimental conditions before proceeding with installation.

3.2 ADHESIVES

A. Mix and apply adhesives in compliance with their manufacturer's instructions.
B. Apply adhesive uniformly over backing surfaces, but only on areas that can be covered by flooring material within the recommended working time of the adhesive.
C. Remove adhesive that dries or films over. Do not soil adjacent surfaces with adhesive, and promptly remove spillage without damaging those surfaces.

3.3 PLANKS

A. Match units for color and pattern, when applicable, by using units from cartons in the same sequence as manufactured and packaged.
B. Install units working from centerlines of each room or space and work outward towards the perimeter. Lay out units so none are less than 1/2 the width of a full size.
C. Fit units neatly and tightly into breaks and recesses, against bases, around pipes and penetrations, under metal thresholds and around permanent fixtures and equipment.
D. Lay units in grid pattern with the patterns running in the same direction, parallel to room axis in straight lines, except where impractical because of room shape.

E. As units are installed and within adhesive's recommended working time, roll floor with a clean, smooth, 100-pound roller in both directions.

1. As the rolling proceeds, replace loosened, defective, or damaged tile with new and finish to the specified condition.
2. Take particular care to roll edges and corners thoroughly.

3.4 REDUCER AND EDGING STRIPS

A. Install reducer and edging strips at termination of floor tile where tile is not covered by another material. Glue securely to clean, dry subfloor.
B. Install in one piece between door jambs, and in longest possible length elsewhere with no piece less than 6 feet long.
C. Butt tightly to resilient tiles, where applicable, and scribe accurately to doorframe and other abutting surfaces.

3.5 FINISHING/CLEANING/PROTECTING

A. Protect flooring against mars, marks, indentations, and other damage immediately after installation and polishing.
B. Use protection methods recommended by flooring manufacturer.
C. Do not move heavy and sharp objects directly over resilient flooring. Place hardboard panels over flooring and under objects being moved. Slide or roll objects over panels without moving panels.
D. Cover traffic paths with undyed, untreated building paper taped securely in place. Remove at final cleaning.
E. Apply protective polish to floor surfaces that are free from soil, visible adhesive and surface blemishes.
F. Clean resilient floors not more than 4 days before dates scheduled for inspections intended to establish Substantial Completion in each area of the Project.

1. If required to restore polish finish, and if recommended by flooring manufacturer, strip protective floor polish applied after completing installation before cleaning.
2. After cleaning, reapply polish to floor to restore floor finish according to flooring manufacturer instructions. Coordinate with Owner's maintenance program.

G. Remove and replace materials that are damaged or cannot be cleaned.

END OF SECTION

SECTION 09 65 66 – RESILIENT ATHLETIC FLOORING SYSTEMS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes the following resilient flooring systems:

1. Flooring system at Weight Room. (SF-1)
2. Flooring system at TRX / Training Room. (SF-3)
3. Flooring system at Yoga / Training Room. (SF-4)
4. Wall system at TRX / Training Room. (SF-5)
5. Indoor running track including installation of a prefabricated sheet rubber sports surfacing system. (SF-2, SF-2A)

1.2 SUBMITTALS

A. Product Data: Provide current printed data sheets for all products supplied including installation instructions.

B. Shop Drawings: Submit shop drawings illustrating layouts, seam locations, details, dimensions, and other pertinent details.

C. Samples: Submit samples, 6 inches x 6 inches, for verification of such characteristics as color and surface texture for each Manufactured Product specified.

D. Maintenance Literature: Submit maintenance instructions.

1.3 QUALITY ASSURANCE

A. Manufacturer: Shall be an established firm with a minimum of 10 years in business specializing in manufacturing prefabricated sheet rubber for athletic surfaces.

B. Flooring Contractor:

1. Complete installation of the flooring system shall be performed only by an experienced flooring contractor with a minimum of three years of experience installing athletic surfaces and approved by the manufacturer.
2. Work will be performed in accordance with the most recent printed installation instructions of the manufacturer.

C. Mockup: Provide independent, out of sequence mockup on site for each flooring system as required by Architect to review installed system. Remove and dispose of upon final acceptance of each system.

1.4 HANDLING

A. Products Supplied must be delivered in Manufacturer’s original, unopened and undamaged packaging with identification labels intact.

B. Products Supplied must be protected from exposure to harmful weather conditions and must be safely stored on a clean, dry, flat surface. Store rolls of Resilient Track Surfacing upright.

C. Climate controlled storage is recommended. Storage temperature must not be below 40 degrees F and must not exceed 100 degrees F. Materials must be delivered to site a minimum of 24 hours before work is scheduled to begin so that they may acclimate.

D. Avoid storing Manufactured Product for extended periods of time or additional material trimming may be required.

E. Products Supplied need not suffer damage during delivery, storage and handling (i.e. dents/scratches, excessive compression or warping, chipped edges, etc.).

1.5 SITE CONDITIONS

A. The prefabricated rubber sheet flooring specified herein shall not be installed until all trades including, but not limited to, masonry, painting, plaster, tile, marble, terrazzo, carpentry, overhead mechanical trades', goals, scoreboard, electrical, and painters have finished in the installation area.

B. The area will be closed and secured from all foot traffic and trades for duration of the installation and curing period.

C. The building shall be enclosed, weather-tight, with permanent windows and lockable doors.

D. Permanent heat, light and ventilation shall be installed and operating prior to, during and after installation.

E. Subfloors shall be broom clean, dry and free from dirt, dust, oil, grease, paint, and alkali, concrete curing agents, hardening and parting compounds, old adhesive residue or other foreign materials.

F. Concrete tolerance of 1/8 inch (3mm) in ten foot (3m) shall be maintained throughout. High spots shall be ground level and low spots filled with a Portland base compound such as Ardex Feather Finish. No concrete curing, hardening or sealing agents shall be applied to concrete.

G. Concrete must dry for a minimum of 30 days and slab moisture levels shall not exceed 85% in accordance with “Determining Relative Humidity in Concrete with In-Situ Probes” respecting ASTM F2170. HVAC must be operational and with a constant temperature for 7 days prior to testing.

H. The installation area shall be closed to all traffic and activity during installation and for seven days following to allow drying/curing.

I. After completion, area to be kept locked by general contractor. No other trades or personnel to be allowed on floor until accepted by owner.

1.6 WARRANTY

A. Manufactured Product is warranted against excessive wear under normal usage for a period of ten (10) years from the date of Substantial Completion, except SF-4 which shall be warranted against excessive wear under normal usage for a period of five (5) years.

PART 2 - PRODUCTS

2.1 MANUFACTURER

A. Manufacturers:

1. Basis for design, see Interior Finish Material Schedule on Drawings: SF-1, SF-3, SF-4 and SF-5, or equal.

2.2 MATERIALS

A. Material shall be prefabricated sheet rubber athletic flooring and highly resistant to UV or atmospheric agents.

1. Only vulcanized, dual durometer sheet rubber with each layer having independent physical properties and biomechanical attributes will be accepted.
2. Flooring must be highly resistant to UV and atmospheric agents.
3. The surface layer shall be free of recycled rubber granules and free of any different color fillers.
4. Flooring surface shall be manufactured to maintain performance criteria, as stated by manufacturer, without defects, damage, or failure.

5. Finish and tickness: As indicated on Interior Material Finishes Schedule.
6. Color shall be determined.
7. Finish: Track Embossing

B. Adhesive: As recommended by flooring manufacturer.

C. Transition Strip: Trakett, or equal.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Inspect concrete slab for proper tolerance of 1/8 inch (3mm) in ten foot (3m). Report discrepancies to general contractor for correction.

1. High spots shall be ground level and low spots filled with a Portland base compound such as Ardex Feather Finish.

B. Perform moisture testing of the slab. “Determining Relative Humidity in Concrete with In-Situ Probes” not to exceed 85% respecting ASTM F2170. Report results to the general contractor. See addendum in installation guides for details.

1. HVAC must be operational and with a constant temperature for 7 days prior to testing.
2. Allow further drying time if moisture tolerances are exceeded.

C. Ensure all requirements from section 1.6 SITE CONDITIONS are completed and satisfied.

D. All work required to put the concrete slab in an acceptable condition and provide correct working conditions for a successful installation is the responsibility of the General Contractor or Construction Manager.

3.2 PREPARATION

A. Prepare substrate surface in accordance with Manufacturer’s current printed guidelines.

3.3 INSTALLATION

A. Install athletic flooring and accessories in accordance with current manufacturer's installation instructions

B. Wall Base: Install vinyl base anchored to walls with base cement.

3.4 CLEANING

A. For surfaces having received newly painted lines, wait a minimum of 30 days after the application of the paint before going over the surface with a scrubber/scrubbing the lines, in order to ensure proper curing of the paint.

3.5 FIELD QUALITY CONTROL

A. Adjust hardware so panels operate freely, but not loosely, without sticking or hinge binding.

B. Adjust hardware for proper function.

END OF SECTION

SECTION 09 65 71 – INDOOR RUNNING TRACK

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes an indoor running track including installation of a prefabricated sheet rubber sports surfacing system. (SF-2)

B. System shall include game-line striping by manufacturer.

1.2 ADMINISTRATIVE REQUIREMENTS

A. Field verification: Verify actual locations of supports.

1.3 SUBMITTALS

A. Manufacturers Product Information

1. Submit (1) copy of I.A.A.F. Certification of surface to be installed.
2. Submit (3) copies of Connor Sports ProTraxx System Specification Sheets or as requested.

B. Shop Drawings: Submit (1) set of shop drawings reflecting side seam placement and layout.

C. Samples: Submit (1) set of samples showing colors and texture of ProTraxx surface or as requested.

D. Maintenance Literature: Submit (3) copies of Connor Sports ProTraxx maintenance instructions.

1.4 QUALITY ASSURANCE

A. Manufacturer: Shall be an established firm with a minimum of 10 years in business specializing in manufacturing prefabricated sheet rubber for athletic surfaces.

B. Flooring Contractor:

1. Complete installation of the flooring system shall be performed only by an experienced flooring contractor with a minimum of three years of experience installing athletic surfaces and approved by the manufacturer.
2. Work will be performed in accordance with the most recent printed installation instructions of the manufacturer.

C. Line Marker:

1. Shall be approved by the Surfacing Contractor.
2. Painting must be done by professionals with proper experience and qualifications to effectively perform the work.
3. Line Marker to have painted a minimum of twenty (20) track and field facilities in North America that have been properly certified (when applicable) to meet specified Association requirements for desired level of competition.

D. Mockup: Provide independent, out of sequence mockup on site as required by Architect to review installed system. Remove and dispose of upon final acceptance of walking/running track.

1.5 HANDLING

A. Products Supplied must be delivered in Manufacturer’s original, unopened and undamaged packaging with identification labels intact.

B. Products Supplied must be protected from exposure to harmful weather conditions and must be safely stored on a clean, dry, flat surface. Store rolls of Resilient Track Surfacing upright.

C. Climate controlled storage is recommended. Storage temperature must not be below 40 degrees F and must not exceed 100 degrees F. Materials must be delivered to site a minimum of 24 hours before work is scheduled to begin so that they may acclimate.

D. Avoid storing Manufactured Product for extended periods of time or additional material trimming may be required.

E. Products Supplied need not suffer damage during delivery, storage and handling (i.e. dents/scratches, excessive compression or warping, chipped edges, etc.).

1.6 SITE CONDITIONS

A. The prefabricated rubber sheet flooring specified herein shall not be installed until all trades including, but not limited to, masonry, painting, plaster, tile, marble, terrazzo, carpentry, overhead mechanical trades', goals, scoreboard, electrical, and painters have finished in the installation area.

B. The area will be closed and secured from all foot traffic and trades for duration of the installation and curing period.

C. The building shall be enclosed, weather-tight, with permanent windows and lockable doors.

D. Permanent heat, light and ventilation shall be installed and operating prior to, during and after installation.

E. Subfloors shall be broom clean, dry and free from dirt, dust, oil, grease, paint, and alkali, concrete curing agents, hardening and parting compounds, old adhesive residue or other foreign materials.

F. Concrete tolerance of 1/8 inch (3mm) in ten foot (3m) shall be maintained throughout. High spots shall be ground level and low spots filled with a Portland base compound such as Ardex Feather Finish. No concrete curing, hardening or sealing agents shall be applied to concrete.

G. Concrete must dry for a minimum of 30 days and slab moisture levels shall not exceed 85% in accordance with “Determining Relative Humidity in Concrete with In-Situ Probes” respecting ASTM F2170. HVAC must be operational and with a constant temperature for 7 days prior to testing.

H. The installation area shall be closed to all traffic and activity during installation and for seven days following to allow drying/curing.

I. After completion, area to be kept locked by general contractor. No other trades or personnel to be allowed on floor until accepted by owner.

1.7 WARRANTY

A. Manufactured Product is warranted against excessive wear under normal usage for a period of ten (10) years from the date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURER

A. Manufacturers:

1. Basis for design, see Finish Schedule on Drawings: SF-2, or equal.

2.2 MATERIALS

A. Athletic surface must be certified by I.A.A.F. (International Association of Athletic Federation).

B. Material shall be prefabricated sheet rubber athletic flooring and highly resistant to UV or atmospheric agents.

1. Only vulcanized, dual durometer sheet rubber with each layer having independent physical properties and biomechanical attributes will be accepted.
2. Flooring must be highly resistant to UV and atmospheric agents.
3. The Shore Hardness of the top layer surface will be greater than that of bottom layer with differentiated elasticity between the two layers.
4. The surface layer shall be free of recycled rubber granules and free of any different color fillers.
5. Flooring surface shall be manufactured to maintain performance criteria, as stated by manufacturer, without defects, damage, or failure.
6. Thickness shall be 8mm.
7. Color shall be determined.
8. Finish: Track Embossing
9. Material shall be provided in rolls only.
10. Flooring must have IAAF Class 1 certification performance.

C. Adhesive: Two-component polyurethane adhesive as recommended by track manufacturer.

D. Game Line Paint: Two-component polyurethane selected from standard colors.

E. Transition Strip: Trakett, or equal.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Inspect concrete slab for proper tolerance of 1/8 inch (3mm) in ten foot (3m). Report discrepancies to general contractor for correction.

1. High spots shall be ground level and low spots filled with a Portland base compound such as Ardex Feather Finish.

B. Perform moisture testing of the slab. “Determining Relative Humidity in Concrete with In-Situ Probes” not to exceed 85% respecting ASTM F2170. Report results to the general contractor. See addendum in installation guides for details.

1. HVAC must be operational and with a constant temperature for 7 days prior to testing.
2. Allow further drying time if moisture tolerances are exceeded.

C. Ensure all requirements from section 1.6 SITE CONDITIONS are completed and satisfied.

D. All work required to put the concrete slab in an acceptable condition and provide correct working conditions for a successful installation is the responsibility of the General Contractor or Construction Manager.

3.2 INSTALLATION

A. Install athletic flooring and accessories in accordance with current manufacturer's installation instructions

1. Disc sand concrete in preparation to receive flooring material.
2. Unroll flooring and allow to relax overnight while maintaining a constant room temperature.
3. Thoroughly mix two-component polyurethane adhesive per manufacturer’s instructions and apply directly to substrate.
4. Install flooring into freshly applied adhesive, scribing and fitting neatly at walls, around columns and around door frames. Use matching urethane caulk at tight fit locations.

5. Roll material in multiple directions with a 100-pound (45.4 kg) roller to remove entrapped air.
6. Clean any adhesive that migrates between seams with recommended product.
7. Hold and weight all seams in place with cinder bricks. Leave weight in place for a minimum of 12 hours.

B. Game Lines

1. Use only high-quality masking tape approved by track manufacturer.
2. Carefully layout and mask game lines as indicated on drawings.
3. Prime area to receive paint per manufacturer's instruction.
4. Thoroughly mix two-component game line paint.
5. Apply paint by spray method

C. Wall Base: Install vinyl base anchored to walls with base cement.

3.3 CLEANING

A. For surfaces having received newly painted lines, wait a minimum of 30 days after the application of the paint before going over the surface with a scrubber/scrubbing the lines, in order to ensure proper curing of the paint.

3.4 FIELD QUALITY CONTROL

A. Adjust hardware so panels operate freely, but not loosely, without sticking or hinge binding.

B. Adjust hardware for proper function.

END OF SECTION

SECTION 09 67 23 - RESINOUS FLOORING

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:

1. Resinous flooring.
2. Primer, resin, mortar, undercoat, sealants, and sealer.

B. Related requirements: All other waterproofing membranes.

1.2 SUBMITTALS

A. Samples: 24-inch square of the selected colors of each type of resinous flooring mounted on plywood or hardboard. Step application to show all the components.
B. Shop drawings: Large scale details of floor patterns and striping, coves and corners. Dimension terminations and penetrations through resinous flooring.
C. Data: Manufacturer Product Data for system proposed for use.
D. Letter of acceptance: From the manufacturer to verify its acceptance of the applicator and acceptance of substrates as satisfactory to receive this work.
E. Closeout: Copy of care and maintenance recommendations.

1.3 QUALITY ASSURANCE

A. Single source responsibility: Obtain primary resinous flooring materials from a single manufacturer with not less than 10 years experience in manufacturing and installing principal materials described in this Section.
B. Applicator qualifications: Firm acceptable to flooring manufacturer, with a minimum of 5 consecutive years of experience in application of the floor systems proposed for use on projects of similar size and scope.
C. Pre-installation meeting: Prior to start of installation arrange a meeting between the manufacturer of the resinous flooring and the trade responsible for the installation, Contractor and Architect to review conditions of substrate and review installation and curing instructions.

1.4 HANDLING

A. Materials used shall be factory pre-weighed and pre-packaged in single, easy to manage batches to eliminate on site mixing errors. No on site weighing or volumetric measurements are allowed.
B. Store materials in a dry, enclosed area protected from exposure to moisture. Maintain temperature of storage area between 60- and 85-degree F.

1.5 JOB CONDITIONS

A. Cure concrete substrate for a minimum of 30 days prior to starting the work of this Section unless manufacturer states otherwise during pre-conference meeting.
B. Illuminate work areas during installation to provide the same or greater level of illumination, as required to properly perform this work, as will occur in the room or space after the building is in operation.

PART 2 - PRODUCTS

2.1 MANUFACTURE/SYSTEMS

A. Durastone flexible polished flooring by Duracryl.

2.2 EPOXY PATCHING MORTAR

A. As recommended by manufacturer, to be used to fill all cracks less than 1/8-inch prior to application of flooring systems

2.3 JOINT SEALANT MATERIALS

A. Flexible sealant used where concrete expansion/isolation joints are carried thru the resinous flooring system as recommended by manufacturer.
B. Divider strips and other accessories: As recommended by the resinous flooring manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION/PREPARATION/PROTECTION

A. Examine surfaces to receive flooring for conditions that could adversely affect its permanence and appearance.
B. Examine substrate for excessive moisture content and unevenness, which would prevent the proper execution of the work of this Section.
C. Check floors for moisture content. Verify that they are sufficiently dry to receive flooring by testing in compliance with ASTM D 4263.

1. Allow sufficient time in the construction schedule to allow slabs to dry sufficiently, force dry slabs, or provide a compatible surface coating so that water vapor emission will be at a level acceptable to the floor covering manufacturer.
2. Concrete slab with water vapor pressure exceeding 6 lb. shall receive waterproofing membrane specified before installation of resinous flooring system.

D. Fill cracks and grind down bumps that would telegraph through the flooring so that a 10-foot straightedge placed anywhere on the surface touches the floor with no more than a 1/8-inch gap.
E. Remove dirt, oil, grease, or other foreign matter from surfaces to receive flooring, including curing compounds or laitance by mechanical means include use of a scabbler, scarifier or shot blast machine.
F. pH test:

1. Perform pH tests on concrete floors regardless of the age or grade level.
2. If pH is greater than 10, neutralize the floor prior to beginning installation.

G. Do not start installation until subfloor temperature is 60-degree F or above.
H. Correct other conditions detrimental to the proper and timely completion of this work before proceeding with installation.
I. Protect adjacent surfaces with waterproof covers, securely taped in place, to prevent staining and other damage caused by this work. Restore damaged surfaces to their original condition.

3.2 INSTALLATION

A. Install resinous flooring system in compliance with its manufacturer's instructions and these Specifications.

B. Apply each component of resinous flooring system to produce a uniform monolithic wearing surface of thickness specified, uninterrupted except at divider strips, sawn joints or other types of joints as indicated.
C. Take thickness readings as the installations progress to make sure that the proper amounts of materials are being applied.
D. The installed flooring shall be smooth, uniform in thickness and color, and free from other defects. Top edges of self-coved bases shall be straight and level, finished neatly. Trowel marks are unacceptable.
E. Install integral 6-inch high coved base as indicated.
F. Cure resinous flooring in compliance with its manufacturer's instructions.

3.3 PROTECTING

A. Protect the installed flooring against damage, including misuse by other trades.
B. Repair damaged areas to match adjacent undamaged areas.

END OF SECTION

SECTION 09 68 13 - CARPET TILE

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:

1. Carpet planks. (CPT-1).
2. Adhesive.
3. Accessories.

1.2 ADMINISTRATIVE REQUIREMENTS

A. Pre-installation conference:

1. Prior to start of installation, arrange a pre-installation meeting between the carpet installer, Contractor, Architect and electrical trade responsible for wire access, where applicable.
2. Mark chalk lines on the slab, showing pattern alignment for placement and pattern layout. Spray lacquer on chalk lines, after Architect has approved the locations.
3. Review the suitability of the subfloor to receive carpet. Verify flatness and levelness, pH and latent water content of slabs.
4. Identify areas of concern and remedial measures.
5. Photograph areas of concerns before and after remedial measures are taken.
6. Record meeting minutes and distribute PDF copy to all concerned, including the Architect, within 48 hours of the meeting.

1.3 SUBMITTALS

A. Data:

1. Manufacturer Product Data for carpet, adhesive and accessories.
2. Manufacturer′s recommended cleaning and maintenance instructions for carpet.

B. Samples:

1. Full size Samples of each type and color/pattern of carpet tile.
2. Twelve-inch long Samples of carpet edge guard profile.

C. Layout drawings: Three-eight-inch minimum layout drawings showing tile layout, pattern direction, if any, and pile direction.

D. Tests results:

1. Evidence that the carpet, accessories and adhesives to be used comply with Code requirements for combustibility, flammability and toxicity.
2. Results of test conducted on concrete (refer to Part 3 below) slabs prior to start of installation.

E. Manufacturer warranties: Published warranties as specified below.

1.4 QUALITY ASSURANCE

A. Installer qualifications: FCIB or IFCI certified carpet installers, unless otherwise acceptable to the Architect.

1.5 HANDLING

A. Procedure: In accordance with CRI 104 Section 5. Store carpet indoors in a protected location.
B. Delivery: Deliver carpet with manufacturer registry number attached and intact.
C. Storage: Sore carpet in bins to prevent pile crush. Temporary storage shall be in flat bins with a maximum height not to exceed 3 rolls.
D. Handling:

1. Transport carpet on flat dollies equipped with carpet cradles. Equip fork lifts with booms.
2. Bending or folding of individual carpet rolls is not recommended, however, if it is absolutely necessary for delivery purposes, under no circumstances shall carpet be left bent or folded for longer than 4 hours.

E. Conditioning:

1. Condition carpet and adhesive on site in a heated, dry space at a minimum temperature of 65-degree and a relative humidity between 10 percent and 65 percent for at least 48 hours before installation.
2. Maintain these conditions night and day during installation and for at least 72 hours after completion.

1.6 JOB CONDITIONS

A. Temperature: Maintain a uniform temperature, in the space being carpeted, in the range of 65 to 75 degrees F during and after carpet installation.
B. Lighting: Illuminate work areas during installation to provide the same or greater level of illumination required to properly perform the work and as will occur in the room or space after the building is in operation.
C. Ventilation:

1. Maintain fresh air ventilation in installation spaces in accordance with current guidelines of ASHRAE standard 62 published by American Society of Heating, Refrigerating and Air Conditioning Engineers.
2. During installation, maintain fresh air ventilation by utilizing exhaust fans, and by operating the ventilation system at full capacity. Exhaust air to the outside and avoid recirculation of air.
3. After installation, maintain fresh air ventilation for 48-72 hours at normal room temperatures by operating ventilation or exhaust fan system at full capacity. Open doors and windows, if possible to dissipate, and eliminate lingering odors from the installation.

1.7 WARRANTIES

A. Carpet manufacturer shall warrant the carpet as follows:

1. The life of the carpet shall be 15 years under normal conditions.
2. Primary and secondary backing shall not delaminate for the life of the carpet.
3. Twenty-pound tuft-bind, wet and dry, shall be warranted for the life of carpet.
4. Stain resistant properties shall be permanent and inherent in the fiber. Topically applied stain resistant treatments are not acceptable. Stain resistant properties shall not be removed by commercial cleanings and abrasive wear.
5. Carpet shall be warranted to be impervious to water damage.
6. There shall be no more than 10 percent face yarn loss for the life of the carpet.

1.8 MAINTENANCE

A. Furnish the following full-size units equal to 2 percent of amount installed for each type indicated, but not less than 2 full boxes.

PART 2 - PRODUCTS

2.1 PERFORMANCE REQUIREMENTS

A. ADA requirements for new carpet:

1. Provide glue-down installation that complies with CBC Section 11B-302..
2. Carpet shall have a level loop, textured loop, or level-cut/uncut pile texture and maximum pile height of 1/2-inch per CBC Section 11B-302.
3. Carpet edges shall comply with CBC Section 11B-303.

B. Environmental Impact Standards for the Carpet and Rug Institute's Indoor Air Quality testing program:

1. Less than 0.05 mg/square meter/per hour of formaldehyde.
2. Less than 0.3 mg/square meter/hour of total volatile organics compounds (TVOC).
3. Less than 0.4 mg/square meter/hour of styrene.
4. Less than 0.05 mg/square meter/hour of 4-PC.
5. Conduct test over 24-hour time period.

C. State of Washington Protocol for Indoor Air Quality testing.

1. Provide Class I products as determined by testing identical products for critical radiant flux classification in accordance with ASTM E 648.
2. Testing shall be conducted by an independent testing and inspecting agency acceptable to authorities having jurisdiction.

D. NBS smoke chamber test: Less than 450.
E. Static propensity:

1. 3 KV or less as tested in accordance with AATCC-134 (70-degree F at 20 percent R.H.).
2. Carpet shall retain its static control for the useful life of the installation.

F. Radiant panel (ASTM E 648): Class I.

2.2 CARPET TILE

A. Make: See Interior Finish Materials on drawings.

2.3 CARPET ACCESSORIES AND INSTALLATION MATERIALS

A. Carpet edge guard: Rubber or vinyl extrusion by Mercer Plastics Co. or Johnson Rubber Co., designed specifically as carpet edge guard. The Architect will select Color(s).
B. Seaming tape: Roberts Industries No. 50-330 Supertape, or Orcon CT-3 Super Tape.
C. Adhesives:
D. Edge sealer: USG Durabond Carpet Square Adhesive D2, WW Henry Peach Glue, 3M Blue Glue, or equal adhesive formulated for heavy commercial approved by the carpet manufacturer.
E. Floor leveling material:

1. Provide a minimum of one 10 lbs. bag of Portland cement-based floor prep material for every 100 square yard of carpet to be installed.
2. Do not use gypsum-based materials.

F. Other miscellaneous materials: As recommended by the carpet manufacturer for the conditions of installation and use.

PART 3 - EXECUTION

3.1 EXAMINATION/PREPARATION

A. Comply with the applicable specifications and recommendations of the Carpet and Rug Institute (CRI), Standard for Installation of Textile Floor covering Materials CRI 104, except as noted.
B. Vacuum substrate immediately prior to carpeting and remove deleterious substances, which would interfere with the installation or be harmful to this work.
C. Prepare concrete surfaces in accordance with CRI 104 Section 6.1.1 and 6.2.

Check floors for moisture content. Be sure that they are sufficiently dry to receive carpet by testing for moisture emission rate per ASTM F 1869 relative humidity per ASTM F 2170 and alkalinity-pH in accordance with ASTM F 710. Allow sufficient time in the construction schedule to allow slabs to dry sufficiently, force dry slabs, or provide a compatible surface coating so that water vapor emission will be at a level acceptable to the floor-covering manufacturer. Do not install carpet in areas above the following limits or exceed the limint published by the manufacturer:

1. Moisture emission rates above 3.0 lbs.
2. Relative Humidity rates above 75%RH.
3. Digital Alkalinity-pH readings above 9.0 pH.
1. Notify Architect of excessive results in writing. Installation deems acceptance of on-site conditions.

D. Test the alkalinity level of the concrete using a Litmus test. If the pH is above a level unacceptable to the adhesive manufacturer, treat the surface so that the floor PH is within acceptable levels.
E. Remove dirt, oil, grease, or other foreign matter from surfaces to be carpeted and/or to receive floor filler.
F. Use a floor filler, recommended by the carpet manufacturer, to fill-in cracks, holes and other indentation marks; grind down bumps to flat surface. Floor under carpet shall not exceed an Ff of 25.
G. Correct other detrimental conditions before starting installation.

3.2 INSTALLATION

A. General:

1. Comply with the carpet manufacturer's instructions and recommendations, except as modified herein.
2. Align carpet with centerline of room or space, and adjust at edges for wall variations.
3. Dry lay carpet in one room before going further to verify side match, dye sequence, pattern and defects. Obtain Architect’s approval of dry lay before installing the remainder of carpet tile.
4. Install carpet edge guard, where edge of carpet is exposed to traffic, in single length without joints except at changes in direction. Cut for a tight fit against abutting surfaces. Center under doors when applicable.

5. Extend carpet at the following locations:

    a. Under open-bottomed and raised bottomed obstructions, and under removable flanges of obstructions.
    b. Into closets and alcoves of spaces scheduled to be carpeted, unless another floor finish is indicated for such space.
    c. Under movable furniture and equipment.

6. Install carpet in one direction in each room and do not reverse direction at any locations.
7. Carpet shall have full adhesion to subfloor without loose edges.

B. Carpet tile installation:

1. Install in accordance with CRI 104 Section 14 and the following.
2. Terminate work neatly at obstructions, edges and corners without disrupting pattern or joint alignment. Cut tiles to obtain clean, sharp edges.
3. Install tile by the stair step method in full bed of adhesive, with tight joints and perimeter units not less than 1/2 tile wide. Adjust to minimize cutting.
4. Install tiles so that the arrows on the back point in the same direction.
5. Fit tiles snugly to prevent gaps, but do not force into place so as to cause buckles. Align tiles to avoid trapping pile yarns in the joint.
6. Roll completed installation with a 35 to 75 lb. linoleum roller in both directions to ensure uniform bond everywhere.
7. Installation tolerance: Comply with appropriate Sections of CRI 104.

3.3 CLEANING/PROTECTING

A. Remove debris from installation, carefully sorting pieces to be saved from scraps to be disposed of.
B. Vacuum carpet with a commercial machine, with a rotating agitator or beater in the nozzle. Remove soiled spots.
C. Close areas to traffic during installation. Cover carpet in traffic areas with protective non-staining building paper. Do not use plastic sheeting.
D. Prior to acceptance of the Work, replace damaged and stained carpet with new carpet.

END OF SECTION

SECTION 09 78 00 - FRP WALL PANELS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:

1. Fiberglass reinforced polyester (FRP) wall panels.
2. Matching moldings, fasteners, adhesive, and sealant.

B. Related requirements: All other sealants.

1.2 ADMINISTRATIVE REQUIREMENTS

A. Scheduling and sequencing:
B. Preinstallation meeting:

1.3 SUBMITTALS

A. Samples: 12-inch square Samples of panel and 12-inch lengths of each profile of moldings.
B. Shop Drawings: Shop Drawings showing panel joint locations and details. Joint locations are subject to the Architect’s approval.
C. Data: Manufacturer Product Data including testing laboratory certification of fire hazard classification on each package.
D. Maintenance instructions:

1. Copy of the panel manufacturer’s maintenance instructions.
2. Include recommended cleaning materials and methods of application therefore together with precautions in cleaning materials' use if such are improperly applied.

1.4 HANDLING

A. Store panels indoor, and flat to avoid distortion. Maintain storage area temperature above 60-degree F.

1.5 JOB CONDITIONS

A. Comply with wall panel manufacturer recommendations for temperature and humidity in installation areas.
B. Illuminate work areas during installation to provide the same or greater level of illumination required to properly perform the work and as will occur in the room or space after the building is in operation.

PART 2 - PRODUCTS

2.1 MATERIALS

A. FRP wall panel: By one of the following, furnished in longest length available to minimize joints, of the color selected by the Architect.

1. Marlite Standard FRP panels, P 100 white, pebbled finish, basis of design.

2. Fire-X Glasbord by Crain Composites.
3. Sequentia Inc.
4. Or equal.

B. Trim: Manufacturer standard vinyl division bar, insider corner, outside corner and cap as required, matching the color of wall panel.
C. Fasteners: Manufacturer standard rivets matching the color of the wall panel.
D. Adhesive: Titebond “Fast Grab”, or equal non-toxic, non-allergenic adhesive recommended by the wall panel manufacturer and meeting Code requirements for flammability and toxicity.
E. Sealant: White, low gloss silicone, as specified in Section 07 92 00 unless otherwise recommended by panel manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine surfaces scheduled to receive wall panel for conditions that will adversely affect execution, permanence and quality of work. Verify that substrates are:

1. Clean, smooth, dry, free of irregularities.
2. Straight within a maximum tolerance of 1/8-inch in 10 feet, and not greater than 1/16-inch each running foot.

B. Correct detrimental conditions before proceeding with installation.

3.2 MOLDING INSTALLATION

A. Provide molding at top and bottom edges of panels. Use full-length stock moldings for run equaling, or less than, the stock length. Miter corners.
B. Butt vertical edges tight and flush.
C. Install panels plumb and level, and with hairline joints.

3.3 INSTALLATION OF PANELS

A. Except as modified in this Section, comply with the panel manufacturer's installation instructions.
B. Establish the top of the wainscot, or vertical terminations, in a straight line.
C. Avoid contamination of panel faces.
D. Butt joints for an even and tight fit along entire length of joint. Make joints plumb and level.
E. Balance sheet width symmetrically about centerline of wall so that no sheet is less than 2-foot wide.
F. Glue panels securely to substrate.
G. Square cut and sand smooth edges that will not be covered by trim. Do not damage exposed face.
H. Carefully locate penetrations and openings through the panels, including electrical outlets and piping, and provide minimum sized openings as required. Size openings so they will be covered by switch plates, flanges and other required trim.

3.4 CLEANING

A. Remove excess sealant and adhesive from joint immediately.
B. Clean installation immediately after installation with manufacturer recommended cleaner.
C. Replace damaged or permanently contaminated units.

END OF SECTION

SECTION 09 90 00 - PAINTING

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:

1. Painting and finishing all interior and exterior exposed surfaces throughout the Project, except as excluded in Paragraphs B and C below.
2. Surface preparation, priming and coats of paint specified herein are in addition to shop priming and surface treatment specified in other Sections.
3. Paint all exposed surfaces whether or not colors are designated, except where the natural finish of the material is obviously intended or specifically noted as a surface not to be painted. Where items or surfaces are not specifically mentioned, paint these the same as adjacent similar materials or areas.
4. This Section also includes sealing joints between surfaces to be painted, except for joints designed to be expressed in the Work and joints between a natural finish and a painted surface.
5. Section also includes preparation of existing surface to be painted and painting these surfaces.

B. Painting specified elsewhere:

1. Shop priming of ferrous metal items included under miscellaneous metal fabrications, hollow metal work, and similar work.
2. Deck coating.
3. Finished (not primed) mechanical and electrical equipment including light fixtures, switchgear and distribution cabinets, except as specified in Article 3.4 below.
4. Prefinished glazed assemblies, including skylights.
5. Pavement markings.
6. Toilet compartments and screens.
7. Exterior wall louvers.
8. Flagpoles.
9. Signage.
10. Postal equipment.
11. Loading dock equipment.
12. Parking control equipment.
13. Piping identification.

C. Painting not included: Do not paint the following surfaces.

1. Insulation and its facing.
2. Wood flooring.
3. Concrete and CMU.
4. Sprayed fireproofing.
5. Roofing.
6. Steel decking.
7. Chain link partitions.
8. Finish hardware, except those items noted USP.
9. Flexible door and window seals and weatherstripping (paint exposed metal to match door frame).
10. Finished metal surfaces such as anodized aluminum, stainless steel, chromium-plating, copper, bronze, brass and similar finished materials will not require finish painting.

11. Painting is not required on walls or ceilings in concealed and inaccessible areas, such as furred areas, pipe spaces, duct shafts and elevator shafts.
12. Operating parts, labels and nameplates:

    a. Do not paint moving parts of operating units, mechanical and electrical parts, such as valve and damper operator linkages, sinkages, sensing devices, motor and fan shafts.
    b. Do not paint over any nameplates, Code required labels, such as UL and FM, or any equipment identification, performance rating, name, or nomenclature plates.

1.2 DEFINITIONS

A. Paint: The term, as used in this Section, means all coating system components, including primers, emulsions, enamels, varnishes, stains, lacquers, sealers, fillers, and other applied materials whether used as prime, intermediate or finish coat.
B. Definitions of painting terms: ASTM D 16, unless otherwise specified.
C. Dry film thickness (DFT): Thickness of a coat of paint in fully cured state measured in mils (1/1000-inch).
D. Sheen: The terms used in these Specifications refer to the following gloss ranges when tested in accordance with ASTM D 523 test method.

Name	Test Method	Gloss Range
Flat	60-degree meter	0 to 7
Low sheen	60-degree meter	10 to 15
Eggshell	60-degree meter	25 to 30
Semi-gloss	60-degree meter	55 to 60
Gloss	60-degree meter	85 to 90

E. Coat: As used in this Section means a layer of paint, varnish, lacquer, or other material applied, then allowed to dry. To backroll or apply a wet-on-wet film still constitutes a single coat.
F. Finish: As used in this Section means the entire coating system including the texture, color, and sheen of a surface.
G. Refinish: As used in this Section implies a new finish will be applied to a surface that has been finished as defined above.
H. Touchup: As used in this Section means correction of deficiencies in the specified work to achieve a properly painted surface.

1.3 ADMINISTRATIVE REQUIREMENTS

A. Phasing: Program cleaning and painting so that dust and other contaminants from the cleaning process will not fall on wet, newly painted surfaces.

1.4 SUBMITTALS

A. Materials:

1. Copies of a complete materials list, identified by manufacturer name and product label or stock number.
2. Prepare list in the form of a repetition of the specified paint finishes, with the addition of the specific product intended for each coat.

B. Color samples:

1. Eight-and-one-half- by 11-inch samples of each color for painted finishes.

2. Provide stepped samples, defining each separate coat, including block fillers and primers. Identify paint system on back of control Samples.
3. Use representative colors when preparing samples for review.
4. Provide a list of materials and applications for each coat of each sample. Label each sample for location and application.
5. For transparent finishes, prepare the samples on wood specie, which will be used for the Project; 12-inch for lumber; 12-inch square for veneered panels.
6. Resubmit until required sheen, color, and texture are achieved.

C. Data: Manufacturer product data as follows.

1. Data for paint products, including paint label analysis, application instruction, and VOC content in grams/liter.
2. Duplicate copies of manufacturer affidavit with each shipment of materials delivered to the job site certifying that each material furnished complies with specified requirements.

1.5 QUALITY ASSURANCE

A. Painter’s qualifications: Firm and individuals experienced in applying paints and coatings similar in material, design, and extent to those specified for the Project, whose work has resulted in applications with a record of successful in-service performance.
B. SCAQMD Rule 1113: Submit paint manufacturer's certificate stating that provided coatings meet or exceed current SCAQMD Rule 1113 requirements.
C. Mockups:

1. Apply sample paint finishes (approximately 10-foot square) of each color scheme to wall areas, as directed by the Architect. Refer to Section 09 24 00 for painting cement plaster mockup and to Section 09 29 00 for painting gypsum board mockup.
2. Obtain Architect's approval of mockups before proceeding further. Approved mockups will be used as a standard for the Project, and if properly identified may remain a part of the Work.
3. Final acceptance of colors will be from job-applied samples.

1.6 JOB CONDITIONS

A. Environmental requirements:

1. Comply with paint manufacturer’s recommendations for environmental conditions and the following.
2. Provide adequate heating and ventilating to maintain environmental conditions recommended by paint manufacturer.
3. Do not apply finish in areas where dust is being generated.
4. Apply paint under the following prevailing conditions.

a. Air and surface temperatures are not below 40-degree F. or above 120-degree F.
b. Surface temperature is at least 5-degree F. above the dew point.
c. When there is not threat of impending rain.

B. Protection:

1. Protect adjacent whether being painted or not against damage from painting operation. Correct damage by cleaning, repairing, replacing, and repainting, as approved by Architect, and leave in an undamaged condition.
2. Use protective methods and materials, including temporary covering, recommended in writing by deferred (finish) flooring manufacturer.

3. Provide "Wet Paint" signs to protect newly coated finishes. After completing coating operations, remove temporary protective wrappings provided by others to protect their work. Post signs immediately after painting.
4. Provide drop cloths, shields, barricades and other protection necessary to safeguard adjacent surfaces not to be painted.
5. Provide and maintain protection as required to protect finished work from damage until its acceptance.

C. Illuminate work area during painting to provide the same or greater level of illumination required to properly perform the work and will occur in the room or space after the building is in operation.

1.7 HANDLING

A. Store materials indoors and mix only in spaces suitable for such purpose. Protect adjacent surfaces when mixing.
B. Store paint containers so the manufacturer's labels are clearly visible.

1.8 WARRANTY

A. Color of exterior surfaces painted, as part of the work of this Section shall, at the end of one year, have remained free from serious fading when compared to a control sample of the original paint.
B. Interior and exterior paint shall have its original adherence at the end of one year and there shall be no evidence of blisters, running, peeling, scaling, chalking, streaks, or stains at the end of this period.
C. Washing painted surfaces with alkali-free soap and water shall remove surface dirt from painted surfaces without producing deteriorating effects.

1.9 MAINTENANCE MATERIAL

A. With closeout submittals deliver one identified unopened gallon of each type and color of paint material used on the Project to the Owner for future paint touchup.
B. In addition to manufacturer label, identify with room number, floor or area, type of paint, color and sheen, as applicable, for future identification.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Specified and approved manufacturers:

1. Catalog names and numbers refer to products manufactured or distributed by the Vista Paint Corp. Dunn Edwards Corp. and Sherwin Williams, except as otherwise specified.
2. Equivalent acceptable products by Benjamin Moore, and PPG may be substituted when approved by the Architect.

2.2 PAINT

A. General:

1. Provide coating systems meeting or exceeding current SCAQMD Rule 1113 requirements.
2. Biocide content shall not exceed 0.025 percent by weight or volume.

3. Paint shall not contain fungicides or bactericides classified as mercury acetates, phenol phenates, or phenol formaldehyde.
4. Water-based paints shall not be formulated or manufactured with chemicals listed by Green Seal to be hazardous including, but not limited to, formaldehyde, halogenated solvents, aromatic hydrocarbons, mercury, and mercury compounds.
5. Paints shall not be tinted with pigments of lead, cadmium, chromium, and their oxides.

B. Quality and manufacture: Insofar as practicable, each paint shall be factory-mixed to match approved samples and colors and be of a consistency permitting immediate application. Use best quality grade regularly manufactured by one of the manufacturers listed in the schedule at the end of the Section.
C. Clear interior wood coatings: McCloskey's, Sikkens and Deft
D. Paint uniformity and compatibility:

1. Box at the job site or factory-batch paint to ensure color uniformity and consistency. This includes the required maintenance materials.
2. Provide finish coats compatible with the prime coats used.

a. Review other Sections of these Specifications, in which prime coats are specified, and manufacturer data for shop-primed surfaces to be painted.
b. Be responsible for the compatibility of the total coating system.

3. Provide barrier coats over incompatible primer or remove and reprime.
4. Products of more than one approved manufacturer may be used, except that all products applied on a surface shall be by the same manufacturer.

2.3 MISCELLANEOUS MATERIALS

A. Joint sealant: Paintable sealant as specified in Section 07 92 00.
B. Galvanized etching product: One of the following.

1. Jasco Prep N Prime.
2. Oakite 747 LTS.
3. Henkel Galvaprep 5.

2.4 COLOR SCHEDULE

A. Refer to the Finish and Materials Schedule for paint colors.
B. Number of colors to be used will be determined by the Architect.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine surfaces to be painted for conditions that would adversely affect the permanence and quality of this work.
B. Correct unsuitable conditions before proceeding with painting.

3.2 SURFACE PREPARATION

A. General: Prepare surfaces to receive the specified finishes in compliance with the paint manufacturer's instructions and the following. Extend painting on all surfaces visible from any angle.

B. Galvanized steel: Comply with American Galvanizers Association recommendations, ASTM D 2092, ASTM D 6386 - 10 Standard Practice for Preparation of Zinc (Hot-Dip Galvanized) Coated Iron and Steel Product and Hardware Surfaces for Painting, and the following.

1. Clean with commercial phosphoric acid solution or one of the products named above for pretreatment or by brush off blast cleaning with a fine abrasive to achieve a uniform anchor profile of 1.5 to 2 mils.
2. Recoat within the time limit recommended by the primer manufacturer.

C. Shop-primed metal: Remove oil, grease, dirt and foreign matter. Spot prime abraded surfaces with compatible primer.
D. Shop-painted metal: Sand to provide a mechanical bond with field applied finishes, or use a commercial preparation specifically formulated to improve paint bond.
E. Unprimed ferrous metal: Remove rust, mill scale, oil and other foreign matter.
F. Aluminum: Remove foreign matters and clean with mineral spirit.
G. Factory-primed equipment: Repair damaged primer; remove rust and clean to bright metal where appropriate. Sand or etch primer to permit bonding of finish coats. Clean surfaces thoroughly before applying additional coats.
H. Plaster, concrete and CMU:

1. Clean surfaces of dirt, laitance, encrustations and foreign matter. For concrete, comply with SSPC-SP13, “Surface Preparation of Concrete.”
2. In plaster and concrete, patch cracks, holes, pits and other imperfections, not patched under other Sections, flush and smooth with adjacent surfaces.
3. Do not apply sealer or paint when the moisture content of the surfaces to be painted exceeds 8 percent.
4. Touchup suction spots after priming with an additional prime coat until all surfaces show a uniform coating.

I. Gypsum board:

1. Remove dust, loose particles or other matter that would prevent proper paint adhesion.
2. Check to see that joints and screw heads are properly covered with joint compound and sanded smooth and flush with adjacent surfaces.

J. Wood:

1. Sandpaper smooth and dust clean. Remove handling marks and raised grain.
2. Fill nail holes, cracks and depressions with wood filler , colored to match finish for wood scheduled to receive a transparent finish. Use a tack cloth on wood to receive a transparent finish to remove sanding dust.

K. Other materials not covered above: Prepare to receive paint in compliance with the paint manufacturer instructions.
L. Existing painted surfaces:

1. General:

a. Wash surfaces with biodegradable detergent to remove dirt, dust and contaminants. Rinse clean. Use bleach on mildew; remove mildew completely.
b. Patch dents, gouges and other imperfections in painted surfaces and sand smooth and flush with adjacent undamaged surfaces so that patching will be invisible after painting.

c. Remove dust, rust and other surface contaminates, loose and unsound paint coatings, etc. as required to provide clean and sound surfaces to receive new paint.
d. Remove gloss from enamel paints with steel wool or by treating them with a commercial de-glosser used in compliance with its manufacturer's instructions.
e. Where paint is missing, damaged, or dented and where bare substrate is exposed, remove all surfaces contamination and featheredge all edges to zero. Sand surfaces smooth and prime.
f. Additionally, paint that is loose or is not otherwise tightly adhered to the substrate must be removed back to sound paint and down to the substrate, and all edges feathered to zero. When 40 percent or more of the paint on a given substrate is loose, damaged, or otherwise unsound, all the paint down to the substrate must be removed.

2. Wood:

a. Verify that substrate is smooth and free of dirt, oil, and other foreign substances, while knots shall be seasoned, clean, dry, and sealed.
b. Holes and imperfections must be filled with putty or plastic wood filler and sanded smooth, with the edges, ends, faces, undersides, and backsides primed.
c. There shall be neither signs of steel wool (used for smoothing) nor blue stain.

3. Galvanized surfaces:

a. Clean of soil, cement spatter, weld flux and spatter, oil grease, grime, and other surface dirt.
b. Additionally, repair damaged zinc coating on galvanized surfaces with high zinc content cold-galvanizing repair.
c. Remove grease, oil, dust, grime, and loose dirt are removed;
d. Abrade surfaces sufficiently and roughen to provide a sound-anchoring base for new paint.

4. Rust: Remove down to bright metal and prime surfaces with rust-inhibitive primer.
5. Test: Test a small area of the previously painted finish with the new coating by applying to specified thickness and then continuing the test for the manufacturer's recommended published length of time before re-coating. If the previously painted surface blisters, wrinkles, dissolves, and/or delaminates, it will not work with the new finish. Where the previously painted surface is incompatible with the finish coat, one should apply a proper barrier coat to the prime coat. It is important to allow the manufacturer's suggested drying time between the succeeding coat, and to check the film of the previous coat be certain it is cured.

M. Hardware:

1. Remove hardware, hardware accessories, machined surfaces, plates, lighting fixtures and similar items in place and not to be painted, or provide surface- applied protection prior to surface preparation and painting.
2. Coat cutouts for hinges, edges of lockset holes and same as for first coat.
3. Following completion of painting each space or area, reinstall the removed item by workmen skilled in the trades involved.

N. Fire extinguishers and fire hose cabinets: Apply 2 coats of paint finish, inside and out, matching finish and color of adjoining areas, unless otherwise noted for directed.
O. Weatherstripping and sound seals. Paint exposed metal surfaces to match the door frame, whether or not unfinished, furnished with factory prime coat, or factory treated for paint adhesion.

P. Access doors and panels: Generally, paint the same color as surrounding walls and ceiling.
Q. Registers: Paint exterior of register same color as adjacent wall. Paint interior of connected duct flat black for a distance of 18 inches.

3.3 PAINT PREPARATION

A. Open paint containers only as required for use. Mix paint in designated areas.
B. Thoroughly stir and agitate paint to uniformly smooth consistency suitable for proper application.
C. Do not reduce, change or use any materials except in compliance with manufacturer printed instructions.
D. In all cases, prepare and handle paint to prevent deterioration and inclusion of foreign matter.

3.4 APPLICATION

A. General:

1. Seal interior joints between wood or wood composite materials, trim, baseboard, molding, and casements and adjacent materials with paintable sealant specified in Section 07 92 00.
2. On prefinished wood doors, finish bottom after trimming and cutouts with 2 coats of high solids clear urethane varnish promptly upon delivery to the jobsite. This requirement applies also to plastic laminate faced doors.
3. Where the 2 faces of doors differ in color or finish, finish the edges to match the face visible when the door is open.
4. Apply paint only under conditions that will insure finishes free from blemishes and defects. Leave corners with no undue amount of paint buildup.
5. Use a slightly different shade for each coat of paint so that it may be readily identified.
6. Primer and intermediate coats shall be unscarred and completely integral when succeeding coats are applied. Sand and dust between each coat to remove defects visible from a distance of 5 feet.
7. Give particular attention to edges, angles, flanges, and other similar areas, where insufficient film thicknesses are likely to be present, and ensure proper millage in these areas.
8. Remove paint spillage and spatters on adjacent surfaces so as not to damage the surface being cleaned.

    a. Perform patching and repairs required because of painting operations.
    b. Refinish entire panel or assembly where portion of finish has been damaged or is not acceptable to the Architect.

9. Paint interior surfaces of ducts, where visible thru registers and grilles, with a flat nonspecular black paint.
10. Unless otherwise directed by the Architect, spray-paint exposed surfaces of ceiling diffusers, air return grilles, speakers and other electrical and mechanical items, except smoke detectors and sprinkler heads, in painted ceilings to match the ceilings, whether these items are primed or factory-finished.
11. Number of coats:

    a. The number of coats and paint film thickness required is the same regardless of the application method. Do not apply succeeding coats until the previous coat has completely dried.
    b. The number of coats specified is the minimum required for complete coverage and uniformity of color.
    c. Apply additional coats when undercoats, stains, or other conditions show through the final finish until the finish is of uniform color and appearance.

12. Paint surfaces behind movable equipment and furniture the same as similar exposed surfaces. Paint surfaces behind permanently fixed equipment or furniture with prime coat only.
13. Paint interior surfaces, which are a continuation of exterior surfaces, subject to exterior exposure (such as an out-swinging door), with the applicable exterior coating system.
14. For opaque finishes, completely cover surfaces to be painted to provide an opaque, smooth surface film uniform in finish, color, appearance, and coverage. Painted surfaces with cloudiness, spotting, holidays, laps, brush marks, roller tracking, runs, sags, ropiness and other imperfections are not acceptable. Cut paint in sharp lines and color breaks.
15. For transparent finishes, apply multiple coats to produce a glass-smooth surface film of even luster, free of laps, cloudiness, color irregularity, runs, brush marks, orange peel, nail holes, and other surface imperfections.
16. Completed work shall match approved samples, as determined by the Architect. Remove, refinish, or repaint work not complying with specified requirements.

B. Labeling rated (fire and smoke walls and partitions): Identify both sides of rated walls and partitions above finished and decorative ceilings (plenum) with minimum 2-inch high, bright red letters spaced at 10 feet o.c. maximum, as follows. Identification can be painted using a stencil or by using pre-printed self-adhesive labels.

1. Fire rated partitions: "FIRE PARTITION - DO NOT PENETRATE."
2. Smoke barrier partitions: "SMOKE PARTITION - DO NOT PENETRATE."

C. Painting fire suppression, plumbing, HVAC, electrical, communication, and electronic safety and security work: Paint the following and their hangers and accessories where exposed to view:

1. Uninsulated metal piping.
2. Uninsulated plastic piping.
3. Pipe hangers and supports.
4. Ductwork.
5. Metal conduit.
6. Plastic conduit.
7. Tanks that do not have factory-applied final finishes.

D. Application method: Contractor's option provided applied coatings match approved samples. The Architect reserves the right to require that paint be sprayed for smoothness and uniformity.

E. Priming:

1. Prime bare metal scheduled to be painted, and not embedded in concrete and masonry, immediately upon delivery to the site.
2. Time lapse between priming and application of second coat shall be as short as possible.

F. Shop-primed metal:

1. Apply 2 finish coats of paint to match adjoining surfaces, as directed by the Architect, to shop primed mechanical and electrical equipment. This work includes but is not limited to interior of fire hose cabinets, air grilles, ceiling diffusers, electrical and telephone panels, and access panels.
2. Paint conduits, outlets and pull boxes, and mechanical equipment exposed to view, such as covered and uncovered piping and ductwork, pumps, compressors, air conditioning equipment and tanks as specified in this Section.
3. Paint the back side of access panels, removable or hinged covers to match the exposed surfaces.

G. Miscellaneous painting: Surfaces to be painted and not specifically described herein, shall be painted with a product specifically manufactured or prepared for the material and surface to be painted with a prime and 2 finish coats.

3.5 TOUCHUP/CLEANING

A. At completion of construction activities of other trades, touchup and restore damaged or defaced painted surfaces. Comply with procedures specified in PDCA P1.

3.6 PAINT FINISH SCHEDULE

A. Finish all surfaces in compliance with the schedule in Section 09 90 00A, following this Section. Catalog names and numbers refer to products by the Vista, Dunn Edwards, Sherwin Williams, Monochem and Carboline except as otherwise specified.

END OF SECTION

SECTION 09 90 00A – PAINT FINISH SCHEDULE

1.1 EXTERIOR SURFACES

A. Wood: 100 percent Acrylic Flat

1. Primer (1 coat):

a. 4200 Terminator II by Vista Paint.
b. UGPR00 Ultra Grip Primer by Dunn-Edwards.
c. ProBlock Latex Primer/Sealer, B51-600 Series by Sherwin-Williams.

2. Finish Coat (2 coats):

a. 2000 Duratone by Vista Paint.
b. EVSH10 Evershield by Dunn-Edwards.
c. Duration Flat K32 Series by Sherwin-Williams.

B. Wood: 100 percent Semi-Gloss Acrylic

1. Primer (1 coat):

a. 4200 Terminator II by Vista Paint.
b. UGPR00 Ultra Grip Primer by Dunn-Edwards.
c. ProBlock Latex Primer/Sealer, B51-600 Series by Sherwin-Williams.

2. Finish Coat (2 coats):

a. 8400 Carefree SG by Vista Paint.
b. EVSH50-0 Evershield SG by Dunn-Edwards.
c. Duration Semi-Gloss A98 Series by Sherwin-Williams.

C. Wood: 100 percent Gloss Acrylic

1. Primer (1 coat):

a. 4200 Terminator II by Vista Paint.
b. UGPR00 Ultra Grip Primer by Dunn-Edwards.
c. ProBlock Latex Primer/Sealer, B51-600 Series by Sherwin-Williams.

2. Finish Coat (2 coats):

a. 8500 Carefree Gloss by Vista Paint.
b. EVSH60-0 Evershield GL by Dunn-Edwards.
c. Duration Gloss K38 Series by Sherwin-Williams.

D. Wood: Semi-Transparent Stain

1. 2 Coats:

a. Olympic Maximum Semi-Transparent Stain by Vista Paint.
b. Okon WPT-3 Semi-Transparent Stain by Dunn-Edwards.

SuperDeck Exterior Waterborne Semi-Transparent Stain, SD3T00015 by Sherwin-Williams.

E. Concrete and Brick: 100 percent Acrylic Flat

1. Primer (1 coat):

a. 4600 Uniprime II by Vista Paint.
b. ESPR00 Eff-Stop by Dunn-Edwards.
c. Loxon Concrete & Masonry Primer/Sealer, A24W8300 by Sherwin-Williams.

2. Finish Coat (2 coats):

a. 2000 Duratone by Vista Paint.
b. EVSH10 Evershield by Dunn-Edwards.
c. Duration Flat K32 Series by Sherwin-Williams.

F. Portland Cement Plaster: 100 percent Acrylic Flat

1. Primer (1 coat):

a. 4600 Uniprime II by Vista Paint.
b. ESPR00 Eff-Stop by Dunn-Edwards.
c. Loxon Concrete & Masonry Primer/Sealer, A24W8300 by Sherwin-Williams.

2. Finish Coat (2 coats):

a. 2000 Duratone by Vista Paint.
b. EVSH10 Evershield by Dunn-Edwards.
c. Duration Flat K32 Series by Sherwin-Williams.

G. CMU: 100 percent Acrylic Flat

1. Primer (1 coat):

a. 018 Acrylic Block Filler by Vista Paint.
b. SBPR00 Blocfil by Dunn-Edwards.
c. Loxon Block Surfacer, A24W200 by Sherwin-Williams.

2. Finish Coat (2 coats):

a. 2000 Duratone by Vista Paint.
b. EVSH10 Evershield by Dunn-Edwards.
c. Duration Flat K32 Series by Sherwin-Williams.

H. CMU: 100 percent Acrylic Elastomeric

1. Primer (1 coat):

a. 018 Acrylic Block Filler by Vista Paint.
b. SBPR00 Blocfil by Dunn-Edwards.
c. Loxon Block Surfacer, A24W200 by Sherwin-Williams.

2. Finish Coat (2 coats):

    a. 1900 Weather Master at 8 to 10 MILS per coat DFT by Vista Paint.
    b. DE Enduralastic, 10 EDLX10-0 Elastomeric at 11 to 13 MILS per coat DFT by Dunn-Edwards.
    c. Loxon XP, A24W1451 at 8 to 10 MILS per coat DFT by Sherwin-Williams.

I. CMU, Concrete, Brick: Graffiti-Resistant Coating (Permanent Matte Flat)

1. See Section 09 96 23

J. Painted Surfaces

1. Finish Coat (2 coats):

    a. Monochem 6100 Clear or 6150 Pigmented TDFT Base at 4-6 MILS by Vista Paint.
    b. Monochem 6100 Clear or 6150 Pigmented TDFT Base at 4-6 MILS by Dunn-Edwards.
    c. Monochem 6100 Clear or 6150 Pigmented TDFT Base at 4-6 MILS by Sherwin-Williams.

2. Finish Coat (2 coats):

    a. Monochem 5600 Permashield Premium at 4-6 MILS TDFT by Vista Paint.
    Monochem 5600 Permashield Premium at 4-6 MILS TDFT by Dunn-Edwards.
    Monochem 5600 Permashield Premium at 4-6 MILS TDFT by Sherwin-Williams.

K. Clear Water Repellent

1. Monochem Aquaseal ME12 by Vista Paint.
2. Okon S-20 by Dunn-Edwards.
3. Loxon 7% Siloxane Water Repellent, A10T7 by Sherwin-Williams.

L. Unpainted Surfaces: Permanent (Matte Flat)

1. Finish Coat (2 coats):

    a. Monochem 6100 Clear Base at 4-6 Mils TDFT by Vista Paint.
    Monochem 6100 Clear Base at 4-6 Mils TDFT by Dunn-Edwards.
    Monochem 6100 Clear Base at 4-6 Mils TDFT by Sherwin-Williams.

2. Finish Coat (2 coats):

    a. Monochem 5600 Permashield Premium at 4-6 MILS TDFT by Vista Paint.
    Monochem 5600 Permashield Premium at 4-6 MILS TDFT by Dunn-Edwards.
    Monochem 5600 Permashield Premium at 4-6 MILS TDFT by Sherwin-Williams.

M. Iron and Steel: 100 percent Gloss Acrylic

1. Primer (1 coat):

    a. 9600 Protec Primer by Vista Paint.
    b. BRPR00 Block Rust by Dunn-Edwards.
    c. Pro Industrial Pro-Cryl Universal Primer, B66-310 Series by Sherwin-Williams.

2. Finish Coat (2 coats):

    a. 8500 Carefree Gloss by Vista Paint.
    b. EVSH60-0 Evershield GL by Dunn-Edwards.
    c. Duration Gloss K38 Series by Sherwin-Williams.

N. Iron and Steel: 100 percent Semi-Gloss Acrylic

1. Primer (1 coat):

    a. 9600 Protec Primer by Vista Paint.
    b. BRPR00 Block Rust by Dunn-Edwards.
    c. Pro Industrial Pro-Cryl Universal Primer, B66-310 Series by Sherwin-Williams.

2. Finish Coat (2 coats):

    a. 8400 Carefree SG by Vista Paint.
    b. EVSH50-0 Evershield GL by Dunn-Edwards.
    c. Duration Semi-Gloss A98 Series by Sherwin-Williams.

O. Aluminum and Galvanized Steel: 100 percent Gloss Acrylic

1. Pretreat:

    a. Jasco Prep N Prime by Vista Paint.
    b. SCME-01 Supreme Etch by Dunn-Edwards.
    c. Great Lakes Clean & Etch by Sherwin-Williams.

2. Primer (1 coat):

    a. 4800 Metal Pro Primer by Vista Paint.
    b. UGPR00 Ultra Grip Primer by Dunn-Edwards.
    c. Pro Industrial DTM Acrylic Primer/Finish, B66W11 by Sherwin-Williams.

3. Finish Coat (2 coats):

    a. 8500 Carefree Gloss by Vista Paint.
    b. EVSH60-0 Evershield GL by Dunn-Edwards.
    c. Duration Gloss K38 Series by Sherwin-Williams.

P. Aluminum and Galvanized Steel: 100 percent Semi-Gloss Acrylic

1. Pretreat:

    a. Krud Kutter by Vista Paint.
    b. SCME-01 Supreme Etch by Dunn-Edwards.
    c. Great Lakes Clean & Etch by Sherwin-Williams.

2. Primer (1 coat):

    a. 4800 Metal Pro Primer by Vista Paint.
    b. UGPR00 Ultra Grip Primer by Dunn-Edwards.
    c. Pro Industrial DTM Acrylic Primer/Finish, B66W11 by Sherwin-Williams.

3. Finish Coat (2 coats):

    a. 8400 Carefree SG by Vista Paint.
    b. EVSH50-0 Evershield SG by Dunn-Edwards.
    c. Duration Semi-Gloss A98 Series by Sherwin-Williams.

Q. Fiber Cement Board: 100 percent Acrylic Flat

1. Primer (1 coat):

    a. 4600 Uniprime II by Vista Paint.
    b. ESPR00 Eff-Stop by Dunn-Edwards.
    c. Loxon Concrete & Masonry Primer/Sealer, A24W8300 by Sherwin-Williams.

2. Finish Coat (2 coats):

    a. 2000 Duratone by Vista Paint.
    b. EVSH10 Evershield by Dunn-Edwards.
    c. Duration Flat K32 Series by Sherwin-Williams.

R. Zinc Alloy: 100 percent Semi-Gloss Acrylic

1. Pretreat:

    a. Krud Kutter by Vista Paint.
    b. SCME-01 Supreme Etch by Dunn-Edwards.
    c. Great Lakes Clean & Etch by Sherwin-Williams.

2. Primer (1 coat):

    a. 4800 Metal Pro Primer by Vista Paint.
    b. UGPR00 Ultra Grip Primer by Dunn-Edwards.
    c. Pro Industrial DTM Acrylic Primer/Finish, B66W11 by Sherwin-Williams.

3. Finish Coat (2 coats):

    a. 8400 Carefree SG by Vista Paint.
    b. EVSH50-0 Evershield SG by Dunn-Edwards.
    c. Duration Semi-Gloss A98 Series by Sherwin-Williams.

S. Ferrous Metal: Heavy Duty

1. Primer (1 coat):

    a. Carboline Carboguard 890 VOC at 5 MILS DFT by Vista Paint.
    b. Carboline Carboguard 890 VOC at 5 MILS DFT by Dunn-Edwards.
    c. Macropoxy 646-100 Fast Cure Epoxy, B58W620 at 5 MILS DFT by Sherwin-Williams.

2. Primer (1 coat):

    a. Carboline Carbothane 133MC at 5 MILS DFT by Vista Paint.
    b. Carboline Carbothane 133MC at 5 MILS DFT by Dunn-Edwards.
    c. Hi-Solids Polyurethane 100, B65-600 Series at 4 MILS DFT by Sherwin-Williams.

T. Gypsum Soffit Board: 100 percent Acrylic Flat

1. Primer (1 coat):

a. 4600 Uniprime II by Vista Paint.
b. UGPR00 Ultra Grip Primer by Dunn-Edwards.
c. ProBlock Latex Primer/Sealer, B51-600 Series by Sherwin-Williams.

2. Finish Coat (2 coats):

a. 2000 Duratone by Vista Paint.
b. EVSH10 Evershield or Enduralastic 10 by Dunn-Edwards.
c. Duration Flat K32 Series or A80-1100 Series by Sherwin-Williams.

1.2 INTERIOR SURFACES

A. Wood: Low Sheen 100 percent Acrylic

1. Primer (1 coat):

a. 4200 Terminator II by Vista Paint.
b. UGPR00 Ultra Grip Primer by Dunn-Edwards.
c. ProBlock Latex Primer/Sealer, B51-600 Series by Sherwin-Williams.

2. Finish Coat (2 coats):

a. 8200 Carefree by Vista Paint.
b. SPMA20 Suprema Velvet Sheen by Dunn-Edwards.
c. Duration Matte A96 Series by Sherwin-Williams.

B. Wood: Semi-Gloss 100 percent Acrylic

1. Primer (1 coat):

a. 4200 Terminator II by Vista Paint.
b. UGPR00 Ultra Grip Primer by Dunn-Edwards.
c. ProBlock Latex Primer/Sealer, B51-600 Series by Sherwin-Williams.

2. Finish Coat (2 coats):

a. 8400 Carefree Semi-Gloss by Vista Paint.
b. SPMA50 Suprema Semi-Gloss by Dunn-Edwards.
c. Duration Semi-Gloss A98 Series by Sherwin-Williams.

C. Wood: ST Stain & Clear Lacquer Finish (275 g/liter VOC)

1. Primer (1 coat):

a. VWS0250 Series ST Stain by Vista Paint.
b. Old Masters Stain [? ? ?] by Dunn-Edwards.
c. Minwax Water-based Wood Stain by Sherwin-Williams.

2. Primer (1 coat):

   a. NRS 1620 [? ? ?] by Vista Paint.
   b. Contractor's Edge Sanding Sealer by Dunn-Edwards.
   c. Sher-Wood NC Lacquer Sealer, T65FV14 Sanding Sealer by Sherwin-Williams.

3. Primer (1 coat):

   a. NRF 1626 Satin Lacquer by Vista Paint.
   b. Contractor's Edge Sanding Sealer by Dunn-Edwards.
   c. Sher-Wood 275 Lacquer, T75FH100 Series by Sherwin-Williams.

D. Wood: Stained, Water White Finish (for light colored stains) (275 g/liter VOC)

1. Primer (1 coat):

   a. VW0250 Series ST Stain by Vista Paint.
   b. Old Masters Stain, Mission White Satin by Dunn-Edwards.
   c. Minwax Water-based Wood Stain by Sherwin-Williams.

2. Primer (1 coat):

   a. NAF 1420 Satin Sealer by Vista Paint.
   b. Contractor's Edge WW Sanding Sealer by Dunn-Edwards.
   c. Sher-Wood NC Lacquer by Sherwin-Williams.

3. Primer (1 coat):

   a. NAF 1426 Satin Lacquer by Vista Paint.
   b. Contractor's Edge Satin Lacquer by Dunn-Edwards.
   c. Sher-Wood 275 Lacquer, T75FH100 Series by Sherwin-Williams.

E. Wood: Varnish Flat Clear

1. Finish Coat (2 coats):

   a. McCloskey's 6701 Flat by Vista Paint.
   b. McCloskey's 6701 Flat by Dunn-Edwards.
   c. Minwax Water based Wood Stain by Sherwin-Williams.

2. Finish Coat (2 coats):

   a. Varnish Satin Clear McCloskey's 6702 Satin by Vista Paint.
   b. Varnish Satin Clear McCloskey's 6702 Satin by Dunn-Edwards.
   c. Wood Classics Waterborne Polyurethane Varnish Satin by Sherwin-Williams.

3. Finish Coat (2 coats):

   a. Varnish Gloss Clear McCloskey's 6703 Gloss by Vista Paint.
   b. Varnish Gloss Clear McCloskey's 6703 Gloss by Dunn-Edwards.
   c. Wood Classics Waterborne Polyurethane Varnish Gloss by Sherwin-Williams.

F. Wood: Varnish Flat Clear

1. Finish Coat (2 coats):

a. DF 12 Dryfall Flat by Vista Paint.
b. AQUA10 Aquafall Dry Fall by Dunn-Edwards.
c. Waterborne Acrylic Dryfall Flat, B42W1 by Sherwin-Williams.

G. Rough Sawn Wood: Stain, Semi-Transparent

1. Finish Coat (2 coats):

a. Olympic Semi-Transparent Stain by Vista Paint.
b. Okon WPT-3 Semi-Transparent Stain by Dunn-Edwards.
c. Transparent Stain Waterborne Semi-Transparent Stain, SD3T00015 by Sherwin-Williams.

H. Concrete, Plaster, CMU: Flat Acrylic

1. Concrete Primer (1 coat):

a. 4600 Uniprime II by Vista Paint.
b. ESPR00 Eff-Stop by Dunn-Edwards.
c. ProBlock Interior/Exterior Latex Primer/Sealer, B51-600 Series by Sherwin-Williams.

2. Plaster Primer (1 coat):

a. 4600 Uniprime II by Vista Paint.
b. ESPR00 Eff-Stop by Dunn-Edwards.
c. ProBlock Interior/Exterior Latex Primer/Sealer, B51-600 Series by Sherwin-Williams.

3. CMU Primer (1 coat):

a. 018 Acrylic Block Filler by Vista Paint.
b. SBPR00 Blocfil by Dunn-Edwards.
c. Loxon Block Surfacer, A24W200 by Sherwin-Williams.

4. Finish Coat (2 coats):

a. 8100 Carefree Flat by Vista Paint.
b. SPMA10 Suprema Flat by Dunn-Edwards.
c. Duration Flat A95 Series by Sherwin-Williams.

I. CMU, Concrete, Plaster: Eggshell Acrylic

1. Concrete Primer (1 coat):

a. 4600 Uniprime II by Vista Paint.
b. ESPR00 Eff-Stop by Dunn-Edwards.
c. ProBlock Interior/Exterior Latex Primer/Sealer, B51-600 Series by Sherwin-Williams.

2. Plaster Primer (1 coat):

    a. 4600 Uniprime II by Vista Paint.
    b. ESPR00 Eff-Stop by Dunn-Edwards.
    c. ProBlock Interior/Exterior Latex Primer/Sealer, B51-600 Series by Sherwin-Williams.

3. CMU Primer (1 coat):

    a. 018 Acrylic Block Filler by Vista Paint.
    b. SBPR00 Blocfil by Dunn-Edwards.
    c. Loxon Block Surfacer, A24W200 by Sherwin-Williams.

4. Finish Coat (2 coats):

    a. 8200 Carefree VS by Vista Paint.
    b. SPMA30 Suprema EG by Dunn-Edwards.
    c. Duration Matte A96 Series by Sherwin-Williams.

J. CMU, Concrete, Plaster: Semi-Gloss Acrylic

1. Concrete Primer (1 coat):

    a. 4600 Uniprime II by Vista Paint.
    b. ESPR00 Eff-Stop by Dunn-Edwards.
    c. ProBlock Interior/Exterior Latex Primer/Sealer, B51-600 Series by Sherwin-Williams.

2. Plaster Primer (1 coat):

    a. 4600 Uniprime II by Vista Paint.
    b. ESPR00 Eff-Stop by Dunn-Edwards.
    c. ProBlock Interior/Exterior Latex Primer/Sealer, B51-600 Series by Sherwin-Williams.

3. CMU Primer (1 coat):

    a. 018 Acrylic Block Filler by Vista Paint.
    b. SBPR00 Blocfil by Dunn-Edwards.
    c. Loxon Block Surfacer, A24W200 by Sherwin-Williams.

4. Finish Coat (2 coats):

    a. 8400 Carefree SG by Vista Paint.
    b. SPMA50 Suprema SG by Dunn-Edwards.
    c. Duration Semi-Gloss A98 Series by Sherwin-Williams.

K. CMU, Concrete, Plaster: 100 percent Acrylic

1. Concrete Primer (1 coat):

    a. 065 Acry-Prime by Vista Paint.
    b. ESPR00 Eff-Stop by Dunn-Edwards.
    c. ProBlock Interior/Exterior Latex Primer/Sealer, B51-600 Series

by Sherwin-Williams.

2. Plaster Primer (1 coat):

   a. 4600 Uniprime II by Vista Paint.
   b. ESPR00 Eff-Stop by Dunn-Edwards.
   c. ProBlock Interior/Exterior Latex Primer/Sealer, B51-600 Series by Sherwin-Williams.

3. CMU Primer (1 coat):

   a. 018 Acrylic Block Filler by Vista Paint.
   b. SBPR00 Blocfil by Dunn-Edwards.
   c. Loxon Block Surfacer, A24W200 by Sherwin-Williams.

4. Finish Coat (2 coats):

   a. 8500 Carefree Gloss by Vista Paint.
   b. EVSH60 Evershield GL by Dunn-Edwards.
   c. Duration Gloss K38 Series by Sherwin-Williams.

L. Masonry: Gloss Acrylic Epoxy

1. Concrete Primer (1 coat):

   a. 4600 Uniprime II by Vista Paint.
   b. ESPR00 Eff-Loc or Carboline 120 Primer with Carboline Sanitile 555 by Dunn-Edwards.
   c. ProBlock Interior/Exterior Latex Primer/Sealer, B51-600 Series by Sherwin-Williams.

2. Plaster Primer (1 coat):

   a. 4600 Uniprime II by Vista Paint.
   b. ESPR00 Super-Loc by Dunn-Edwards.
   c. ProBlock Interior/Exterior Latex Primer/Sealer, B51-600 Series by Sherwin-Williams.

3. CMU Primer (1 coat):

   a. 018 Acrylic Block Filler by Vista Paint.
   b. SBPR00 Blocfil by Dunn-Edwards.
   c. Loxon Block Surfacer, A24W200 by Sherwin-Williams.

4. Finish Coat (2 coats):

   a. S60 WB Gloss Epoxy at 2 to 3 MILS DFT by Vista Paint.
   b. S60 WB Gloss Epoxy at 2 to 3 MILS DFT or Carboline Sanitile 555 by Dunn-Edwards.
   c. Pro Industrial Water Based Catalyzed Epoxy Gloss, B73-300/B73V300 at 2 to 4 MILS DFT by Sherwin-Williams.

M. Gypsum Board: Flat

1. Finish Coat (2 coats):

    a. 8100 Carefree Flat by Vista Paint.
    b. SPMA10 Suprema Flat by Dunn-Edwards.
    c. Duration Flat A95 Series by Sherwin-Williams.

N. Gypsum Board: Eggshell

1. Primer (1 coat):

    a. 1100 Hi-Build PVA Primer by Vista Paint.
    b. VNPR00 Vinylastic Primer by Dunn-Edwards.
    c. ProMar 200 Zero VOC Interior Latex Primer, B28W2600 by Sherwin-Williams.

2. Finish Coat (2 coats):

    a. 8200 Carefree Velva Sheen by Vista Paint.
    b. SPMA30 Suprema EG by Dunn-Edwards.
    c. Duration Matte A96 Series by Sherwin-Williams.

O. Gypsum Board: Low Sheen 100 percent Acrylic

1. Primer (1 coat):

    a. 1100 Hi-Build PVA Primer by Vista Paint.
    b. VNPR00 Vinylastic Primer by Dunn-Edwards.
    c. ProMar 200 Zero VOC Interior Latex Primer, B28W2600 by Sherwin-Williams.

2. Finish Coat (2 coats):

    a. 8300 Carefree Eggshell by Vista Paint.
    b. SPMA40 Suprema Low Sheen by Dunn-Edwards.
    c. Duration Satin A97 Series by Sherwin-Williams.

P. Gypsum Board: Semi-Gloss Acrylic

1. Primer (1 coat):

    a. 1100 Hi-Build PVA Primer by Vista Paint.
    b. VNPR00 Vinylastic Primer by Dunn-Edwards.
    c. ProMar 200 Zero VOC Interior Latex Primer, B28W2600 by Sherwin-Williams.

2. Finish Coat (2 coats):

    a. 8400 Carefree Semi-Gloss by Vista Paint.
    b. SPMA50 Suprema Semi-Gloss by Dunn-Edwards.
    c. Duration Semi-Gloss A98 Series by Sherwin-Williams.

Q. Gypsum Board: 100 percent Gloss Acrylic

1. Primer (1 coat):

a. 1100 Hi-Build PVA Primer by Vista Paint.
b. VNPR00 Vinylastic Primer by Dunn-Edwards.
c. ProMar 200 Zero VOC Interior Latex Primer, B28W2600 by Sherwin-Williams.

2. Finish Coat (2 coats):

a. 8500 Carefree Gloss by Vista Paint.
b. EVSH60 Evershield Gloss by Dunn-Edwards.
c. Duration Gloss K38 Series by Sherwin-Williams.

R. Gypsum Board: Gloss Acrylic Epoxy

1. Primer (1 coat):

a. 1100 Hi-Build PVA Primer by Vista Paint.
b. VNPR00 Vinylastic Primer by Dunn-Edwards.
c. ProMar 200 Zero VOC Interior Latex Primer, B28W2600 by Sherwin-Williams.

2. Finish Coat (2 coats):

a. Carboline Sanitile 255 at 2 to 3 MILS DFT by Vista Paint.
b. Carboline Sanitile 255 at 2 to 3 MILS DFT by Dunn-Edwards.
c. Pro Industrial Water Based Catalyzed Epoxy Gloss, B73-300/B73V300 at 2 to 4 MILS DFT by Sherwin-Williams.

S. Plaster: Gypsum, Portland Cement, Flat

1. Primer (1 coat):

a. 4600 Uniprime II by Vista Paint.
b. ESPR00 Eff-Stop by Dunn-Edwards.
c. ProBlock Interior/Exterior Latex Primer/Sealer, B51-600 Series by Sherwin-Williams.

2. Finish Coat (2 coats):

a. 8100 Carefree Flat by Vista Paint.
b. SPMA10 Suprema Flat by Dunn-Edwards.
c. Duration Flat, A95 Series by Sherwin-Williams.

T. Plaster: Gypsum, Portland Cement, Eggshell

1. Primer (1 coat):

a. 4600 Uniprime II by Vista Paint.
b. ESPR00 Eff-Stop by Dunn-Edwards.
c. ProBlock Interior/Exterior Latex Primer/Sealer, B51-600 Series by Sherwin-Williams.

2. Finish Coat (2 coats):

    a. 8200 Carefree Velva Sheen by Vista Paint.
    b. SPMA30 Suprema EG by Dunn-Edwards.
    c. Duration Matte A96 Series by Sherwin-Williams.

U. Plaster: Gypsum, Portland Cement, Semi-Gloss Acrylic

1. Primer (1 coat):

    a. 4600 Uniprime II by Vista Paint.
    b. ESPR00 Eff-Stop by Dunn-Edwards.
    c. ProBlock Interior/Exterior Latex Primer/Sealer, B51-600 Series by Sherwin-Williams.

2. Finish Coat (2 coats):

    a. 8400 Carefree SG by Vista Paint.
    b. SPMA50 Suprema SG by Dunn-Edwards.
    c. Duration Semi-Gloss A98 Series by Sherwin-Williams.

V. Plaster: Gypsum, Portland Cement, Gloss 100 percent Acrylic

1. Primer (1 coat):

    a. 4600 Uniprime II by Vista Paint.
    b. ESPR00 Eff-Stop by Dunn-Edwards.
    c. ProBlock Interior/Exterior Latex Primer/Sealer, B51-600 Series by Sherwin-Williams.

2. Finish Coat (2 coats):

    a. 8500 Carefree Gloss by Vista Paint.
    b. EVSH00 Evershield GL by Dunn-Edwards.
    c. Duration Gloss A38 Series by Sherwin-Williams.

W. Particleboard, Hardboard: Flat

1. Primer (1 coat):

    a. 4600 Uniprime II by Vista Paint.
    b. ESPR00 Eff-Stop by Dunn-Edwards.
    c. ProBlock Interior/Exterior Latex Primer/Sealer, B51-600 Series by Sherwin-Williams.

2. Finish Coat (2 coats):

    a. 8100 Carefree Flat by Vista Paint.
    b. SPMA10 Suprema Flat by Dunn-Edwards.
    c. ProMar 200 Zero VOC Interior Latex Flat, B30-2600 by Sherwin-Williams.

X. Particleboard, Hardboard: Semi-Gloss Acrylic

1. Primer (1 coat):

a. 4600 Uniprime II by Vista Paint.
b. ESPR00 Eff-Stop by Dunn-Edwards.
c. ProBlock Interior/Exterior Latex Primer/Sealer, B51-600 Series by Sherwin-Williams.

2. Finish Coat (2 coats):

a. 8400 Carefree SG by Vista Paint.
b. SPMA50 Suprema SG by Dunn-Edwards.
c. ProMar 200 Zero VOC Interior Latex Semi-Gloss, B31-2600 by Sherwin-Williams.

Y. Particleboard, Hardboard: Gloss 100 percent Acrylic

1. Primer (1 coat):

a. 4600 Uniprime II by Vista Paint.
b. ESPR00 Eff-Stop by Dunn-Edwards.
c. ProBlock Interior/Exterior Latex Primer/Sealer, B51-600 Series by Sherwin-Williams.

2. Finish Coat (2 coats):

a. 8500 Carefree Gloss by Vista Paint.
b. EVSH60 Evershield GL by Dunn-Edwards.
c. Duration Gloss A38 Series by Sherwin-Williams.

Z. Ferrous Metal: Semi-Gloss 100 percent Acrylic

1. Primer (1 coat):

a. 9600 Protec Primer by Vista Paint
b. BRPR00 Block-Rust by Dunn-Edwards.
c. Pro Industrial Pro-Cryl Universal Primer, B66-310 Series by Sherwin-Williams.

2. Finish Coat (2 coats):

a. 8400 Carefree SG by Vista Paint.
b. SPMA50 Suprema SG by Dunn-Edwards.
c. Duration Semi-Gloss A98 Series by Sherwin-Williams.

AA. Ferrous Metal: Gloss 100 percent Acrylic

1. Primer (1 coat):

a. 9600 Protec Primer by Vista Paint
b. BRPR00 Block-Rust by Dunn-Edwards.
c. Pro Industrial Pro-Cryl Universal Primer, B66-310 Series by Sherwin-Williams.

2. Finish Coat (2 coats):

    a. 8500 Carefree Gloss by Vista Paint.
    b. EVSH00 Evershield GL by Dunn-Edwards.
    c. Duration Gloss A38 Series by Sherwin-Williams.

BB. Ferrous Metal: Heavy Duty

1. Primer (1 coat):

    a. Carboline Carboguard 890 VOC at 5 MILS DFT by Vista Paint.
    b. Carboline Carboguard 890 VOC at 5 MILS DFT by Dunn-Edwards.
    c. Macropoxy 646-100 Fast Cure Epoxy, B58W620 at 5 MILS DFT by Sherwin-Williams.

2. Primer (1 coat):

    a. Carboline Carbothane 133MC at 5 MILS DFT by Vista Paint.
    b. Carboline Carbothane 133MC at 5 MILS DFT by Dunn-Edwards.
    c. Hi-Solids Polyurethane 100, B65-600 Series at 4 MILS DFT by Sherwin-Williams.

CC. Aluminum: Semi-Gloss 100 percent Acrylic

1. Primer (1 coat):

    a. 9600 Protec Primer by Vista Paint
    b. BRPR00 Block-Rust by Dunn-Edwards.
    c. Pro Industrial Pro-Cryl Universal Primer, B66-310 Series by Sherwin-Williams.

2. Finish Coat (2 coats):

    a. 8400 Carefree SG by Vista Paint.
    b. SPMA50 Suprema SG by Dunn-Edwards.
    c. Duration Semi-Gloss A98 Series by Sherwin-Williams.

DD. Aluminum: Gloss 100 percent Acrylic

1. Primer (1 coat):

    a. 4800 Metal Pro Primer by Vista Paint
    b. UGPR00 Ultra Grip Primer by Dunn-Edwards.
    c. Pro Industrial Pro-Cryl Universal Primer, B66-310 Series by Sherwin-Williams.

2. Finish Coat (2 coats):

    a. 8500 Carefree Gloss by Vista Paint.
    b. EVSH60 Evershield GL by Dunn-Edwards.
    c. Duration Gloss K38 Series by Sherwin-Williams.

EE. Stainless Steel, Copper, Brass: Semi-Gloss 100 percent Acrylic

1. Primer (1 coat):

    a. 4800 Metal Pro Primer by Vista Paint

b. UGPR00 Ultra Grip Primer by Dunn-Edwards.
c. Pro Industrial Pro-Cryl Universal Primer, B66-310 Series by Sherwin-Williams.

2. Finish Coat (2 coats):

a. 8400 Carefree SG by Vista Paint.
b. SPMA50 Suprema SG by Dunn-Edwards.
c. Duration Semi-Gloss A98 Series by Sherwin-Williams.

FF. Stainless Steel, Copper, Brass: Gloss 100 percent Acrylic

1. Primer (1 coat):

a. 4800 Metal Pro Primer by Vista Paint
b. UGPR00 Ultra Grip Primer by Dunn-Edwards.
c. Pro Industrial Pro-Cryl Universal Primer, B66-310 Series by Sherwin-Williams.

2. Finish Coat (2 coats):

a. 8500 Carefree Gloss by Vista Paint.
b. EVSH60 Evershield GL by Dunn-Edwards.
c. Duration Gloss K38 Series by Sherwin-Williams.

GG. Fiberglass or Glass: (All Finishes)

1. Primer (1 coat):

a. XIM Clear Primer by Vista Paint
b. XIM Clear Primer by Dunn-Edwards.
c. Extreme Bond Bonding Primer, B51W150 by Sherwin-Williams.

2. Finish Coat (2 coats):

a. Finish as specified by Vista Paint.
b. Finish as specified by Dunn-Edwards.
c. Finish as specified by Sherwin-Williams.

HH. Acoustical Tile: Flat

1. Primer (1 coat):

a. 013 Acoustic Kote by Vista Paint
b. W 615 Acoustikote by Dunn-Edwards.

2. Finish Coat (2 coats):

a. 013 Acoustic Kote by Vista Paint.
b. W 615 Acoustikote by Dunn-Edwards.

II. Intumescent Paint on Plywood Backing Panel: Latex

1. Primer (1 coat minimum):

a. “Intumescent Latex” (thin film) by Contego International

b. “Flame Stop IM” by Flame Stop, Inc., or equal.

JJ. Concrete Epoxy Flooring System in Elevator Machine Rooms, and Electrical and Telephone Closets: Track blast or bead floor prior to application (ASTM D 4260)

1. Finish Coat (2 coats):

a. Carboline Carboguard 890 VOC at 5 MILS DFT by Vista Paint
b. Carboline Carboguard 890 VOC at 5 MILS DFT by Dunn-Edwards.
c. Armorseal 8100 Water Based Epoxy Floor Coating, B70-8000/B70V8100 Series by Sherwin-Williams.

END OF SECTION

SECTION 09 96 00 - HIGH-PERFORMANCE COATINGS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes the following:

1. Surface preparation and field application of high-performance coating systems to exterior steel surfaces, except for stainless steel and prefinished surface.
2. Establishing requirements for shop priming specified assemblies/materials. Coordinate surface preparation and shop priming with the requirements of this Section.

B. Related requirements:

1. Division 05 for shop-primed ferrous metal.
2. Division 09 for general field painting.

1.2 ADMINISTRATIVE REQUIREMENTS

A. Coordination: Review other Sections in which primers or other coatings are provided to ensure compatibility of total systems for various substrates. Furnish information on characteristics of specified finish materials to ensure compatible primers.

B. If a potential incompatibility of primers applied by other trades exists, obtain the following from the primer applicator before proceeding further:

1. Confirmation of primer's suitability for expected service conditions.
2. Confirmation of primer's ability to be top coated with materials specified.

C. Notify Architect about anticipated problems before using the coatings specified over substrates primed under other Sections.

1.3 DEFINITIONS

A. Standard coating terms defined in ASTM D 16 apply to this Section.

B. Gloss ranges used in this Section include the following:

1. Semi-gloss refers to medium-sheen finish with a gloss range between 30 and 65 when measured at a 60-degree meter.
2. High gloss refers to high-sheen finish with a gloss range more than 65 when measured at a 60-degree meter.

C. Coating types:

1. Shop primer: Zinc.
2. Intermediate coat: Epoxy.
3. Finish coat: Hybrid Urethane/Modified Siloxane.

1.4 SUBMITTALS

A. Data: The manufacturer Product Data for each coating system indicated, including primers.

1. Material list: An inclusive list of required coating materials. Indicate each material and cross-reference the specific coating, finish system, and application. Identify each material by manufacturer's catalog number and general classification.
2. Manufacturer's information: Manufacturer's technical information, including label analysis and instructions for handling, storing, and applying each material specified.

B. Manufacturer’s certification: Certifications that products supplied comply with requirements indicated that limit the amount of VOC in coating products.

C. Samples: Samples of each color and material to be applied, with texture to simulate actual conditions, on representative Samples of the actual substrate.

1. Provide stepped Samples defining each separate coat, including primers. Use representative colors when preparing Samples for review. Identify paint system on back of control Samples.
2. Resubmit until required sheen, color, and texture are achieved.
3. List of material and application for each coat of each sample. Label each sample for location and application.
4. Samples for each substrate for Architect review of color and texture: Provide two 12-inch square samples for each type of substrate with each type of finish.

D. Qualification data: For applicator to demonstrate its capabilities and experience. Include lists of completed projects with project names and addresses, names and addresses of Architect and owners, and other information specified.

E. Certification: Duplicate copies of manufacturer's affidavit with each shipment of materials delivered to the jobsite certifying that material furnished complies with specified requirements.

1.5 QUALITY ASSURANCE

A. Manufacturer qualifications: Firm that specializes in producing high quality industrial coatings with a minimum of 10 years experience demonstrated by case histories in the designated field of application.

B. Applicator qualifications: Firm who has completed high-performance coating systems similar in material and extent to those indicated for Project and whose work has a record of successful in-service performance.

C. Source limitations:

1. Obtain primers and undercoat materials for each coating system from the same manufacturer as the finish coats.
2. Only coatings that meet or exceed the performance of those identified herein may be submitted. No substitutions will be considered that change the generic chemistry of the coatings required by the Specifications.
3. Where manufacturer’s coating recommendations exceed those listed, the increased coating thickness shall be used. The coating thickness and coverage rate shall not be reduced from those scheduled.

D. SCAQMD Rule 1113: Submit paint manufacturer's certificate stating that provided coatings meet or exceed current SCAQMD Rule 1113 requirements.

E. Mockups: Provide a full-coat benchmark finish sample of each type of coating and substrate required.

1. Architect will select areas or surface to represent surfaces and conditions for application of each type of coating and substrate.
2. After permanent lighting and other environmental services have been activated in interior locations, apply coating systems to each surface as specified. Provide the required sheen, color, and texture of each surface.

    a. After finishes are accepted, Architect will use each surface to evaluate coating systems of a similar nature.

3. Final approval of colors will be from benchmark samples.

1.6 HANDLING

A. Deliver materials to Project site in manufacturer's original, unopened packages and containers bearing manufacturer's name and label with the following information:

1. Name or title of material.
2. Product description (generic classification or binder type).

3. Manufacturer's stock number and date of manufacture.
4. Contents by volume, for pigment and vehicle constituents.
5. Thinning instructions.
6. Application instructions.
7. Color name and number.
8. Handling instructions and precautions.

B. Store materials not in use in tightly covered containers in a well-ventilated area at a minimum ambient temperature of 45-degree F. Maintain containers used in storage in a clean condition, free of foreign materials and residue.

1. Protect materials from freezing. Keep storage area neat and orderly. Remove oily rags and waste daily. Take necessary measures to ensure that workers and work areas are protected from fire and health hazards resulting from handling, mixing, and applying coatings.

1.7 PROJECT CONDITIONS

A. Apply coatings only when temperature of surfaces to be coated and surrounding air temperatures are between 45 and 95-degree F.
B. Do not apply coatings in snow**,** rain, fog, or mist; when relative humidity exceeds 85 percent; at temperatures less than 5-degree F above the dew point; or to damp or wet surfaces.

1. Allow wet surfaces to dry thoroughly and attain temperature and conditions specified before proceeding with or continuing coating operation.
2. Work may continue during inclement weather only if areas and surfaces to be coated are enclosed and temperature within the area can be maintained within limits specified by manufacturer during application and drying periods.

C. Protection:

1. Provide and maintain protection as required to protect finished work from damage until its acceptance.
2. Protect work of other trades, whether being coated or not, against damage from coating operation.
3. Provide "Wet Paint" signs to protect newly coated finishes. After completing coating operations, remove temporary protection.
4. Provide drop cloths, shields, barricades and other protection necessary to safeguard adjacent surfaces not to be painted. Post signs immediately after painting.

1.8 EXTRA MATERIALS

A. With closeout submittals, deliver one identified unopened gallon container of each color (if more than one color was used) of coating used on the Project. Identify with area and material for future identification.
B. Provide the Owner copy of instructions for touchup and maintenance recommendations.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Tnemec Co. Inc. (basis of design).
B. Carboline Co.
C. Sherwin Williams; Industrial and Marine Coatings (SW).
D. Or equal.

2.2 COATINGS MATERIALS, GENERAL

A. General: Provide paint systems meeting or exceeding current SCAQMD Rule 1113 requirements.
B. Material compatibility: Provide primers, undercoats, and finish-coat materials that are compatible with one another, and substrates indicated under conditions of service and application, as demonstrated by manufacturer based on testing and field experience.
C. Material quality:

1. Provide manufacturer's highest grade of the various high-performance coatings specified. Materials not displaying manufacturer's product identification are not acceptable.
2. Use of manufacturer's proprietary product names to designate colors or materials is not intended to imply that products named are required to be used to the exclusion of equivalent products of other manufacturers.
3. Furnish manufacturer's material data and certificates of performance for proposed substitutions.

2.3 COLORS

A. Colors: Match Architect’s control samples.

2.4 COATING SYSTEM EXTERIOR EXPOSED UNPRIMED AND NON-GALVANIZED STEEL SURFACES (MT-3 & 4)

A. Surface preparation: SSPC-SP6 Commercial Blast Cleaning.
B. Shop primer: Zinc-rich urethane primer/polyamidoamine epoxy/hybrid polyurethane, fast-cure, with 83 percent zinc content by weight in dried film.

1. Tnemec 90-97 Tneme-Zinc at 2.5 to 3.5 mils (65 to 90 microns) DFT.
2. Carboline: Carboline 621.
3. SW: Corothane 1 galvapac zinc primer.

C. Intermediate coat:

1. Tnemec Series 1075 Endura-Shield II, or equal at 2 to 3 mils (50 – 75 microns) DFT.
2. Carboline:.
3. SW:.

D. Finish coat:

1. Tnemec Series 1078V at 3 to 5 mils (75 to 125 microns) DFT.
2. Carboline:.
3. SW: .

E. Gloss range: Gloss.
F. Total DFT: No less than 9.5 mils (245 microns) DFT
G. Quality assurance standards:

1. ASTM B 117: System shall pass 30,000 hours salt fog corrosion resistance.
2. ASTM G53: Finish shall pass with 100 percent gloss retention and no more than 4 MacAdam Units color change after 3,000 hours exposure.
3. ASTM D 3363: Finish coat hardness shall be HB or better.
4. ASTM D 4060: Finish coat shall pass no more than 50 mg loss after 1,000 hours with 1,000 g load.
5. AAMA 24604-98: Meet exterior weathering requirements of this document.

H. Finish shall be graffiti resistant.

2.5 COATING SYSTEM FOR INTERIOR UNPRIMED METAL SURFACES EXPOSED TO PUBLIC CONTACT

A. Applies to handrails and guardrails, , steel doors and frames, metal surfaces in toilet rooms and in maintenance storage areas, and in areas of similar conditions indicated.
B. Does not apply to interior exposed structural and miscellaneous steel. These will be painted under Section 09 90 00.

C. Surface preparation: SSPC-SP6 Commercial Blast Cleaning.
D. Shop primer: Zinc-rich Urethane Primer/Polyamide Epoxy Finish, Satin Finish.

1. Tnemec Series 69 Epoxoline at 4 to 6 mils (100-150 microns) DFT.
2. Carboline: Carboline 890.
3. SW: Tile Clad Plus B-62.

E. Finish coat:

1. Tnemec Series 69 Epoxoline at 4 to 6 mils (100 – 150 microns) DFT.
2. Carboline: Carboline 890.
3. SW: Tile Clad Plus B-62.
4. Precision Coatings, Inc: PC3v100 Acrylic Polyurethane Topcoat.

F. Gloss range: To be determined.
G. Total DFT: No less than 8 mils (200 microns) DFT
H. Quality assurance standards:

1. ASTM D 4541: Primer and complete coating system shall have adhesion strength of not less than 1000 psi.
2. ASTM D 3359: Primer and complete coating system shall have a rating of not less than 5.
3. ASTM D 3363: Finish coat hardness shall be 3H.
4. ASTM D 4060: Finish coat shall pass no more than 115 mg loss after 1,000 cycles with 1,000 g load.

2.6 COATING SYSTEM FOR GALVANIZED STEEL

A. Surface preparation:

1. SSPC-SP1 preparation to remove soluble contamination.
2. Thoroughly roughen the entire surface to be coated using compressed air nozzle brush-off blast cleaning with a fine abrasive to achieve a uniform anchor profile (1.5 to 2 mils) (38 to 50 microns).
3. Pressure wash with 140 to 150-degree F alkaline cleaner followed by tap water rinse is the preferred method to remove both water soluble and organic solvent soluble contaminants.

B. Touchup: Where the galvanized surface is damaged, repair shall consist of mechanical surface cleaning to bare metal, followed by touchup application of organic zinc-rich moisture cured urethane primer at 2.5 mils DFT minimum.
C. Spot primer: Surface tolerant epoxy primer/aliphatic acrylic polyurethane gloss finish.

1. Tnemec Series 90-97 Tnemec-zinc at 2.5 to 3.5 mils (65 – 90 microns) DFT
2. Carboline: Carboline 621.
3. Corathane 1 galvanized zinc primer.

D. Primer:

1. Tnemec: Series L69 Epoxoline.
2. Carboline: Carboline 890.
3. SW: Tile Clad Plus B-62.
4. Precision Coatings, Inc: PC3v100 Acrylic Polyurethane Topcoat.

E. Finish coat:

1. Tnemec Series 75UVX or Carboline “Carboxane 2000” at 2 to 3 mils (100-150 microns) DFT.
2. Precision Coatings, Inc: OC3v100 Acrylic Polyurethane Topcoat.
3. Gloss range: To be determined.

F. Total DFT: No less than 4 mils (200 microns) of field-applied coating.

G. Quality assurance standards:

1. ASTM D 3363: Finish coat hardness shall be HB or better.
2. ASTM D 4060: Finish coat shall pass no more than 95 mg loss after 1,000 hours with 1,000 g load.

2.7 COATING SYSTEM FOR ALUMINUM

A. Surface preparation:

1. Preparation: Thoroughly roughen the entire surface to be coated using compressed air nozzle brush-off blast cleaning with a fine, non-metallic abrasive to achieve a uniform anchor profile (1.5 to 2 mils) (38 to 50 microns).
2. System Type: Epoxy/Hybrid Urethane.

a. Prime Coat: Tnemec L69 Epoxoline @ 2.0 to 4.0 mils DFT.
b. Finish Coat: Tnemec 750 UVX @ 2.0 to 4.0 mils DFT.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates and conditions under which high-performance coatings will be applied, for compliance with coating application requirements.

B. Apply coatings only after unsatisfactory conditions are corrected and surfaces to receive coatings are thoroughly dry.

C. Correct unsatisfactory conditions before starting application.

3.2 PREPARATION

A. General:

1. Remove plates, machined surfaces, and similar items already in place that are not to be coated.
2. If removal is impractical or impossible because of size or weight of item, provide surface-applied protection before surface preparation and coating.
3. After completing coating operations, reinstall items that were removed; use workers skilled in the trades involved.

B. Cleaning:

1. Before applying high-performance coatings, clean substrates of substances that could impair bond of coatings.
2. Remove oil and grease before cleaning.
3. Schedule cleaning and coating application so dust and other contaminates from cleaning process will not fall on wet, newly coated surfaces.

C. Surface preparation: Clean and prepare surfaces to be coated according to manufacturer's instructions for each substrate condition, and as specified. Provide barrier coats over incompatible primers or remove primers and reprime substrate.

D. Material preparation: Carefully mix and prepare coating materials according to manufacturer's written instructions.

1. Maintain containers used in mixing and applying coatings in a clean condition, free of foreign materials and residue.
2. Stir materials before applying to produce a mixture of uniform density. Stir as required during application. Do not stir surface film into the material. Remove film and, if necessary, strain coating material before using.
3. Use only the type of thinners approved by manufacturer and only within recommended limits.

E. Tinting: Tint each undercoat a lighter shade to facilitate identification of each coat if multiple coats of the same material are to be applied. Tint undercoats to match color of finish coat, but provide sufficient difference in shade of undercoats to distinguish each separate coat.

3.3 APPLICATION

A. General: Apply coatings according to their manufacturer's instructions and the following.

1. Use applicators and techniques best suited for the material being applied.
2. Do not apply coatings over dirt, rust, scale, grease, moisture, scuffed surfaces, or conditions detrimental to forming a durable coating film.
3. Coating colors, surface treatments, and finishes are indicated in the coating system descriptions.
4. Provide finish coats compatible with primers used.
5. The term "exposed surfaces" includes areas visible when permanent or built-in fixtures, convector covers, grilles, covers for finned-tube radiation, and similar components are in place. Extend coatings in these areas, as required, to maintain system integrity and provide desired protection.

    a. Coat surfaces behind movable equipment and furniture the same as similar exposed surfaces. Before final installation, coat surfaces behind permanently fixed equipment or furniture with prime coat only.
    b. Coat back sides of access panels, removable or hinged covers, and similar hinged items to match exposed surfaces.

B. Scheduling coating: Apply first coat to surfaces that have been cleaned, pretreated, or otherwise prepared for coating as soon as practicable after preparation and before subsequent surface deterioration.

1. The number of coats and film thickness required is the same regardless of application method.

    a. Omit primer on metal surfaces that have been shop primed and touchup painted.
    b. Do not apply succeeding coats until previous coat has cured as recommended by manufacturer.
    c. Where manufacturer's written instructions require sanding, sand between applications to produce a smooth, even surface.
    d. Allow sufficient time between successive coats to permit proper drying. Do not recoat surfaces until coating has dried to where it feels firm, does not deform or feel sticky under moderate thumb pressure, and application of another coat does not cause undercoat to lift or lose adhesion.

2. If undercoats or other conditions show through final coat, apply additional coats until cured film has a uniform coating finish, color, and appearance. Give special attention to edges, corners, crevices, welds, exposed fasteners, and similar surfaces to ensure that they receive a dry film thickness equivalent to that of flat surfaces.

C. Application procedures:

1. Brush, roller, spray, or other applicators according to manufacturer's requirements.
2. Apply primers and first coats by brush unless manufacturer's written instructions permit using roller or mechanical applicators.

D. Minimum coating thickness: Apply each material no thinner than manufacturers recommended spreading rate. Provide total dry film thickness of the entire system as recommended by manufacturer.

E. Prime coats:

1. Before applying finish coats, apply a prime coat of material, as recommended by manufacturer, to material required to be coated or finished that has not been prime coated by others.
2. Recoat primed and sealed substrates if there is evidence of suction spots or unsealed areas in first coat, to ensure a finish coat with no burn-through or other defects caused by insufficient sealing.

F. Completed work:

1. Match approved samples for colors, sheens, textures, and coverage. Remove, refinish, or recoat work that does not comply with specified requirements.
2. No “orange peel” finish, cloudiness, spotting, holidays, laps, sags, ropiness, drips, runs, skips or other surface imperfections, such as scratches, scrapes, dents, spots, stain, streaks and lines will be accepted.” “Remove, refinish, or recoat work that does not comply with the specified requirements.”

3.4 FIELD QUALITY CONTROL

A. Owner reserves the right to invoke the following procedure at any time and as often as Owner deems necessary during the period when coatings are being applied:

1. Owner may engage the services of a qualified testing agency to sample coating material being used. Samples of material delivered to Project site will be taken, identified, sealed, and certified in presence of Contractor.
2. Testing agency may perform appropriate tests for the following characteristics as required by Owner:

    a. Quantitative materials analysis.
    b. Absorption.
    c. Accelerated weathering.
    d. Accelerated yellowness.
    e. Color retention.
    f. Alkali and mildew resistance.
    g. Abrasion resistance.
    h. Apparent reflectivity.
    i. Washability.
    j. Dry opacity.
    k. Recoating.
    l. Skinning.

3. Owner may direct Contractor to stop applying coatings if test results show materials being used do not comply with specified requirements.

    a. Contractor shall remove non-complying coating materials from Project site, pay for testing, and recoat surfaces coated with rejected materials.
    b. If necessary, Contractor may be required to remove rejected materials from previously coated surfaces if, on recoating with specified materials, the 2 coatings are not compatible.

3.5 CLEANING

A. After completing coating application, clean spattered surfaces.
B. Remove spattered coatings by washing, scraping, or other methods.
C. Do not scratch or damage adjacent finished surfaces.

3.6 PROTECTION

A. At completion of construction activities of other trades, touchup and restore damaged or defaced coated surfaces.

END OF SECTION

DIVISION 10
SPECIALTIES

SECTION 10 10 00 – FIXED MARKERBOARDS

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes providing and the installation of the fixed markerboards.
   1. Fixed, Magnetic optically clear, ghost-free, dry –erase markerboards.

B. Related Items
   1. Miscellaneous carpentry, Section 06 10 53.
   2. Concealed blocking, Section 09 22 16.

1.2 SUBMITTALS

A. The College will supply the required information for this section.

B. Product Data Manufacturer’s specifications and technical data by the College
   1. Detailed specification of construction and fabrication.
   2. Manufacturer's installation instructions.

C. Shop Drawings (by the Contractor): Indicate dimensions, description of materials and finishes, general construction, specific modifications, component connections, anchorage or mounting methods, hardware, and installation procedures, plus the following specific requirements.
   1. Indicated type of adhesive, backing, trim, or accessories required.
   2. Warranty documentation.

1.3 DELIVERY, STORAGE, AND HANDLING

A. College will turn over the markerboards to the Contractor.

B. Storage and Protection Comply with manufacturer's recommendations.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Acceptable Manufacturers for Markerboards
   1. Vivid Glass.
   2. Comparable products of other manufacturers.

2.2 FIXED MARKERBOARDS

A. Mounting: Provide manufacturer’s satin aluminum stand-offs.

B. Glass thickness: 1/4-inch thick tempered safety glass.

C. Stand offs: 1-3/8-inches.

D. Include hidden acrylic marker holders.

E. Corners: Rounded corners.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verify Conditions
   1. Examine areas and conditions under which Work is to be performed and identify conditions detrimental to proper or timely completion.

2. Do not proceed until unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Comply with manufacturer's recommendations.

B. Deliver factory pre-assembled units complete with frame and backer board.
1. If overall size prevents pre-assembly, prefit at factory and ship knocked down. Use concealed steel splines at all joints to maintain surface alignment.

C. Securely mount boards and trim in compliance with manufacturer's recommendations.
1. Provide grounds, clips, backing materials, adhesive brackets, anchors, trim, and accessories for complete installation.

D. Joints between adjacent boards shall be smooth, flush butt hairline seams.

3.3 CLEANING

A. Clean units in compliance with manufacturer's recommendations. Demonstrate proper maintenance and cleaning procedures to the Owner’s personnel. Provide at least one copy of the manufacturer’s published cleaning instructions and recommended schedule for each person trained.

END OF SECTION

SECTION 10 14 00 - SIGNAGE

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Exterior signs: Building-mounted cast steel letters.
B. Interior Signs:

1. Dimensional Letters.
2. Room and door signs.
3. Building identification signs.
4. Code-compliance signs at exits, stairs and toilet rooms.

1.02 SUBMITTALS

A. Product Data: Manufacturer's printed product literature for each type of sign, indicating sign styles, font, foreground and background colors, locations, overall dimensions of each sign.
B. Signage Schedule: Provide information sufficient to completely define each sign for fabrication, including room number, room name, other text to be applied, sign and letter sizes, fonts, and colors.
C. Samples: Submit two samples of each type of sign, of size similar to that required for project, illustrating sign style, font, and method of attachment. Include the letters “B’ and “H” in cast steel letters with paint.
D. Selection Samples: Where colors are not specified, submit two sets of color selection charts or chips.
E. Verification Samples: Submit samples showing colors specified.
F. Manufacturer's Installation Instructions: Include installation templates and attachment devices.

1.03 QUALITY ASSURANCE

A. Manufacturer Qualifications: Company specializing in manufacturing the products specified in this section with minimum three years of documented experience.
B. Uniformity: For each sign form and graphic image process indicated furnish products of a single manufacturer.
C. Coordination: Before starting Shop Drawings, notify the Architect and arrange a meeting with the Owner's designated personnel to review in detail the work of this Section. Review and coordinate layouts for each sign, and obtain Architect's approval prior to manufacture.
D. All tactile room identification and exit signs shall include Grade 2 Braille translation with the tactile portion of the sign following the requirements of ADA.

1.04 DELIVERY, STORAGE, AND HANDLING

A. Package signs as required to prevent damage before installation.
B. Package room and door signs in sequential order of installation, labeled by floor or building.
C. Store tape adhesive at normal room temperature.

1.05 FIELD CONDITIONS

A. Verify type of supporting construction; provide suitable attachments.
B. Do not install tape adhesive when ambient temperature is lower than recommended by manufacturer.

C. Maintain this minimum temperature during and after installation of signs.
D. Adhesive as the sole means of installation is only allowed where sign is to be on glazing.

PART 2 - PRODUCTS

2.01 DESIGN REQUIREMENTS

A. Signage shall conform to the CBC and specifically to the following CBC chapters:

1. Chapter 11B-201.1 for design and construction, 11B-603 and 11B-604.8 for passageways.
2. Chapter 11B-216.6 for scoping for signs where accessible routes diverge from the regular circulation path
3. Chapter 11B-703 for non-accessible existing entrances and general standards.
4. Chapter 11B-703.3 for braille requirements.
5. Chapter 11B-703.5.1, 6.2 and 7.3 for finish and contrast.
6. Chapter 11B-703.2.4 and 2.6 for proportions.
7. Chapter 11B-307.3 for pole-mounted objects, edges and corners.

B. Characters:

1. Comply with CBC 11B-703.5 for visual characters.
2. Character Type: Characters on signs shall be raised 1/32 inch minimum and shall be sans serif uppercase characters accompanied by contracted Grade 2 Braille (see Note 5 below).
3. Character Size: Raised characters shall be a minimum of 5/8 inch and a maximum of 2 inch high.
4. Finish and Contrast: Contrast between characters, symbols and their background must be 70% minimum and have a non-glare finish.
5. Proportions: Characters on signs shall have a width-to-height ratio of between 3:5 and 1:1 and a stroke width-to-height ratio of between 1:5 and 1:10.
6. Letters measured must be uppercase. After choosing a typestyle to test, begin by printing the letters I, X, and O at 1 inch height. Place the template's 1:1 square over the X or O, whichever is narrower. If the character is not wider that 1 inch, nor narrower than the 3:5 rectangle, the proportions are correct. Use the 1:5 rectangle to determine if the stroke of the I is too broad, and the 1:10 rectangle to see if it is to narrow. If all the tests are passed, the typestyle is complaint with proportion code.

C. Braille Symbols:

1. Comply with CBC Section 11B-703.3.
2. Contracted Grade 2 Braille shall be used whenever Braille is required in other portions of these standards. Dots shall be spaced 1/10 inch on center in each cell, with 2/10 inch space between cells, measured from the second column of dots in the first cell to the first column of dots in the second cell. Dots shall be raised a minimum of 1/40 inch above background
3. Provide rounded or domed Contracted Grade 2 Braille dots, each distinct and separate. Dots with straight sides and flat tops are not acceptable.

D. Type Imagery:

1. Type style: Sans Serif upper case.
    a. Letter Size: See signage drawings.

b. Number Size: See signage drawings.
c. Raised Letters: Letters shall be raised a minimum of 1/32 inch above background.
d. Other Sizes: As specifically indicated.

2. Arrangement: Use standard spacing between letters, words, numbers and lines; center text.
3. Symbol Style: Recognized standard International Symbols of Accessibility, such as those developed by the American Institute of Graphics, for the U. S. Department of Transportation.

a. Accessible Restrooms shall include a 6 inch high wheelchair logo. Logo shall be raised a minimum of 1/32 inch above the background.
b. On visual signs, characters and symbols shall be sized according – to view distance. Signs mounted 80 inch or more AFF shall have minimum 3 inch high characters.
c. Pictographs and ISA's (International Symbol of Accessibility) on interior signs at eye level, shall be minimum 3 inch high or twice as high as the height of text on the sign; whichever is greater. On signs where bottom is 72 inch or more AFF, minimum height shall be 6 inch or twice as high as the largest text on the signs; whichever is greater.

4. Colors:

a. Background Colors: As selected by the Architect from manufacturer's standard color range (12 colors maximum); one color maximum, typically.
b. Type Imagery: White or black, as selected by Architect to contrast with background colors; one color maximum, each, for interiors and exteriors.
c. Code Required Colors for Symbols and Signs: Where colors are mandated by Codes or Regulations conform to their requirements including 11B-703; colors from the CBC.
d. Other colors: Certain colors are specifically noted.

2.02 MANUFACTURERS

A. Acceptable Manufacturers:

1. Advance Corporation; Braille-Tac Division.
2. ASI.
3. Architectural Graphics, Inc.
4. Architectural Signs and Directories.
5. Vomar Products, Inc.
6. Or equal.

2.03 SIGNAGE APPLICATIONS

A. Accessibility Compliance: All signs are required to comply with ADAAG and CBC Chapter 11B and applicable building codes, unless otherwise indicated; in the event of conflicting requirements, comply with the most comprehensive and specific requirements.
B. All Signage Types: Unless otherwise indicated:

1. Character Font: Helvetica, or other sans serif font acceptable to the Architect.
2. Character Case: Upper case only.
3. Background Color: Clear.
4. Character Color: Contrasting color.

C. Room and Door Signs: Provide a sign for every doorway, whether it has a door or not, not including corridors, lobbies, and similar open areas.

1. Sign Type: Flat signs with engraved panel media as specified.
2. Provide “tactile" signage, see above.
3. Braille shall be rounded or contracted domed top.
4. Character Height: 1 inch.
5. Sign Height: 2 inches, unless otherwise indicated.
6. Office Doors: Identify with room numbers to be determined later, not the numbers shown on the drawings.
7. Conference and Meeting Rooms: Identify with room numbers to be determined later, not the numbers shown on the drawings.
8. Service Rooms: Identify with the room names and numbers shown on the drawings.

2.04 DIMENSIONAL CHARACTERS

A. Fabricated characters located on canopy: Characters with uniform faces, sharp corners, and precisely formed lines and profiles, and as follows:

1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

a. ASI Sign Systems, Inc.
b. Century Sign Builders
c. Gemini Incorporated.
d. Metallic Arts.
e. Or equal.

2. Character Material: Fabricated as indicated on Drawings.
3. Character Height: As indicated on Drawings.
4. Thickness: As indicated on Drawings.
5. Finishes: Powder coat.
6. Mounting: As indicated on Drawings.
7. Typeface: As selected by Architect.

2.05 PLASTIC SIGN MATERIAL

A. Material:

1. Type: Phenolic Resin Core with a three-ply melamine resin surface.
2. Thickness: 1/8 inch.

B. Adhesive: Pressure sensitive, hi-tack transfer tape with peel-back paper backing. Structural grade silicone adhesive for mounting on glazing.
C. Mounting Screws: Non-corrosive, tamperproof screws. Match finishes to the door hardware for the door where the signs are mounted.
D. Signs shall be non-static, fire retardant, and self-extinguishing.
E. No. SP125 Manufacturing Specifications per basis of design manufacturer:

1. Material thickness: 1/8 inch.
2. Standard sheet size: 48 inch x 96 inch.
3. Weight: 1/8 inch = 1 lb/ square foot.
4. Maximum continuous operating temperature: 225°F.
5. Flexural strength flat: 21,497 psi.

6. Tensile strength: 22,000 psi.
7. Shear strength: 22,729 psi.
8. NEMA rated "self-extinguishing"

2.06 SIGN TYPES

A. Graphic Process and Fabrication: All signs shall be manufactured using "Sand-Etched Process" or equivalent system, as per acceptable manufacturers stated methods, whereby characters are integral part of signage body.

1. Tactile characters shall be raised the required 1/32 inch from sign face. Glue-on letters, images and/or symbols are not acceptable.
2. Work to have sharp clean profiles.
3. Text shall be accompanied by Contracted Grade 2 Braille. Braille shall be separated 1/2 inch from corresponding raised characters or symbols.
4. Perimeter borders shall be 1/4 inch minimum.
5. Edges: Finish edges smooth and clean, without chips or burrs.
6. Corners: Provide radius corners; 1/8 inch diameter.
7. Cut-outs For Hardware: Factory made, accurately, to templates.
8. Mounting Holes: Factory drilled.
9. Adhesive Backing: Completely cover rear surface of each sign.

B. Room Identification Signs:

1. Refer to Drawings for names, numbers, identification symbols, sizes, configurations, and locations.
2. Colors for Type Imagery:
    a. Room Name Signs:
        1) Type: Black or white, to be selected by Architect.
        2) Background: One color to be selected by the Architect from manufacturer's standard color range (12 colors, minimum) for interior signs, unless otherwise noted. Refer to signage schedule.
    b. Room Number Signs:
        1) Type: Black or white, to be selected by Architect.
        2) Background: One color to be selected by the Architect from manufacturer's standard color range (12 colors, minimum) for interior signs, unless otherwise noted. Refer to signage schedule.
        3) Architect shall select a second color for signs located on exterior.

C. Accessibility Symbol Signs:

1. Refer to Drawings for identification symbols, sizes, configuration, and locations.
2. Figure Symbols for Building Entrance Signs:
    a. Size: 6 inch x 6 inch, typically.
    b. Refer to Drawings.
3. Geometric Symbols for Toilet Rooms:
    a. For Men/Boys: An equilateral triangle, 10 inches on a side; 1/4 inch thick.
    b. For Women/Girls: A 12-inch diameter circle; 1/4 inch thick.

c. For Both Sexes: An equilateral triangle, 10 inches on a side, inlayed in 12 inch diameter circle; 1/4 inch thickness for the triangle and the circle.

4. Directional Signs.
5. International Symbol for Access for the hearing impaired.
6. Colors for Symbols:

a. International Accessibility Symbols:

1) Symbols: White.
2) Background: Blue, Color No. 15090 per Federal Standard 595C.

b. Male and Female Symbols:

1) Symbols: Blue.
2) Background: White.

D. Room Capacity Signs:

1. Wording for sign at Assembly Room at Multi-Purpose Building: See Plans and Signage drawings. Number to be on Drawings or provided by Architect.
2. Refer to Drawings for identification.

2.07 ACCESSORIES

A. Interior:

1. Concealed Screws: Stainless steel, galvanized steel, chrome plated, or other non-corroding metal.

a. Exterior: Stainless steel, galvanized steel.
b. Interior: Bright finish.

2. Tape Adhesive: Double sided tape, permanent adhesive.

a. Completely cover the plate with adhesive.

3. Where flat signs are mounted on glass walls:

a. Provide an additional blank plate with same background color.
b. Mount this plate on the inside of glass in alignment with sign plate.

B. Exterior:

1. Fasteners and Anchors: Manufacturer's standard as required for secure anchorage of signs, noncorrosive and compatible with each material joined, and complying with the following:

a. Use concealed fasteners and anchors unless indicated to be exposed.
b. For exterior exposure, furnish stainless steel devices unless otherwise indicated.
c. Sign Mounting Fasteners:

1) Concealed Studs: Concealed (blind), threaded studs welded or brazed to back of sign material, screwed into back of sign assembly, or screwed into tapped lugs cast integrally into back of cast sign material, unless otherwise indicated.

2) Projecting Studs: Threaded studs with sleeve spacer, welded or brazed to back of sign material, screwed into back of sign assembly, or screwed into tapped lugs cast integrally into back of cast sign material, unless otherwise indicated.
3) Through Fasteners: Exposed metal fasteners matching sign finish, with type of head indicated, installed in predrilled holes.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Verify that substrate surfaces are ready to receive work.

3.02 PREPARATION

A. Layout: Accurately lay out work to maintain proper lines, levels and spacing.

3.03 INSTALLATION

A. Install in accordance with manufacturer's instructions and CBC Chapter 11B.
B. Install neatly, with horizontal edges level.
C. Mounting location shall be determined so that a person may approach within 3 inches of signage without encountering protruding objects or standing within the swing of the door. CBC Section 11B-703.4.2.
D. Mounting:

1. See drawings for locations.
2. Press tape firmly to mounting surface, and secure each plaque or sign with minimum four tamper-proof screws for square or rectangular signs; minimum three tamper-proof screws for triangle, or round signs.
3. Signs shall have pre-drilled holes when delivered, and mounted with non-corroding anchors and tamper-proof screws.
4. When mounting on glazing, press silicone adhesive firmly to glazing. Clean excess adhesive from glazing.

E. Protect from damage until Substantial Completion; repair or replace damage items.

3.04 ADJUSTING AND CLEANING

A. Remove and replace damaged or deformed signs and signs that do not comply with specified requirements. Replace signs with damaged or deteriorated finishes or components that cannot be successfully repaired by finish touchup or similar minor repair procedures.
B. Remove temporary protective coverings and strippable films as signs are installed.
C. On completion of installation, clean exposed surfaces of signs according to manufacturer's written instructions and touch up minor nicks and abrasions in finish. Maintain signs in a clean condition during construction and protect from damage until acceptance by District.

END OF SECTION

SECTION 10 21 13 - TOILET COMPARTMENTS & SCREENS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:

1. Floor-mounted, overhead-braced painted metal toilet compartments.
2. Wall-mounted painted metal urinal screens.

B. Related requirements: Division 10 for toilet room accessories.

1.2 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate installation of toilet partitions and screens with their supports. Supply Shop or setting drawings, templates and directions for installing backing plates, brackets, anchors, suspension system, and other accessories.
2. Coordinate fabrication of toilet partitions for installation of surface-mounted and recessed toilet room accessories supported by the partitions. Obtain Shop or setting drawings, templates and directions required for reinforcement to be built-in the partitions.
3. Verify dimensions by field measurements before fabrication and indicate measurements on Shop Drawings.

B. Scheduling and sequencing:
C. Pre-installation meeting:

1.3 SUBMITTALS

A. Data: Manufacturer Product Data for compartments and screens.
B. Shop drawings:

1. Show layout of compartments and screens in each space to receive them.
2. Show elevations.
3. Show fabrication and erection of compartment assemblies, to extent not fully described by manufacturer’s data sheets.
4. Show anchorage, accessory items and finishes.
5. Provide location drawings for bolt hole locations in supporting members for attachment of compartments.

C. Samples: 6-inch square by 22-gage steel samples with the selected finish.

1.4 MAINTENANCE

A. With closeout submittal, provide instructions for proper care of compartments and screens such as required lubrications, adjustments, and cleaning.

PART 2 - PRODUCTS

2.1 MANUFACTURE/TYPE

A. DuraLine Series by Bobrick, basis of design (Tag 11 on Drawings).
B. Or equal.

2.2 COMPACT LAMINATE (SOLID PHENOLIC), MOISTURE RESISTANT SUBSTRATE

A. Compact Laminate (Solid Phenolic) Toilet Partitions: Bobrick DuraLineSeries.

1. Design Type::

a. Standard Height.

1) Door/Panel Height: 58 inches (147 cm).
2) Floor Clearance: 12 inches (30 cm).

2. Privacy Style Partitions: No sightlines with gap-free interlocking doors and stiles routed 0.300 inches (7.6 mm) from the edge to allow for 0.175 inch (4.4 mm) overlap to prevent line-of-sight into the toilet compartment. Privacy strips fastened or adhered onto the partition material are not acceptable.
3. Mounting Configuration:

a. Floor-mounted, overhead-braced with anodized aluminum headrails, 0.065 inch (1.65 mm) thick with anti-grip profile.

1) Stile Maximum Height: 83 inches (211 cm); Extended Height: 97 ¾ inches (248 cm).

B. Compact Laminate (Solid Phenolic) Urinal Screens: Bobrick DuraLineSeries.

1. Mounting Configuration:

a. Wall-hung.

1) Screen Height: 48 inches (122 cm) with 12 inches (30 cm) floor clearance.

C. Materials: Solidly fused plastic laminate with matte-finish melamine surfaces; integrally bonded colored face sheets and black phenolic-resin core.
D. Edges: Black; brown edges not acceptable.
E. Color: Color: 515-58 Graphite Grafix.
F. Fire Resistance:

1. National Fire Protection Association/International Building Code Interior Wall and Ceiling Finish: Class A / Uniform Building Code: Class I.

a. Flame Spread Index (ASTM E 84): 15-25 for panels, stiles and doors.
b. Smoke Developed Index (ASTM E 84): 25 - 105 for panels, 20-90 for stiles.

G. Finished Thickness:

1. Stiles and Doors: 3/4 inch (19 mm).
2. Panels and Screens: 1/2 inch (13 mm).

H. Stiles: Floor-anchored stiles furnished with expansion shields and threaded rods.

1. Leveling Devices: 7 gauge, 3/16 inches (5 mm) thick, corrosion-resistant, chromate-treated, double zinc-plated steel angle leveling bar bolted to stile; furnished with 3/8 inch (10 mm) diameter threaded rods, hex nuts, lock washers, flat washers, spacer sleeves, expansion anchors, and shoe retainers.
2. Stile Shoes: One-piece, 22 gauge (0.8 mm), 18-8, Type 304 stainless steel, 4 inch (102 mm) height; tops with 90 degree return to stile. One-piece shoe capable of adapting to 3/4 inch (19 mm) or 1 inch (25 mm) stile thickness and capable of being fastened (by clip) to stiles starting at wall line.

I. Wall Posts: Pre-drilled for door hardware, 18-8, Type 304, 16 gauge (1.6 mm) stainless steel with satin finish; 1 inch (25 mm) x 1-1/2 inches (38 mm) x 58 inches high (1473 mm).

J. Anchors: Expansion shields and threaded rods at floor connections as applicable. Threaded rods secured to supports above ceiling as applicable. Supports above ceiling furnished and installed as Work of Section 05 50 00 - Metal Fabrications.

K. Hardware:

1. Compliance: Operating force of less than 5 lb (2.25 kg).
2. Emergency Access: Hinges, latch allow door to be lifted over keeper from outside compartment on inswing doors.
3. Materials: 18-8, Type 304, heavy-gauge stainless steel with satin finish.
4. Doorstops: Prevents inswinging doors from swinging out beyond stile; on outswing doors, doorstop prevents door from swinging in beyond stile.
5. Fastening: Hardware is secured to door and stile with pin-in-head Torx stainless steel machine screws. Hinges, latch and optional door stops secured to door with pin-in-head Torx stainless steel machine screws into factory-installed, threaded brass inserts. Fasteners for hinges, latch and optional door stops secured directly into core not acceptable.

    a. Threaded Brass Inserts: Factory-installed; withstand direct pull force exceeding 1500 lb (680 kg) per insert.

6. Clothes Hooks: Projecting no more than 1-1/8 inch (29 mm) from face of door.
7. Door Latch: Track of door latch prevents inswing doors from swinging out beyond stile; on outswing doors, door keeper prevents door from swinging in beyond stile; 16 gauge (1.6 mm) sliding door latch, 14 gauge (2 mm) keeper.

    a. Locking: Door locked from inside by sliding door latch into keeper.

8. Pull: Provide door pulls on each side of accessible stall doors in accordance with CBC 11B-604.8.12,
9. Hinge Type: Balanced, with field-adjustable cam to permit door to be fully closed or partially open when compartment is unoccupied.
10. Mounting Brackets: Mounted inside compartment; exposed brackets on exterior of compartment not acceptable with the exception of outswing doors.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine conditions and measurements affecting the work of this Section at site.
B. Correct detrimental conditions before proceeding with installation.

3.2 PREPARATION

A. Prepare substrates including but not limited to blocking and supports in walls and ceilings at points of attachment using methods recommended by the manufacturer for achieving the best result for the substrates under the project conditions.

1. Inspect areas scheduled to receive compartments for correct dimensions, plumbness of walls, and soundness of surfaces that would affect installation of mounting brackets.
2. Verify spacing of plumbing fixtures to assure compatibility with installation of compartments.

B. If preparation is the responsibility of another installer, notify Architect in writing of deviations from manufacturer's recommended installation tolerances and conditions.

C. Do not proceed with installation until substrates have been properly prepared with blocking and supports in walls and ceilings at points of attachment and deviations from manufacturer's recommended tolerances are corrected. Commencement of installation constitutes acceptance of conditions.

3.3 INSTALLATION

A. Set compartments and screens plumb, level, and space uniformly in compliance with their manufacturer's instructions and the following.

B. Set pilasters with anchorages having not less than 2-inch penetration into structural floor, unless otherwise recommended by partition manufacturer.

1. Level, plumb, and tighten installation with devices furnished.
2. Hang doors and adjust so that tops of doors are level with tops of pilasters when doors are in closed position.

C. Secure panels to walls with continuous brackets not less than 2 stirrup brackets attached near top and bottom of panel.

1. Locate wall brackets at the same height, so that holes for wall anchorages occur in tile joints.
2. Secure panels to pilasters with not less than 2 stirrup brackets located to align with stirrup brackets at wall.
3. Anchor panels to studs or backing plates; fastening components to walls with toggle bolts will not be allowed.

D. Install hardware as recommended by manufacturer. Conceal evidence of drilling in finished work.

E. Tolerances: Installed compartments and screens shall be within the following tolerances.

1. From true position: 1/4-inch.
2. From plumb, alignment, and level: 1/8-inch.

3.4 ADJUSTING/CLEANING

A. Adjust hardware for proper operation. Set hinges on in-swinging doors to hold open approximately 30-degree from closed position when unlatched, except set hinges on out-swinging doors and accessible compartments to return to fully closed position.

B. After completion of installation, clean and polish exposed surfaces and touchup minor scratches. Remove and replace components that cannot be satisfactorily touched-up in the field, in the Architect's opinion.

END OF SECTION

SECTION 10 22 39 - FOLDING PANEL PARTITIONS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes the following:
B. Classrooms: Manually operated, center stacking, top supported operable wall with panels hinged in groups of two or three.
C. Related requirements:

1. Section 05 50 00 for structural supports and braces.
2. Division 9 - for panel finishes not addressed in this section.

1.2 DEFINITIONS

A. NVLAP: National Voluntary Laboratory Accreditation Program
B. NIC: Noise Isolation Class
C. STC: Sound Transmission Class

1.3 SUBMITTALS

A. Product Data: Material descriptions, construction details, finishes, installation details, and operating instructions for each type of operable panel partition, component, and accessory specified. Included data on acoustical performance, surface-burning characteristics, and durability.
B. Shop Drawings: Show location and extent of operable panel partitions. Include plans, elevations, sections, details, attachments to other construction and accessories. Indicate dimensions; weights; conditions at openings and for storage; and required installation, storage, and operating clearances. Indicate location and installation requirements for hardware and track, and direction of travel. Show blocking to be provided by others.
C. Setting Drawings: For embedded items and cutouts required in other work, including support beam-punching template.
D. Samples for Selection:

1. Manufacturer's color charts showing the full range of colors available for units with factory-applied color finishes.
2. Minimum 12-inch-long samples of aluminum extrusions with the required finish.
3. Full size sample of hardware when so requested.
4. Minimum 24-inch square samples of each type of panel face finish.

E. Product Certificates: Submit letter signed by manufacturer certifying that operable walls to be furnished on this project comply with the requirements of the specification.
F. Product Test Reports: From an independent testing agency indicating that each operable panel partition complies with requirements. Submit the following:

1. Report for STC.
2. Proof load testing of track/trolley/bracket/hanger rod assembly. Other proof load tests as may be identified in the "PART 2" of this specification.

G. Maintenance Data: For the following to include in maintenance manuals specified in Division 1:

1. Panel finishes and finishes for exposed trim and accessories. Include precautions for materials and methods that could be detrimental to finishes and performance.
2. Seals, hardware, track, carriers, and other operating components.

H. Seismic qualification certificates: The following from the manufacturer.

1. Indicate whether certification is based on actual test of assembled components or on calculation.
2. Dimensioned outline drawings of equipment unit identifying center of gravity and locating and describing mounting and anchorage provisions.
3. Detailed description of equipment anchorage devices on which the certification is based and their installation requirements.

1.4 QUALITY ASSURANCE

A. Installer qualifications: Experienced installer certified in writing by the operable partition manufacturer as qualified to install the manufacturer's partition system.
B. Testing Agency Qualifications: An independent NVLAP-accredited testing laboratory with experience and capability to conduct the testing indicated, as documented according to ASTM E-548.
C. Fire-Test-Response Characteristics: Provide operable wall partitions with the following fire-test-response characteristics

1. Surface-Burning Characteristics: As follows, per ASTM E-84:

a. Flame Spread: 25 or less

2. Fire Growth Contribution: Textile wall coverings comply with the acceptance criteria of UBC Standard 8-2.

1.5 HANDLING

A. Store partition components indoors at temperature and humidity approximating those to be expected when the partition is in service.

1.6 PROJECT CONDITIONS

A. Field Measurements: Verify operable panel partition openings and storage arrangements by field measurements before fabrication and indicate measurements on Shop Drawings. Coordinate fabrication schedule with construction progress to avoid delaying the work.

1.7 WARRANTY

A. Provide warranty in accordance with Article 13 of the General Conditions and Section 01 74 00 Warranties, Guaranties and Bonds.
B. Tracks:

1. Provide 1-year all-inclusive warranty covering defects in material and workmanship.

2. Covered components shall include track, trolleys and (if appropriate) track curves, intersections, switches, and control devices exclusive of wiring.

C. Panels:

1. Provide 1-year all-inclusive warranty covering defects in material and workmanship.
2. Warranty shall cover structural members, panel faces, panel trim, hardware and operating components.

D. 5-Year Panel Limited Warranty: Provide 5-year limited warranty for welded steel panels located at Classrooms. Warranty shall cover structural members, panel faces, panel trim, hardware and operating components. In the event warranty covered items fail or have their performance materially reduced due to defects in workmanship or materials, the manufacturer shall repair or provide replacement parts FOB jobsite, not including unloading or installation. Warranty shall not exclude "normal wear and tear".

E. 2- Year Panel Limited Warranty: Provide 2-year limited warranty for tracks located at Classrooms. Warranty covered components shall include track and trolleys and, if utilized, steel curves, and "Y's" and track switches excluding electric, pneumatic components or drive system components. In the event warranty covered items fail or have their performance materially reduced due to defects in workmanship or materials, the manufacturer shall repair or provide replacement parts FOB jobsite, not including unloading or installation. Warranty shall not exclude "normal wear and tear".

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Advanced Equipment Corporation.
B. Or equal.

2.2 SYSTEM PERFORMANCE REQUIREMENTS

A. Acoustical Performance: Provide operable panel partitions tested by a qualified testing agency for the following acoustical properties according to test methods indicated:

1. Sound Transmission Requirements: Operable panel partition assembly in a full-size opening, 14 by 9 feet, for laboratory sound transmission loss performance according to ASTM E-90, determined by ASTM E-413, and rated for not less than STC indicated in product description below.

2.3 PANEL CONSTRUCTION

A. For purposes of establishing minimum performance standards, this specification is based on operable walls manufactured by Advanced Equipment Corporation, 2401 West Commonwealth Ave., Fullerton, CA 92833, ph. 714-635-5350.
B. Provide top reinforcement as required to support panel from suspension components and provide reinforcement for hardware attachment. Fabricate panels with tight hairline joints and concealed fasteners. Fabricate panels so finished in-place partition is rigid; plumb aligned, with tight joints and uniform appearance; and free of bow, warp, twist, deformation, and surface and finish irregularities.

C. Welded steel panel construction, 3-1/2 inch thick.

1. Panels with this construction occur at Classrooms.
2. Panels at Classrooms shall have minimum 18-gauge (1.22-mm) steel face sheets, robotically fusion welded to 16-gauge (1.52-mm) vertical frame members and 14-gauge (1.9-mm) top rail.
3. Panel weight not to exceed 7.4 psf.
4. Panels at Classrooms shall be rated minimum 52 STC. If field sound tested, wall/s shall achieve a minimum 40 NIC when tested in accordance with ASTM E336, providing that the surrounding building construction is compatible with this rating.
5. Submit test report showing that trolley plate anchorage in test specimen (minimum 4-ft. wide and same construction as proposed for this project) is capable of withstanding a tensile load of 8,000 pounds applied via pendant bolt without failure.
6. Submit test report (minimum 4-ft. wide by 20-ft. long test specimen of the same construction as proposed for this project) showing that panel is capable of resisting a uniform load of 20 pounds per square foot applied normal to the panel face without permanent damage when tested in accordance with ASTM E-72.

D. Panel Edge Trim

1. Panels at Classrooms to be furnished with protective vertical edge trim that overlaps the panel face and secures finish at the vertical edge.

E. Panel Trim Finish:

1. Panels located at Classrooms shall have silicon polyester panel trim.
2. Hardware: Manufacturer's standard as required to activate operable panel partition and accessories; with decorative, protective finish to match panel trim finish.

2.4 SEALS

A. General: Provide types of acoustical seals indicated that produce operable panel partitions with acoustical performance requirements and the following.

1. Seals made from materials and profiles that minimize sound leakage.
2. Seals fitting tight at contact surfaces and sealing continuously between adjacent panels and between operable panel partition perimeter and adjacent surfaces, when operable panel partition is extended, closed, and in place.

B. Vertical Seals: Deep-nesting, interlocking astragals mounted on each edge of panel, with continuous PVC acoustical seals.
C. Top Seals: Panel top seals shall be fixed, flexible multi-fin.
D. Horizontal Bottom Seals

1. Panels at Classrooms shall have tool-activated, mechanical, retractable bottom seals. Seal shall be operated by rotation of a removable crank inserted into a socket located approximately 8-inches from the floor and centered on one panel face. Bottom seal shall be spring loaded and internally guided. Bottom seal assembly shall be a cartridge, removable without cutting panel face.
2. Panels at Classrooms shall have minimum 2-inches travel bottom seal.

2.5 FINISH FACING

A. General: Provide finish facings that comply with indicated fire-test-response characteristics and that are factory applied to operable partitions with appropriate backing, using mildew-resistant non-staining adhesive.

1. Apply one-piece facings free from air bubbles, wrinkles, blisters, and other defects, with no gaps or overlaps. Tightly secure and conceal raw and selvage edges of facing for finished appearance.

B. Vinyl Fabric: Panels at Classrooms shall have manufacturer's standard Type-I vinyl fabric finish. Material shall be mildew-resistant, washable and comply with CFFA-W-101-B for Type indicated; Class A; weight not less than 18 oz. per lineal yard. Color and pattern shall be selected from operable wall manufacturer's standard offering.

2.6 SUSPENSION SYSTEM

A. Suspension Tracks: Steel and aluminum composite as noted below with adjustable steel hanger rods for overhead support, designed for type of operation, size and weight of operable panel partitions as indicated. Size track to support partition operation and storage without damage to suspension system, operable panel partitions, or adjacent construction. Limit track deflection to no more than 0.10-inch between bracket supports. Provide a continuous system of track sections and accessories to accommodate configuration and layout indicated for partition operation and storage.

1. Operable walls at Classrooms shall utilize AEC #2 composite track (aluminum case with steel running surface) or equal.

a. Panel guide shall have finish to match track soffit shall be furnished at operable walls configured as paired panels or continuously hinged.
b. Track soffit trim shall be integral to track.
c. Track brackets shall interlock with top flange of track and attach to structure with pairs of 1/2-inch diameter steel threaded rod. Track joints to be aligned by concealed, steel dowels.
d. Track shall have minimum 2.2-inch-to-the-fourth moment of inertia.
e. Trolleys shall have 4, ball-bearing, steel wheels. Individual trolley capacity shall be 600 pounds.
f. Pendant bolt to be 5/8-inch diameter and attach to panel through a steel plate mounted internally with panel frame.
g. Track at walls configured as individual panel operation shall utilize 12-inch radius turns. Trolleys shall be pre-programmed to select the appropriate stack track. Changes in direction of panel travel shall be by means of remotely controlled track switches.

B. Track Finish:

1. Track soffit trim at Classrooms shall have silicon polyester finish.

C. Proof Load Testing:

1. Classrooms- Submit test report from nationally recognized independent laboratory showing that assembly of track/trolley/bracket/hanger rod sustains a load of 3,000

pounds at mid-point of 42-inch simple span without damage. Load applied to trolley via pendant bolt.

PART 3 - EXECUTION

3.1 EXAMINATION/PREPARATION

A. Examine adjacent construction, supports and built-in components to ensure a coordinated installation.
B. Verify that openings and substrates are within allowable tolerances, plumb, level, clean, will provide a solid anchoring surface. Prepare opening to conform with ASTM E 557, operable partition manufacturer's installation instructions, and the approved shop drawings.
C. Verify that permanent building construction around the operable partition matches the required acoustical performance.
D. Level floors by grinding and filling to bring tolerances within limits acceptable to the partition manufacturer and the installer.
E. Correct other detrimental conditions before proceeding with installation.

3.2 INSTALLATION

A. Install assembly in compliance with manufacturer's instructions and ASTM E 557 after other finishing operations including painting are completed.
B. Install plumb and level, with sound-absorbing faces alternated with solid reflecting faces such that half of the sound absorption is exposed on each side of the partition.
C. Anchor track securely to overhead supports, and jambs to adjacent construction.
D. Match operable partition panels for color and pattern by installing partition from cartons in same sequence as manufactured and packaged, if so numbered. Broken, cracked, chipped, or deformed panels are not acceptable.
E. After completing installation, lubricate bearings and sliding parts; and adjust to ensure smooth, easy operation.

3.3 FIELD QUALITY CONTROL

A. Engage a factory-authorized service representative to adjust and operate the operable panel partitions.

    1. Test and adjust seals, hardware, carriers, tracks, pass doors, pocket doors, controls, safety devices and other operable wall components. Replace damaged or malfunctioning operable components.

B. In the College Representative's presence, conduct tests to ensure safe and efficient operation of the partition.
C. Review the maintenance data specified above with the College’s Representative.
D. Acoustical performance testing by an independent acoustical consultant in accordance with ASTM E336 with special conditions as follows:

    1. The source room levels shall have uniformity of plus or minus 2 dBC approximately 5 feet in front of the partition under test.
    2. The source and receiver room sound pressure levels will be measured across the width of the room and spatially averaged at approximately 10 feet from the partition.

E. Repair or replace operable partition components within areas where test results indicate partition does not comply with requirements and retest new partition at no cost to the University. After installation, restore marred or abraded surfaces to original condition as approved by the University Representative.

3.4 CLEANING AND PROTECTION

A. Clean soiled surfaces on completing installation of operable panel partitions, to remove dust, adhesives, and other foreign materials according to manufacturer's written instructions.
B. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and installer, that ensure operable panel partitions are without damage or deterioration at time of Substantial Completion.
C. Replace panels that cannot be cleaned and/or repaired, in a manner approved by Architect, before time of Substantial Completion.

3.5 DEMONSTRATION

A. Engage a factory-authorized service representative to train owner's maintenance personnel to adjust, operate, and maintain operable panel partitions.

1. Train owner's maintenance personnel on procedures and schedules for starting and stopping, troubleshooting, servicing and maintaining equipment and schedules.
2. Review data in maintenance manuals.

END OF SECTION

SECTION 10 28 00 – TOILET ROOM ACCESSORIES

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes toilet accessories, including framed mirrors.
B. Related requirements:

1. Section 08 86 00 for unframed mirrors.
2. Section 09 22 16 and 10 21 13 for toilet room accessories supports.

1.2 ADMINISTRATIVE REQUIREMENTS

A. Scheduling and sequencing:
B. Pre-installation meeting:

1.3 SUBMITTALS

A. Data: Manufacturer Product Data, and illustrations, complete parts list, and installation requirements for each accessory specified.
B. Samples: Full size Samples of accessories, when requested. Samples will be returned to the Contractor.
C. Schedule: Schedule indicating types, quantities, sizes, and installation locations (by room) for each toilet accessory item to be provided for the Project.

1.4 QUALITY ASSURANCE

A. Basis of design is for accessories made by Bobrick Washroom Equipment, Inc. Other acceptable manufacturers include American Specialties, Inc. and Bradley Corp.
B. Compliance with CBC requirements for accessibility for accessories and their attachments is the Contractor's responsibility.

1.5 HANDLING

A. When possible, keep protective covers on accessories until their installation is complete, then remove at final cleanup.

1.6 SPECIAL WARRANTY

A. Provide the Owner the manufacturer warranty protecting mirrors against silver spoilage for 5 years after Substantial Completion.

1.7 MAINTENANCE

A. Furnish operating instructions and keys for equipment locks.

PART 2 - PRODUCTS

2.1 MANUFACTURERS & MODELS

A. Basis of Design - Bobrick as indicated in the schedule on the Drawings.
B. Or equal.

2.2 MATERIALS

A. Stainless steel: AAMA Type 302/304 complying with ASTM A 167.
B. Sheet steel:

1. Cold-rolled commercial quality, complying with ASTM A 336, 20 gage minimum.
2. Galvanized steel: ASTM A 653 LQ, G60 zinc coating, 20 gage minimum.

C. Mirror glass: 1/4-inch (6 mm) thick, "Silvering Quality" float glass with silver coating, copper protective coating and 2-mil thick protective paint; complying with CS 27.
D. Mounting devices: Galvanized steel.
E. Fasteners: Spanner head design stainless steel fasteners where exposed; may be galvanized steel where concealed.

2.3 AUTOMATIC HAND DRYERS

A. Recessed Automatic Hand Dryers (Tag 10 on Drawings):

1. Basis of Design: Bobrick TrimLine Series Model B-3725 208-240V.
2. Power: 208-240V AC, 4.0-4.4 amp, 1000 watts, 50/60 Hz, single phase, cULus Listed, CE Marked.
3. Compliance:
4. Comply with accessibility regulations, including requirement that unit shall not project more then 4 inches from wall.
5. Cover: 18-8, type-304, 18-gauge stainless steel with a projection of 2 inches from the wall. Corners shall be welded. Equipped with air inlets on sides.
6. Hand Drying Alcove: 9-7/8-inches H x 10-inches W x 6-inches D, curved back with a ceramic water absorbent surface to capture and evaporate excess water.
7. Automatic Function: Infrared sensor.
8. Turns off automatically if an inanimate object is placed over sensor.
9. After inanimate object is removed, electronic sensor resets itself and dryer automatically resumes normal operation.
10. LED light: Flashing Green, ready to use, Solid Green, in use, Solid Red, contact maintenance.

2.4 BABY CHANGING STATIONS:

A. Recessed-Mounted Horizontal Design Stainless Steel Changing Stations (Tag 14 on Drawings):

1. Basis of Design: Model KB110-SSRE as manufactured by Koala Kare Products, a Division of Bobrick.
2. Materials: Blow molded high-density polyethylene (HDPE) clad in 18 gauge Type 304 stainless steel, brushed finish. Includes flange in same material and finish.
3. Operation: Concealed pneumatic cylinder providing controlled, slow opening and closing of the changing station bed.
4. Stainless Steel Liquid Diversion Channel: Prevents liquids that may be present on the changing surface from draining into the wall.
5. Hinge Mechanism: Reinforced full-length steel-on-steel hinge with integrated steel hook plate.
6. Changing Surface: Contoured, concave and smooth, 442 sq. in.
7. Safety Straps: Replaceable, snap-lock, nylon protective holding straps.
8. Performance: Units exceed static load requirements called out by ASTM Standard F 2285, Standard Consumer Safety Performance Specification for Diaper Changing Stations for Commercial Use.
9. Mounting: Factory-drilled mounting holes and mounting hardware included.

10. Features: No hinge structure exposed on interior or exterior surfaces; two bag hooks; built-in liner dispenser with 25 liner capacity.
11. Instruction Graphics: Universal molded instruction graphics and safety messages in multiple languages.

2.5 DRESSING BENCH

A. Shower area ADA wall hung dressing benches (Tag 15 on Drawings):

1. Folding benches shall have a frame constructed of type-304, satin-finish stainless steel that consists of 1.6mm (16-gauge), 32mm square tubing and 1.2mm (18-gauge), 25mm diameter seamless tubing.
2. Benches shall be one-piece, 13mm thick, solid phenolic with matte-finish, ivory-colored, melamine surfaces and black phenolic-resin core; secured to frame with stainless steel carriage bolts and acorn nuts.
3. Benches shall be equipped with two 75mm diameter mounting flanges constructed of type-304, 5mm thick, satin-finish stainless steel; a guide bracket constructed of type-304, 1.6mm (16-gauge), satin-finish stainless steel; and a spring constructed of type-301, 0.6mm (24-gauge) stainless steel that is spot-welded to a baseplate of type 304, heavy-gauge stainless steel.
4. Benches shall be able to lock in upright position when not in use. Shower seat shall comply with Australia Standard AS1428.1-2009 for structural strength.

2.6 SHOWER SEAT

A. Reversible folding shower seat (Tag 19 on Drawings):

1. Frame constructed of Type-304, satin-finish stainless steel that consists of 16-gauge, 1-1/4-inch square tubing and 18-gauge, 1/2-inch diameter seamless tubing.
2. Seat shall be one-piece, 1/2-inch thick, solid phenolic with matte-finish, antique white-colored, melamine surfaces, and black phenolic-resin core; secured to frame with stainless steel carriage bolts and acorn nuts.
3. Seat shall be reversible for left- or right-hand installation in the field. Shower seat shall be equipped with two 3-inch diameter mounting flanges constructed of Type-304, 3/16-inch thick, satin-finish stainless steel; a guide bracket constructed of Type-304, 16-gauge, satin-finish stainless steel; and a spring constructed of Type-301, 24-gauge stainless steel that is spot-welded to a baseplate of Type-304, heavy- gauge stainless steel. Seat shall remain in upright position when not in use.
4. Shower seat shall comply with accessible design guidelines including ADAAG.

2.7 FABRICATION

A. Fabricate units with seamless one-piece flanges on exposed faces.

1. Miter corners, weld and grind smooth and flush with parent metal so that welds are invisible on exposed surfaces.
2. Open joints (not fully welded) on exposed surfaces are not acceptable.
3. Conceal anchoring devices.

B. Hang doors or panels on continuous stainless steel piano hinges.
C. Master-key locked dispensing units. Key coin boxes of coin-operated dispensing units separately from the lock on the unit.
D. Grind edges smooth, both inside and out.
E. Finish exposed surfaces with an AISI No. 4 finish running in the same direction (horizontal or vertical) for all accessories, except where a knurled surface is specified for grab bars.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine adjacent construction and supports.
B. Verify that attachment surfaces are within allowable tolerances, plumb, level, clean, will provide a solid anchoring surface.
C. Correct detrimental conditions before proceeding with installation.

3.2 INSTALLATION

A. Drill holes to correct size and location. Install accessories plumb, level and equally spaced (where applicable).

    1. Where accessories are attached to toilet compartments, do not “thru-bolt” but drill and tap partition reinforcement
    2. Provide templates of accessories for drilling and tapping required in Section 10 21 13.

B. When installed in ceramic tile surfaces, coordinate accessory location with the tilework so that the top and one side (closest to the door) of the accessory will align with a tile joint.
C. Attach accessories plumb, level, evenly spaced where applicable, securely anchored with screws or bolts to steel studs or backing plates. Do not use Molly or toggle bolts in gypsum board.
D. Install grab bars to withstand a downward load of at least 250 lbf when tested according to method in ASTM F 446.
E. Adjust accessories for proper operation. After completion of installation, clean and polish exposed surfaces after removal of protective coverings.

3.3 ACCESSORY SCHEDULE

A. See Sheet A411 on Drawings for schedule.

END OF SECTION

SECTION 10 41 16 - EMERGENCY ACCESS KEY BOXES

PART 1 - GENERAL

A. SUMMARY

1. Section Includes:

a. Fire department emergency access key boxes.

1.2 SYSTEM DESCRIPTION

A. Emergency Access Key Boxes: High security key-locked vaults approved by Fire Department, sized and configured to house entrance keys to designated spaces and rooms, and accessed by single master key controlled by Fire Department to provide rapid emergency access to those designated spaces and rooms.

1.3 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Conference: Before starting emergency access key box installation, conduct conference at Project site.

1. Meet with Owner, Architect, and Fire Marshal.
2. Agenda: Review products, installation procedures and coordination with related work. Coordinate location of emergency access key box with Fire Marshal.

PART 2 - PRODUCTS

2.1 EMERGENCY ACCESS KEY BOXES

A. Emergency Access Key Boxes: Heavy duty steel case with hinged door for recessed mounting.

1. Basis-of-Design Product: Subject to compliance with requirements, provide Knox-Box 3200 Series Hinged Door.

a. Prior approved equal.

2. Mounting: Recessed.
3. Case: 1/4-inch-thick welded steel plate; 30 cubic inch capacity capable of holding up to 10 keys and access cards.
4. Size: 7 inches wide by 7 inches high by 3 inches deep.
5. Recessed Mount Flange: Steel face flange secured to case; 7 inches wide x 7 inches high.
6. Door: 1/2-inch-thick solid plate steel with interior gasket seal and stainless-steel hinge; 1/8-inch-thick stainless steel lock cover with hole for tamper proof seal.
7. Lock: Double action rotating tumblers and hardened steel pins access by biased cut key; keyed to Fire Department master key.
8. Finish: Manufacturer's Knox-Coat proprietary finishing process; color to match adjacent wall finish.

2.2 ACCESSORIES

A. Recessed Mounting Kit: Provide manufacturer's standard shell housing and mounting hardware for casting into concrete or setting into masonry construction where required.

B. Fasteners: Grade 5 zinc plated steel carriage screws with nuts; fabricated from quenched and tempered steel with minimum 120,000 psi tensile strength; coarse thread; thread length at least 2 times screw diameter plus 1/4 inch; 3/8-inch diameter by lengths sufficient to secure emergency access key box to backing plates at recessed locations and through wall at surface mounted locations.

C. Sealant: As specified in Section 07 92 00 - Joint Sealants.

2.3 FABRICATION

A. Form emergency access key boxes to required shapes and sizes, with true lines and angles, square, rigid, and without warp, and with metal faces flat and free of dents or distortion. Make exposed metal edges and corners free of sharp edges and burrs and safe to touch. Fabricate doors of emergency access key boxes to preclude binding. warping. or misalignment.

B. Preassemble emergency access key boxes in shop to greatest extent possible to minimize field assembly.

C. Mill joints to a tight, hairline fit. Cope or miter corner joints. Form joints exposed to weather to exclude water penetration.

D. Drill or punch holes required for fasteners and remove burrs. Use security fasteners where fasteners are exposed. If used, seal external rivets before finishing.

E. Weld in concealed locations to greatest extent possible without distorting or discoloring exposed surfaces. Remove weld spatter and welding oxides from exposed surfaces.

F. Where dissimilar metals contact each other, protect against galvanic action by painting contact surfaces with bituminous coating or by applying other permanent separation as recommended by manufacturers of dissimilar metals.

2.4 GENERAL FINISH REQUIREMENTS

A. Comply with NAAMM/NOMMA's "Metal Finishes Manual for Architectural and Metal Products (AMP 500-06)" for recommendations for applying and designating finishes.

B. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

C. Appearance of Finished Work: Noticeable variations in same piece are not acceptable. Variations in appearance of adjoining components are acceptable if they are within the range of approved Samples and are assembled or installed to minimize contrast

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer and fire marshal present, for compliance with requirements for roughing-in openings, clearances, and other conditions affecting performance of the Work.

B. Examine walls and other adjacent construction for suitable conditions before installation.

C. Prepare written report, endorsed by Installer, listing conditions detrimental to performance of the Work.

D. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Install emergency access key box in accordance with Fire Department requirements and with manufacturer’s instructions and recommendations.

B. Install emergency access key boxes level and plumb, according to manufacturer's written instructions.

1. Install recess mounted emergency access key boxes flush in non-rated framed construction. Install surface mounted emergency access key boxes in fire-rated framed construction, concrete construction, and masonry construction.
2. Where dissimilar metals contact each other, protect against galvanic action by painting contact surfaces with bituminous coating or by applying other permanent separation as recommended by manufacturer.
3. Where aluminum contacts grout, concrete, masonry, or wood, protect against corrosion by painting contact surfaces with bituminous coating.

C. Emergency Access Key Boxes: Install emergency access key boxes with centerline not more than 48 inches above finished floor.

3.3 FIELD QUALITY CONTROL

A. Examine and test emergency access key boxes.

3.4 ADJUSTING AND CLEANING

A. Remove temporary protective coverings and strippable films, if any, as emergency access key boxes are installed unless otherwise indicated in manufacturer's written installation instructions.

B. Adjust doors, hardware, and moving parts to function smoothly, and lubricate as recommended by manufacturer. Verify that integral locking devices operate properly.

C. Touch up marred finishes or replace emergency access key boxes that cannot be restored to factory-finished appearance. Use only materials and procedures recommended or furnished by in-wall payment drop box manufacturer.

D. Replace emergency access key boxes that have been damaged or have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

E. On completion of emergency access key boxes installation, clean interior and exterior surfaces as recommended by manufacturer.

END OF SECTION

SECTION 10 44 00 - FIRE PROTECTION SPECIALTIES

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes:

1. Fire extinguishers.
2. Fire extinguisher cabinets.
3. Mounting brackets.
4. Fire extinguisher locators.

B. Related requirements: Division 21 for fixed fire protection systems.

1.2 ADMINISTRATIVE REQUIREMENTS

A. Pre-installation meeting:

1. Coordinate size of fire extinguisher cabinets to ensure that type and capacity of fire extinguishers indicated are accommodated.
2. Coordinate sizes and locations of fire extinguisher cabinets with wall depths. Final location of fire extinguisher cabinets is subject to the Fire Department’s approval.
    a. Verify cabinet locations with both the Fire Department and the Architect and Owner’s Authorized Representative during the framing stage of the Project.
    b. Positioning of cabinets at locations other than indicated shall be done at no additional cost to the Owner.
    c. Where extinguisher Locations are not indicated, assume cabinet and extinguishers will be located within 75 feet of any point in the building, or at a rate of one for each 3,000 square feet of building area, or portion thereof, whichever yields the greater number of extinguishers.

1.3 SUBMITTALS

A. Data: Manufacturer Product Data and installation instructions for the work of this Section.

1. For fire extinguishers, submit Drawings indicating locations and type of extinguishers after approval by Fire Marshall.
2. For extinguisher cabinets, include roughing-in dimensions and details showing mounting methods, door hardware, cabinet type and materials, trim style and door construction, and materials.
3. Include color charts showing full range of manufacturer standard colors and designs available.

B. Closeout: 2 keys for each cabinet, all keyed alike, and properly tagged.

1.4 QUALITY ASSURANCE

A. Uniformity: Provide all fire extinguishers, cabinets and accessories made by one manufacturer.
B. UL listing: Provide UL listed fire extinguishers bearing the UL "Listing Mark" for type, rating, and classification specified. Provide cabinets with the same fire-rating as walls in which they are installed.

C. NFPA compliance: Fabricate and label fire extinguishers to comply with NFPA 10, "Portable Fire Extinguishers."

1.5 SPECIAL WARRANTY

A. Fire extinguisher warranty:

1. Warranty stating that manufacturer agrees to repair or replace fire extinguishers that fail in materials or workmanship for 5 years from Substantial Completion.
2. Failures include:

a. Failure of hydrostatic test according to NFPA 10.
b. Faulty operation of valves or release levers.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Basis of design: Products by Larsen's Manufacturing Co.
B. Other acceptable manufacturers:

1. JL Industries, Inc./Division of Activar Construction Products Group.
2. Potter Roemer LLC.
3. Or equal.

2.2 FIRE EXTINGUISHERS

A. Multi-purpose dry chemical: 3A:40B:C UL rated, 6 lb. capacity, aluminum valve.

1. Markings:
2. Include pictorial marking system complying with NFPA 10, Appendix B and bar coding for documenting fire extinguisher location, inspections, maintenance, and recharging.
3. Label with standard warnings concerning breathing, eyes, skin and ingestion. Provide emergency and first aid procedures.

2.3 FIRE EXTINGUISHER CABINETS

A. Manufacturer:

1. Basis-of-design-product: "Architectural Series" Steel "Tub" box, "Larsen Loc", recessed and semi-recessed, with lockable door.

a. Recessed:

1) Non-fire-rated 2409-R2.
2) Fire-rated: FS 2409-R2.

b. Semi-Recessed:

1) Non-fire-rated: 2409-R4 with a 3-1/2-inch projection.
2) Fire-rated: FS 2409-R4 with a 3-1/2-inch projection.

2. Or equal.

B. Construction: Manufacturer standard enameled steel box. Miter and weld perimeter door and frames and grind smooth.
C. Doors: Full panel clear tempered glass with Larson-Loc.
D. Trim: One-piece combination trim and perimeter door frame overlapping surrounding wall surface, with exposed trim face and wall return at outer edge (backbend). Miter and weld all joints.
E. Door hardware: Manufacturer standard door operating hardware and keyed lock. Provide concealed or continuous type hinge permitting door to open 180 degrees.
F. Factory-finishing:

1. After cleaning and pretreatment, apply manufacturer's baked enamel coating of the color selected by the Architect from manufacturer's palette.
2. Identify fire extinguisher in cabinet with lettering spelling "FIRE EXTINGUISHER" painted on door by silk-screen process.
3. Provide vertical lettering on door as selected by Architect from manufacturer's standard letter sizes, styles and layouts.

2.4 ACCESSORIES

A. Fire extinguisher locators: White plastic. Red edge in white vinyl with a fire extinguisher symbol and “Fire Extinguisher” lettering by Flynn, or equal.
B. Mounting brackets (wall hooks):

1. Basis-of-design-products: Larsen’s Model B4, standard brackets of sizes required for extinguisher specified, in manufacturer standard plated finish.
2. Provide brackets for extinguishers, other than those in cabinets.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine adjacent construction and supports.
B. Verify that openings are within allowable tolerances, plumb, level, clean, will provide a solid anchoring surface.
C. Correct detrimental conditions before proceeding with installation.

3.2 INSTALLATION

A. Verify with Fire Marshal and Architect each fire extinguisher cabinet location during the framing stage of the Project; location of fire extinguisher cabinets is subject to the Fire Marshal's approval.

1. Position cabinets at locations other than indicated at no cost to the Owner.
2. Where not indicated locate, cabinets and extinguishers with the Architect's approval, so that they can be reached within 75 feet travel distance from any point, or one for each 3,000 square feet, whichever is more restrictive.

B. Install cabinets so that the fire and/or acoustical rating of the walls are not compromised.
C. Attach mounting brackets and fire extinguisher cabinets securely to studs or backing plates, square, plumb and level, in compliance with their manufacturer's instructions; do not attach them to gypsum board with Molly or toggle bolts.
D. Install fire extinguisher locators where indicated. Secure to supports with double-sided foam tape.

3.3 FIELD QUALITY CONTROL

A. Verify that installed extinguishers are fully charged and tagged in accordance with requirements of authorities having jurisdiction.
B. Touchup damaged finish, when the results are acceptable to the Architect, otherwise replace damaged components.

END OF SECTION

SECTION 10 51 13 - STEEL LOCKERS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes

1. Heavy duty knocked down two tier lockers, including hardware, flat tops, skirts, fillers, and related accessories required for complete installation as indicated.
2. Locker benches.

1.2 ADMINISTRATIVE REQUIREMENTS

A. Preinstallation Conference: Conduct conference at Project site.
B. Coordination:

1. Coordinate sizes and locations of concrete bases for metal lockers.
2. Coordinate sizes and locations of framing, blocking, furring, reinforcements, and other related units of work specified in other Sections to ensure that metal lockers can be supported and installed as indicated.

1.3 SUBMITTALS

A. Data: Manufacturer product data giving sizes, standard fabrication details, materials, finishes, roughing-in diagrams and installation instructions, including those for anchors and fasteners.
B. Shop drawings:

1. Include plans, elevations, sections, and attachment details.
2. Show locker trim and accessories.
3. Include locker identification system and numbering sequence.
4. Show attachment and anchoring details with size of anchors to be used.

C. Samples:

1. Locker manufacturer samples shall be at least 80-sq-inches.
2. Trim samples shall be at least 8-linear-inches.

1.4 QUALITY ASSURANCE

A. Provide all lockers for the Project made by the same manufacturer.

1.5 HANDLING

A. Do not deliver lockers until the building is enclosed and ready for their installation.

1.6 WARRANTY

A. Special Warranty: Manufacturer agrees to repair or replace components of metal lockers that fail in materials or workmanship, excluding finish, within specified warranty period.

1. Failures include, but are not limited to, the following:

a. Structural failures.

b. Faulty operation of latches and other door hardware.

2. Damage from deliberate destruction and vandalism is excluded.
3. Warranty Period for Knocked-Down Metal Lockers: Two years from date of Substantial Completion.

PART 2 - PRODUCTS

2.1 MANUFACTURER

A. One of the following:

1. Basis of design: Penco Products Inc.
2. Lyon Workspace Products.
3. Republic Storage Systems.
4. Or equal.

2.2 HEAVY DUTY LOCKERS

A. Heavy Duty Lockers: All locker body components made of cold rolled steel specially formed for added strength and rigidity and to ensure tight joints at fastening points.

1. Lockers with Doors: Penco Invincible II, knock-down lockers, with no legs.

B. Locker Body Construction: Steel specially formed for added strength and rigidity and to ensure tight joints at fastening points.

1. Sides, Bottoms, Tops, and Shelves:

a. 16-gauge steel.
b. Ventilation: 3/4 inch wide by 1-1/2-inch-high diamond-shaped perforations.
c. Solid sides.

2. Backs: Solid 18-gauge steel.
3. Doors:

a. 14-gauge steel.
b. Ventilation: 3/4 inch wide by 1-1/2-inch-high diamond-shaped perforations.
c. Solid doors.

4. Tops and bottoms with three sides formed 90 degrees, the front offset formed to be flush with horizontal frame member.
5. Shelves with four sides formed to 90 degrees, front edge having a second bend.
6. Hole spacing in locker body construction: Not exceeding 9 inches.
7. Two- tier lockers: Intermediate channel-shaped horizontal frame members attached to side frames with mortise and tenon construction, securely welded.
8. Optional factory assembly of locker bodies using rivets.

C. Components for two tier lockers

1. Body. Locker body components shall be minimum 24-gage steel sheet formed to ensure tight joints at fastening points.

    a. Tops and bottoms shall have 3 sides hemmed and bent 90 degrees and the front offset and formed to be flush with the horizontal frame member.
    b. Shelves shall have 3 sides hemmed and bent 90-degrees, the front edge shall be hemmed and bent twice to form a channel.
    c. Exposed Locker Sides: shall be minimum 16 gage steel sheet without any extra holes.

2. Door Frame: minimum 16 gage steel sheet formed to a channel shape. Vertical members shall have an additional flange to provide a continuous door strike. Inter-membering parts shall be mortised and tenoned and electrically welded. Cross frame members, including intermediate cross frames, on multiple-tier lockers, shall be channel shapes of minimum 16 gage steel and be securely welded to vertical framing members.
3. Door face, top and bottom rails and edge stiles: formed from one piece of 16 gage steel sheet.
4. Forming shall provide

    a. A fully enclosed channel shape on the lock side of adequate width and enough depth to fully conceal the lock bar.
    b. Channel formation on the hinge side.
    c. Right angle formations across the top and bottom.

5. Ventilation

    a. Doors 36- to 72-inches high shall have 2 sets of louvers, one set near the top of the door and one set near the bottom.
    b. Shorter doors shall have one set of louvers.

6. Interior Equipment Internal reinforcing may be manufactured of hot rolled pickled and oiled steel per ASTM A569, unless indicated otherwise.

    a. Double tier lockers shall have the following.

        1) 3 single-prong wall hooks mounted below the ceiling
        2) One double-prong hook mounted to the underside of the ceiling.

7. Internal reinforcing may be manufactured of hot rolled pickled and oiled steel per ASTM A569, unless indicated otherwise.

D. Locker Doors: One piece sheet steel.

1. Multi-Point Latch Doors: Full channel formation of adequate depth to fully conceal lock bar on lock side, channel formation on hinge side, right angle formations across top and bottom, with holes for attaching number plates.
2. Single Point Latch Doors: 14-gauge door reinforced by a full height 3-1/2 inch wide, 18-gauge vertical pan welded to the top, bottom and hinge side flanges and rear of door skin on 12-inch, 15 inch and 18-inch-wide doors. Provide a horizontal pan for doors wider than 18 inches.

3. Single Point Latch Doors: 14-gauge door reinforced by a full 18-gauge inner pan welded to outer door skin on all four sides.

    a. Solid outer door, solid inner pan
    b. Diamond perforated outer, offset diamond perforated inner pan.
    c. 3 inch or 6-inch louvered outer door, mini louvered inner pan.
    d. Mini louvered outer, mini louvered inner pan.

4. Doors over 15 inches wide and 30 inches high: Provided with 3-inch wide 20 gauge full height reinforcing pan welded to inside face of door at 6 inch centers.
5. Box Lockers (2 Tiers): Channel formations on lock and hinge sides; right angle flanges on top and bottom with friction catch door pull.
6. Provide holes for attaching number plates.
7. Ventilation:

    a. Doors 20 inches or higher: 3/4-inch wide by 1-1/2-inch-high diamond-shaped perforations.
    b. All other doors: 7/16-inch wide by 15/16-inch-high diamond-shaped perforations.

8. Ventilation: Provide louvered doors in manufacturer's standard louver pattern.
9. Ventilation: Provide louvered doors in manufacturer's standard mini-louver pattern, louvers 5/8 inch wide and 1/4 inch high.
10. Ventilation: Provide fully louvered doors in manufacturer's standard full louver pattern.
11. No Ventilation: Provide with solid doors.

E. Hinges:

1. Hinge: 0.074-inch-thick sheet steel, double spun, full loop, tight pin, projection welded to door frame and securely fastened to the door.

    a. Doors 24 inches wide by 60 inches or 72 inches high: Four 2 inch high five-knuckle hinges.
    b. All other doors: Two 2 inch high five-knuckle hinges.

2. Continuous Hinges: Continuous piano hinge for the full height of the door.

2.3 DOOR HANDLES AND LATCHING

A. 2 Tier Lockers:

1. Two, equal height locker compartments vertically stacked; furnish with 4-inch legs, skirted base, and sloped tops

    a. Size: As shown on Drawings.

        1) 18-inches wide by 24-inches deep by 36-inches high.
        2) 24-inches wide by 24-inches deep by 36-inches high.

    b. Locking, padlock, not key controlled.

2. Multi-point latching with recessed handles:

    a. Recess finger-lift control handle in door.
    b. Pocket: 22 gauge brushed stainless steel securely fastened to door with two tabs and a positive tamper-resistant decorative fastener; of depth sufficient to prevent a

combination padlock, built-in combination lock, or key lock from protruding beyond door face.

c. Provide lock hole cover plate for use with padlocks.
d. Attach 14 gauge formed steel lifting piece to latching channel with one concealed retaining lug and one rivet, assuring a positive two-point connection.
e. Handle Finger Lift: Molded, sound-deadening, attached with rivet; padlock eye for use with 9/32 inch (7.1 mm) diameter padlock shackle.
f. Latch Clip: Glass-filled nylon engaging the door frame and holding the door shut.

1) Doors 60 inches and 72 inches high: Three points.
2) Doors 20 inches to 48 inches high: Two points.

g. Locking Device: Positive, automatic type, whereby locker may be locked when open, then closed without unlocking.
h. Firmly secure one rubber silencer in frame at each latch hook.

2.4 INTERIOR EQUIPMENT

A. ADA-Compliant Lockers (Recessed Handles with Multi-Point Latch):

1. Locker Compartment Bottom: Minimum of 15 inches off the floor, or an extra shelf placed 15 inches off the floor for unobstructed forward and side reach.
2. Handicapped symbol attached to door.
3. Hooks and rods as specified for other lockers.

B. Non-ADA Lockers (Invincible II):

1. Openings up to 18 inches deep: Three single-prong wall hooks and one double-prong ceiling hook.
2. Openings 30 inch and 36 inch high: Three single-prong wall hooks and one double prong ceiling hook.

2.5 ACCESSORIES

A. Number Plates: Provide each locker with a polished aluminum number plate, 2-1/4 inches wide by 1 inch high, with black numerals not less than 3/8 inches high; attach to face of door with two aluminum rivets.
B. Closed Bases: 18 gauge closed metal front and end bases, finished to match lockers.
C. Padlocks: Control-keyed, three-number dialing combination type padlocks; not key controlled.
D. Finished End Panels: Minimum 16-gauge steel formed to match locker depth and height, 1 inch edge dimension; finish to match lockers; install with concealed fasteners.
E. Front Fillers: 20-gauge steel formed in an angle shape, with 20 gauge slip joint angles formed in an angle shape with double bend on one leg forming a pocket to provide adjustable mating with angle filler.

1. Attachment by means of concealed fasteners.
2. Finish to match lockers.

F. Zee Bases for Knock-Down Lockers without legs: 14-gauge, steel flanged outward at top for support of lockers, flanged inward at bottom for anchoring to floor.

1. Height: 6 inches.

G. Recess Trim: 18-gauge steel, 3-inch face dimension.

1. Vertical and/or horizontal as required.

2. Standard lengths as long as practical.
3. Attach to lockers with concealed clips.
4. Provide necessary finish caps and splices.
5. Finish to match lockers.

H. Benches: Laminated selected hardwood, 1-1/4-inch full finished thickness, corners rounded and sanded, surfaces finished with two coats of clear lacquer.

1. Depth: 24 inches deep.
2. Lengths: 48-inches long

I. Stainless Steel Free-Standing Bench Pedestals:

1. 2-inches diameter brushed 16-auge stainless steel formed into a trapezoid, 14-inch-wide bottom with two 5/16-inch diameter holes, top flange with four 5/16-inch diameter holes for fastening to bench (Cat # 60827H).
2. Provide non-skid kit for stainless pedestal (Cat # 68420).

2.6 FABRICATION

A. Fabricate components straight, clean cut and free from dents, scratches, oil canning, or other defects.
B. Knock-Down Lockers: Fabricate lockers on the unit principle, each locker with individual door and frame, individual top, bottom, back, and shelves, with common intermediate divisions separating compartments. Verify dimensions and arrangement before fabrication.
C. Use only smooth materials, free of blemishes such as pitting, seam marks, roller marks, trade names and roughness for surfaces exposed to view.
D. Remove blemishes by grinding before cleaning, treating and applying specified finishes.
E. Provide necessary cutouts and reinforcement for hardware.

2.7 FINISH

A. Finish: Enamel powder coat paint finish electrostatically applied and properly cured to manufacturer's specifications for optimum performance. Finishes containing volatile organic compounds and subject to out-gassing are not acceptable. Locker exterior and interior shall be painted the same color.

1. Powder Coat - Dry Thickness: 1 to 1.2 mils (0.025 to 0.03 mm).
2. Powder Coat Plus - Dry Thickness: 2 to 2.2 mils (0.05 to 0.055 mm).
3. Color: 736 Burgundy.
4. Hardware: Heavy chrome-plating with a mirror finish (US 26), and polished aluminum for number plates.
5. All other ferrous surfaces: Thoroughly clean, phosphatize and seal. Then electrostatically apply enamel finish coat and bake under controlled conditions. Colors shall have a 55 to 60 sheen.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine conditions and measurements affecting the work of this Section at site.
B. Correct detrimental conditions before proceeding with installation.

3.2 INSTALLATION

A. Install lockers plumb, level and securely anchored, in accordance with their manufacturer's recommendations and Code seismic regulations, with hairline, flush joints between units.
B. Use concealed (when lockers are closed) fasteners only, appropriate to load and anchoring substrate; do not use toggle bolts in gypsum board. Install reinforcing plates to distribute the load where fasteners would distort the metal.
C. Install trim to provide flush, hairline joints against adjacent construction. Adjust doors and hardware to operate freely without binding.

3.3 FIELD QUALITY CONTROL

A. Verify operations of all the lockers, door swing and locking mechanism. Lubricate moving parts as required.
B. Touchup minor damage or replace damaged parts. Replace lockers damaged beyond satisfactory field repair as directed by the Architect.

END OF SECTION

SECTION 10 82 00 - EXTERIOR ROOF-MOUNTED SCREEN WALL

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes design/build prefinished exterior aluminum wall louvers.

1. Furnish and install screenwall/vision barrier, structural supports and attachment brackets as shown on the drawings, as specified, and as needed for a complete and proper installation.
2. The screenwall/vision barrier to be furnished include the following:

a. Fixed extruded screenwall/vision barrier.

B. Related requirements: Division 23 for interior louvers connected to ductwork.

1.2 SUBMITTALS

A. Data: Manufacturer Product Data and specifications, air performance and water penetration graphs (AMCA Certified Ratings), anchorage details and installation instructions, including specifications for finishing materials.
B. Shop Drawings:

1. Detail the fabrication and erection of louvers not shown in the manufacturer data.
2. Include details of sections and connections.
3. Show interface with adjacent materials, anchorage and accessories.

C. Samples: 6-inch-long finished Samples of each profile of aluminum extrusions with the specified finish.

1.3 QUALITY ASSURANCE

A. Single subcontract responsibility: Subcontract the work to a single firm that has had not less than six years' experience in the design and manufacturing of work similar to that shown and required.
B. Welding:

1. Qualify procedures and personnel according to AWS D1.1, Structural Welding Code-Steel, and AWS D1.3, "Structural Welding Code-Sheet Steel".
2. Welders shall have satisfactorily passed AWS qualification tests.
3. If recertification of welders is required, retesting will be Contractor's responsibility.

1.4 HANDLING

A. Delivery: At the time of delivery all materials shall be visually inspected for damage. Any damaged boxes, crates, louver sections, etc. shall be noted on the receiving ticket and immediately reported to the shipping company and the material manufacturer.

B. Handling:

1. Material shall be handled in accordance with sound material handling practices and in such a way as to minimize racking

C. Storage:

1. Material may be stored flat, on end or on its side.
2. Material may be stored either indoors or outdoors.
3. If stored outdoors the material must be raised sufficiently off the ground to prevent it being flooded.
4. If stored outdoors the material must be covered with a weather proof flame resistant sheeting or tarpaulin.

1.5 SPECIAL WARRANTIES

A. Warrant finish against fading, chalking, peeling, cracking, checking, chipping, or erosion to base metal of the exterior panel finish for 20 years after Substantial completion.
B. The warranty, the enforcement or lack of enforcement thereof, shall not deprive the Owner of other actions, rights or remedies available to him. Warranty shall be in form approved by Owner.

PART 2 - PRODUCTS

2.1 MANUFACTURER

A. The screenwall/vision barrier and related materials herein specified and indicated on the drawings shall be as manufactured by:

1. Construction Specialties, Inc., basis of design.
2. Or equal.

2.2 PERFORMANCE REQUIREMENTS

A. Structural performance: Provide assemblies capable of withstanding the effects of gravity loads and the following loads and stresses within limits and under conditions indicated without permanent deformation of louver components, noise or metal fatigue caused by louver blade rattle or flutter, or permanent damage to fasteners and anchors. Wind pressures shall be considered to act on vertical projection of louvers.

1. Wind loads: As indicated on the Structural Drawings.
2. Maximum allowable deflection for the louver structural members to be l/180 or 0.75 inch, whichever is less.
3. Maximum allowable deflection for the louver blades to be l/120 or 0.50 inch across the weak axis, whichever is less.

B. Seismic performance: The building is in Seismic Design Category (SDC) indicated on the Structural Drawings as defined by the CBC. Engineer, fabricate and Install assemblies requiring special bracing or mounting to meet the Seismic Design Category without failure or damage.
C. Thermal movements:

1. Provide louvers that allow for thermal movements resulting from the following change (range) in ambient and surface temperatures without buckling, opening of joints, overstressing of components, failure of connections, and other detrimental effects.
2. Base engineering calculation on surface temperatures of materials due to both solar heat gain and nighttime-sky heat loss.
3. Temperature change (range) of 120-degree F, ambiant, 180-degree F, material surfaces.

2.3 SCREENWALL/VISION BARRIER MODEL

A. ALUMINUM SCREEN, VERT-A-CADE 301-- Blades to be fabricated from extruded aluminum sections in 6063-T5 alloy, minimum .081-inches thick and spaced approximately 6 3/4-inches on center. Blades to be nominal 4” deep, supported and lined up with heavy gauge extruded aluminum blade braces positively interlocked to each blade and mechanically secured to extruded aluminum supports. Aluminum channel supports fixed directly to horizontal steel supports with extruded aluminum clip angles. Fasteners to be type 304 stainless steel.
B. Blade material ships knocked down for field assembly by the installer.

2.4 MATERIALS

A. Aluminum Extrusions: ASTM B211, Alloy 6063-T5, 6063-T6 or 6061-T6.
B. Aluminum Sheet: ASTM B3209, Alloy 1100, 3003 or 5005.
C. Blank-off panels: Sheet aluminum, ASTM B 209.
D. Steel reinforcement: ASTM A 36.
E. Fasteners: Stainless steel or aluminum for aluminum-to-aluminum, galvanized steel for anchorage to supporting structure. Use Phillips flat-head machine screws for exposed fasteners.
F. Anchors and inserts:

1. Non-ferrous metal or hot-dip galvanized anchors and inserts.
2. Use steel or lead expansion bolt devices for drilled-in-place anchors.
3. Furnish inserts, as required, to be set into concrete and masonry.

G. Paint:

1. For concealed ferrous metal surfaces: Tneme-Zinc 90-93 by Tnemec, Zinc-Lock 308 by Porter International, or MZ-4 Epoxy Zinc-Rich Primer by Valspar Corp.
2. Bituminous paint: Cold-applied asphalt mastic paint complying with SSPC-Paint 12, except containing no asbestos, and formulated for 30-mil thickness per coat.

H. Sealants: As specified in Section 07 92 00.

2.5 FABRICATION

A. Provide CS screenwall models, structural supports and accessories as specified and/or shown on the drawings. Materials, sizes, depths, arrangements and material thickness to be as indicated or as required for optimal performance with respect to strength; durability; and uniform appearance.
B. Screenwall to be mechanically assembled using stainless steel or aluminum fasteners.
C. Include supports, anchorage, and accessories required for complete assembly.
D. Frame louvers with mitered or coped and continuously welded or riveted and soldered joints.

1. Weld or rivet and solder blades to frames at each end, so that all joints will be watertight.

2. Reinforce frames and blades as required for stiffness and to comply with the design criteria.

E. Blank-off panels:

1. Provide blank-off where indicated.
2. Fabricate from 0.064-inch aluminum sheet.
3. Locate on inside face of louver.
4. Install on continuous foam tape, specified in Section 07 92 00, to provide an airtight seal.
5. Attach to louver frames with machine screws at each corner and spaced at 12-inches o.c. maximum between.

2.6 FINISHES

A. General: Comply with NAAMM "Metal Finishes Manual" for finish designations and application recommendations, except as otherwise indicated. Apply finishes in factory. Protect finishes on exposed surfaces prior to shipment. Remove scratches and blemishes from exposed surfaces that will be visible after completing finishing process. Provide color as indicated or, if not otherwise indicated, as selected by architect.

B. 100% Fluoropolymer Resin Powder Coat System complying with AAMA-2605-5 standards for gloss and color retention. Finish thickness to be 1.5 to 3.0 mils.

1. Finish to allow zero VOCs to be emitted into facility of application or at job site.
2. Finish to adhere to a 4H Hardness rating.
3. Furnish manufacturer's twenty (20) year warranty for finish for gloss and color retention.

C. Three Coat Fluorocarbon Coating:

1. Sunshades to be finished with a minimum 1.4 mil (0.035mm) thick full strength 70% resin, 3 coat Fluoropolymer system.
2. Aluminum shall be thoroughly cleaned, etched and given a chromated conversion pre-treatment before application of the Kynar/Hylar coating. The coating shall consist of a primer, a high Metallic color coat and a clear PVF2 topcoat. It shall receive a bake cycle of 17 minutes at 450°F. All finishing procedures shall be one continuous operation in the plant of the manufacturer.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine adjacent construction and supports.
B. Verify that openings are within allowable tolerances, plumb, level, clean, will provide a solid anchoring surface.
C. When areas behind louvers will be difficult to access after installation, clean free of debris and dust.
D. Correct detrimental conditions before proceeding with installation.

3.2 INSTALLATION

A. Comply with manufacturer's instructions and recommendations for installation of the work.
B. Place louvers plumb, level and in proper alignment with adjacent work.

C. Anchor securely to adjacent construction as indicated on the approved Shop Drawings. Use concealed anchorages wherever possible.
D. Form tight, flush joints with exposed connections accurately fitted together.
E. Protect unpainted aluminum surfaces that will be in contact with cementitious and dissimilar metals from corrosion and galvanic action by applying a heavy coating of bituminous paint or by separating surfaces with waterproof gaskets or nonmetallic flashing.
F. Install blank-off panels on continuous ribbons of tape sealant to affect a weathertight seal.
G. Repair finish damaged by cutting, welding, soldering and grinding operations required for fitting and jointing. Restore finish so that there is no evidence of corrective work or return damaged parts to the shop for refinishing.
H. Seal joints between louvers and adjacent construction as specified in Section 07 92 00.
I. Erection Tolerances:

1. Maximum variation from plane or location shown on the approved shop drawings: 1/8" per 12 feet of length, but not exceeding 1/2" in any total building length or portion thereof (non-cumulative).
2. Maximum offset from true alignment between two members abutting end to end, edge-to-edge in line or separated by less than 3": 1/16" (shop or field joints). This limiting condition shall prevail under both load and no load conditions.

3.3 ADJUSTING AND CLEANING

A. Immediately clean exposed surfaces of the louvers to remove fingerprints and dirt accumulation during the installation process. Do not let soiling remain until the final cleaning.
B. Before final inspection, clean exposed surfaces with water and a mild soap or detergent not harmful to the material finishes. Thoroughly rinse surfaces and dry.
C. Restore louvers and accessory components damaged during installation and construction so no evidence remains of corrective work. If results of restoration are unsuccessful, as determined by the Architect, remove damaged materials and replace with new materials.

1. Touch up minor abrasions in finishes with a compatible air-dried coating that matches the color and gloss of the factory applied coating.

END OF SECTION

DIVISION 11
EQUIPMENT

SECTION 11 66 00 – ATHLETIC EQUIPMENT

PART 1 - GENERAL

1.1 SUMMARY

A. This Section includes the following basketball equipment:
   1. Portable basketball backstops.
   2. Protective Floor Cover/Storage Rack.
   3. Wall-mounted safety pads.
   4. Volleyball Standards.
   5. Divider Curtain.

B. Related Sections include the following:
   1. Construction Waste Management and Disposal- Section 01 7419
   2. Division 5 Section "Structural Steel" for structural supports not provided by basketball equipment manufacturer for supporting basketball equipment to building structure.
   3. Division 9 Section “Athletic Wood Flooring” regarding location of blocking under portable backstops.
   4. Division 26 Sections for electrical service and connections for shot clocks, scoreboards, controls, and other powered devices.

1.2 DEFINITIONS

A. NCAA: National Collegiate Athletic Association.

1.3 SUBMITTALS

A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, features, and finishes. Include details of anchors, hardware, and fastenings. If applicable, include assembly, disassembly, and storage instructions.
   1. Basketball Equipment Operators: Include operating instructions.
   2. Motors: Show nameplate data, ratings, characteristics, and mounting arrangements.

B. Shop Drawings: Show location and extent of fully assembled basketball equipment. Show location and extent of disassembled equipment and components and transport and storage accessories. Include elevations, sections, and details not shown in Product Data. Show method of field assembly, connections, installation details, mountings, floor inserts, attachments to other Work, operational clearances, and relationship to adjoining work.
   1. Blocking and Reinforcement: Show locations of blocking and reinforcement required for support of basketball equipment.
   2. Basketball Equipment Operators: Show locations and details for installing operator components, switches, and controls. Indicate motor size, electrical characteristics, drive arrangement, mounting, and grounding provisions.
   3. Wiring Diagrams: Power, signal, and control wiring.

C. Coordination Drawings: Court layout plans and elevations drawn to scale and coordinating game lines and markers applied to finished flooring.

D. Samples for Verification: For the following products:
   1. Pad Fabric: Not less than 3 inches square, with specified treatments applied. Mark face of material.

E. Product Certificates: For each type of basketball equipment, signed by product manufacturer.

F. Submit certification that wall pad foam complies with Building Code requirement for maximum heat release, when tested in accordance with UL Test Standard 1975.

G. Manufacturer Certificates: Signed by manufacturers certifying that they comply with requirements. Include evidence of manufacturing experience.

H. Qualification Data: For installer.

I. Maintenance Data: For basketball equipment and basketball equipment operator to include in maintenance manuals.

J. Warranty certifications.

1.4 QUALITY ASSURANCE

A. Source Limitations: Obtain each type of basketball equipment through one source from a single manufacturer.

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

C. Standards: Provide basketball equipment complying with or exceeding requirements of NCAA.

1.5 PROJECT CONDITIONS

A. Environmental Limitations: Do not install basketball equipment until spaces are enclosed and weatherproof, wet work in spaces is complete and dry, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

B. Field Measurements: Verify position and elevation of floor inserts and layout for basketball equipment. Verify dimensions by field measurements.

1.6 COORDINATION

A. Coordinate installation of floor inserts with structural floors and finish flooring installation and with court layout and game lines and markers on finish flooring.

B. Coordinate layout and installation of overhead-supported equipment and suspension system components with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, fire-suppression-system components, and partition assemblies.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Basketball Equipment: Portable Goals. (Arena = 3)
      a. Spalding: Model# 401-990 with jack lift system.
         1) NCAA approved backboard and rim.
      b. Porter: Model# 1835108
         1) NCAA approved backboard and rim.
   2. Basketball Equipment: Portable Goals: (Practice = 2)
      a. Spalding Model# 401971.
         1) NCAA approved backboard and rim.
      b. Porter: Model# 735050.
         1) NCAA approved backboard and rim.

3. Protective Floor Cover

    a. Covermaster.
    b. M Putterman
    c. Cover Sports USA

4. Wall-Mounted Safety Pads: Color and Graphics as determined by Architect.

    a. Sportsgraphics, Inc.
    b. Draper Shade & Screen Co., Inc.
    c. Jaypro Sports, Inc.
    d. Porter Athletic Equipment Co.

5. Volleyball Standards: Complete with floor anchors and Scorer's platform.

    a. Porter Athletic Equipment Co.- 01999-000 Composite Powr-Line Volleyball Standards.
    b. Comparable Products by other manufacturers.

6. Divider Curtains:

    a. Draper
    b. Spalding
    c. Covermaster

2.2 MATERIALS, GENERAL

A. Portable Basketball Backstop

1. Portable Basketball Backstop-Complete system meeting NCAA requirements, including regulation glass backboard, rim, backboard and frame padding. (Comparable to Spalding – Model # 401-990.)

B. Protective Floor Cover System / Storage Rack

1. Flooring Covering: basis of design is Covermaster model no. Ultima 5000

    a. Supplier shall provide adequate coverage of the entire athletic wood flooring in the Practice
    b. Court ensuring proper material overlaps
    c. PVC Coated polyester on both sides.
    d. Total cover weight to be between 27 oz. and 32 oz. per square yard.
    e. Provide a minimum ten (10) year manufacturers warranty
    f. Material to be provided in ten (10) feet wide sections
    g. All seems to be thermally welded with a minimum 1" lap weld.
    h. Provide fire resistance testing results indicating compliance with one of the following standards;
    i. Underwriter Laboratory test UL-214; NFPA 701; Fed Std 191 method #5903.

2. Storage Rack

    a. The storage rack shall provide an appropriate level of storage (number of rolls) to accommodate the required area of floor covering for the Practice Court.
    b. Non-marking casters shall have ball bearing swivel base, lubrication fittings and foot brakes.
    c. Brackets shall be adjustable rubber mounted and fitted with roller bearings that allow rollers to rotate. Locking safety clips shall be provided.
    d. Rollers shall easily rotate in the bearing housing supports allowing individual rollers to remain on the rack during installation and removal of the protective cover.
    e. Two (2) hand cranks shall be provided for loading of the cover onto the rollers.
    f. Provide a minimum ten (10) year warranty.

3. Practice Court Wall Padding

a. Safety pads shall have foam filler that produces a maximum heat release rate of 100kW when tested in accordance with UL Test Standard 1975.
b. Pad Covers: Provide safety pad fabric covers fabricated from puncture- and tear-resistant, not less than 14-oz. PVC-coated polyester or nylon-reinforced PVC fabric treated with fungicide for mildew resistance, with the fire-test-response characteristics indicated.

1) Flame-Resistance Ratings: Passes NFPA 701 Standard Methods of Fire Tests for Flame Propagation of Textiles and Films.

c. Wall Safety Pads: Padded wall wainscot panels designed to be attached in a continuous row; each panel section consisting of fill laminated to backer board with visible surfaces fully covered by seamless fabric cover, free from sag and wrinkles and firmly attached to back of backer board.

1) Backer Board: Not less than 7/16-inch- thick plywood or composite panel.

a) Where wall pads span between supports, the thickness of the backer board shall be increased as necessary to withstand the same impact that the pad material is capable of withstanding, but not less than 3/4-inch thick.

b) Finished face of wall-mounted pads and pads across window openings shall be flush.

2) Fill: Multiple-impact-resistant foam not less than 2-1/2 inch thick polyethylene, 3.5 pounds per cubic foot density.
3) Indentation Force Deflection value: not less than 90 pounds or more than 100 pounds, per ASTM D5672-95.
4) Size: Each panel section, as indicated on Drawings.
5) Number of Panel Sections: As indicated on Drawings.
6) Installation Method: Concealed mounting Z-clips at the top, bottom, and intermediate supports where indicated at windows.
7) Fabric Cover Color: Color / Graphics as selected by Architect.
8) Where pads are visible through windows, wrap back of wall pads with pad fabric so that all visible surfaces are fabric-covered.
9) Padding to be manufactured to accommodate openings required for electrical outlets.

d. Corner Wall Safety Pads shall be constructed of the same materials as the wall pads. Fabric shall wrap around the corner and cover all exposed sides and edges.

C. Divider Curtain: Specification is based on proprietary information provided by Draper, Inc. Other manufacturers should submit comparable products.

1. Electrically operated, top-roll gymnasium divider including motor, controls, clamps for attachment to building structure, threaded rod supports, and other components required for complete functional installation; top-Roll Gym Divider as manufactured by Draper, Inc.
2. Operation: Curtain moves by rolling directly onto drive tube without the use of belts or cables.
3. Configuration: Rectangular shape with straight bottom and extending across room as indicated on Drawings.

a. Maximum dimension of stored divider: from bottom or structural support to bottom of rolled curtain: 6 inches.
b. Minimum required clearance between vertical curtain edges and adjacent fixed objects: 6 inches.

c. Provide at least 36 inches space between curtain ends and walls or fixed objects to allow passage space around divider.

4. Operating mechanism: Drive pipe winch powered with 1 HP, 110VAC, 60-cycle, single phase, reversible capacitor, C-Face motor with thermal overload protection. Entire winch assembly to be UL listed and shall carry a five-year warranty. Provide with load holding worm gear reduction and integral limit switches to control curtain travel. Drive pipe shall rotate in pipe support assemblies spaced at approximately 10 feet.
5. Attachment: Attach to structural support with beam clamps, hanger brackets, and ½ inch diameter threaded rods. Attachment clamps designed to be capable of supporting a minimum of 5,000 lbs. Each and provided in sufficient number to provide a combined minimum 45:1 attachment point safety factor.
6. Drive pipe: 5 inch diameter steel pipe. Drive pipe shall roll in precision laser cut and formed support assemblies. Assemblies spaced at a maximum of 10 feet on center.
7. Divider bottom: 1-5/8 inches diameter steel pipe batten in 6 inches wide curtain pocket.
8. Curtain Fabric:

   a. Bottom 8 feet of curtain to be solid vinyl coated polyester.

      1) Weight 22 ounces.
      2) Resistant to rot, mildew, and ultraviolet light.
      3) Flammability; Rated self extinguishing in accordance with California State Fire Code F-31.5 and F-140.
      4) Color to be selected by Architect.

   b. Top portion of curtain to be to be vinyl coated polyester mesh.

      1) Weight: 9 ounces.
      2) Resistant to rot, mildew, and ultraviolet light.
      3) Flammability: Rated self-extinguishing in accordance with California State Fire Code F-230.
      4) Color to be selected by Architect.

   c. VOC Emission; Divider Curtain Vinyl and Mesh to be low emitting and certified to meet all of the requirements of the GREENGUARD Children and Schools and GREENGUARD certification program. GREENGUARD Children and Schools requires emissions of total volatile compounds 0.22 mg/m cubed, formaldehyde 0.0135 ppm, total aldehydes 0.043 ppm, individual volatile organic compounds 1/1000 TLV and ½ chronic REL and total phthalates 0.01 mg/m cubed. Vinyl and mesh must be evaluated to indoor air quality evaluation (IAQ) using a GREENGUARD product evaluation protocol following the requirements of the GREENGUARD Environmental Institutes (GEI) Product Certification Program.
   d. ASTM Stanard D5116 and the US Environmental Protection Agency and modeled based on GEI requirements for a standard gymnasium loading and modeled based on GEI requirements for a standard gymnasium loading and ASHRAE 62.1-2004 ventilation conditions. Manufacturer to provide certificate and or test results upon requests.
   e. Top Edge: Solid fabric , cut square for attachment to roller tube and of sufficient length to allow at least two complete wraps on roller tube at all times.
   f. Bottom edge : Pocket to house bottom pipe batten.
9. Curtain Safety Device:

   a. Provide Draper Model 504301 Curtain Lok safety device. Curtain Lok to be directly speed sensitive to automatically lock divider curtain in position at any time during storage or operation. In the event of an over-speed situation (greater than 1.5 feet per second)caused by malfunction of the hoisting apparatus, whether sudden or gradual, device will immediately activate. Curtain Lok work regardless of direction of rotation and automatically resets when load is reversed or removed.

10. Controls: Provide key lock, 3-position, momentary contact wall control switch to lower, raise, and stop gymnasium divider. Provide with switch box and plastic cover plate. 11. Coordinate electrical requirements.

2.3 COMPETITION RULES

A. General: Provide equipment and installation that complies with requirements in the "NCAA Basketball Rule Book."

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for play court layout, alignment of mounting substrates, installation tolerances, operational clearances, accurate locations of connections to building electrical system, and other conditions affecting performance.
   1. Verify critical dimensions.
   2. Examine wall assemblies, where reinforced to receive anchors and fasteners, to verify that locations of concealed reinforcements have been clearly marked for installers. Locate reinforcements and mark locations if not already done.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.2 INSTALLATION, GENERAL

A. General: Comply with manufacturer's written installation instructions and competition rules indicated for each type of basketball equipment. Complete equipment field assembly, where required.

B. Unless otherwise indicated, install basketball equipment after other finishing operations, including painting, have been completed.

C. Permanently Placed Basketball Equipment and Components: Rigid, level, plumb, square, and true; anchored securely to supporting structure; positioned at locations and elevations indicated on Shop Drawings; in proper relation to adjacent construction; and aligned with court layout.
   1. Floor Insert Location: Coordinate location with application of game lines and markers.
   2. Floor Insert Elevation: Coordinate installed heights of floor insert with installation and field finishing of finish flooring and type of floor plate.
   3. Operating Basketball Equipment: Verify clearances for movable components of basketball equipment throughout entire range of operation and for access to operating components.

D. Anchoring to In-Place Construction: Use anchors and fasteners where necessary for securing built-in and permanently placed basketball equipment to structural support and for properly transferring load to in-place construction.

E. Wall Safety Pads: Mount with bottom edge at dimension indicated on Drawings above finished floor.

F. Connections: Connect automatic operators to building electrical system.

G. Portable Basketball Equipment and Components: Assemble in place to verify that equipment and components are complete and in proper working order. Instruct Owner's designated personnel in properly handling, assembling, adjusting, disassembling, transporting, storing, and maintaining units. Disassemble portable basketball equipment after assembled configuration has been approved by Architect, and store units in location indicated on Drawings.

H. Blocking support: Provide additional blocking support within wood flooring system at final locations of all portable goal base supports in the upright position. Re: plans for locations.

3.3 ADJUSTING

A. Adjust movable components of basketball equipment to operate safely, smoothly, easily, and quietly, free from binding, warp, distortion, nonalignment, misplacement, disruption, or malfunction, throughout entire operational range. Lubricate hardware and moving parts.

3.4 CLEANING AND PROTECTION

A. After completing basketball equipment installation, inspect components. Remove spots, dirt, and debris and touch up damaged shop-applied finishes according to manufacturer's written instructions.

B. Provide final protection and maintain conditions acceptable to manufacturer and Installer that ensure basketball equipment is without damage or deterioration at time of Substantial Completion.

C. Replace basketball equipment and finishes that cannot be cleaned and repaired, in a manner approved by Architect, before time of Substantial Completion.

END OF SECTION

DIVISION 12
FURNISHINGS

SECTION 12 24 16 - ROLLER SHADES

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes motorized (MS-2) and manually operated (MS-1) roller shades and operators.
B. Shade Fabric.
C. Work furnished, but installed in other Sections:

1. Metal shade pockets or housings recessed into ceiling systems, and extruded aluminum ceiling pocket trim (closure) assemblies.
2. Electrical control components including switches and relays necessary for control characteristics specified.

D. Related requirements: Division 26 for electrical service and connections for motor operators, controls, limit switches, and other powered devices and for system disconnect switches for motorized shade operation.

1.2 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Where motorized shades are to be controlled by control systems provided under other sections, coordinate the work with other trades to provide compatible products.
2. Coordinate the work with other trades to provide rough-in of electrical wiring as required for installation of hardwired motorized shades.

B. Preinstallation Meeting: One week prior to commencing work related to this section. Require attendance of all affected installers.
C. Sequencing:

1. Do not fabricate shades until field dimensions for each opening have been taken with finished conditions in place. "Hold to" dimensions are not acceptable.
2. Do not install shades until final surface finishes and painting are complete.

1.3 SUBMITTALS

A. Data: Manufacturer Product Data for each type of product indicated. Include styles, material descriptions, construction details, dimensions of individual components and profiles, features, finishes, and operating instructions.

1. Motorized shade operators: Include operating instructions.
2. Motors: Show nameplate data, ratings, characteristics, and mounting arrangements.

B. Shop drawings: Large scale, dimensioned drawings showing location and extent of roller shades, including the following:

1. Elevations, sections, details, and dimensions not shown in Product Data. Show locations and size of backing required for installation of shades.
2. Installation details, mountings, attachments to other work, operational clearances, and relationship to adjoining work.
3. Head, jamb and sill details as necessary to coordinate work with surrounding conditions and construction.
4. Shade schedule coordinating room number, window type, opening size(s), quantities and key to details.

5. Locations and details for backing, installing operator components, switches, and controls. Indicate motor sizes, electrical characteristics, drive arrangement, mounting, and grounding provisions.
6. Complete wiring diagrams including connection details for components furnished under this Section.
7. Provide location plan showing all switch and control zones as per the performance requirements of the specifications. All switches, sensors and other control accessories must clearly be shown and called out in a bill of materials.
8. Provide location plan showing all manual shade control locations. Cross-reference furniture plans for optimal positioning of chains.
9. Provide elevation drawings showing shade band layout. Indicate any necessary seam or batten locations.

C. Coordination drawings: Show the following.

1. Overall arrangement of shades and control locations.
2. Shade mounting assembly and attachment.
3. Size and location of access to shade operator, motor, and adjustable components.

D. Selection Samples:

1. 3-inch by 5-inch shade cloth fabric swatches for initial fabric color selection from manufacturer's full range of available fabrics.
2. Standard aluminum finish color Samples from manufacturer's range of standard colors.

E. Verification Samples:

1. One fully operational window shade assembly of each type required, 30-inch square complete with selected shade cloth including sample of seam/batten when applicable. Disassemble sample to demonstrate compliance with the requirements of this Section.
2. One complete set of all shade components, unassembled, demonstrating compliance with the specified requirements.

F. Design Data, Test Reports, and Certificates: Current reports from independent testing laboratories demonstrating specified requirements.
G. Manufacturers' instructions: Manufacturer standard installation instructions.
H. Window treatment schedule: Include roller shades in schedule using same room designations indicated on Drawings.
I. Qualification data: For Installer.
J. Maintenance data: Furnish maintenance manuals with the following information:

1. Methods for maintaining roller shades and finishes.
2. Precautions about cleaning materials and methods that could be detrimental to fabrics, finishes, and performance.
3. Operating hardware.
4. Motorized shade operator.

1.4 QUALITY ASSURANCE

A. Manufacturer qualifications: Firm with minimum 5 years' experience manufacturing products comparable to those specified.
B. Installer qualifications: Firm with minimum 5 years' experience, having completed installation of roller shades similar in material, design, and extent to that indicated for the Project and whose work has resulted in a record of successful in-service performance.
C. Source limitations and material standards: Obtain roller shades through one source from a single manufacturer and provide products with the following characteristics.

1. Shade band materials with flame-resistance ratings that pass NFPA 701, as determined by testing identical products by UL or another testing and inspecting agency acceptable to authorities having jurisdiction.

2. Shade fabrics tested in accordance with University of Pittsburgh Toxicity Protocol including LC50 analysis and toxicity characteristics.
3. Shade cloth shall be 100 percentage polyester core yarn. Fiberglass content in shade cloth is unacceptable.
4. ASTM G 22 results for ATCC6538 (Staphylococcus aureus) and ATCC13388 (Pseudomonas aeruginosa) indicating minimum 5mm 'No Growth Contact Area'.
5. ASTM G 285 results for ATCC9642, ATCC9644, ATCC9348 and ATCC9645 indicating "No Growth."
6. Electrical components, devices, and accessories as a system: Listed and labeled as defined in NFPA 70, Article 100, by a testing agency acceptable to authorities having jurisdiction, and marked for intended use.

D. Mockup: Build a full size motorized shade mockup to verify selections made under sample submittals and to demonstrate aesthetic effects and qualities of materials and execution.

1. Build mockup in the location and of the size indicated or, if not indicated, as directed by the Architect.
2. Approved mockup may become part of the completed Work if undisturbed at time of Substantial Completion.

E. Fire-Test-Response Characteristics: Passes NFPA 701 small and large-scale vertical burn. Materials tested shall be identical to products proposed for use.

F. ShadeCloth Anti-Microbial Characteristics: 'No Growth' per ASTM G 21 results for fungi ATCC9642, ATCC9644 and ATCC9645, and E2180.

1.5 HANDLING

A. Storage and protection:

1. Do not deliver items to the Project until all wet work has been completed and is dry.
2. Deliver shades to Project site in labeled protective packaging, uniquely labeled to identify each shade for each opening, using same room designations indicated and scheduled.
3. Schedule delivery to prevent delays to completion of work but to minimize on site storage time.
4. Store materials in a dry secure place. Protect from weather, surface contaminants, corrosion, construction traffic and all other potential damage.

1.6 PROJECT CONDITIONS

A. Environmental limitations: Do not install roller shades until construction and wet and dirty finish work in spaces, including painting, is complete and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

B. Field measurements:

1. Where roller shades are indicated to fit to other construction, verify dimensions of other construction by field measurements before fabrication and indicate measurements on Shop Drawings.
2. Allow clearances for operable glazed units' operation hardware throughout the entire operating range. Notify Architect of discrepancies.

1.7 MAINTENANCE

A. Furnish extra materials described below that match products installed and that are packaged with protective covering for storage and identified with labels describing contents.

B. Before installation begins, deliver full-size units equal to 5 percent of quantity installed for each size, color, texture, and pattern indicated.

1.8 WARRANTIES

A. Roller Shade Hardware and Chain Warranty: Manufacturer's standard non-depreciating warranty for interior shading.

1. Shade Hardware:

a. Mecho/5 with ThermoVeil, EuroVeil, EuroTwill, Soho, Equinox, Midnite, Chelsea, or Classic Blackout shade fabric: 25-years.

2. Standard Shadecloth: Manufacturer's standard 25-year warranty.
3. Roller Shade Installation: One year from date of Substantial Completion, not including scaffolding, lifts or other means to reach inaccessible areas, which are deemed owners responsibility.

PART 2 - PRODUCTS

2.1 MANUFACTURER

A. MechoShade Systems, Inc.; as represented by ARCHITYPE, Tel: (213) 631-5001. Fax: (213) 884-4790, Contact: Jean-Guy Poitras. Email: jean-guy.poitras@mechoshade.com ; jeanguy@architype.net.
B. Draper Shade & Screen Co., Inc.
C. Hunter Douglas Window Fashions.
D. Levolor Contract; a Newell Company.
E. Or equal.

2.2 APPLICTION/SCOPE

A. Roller Shade Schedule:

1. Manual operating, chain drive, Urban sunscreen roller shades and related mounting systems and accessories as indicated on drawings.

a. Shade pockets.
b. Fascias.

2. Motorized interior sunscreen roller shades in all exterior / interior windows of rooms and spaces as shown on referenced Drawings, and related EDU control requirements systems. Include the following as scheduled and as indicated on the Drawings:

a. Shade pockets.
b. Fascias.

3. Motorized operating, chain drive, Urban room darkening opaque roller shades and related mounting systems and accessories on all door windows as indicated on drawings.

2.3 ROLLER SHADES, MANUAL OPERATION AND ACCESSORIES

A. Shade System; General:

1. Components capable of being removed or adjusted without removing mounted shade brackets, or cassette support channel.
2. Smoothly operation raising or lowering shades.

B. Basis of Design: See Interior Finish Materials Schedule on Drawings. Fabric window shade system complete with mounting brackets, roller tubes, hembars, hardware, and accessories.

1. Shade Type: Single Roller. Manual.
2. Shade Type: Double Roller. Manual.
3. Drop Position: Regular. Fabric falls off roller tube, close to glass
4. Mounting: As indicated on drawings.
5. Size: As indicated on drawings.

6. Fabric: As indicated under Shade Fabric article and Window Treatment Schedule.
7. Brackets and Mounting Hardware: Stamped steel. As recommended by manufacturer for mounting indicated accommodating shade fabric roll-up size and weight.
    a. Double Roller Brackets: Configured for light-filtering and room-darkening shades in one opening.
        1) Light-Filtering Fabric: Room-side of opening.
        2) Room-Darkening Fabric: Glass-side of opening.
8. Roller Tubes: Extruded aluminum. Capable of being removed and reinstalled without affecting roller shade limit adjustments.
    a. Size: As recommended by manufacturer; for installation conditions, span, and weight of shades.
    b. Fabric Attachment: Extruded channel in tube accepts vinyl spline welded to fabric edge.
        1) Shade Band: Removable and replaceable without removing roller tube from brackets or inserting spline from the side of the roller tube.
9. Hembars: Maintains bottom of shade straight and flat.
    a. Style: Full wrap fabric covered bottom bar, flat profile with heat sealed closed ends.
10. Manual Operation:
    a. Clutch Operator: Manufacturer's standard material and design integrated with bracket/brake assembly.
        1) Brake Assembly: Mounted on a low-friction plastic hub with wrapped spring clutch.
            a) Brake must withstand minimum pull force of 25 lbs (12 kg) in stopped position.
        2) Clutch/Brake Mounting: On support brackets, independent of roller tube components.
    b. Drive Chain: Continuous loop beaded ball chain. Upper and lower limit stops.
        1) Breaking Force: 95 pound (43 kg) minimum.
        2) Chain Retainer: Chain tensioning device complying with WCMA A100.1.
    c. Lift Assist Mechanism: Provide manufacturer's standard device, contained in the idler end of roller tube, when hanging weights exceed roller tube weight limits.
11. Accessories:
    a. Fascia: Removable extruded aluminum. Size as required to conceal shade mounting. Attachable to brackets without exposed fasteners.
        1) Profile: Square.
        2) Configuration: Captured and continuous, as indicated on drawings.
    b. Ceiling Pockets: Pre-manufactured metal shade pocket with removable closure panel, for recess mounting in acoustical tile or drywall ceilings; size and configuration as indicated on drawings.

2.4 ROLLER SHADE FABRICATION

A. Field measure finished openings prior to ordering or fabrication.
B. Dimensional Tolerances: Fabricate shades to fit openings within specified tolerances.

1. Vertical Dimensions: Fill openings from head to sill with 1/2 inch space between bottom bar and window stool.
2. Horizontal Dimensions: Inside Mounting.
    a. Fill openings from jamb to jamb.
3. Horizontal Dimensions: Outside mounting.
    a. Cover window frames, trim, and casings completely.

C. Openings Requiring Continuous Multiple Shade Units with Separate Rollers: Locate roller joints at window mullion centers; butt rollers end-to-end.

2.5 SHADE FABRIC

A. See Drawings.

2.6 SHADE MOTORS AND MOTOR CONTROL SYSTEMS (IQ/MLC SYSTEM)

A. Motors:

1. Tubular, asynchronous motors with built-in reversible capacitor operating at 110V AC (60hz), single phase, temperature Class A, thermally-protected, totally enclosed, maintenance free with line voltage power supply equipped with locking disconnect plug assembly furnished with each motor.
2. Conceal shade motors inside shade roller tube.
3. Each shade motor shall draw a maximum current of 2.3 amps.
4. Use motors rated at the same nominal speed for all shades in the same room.

B. Hanging weight: Total hanging weight of shade band shall not exceed 80 percentage of the rated lifting capacity of the shade motor and tube assembly.

C. Wall switches:

1. Three-button flush-mounted switches with metal cover plates and no exposed fasteners.
2. Connect local wall switches to control system components via low voltage (12V DC) 4 conductor modular cable equipped with RJ-11 type connectors specified in Division 16.
3. Connect master wall switches to control system components via low voltage (12V DC) 6-conductor modular cable equipped with RJ-12 type connectors specified in Division 26.

D. Motor control system:

1. Provide power to each shade motor via individual 3 conductor line voltage circuits connecting each motor to the relay-based controllers (IQ/MLC).
2. For control system components provide appropriate (spike and brown out) over-current protection (plus or minus 10 percent of line voltage) for each of the 4 individual motor circuits and shall be rated by UL or ETL as a component of this system.
3. Motor control system allows each group of 4 shade motors to be controlled by each of 4 local switch ports, with up to 14 possible “sub-group” combinations via local 3 button wall switches and all at once via a master 3-button switch. System shall allow for overlapping switch combinations from 2 or more switches.
4. Multiple “sub-groups” from different IQ/MLC control components may be combined to form “groups” operated by a single 3-button wall switch.
5. Each shade motor shall be accessible (for control purposes) from up to four local switches and one master switch.
6. Control system shall allow for automatic alignment of shade hembars at 25 percent, 50 percent and 75 percent of opening heights, or up to 3 user defined intermediate stopping positions in addition to all up/all down positions regardless of shade height. Control system shall allow shades to be stopped at any point in the opening height.
7. Control system shall have 2 standard operating modes: “Normal Mode” allowing the shades to be stopped anywhere in the opening height and “Uniform Mode” allowing the

shades to only be stopped at the predefined intermediate stop positions. Both modes shall allow for all up/all down positioning.

8. Control system components shall allow for interface with low voltage Audio Visual system components via a dry contact terminal block.
9. Control system components shall allow for interface with external analog input control devices such as solar activated controllers, wind activated controllers, 24-hour timers, etc. via a dry contact terminal block.
10. Reconfiguration of switchable groups, as specified above, shall not require rewiring of the hardwired line voltage motor power supply wiring or the low voltage control wiring.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine substrates, areas, and conditions for installation tolerances, operational clearances, accurate locations of connections to building electrical system, and other conditions affecting performance.
B. Correct detrimental conditions before proceeding with installation.

3.2 SHADE INSTALLATION

A. Install shades level, plumb, square, and true per manufacturer's instructions and approved shop drawings. Locate so shade band is at least 2 inches from interior face of glass. Allow proper clearances for window operation hardware. Use mounting devices as indicated.
B. Replace shades exceeding specified tolerances at no extra cost to Owner.
C. Adjust and balance roller shades to operate smoothly, easily, safely, and free from binding or malfunction throughout entire operational range. Adjust level, projection, and shade centering from mounting bracket. Verify there is no telescoping of shade fabric.
D. Clean roller shade surfaces after installation, per manufacturer's written instructions.
E. Demonstrate operation and maintenance of window shade system to Owner's personnel.
F. Manufacturer's authorized personnel are to train Owner's personnel on operation and maintenance of system.

1. Use operation and maintenance manual as a reference, supplemented with additional training materials as required.

G. Install units within the following tolerances:

1. Maximum variation of gap at window opening perimeter: 1/4-inch, per 8 feet (plus or minus 1/8-inch) of shade height.
2. Maximum offset from level: 1/16-inch per 5 feet of shade width.

H. Allow clearances for window operation hardware.
I. Connect motorized operators to building electrical system.

3.3 ADJUSTING

A. Adjust and balance shades to operate smoothly, easily, safely, and free from binding or malfunction throughout entire operational range.

3.4 SYSTEM STARTUP

A. Motorized Shade System: Provide services of a manufacturer's authorized representative to perform system startup.
B. Turn-Key Single-Source Responsibility for Motorized Interior Roller Shades: Design, engineering, and installation of motorized roller shade systems, motors, controls, and low voltage electrical control wiring specified is to be performed by a single manufacturer and their authorized installer/dealer.

1. The Architect will not provide a set of electrical drawings for installation of control wiring for motors, or motor controllers of motorized roller shades.
2. Power wiring (line voltage), to be provided by roller shade installer/dealer, per requirements provided by manufacturer. Coordinate following with roller shade installer/dealer:
3. Contractor To Provide the Following:

    a. Power Panels and Circuits: Size to accommodate roller shade manufacturer's requirements, as indicated on mechanical and electrical drawings.
    b. Coordinate with requirements of roller shade installer/dealer, before inaccessible areas are constructed.
    c. Line voltage as dedicated home runs, of sufficient quantity, and capacity as required. Terminate in junction boxes at locations designated by roller shade installer/dealer.
    d. Run line voltage from terminating points to motor controllers. Wire roller shade motors to motor controllers. Run low voltage control wiring from motor controllers to switch/control locations designated by Architect.

        1) Above-ceiling and concealed wiring to be plenum-rated, or in conduit, as required by the electrical code having jurisdiction.
        2) Use conduit with pull wire in areas, not accessible to roller shade contractor due to building design, equipment location or schedule.

3.5 FIELD QUALITY CONTROL

A. Upon completion of installation, conduct tests to ensure the proper operation of the shades.
B. Adjust and lubricate as required for safe and efficient operation.
C. Review the maintenance data specified in PART 1 above with the Owner's representative.
D. Restore marred or abraded surfaces to original condition using same primer used for shop painting.

3.6 DEMONSTRATION

A. Engage a factory-authorized service representative to train Owner's maintenance personnel to adjust, operate, and maintain the assemblies. CLEANING AND PROTECTING
B. Clean shade surfaces after installation in compliance with their manufacturer's instructions.
C. Provide final protection and maintain conditions, in a manner acceptable to manufacturer and installer that ensure that shades are without damage or deterioration at Substantial Completion.
D. Replace damaged shades that cannot be repaired, in a manner approved by Architect, before Substantial Completion.

END OF SECTION

SECTION 12 36 61 - QUARTZ SURFACING

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes quartz surfacing for countertops, and backsplashes. (SLS-1)
B. Related requirements:

1. Division 07 for perimeter sealant to adjacent construction.

1.2 ADMINISTRATIVE REQUIREMENTS

A. Scheduling and sequencing:
B. Preinstallation meeting:

1.3 REFERENCES

A. Architectural Woodwork Institute “North American Architectural Woodwork Standard Section 11, “Premium Grade.”

1.4 SUBMITTALS

A. Data: Manufacturer Product Data, sample warranty form, fabrication and installation instructions.
B. Shop Drawings:

1. Indicate materials, show fabrication details, field jointing, adjacent construction and methods of support and anchorages, and integration of plumbing components.
2. Dimension position of openings required, with rough-in sizes. Provide templates for cast-in or placed frames or anchors; tolerances for item placement and temporary bracing of components.

C. Samples:

1. Three-inch square samples representative of color, texture and finish to be expected for final product. Finish all exposed edges same as for exposed face.
2. Variation in distribution of aggregates in quartz surfacing in stock that will be used for the Project must be approved by the Architect prior to fabrication.

D. Manufacturer's certificate: Certification that product meets or exceeds specified requirements for stain resistance.
E. Fabricator qualifications: Evidence of fabricator qualifications.
F. Closeout:

1. List of approved cleaning materials and procedure required and provide list of substances that are harmful to product.
2. Include instructions for stain removal, surface and gloss restoration and scratch removal.

1.5 QUALITY ASSURANCE

A. Regulatory requirements: Conform to Code for flame/smoke rating in accordance with ASTM E 84.
B. Fabricator qualifications: Firm specializing in fabrication of products specified with minimum 3 years documented successful experience.
C. Color match: Materials for the Project shall be from the same batch and shall bear labels with same batch number. Visually inspect materials to be used for adjacent pieces to assure acceptable color match. Inspect in lighting conditions similar to those on Project.

1.6 HANDLING

A. Packaging, shipping, handling, and unloading:

1. Observe manufacturer's recommendations and handle in manner to prevent breakage or damage.
2. Brace parts if necessary.
3. Transport in the near-vertical position with finished face to finished face.
4. Do not allow finished surfaces to rub during shipping or handling.

B. Storage and protection:

1. Store in racks in near-vertical position. Prevent warpage and breakage.
2. Store inside away from direct exposure to sun between 25- and 130-degree F.
3. Store with finished face toward finished face.

1.7 WARRANTY

A. Ten-year warranty against cracking, softening and discoloration of the countertops.

PART 2 - PRODUCTS

2.1 MANUFACTURERS/MATERIALS

A. Quartz surfacing:

1. US Quartz Products Inc. "CaesarStone Quartz Surfacing" (basis of design).
2. DuPont "Zodiac Quartz Surfacing."
3. Consentino "Silestone."
4. Samsung "Staron."

2.2 PERFORMANCE REQUIREMENTS:

A. Performance:

1. Flexural strength: 7,420 psi, ASTM C880.
2. Compressive strength: ASTM C-170.

a. Dry: 10,430 psi average.
b. Wet: 11,265 psi average.

3. Izod impact strength: 0.361-foot lbs./inch of notch average; ASTM D256.

4. Bond Strength: 205 psi; ASTM C482 modified.
5. Modulus of rupture: 2,110 average, ASTM C99.
6. Mohs hardness: 6.5-7.5; scratch test.
7. Absorption: 0.022 percent; ASTM C97.
8. Stain and Acid Resistance: Not affected; ASTM D2299.
9. Surface burning characteristics:

    a. Flame spread: 10.
    b. Smoke density: 195; ASTM E84.

10. Wear resistance: 36.12 gram average; ASTM C501, tested with 1 kg. load, 1000 cycles at 70 rpm.]

2.3 QUARTZ SURFACING

A. Composition: 93 percent crushed quartz aggregate combined with resins and pigments and fabricated into slabs using a vacuum vibro-compaction process.
B. Identification: Material shall be labeled with batch number and imprinted on back with manufacturer's identifying mark.
C. Color and finish: As selected by the Architect from manufacturer's palette.

2.4 MISCELLANEOUS MATERIALS

A. Adhesive: Type recommended by the quartz surfacing manufacturer.
B. Sealant: As specified in Section 07 92 00.
C. Cleaning agents: Non-abrasive, soft-scrub type kitchen cleansers.

2.5 FABRICATION

A. Color match materials throughout Project shall be from the same batch with labels with same batch number. Visually inspect materials to be used for adjacent pieces to assure acceptable color match. Inspect under lighting conditions similar to those on Project.
B. Fabricate countertops to profiles and dimensions shown in compliance with WI Manual of Millwork Section 16, Premium Grade. Minimize joints.

    1. Finish exposed surfaces smooth and polish to a low sheen.
    2. Radius corners and edges unless otherwise indicated.

C. Cut and drill sinkages and holes for anchors, supports, and attachments.
D. Provide openings, reveals, and similar features as needed to accommodate adjacent work.
E. Fabricate edges with edge profile to produce uniform shape throughout entire length of edge and with precisely formed arris slightly eased to prevent snipping, and matched at joints between units. Form corners slightly eased, unless otherwise indicated. Miter and glue corners to a hairline using adhesive colored to match stone.
F. Finish exposed faces to match approved Samples. Provide matching finish on the exposed edges of countertops.
G. Fabricate tops without joints, except that where length of exceeds available slab length, locate joints where indicated. Make joints hairline and flush.
H. Fabricate thresholds with a uniform honed (400 to 1,200 grit abrasive) finish on exposed surfaces for a tight fit against door jambs and a smooth transition between tile and adjoining floor surface. Bevel edges at 1:2 slope, aligning lower edge of bevel with adjacent floor finish. Limit height of bevel to 1/2-inch or less.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Examine conditions and measurements affecting the work of this Section at site.
B. Correct detrimental conditions before proceeding with installation.

3.2 INSTALLATION

A. Install countertops in compliance with the approved shop drawings, WI Manual of Millwork for the grade specified, and the quartz surfacing manufacturer's instructions, plumb, level, with tight, flush joints.
B. Anchor with adhesive securely to supports with a maximum variation from true dimension and position of 1/8-inch.

3.3 CLEANING/PROTECTING

A. Clean and polish in compliance with quartz surfacing manufacturer's instructions.
B. Protect finished work from damage by covering with heavy Kraft paper until final cleaning.

END OF SECTION

SECTION 12 76 50 - TELESCOPIC SEATING

PART 1 - GENERAL

1.1 WORK INCLUDED

A. Manufacture, deliver and install Telescopic Seating Systems in accordance with applicable codes, the following specifications, and approved drawings.

1.2 RELATED WORK BY OTHERS

A. Adequate floor levelness and strength for operation of telescopic seating.
B. Adequate wall strength for attachment and operation of wall attached telescopic seating.
C. Electrical wiring within the building as required for power operated telescopic seating.

1.3 SYSTEM DESCRIPTION

A. Telescopic seating system shall be multiple tiered seating rows comprised of seat and deck components, risers, and supportive understructure.
B. Telescopic seating shall be operable on the telescopic principle, stacking vertically in minimum floor area when not in use.
C. The first moving row, on manual sections, shall be secured with release lever. All other rows shall be mechanically locked, operable only upon unlocking and cycling of first row. Power sections shall be secured with mechanical locks as well as the power system, operable upon activating the pendant control.

1.4 SUBMITTALS

A. Product Data: Manufacturer's specifications and technical data including the following.

1. Detailed specification of construction and fabrication.
2. Manufacturer's installation instructions.
3. Certified test reports indicating compliance with performance requirements specified herein.
4. Description of operations, including step by step set-up and take-down tasks.
5. Complete list of all deviations from specifications. To include any changes in heights or runs as depicted in the Drawings.

B. Shop Drawings: Indicate dimensions, description of materials and finishes, general construction, specific modifications, component connections, anchorage methods, hardware, and installation procedures, plus the following specific requirements.

1. Floor plans of each level indicating seating section numbers, row numbers, seat numbers and seat count.
2. Seat sizes and aisle widths.
3. Railing locations and attachment details.
4. Closure panel locations and details.
5. Anchorage details for retractable sections, horizontal and vertical structure allowing safe lifting and transport of removable sections.
6. Provide storage plan indicating width, depth and height at all seating sections, including all storage carts for platforms and rails.
7. Shop Drawings: Prepared, sealed and signed by a Professional Engineer registered in the State of California.

C. Samples: Submit 2 sets of samples for color selection or verification of the following:

1. Seats and backs, complete with outer shell, padding and upholstery.
2. Color samples for upholstery and plastic outer shells and armrests.

3. Color samples for understructure.
4. Color samples for drapes 6 inch by 6 inch from standard color palette.

D. Mock-up: A working mock-up shall be submitted with the bids if requested by Owner. Mock-up shall be a complete and fully functional manual portable retractable unit not less than 3 tiers high by 8 feet wide and shall include items listed below:

1. Provide a two-chair sample mounted to a deck section complete with fully operable fold down mechanism. One bleacher shall be mounted on first level and second bleacher on second level directly behind first bleacher.
2. Provide a complete understructure assembly, including framing, brace, and finish.
3. Platform decks and aisles including finish and safety strip.
4. Aisle front step.
5. Removable rails and guardrails.
6. End standard with removable or folding arm to comply with ADA requirements.
7. Mock-up shall remain property of bidder.

E. Quality Control Submittals:

1. Test reports.
2. Statement of qualifications.

F. Contract Closeout Submittals: Comply with Section 01 77 00.

1. Project record documents.
2. Operating and maintenance manuals.
    a. Include required lubrication and adjustments, complete parts list, and name of nearest parts supply and service company for retractable platforms.
    b. Setup configuration layout and details to permit verification of correct use are safety design requirements.
3. Seating Manifest: Provide electronic media seating manifest for ticketing by section and seat type.
    a. Manifest shall be provided in media and format compatible with fixed seating manufacturers manifest who shall incorporate the information into a single comprehensive seating manifest. Provide initial manifest, an updated manifest and final manifest.

1.5 QUALITY ASSURANCE

A. Products and materials to be provided are to be from manufacturers regularly engaged full-time in the manufacture or production of this and similar items, with a history of successful manufacture or production acceptable to the Owner. Additional documentation shall include:
B. In addition to complying with pertinent codes and regulations, comply with industry and trade standards normally associated with this product or material, except where product or material is superior in quality to industry trade standards.
C. It will be the responsibility of the bidder or manufacturer of any proposed substitute product to furnish a complete list and clarification of deviations from this specification. Suppliers not complying with this paragraph and Div. 01 requirement for proposed substitutions will be subject to rejection.
D. Installation: Shall be handled directly by the manufacturer or by a factory certified installation subcontractor.
E. Product Liability: Certification of insurance coverage of not less than $5,000,000.
F. Welding Processes: To be performed by certified professional welding operators in accordance with American Welding Society – Certified Welding Fabricator, (AWS-CWF), D1,1 "Structural Welding Code-Steel."

G. Product Improvements: Equipment provided shall incorporate manufacturer's design improvements and materials current at time of shipment, provided that such improvements and materials are consistent with the intent of these specifications.

1.6 DSA APPROVAL

A. Telescopic bleachers specified herein and indicated on the drawings, including detailed plans, specifications and engineering calculations have been accepted and signed by the Architect or Engineer in charge of design and the Architect who has been designated responsible to cover the work shown on a particular plan or specification, and approved by the Division of State Architect. Products of other manufacturers may be submitted for approval as equivalent provided, they meet or exceed the requirements of this specification.
B. Acceptable substitutions shall be submitted to the Division of the State Architect as a Field Change Directive and must be processed on a deferred approval basis. All associated design review engineering and submittal costs shall be borne by the contractor. No time extensions shall be allowed for FCD/Deferred Approval of this item.
C. Submittal shall include complete shop drawings and structural calculations (signed and stamped by the manufacturer's California licensed Structural Engineer in charge of design) for architectural/ engineering review, and processing through DSA.
D. Installation of acceptable substitute telescopic bleachers shall not be started until detailed plans, specifications and engineering calculations have been accepted by the Architect in charge of design and the signature of the Architect who has been designated responsible to cover the work shown on a particular plan or specification and approved by the Division of the State Architect.
E. All costs associated with review and submittal of acceptable substitute products to DSA as an FCD/Deferred Approval item shall be borne by the by the product manufacturer or contractor.

1.7 SUBSTITUTIONS

A. Products of other manufacturer's may be considered equivalent provided they meet or exceed requirements of this specification including retractable/recoverable first row modules for ADA and other event seating in locations shown on the plans, all skirting, closure, and finish panels. Substitutions shall be in accordance with Division 01 of the contract documents. The District or District's representative shall be the sole judge of the equivalency of any proposed substitution. Where manufacturer's offer more than one model, provide the premium model.

1.8 DESIGN CRITERIA

A. Comply with DSA IR 16-5, Deign Fabrication and Inspection of Bleachers, Folding and Telescopic Seating, and Grandstands.
B. Telescopic seating shall be designed to support, in addition to its own weight, and the weight of added accessories, a uniformly distributed live load of not less than 100 lbs. per sq. ft. (4.8 kN per sq. m.) of gross horizontal projection. Seat boards and footrest shall be designed for a live load of not less than 120 lbs. per linear foot (1.751 kN per linear m).
C. Sway force applied to seats shall be 24 lbs. per linear ft. (350 N per linear m.) parallel to the seats and 10 lbs. per linear ft. (146 N per linear m.) perpendicular to the seats. Sway forces shall not be considered simultaneously applied.
D. Railings, posts, and sockets designed to withstand the following forces applied separately.
E. Handrails shall be designed and constructed for:

1. A concentrated load of 200 lbs. (890 N) applied at any point and in any direction.

2. A uniform load of 50 lbs. per ft. (730 N/m) applied in any direction.

    a. The concentrated and uniform loading conditions shall not be required to be applied simultaneously.

F. Guards shall be designed and constructed for:

1. A concentrated load of 200 lbs. (890 N/m) applied at any point and in any direction along the top railing member and a uniform load of 50 lbs. per ft. (730 N/m) applied horizontally at the required guardrail height and simultaneous uniform load of 100 lbs. per ft. (1460 N/m) applied vertically downward at the top of the guardrail. The concentrated and uniform loading conditions shall not be required to be applied simultaneously.

G. American Institute of Steel Construction (AISC), American Iron and Steel Institute (AISI) and Aluminum Association (AA) design criteria shall be the basis for calculation of member sizes and connections.

H. Wood members shall be designed in accordance with National Forest Products Association, (NFOPA), and National Design Specification for Wood Construction.

1.9 WARRANTY

A. The manufacturer shall warrant all work performed under these specifications to be free of defects for a period of one year.

B. All understructure components shall be warranted for a period of ten years.

C. Any materials found to be defective within this period will be replaced at no cost to the owner. This warranty shall not include replacements required by Acts of God, war, vandalism, flood, fire, calamity or deliberate abuse or misuse of the equipment.

PART 2 - PRODUCTS

2.1 ACCEPTABLE MANUFACTURERS

A. Seating shall be VersaTract Telescopic Seating System as manufactured by Irwin Seating Company - Telescopic Division, Altamont, IL 62411 or equal, subject to prior approval and strict compliance with these specifications.

2.2 MATERIALS

A. Seating area as shown on architectural drawings:

1. Sideline seating areas with tapered end sections.
2. End zone seating area with tapered end sections.
3. Corner seating area to include custom design telescopic section with adjacent passthrough tunnel section.
4. Ten seating rows – Nine telescopic with last row mounted to concrete behind.
5. All seating areas to be Recessed.

B. Dimensions:

1. Overall height: 11 feet 4 inches.
2. Open depth: 25 feet 8 5/8 inches.
3. Closed depth: 5 feet 10 5/8 inches.
4. Row Spacing: 34 inches.
5. Rise per row: 16 inches.
6. All seats to have a 19-inch seating area.

2.3 FABRICATION

A. Understructure System:

1. Steel supports and rolling frames shall be constructed from formed steel of the size and shape necessary to support the design loads. All support bracing shall begin at Row 2 and be of diagonal or "knee" type for rigidity. Diagonal bracing to be minimum 1 1/2-inch x 1 1/2-inches 14-gauge square tubing. Bracing fabricated from open-sided channel, angle iron or flat strap "X" type bracing is unacceptable.
2. Wheels shall not be less than 5-inches diameter x 1 3/8-inches non-marring soft rubber face to protect wood or synthetic floor surfaces. Each operating row shall have a minimum of 6 wheels.
3. Each fully skirted wheel channel shall be formed 12-gauge steel and continuously in contact with adjacent channels by means of an Integral Alignment System (IAS) and include nylon glides to eliminate any metal-to-metal contact. The IAS maintains proper alignment between adjacent wheel channels for smooth and consistent operation while eliminating the potential for accidental row separation. Wheel channel alignment systems with metal-to-metal contact requiring periodic lubrication or that utilizes a guide rod system that can be bent or damaged will not be acceptable.
4. Each cantilever arm shall be triple-formed 10-gauge steel, securely welded to the post assembly and include a nylon cantilever pad to ensure smooth operation. The cantilever pad shall also provide a firm base when in the occupied position and provide a solid feel when walked on.
5. Vertical columns shall be high tensile steel structural tube to meet design criteria. Minimum column size to be 2-inches x 3-inches 14-gauge structural tube, welded to a 2-foot-wide wheel channel using 360 degrees of weldment.
6. Deck support members shall be double formed 14-gauge steel and connect the front nosing and rear riser members. Each deck support shall include a unique dual-purpose roller that provides smooth support during operation. The deck support roller shall also include a 3/4-inch-wide shoulder that’s encapsulated by the deck support on the row above in order to maintain proper upper alignment while delivering consistent, repeatable operation.

B. Seat Systems:

1. Infinity Seat: Supply plastic modular seats with a minimum 19-inch seating area using an 18-inch module and a 1-inch seat spacer. Seat depth to be 10-inches. Narrower seats or seats that are cut down to form a 19-inches seat will not be acceptable. Seating to be scuff resistant injection molded high density polyethylene plastic.

    a. Seat modules supplied shall be of a high aesthetic design using multiple textures, style lines and a waterfall front. The rear of the seat shall be slightly curved to eliminate the straight-line appearance and include a moderate seat contour and texture to enhance spectator comfort.
    b. Seating design shall be molded to achieve a finished end appearance without the use of end caps. The rear of the seat shall include a smooth wall allowing for the deck to be easily swept clean without obstruction.
    c. Seat heights shall be maintained at a minimum of 16 3/4-inches. Lower seat heights which detour from spectator comfort will not be accepted.
    d. Each seat to be designed with the capability of using seat numbers and row letters at the aisle locations. Seat numbers to be stylishly designed using a radius corner to enhance the aesthetic value of the seat. Seat numbers and row letters shall be recessed into the seat to protect against any vandalism.
    e. Seat colors to be an exact match to Irwin Maroon (MRN). Color variations measuring more than 2 Deltas will not be acceptable.
    f. Securely fasten each seat to the nose beam using a 10-gauge formed steel bracket and locking hardware. Adjacent seating shall be interlocked together

along the full perimeter eliminating any fore or aft movement or the potential of any pinching hazard.

g. Seat modules shall be designed to support a uniform load of 600 lbs per seat and a concentrated load of 150 lbs over 4 square inches.

C. Panelam decking shall have a 0.030 (30 thousandths) high density polyethylene overlay, permanently bonded over 5-ply structural plywood in strict compliance with U.S. Product Standard PS 1 requirements. Plywood shall be supported along the front and back edge for maximum rigidity and designed in a manner that allows 3 plies to run front to back for increased deck strength. Each plywood panel shall be connected using a tongue and groove splice leaving the deck clean and free of any tripping or cleaning obstructions. Decking shall be secured in place by the encapsulation of the rear riser and mechanical fasteners along the front edge. Panelam color to match Irwin Light Grey.

1. 3/4-inches Panelam to be supplied. Due to the tread depth thinner deck panels will not be acceptable.

D. Nosing shall be one piece, formed, 14-gauge steel with a minimum G-60 pre-galvanized finish.

E. Rear riser shall be one piece, formed, 14-gauge steel with a minimum G-60 pre-galvanized finish.

F. Finish: For rust resistance in standard conditions all painted surfaces shall be finished in textured Epoxy Powder Coated Semi-Gloss Black.

2.4 ACCESSORIES

A. Aisles shall be footrest level and supplied as shown on the architectural plans. Aisles at the footrest level shall include non-slip treads on the top front edge.

B. Intermediate aisle steps shall be provided. Steps are permanently attached closed design. Steps shall be constructed from 14 ga. steel, finished in a custom silver powder coated epoxy as designated by the architect, and designed to eliminate any possible toe catch between the top of the intermediate step and the bottom of the nose beam per ADA or other applicable codes. Intermediate steps will be required in both rectangular and tapered designs. Front step shall be removable and interlock to the front row eliminating any possibility of accidental disengagement, and store on the front row when not in use.

C. Aisle handrails.

1. Smart Rail EX aisle handrails shall be provided for all aisles that are 90 degrees to the seating rows. Aisle railings shall quickly and easily rotate 90 degrees to the locked position and store parallel to the front of the aisle. Railings that require removal from the pocket or the use of tools for storage will not be acceptable. Aisle railings shall be an individual rail design, located on every other row starting at row two (2). Railing to be constructed of 1 1/2-inches 11 ga. round steel tubing, finished in a textured custom silver powder coated epoxy. For safety, railings designed without a full return of the handrail will not be acceptable.
2. Removable aisle handrails shall be provided for all tapered aisles. Aisle railings shall be an individual rail design, located on every other row starting at row two (2). Railing to be constructed of 1 1/2-inch 11ga. round steel tubing, finished in a textured custom silver powder coated epoxy. Aisle rails spanning several rows, or rails made from square tubing will not be acceptable. For safety, rail pockets that protrude beyond the face of the bleacher while in the closed position or railings with blunt, non-turned ends will not be allowed.

D. Recoverable wheelchair spaces shall be provided at the section joint location or section length as shown on architectural plans. An integral support on row two shall be provided to eliminate structural damage to the understructure during the operation and use of the system. Front rails to be supplied at each recoverable area.

E. End rails of the vertical, removable type, finished with textured custom silver epoxy powder-coated enamel, shall be provided at the open ends of the seating areas. Each area the rails are

intended to be used shall be equipped with permanent slide-out pockets allowing the rails to be securely attached. End rails shall start at row two and be constructed from 1-inch square tubing to meet all national building codes. Railings with flexible uprights that can be expanded beyond the 4-inch sphere are not acceptable.

F. Vinyl end curtains to be removable, individual strip design to limit unauthorized access to the underside of the telescopic system. Curtain strips shall be equal to the depth of each seating row, complete with a 2-inch overlap with sewn in Velcro for securing adjacent curtain. Each row end shall have heavy-duty Velcro securely attached to the end cap using minimum 1/8-inch steel rivets for attaching curtains. End curtains to be constructed of a sturdy vinyl material. Color to be selected from manufacturer's standard selection.

G. Seat numbers and row letters shall be supplied in a contrasting, but complementary color for easy seat identification. Layout of numbering to be coordinated with the architect/owner.

H. Molded contoured backrests and seat module shall be supplied on the last seating row and permanently mounted to the concrete tread. Backrest to be injection molded and styled in a manner to complement the appearance of the seat module. The contoured backrest shall be designed with proper ergonomic shapes and promote spectator comfort from multiple seating positions. Individual backrests shall attach to a clear anodized aluminum rail for improved aesthetics, including the use of hidden fasteners. All backrest support brackets shall be finished in a texture powder coated epoxy.

I. Infinity seat spacers shall be supplied as indicated on architectural drawings and create a 19-inch seating area. Seat spacers to be 1-inch wide with a contoured shape matching that of the adjacent seat modules and supplied in a matching color. Seat spacers to be constructed using the same material, design, durability and attachment method as the Infinity seat module.

J. Front closure panels of plywood and supports shall be provided to enclose the opening from the bottom of the recess to the top of the telescopic stands. Front panels to be constructed from Panelam and match the deck surface.

2.5 PROPULSION SYSTEM

A. MANUAL: For manually operated bleachers, individual sections containing a series of tiered rows shall be manually opened and closed. Each tiered row shall have mechanical locks to keep rows fully extended when in the open position. Row locks shall automatically release upon operation of release lever in the front skirt panel. Hinging of the lower skirt board is not acceptable.

B. FRICTION POWER: Integra Drive System (IDS) shall be furnished on each seating group to open and close the telescopic units. Each individual section shall include 2 IDS friction drive systems integrated into the first moving row of understructure to achieve smooth and efficient operation. Operation of the seating shall be accomplished with the use of a walk along pendant control.

1. Each IDS power system shall include large 6 1/2-inch diameter friction rollers to develop tractive force adequate to open and close the system. Each roller to include non-marring 1/2-inch-thick rubber covering.
2. Electrical motors for each section shall be heavy-duty and high efficiency gear reduction motors. The shaft diameter for the gear motor and rollers shall be a minimum of 1-inch and be connected by a 1-inch schedule 40 drive shaft.
3. All roller chain and sprockets used throughout the drive system shall be a minimum of #40 in size. Each drive unit shall be designed to include a safety shroud around the chain and sprocket for overall safety.
4. The power units shall develop tractive forces adequate to operate the seating units under normal conditions but inadequate to operate should significant obstacles be encountered.

C. Operation of the seating shall be accomplished with the use of a walk along steerable pendant control. Steering feature to be by a motor selection switch operation allowing the operator to make subtle adjustments during the opening/closing and ensuring proper alignment. Power operated systems without a steerable feature will not be acceptable.

D. Manufacturer shall provide all wiring from power source within bleacher seating including pendant control. Removable pendant control shall be handheld with forward and reverse button, plugging into a single receptacle. Electrical contractor shall provide a 60 HZ power source (as specified below) behind each group of seating. Amperage to be as specified by seating manufacturer depending on the number of power units required. For wall-attached installations, power source to terminate in a surface mounted junction box above floor. For reverse units, power source to terminate in a junction box, flush mounted under first seating row in center of group. Electrical contractor shall perform the connections to the seating equipment at the junction box. All electrical parts and wiring shall be installed in complete accord with the National Electric Code. U.L. Listing FHJU.E479554.

1. Supply power system with 208/230V, 5 wire 3-phase system.

PART 3 - EXECUTION

3.1 REVIEWS AND APPROVALS

A. Shop drawings shall be approved, and job site field measurements taken prior to installation and telescopic gym seating shall be installed in conformance therewith.

3.2 INSTALLATION

A. The installation of the telescopic gym seating will be handled directly by the manufacturer or by a factory authorized installation subcontractor qualified to perform the installation function.

3.3 PROTECTION

A. The manufacturer’s representative shall transmit instructions in both operation and maintenance to the owner.

B. Maintenance and operation of the telescopic gym seating shall be the responsibility of the owner or his duly authorized representative, and shall include the following:

1. During operation of the telescopic gym seating, the opening and closing shall be supervised by responsible personnel who will assure that the operation is in accordance with the manufacturer's instructions.
2. Only attachments specifically approved by the manufacturer for the specific installation shall be attached to the telescopic gym seating.
3. An annual inspection and required maintenance of all telescopic gym seating shall be performed to assure safe conditions. At least bi-annually, the inspection shall be performed by a Professional Engineer or factory service personnel.

C. Irwin Telescopic Seating Company constantly strives to improve its product and manufacturing methods; therefore, it reserves the right to make changes without notice which, in the opinion of Irwin Seating Company, shall improve the product.

END OF SECTION

DIVISION 13
SPECIAL CONSTRUCTION

SECTION 13 11 00 - SWIMMING POOL GENERAL REQUIREMENTS

PART 1 - GENERAL

1.1 WORK INCLUDED

A. The scope of the work included under this Section of the Specifications shall include swimming pool(s) as illustrated on the Drawings and specified herein. The General and Supplementary Conditions of the Specifications shall form a part and be included under this Section of the Specifications. The Swimming Pool Subcontractor shall provide all supervision, labor, material, equipment, machinery, plant and any and all other items necessary to complete the work. ALL OF THE WORK IN SECTIONS 13 11 00 - 13 11 08 IS TO BE THE RESPONSIBILITY OF ONE EXPERIENCED SWIMMING POOL CONTRACTOR PRIMARILY ENGAGED IN THE CONSTRUCTION OF COMMERCIAL PUBLIC-USE SWIMMING POOLS. A SWIMMING POOL SUBCONTRACTOR SHALL BE CONSIDERED PRIMARILY ENGAGED AS REQUIRED HEREIN IF THE CONTRACTOR DERIVED 50% OF ITS ANNUAL REVENUE FROM PUBLIC-USE SWIMMING POOL CONSTRUCTION FOR EACH OF THE LAST FIVE YEARS. THE CONTRACTOR MUST HAVE ALSO, IN THE LAST FIVE YEARS CONSTRUCTED AT LEAST FIVE (5) COMMERCIALLY DESIGNED MUNICIPAL AND PUBLIC-USE SWIMMING POOLS, EACH OF WHICH SHALL HAVE INCORPORATED A MINIMUM SIZE OF 6,000 SQUARE FEET OF WATER SURFACE AREA WITH A CONCRETE AND CERAMIC TILE PERIMETER OVERFLOW GUTTER AND SELF-MODULATING BALANCE TANK. The Swimming Pool Contractor shall furnish and install the swimming pool structures, finishes, cantilever forming, swimming pool mechanical and electrical systems, and all accessories necessary for a complete, functional swimming pool system, as herein described. Work shall include start-up, instruction of Owner’s personnel, as-built plans, and warranties as required.

1.2 CODES, RULES, PERMITS, FEES

A. The swimming pools shall be constructed in strict accordance with the applicable provisions set forth by authorities having jurisdiction over swimming pool construction and operation in the State of California.

B. The Swimming Pool Contractor shall include in the work any labor, materials, services, apparatus, or drawings in order to comply with all applicable laws, ordinances, rules and regulations, whether or not shown on Drawings and/or specified.

1.3 DESCRIPTION OF WORK

A. Furnish and perform supervision, coordination, all layout, formwork, excavation, hand trim, disposing off-site of all unused material or debris to complete the swimming pool excavation to the dimensions shown on the plans.

B. Furnish and install complete swimming pool structures, including reinforcing steel and cast-in-place or pneumatically placed concrete walls and floors.

C. Furnish and install swimming pool finishes, including ceramic tile and marble plaster or other waterproof finishes.

D. Furnish and install complete swimming pool mechanical system(s), including, but not limited to, circulation systems, filtration systems, pool water heating systems, water chemistry control systems, domestic water fill line systems, booster pump and special effects systems, and all pumps, piping, valves, and connections between system(s) and swimming pool(s).

E. Furnish and install complete swimming pool electrical system(s) from P.O.C. in Mechanical Room, including, but not limited to, underwater lighting systems, water level control systems, timing systems, scoreboards, special effects systems, control circuitry, motor starters, time

clocks, bonding, and all conduits, conductors, contactors, and switches between the system(s) and swimming pool(s).

F. Furnish and install all swimming pool cantilever forming, deck equipment and required anchors and inserts for the specified equipment as required by code, shown on the Drawings and specified herein.

G. After the initial filling of the swimming pool system(s), should any repairs, continuing work, or other Subcontractor responsibility require drainage or partial drainage of the swimming pool systems, the Swimming Pool Contractor shall be responsible for any subsequent refilling and shall complete the project with the swimming pool system(s) full of water, water in chemical balance, complete in every way, and in full operation.

1.4 ASSIGNED RESPONSIBILITIES AND RELATED WORK

A. It is the intent of this section of the Specifications to clarify Work responsibilities of the trades directly and indirectly involved in construction of the pool systems. All labor, equipment, materials and supplies furnished by the Swimming Pool Subcontractor and other Subcontractors per the contractual agreement with the General Contractor and Owner and shall be as directed by the Owner through their Designated Representative.

B. THE SWIMMING POOL CONTRACTOR SHALL NOT SUBCONTRACT ANY PORTION OF THE SWIMMING POOL CONSTRUCTION OR SWIMMING POOL EQUIPMENT INSTALLATION TO ANYONE OTHER THAN A SUBCONTRACTOR THAT SATISFIES THE REQUIREMENTS OF SECTION 13 11 00.

C. References to “swimming pool systems” shall include the swimming pools, equipment, and accessories.

D. The Owner will provide one complete water filling of the swimming pool(s) but will not assume any responsibility for the swimming pool system(s) until they have been proved fully operational, complete in every way and accepted by the Designated Representative.

1.5 RESPONSIBILITIES OF THE GENERAL CONTRACTOR/POOL CONTRACTOR

A. The General Contractor shall grade the swimming pool site(s), establish benchmarks, cut and fill as necessary to provide as level an area as possible at swimming pool deck elevation before swimming pool layout.

B. The General Contractor shall be responsible for horizontal dimensions and grade elevations accurately from established lines and benchmarks (as indicated on the Drawings) and be responsible for those grades.

C. The General Contractor shall provide adequate temporary light, electric power, heat and ventilation per Federal and State OSHA requirements to construct the swimming pool system(s).

D. The General Contractor shall not permit any heavy equipment activity over any area or within five (5) feet of any area under which swimming pool piping is buried. There shall be no exceptions to this requirement.

E. The Pool Contractor shall keep the swimming pool excavation(s) and swimming pool structure(s) free of construction residue and waste materials of their workmen or Subcontractors, removing said material from the swimming pools as required.

F. The Pool Contractor shall protect the swimming pool(s) from damage caused by their construction equipment and /or workmen and Subcontractors.

G. The General Contractor shall provide a representative at the time of swimming pool start-up to coordinate all trades related to swimming pool system(s).

1.6 RESPONSIBILITIES OF THE MECHANICAL AND PLUMBING CONTRACTORS

A. The Mechanical and Plumbing Contractor shall be licensed in the State of California and provide written notifications to Swimming Pool Subcontractor and contractor when necessary to excavate and backfill within the swimming pool construction site.

B. The Mechanical Subcontractor shall not utilize any swimming pool piping trench for installation of any sanitary sewer, storm sewer, domestic water, hot water, chilled water or natural gas line.

C. The Plumbing Contractor shall furnish and install all sanitary sewer piping, including vent stacks (if necessary), for backwash pits, floor drains and floor sinks as required by code, shown on Drawings, and herein specified.

D. The Plumbing Contractor shall furnish and install all storm sewer piping and site drainage systems as required by code, shown on the Drawings, and herein specified.

E. The Plumbing Contractor shall provide a minimum 75 psi water supply for swimming pool construction work within fifty (50) feet of the swimming pool construction site(s).

F. The Plumbing Contractor shall furnish and install reduced pressure backflow protected domestic water lines to P.O.C. within swimming pool Mechanical Room as required by code, shown on the Drawings, and herein specified.

G. The Plumbing Contractor shall furnish and install natural gas piping, pressure regulation and valving to P.O.C. within swimming pool Mechanical Room as required by code, shown on the drawings, and herein specified.

H. The Mechanical Contractor shall furnish and install all ductwork, louvers, and all HVAC equipment within swimming pool Mechanical Room as required by code, shown on the Drawings, and herein specified.

I. The Mechanical Contractor shall provide a representative at time of swimming pool start-up to coordinate work related to swimming pool system(s).

1.7 RESPONSIBILITIES OF THE ELECTRICAL CONTRACTOR

A. The Electrical Contractor shall be licensed in the State of California and shall furnish and install electrical service to swimming pool Mechanical Room sized to accommodate all necessary swimming pool equipment as shown on the Drawings and herein specified.

B. The Electrical Contractor shall furnish any temporary power needed by the Swimming Pool Subcontractor within fifty (50) feet of the swimming pool construction site(s).

C. The Electrical Contractor shall furnish and install all conduits, conductors, starters/disconnects, panels, circuits, switches and equipment as required for lighting, ventilation and HVAC equipment within swimming pool Mechanical Room as required by code, shown on the Drawings, and herein specified.

D. The Electrical Contractor shall furnish and install all conduits, conductors, panels, circuits, switches and equipment for area lighting as required by code, shown on the Drawings, and herein specified.

E. All equipment, material and installation shall be as required under Division 16 of the Specifications and shall conform to NEC Article 680 (latest revision), State and Local Codes, and as may be required by all authorities having jurisdiction over swimming pool construction within the State of California.

F. The Electrical Contractor shall provide a representative at time of swimming pool start-up to coordinate work related to swimming pool system(s).

1.8 INTENT

A. It is the intention of these specifications and Drawings to call for finished work, tested and ready for operation. Wherever the work “provide” is used, it shall mean “furnish and install complete and ready for use.”

B. Minor details not usually shown or specified, but necessary for proper installation and operation, shall be included in the work, the same as if herein specified or shown.

1.9 SCHEDULE OF VALUES

A. Provide a Schedule of Values for all work specified in each of the technical specifications listed in the table below, regardless of whether the work is performed by the swimming pool contractor or others. Values listed shall be fully burdened, with contractor general conditions, overhead, profit and bonds included. Payments for swimming pool work completed shall not be approved until Schedule of Values has been submitted to and approved by Architect.

B.

SWIMMING POOL SCHEDULE OF VALUES			
No.	Section #	Description	Value
1.	13 11 01	Swimming Pool Excavation	
2.	13 11 02	Swimming Pool Concrete	
3.	13 11 03	Swimming Pool Shotcrete	
4.	13 11 04	Swimming Pool Ceramic Tile	
5.	13 11 05	Swimming Pool Plaster	
6.	13 11 06	Swimming Pool Equipment	
7.	13 11 07	Swimming Pool Mechanical	
8.	13 11 08	Swimming Pool Electrical	
Total			

1.10 SUBMITTAL PROCEDURES

A. General: Electronic copies of CAD Drawings of the Contract Drawings will not be provided by Architect for Subcontractor's use in preparing submittals.

B. Coordination: Coordinate preparation and processing submittals with performance construction activities.

1. Coordinate each submittal with fabrication, purchasing, testing, delivery, other submittals, and related activities that require sequential activity. Coordinate transmittal of different types of submittals for related parts of the Work so processing will not be delayed because of need to review submittals concurrently for coordination.

a. Architect reserves the right to withhold action on a submittal requiring coordination with other submittals until related submittals are received.

C. Submittals Schedule: Comply with requirements in Division 1 Section "Construction Progress Documentation" for list of submittals and time requirements for schedules performance of related construction activities.

D. Processing Time: Allow enough time for submittal review, including time for re-submittals as follows. Time for review shall commence on Architect's receipt of submittal.

1. Initial Review: Allow fifteen (15) days for initial review of each submittal. Allow additional time if processing must be delayed to permit coordination with subsequent submittals. Architect will advise Contract when a submittal being processed must be delayed for coordination.

2. Concurrent Review: Where concurrent review of submittals by Architect's consultants, Owner, or other parties is required, allow twenty-one (21) days for initial review of each submittal.
3. Direct Transmittal to Consultant: Where the Contract Documents indicate that submittals may be transmitted directly to Architect's consultants, provide duplicate copy of transmittal to Architect. Submittal will be returned to Architect before being returned to Subcontractor.
4. If intermediate submittal is necessary, process it in same manner as initial submittal.
5. Allow fifteen (15) days for processing each submittal.
6. No extension of the Contract Time will be authorized because of failure to transmit submittals enough in advance of the Work to permit processing.

E. Identification: Place a title block on each submittal for identification.

1. Indicate name of firm or entity that prepared each submittal on title block.
2. Provide a space on title block to record Subcontractor's review and approval markings and action take by Architect.
3. Include the following information on title block for processing and recording action taken: (See Attached Sample)

    a. Project name.
    b. Date.
    c. Name and address of Subcontractor.
    d. Name of Subcontractor.
    e. Name of Supplier.
    f. Name of Manufacturer.
    g. Unique identifier, including revision number.
    h. Number and title of appropriate Specification Section.
    i. Drawing number and detail references, as appropriate.
    j. Other necessary identification.

SUBMITTAL FOR:	SUBMITTAL TO:	SUBCONTRACTOR:

Item Number: _____
Section Number: _____
Section Description: _____
Subcontractor: _____
Supplier: _____
Manufacturer: _____
Product Code: _____
Quantity: _____

Subcontractor Certification:

It is hereby certified that the equipment or material designated in this submittal is proposed to be incorporated in the above named project and is in compliance with the contract drawings and / or specifications and is submitted for approval.

Certified by: _____
Date: _____
Job Superintendent: _____
Revisions: _____

Contractor's Submittal Stamp:

Architect's Review Stamp and Comments

F. Deviations: Highlight, encircle, or otherwise identify deviations from the Contract documents on submittal.

G. On all catalogue or cut sheets identify which model or type is being submitted.

H. Transmittal: Package each submittal individually and appropriately for transmittal and handling. Product data and shop drawings shall be packaged within a three-ring binder and colored samples shall be packaged on a heavy cardboard. Transmit each submittal using a transmittal form.

1. On an attached separate sheet, prepared on Subcontractor's letterhead, record relevant information, request for data, revisions other than those requested by Architect on previous submittals and deviations from requirements of the Contract documents, including minor variations and limitations. Include the same label information as the related submittal.
2. Include Subcontractor's certification stating that information submitted complies with requires of the Contract Documents.
3. Transmittal Form: Provide locations on form for the following information:

a. Project name.
b. Date.
c. Destination (To:).
d. Source (From:).
e. Names of Subcontractor, manufacturer, and supplier.
f. Category and type of submittal.
g. Submittal purpose and description.
h. Remarks.

I. Distribution: Furnish copies of final submittals to manufacturers, Subcontractors, suppliers, fabricators, installers, authorities having jurisdiction and others as necessary for performance of construction activities. Show distribution on transmittal forms.

J. Use for Construction: Use only final submittals with mark indicating action taken by Architect in connection with construction.

1.11 SUBSTITUTIONS

A. To obtain approval to use unspecified products, bidders shall submit requests for substitution at least ten (10) days prior to bid date. Requests shall only be considered if they clearly describe the product for which approval is asked, including all data necessary to demonstrate acceptability. All unspecified products and equipment will be considered on an “or equal” basis at the discretion of the Designated Representative. Requests for substitution received after the specified deadline will not be considered. Where a conflict exists between the requirements of the General Conditions / Special Conditions / Division 1 concerning substitutions and the requirements of this Article, this Article (Section 13 11 00, Article 1.11) shall govern.

B. Where the Swimming Pool Contractor proposes to use an item of equipment other than that specified or detailed on the Drawings which requires any redesign of the structure, partitions, foundations, piping, wiring, or any other part of the architectural, mechanical, or electrical layout, all such redesign and all new drawings (stamped by California Licensed Engineer) and detailing required shall be prepared by the Swimming Pool Contractor, at their own expense, submitted for review and approval by the Designated Representative prior to bid.

C. Where such approved deviation requires a different quantity and arrangement of piping, supports and anchors, wiring, conduit, and equipment from that specified or indicated on the Drawings, the Swimming Pool Contractor shall furnish and install any such piping, structural supports, controllers, motors, starters, electrical wiring and conduit, and any other additional equipment required by the system, at no additional cost to the Owner.

1.12 SURVEYS AND MEASUREMENTS

A. The Swimming Pool Contractor shall base all measurements, both horizontal and vertical, from benchmarks established by the Contractor. All work shall agree with these established lines and levels. The mechanical Drawings do not give exact details as to elevations of piping, exact locations, etc. and do not show all offsets, control lines, pilot lines and other installation details. Verify all measurements at site and check the correctness of same as related to the work.

1.13 DRAWINGS

A. Drawings are diagrammatic and indicate the general arrangement of the systems and work included in the Contractor. Drawings are not to be scaled. The architectural drawings and details shall be examined for exact dimensions. Where they are not definitely shown, this information shall be obtained from the Designated Representative.

1.14 SWIMMING POOL CONTRACTOR

A. The swimming pool construction work as herein described and specified in Division 13 of the Project Manual shall be the complete responsibility of a qualified and specifically licensed (C-53 license classification within the State of California) Swimming Pool Subcontractor with extensive experience in commercial public use swimming pool installations.

B. The Swimming Pool Contractor shall furnish performance and payment bonds in the amount of 100% of the Swimming Pool Contractor’s bid written by a surety Company properly registered in the State of California and listed by the U.S. Treasury. The expense of the bond(s) is to be borne by the Contractor. The Contractor shall clearly specify the amount and requirements of the bond(s) in the Contractor’s written or published request for subbids. The Contractor’s written or published request for subbids shall also specify that the bond(s) expense is to be borne by the Subcontractor.

C. Contractor certifies that it meets the qualifications and experience requirements established in Swimming Pool General Conditions, Section 13 11 00, as follows:

1. Contractor has derived 50% of its annual revenue from public-use swimming pool construction for each of the last five (5) years.
2. Contractor has, in the last five (5) years, constructed at least five (5) commercially designed municipal and public-use swimming pools, each of which have incorporated a minimum size of 6,000 square feet of water surface area with a concrete and ceramic tile perimeter overflow gutter and self-modulating balance tank.
3. The following list of projects meet the requirements of section (b) above and the contact as reference by the Contractor, the Awarding Authority of their agent or designee.

a. Owner: _____
Scope of Project: _____
Contact Person: _____
Phone Number: _____
Architect for Project: _____

b. Owner: _____
Scope of Project: _____
Contact Person: _____
Phone Number: _____
Architect for Project: _____

c. Owner: _____
Scope of Project: _____
Contact Person: _____
Phone Number: _____
Architect for Project: _____

d. Owner: _____
Scope of Project: _____
Contact Person: _____
Phone Number: _____
Architect for Project: _____

e. Owner: _____
Scope of Project: _____
Contact Person: _____
Phone Number: _____
Architect for Project: _____

D. Swimming Pool Deck Subcontractor other than the swimming pool Contractor certifies that it meets the qualifications and experience requirements established in Swimming Pool General Conditions, Section 13 11 00, as follows:

1. Subcontract has, in the last five (5) years, constructed at least five (5) commercially designed cantilevered pool decks over perimeter gutters, each of which have incorporated a minimum size of 6,000 square feet of water surface area of the swimming pool.
2. The following list of projects meet the requirements of section (b) above and the contact as reference by the Contractor, the Awarding Authority of their agent or designee.

SWIMMING POOL DECK SUBCONTRACTOR

Architect for Project: _____

1.15 OPERATING INSTRUCTIONS

A. The Swimming Pool Contractor shall determine from actual samples of pool water supplied by the Owner, the proper water management program necessary for maximum operating efficiency and comfort. The Swimming Pool Contractor shall provide the services of experienced personnel familiar with this type of pool system operation, in conformance with Section 13 11 05 of the Specifications.

1.16 MAINTENANCE MANUALS

A. The Swimming Pool Contractor shall provide six (6) bound sets for delivery to the Designated Representative of instructions for operating and maintaining all systems and equipment included in this Contract. Manufacturer's advertising literature or catalog pictures will not be acceptable for operating and maintenance instructions.

B. Bound in ring binders shall be all parts lists, periodic maintenance instructions and troubleshooting guidelines for all pool equipment, including but not limited to filters, pumps, controllers, water chemistry control equipment, etc.

1.17 SECURE FROM THE OWNER

A. A complete Owner-furnished filling of the swimming pools.

B. The Owner's assistance, as specified herein, from the time of start-up until final written acceptance of the swimming pool system(s).

C. Chemicals as required for swimming pool operation after Swimming Pool Contractor completes initial water chemistry balance and water treatment during the maintenance period described in Section 13 11 05 of the Specifications.

1.18 WARRANTY

A. The Swimming Pool Contractor shall warrant all swimming pool structures, finishes and systems against defects in material and workmanship for a period of one year after the date of acceptance by the Owner. Any repair or replacement required due to defective material or workmanship will be promptly corrected by the Swimming Pool Contractor.

PART 2 - PRODUCTS

NOT USED

PART 3 - EXECUTION

NOT USED

END OF SECTION

SECTION 13 11 01 - SWIMMING POOL EXCAVATION

PART 1 - GENERAL

1.1 DESCRIPTION

A. Finish and fine grading to bring the surface of the ground to the required grades and elevations as indicated on the Drawings.

B. Subgrade improvements and placing of compacted fills.

C. Excavation and backfill for all swimming pool, pool deck and surge chamber structural, including footings, foundations, slabs and walls.

1.2 QUALITY ASSURANCE

A. Requirements of Regulatory Agencies: Conform with requirements of the General Conditions, and more specifically the following:

1. Comply with California Building Code, latest edition.
2. Comply with applicable construction safety orders, latest edition, Federal and State OSHA.
3. Comply with applicable trench safety provisions, latest edition, Federal and State OSHA.

B. Qualifications of Workers:

1. The entity performing the work of this Section shall have been successfully engaged in the respective trade for at least five (5) years immediately prior to commencement of the Work.
2. For actual construction operations, use only trained and experienced workers with a minimum of three (3) years experience with the materials and methods specified.
3. Provide at least one person who shall be present at all times during execution of the work of this Section, with a minimum of five (5) years experience with the type of materials being installed, the referenced standards, and who shall direct all Work performed under this Section.

C. Project/Site Conditions:

1. Be familiar with site and subsurface conditions.
2. Excavation is unclassified and includes excavation to sub-grade elevations indicated or necessary, regardless of character of materials and obstructions encountered.
3. Provisions for mitigation of wet soils due to seepage or rain shall be made during excavation and throughout construction. If wet soils are encountered within the swimming pool excavations, de-watering shall be provided and the Geotechnical Engineer shall make recommendations for moist soil mitigation.
4. Where slope instability is encountered, all excavations within those areas shall be 1:1 or flatter. Forming of vertical walls may be necessary, and all soil conditions shall be field verified by the Geotechnical Engineer.
5. Contractor shall review the Geotechnical Investigation Report as furnished by the Owner’s Representative to determine the suitability of the soils.

D. Adverse Weather Conditions:

1. During the periods when site soil moisture content is substantially in excess of moisture content required for optimum compaction, do not perform fill compaction.
2. When unfavorable weather conditions necessitate interrupting filling and grading operations, prepare areas by compaction of surface and grading to avoid collection of water. Provide adequate temporary drainage to prevent erosion.

1.3 SUBMITTALS AND SUBSTITUTIONS

A. Provide submittals in conformance with requirements of Section 01 33 00.

B. Required submittals include:

1. Offsite fill material, if applicable.

C. Submit proof of qualifications as specified in Article 1.2.A of this Section

1.4 EXCAVATING & TRENCHING, GENERAL REQUIREMENTS

A. Refer to Section 01 55 00, Temporary Facilities and Controls.

B. All trenches, holes, etc. are to be completely protected using solid barricades, steel plates, and plywood both during construction and during off hours, including night time.

C. Flashing warning light barricades are required on sidewalks, roads, and any other critical areas that require night time protection.

D. Roads, paths and sidewalks shall not be blocked at any time or in any way. Trenching across roads, paths or sidewalks involves special instructions and review of the construction procedure by the Owner's Representative at least three (3) days prior to the Work actually being started.

E. Construction equipment, including all trucks, cars, etc. shall not be parked or driven on roads, paths or sidewalks. Items not allowed on roads, paths or sidewalks include hoses, power cords, ropes, construction materials, dirt and debris, etc.

F. All roads, paths and sidewalks must remain clear and the Contractor shall maintain temporary safe and effective pedestrian access at all times.

G. Drawings show existing major underground utilities using the best information available. The Contractor shall also fully check public works reference drawings prior to excavation. Call local Dig Alert to locate utilities to ensure safety.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Fill Material, General: All material shall be subject to the review of the Geotechnical Engineer to determine acceptability.

B. The onsite shallow clay soils encountered in the borings are considered to have a low to moderate expansion potential. In general, they shall not be re-used as backfill within the upper one foot of subgrade below concrete flatwork except for roadway. Unless indicated otherwise, the shallow clay soils are considered suitable for backfilling purpose at depths exceeding one foot below finished subgrade, where concrete flatwork is anticipated and at subgrade where no concrete flatwork is anticipated, provided they are free of deleterious and oversize materials and are properly processed and moisture conditioned. Import materials will also be needed for backfilling purpose. The imported materials being used for backfilling shall have a low expansion potential (EI less than 20), and shall comply with the specifications of the Soils Report.

C. Import materials, if needed shall contain sufficient fines (binder material) so as to be relatively impermeable and result in a stable subgrade when compacted. The imported materials shall have an expansion index (EI) less than 20 and shall be free of organic materials, debris, and cobbles larger than 2½ inches with no more than 35% passing the #200 sieve. A bulk sample of potential import material, weighing at least 35 pounds, shall be submitted to the Geotechnical Consultant at least 48 hours before fill operations. All proposed import materials shall be tested for corrosivity, shall be environmentally cleared from contamination and shall be approved by the Geotechnical Consultant prior to be placed onsite.

D. All fill soil shall be placed in thin, loose lifts moisture conditioned, as necessary, to near optimum moisture content, and compacted to a minimum 95 percent relative compaction as determined by ASTM Test Method D1557.

PART 3 - EXECUTION

3.1 INSPECTION

A. Verify drawing dimensions and elevations with actual field conditions. Inspect related Work and adjacent surfaces and report discrepancies and conditions which prevent proper execution of the Work to the Owner's Representative.

3.2 SUBGRADE IMPROVEMENTS

A. The proposed swimming pool and pool deck shall be supported entirely on engineered fill. The pool deck area shall be overexcavated by at least 2½ feet below existing grade or below the bottom of the hardscape surface, whichever is greater. The overexcavation below the pool bottom shall also be at least 2½ feet.

B. Following geotechnical approval, the bottom of the removal excavations shall be scarified to a depth of 8 inches, moisture conditioned within 2 ½ percent of optimum for clay and recompacted to at least 90% relative compaction as determined by ASTM D1557. All fill placed shall be compacted to at least 90% relative compaction at moisture contents within 2 ½ percent of optimum for sand soils and 125% of optimum for clay and silt soils. The upper 12 inches of backfill below the pool deck and pool shell shall consist on non-expansive soils (EI<20). The non-expansive soils shall be placed immediately following the placement of the clay soils to prevent drying of the clay soils.

C. To collect any water that may infiltrate from the ground surface or from the pool/pipe leakage, the pool shall have an underdrain blanket consisting of 6 inches of ¾-inch drain gravel (CalTrans Class 2 permeable or equivalent) extending over the entire footprint or the pool. A collector drain shall be installed at the low points of the pool and any water in the low shall be directed to a sounding tube which can be pumped as needed due to the relative imperviousness of the clay soils.

3.3 EXCAVATION

A. Checking Layout: Contractor shall, before commencing the excavation work, check all lines, stakes and levels for dimensions, angles, elevations and grades with the survey.

B. Except where extra excavation is directed by the Owner's Representative or Geotechnical Engineer, excavations made to a greater depth or size than indicated or required shall be filled with concrete or shotcrete as specified in Sections 13 11 02 / 13 11 03.

C. Dimensions: Excavate to proper dimensions as shown, cut square and smooth with firm level bottoms. Prepared excavations shall be approved by Geotechnical Engineer. Excavations shall be free of loose or disturbed materials.

D. Excess Water Control: Keep all excavations free from standing water by pumping, draining or providing proper protection against water intrusion. If soil becomes soft, soggy or saturated, perform additional excavation to firm soil not affected by water.

E. Form Removal: Make all excavations of sufficient size to permit installation and removal of forms and all other required work.

F. Alternate Forming: Sides of structures may be formed by neat excavations where banks will stand without caving. If banks cave, provide forming as required and widen excavation to permit forming, bracing and inspection. Provide forming in conformance with Section 13 1102 and all recognized safety standards.

3.4 BACKFILLING

A. Method: After concrete has been placed, forms removed and concrete work approved, backfill the excavations with earth to indicated or required grades. Carry on backfilling simultaneously on each side of walls or grade beams. Remove all rubbish and wood from the excavations before placing backfill.

B. Concrete Protection: Prior to placing any backfill, adequately cure all concrete and provide any bracing required to ensure the stability of the structure. Protect waterproofing and dampproofing against damage in a manner acceptable to the Owner's Representative. Remove bracing as backfill operations progress.

C. Material: Use the material from the excavations for backfilling, subject to approval by Soils Testing Agency. The earth shall be free from debris, large clods or stones.

D. Lifts: Place backfill in eight (8) inch loose layers, bring to optimum moisture content and compact to ninety percent (95%) of maximum density, sloping down and away from the structures being backfilled.

E. Moisture: Rigidly control the amount of water used to insure optimum moisture conditions for the type of fill material used. Excessive amounts of water causing saturation of earth will not be permitted. Compaction by flooding or jetting is prohibited.

3.5 GRADING

A. Slopes: Grade to finish grades indicated on Drawings, with uniform slopes between all points.

B. Subgrades: Blade to required grade and roll or tamp subgrades for exterior slabs, decks and paving.

3.6 CLEAN-UP

A. Disposal: Haul away rubbish, debris, and rocks from site promptly and dispose of legally. Burning rubbish on site is prohibited.

B. Dust and Noise Abatement: During entire period of construction keep area and material being loaded sprinkled to reduce dust in air and annoyance to premises and surrounding property.

END OF SECTION

SECTION 13 11 02 - SWIMMING POOL CONCRETE

PART 1 - GENERAL

1.1 WORK INCLUDED

A. Forming for cast-in-place concrete and shotcrete associated with swimming pools and pool decks.

B. Reinforcement for cast-in-place concrete and shotcrete associated with swimming pools and pool decks.

C. Cast-in-place concrete for swimming pool structures. Do not use waterproofing admixture of any kind.

D. Cast-in-place concrete for swimming pool decks with Xypex C-500 crystalline waterproofing admixture. Waterproofing admixture for swimming pool decks only.

E. Provide labor, materials and equipment as required to install sealant for all pool deck expansion joints, or any other caulking, as indicated on the aquatic Drawings and herein specified.

1.2 QUALITY ASSURANCE

A. Qualifications of Workers:

1. The entity performing the work of this Section shall have been successfully engaged in the respective trade for at least five (5) years immediately prior to commencement of the Work.
2. For actual construction operations, use only trained and experienced workers with a minimum of three (3) years experience with the materials and methods specified.
3. Provide at least one person who shall be present at all times during execution of the work of this Section, with a minimum of five (5) years experience with the type of materials being installed, the referenced standards, and who shall direct all Work performed under this Section.

B. Standards:

1. In addition to complying with the California Building Code (latest edition), comply with all pertinent recommendations contained in "Guide to Formwork for Concrete," Publication ACI 347R-14 of the American Concrete Institute.
2. In addition to complying with California Building Code (latest edition), comply with all pertinent recommendations contained in “Guide to Presenting Reinforcing Steel Design Details,” Publication ACI 315R-18 of the American Concrete Institute.
3. In addition to comply with all local codes and regulations, comply with all pertinent recommendations contained in American Society for Testing and Materials (ASTM); ASTM C 920 “Standard Specification for Elastomeric Joint Sealants.”
4. Where provisions of applicable codes and standards conflict with the requirements of this Section, the more stringent provisions shall govern.

C. Tolerances: Construct all swimming pool concrete straight, true, plumb and square within a tolerance horizontally of one in 200 and vertically of one in 2000.

1.3 SUBMITTAL AND SUBSTITUTIONS

A. Provide submittals in conformance with the requirements of Section 01 33 00.

B. Samples and Certificates, Concrete Reinforcement:

1. Provide all data and access required for testing as described in Section 01 44 00 of the Specifications.

2. All material shall bear mill tags with heat number identification. Mill analysis and report shall be made available upon request.
3. Material not so labeled and identifiable may be required by the Owner's Representative to be tested by the testing laboratory selected by the Owner's Representative and at no additional cost to the Owner, in which case random samples will be taken for one series of tests from each 2-1/2 tons or fraction thereof of each size and kind of reinforcing steel.
4. Design mix from batch plant demonstrating previous use history and associated strengths at 28 days.
5. The Contractor shall submit a mix design stamped and signed by a licensed engineer for approval by the Owner's Representative prior to any placement of concrete.
6. The Contractor shall submit a mix design stamped and signed by a licensed engineer for the swimming pool decks which contains the specified Xypex C-500 crystalline waterproofing admixture for approval by the Owner's Representative prior to any placement of concrete.

C. Submit proof of qualifications as specified in Article 1.2.A of this Section.

D. Submit reinforcing drawings for pool walls, gutters, floors, dike walls and balance tanks, etc. as shown on the construction drawings.

1.4 PRODUCT HANDLING

A. Delivery: Deliver materials to the Project Site in the manufacturer's original unopened containers with all labels intact and legible.

B. Storage: Store materials under cover in a manner to prevent damage and contamination, and store only the specified materials at the Project Site.

C. Protection: Use all means necessary to protect the swimming pool concrete before, during, and after installation and to protect the installed Work specified in other Sections.

D. Replacements: In the event of damage, immediately make all repairs and replacements necessary to the approval of the Owner's Representative.

PART 2 - PRODUCTS

2.1 CONCRETE FORMWORK

A. Form Materials:

1. Form Lumber: All form lumber in contact with exposed concrete shall be new except as allowed for reuse of forms in Part 3 of this Section, and all form lumber shall be one of the following, a combination thereof, or an equal approved in advance by the Owner's Representative.

   a. "Plyform," Class I or II, bearing the label of the Douglas Fir Plywood Association; "Inner-Seal" Form as manufactured by Louisiana-Pacific, or approved equal.
   b. Douglas Fir-Larch, number two grade, seasoned, surfaced four sides.

2. Form Release Agent: Colorless, non-staining, free from oils; chemically reactive agent that shall not impair bonding of paint or other coatings intended for use.

B. Ties and Spreaders:

1. Type: All form ties shall be a type which do not leave an open hole through the concrete and which permits neat and solid patching at every hole.
2. Design: When forms are removed, all metal reinforcement shall be not less than two (2) inches from the finished concrete surface.
3. Wire Ties and Wood Spreaders: Do not use wire ties or wood spreaders.

C. Alternate Forming Systems: Alternate forming systems may be used subject to the advance approval of the Owner's Representative.

2.2 CONCRETE REINFORCEMENT

A. Bars: Bars for reinforcement shall conform to "Specifications for Deformed Carbon-Steel Bars for Concrete Reinforcement," ASTM A-615, Grade 60.

B. Wire Fabric: Wire fabric shall conform to "Specifications for Carbon Steel Wire and Welded Wire Reinforcement, Plain and Deformed, for Concrete," ASTM A-1064.

C. Tie Wire: Tie wire for reinforcement shall conform to "Specifications for Carbon Steel Wire and Welded Wire Reinforcement, Plain and Deformed, for Concrete," ASTM A-1064 black annealed 16-gauge tie wire.

2.3 CAST-IN-PLACE CONCRETE

A. Concrete:

1. All concrete, unless otherwise specifically permitted by the Owner's Representative, shall be transit-mixed in accordance with ASTM C94. Concrete for water retaining structures that do not receive a waterproofing finish such as ceramic tile or swimming pool plaster shall receive a topical waterproofing finish.
2. The control of concrete production shall be under the supervision of a recognized testing agency, selected by the Owner in accordance with Section 01 44 00 of the Specifications.
3. Quality: All concrete shall have the following minimum compressive strengths at twenty-eight (28) days and shall be proportioned within the following limits:

    a. 4,000 psi minimum compressive strength for cast-in-place concrete swimming pool structures.
    b. 4,000 psi minimum compressive strength for cast-in-place swimming pool decks with Xypex C-500 waterproofing admixture.
    c. 1" maximum size aggregate.
    d. 6.0 minimum sacks of cement per cubic yard.*
    e. Maximum water to cement ratio of 0.40 – 0.45 maximum.
    f. 4" maximum slump.
    g. Xypex Admix C-500 2% - 2.5% by weight of cement content. Contact Xypex Technical Services to confirm dosage. (To be used for swimming pool decks only.)

    * For estimate only: to be determined by mix design.

4. Cement: All cement shall be Portland Cement conforming to ASTM C-150, Type II or V, and shall be the product of one manufacturer.
5. Aggregates:

    a. Shall conform to "Standard Specifications for Concrete Aggregates," ASTM C33, except as modified herein.
    b. Coarse Aggregate: Clean sound washed gravel or crushed rock. Crushing may constitute not more than 30% of the total coarse aggregate volume. Not more than 5% flat, thin, elongated or laminated material nor more than 1% deleterious material shall be present. 1" aggregate graded from 1/4" to 1", fineness modulus 6.90 to 7.40. 1-1/2" graded from ½" to 1-1/2", fineness modulus 7.80 to 8.20.
    c. Fine Aggregate: Washed natural sand of hard, strong particles and shall contain not more than 1% of deleterious material, fineness modulus 2.65 to 3.05.
    d. Aggregate must be certified, non-expansive from a "known" good source.

6. Water: ASTM C1602; Clean, fresh, free from acid, alkali, organic matter or other impurities liable to be detrimental to the concrete (potable).
7. Admixtures: Admixtures shall be used upon approval of the Owner's Representative.

    a. Air-entraining admixture: Conform to ASTM C260.

b. Water-reducing admixture: Conform to ASTM C494.
c. Waterproofing admixture for swimming pool decks only: Xypex Admix C-500, no solutions permitted. Conform to ASTM C494.

8. Xypex Admix C-500 Dosage: To be used for swimming pool decks only.

a. General: Xypex Admix must be added to concrete mix at time of batching. It is important to obtain a homogeneous mixture of Xypex Admix with the concrete. Do not add dry Admix powder directly to wet mixed concrete as this could cause clumping and thorough dispersion may not occur.
b. Dosage Rate: Under normal conditions, the crystalline waterproofing powder shall be added to the concrete mix at the following rates:

1) Xypex Admix C-500 2% – 2.5% by weight of cement content

c. Weather Conditions: For mixing, transporting and placing concrete under conditions of high temperature or low temperature, follow concrete practices such as those referred to in ACI 305R (Hot Weather Concreting) and ACI 306R (Cold Weather Concreting) or other applicable standards.
d. Concrete Batching & Mixing Procedures: Procedures for the addition of Xypex admixture will vary according to type of batch plant operation and equipment. Prior to the placement of any concrete, the concrete batch plant and the contractor shall be responsible to consult with the local Xypex representative concerning additional procedures for the addition, mixing and to confirm dosage.
Note: For enhanced chemical protection or for meeting specific project requirements or where the concrete mix design contains higher than 25% type F fly ash content or includes a portland cement/slag cement/type C fly ash blend, consult with manufacturer or its authorized representative to determine appropriate dosage rates.

B. Construction Joints: Use keyform for slab pour joints. Either preformed galvanized or PVC construction joint forms of a standard manufacturer may be used. Install per manufacturer's recommendations and tool edges of slabs.

C. Waterstops: PVC bulb-type for use between concrete pours / lifts, conforming with ASTM D 570, D 624, and D 638. Provide in configuration(s) as recommended by manufacturer for specific application. Greenstreak, W.R. Meadows, or approved equal.

D. Curing Materials:

1. Liquid Membrane (covered slab): Chlorinated rubber membrane forming, curing-sealing compound conforming to ASTM C309.
2. Liquid Membrane (exposed slab): Clear methyl and butyl methacrylate non-staining, membrane forming, curing-sealing compound conforming to ASTM C309.

E. Cement Grout and Drypack:

1. Cement Grout: Mix 1 part by volume of Portland Cement, 1/2 part by volume of water and fine aggregate enough to make mixture flow under its' own weight.
2. Drypack: Mix 1 part by volume of Portland Cement, 1/2 part by volume of water and fine aggregate enough to make a stiff mix that will mold into a ball. Mix no more than can be used in 30 minutes.

2.4 JOINT SEALANT MATERIALS

A. Caulking: Multipart, non-sag gun grade polyurethane-based sealant meeting the requirements of ASTM C920-02, Type S or M, Mamemco International, Pecora, Sika Corp., Sonneborn Building Products, Tremco or approved equal. Self-leveling caulking materials are not allowed.

B. Primer: Non-staining type, recommended by sealant manufacturer to suit application.

C. Joint Cleaner: Non-corrosive and non-staining type, recommended by sealant manufacturer; compatible with joint forming materials.

D. Sealant Backer Rod: Provide compressible polyethylene or polyurethane backer rod as recommended by the sealant manufacturer.

E. Bond Breaker Tape: Provide polyethylene tape or other plastic tape as recommended by sealant manufacturer, to be applied to sealant-contact surfaces where bond to substrate or joint filler must be avoided for proper performance of sealant.

F. Sand: Cover the surface of the caulking with #30 silica sand.

2.5 OTHER MATERIALS

A. All other materials not specifically described but required for proper completion of the work of this Section, shall be as selected by the Contractor subject to the advance review by the Owner's Representative.

PART 3 - EXECUTION

3.1 SURFACE CONDITIONS

A. Inspection:

1. Prior to all Work of this Section, carefully inspect the installed Work of other trades and verify that all such Work is complete to the point where this installation may properly commence.
2. Verify that all Work may be constructed in accordance with all applicable codes and regulations, the referenced standards, the original design, and in accordance with site specific Geotechnical Report.

B. Discrepancies:

1. In the event of discrepancy, immediately notify the Owner's Representative.
2. Do not proceed with installation in areas of discrepancy until all such discrepancies have been fully resolved.
3. Failure to notify the Owner's Representative and give written notice of discrepancies shall constitute acceptance by the Contractor of existing conditions as fit and proper to receive work.

3.2 CONCRETE FORMWORK

A. Construction of Forms:

1. General: Construct all required forms to be substantial, sufficiently tight to prevent leakage of concrete paste, and able to withstand excessive deflection when filled with wet concrete.
2. Layout:

a. Form for all required cast-in-place concrete to the shapes, sizes, lines and dimensions indicated on the Drawings.
b. Exercise particular care in the layout of forms to avoid necessity for cutting concrete after placement.
c. Make proper provisions for all openings, offsets, recesses, anchorages, blocking and other features of the Work as shown or required.
d. Perform all forming required for Work of other trades and do all cutting and repairing of forms required to permit such installation.
e. Carefully examine the Drawings and Specifications and consult with other trades as required relative to providing for pipe and conduit penetrations, reglets, chases and other items in the forms.

3. Imbedded Items: Set all required steel frames, angles, bolts, inserts and other such items required to be anchored in the concrete prior to concrete being placed.
4. Bracings:
    a. Properly brace and tie the forms together so as to maintain position and shape and to ensure safety to workmen.
    b. Construct all bracing, supporting members and centering of ample size and strength to safely carry, without excessive deflection, all dead and live loads to which they may be subjected.
    c. Properly space the forms apart and securely tie them together, using metal spreader ties that give positive tying and accurate spreading.
5. Wetting: Keep forms sufficiently wetted to prevent joints from opening up before concrete is placed.

B. Plywood Forms:

1. Design: Nail the plywood panels directly to studs and apply in a manner to minimize the number of joints.
2. Joints: Make all panel joints tight butt joints with all edges true and square.

C. Footing Forms:

1. Wood Forms: All footing forms shall be wood unless otherwise specifically approved by the Owner's Representative, or as specified in paragraph 3.2(C)(2).
2. Earth Forms:
    a. Side walls for footings may be of earth provided the soil will stand without caving and the sides of the bank are made with a neat cut to the minimum dimensions indicated on the Drawings.
    b. For excavation and backfill of earth forms, conform with applicable provisions of Section 13 11 01.

D. Reuse of Forms:

1. Reuse of forms shall be subject to advance approval of the Owner's Representative.
2. Except as specifically approved in advance by the Owner's Representative, reuse of forms shall in no way delay or change the schedule for placement of concrete from the schedule obtainable if all forms were new.
3. Except as specifically approved in advance by the Owner's Representative, reuse of forms shall in no way impart less structural stability to the forms nor less acceptable appearance to finished concrete.

E. Removal of Forms:

1. General:
    a. In general, side forms of footings may be removed seven (7) days after placement of concrete, but time may be extended if deemed necessary by the Owner's Representative.
    b. Forms for footings, foundations, grade beams, slabs, walls, and other formed concrete may be removed fourteen (14) days after placement of concrete.
2. Removal:
    a. Use all means necessary to protect workers, passersby, the installed Work of other trades and the complete safety of the structure.
    b. Cut nails and tie wires or form ties off flush and leave all surfaces smooth and clean.
    c. Remove metal spreader ties on exposed concrete by removing or snapping off inside the wall surface and pointing up and rubbing the resulting pockets to match the surrounding areas.

d. Flush all holes resulting from the use of spreader ties and sleeve nuts using water, and then solidly pack throughout the wall thickness with cement grout applied under pressure by means of a grouting gun; grout shall be one part Portland Cement to 2-1/2 parts sand; apply grout immediately after removing forms.

3.3 CONCRETE REINFORCEMENT

A. Bending:

1. General:

a. Fabricate all reinforcement in strict accordance with the Drawings.
b. Do not use bars with kinks or bends not shown on the Drawings.
c. Do not bend or straighten steel in a manner that will injure the material. (When opposite end is already encased in concrete.)

2. Design:

a. Bend all bars cold.
b. Make bends for stirrups and ties around a pin having a diameter of not less than four (4) times the minimum thickness of the bar (#3-#5) per ACI.
c. Make bends for other bars, including hooks, around a pin having a diameter of not less than six (6) times the minimum thickness of the bar.

B. Placing:

1. General: Before the start of concrete placement, accurately place all concrete reinforcement, positively securing and supporting by concrete blocks, metal chairs or spacers, or by metal hangers.
2. Clearance:

a. Preserve clear space between bars of not less than one and one-half (1-1/2) times the nominal diameter of the round bars.
b. In no case let the clear space be less than one and one-half (1-1/2) inches nor less than one and one-third (1-1/3) times the maximum size of the aggregate.
c. Provide the following minimum concrete covering of reinforcement:

1) Concrete deposited against earth: three (3) inches minimum.
2) Concrete below grade deposited against forms: two (2) inches minimum.
3) Concrete elsewhere: As indicated on Drawings or otherwise approved by the Owner’s Representative.

3. Splicing:

a. Horizontal Bars:

1) Place bars in horizontal members with minimum lap at splices sufficient to develop the strength of the bars.
2) Bars may be wired together at laps except at points of support of the member, at which points preserve clear space described above.
3) Whenever possible, stagger the splices of adjacent bars.
4) Splice seventy-four (74) bar diameters minimum.
5) Provide non-contact lap slices for shotcrete.

b. Wire Fabric: Make all splices in wire fabric at least one and one-half (1-1/2) meshes wide.
c. Other Splices: Make only those other splices that are indicated on the Drawings or specifically approved by the Owner’s Representative.

4. Dowels: Place all required steel dowels and securely anchor them into position before concrete is placed.

5. Obstructions: In the event conduits, piping, inserts, sleeves and other items interfere with placing reinforcement as indicated on the Drawings or otherwise required, immediately consult with the Owner's Representative and obtain approval of a new procedure prior to placing concrete.

C. Cleaning Reinforcement: Steel reinforcement, at the time concrete is placed around it, shall be free from rust scale, loose mill scale, oil, paint and all other coatings which will destroy or reduce the bond between steel and concrete. Bend down all tie wire away from the top of the pool deck. Maintain a 2" clear from top of concrete to the tie wire.

3.4 SHOTCRETE REINFORCEMENT

A. The maximum size of reinforcement shall be No. 5 bars unless it can be demonstrated by preconstruction tests that adequate encasement of larger bars can be achieved. When No. 5 or smaller bars are used, there shall be a minimum clearance between parallel reinforcement bars of 2-1/2 inches (64 mm). When bars larger than No. 5 are permitted, there shall be a minimum clearance between parallel bars equal to six diameters of the bars uses. When two curtains of steel are provided, the curtain nearest the nozzle shall have a minimum spacing equal to 12 bar diameters and the remaining curtain shall have a minimum spacing of six bar diameters.

B. Lap splices in reinforcing bars shall be by the non-contact lap splice method with at least 2 inches clearance between bars. The enforcement agency may permit the use of contact lap splices when necessary for the support of the reinforcing provided it can be demonstrated by means of preconstruction testing, that adequate encasement of the bars at the splice can be achieved, and provided that the splices are placed so that a line through the center of the two spliced bars is perpendicular to the surface of the shotcrete work.

3.5 CAST-IN-PLACE CONCRETE

A. Conveying and Placing Concrete:

1. Before placing concrete, mixing and conveying equipment shall be well cleaned, and the forms and space to be occupied by concrete shall be thoroughly cleaned and wetted. Ground water shall be removed until the completion of the work.
2. No concrete shall be placed in any unit of work until all formwork has been completely constructed, all reinforcement has been secured in place, all items to be built into concrete are in place, and form ties at construction joints tightened.
3. Concrete shall be conveyed from mixer to place of final deposit in such a way to prevent the separation or loss of ingredients. It shall be placed as nearly as practicable in its' final position to avoid rehandling or flowing. Concrete shall not be dropped freely where reinforcing bars will cause segregation, nor shall it be dropped freely more than six (6) feet. Use tremies, spouts and dump boxes in deep sections. Vibrators are not acceptable for facilitating concrete transport.
4. Concrete shall be tamped and spaded to insure proper compaction into all parts of forms and around reinforcement. A mechanical vibrator shall be used to thoroughly compact the concrete. Vibration must be by direct action in the concrete and not against forms or reinforcement.
5. Mixing and transport time as indicated in ASTM C94 is required. If air temperature is between 85° and 90° F the delivery time is to be reduced to 75 minutes. When air temperatures are in excess of 90° F the delivery time should be reduced to 60 minutes.
6. Truck mixes without batch certificates will be rejected.

B. Construction Joints / Expansion Joints: Construction joints and expansion joints shall be provided at locations and in the manner shown on the Drawings. With exception of existing concrete / new shotcrete joints, use PVC bulb-type waterstops appropriate for design condition between all concrete pours / lifts to avoid cold joints. Waterstops shall be placed in such a way to protect reinforcing steel from rust and oxidation. All expansion joints must be the full depth of the concrete section in which they are located.

C. Slab Finishes: Concrete slabs shall be compacted and screeded uniformly to grades shown. Push large aggregates below the surface with a screen tamper, screed and bull float. As soon as the surface becomes workable, it shall be wood floated, then finished as indicated on the Drawings to a uniform smooth, true surface in a neat and workmanlike manner. Carefully coordinate slab finish requirements with other trades (ceramic tile, pool plaster) to insure concrete finish is appropriate substrate for final finish material.

1. Contractor shall provide three mock-up deck samples, minimum 3'x 3', with a wedge anchor installed in one sample. These (3) samples shall be constructed; one with a light broom finish, one (1) with a medium broom finish and one (1) with a heavy broom finish for determination and selection of an appropriate deck finish. Each sample shall be edged on all four sides to demonstrate a 3/4" radius edge. Anchor installation shall demonstrate acceptable interface between anchor and the top of deck. Deck samples shall remain on job site through final inspection for reference.
2. Pool Floor Slab: Heavy Wire Broom Finish.

D. Protection and Curing:

1. Concrete shall be protected from injurious action of the elements and defacement of any nature during construction.
2. All forms must be kept wet to prevent drying out of the concrete.
3. All concrete surfaces including footings must be kept wet for at least seven (7) days after concrete is placed.
4. Apply the appropriate curing materials, as specified in 2.3 of this Section, immediately after finishing slabs. Application shall be as specified by the manufacturer.

E. Form Removal:

1. Take care in removing forms so that surfaces are not marred or gouged and that corners are true, sharp and unbroken.
2. No steel spreaders, ties or other metal shall project from or be visible on any concrete surfaces.

F. Defective Work:

1. Should the strength of any concrete for any portion of the work indicated by tests of molded cylinders and core tests fall below minimum 28 days strength specified or indicated, concrete will be deemed defective work and shall be replaced.
2. Concrete work that is not formed as indicated, is not true to intended alignment, not plumb or level where so intended, not true to intended grades or elevations, not true to specified or selected finish, contains sawdust shavings, wood, or embedded debris, which exhibits cracks or contains fine or coarse sulfide particles, or expansive aggregates detrimental to performance or appearance of the concrete shall be deemed defective.
3. Promptly perform work required to replace and properly clean (by sandblasting if necessary) any defective concrete panels (control joint or expansion joint to control joint or expansion joint), at Contractor's expense, including all expense of additional inspection, tests, or supervision made necessary as a result of defective concrete.

3.6 EXPANSION JOINTS

A. Temperatures: Do not install sealants when air temperature is less than 40°F.

B. Tooling: Tool exposed joints to a slightly concave surface using slicking materials recommended by the manufacturer. The tooling procedure shall press sealant against the sides of the joint. No materials shall be left "feathered" out or smeared on the abutting materials. Completed joints shall have a uniform professional appearance.

C. Joint Construction: Sealant joint width, thickness and cross-sectional profile to be constructed in strict accordance with the sealant manufacturer's recommendations.

D. Sand: At the appropriate time cover the sealant with sand to provide a sanded finish.

3.7 CLEAN-UP

A. Upon completion of the Work of this Section, immediately remove all swimming pool concrete materials, debris and rubbish occasioned by this Work to the approval of the Owner's Representative.

END OF SECTION

SECTION 13 11 03 - SWIMMING POOL SHOTCRETE

PART 1 - GENERAL

1.1 WORK INCLUDED

A. Provide labor, materials and equipment as required to install wet mix shotcrete for swimming pool structures as indicated on the Drawings and herein specified.

1.2 QUALITY ASSURANCE

A. Qualifications of Workers:

1. The entity performing the work of this Section shall have been successfully engaged in the respective trade for at least five (5) years immediately prior to commencement of the Work.
2. For actual construction operations, use only trained and experienced workers with a minimum of three (3) years experience with the materials and methods specified.
3. Provide at least one person who shall be present at all times during execution of the work of this Section, with a minimum of five (5) years experience with the type of materials being installed, the referenced standards, and who shall direct all Work performed under this Section.

B. Standards: Except as otherwise indicated, provide shotcrete per American Concrete Institute Standard ACI 506. In addition, conform to recommendations contained in “Shotcrete,” Brochure G-84 as published by the Gunite Contractors Association, Sylmar, California and the California Building Code (latest edition). Comply with CBC 2016 Section 1908A.

C. Mix Design: The Contractor shall submit a mix design stamped and signed by a licensed engineer for approval by the Owner’s Representative prior to any placement of shotcrete. Mix design shall indicate source of aggregate and brands of cement and admixtures used. All mix designs shall take character of locally available aggregate into consideration and make adjustments as necessary to conform with specified design criteria.

D. Testing and Inspection: A test panel shall be shot, cured, cored or sawn, examined and tested (representing the most congested and difficult project scenario) prior to commencement of the project in accordance with ASTM C1140. All project conditions and personnel shall be represented in the test panel. Additionally, one test panel shall be provided for each 50 yards (or portion thereof) of shotcrete placed for each day or each nozzleman, whichever is greater. The size of the strength test panel shall be per the direction of the Special Shotcrete Inspector. At least three (3) cores shall be taken from each test panel. (At least three (3) cores shall be taken from the completed work for each day of shotcrete operation.) Testing shall be performed by the Owner’s designated Testing Lab and comply with Section 1908A.10, California Building Code. Continuous inspection of the shotcrete operation by a deputy inspector provided by the Owner shall be required. Inspection of shotcrete work shall comply with Section 1908A of California Building Code, and coring, sampling, soaking and testing per 1908A.5 and 1908A.10 of California Building Code. Contractor shall provide test panels for all required tests. The Contractor shall provide the Owner and Testing Lab 48 hours’ notice before the start of shotcrete operations.

E. Tolerances: Construct all swimming pool shotcrete straight, true, plumb and square within a tolerance horizontally of one in 200 and a tolerance vertically of one in 2000.

1.3 SUBMITTALS AND SUBSTITUTIONS

A. Provide submittals in conformance with the requirements of Section 01 33 00 and ACI 506.2.

B. Materials List: Within thirty (30) days after issuance of Notice to Proceed, and before shotcrete materials are delivered to the project site, submit to the Owner’s Representative a complete list

of materials proposed to be used in this portion of the Work, showing manufacturer's name and catalog number of all items such as admixtures and curing membranes, and the name and address of the supplier of cement and aggregate to be used.

C. Submit proof of qualifications as specified in Article 1.2.A of this Section.

1.4 PRODUCT HANDLING

A. Protection: Use all means necessary to protect shotcrete materials before, during and after installation and to protect the installed Work specified in other Sections.

B. Replacements: In the event of damage, immediately make all repairs and replacements necessary to the approval of the Owner’s Representative and at no additional cost to the Owner.

PART 2 - PRODUCTS

2.1 MATERIALS

A. Cement: Cement shall be Type II Portland Cement conforming to ASTM C150. Cement type shall be the same for all shotcrete work.

B. Aggregate: ASTM C33, washed hard dense durable clean sharp sand from approved pit, free of organic matter and opaline, feldspar, or silicous magnesium substances and containing not more than 3% by weight of deleterious substances. Maximum size aggregate for shotcrete is ¾” per CBC 1908A.3. When tested for organic impurities by ASTM C40 method, fine aggregate color not darker than reference standard color. When tested for soundness by ASTM C88 method, grading No. 2 of ASTM C1436, loss after 5 cycles not over 10% of fine aggregate.

C. Water: Potable, clean, fresh, free from acid, alkali, organic matter or other impurities liable to be detrimental to the shotcrete.

D. Admixtures: Admixtures shall conform to ASTM C1141 and only be used upon approval of the Owner's Representative.

PART 3 - EXECUTION

3.1 EXECUTION

A. Inspection:

1. Prior to all Work of this Section carefully inspect the installed Work of other trades and verify that all such Work is complete to the point where this installation may properly commence.
2. Verify that items to be imbedded in shotcrete are in place and that shotcrete may be placed to the lines and elevations shown on the Drawings, with all required clearance from reinforcement.

B. Discrepancies:

1. In the event of discrepancy, immediately notify the Owner's Representative.
2. Do not proceed with installation in areas of discrepancy until all such discrepancies have been fully resolved.
3. Failure to notify the Owner's Representative and give written notice of discrepancies shall constitute acceptance by the Contractor of existing conditions as fit and proper to receive the Work.

3.2 PREPARATION

A. General:

1. Thoroughly clean all areas where shotcrete is to be placed to insure proper bonding of shotcrete.
2. Where shotcrete is to be placed against smooth surfaces (i.e., cast-in-place concrete), sandblast surfaces to receive shotcrete to provide clean aggregate surface, thereby insuring proper bond between materials.

B. Ground Wires: Adequate ground wires, to be used as screeds, shall be installed to establish the thickness and surface planes of the shotcrete work. Ground wires shall be placed so that they are tight and true to line and grade and in such a manner that they can be easily tightened.

3.3 PROPORTIONING AND MIXING

A. Accurately control proportion of water to Portland cement to produce thorough and uniform hydration of the shotcrete that, when shot, forms a homogeneous mass containing neither sags nor dry sand formation. Proportion by mass per ASTM C94 or by volume per ASTM C685.

B. Shotcrete shall have a minimum compressive strength of 4,000 PSI at 28 days. Shotcrete material shall have a water/cement ratio of 0.40-0.45 per ACI 506R, Chapter 6, Proportioning and Preconstruction Testing; Section 6.3.3, Wet Mix Process.

C. Discontinue shotcrete work if the time between the addition of mixing water to cement and aggregate, or cement to aggregates, and placement of shotcrete exceeds ninety (90) minutes when the ambient temperature is below 85 degrees Fahrenheit or exceeds sixty (60) minutes when the ambient temperature is above 85 degrees Fahrenheit. Batch, mix and deliver wet-mixture shotcrete per ASTM C94 or C685.

D. Hot Weather Shotcreting – Unless otherwise specified, do not place shotcrete when shotcrete temperature is above 95°F, unless prequalification testing shows that the required quality of materials can be achieved at high temperatures. The temperature of reinforcement and receiving surfaces shall be below 90°F prior to shotcrete placement.

E. Cold Weather Shotcreting – Unless otherwise specified, shooting may proceed when ambient temperature is 40°F and rising. Stop shooting when ambient temperature is 40°F and falling, unless measures are taken to protect the shotcrete. Shotcrete material temperature, when shot, shall not be less than 50°F. Do not place against frozen surfaces.

3.4 SHOTCRETE PLACING, FINISHING, AND CURING

A. Operations: Utilize a standard type of air compressor, capable of providing a minimum of 250 cubic feet of air per minute per nozzle.

B. Placing: Except when shooting reinforcing, hold the nozzle perpendicular to and 2-1/2 to 3 feet from surface. At reinforcing bars, hold the nozzle so as to direct shotcrete behind the bars, and shoot each side of each bars separately. A nozzleman's helper equipped with an air jet shall precede the nozzle and blow out rebound or sand lodged behind bars, on forms, or placed shotcrete. Placing shotcrete horizontal members from the top is not allowed unless approved methods are employed to eliminate all rebound. Material shall emerge from the nozzle in a uniform flow. If flow becomes intermittent for any reason, direct the nozzle away from the surface until the flow is again steady and constant. Do not reuse rebound or loose sand for any purpose.

C. Puddled Shotcrete: Use of "puddled shotcrete" in which the air pressure is reduced and the water content is increased to facilitate placing in difficult locations is not allowed. Do not place shotcrete where nozzle stream cannot impinge directly on the involved surface. Where difficult shooting conditions occur, obtain proper results by maintaining correct air pressure and water ratio and reduce supply of material.

D. Construction Joints: Form joints with sloping beveled edges. Clean and dampen the hardened joint surfaces before placing additional shotcrete. Square edged construction joints are not allowed. The film of laitance which forms on the surface of the shotcrete shall be removed

within approximately two hours after application by brushing with a stiff broom. If this film is not removed within two hours, it shall be removed by thorough wire brushing or sand blasting. Construction joints over eight hours old shall be thoroughly cleaned with air and water prior to receiving shotcrete.

E. Finishing: Rod exposed surfaces to true planes and lines on reaching the thickness and plane established by forms and ground wires. Tamp and wood float surfaces level and provide a rough raked finish. Carefully coordinate finish requirements with other trades (ceramic tile, pool plaster) to insure shotcrete finish is appropriate substrate for final finish material.

F. Curing: Keep shotcrete continuously damp for not less than seven (7) days after placing. Use sealed curing sheeting or other approved curing method where water curing is not feasible. Do not use curing compound of any kind.

3.5 DEFECTIVE WORK

A. Cut out, remove and replace, or repair to the satisfaction of the Owner’s Representative, shotcrete not meeting minimum strength, not true, plumb or level, not to required elevations, containing cracks detrimental to performance or appearance, containing shavings, debris or with honeycombs or voids.

B. Promptly perform Work required to repair, patch, replace, render properly cleaned surfaces (by sandblasting if necessary) or otherwise make good any defective shotcrete at Contractor's expense, including all expense of additional inspection, tests, or supervision made necessary as a result of defective shotcrete.

3.6 CLEAN-UP

A. Upon completion of the Work of this Section, immediately remove all swimming pool shotcrete materials, debris and rubbish occasioned by this work to the approval of the Owner's Representative.

END OF SECTION

SECTION 13 11 04 - SWIMMING POOL CERAMIC TILE

PART 1 - GENERAL

1.1 WORK INCLUDED

A. Furnish and install all swimming pool ceramic tile detailed on the Drawings, including, but not limited to, the following:

1. Waterline Face Tile (deep gutter)
2. Gutter Cap Tile (deep gutter)
3. Lane Line / Target Tile / 4'-6" Depth Tile
4. Depth Marker Tile (at cantilever deck at deep gutter)
5. Depth / Caution Marker Tile (at gutter pool decks).
6. Trim Tile (at steps).

1.2 QUALITY ASSURANCE

A. All Work of this Section shall be performed or supervised by the Swimming Pool Subcontractor.

B. Qualifications of Workers:

1. The contractor / subcontractor for this portion of the Work shall have been successfully engaged in the respective trade for at least five (5) years immediately prior to commencement of this work and shall demonstrate to the approval of the Owner’s Representative that his record of workmanship is satisfactory.
2. For actual construction operations, use only thoroughly trained and experienced workers completely familiar with the materials and methods specified.
3. Provide at least one person who shall be present at all times during execution of this portion of the Work and who shall be thoroughly familiar with the type of materials being installed, the referenced standards, and the requirements of this Work, and who shall direct all Work performed under this Section.

C. Standards: In addition to complying with all pertinent codes and regulations:

1. Manufacture of all tile shall be in accordance with ANSI A-137.
2. Install ceramic tile in accordance with the recommendations contained in 2021Handbook for Ceramic Tile Installation of the Tile Council of America, Inc.

D. Tolerances: Install all swimming pool ceramic tile straight, true, plumb and square within a tolerance horizontally of one in 200 and a tolerance vertically of one in 500. Waterline and gutter bullnose tile shall be level to 1/8” (+/- 1/16”) around entire perimeter of swimming pool(s).

1.3 SUBMITTALS AND SUBSTITUTIONS

A. Provide submittals in accordance with the requirements of Section 01 33 00.

B. Samples: Submit five (5) samples of each color and pattern in the specified groups. Character samples can be representative for review prior to screening of actual tile.

C. Master Grade Certificate: Prior to opening ceramic tile containers, submit a Master Grade Certificate, signed by the manufacturer of the tile used and issued when the shipment is made, stating the grade, kind of tile, identification marks for the tile containers, and the name and location of the Project.

D. Specifications: Submit five (5) copies of manufacturer's recommended installation specifications for this Work.

1.4 PRODUCT HANDLING

A. Delivery: Deliver all materials to the Project Site in the manufacturer's original unopened containers with all labels intact and legible.

B. Storage: Store all materials under cover in a manner to prevent damage and contamination, and store only the specified materials at the Project site.

C. Protection: Use all means necessary to protect swimming pool ceramic tile before, during and after installation and to protect the installed Work of all other trades.

D. Replacements: In the event of damage, immediately make all repairs and replacements necessary to the approval of the Owner's Representative.

PART 2 - PRODUCTS

2.1 TILE

A. Waterline Face Tile:

1. Material: All waterline face tile shall be glazed ceramic tile (Group 3 standard) as manufactured by Dal-Tile or approved equal.
2. Size: 6 x 6 inches.
3. Color: Dal-Tile #D-129, 'Sky Blue'. Contact Kylee Midura kylee.midura@daltile.com (858)344-0019.

B. Gutter Cap Tile:

1. Material: All gutter cap tile shall be glazed ceramic tile (Group 3 standard) as manufactured by Dal-Tile or approved equal.
2. Size: 2-1/2 x 6 inches (#A-7250).
3. Color: Dal-Tile #D-129, 'Sky Blue'.

C. Lane Line / Target Tile / 4'-6" Depth Tile:

1. Material: Group 3 quality, non-slip frost proof unglazed ceramic mosaic tile with absorption rate of less than 1% as manufactured by Dal-Tile or approved equal.
2. Size: 1 x 1 inches.
3. Color: Dal-Tile #D-311, 'Black' in 25 Yard direction and end wall target tile. Dal-Tile #D-023, 'Galaxy Blue' at 4'-6" depth tile.

D. Depth Marker Tile (At Cantilever Deck Face at Deep Gutter):

1. Material: All depth marker tiles shall be glazed ceramic tile as manufactured and/or distributed by Dal-Tile, Precision Tile Co., or approved equal.
2. Size: 4-1/4 x 4-1/4 inches.
3. Color: Dal-Tile #X-114, 'Desert Gray' with Black silk screen numbers.
4. Trim: Furnish trim pieces as indicated on the Drawings.

E. Depth / Caution Marker Tile (at pool deck at deep gutter):

1. Material: Group 3 quality, frost proof unglazed ceramic mosaic tile with absorption rate of less than 1% as manufactured by Dal-Tile or approved equal.
2. Size: 1 x 1 inches.
3. Color: Dal-Tile #D-311, 'Black' letters and numbers on #D-014, 'Light Gray' field.

F. Trim Tile (on underwater steps):

1. Material: Group 3 quality, non-slip frost proof unglazed ceramic tile with absorption rate of less than 1% as manufactured by Dal-Tile or approved equal.
2. Size: 1 x 1 inches with S-812 quarter round. Color: Dal-Tile #D-311. 'Black.'
3. Size: 2 x 6 inches with integral quarter round. Color: Black, non-slip. Inlays #CPC00022.

2.2 MORTAR

A. Laticrete 3701 fortified mortar #LCR-37-1017

B. Site mortar mix shall comply with ASTM C270 standards.

1. Sand for mortar: Comply with requirements of fine aggregate for concrete.
2. Cement: Type 1 Portland Cement, conforming to ASTM C150
3. Hydrated Lime: Conforming to ASTM C206 or 207, Type S.
4. Water: From a potable source.

C. Water: from a potable source.

D. Mortar shall meet ASTM C627.

2.3 THIN SET MORTAR

A. Laticrete 254 Platinum. Laticrete, Custom or equal.

B. Water from a potable source.

C. Mortar shall meet ASTM C627.

2.4 GROUT

A. All tile grout shall be waterproof grout complying with the recommendations of referenced standards. Grout color shall be grey for dark backgrounds, white for light backgrounds (verify colors with Architect).

PART 3 - EXECUTION

3.1 SURFACE CONDITIONS

A. Inspection:

1. Prior to all Work of this Section, carefully inspect the installed Work of other trades and verify that all such Work is complete to the point where this installation may properly commence.
2. Verify that ceramic tile can be installed in accordance with the original design and all referenced standards.

B. Discrepancies:

1. In the event of discrepancy, immediately notify the Owner’s Representative.
2. Do not proceed with installation in areas of discrepancy until all such discrepancies have been fully resolved
3. Failure to notify the Owner’s Representative and give written notice of discrepancies shall constitute acceptance by the Contractor of existing conditions as fit and proper to receive its Work.

3.2 INSTALLATION

A. Method:

1. Install all ceramic tile in strict accordance with installation method P601-90 of the 2021 Handbook for Ceramic Tile Installation of the Tile Council of America, Inc.
2. Be certain to install all ceramic tile perfectly level, flush, plumb, and to the finish grades and elevations indicated on the Drawings.

B. Interface:

1. Carefully establish and follow the required horizontal and vertical elevations to insure proper and adequate space for the work and materials of other trades.

2. Coordinate and cooperate as required with other trades to insure proper and adequate interface of ceramic tile Work with the Work of other trades.

3.3 GROUTING

A. Follow grout manufacturer's recommendations as to grouting procedures and precautions.

B. Remove all grout haze, observing grout manufacturer's recommendations as to use of acid and chemical cleaners.

3.4 EXTRA STOCK

A. Provide one (1) unopened box of extra tile for 2.1A, 2.1B, and 2.1C for Owners use at a future time.

3.5 CLEAN-UP

A. Upon completion of the swimming pool ceramic tile installation, thoroughly clean and polish the exposed surfaces of tile work. Completely clean work area of debris and rubbish occasioned by this Work and dispose of to the approval of the Owner’s Representative.

END OF SECTION

SECTION 13 11 05 -SWIMMING POOL PLASTER

PART 1 - GENERAL

1.1 WORK INCLUDED

A. Swimming pool plaster and waterproofing of swimming pool structures as indicated on the Drawings and herein specified.

B. Start-up and operation instructions to Owner's operations and maintenance personnel and properly balance swimming pool water chemistry until the Owner takes occupancy.

1.2 QUALITY ASSURANCE

A. Qualifications of Workers:

1. The entity performing the work of this Section shall have been successfully engaged in the respective trade for at least five (5) years immediately prior to commencement of the Work.
2. For actual construction operations, use only trained and experienced workers with a minimum of three (3) years experience with the materials and methods specified.
3. Provide at least one person who shall be present at all times during execution of the work of this Section, with a minimum of five (5) years experience with the type of materials being installed, the referenced standards, and who shall direct all Work performed under this Section.

B. Standards: Swimming pool plaster shall conform with requirements of Chapter 31B of California Building Code, latest edition. In addition, meet requirements of applicable portions of most current edition of the "Technical Manual," National Plasterers Council, Wauconda, Illinois.

C. Start-up:

1. Furnish a swimming pool water chemistry consultant, with a minimum of five (5) years experience, possessing either AFO (Aquatic Facility Operator) or CPO (Certified Pool Operator) certification(s), to supervise and properly balance swimming pool water chemistry.
2. Demonstrate to the Owner's Representative that all systems are fully operational and that calcium hardness, total alkalinity, chlorine residual and pH levels are within specified limits.
3. Standards: Furnish labor and chemicals as required to condition the water properly to the following specifications:

a.	Calcium Hardness:	200-400 parts per million (PPM)
b.	Total Alkalinity:	80-100 PPM
c.	Chlorine Residual:	1.00 to 2.00 PPM
d.	pH Factor:	7.2 to 7.6

1.3 SUBMITTALS AND SUBSTITUTIONS

A. Provide submittals in conformance with the requirements of Section 01 33 00.

B. Submit proof of qualifications as specified in Article 1.2.A and 1.2.C.1 of this Section.

1.4 PRODUCT HANDLING

A. Delivery: Deliver materials to the Project Site in the manufacturer's original unopened containers with all labels intact and legible.

B. Storage: Store materials under cover in a manner to prevent damage and contamination, and store only the specified materials at the Project Site.

C. Protection: Use all means necessary to protect the swimming pool plaster before, during, and after installation and to protect the installed Work specified in other Sections.

D. Replacements: In the event of damage, immediately make all repairs and replacements necessary to the approval of the Owner's Representative.

1.5 ENVIRONMENTAL CONDITIONS

A. No plastering shall be done under unsuitable conditions of weather or temperature. No plastering shall be done when prevailing temperature is 40 degrees Fahrenheit or less.

B. Do not install plaster during rain and, if rain commences after plastering has begun, immediately protect the plaster from rain by all means necessary until the plaster has set.

C. Do not install plaster during wind greater than 10 mph and, if wind commences after plastering has begun, immediately protect the plaster from wind by all means necessary until the plaster has set.

PART 2 - PRODUCTS

2.1 CEMENT / AGGREGATE

A. Luna Quartz® tiny pebble finish by Wet Edge Technologies. Altima® quartz finish by Wet Edge Technologies. Pebble-Fina® pool finish by Pebble Technologies.

2.2 COLOR

A. All swimming pool plaster shall be white in color. Wet Edge Technologies shall be Luna Quartz® "Polar White". Wet Edge Technologies shall be Altima® "White". Pebble Technology shall be Pebble-Fina® "Classico". Contractor to obtain written approval on selected pebble color from the local Health Department prior to installation. Submit cut sheet, color sample and written approval for review by Architect and Owner.

2.3 WATER

A. Water for swimming pool plaster shall be clean and free from injurious amounts of acid, alkali, and organics.

2.4 GUTTER, PUMP PIT, BACKWASH PIT & SURGE CHAMBER WATERPROOFING

A. Xypex, Miracote Membrane C, or approved equal. Mix and apply per manufacturer's recommendations for specific application. Color shall be Gray.

PART 3 - EXECUTION

3.1 SURFACE CONDITIONS

A. Inspection:

1. Prior to Work of this Section, carefully inspect the installed Work of other trades and verify that all such Work is complete to the point where this installation can properly commence.
2. Verify that swimming pool plaster can be installed in accordance with the original design and all referenced standards, including proprietary application techniques and application training/certifications.

B. Discrepancies:

1. In the event of discrepancy, immediately notify the Owner's Representative.

2. Do not proceed with installation in areas of discrepancy until all such discrepancies have been fully resolved.
3. Failure to notify the Owner's Representative and give written notice of discrepancies shall constitute acceptance by the Contractor of existing conditions as fit and proper to receive the Work.

3.2 INSTALLATION OF GUTTER, PUMP PIT, BACKWASH PIT & SURGE CHAMBER WATERPROOFING

A. Provide two (2) coats of the specified gutter and surge chamber waterproofing prior to plastering the swimming pool. Prepare surfaces to receive waterproofing and cure in conformance with manufacturer's recommendations. Provide steel trowel application method to ensure uniform smooth, dense surface finish.

3.3 INSTALLATION OF POOL PLASTER

A. Outdoor Pools or Spas:

1. Completion of other work: DO NOT commence plastering of swimming pool(s) or spa(s) until the following conditions have been met:

a. The Health Department and/or other governing agencies have approved the pool(s) and/or spas) for plaster.
b. All concrete pool deck construction is complete and the pool decks have been thoroughly cleaned.
c. All landscaping in areas adjacent to the pool(s) or spa(s) is complete and the landscape irrigation system is operable.
d. All painting in the pool area is complete.
e. All welding and grinding in locations adjacent to the pool area are complete.
f. The backwash sewer connection is complete.
g. Pool(s) and/or spa(s) area(s) perimeter fencing installation is complete.
h. All trash and debris have been removed from areas adjacent to the pool(s) or spa(s), particularly those areas that are normally upwind from the pool(s) or spa(s).
i. All dust raising construction and/or activities in areas adjacent to the pool(s) or spa(s) are complete or mitigated.
j. The circulation pump(s) is/are operational.
k. The mechanical system has been flushed sufficiently to remove all dirt and debris from the piping system.
l. All necessary chemicals (Chorine, pH adjuster, Sodium Bicarbonate and Calcium Chloride or any other required chemicals) are on site and ready for use.
m. Obtain written approval from the Owner’s Representative and the Architect.

B. Indoor Pools or Spas:

1. Completion of Other Work: DO NOT commence plastering of swimming pool(s) or spa(s) until the following conditions have been met:

a. The Health Department has approved the pool(s) and/or spa(s) for plaster.
b. All work above the pool(s) and/or spa(s) is complete.
c. All painting in the pool area is complete.
d. All welding and grinding in locations adjacent to the pool area are complete.
e. The backwash sewer connection is complete.
f. All concrete pool deck construction is complete and the pool decks have been thoroughly cleaned.
g. The circulation pump(s) is/are operation.
h. The mechanical system has been flushed sufficiently to remove all dirt and debris from the piping system.

i. All necessary chemicals (Chlorine, Acid, Sodium Bicarbonate and Calcium Chloride) are on site and ready to use.
j. Obtain written approval from the Owner's Representative and the Architect.

C. Contractor accepts all liability from damage done to the pool plaster if the pool(s) or spa(s) is (are) plaster before the completion of the above listed items or without the written approval of the Owner's Representative and the Architect.

D. POOL PLASTER AUTHORIZATION FORM:

1. The pool(s) and or spa(s) at Compton Community College is/are hereby approved for the installation of the pool plaster. Pursuant to the requirements of specification section 13 11 05, paragraph 3.3.

Owner	Date
Architect / Project Manager	Date

E. Preparation:

1. Do not apply plaster over dirt, rust, scale, grease, moisture, scuffed surfaces or conditions otherwise detrimental to the formation of a durable plaster finish.
2. Consult with manufacturer on application to specific surfaces being treated. Follow manufacturer's recommendation for curing of cast-in-place concrete or shotcrete surfaces prior to application of plaster.
3. Protect ceramic tile, decking, deck equipment, gratings, fittings and other items by suitable covering or masking.
4. Mask or remove all hardware, hardware accessories, machined surfaces, plates, lighting fixtures and similar items in place not to receive pool plaster. Following completion of plaster for each space or area remove masking. Re-install all removed items utilizing workers skilled in the trades involved.

F. Application:

1. Finish shall be applied to a uniform thickness of 3/8" to ½" over the entire surface. The walls shall be scratch-coated followed by a finish coat. Material applied to the floor after the walls have been applied shall be accelerated to assure uniform setting time throughout the pool surface.
2. Float the plaster to a uniform plane and trowel to a smooth, dense, impervious surface using extreme care to avoid stains.
3. Take special care in finishing around pool fittings, making sure to mask off or plug openings so as not to fill such openings with excess plaster. Be certain to completely enclose pool fittings with plaster to insure a leak-proof seal around pipes, fittings, lights, anchors, etc.
4. Accurately interface with the finish planes of items installed by other trades.
5. Quartz and pebble plaster finish is to be applied by a licensed applicator as approved by the manufacturer, and in accordance with manufacturer's training.

3.4 CURING

A. Preparation: Anticipate the need for required equipment and have all such equipment immediately available for use upon completion of pool plastering.

B. Pool Filling:

1. After the plaster has sufficiently dried and before drying has proceeded to a damaging point, cure the plaster by gradually filling the pool with water, preventing all damage to finished plaster surfaces.
2. Flow the water continuously until the pool is filled.
3. When the weather is hot and/or water pressure is low, keep the pool walls damp while the pool is filling.
4. Coordinate with Contractor to ensure that the pool is continuously monitored while filling to prevent overfill.

3.5 EQUIPMENT ACTIVATION

A. All water chemistry and filtration mechanical equipment shall be operational upon filling of pool after plaster. Chemicals and other related support items as supplied by Contractor, shall be in supply at start-up.

B. For the first fourteen (14) calendar days after completion of the pool plaster, brush all plastered surfaces at least twice a day and coordinate with General Contractor to ensure that the plaster is carefully maintained after the initial fourteen-day period. In addition, coordinate with the Contractor to ensure that pool filtration equipment is continuously running during the initial fourteen-day period.

C. Start-up and provide qualified personnel to operate pool equipment for a period not less than fourteen (14) days after the pool is placed in operation, or until the Owner takes occupancy of the facility or letter of substantial completion. During this time, Contractor shall instruct and supervise the Owner's personnel in the various operating and maintenance techniques involved. Contractor shall be responsible for supply of chemicals during this not less than fourteen (14) day period and at time of turnover to Owner, chemical storage tanks shall be full. (Owner's personnel shall be fully trained and capable of assuming swimming pool maintenance tasks, training may begin before Owner takes occupancy).

3.6 CLEAN-UP

A. Upon completion of swimming pool plaster, remove all materials, equipment and debris occasioned by this Work and leave the job site in a clean and presentable condition. Perform all such clean-up to the approval of the Owner’s Representative.

3.7 WARRANTY

A. All applicators must provide a minimum of five (5) year warranty for application and workmanship additional to the manufacturer’s warranty for product.

END OF SECTION

SECTION 13 11 06 - SWIMMING POOL EQUIPMENT

PART 1 - GENERAL

1.1 WORK INCLUDED

A. Supply and install pool equipment items as required for this Work as indicated on the Drawings and specified herein.

1.2 QUALITY ASSURANCE

A. All Work of this Section shall be performed or supervised by the Swimming Pool Subcontractor.

B. Qualifications of Workers:

1. The contractor / subcontractor for this portion of the Work shall have been successfully engaged in the respective trade for at least five (5) years immediately prior to commencement of this work and shall demonstrate to the approval of the Owner's Representative that his record of workmanship is satisfactory.
2. For actual construction operations, use only thoroughly trained and experienced workers completely familiar with the materials and methods specified.
3. Provide at least one person who shall be present at all times during execution of this portion of the Work and who shall be thoroughly familiar with the type of materials being installed, the referenced standards, and the requirements of this Work, and who shall direct all Work performed under this Section.

C. All equipment supplied or work performed shall comply with regulations governing public swimming pools and spas as contained within Chapter 31 of California Building Code, latest edition.

1.3 SUBMITTALS AND SUBSTITUTIONS

A. Provide submittals in accordance with the requirements of Section 01 33 00.

B. Required submittals include:

1. Swimming Pool Safety Equipment and Maintenance Equipment as specified in Article 2.1 and 2.2 of this Section.
2. Swimming Pool fittings, Deck and Mechanical Equipment as specified in Article 2.3-2.16 of this Section.

C. Submit proof of qualifications as specified in Article 1.2 A of this Section.

D. The equipment shown on the plans represent the first listed items in the technical specifications. The Contractor shall be responsible for all required field coordination and installation of any approved equal product to provide a fully working and warranted system. The Contractor shall submit detailed shop drawings for any products used other than the first listed specified items. Contractor provided shop drawings shall include details and quality equal to the original plans and construction documents. The Contractor shall provide any and all required engineering including but not limited to structural and anchorage requirements for any proposed equipment other than the first listed specified equipment. The Contractor is responsible to provide a factory certified representative(s) to start-up and provide on-site training for all swimming pool mechanical equipment provided.

1.4 PRODUCT HANDLING

A. Protection: Use all means necessary to protect swimming pool equipment items before, during and after installation and to protect the installed Work of all other trades.

SECTION 13 11 07 - SWIMMING POOL MECHANICAL

PART 1 - GENERAL

1.1 WORK INCLUDED

A. Swimming pool mechanical piping as indicated on the Drawings for circulation and filtration systems, pool water heating systems, chemical control systems, booster pump systems and appurtenances.

B. Domestic water system from points of connection within swimming pool mechanical equipment room to make-up water system.

C. Filter backwash piping to point of connection with backwash retention pit as required.

1.2 QUALITY ASSURANCE

A. Qualifications of Workers:

1. The entity performing the work of this Section shall have been successfully engaged in the respective trade for at least five (5) years immediately prior to commencement of the Work.
2. For actual construction operations, use only trained and experienced workers with a minimum of three (3) years experience with the materials and methods specified.
3. Provide at least one person who shall be present at all times during execution of the work of this Section, with a minimum of five (5) years experience with the type of materials being installed, the referenced standards, and who shall direct all Work performed under this Section.

B. Standards:

1. All equipment supplied or work performed shall comply with Chapter 31 of California Building Code, latest edition.
2. Work shall be performed in accordance with the applicable editions of all National, State and local codes, laws, regulations and ordinances, including the following:

    a. American National Standards Institute (ANSI).
    b. American Society for Testing Materials (ASTM).
    c. American Waterworks Association (AWWA).
    d. American Welding Society (AWS).

3. Do not construe anything in the Drawings or Specifications to permit Work not conforming to these requirements.

1.3 SUBMITTALS AND SUBSTITUTIONS

A. Provide submittals in conformance with the requirements of Section 01 33 00.

B. Required submittals include:

1. Pipe and Fittings as specified in Article 2.2 of this Section.
2. Valves as specified in Article 2.3 of this Section.
3. Pressure / Vacuum Gauges as specified in Article 2.4 of this Section.
4. Pipe Hangers and Supports as specified in Article 2.5 of this Section.
5. Sleeves and Waterstops as specified in Article 2.6 of this Section.

C. Submit proof of qualifications as specified in Article 1.2 A of this Section.

1.4 PRODUCT HANDLING

A. Delivery: Deliver all materials to the Project Site in the manufacturer's original unopened containers with all labels intact and legible.

B. Storage: Store all materials under cover in a manner to prevent damage and contamination, and store only the specified materials at the Project site.

C. Protection: Use all means necessary to protect swimming pool mechanical items before, during and after installation and to protect the installed Work specified in other Sections.

D. Replacements: In the event of damage, immediately make all repairs and replacements necessary to the approval of the Owner's Representative and at no additional cost to the Owner.

1.5 JOB CONDITIONS

A. Cooperate with entities performing Work specified in other Sections to so that no conflict of new construction or occupied space may occur. Should any installation Work be done without such craft coordination, that Work so installed shall be removed and re-installed.

PART 2 - PRODUCTS

2.1 PRODUCT QUALITY

A. Materials and equipment shall be new, of the best quality for the purpose intended, and shall be clearly marked with the manufacturer's name and nameplate data or stamp and rating. As far as practicable, materials and equipment shall be of one manufacturer.

2.2 PIPE AND FITTINGS

A. PVC Schedule 40: Type 1, normal impact, NSF approved for solvent welding applications, ASTM Specification D-1785, color shall be white. Dura, Lasco, or approved equal.

B. PVC Schedule 80: Type 1, normal impact, NSF approved for solvent welding applications, ASTM Specification D-1785, color shall be gray. Dura, Lasco, or approved equal.

C. CPVC Schedule 80 Influent/Effluent Heater Piping: Type 1, normal impact, NSF approved for solvent welding applications, ASTM Specification D-1785, color shall be gray. Dura, Lasco, or approved equal.

D. PVC DR25: Conforming to ASTM D-1784, use with epoxy coated bell and spigot-type fittings or epoxy coated mechanical joint by flange adapters with epoxy coated cast iron fittings as specified in Article 2.02 (F), below. Johns-Manville "Big Blue", Diamond Plastics, or approved equal.

E. Copper Tubing: ASTM Specification B-88, hard drawn, with ANSI Standard B16.22 wrot copper fittings.

F. Steel: ASTM Specification A-120, Schedule 40 black or galvanized pipe with ASTM A-47 150 lb. banded malleable iron threaded fittings.

G. Cast Iron: ASTM Specification B16.1, cast iron flanged fittings, provide epoxy coating as required for use with chlorinated water.

2.3 VALVES

A. Ball Valves:

1. For pool system: True-Union design, PTFE seat material with FPM or FKM Double O-ring stem seals, locking handle, NSF certified. PVC schedule 80 body for below grade installation. PVC Schedule 80 body for above grade installation. Furnish ball valves on

all pip diameters 2 ½" or less with a rating of at least 200psi at 73° F, Asahi, Nibco, or Ipex.

2. For copper pipe system: 3-piece full-port bronze body valve with Teflon seat, 'Apollo', 'Nibco' or approved equal.

B. Butterfly Valves:

1. Epoxy coated cast or ductile iron body, 316 stainless steel disc and stem, viton seat material, furnish hand wheel/gear operators on all valves 8" and larger. DeZurick, Keystone, or Ipex.
2. PVC body, PVC disc and EPDM construction suitable for chlorinated water applications. Stem shall be of 316 stainless steel and non-wetted. Valves shall be self-gasketed design with a convex sealing arrangement. Valves 1-1/2" – 10" shall be rated to 150 psi and 12" valves shall be rated to 100 psi at 70°F. Asahi Pool-Pro, no known equal.

C. Check Valves: Wafer-type, epoxy coated cast or ductile iron body, 316 stainless steel plates and shaft, viton seat material. Centerline, Metraflex, or approved equal.

D. Competition Pool Surge Chamber Float Valve: EPD #2-0020-231 Float Control Valve, 12"-line size, as manufactured by Environmental Products Division of Doughboy Recreational, Rancho Cucamonga, CA, no known equal. Two (2) required.

E. Surge Chamber Isolation Valve: Butterfly valve, tapped lug style, bronze body, stainless steel stem, bronze disc, phenolic back-up ring, EPT seat material. Provide stainless steel shaft extension, shaft housing and tool operator located 2'-0" above floor level with deck access grate as required. DeZurick, Keystone, Asahi, Spears, or Ipex.

F. RP Backflow Preventer: Febco #835-B for 2" and smaller; #825 for 2-1/2" and larger. Febco, Watts, or approved equal.

G. Make-up Water Control: Cla-Val make-up water control valve with ductile iron body/cover, bronze trim, globe pattern, Buna-N rubber seals. Pilot system materials to consist of bronze/brass with stainless steel wetted parts and Buna-N rubber seals.

System to include: 3" Cla-Val' solenoid control valve #136-01BY; 3" duct iron, epoxy coated body with cast iron disc retainer and diaphragm washer, bronze trim, flanged globe pattern, 120 V at 60Hz. Solenoid wiring shall be wired to water chemistry controller. Provide 6" air gap at fill point. One (1) system required.

2.4 PRESSURE / VACUUM GAUGES

A. Furnish and install pressure and vacuum gauges on the discharge and suction sides of all pumps. 2" – 2 ½" dial, bottom connection, chrome ring, shut-off cock and snubber. Ranges shall be selected to indicate between mid-point and two-thirds of maximum range under design conditions. Marsh, Trerice, or approved equal.

2.5 PIPE HANGERS AND SUPPORTS

A. General:

1. The requirements of this Section relate to various requirements of the Agreement, General and Supplementary Conditions, Specifications, Drawings, and modifying documents which are part of the Construction Contract. Responsibility for coordination of all such applicable requirements will be that of the Contractor.

B. Description:

1. This section provides guidelines and limitations for the support of all mechanical, electrical, plumbing or architectural items from the building structure, and for the seismic bracing of such items.

2. Design and install all support and bracing systems as required for the swimming pool systems. Provide for attachment to portions of the building structure capable of bearing the loads imposed. Design these systems to not overstress the building structure.

C. Quality Assurance:

1. Design and install all support systems to comply with the requirements of the 2019 California Building Code, Chapter 16A.
2. Seismic bracing for mechanical, electrical and plumbing systems is to be per OPM Design #0043-13, see plans for additional information.

D. Submittals:

1. Submit shop drawings for all substructures and attachment methods.
2. Submit proposed alternative methods of attachment for review and approval by the Architects and DSA, prior to deviating from the requirements given below.
3. For all pipe hangers and support systems, refer to OPM Design #0043-13

E. Materials:

1. Use Mason West, Kin-Line, Grinnel, or approved equal.
2. Support all pipelines individually with hangers, each branch having at least one hanger. Lateral brace as noted and required.
3. Support piping near floor with steel stanchions welded to end plates secured to pipe and floor.
4. Support vertical piping at each floor level. Install coupling in piping at each support. Coupling shall rest on and transmit load to support. Isolate copper from steel supports with vinyl electrician's tape around pipe and coupling.
5. Use Stoneman "Trisolator," Unistrut, or approved equal, isolators at each hanger and other support points on bare copper tubing system.
6. For PVC pipe, space hangers four (4) feet apart for pipe sizes 1" and under, five (5) feet apart for pipe sizes 1-1/4" to 2", and six (6) feet apart for pipe sizes over 2". Space hangers for horizontal pipes at a maximum of six (6) feet for copper 2" and smaller and for steel 1-1/4" and smaller; ten (10) feet for copper 2-1/2" and larger and for steel 1-1/2" and larger.
7. Size hanger rods, screws, bolts, nuts, etc., according to manufacturer's sizing charts.
8. Trapeze hangers may be used for parallel lines.
9. Use galvanized or cadmium plated hangers, attachments, rods, nuts, bolts, and other accessories in pool mechanical room, high humidity areas, or where exposed to weather. Hot dip galvanize all items which are not factory furnished. Plating for hinged movements must be done at the factory.
10. Lateral Bracing: To prevent swaying of the piping systems, provide angle iron bracing and anchor into wall or overhead framing. Piping shall be braced or anchored in such a way as to resist a horizontal force of 50% of its operating weight in any direction.
11. Do not use wire or other makeshift devices for hangers.
12. Furnish all substructures and fasteners required to comply with the limitations given below. Use material as specified in the various sections and as appropriate to their use.

F. Guidelines & Limitations:

1. Each Contractor will coordinate the load requirements from all subcontractors so that no combination of loads overstresses the building structure or exceed the limitations given below.
2. Concrete Structure:

    a. Support all loads hung from concrete structure with cast-in-place inserts, unless drilled-in anchors are specifically approved in writing prior to placing the concrete.

b. Concrete anchors must not penetrate into reinforcing bars. Where the anchors boring indicates the presence of reinforcing bar, patch hole with an epoxy type grout and relocate anchor 12 diameters away.
c. Individual expansion anchors cannot support any loads greater than 300 pounds or manufacturer's specified load capacity without approval.

3. Steel Structure:

a. Hang no more than 20 pounds per metal deck rib in any span.
b. At beams, hang all beam loads greater than 40 pounds concentric to beam, not off the flanges.
c. Attached no loads to the beams or girders greater than the following without specific approval from the architect;

1) Roof beams and girders: 300-pound point load or 600-pound total load for a single span.

G. Seismic Bracing:

1. Install seismic bracing to not ground out vibration and sound isolation systems.
2. All items of mechanical and electrical equipment 60" or more in height are to be seismically braced whether such bracing is shown or not.

2.6 SLEEVES AND WATERSTOPS

A. Provide sleeves where work of this Section passes through fire rated partitions, floors and ceilings, concrete slabs or exterior of structure. Caulk clearance space using sealant appropriate for application in conformance with manufacturer's recommendations and Title 24 of California Code of Regulations. 3m, Dow Corning, or approved equal. In lieu of sleeves and caulking, "Link Seal" products may be used.

B. Provide prefabricated waterstops as indicated on the Drawings at all pipe penetrations through structures containing stored water (i.e., swimming pools, balance/surge tanks, etc.) to insure leak-proof seals.

PART 3 - EXECUTION

3.1 SURFACE CONDITIONS

A. Inspection:

1. Prior to Work of this Section, carefully inspect the installed Work of other trades and verify that such work is complete to the point where this installation may properly commence.
2. Verify that items of this Section may be installed in accordance with the original design and referenced standards.

B. Discrepancies:

1. In the event of discrepancy, immediately notify the Owner's Representative.
2. Do not proceed with installation in areas of discrepancy until all such discrepancies have been fully resolved.
3. Failure to notify the Owner's Representative and give written notice of discrepancies shall constitute acceptance by the Contractor of existing conditions as fit and proper to receive his work.

3.2 ABBREVIATIONS AND SYMBOLS

A. Abbreviations and symbols on the Drawings are those most commonly used. Obtain clarification from the Owner's Representative on any questionable items before bid.

3.3 GENERAL PIPING REQUIREMENTS

A. Size any section of pipe for which size is not indicated or any intermediate section erroneously shown undersized the same size as the largest pipe connecting to it. Sizes listed are nominal.

B. Cut pipe accurately to job measurements and install without springing or forcing, true to line and grade, generally square with building and/or structures and adequately supported to prevent undue stress on pipe, fittings and accessories.

C. Make changes of direction with manufactured fittings. Street ells, bushings, reducing flanges, close nipples or bending of pipe is not allowed.

D. Use great care to install piping in accordance with best practice. Plastic pipe shall be “snaked” in trenches to allow for thermal expansion.

E. All above grade, below grade and buried or imbedded PVC shall be installed using solvent weld fittings. Also, each and every fitting and pipe end shall be prepared with solvent primer. Fittings shall be joined individually and with enough time between assembly of adjacent joints to allow them to seal solidly. After joining, an even ring of primer must be visible around the entire fitting. If any fittings are installed without visible primer, the fitting shall be removed and discarded and piping recut, rechamfered and joint made up again using a new fitting. All procedures, methods and techniques used to make up solvent weld joints shall be in strict accordance with manufacturer's recommendations.

F. Arrange pipe and hangers to allow for expansion, contraction and structural settlement. No pipe shall contact structure except penetrations as shown on the Drawings.

G. Provide dielectric connections between copper and dissimilar metals. In copper systems, threaded piping. Including connections to equipment shall be brass pipe and fittings. Install dielectric connections in vertical sections of piping only.

H. Run pipe full size through shut-off valves, balancing valves, etc. Change pipe size within three (3) pipe diameters of final connection to control valves, fixtures and other equipment.

I. Provide unions or flanges at connections to equipment, on service side of valves and elsewhere as required to facilitate ease of maintenance.

J. Locate equipment shut-off valves as close to equipment as possible maintaining easy valve access.

K. Make all connections between domestic water systems and equipment or face piping with approved backflow prevention devices as required.

L. All PVC pipe exposed to direct sunlight shall be painted with two coats of Exterior Acrylic Semi-Gloss Paint, Sherwin Williams or equal. Color to be selected by the Architect. Prior to painting the PVC pipes, the exterior of all PVC pipes shall be wiped with Methyl Ethyl Ketone, or an approved equal, to remove the glaze from the pipes.

M. The Main Drain pipe must run either level or uphill from the main drain sump, through the surge pit (if applicable) and then to the circulation pump.

3.4 TRENCH EXCAVATION AND BACKFILL

A. Excavation:

1. Excavate and backfill trenches as required for the Work of this Section. Conform to requirements of Section 13 11 01.
2. The Contractor shall perform all excavation of every description and of whatever materials encountered, to the depths indicated on the Drawings or as necessary. The Contractor shall dispose of the excavated materials not required or suitable for backfill as directed and shall perform such grading as may be necessary to prevent surface water

from flowing into the trenches. The Contractor shall provide adequate equipment for the removal of storm or subsurface waters, which may accumulate in the excavated areas.

B. Trenching:

1. Excavate trenches to lines and grades as indicated on the Drawings and with banks as nearly vertical as practicable.
2. Bottoms of trenches shall be accurately graded to provide uniform bearing on undisturbed soil for the entire length of each section of pipe.
3. The width of the trench at and below the top of the pipe shall be such that the clear space between the barrel of the pipe and the trench wall shall not exceed 8” on either side of the pipe. The width of trench above the top of pipe may be wider if necessary.
4. Over-depth excavations shall be filled with tamped sand to required grades.
5. Excavations of five (5) feet or more in depth shall be shored or supported in conformance with rules, and regulations of State and Federal Governments. Shoring shall be constructed, maintained and removed in a manner to prevent caving of the excavation walls or other load on the pipe.

C. Backfilling:

1. Material for backfilling of pipes shall be approved granular material less than two (2) inches in diameter obtained from the excavation. No material of a perishable, spongy or otherwise unsuitable nature shall be used as backfill.
2. Backfilling of pipe trenches shall commence immediately after installation and testing to preclude damage to the installed pipe. Backfill around pipe shall be carefully placed so as not to displace or damage the pipe and shall be carried up symmetrically on each side of the pipe to one foot above the top of the pipe. The material shall be carefully compacted or consolidated before additional backfill is placed.
3. Backfill above an elevation of one foot above the top of pipe in conformance with requirements of Section 31 23 23. Material for balance of backfill shall be approved granular material less than six (6) inches in diameter taken from the excavation.
4. Unless otherwise indicated on the Drawings, all pipe shall have a minimum of eighteen (18) inches of cover.

3.5 GENERAL EQUIPMENT REQUIREMENTS

A. Position equipment to result in good appearance and easy access to all components for maintenance and repairs.

B. Install piping, flues, breeching and ducts so that they do not interfere with equipment access.

C. Install level, secure and out of moisture. Provide shims, anchors, support straps, angles, grouted bases, or other items as required to accomplish proper installation.

D. All screws, nuts, bolts and washers shall be galvanized, cadmium plated or stainless steel. After fabrication, hot-dip galvanize unfinished ferrous items for outdoor, below grade or other use subject to moisture.

E. Extend 1/2” Schedule 40 black steel pipe lubrication tubes from all hard to reach locations to front of equipment or to access points. Terminate with proper type of lubrication fitting.

3.6 VALVES AND STRAINERS

A. If no shut-off is indicated, provide ball valves at inlet connections and balance valves at outlet connections to fixtures and equipment. Provide proper valve trim for service intended.

B. Use no solder end valves unless noted otherwise; provide adapters in copper tubing systems.

C. Locate valves with stems above horizontal plane of pipe. In general, locate valves within six (6) feet of floor, out from under equipment, in accessible locations with adequate clearance around hand wheels or levers for easy operation.

D. Provide all valves, cocks and strainers, full pipe size unless indicated otherwise.

E. Provide hand wheel operators on all valves 6” and larger, under 6” lever operators may be used.

F. Provide tool operated valve with stainless steel shaft extension and 'on deck' tool operation for surge chamber butterfly isolation valve.

3.7 IDENTIFICATION OF PIPING

A. Identify each valve by a numbered brass tag with hole and brass chain mounted on valve stem or handle. Tag to be a minimum of 1” in diameter and numbers at least 1/4” high stamped into tag. Valves and plumbing shall be labeled clearly with the source or destination descriptions.

B. Install an identification chart in a plastic or glass framed enclosure, which schematically illustrates the proper operation of all piping systems and indicates number and location of all valves and control devices within the system.

C. The direction of flow for the recirculation equipment shall be labeled clearly with directional symbols such as arrows on all piping in the equipment area. Where the recirculation equipment for more than one pool is located on site, the equipment shall be marked as to which pool the system serves.

3.8 TESTS

A. Perform tests in presence of Owner’s Representative with no pressure loss or noticeable leaks.

B. Do not include valves and equipment in tests. Include connection to previously tested sections if systems are tested in sections.

C. Perform tests as follows:

System	Test Pressure	Test Medium	Duration
Skimmer lines and Lawson Drain sump lines	20 psig	Water*	4 hours
Pool Piping	50 psig	Water*	4 hours
Pool Main Drains	30 psig	Water*	4 hours
Domestic Water	150 psig	Water*	4 hours

***Never test PVC pipe or fittings with air or other gases, always use water.**

3.9 PIPE MATERIAL APPLICATION

A. PVC Schedule 40: Below grade swimming pool piping and domestic water piping up to 12” line size; use standard solvent weld fittings.

B. PVC Schedule 80: Above grade swimming pool piping up to 12” line size; use solvent weld Schedule 80 or epoxy coated cast iron fittings.

C. Type L Hard Copper: Above grade domestic water piping.

D. CPVC Schedule 80; Pool Heater Piping.

E. Schedule 40 Steel: Natural gas piping.

3.10 CUTTING AND DRILLING

A. Cutting or drilling necessary for installation of Work of this Section shall be done only with approval of Owner’s Representative.

3.11 CLOSING-IN OF UNINSPECTED WORK

A. Do not cover or enclose Work before testing and inspection. Re-open Work prematurely closed and restore all Work damaged.

3.12 QUIETNESS

A. Quietness is a requirement. Eliminate noise, other than that caused by specified equipment operating at optimum conditions, as directed by Owner's Representative.

3.13 FLUSHING OF LINES

A. Flush or blow out pipes free from foreign substances before installing valves, stops or making final connections. Clean piping systems of dirt and dust prior to initial start-up.

B. Just prior to plastering the pool, under the observations of the IOR, the pool mechanical system shall be flushed using the pool circulation pump. Circulate water through the mechanical system until the effluent water from the pool return heads runs clean.

3.14 CLEAN-UP

A. After all Work has been tested and approved, the Swimming Pool Subcontractor shall thoroughly clean all parts of the equipment installations, including all pool pipe and fittings in the pool mechanical room. Exposed parts shall be cleaned of cement, plaster and other materials and all grease and oil spots removed with solvent.

B. The Swimming Pool Subcontractor shall remove debris from the Project site. Cartons, boxes, packing crates and excess materials not used, occasioned by this work shall be disposed of to the satisfaction of the Owner's Representative.

C. If the above requirements of clean up are not performed to the satisfaction of the Owner's Representative, the Owner reserves the right to order the work done, the cost of which shall be borne by the Swimming Pool Subcontractor.

END OF SECTION

B. Replacements: In the event of damage, immediately make all repairs and replacements necessary to the approval of the Owner's Representative.

PART 2 - PRODUCTS

2.1 SAFETY EQUIPMENT

A. First Aid Kit for 50 Persons with two (2) wool blankets: Marine Rescue or approved equal. Quantity as required by the Department of Health, two (2) minimum.

B. Rescue Tubes (minimum 49" long) and Life Ring Buoy (minimum 24" in diameter), U.S. Coast Guard Approved: Marine Rescue or approved equal. Quantity as required by the Department of Health, two (2) minimum.

C. 3/16" diameter Throw Rope, complete with lemon foot, for use with Life Ring Buoy: Kiefer, United Industries, or approved equal. Quantity as required by the Department of Health, two (2) minimum.

D. Rescue Hooks, 16' long x 1-1/2" aluminum pole and stainless-steel mounting hardware: Kiefer, Pentair or approved equal. Quantity as required by the Department of Health, two (2) minimum.

E. Pool Safety Signs: As required by the Department of Health. Submittal required. Placement at the pool site shall be in conformance with Health Department Inspector. Two (2) sets minimum.

F. Spine Board: C.J. Penton Aquatics long board with "L" bracket head immobilizer with foam pads and Velcro strap, 4 Velcro body straps, or equal. One (1) required.

2.2 MAINTENANCE EQUIPMENT

A. Commercial Pool Vacuum: Commercial Pool Vacuum: Provide pool vacuum cart with a 155-square foot single-cartridge filter, lid-mounted handle, separate lid-mounted bracket for electrical cord, and two rubber-tired ball bearing wheels with grease fittings. Cart and filter shall be fabricated from schedule 304 stainless steel with welds treated and passified. Provide Whisperflo pump with a 1 1/2 hp, 115/230 volt, maximum 20 amp draw @ 120 volts, single phase motor and integral trap. Pump shall be UL and NSF listed, have 2" suction and 1 1/2" discharge fittings, and have a brass priming valve with hose bib. Entire pump assembly shall be anchored to vacuum cart with two stainless steel bolts. Provide a 100 foot 10 AWG 3/C SJ electrical cord with ground fault interrupter (GFI) plus. Cord shall be wired to a double pole, 30-amp switch which shall be mounted on pump motor. One (1) required.

B. Heavy Duty Vacuum Hose: 2" x 50' with hose connector. Pentair, Smooth Bore or approved equal. One (1) required.

C. Utility Pole: 24' fiberglass with connectors. Pentair, Skimlite or approved equal. One (1) required.

D. Commercial Vacuum Head: 24" wide "flexible" vacuum head. Pentair Model #R201186 or approved equal. One (1) required.

E. Pool Wall Brush: 36" wide professional quality. Pentair or approved equal. Two (2) required.

F. Leaf Skimmer: 30" x 8" x 12", professional quality. Pentair, Spectrum or approved equal. Two (2) required.

G. Photometer Water Quality Test Kit: 'Palin' Pool Test 9 Premier Kit Model SP709E with 120V plug-in power supply, Three (3) "AAA" batteries and a total dissolved solids sensor. The test kit shall also include the following test reagents in addition to those provided within the kit package:

50 Qty	Total Alkalinity
50 Qty	Calcium Hardness $CaCO_3$
250 Qty	Free Chlorine
250 Qty	Total Chlorine
50 Qty	Free Chlorine Extended Range
50 Qty	Total Chlorine Extended Range
50 Qty	Copper
250 Qty	pH

2.3 FITTINGS

A. Main Drain Frame & Grate (18" x 36"). Lawson Aquatics #MLD-FG-1836 x 34" depth, VGBA compliant, two (2) required. Hayward 1-1/2" collector tubes #SP1056 and Hayward 1-1/2" hydrostatic relief valves #SP1055, or approved equal, two (2) required, one per main drain sump. Contractor shall provide to the Owner a Certificate of Compliance, signed by a licensed design professional, for main drain sump(s) and frame(s) and grate(s), as required by the Virginia Graeme Baker Act.

B. Gutter Outlet Frame & Grate (12"x12"): Lawson Aquatics #MLD-FGD-1212. Eighteen (18) required.

C. Floor Return Inlet 1-1/2" Adjustable: StaRite #8417-0000, United Industries, or approved equal. Sixty-two (62) required.

D. Swimming Pool Underwater Lights: J & J Electronics 'PureWhite LED' #LPL-F5W-120-100 (100' cords, field verify) with polished stainless steel face rings, 87 watt LED and LWC. Stainless steel niches, Pentair #78210600 with 1" hubs, or approved equal. Forty-two (42) required.

E. Junction Box for Underwater Lights, completed with strain reliefs: Hydrel #1719, Appleton or approved equal. Twenty-two (22) required.

2.4 DECK EQUIPMENT

A. Starting Platform Anchors: KDI-Paragon 'Competitor' #23103DW, 6" deep. Thirteen (13) required in concrete. Paragon 'Competitor' #23074, cover for dual wedge, 'Competitor' #23303, cover removal tool, two (2) required. 'Paragon' Track Start, 'SR Smith' legacy or approved equal.

B. Adjustable Starting Platforms: Platforms shall be 'Paragon' Track Start Competitor #24527, side step with track start plus platform kit which includes an adjustable backplate kit, side hand grip kit. Sand finish platform top shall be provided with school color and logo top. Thirteen (13) required. 'Paragon', 'SR Smith' or equal.

C. Stanchion Sockets: 1.90" I.D. Bronze. KDI-Paragon 38201TC, no known equal. Nineteen (19) required.

D. Stanchion Posts: 1.90" O.D. x .145 wall. KDI-Paragon, eleven (11) #38106, and eight (8) #38301, no known equal.

E. Lane Line Anchors: Heavy eye bolt with insert. KDI-Paragon #73017/18 or equal. Forty-nine(49) required.

F. Lane Line Cup Anchors: Spectrum #58316 Stainless steel 4" cup anchors. Three (3) required.

G. Racing Lanes: #200-34200, 'Competitor', 'Anti Wave' or approved equal, verify colors with Owner prior to ordering; 25-yard lanes; fourteen (14) required. Provide vinyl covered stainless steel lane line extensions, Knorr System model #EP-009-0020 or approved equal. Two (2) per lane line. Provide floating water polo side goal tethers, eight (8) total. Provide two (2) additional lanes to be utilized with floating water polo as side lanes. Provide four (4) dedicated stationary water polo lanes.

H. Racing Lane Reel with Cover: KDI-Paragon #75111SS with cover #75133, no known equal. Six (6) required.

I. Moveable Lifeguard Chair: 1.90" O.D. x .065 wall. KDI-Paragon 20302, no known equal. Two (2) required.

J. Figure 4 Grab Rails: KDI-Paragon #30102, 1.90" O.D. x .109" wall, no known equal. Five (5) sets required.

K. Recessed Steps, Set of 3: KDI-Paragon #32102, no known equal. Five (5) sets of three required.

L. Hand Rails: Paragon Custom three bend per plans, 1.09" O.D x .065” wall, no known equal. Five (5) required.

M. Cross-Braced Ladder: Paragon #42123 Custom, no known equal. Two (2) required.

N. Anchor Sockets for Grab Rails, Hand Rails & Ladders: KDI-Paragon 28102, no known equal. Thirty-four (34) required.

O. Stainless Steel Escutcheon Plates for Grab Rails, Hand Rails & Ladders: KDI-Paragon 28301, no known equal. Thirty-two (32) required.

P. Stationary Water Polo Goals: KDI-Paragon 36104, 36201, Antiwave or approved equal. Furnish complete with anchors and nets. Two (2) pair required.

Q. Floating Water Polo Goals: ‘Sundog’ custom floating waterpolo goals with nets and tethers or approved equal. One (1) pair required.

R. Disabled Lift: Spectrum Traveler XRC 500 #27610 ‘Swim-Lift’ self-operated or approved equal. Furnish with anchors, cover, extra battery and transporter cart. One (1) lift required. Furnish with two (2) anchors.

S. Backstroke Pennants: ‘Champion’ 3/16” diameter vinyl coated cable #50-175; ‘Champion’ hardware package #53-030, and ‘Champion’ 12” x 18” vinyl coated polyester pennants #53-020 Lincoln Equipment, Knorr Systems or equal.

T. Pool Cover System: (T-Star or equal)

1. A pool cover system as described below shall be provided and shall include all the specified features, without exception. Submittal data must include complete documentation relating to all the specified features and include manufacturer's sales literature, specification sheets, and installation/operation/maintenance manuals. Upon written request by the specifying agent, the following samples must be provided: samples of tubing used for storage reel winding tubes and end frames; a sample winding tube bearing; a sample castor wheel assembly; and a cover sample measuring at least 8" x 11", including weighted side edge, reinforced end edge, and grommet.
2. Cover Material:

    a. Material shall be woven, 10 by 10 count per inch, high-density polyethylene, ultraviolet stabilized film fabric, laminated to both sides of 1/8" thick, closed cell, medium density, white, polyethylene foam. The woven polyethylene film fabric shall be coated on both sides with an ultraviolet stabilized, chemically resistant polyethylene coating. The combination of film, foam and woven components shall be non-toxic, non-absorbent, non-permeable and buoyant. Color shall be blue on upper surface and black on under surface. In addition to the above, cover must meet the following requirements:

Thickness	1/8 inch minus or plus 10%
Foam Density	2 lbs. per cubic foot
Weight	5 oz. per square foot
Tensile Strength	318 lbs. (ASTM D3597)
Tear Strength	60 lbs. (ASTM D2261-71)
Bursting Strength	(Mullen Tester): 425 psi (ASTM 751-73)
Service Temperature	-40°F to +160°F
K Factor	.25 BTU/sq. ft.-hr-°F/inch (ASTM D2326)
Reinforced Edge Tear Strength	1225 lbs. pull strength, corner to corner
Open Seam Tear Strength	70 lbs.

3. Cover Design Criteria:

   a. Cover panels shall totally cover the surface of the pool without gaps or overlaps with reinforced cutouts to accommodate rounded corners, step areas, rails, etc. Cover panels shall be of the following quantities and sizes:

Qty.	Size
8	14 feet, 5 inch x 75 feet, 1 inch
3	13 feet x 75 feet, 1 inch, with rail cuts

   b. Along end and side edges of each panel, a weighted material shall be sewn in and shall be continuous, non-corrosive and conform to the flat shape of the cover. End edges shall be reinforced with a double layer of polyethylene-coated film fabric and designed in such a manner as to prevent panels from dividing when they are being pulled across the water. On all corners, weighted edge shall wrap corners and be itself encapsulated by the two layers of end reinforcement. The entire corner construction shall be reinforced with an 1/8" thick load dispersion plate and non-corrosive grommet.

   c. Both ends of each cover panel shall be equipped with no less than three (3) non-corrosive grommets and quick-release loops for easy connection to the storage reel or to the next cover panel. All sewing shall be ultra-violet stabilized and chemically resistant 100% polyester thread. Main body seams shall be welded, glued or heat sealed. Complete mechanical attachment with lock-stitched thread shall be required. Warning labels consistent with the recommendations of the Federal Consumer Protection Agency shall be permanently affixed to each end of each cover panel and to the sides of perimeter panels.

4. Storage Reels:

   a. The following quantity, type, and size of storage reels shall be provided:

Qty.	Winding Tubes Per Reel	Length of Winding Tubes
3	3	16 Foot
1	2	16 Foot

   b. Storage reel frame, winding tubes, castors, brake shafts, cranks and fasteners shall be made of type 304 stainless steel. Each reel shall have six wheels, each of which shall be 6 inches in diameter, be rated at 1150 pounds load capacity and be made of solid polyurethane. Wheels shall be lubricateable through grease fittings on stainless steel axle shafts and have stainless steel swivel yoke assemblies. The reel shall have two frame mounted, screw-type brakes with pads that lock directly to the pool deck and have a total of 18 square inches of total braking

surface. Castor brakes or other types of foot-operated or lever-operated brakes will not be considered equal. Each winding tube shall be 4 1/2 inches in diameter; have a wall thickness of .120 inches; and shall consist of continuous length of tubing without joints or welds. Reels with tubes fabricated from two or more pieces of tubing joined together will not be acceptable. End frames shall be fabricated from 1 1/2 inch square Schedule 304 stainless steel box beam tubing with .120" wall thickness. To facilitate field repair, 3/8" stainless steel bolts, nuts and washers shall be used to connect major reel frame parts, wheels, brakes, bearings and winding tubes. Reels that use welding to connect these components will not be considered equal. Winding tube bearings shall be heavy duty, self-aligning, pillow block ball bearings with set screws to secure tube shafts and prevent their lateral movement. All bearings shall be lubricateable through grease fittings. Plastic surface bearings will not be acceptable.

c. Each storage reel shall be provided with a protective cover constructed of vinyl-laminated polyester cloth, 1000 denier, totaling 13 ounces per square yard.

5. Measuring and Training:

a. A representative of the manufacturer shall visit pool site to confirm measurements prior to fabrication of cover, and once cover is delivered, train operating personnel and supervise initial installation of cover.

6. Warranty:

a. Cover panels shall be provided with manufacturer's three- year full replacement warranty covering defects in material and workmanship. Storage reel shall be provided with manufacturer's 10-year warranty covering defects in material and workmanship.

2.5 SWIMMING POOL STRAINER(S):

A. 'Mer-Made' F.O. series FRP reducing basket strainer: One (1) 12" x 8" standard with acrylic lid and two (2) stainless steel strainers each. (150 lbs. each).

2.6 SWIMMING POOL CIRCULATION PUMP(S)

A. 'Paco' #6015-7; 6" x 8" x15", Type 'LC' end suction centrifugal pump; 1150 RPM 460V, 3PH, 40HP; rated at 1,650 GPM @ 60ft. TDH; 87% efficient; premium efficiency TEFC motor; epoxy coat all wet surfaces. 'Paco', 'Aurora' or equal. (760 lbs.) Provide 'SPCS' Eko-Flex pump control system variable speed drive model SPCS040EF4 system 21" x 49" x 17" deep. Coordinate mounting location to maintain desired clearances. 460V 3PH (177lbs.)

2.7 SWIMMING POOL FILTERS:

A. 'EKO3 Systems' Gen 2 #42230-1206-T-5 Automatic Filter Control (AFC) fully automatic hi-rate permanent media filter with 115 sq. ft. of filter area rated at 1,725 GPM at 15.0 GPM/sq. ft. complete with 12" face piping, 6" backwash, seismic anchorage. Provide all utilities, piping, valving etc. (9475 lbs. each tank). EKO3 Gen 2 System or equal. Provide Signet MK-515 flowsenor with digital readout. One (1) system total.

2.8 SWIMMING POOL HEATER(S):

A. Indirect fired pool heating package system; 'Aquas' Crest SmartTouch control condensing modulating boiler, titanium heat exchanger with CPVC connections, factory assembled skid mounted package, California code controls, 1 ½" natural gas connection, 4" water connections, 8" diameter air inlet and 8" diameter sidewall vent size, PVC vented; 1,500,000 BTU per hour input, 97% efficient. Provide ¾" cold water connection 'Lochinvar APO1500N", weight = 3,500 lbs. each. Two (2) total.

2.9 CHLORINE FEED/STORAGE SYSTEM(S):

A. Provide 'Chem-Tainer' 500 Gallon #TC5971DC; dual storage/containment tank with lid seismically restrained; (4,165 lbs.). Complies with Fed. Reg. #40CFR-264-163. Feed system(s) shall be 'LMI' #SD43-88P-KSI; 288 GPD @ 15 PSI with FRP shelf bracket. Hard pipe to point of injection.

2.10 ACID STORAGE/FEED SYSTEM:

A. Provide 'Chem-Tainer' 150 Gallon #TC3448DC; dual storage/containment tank with lid seismically restrained; Operating weight = (1,250lbs). One (1) total. Complies with Fed. Reg. #40CFR-264-163. Provide 60-gallon acid vapor recovery system. One (1) total.

2.11 CARBON DIOXIDE STORAGE/FEED SYSTEM(S):

A. Provide one (1) 'NOVO-600', 600 lb. cryogenic liquid CO_2 storage tank with remote fill port. 594 liquid lbs. (5195 cubic feet of gaseous CO_2 at NTP) one (1) total. Provide EKO^3 PH-MTS CO_2 high efficiency feed system with alkalinity control, 0 to 160 SCFH feed capacity booster pump, piping injector, flowmeter, relays and acid feed alkalinity control. Provide hard wired 'Analox' #APIKIT CO2 detector with audible and visual alarms in each chemical room, UL 1971 standard listed, one (1) total.

2.12 WATER CHEMISTRY CONTROLLER(S):

A. Provide ethernet connection to BECS #CS-BECSYS7-BP-E water chemistry controller. Provide complete system control package. 'Becsys System 7', 'Impact', 'Wallace and Tiernan' or approved equal. One (1) total.

2.13 BACKWASH PIT

A. 6'-0" x 10'-0" x 5'-0" deep with 6" ø P-trap outlet to sewer. Coordinate waterproofing per Section 131105. Coordinate with structural and plumbing plans.

2.14 FILL SYSTEM

A. 3" Cla-Val fill system to include 3" Cla-Val solenoid control valve #136-01BY, 3" duct iron, epoxy coated body with cast iron disc retainer and diaphragm washer, bronze trim, flanged globe pattern, 120V at 60hz. Solenoid wiring shall be wired to water chemistry controller. Provide 6" air gap at fill point.

2.15 EYEWASH / SHOWER

A. Haws Model #8300-8309CRP barrier free combination eyewash/shower with corrosion resistant protection. See MEP sheets for supply piping. Two (2) total.

2.16 POOL OPERATOR WORKSTATION DECK

A. 'Total Lab Solutions' epoxy counter top with drop in sink and two (2) end cabinets. Furnish with wall mounted two (2) faucets 'Broen Boss' or approved equal. See MEP plans for water supply piping.

PART 3 - EXECUTION

3.1 SURFACE CONDITIONS

A. Inspection:

1. Prior to installing the items of this Section, carefully inspect the installed Work of other trades and verify that all such Work is complete to the point where this installation may properly commence.
2. Verify that the swimming pool equipment items may be installed in strict accordance with original design, pertinent codes and regulations, and the manufacturers' recommendations.

B. Discrepancies:

1. In the event of discrepancy, immediately notify the Owner’s Representative.
2. Do not proceed with installation in areas of discrepancy until all such discrepancies are fully resolved.
3. Failure to notify the Owner’s Representative and give written notice of discrepancies shall constitute acceptance by the Installer of existing conditions as fit and proper to receive its Work.

3.2 INSTALLATION

A. Supply and install items of swimming pool equipment in strict accordance with applicable codes and regulations, the original design, and the manufacturer's published recommendations, anchoring firmly and securely for long life under hard use.

B. Coordinate with other trades to insure all imbedded items are set plumb and flush. Railing ends must have anchor sockets and escutcheon plates. Be certain that deck equipment and railings are properly bonded prior to imbedding.

C. All equipment shall be braced and/or anchored to resist horizontal force acting in any direction using the criteria shown on the Drawings.

3.3 START-UP AND INSTRUCTION

A. The Contractor shall provide a factory certified representative(s) to start-up and certify proper installation, operation and full warranty status of all swimming pool mechanical equipment. The Contractor shall provide not less than two 8-hour days of on-site training for facility staff in the operation and maintenance of the swimming pool mechanical equipment and systems. The two 8-hour days shall be separated by a minimum of seven calendar days and be completed within the 14-day start-up period.

3.4 EQUIPMENT ACTIVATION

A. All water chemistry and filtration mechanical equipment shall be operational upon filling of pool after plaster. Chemicals and other related support items as supplied by Contractor, shall be in supply at start-up.

B. For the first fourteen (14) calendar days after completion of the pool plaster, brush all plastered surfaces at least twice a day and coordinate with General Contractor to ensure that the plaster is carefully maintained after the initial fourteen-day period. In addition, coordinate with the Contractor to ensure that pool filtration equipment is continuously running during the initial fourteen-day period.

C. Start-up and provide qualified personnel to operate pool equipment for a period not less than fourteen (14) days after the pool is placed in operation, or until the Owner takes occupancy of the facility or letter of substantial completion. During this time, Contractor shall instruct and supervise the Owner's personnel in the various operating and maintenance techniques involved. Contractor shall be responsible for supply of chemicals during this not less than fourteen (14) day period and at time of turnover to Owner, chemical storage tanks shall be full. (Owner's personnel shall be fully trained and capable of assuming swimming pool maintenance tasks, training may begin before Owner takes occupancy).

3.5 CLEAN-UP

A. Upon completion of swimming pool equipment, remove all debris, materials and equipment occasioned by this Work to the approval of the Owner's Representative.

END OF SECTION

SECTION 13 11 08 - SWIMMING POOL ELECTRICAL

PART 1 - GENERAL

1.1 WORK INCLUDED

A. Provide labor, materials and equipment as required to install the swimming pool electrical system including but not limited to:

1. A complete and operable system of service equipment, switchboards, panelboards, conduits, switches, time clocks and wiring for power and lighting, motor control centers.
2. Junction and/or pull boxes, conduits, disconnects, starters, contactors, wiring and connection of all motors and mechanical equipment, including connection and wiring of line voltage controls associated with the mechanical systems.
3. Swimming pool underwater lighting systems.
4. Swimming pool timing system outlets and scoreboard.
5. Complete grounding system as required and shown on the Drawings.
6. Complete equipotential bonding system as required and shown on the Drawings.
7. Adjusting and preliminary operation of the completed electrical system as described in Article 3.6, A of this Section.
8. Cleaning of all completed Work and installation adjustment of all trim and decorative items.

1.2 QUALITY ASSURANCE

A. Qualifications of Workers:

1. The entity performing the work of this Section shall have been successfully engaged in the respective trade for at least five (5) years immediately prior to commencement of the Work.
2. For actual construction operations, use only trained and experienced workers with a minimum of three (3) years experience with the materials and methods specified.
3. Provide at least one person who shall be present at all times during execution of the work of this Section, with a minimum of five (5) years experience with the type of materials being installed, the referenced standards, and who shall direct all Work performed under this Section.

B. Ordinances and Codes: Materials and construction shall conform with all applicable code requirements, including:

1. National Electrical Code, latest edition; Electrical Safety Orders of the State of California; Department of Industrial Relations; regulations of the State Fire Marshal; rules and regulations of the Board of Underwriters of the Pacific, UL 50, 50E and NEMA 250 rating.
2. Chapter 31 of California Building Code, latest edition.

C. Verification of Conditions:

1. The locations shown on the Drawings are diagrammatic only and the exact finish location of equipment and materials cannot be indicated. Therefore, locations of all Work and equipment shall be verified to avoid interferences, preserve head room and keep openings and passageways clear. Changes shall be made in locations of equipment and materials which may be necessary to accomplish these purposes.

D. Preliminary Operations and Testing:

1. Motor driven equipment shall be tested for correct rotation and completion of all connections.

1.3 SUBMITTALS AND SUBSTITUTIONS

A. Provide submittals in conformance with the requirements of Section 01 33 00. Requests for substitutions shall conform with requirements of Article 1.10.A of Section 13 11 00.

B. Required submittals include:

1. Conduit and Fittings as specified in Article 2.2 of this Section.
2. Panelboards as specified in Article 2.6 of this Section.
3. Circuit Breakers as specified in Article 2.07 of this Section.
4. Motor Starters as specified in Article 2.10 and 2.11 of this Section.
5. Fuses as specified in Article 2.13 of this Section.
6. Time Clocks as specified in Article 2.14 of this Section.
7. Ground Fault Circuit Interrupters as specified in Article 2.15 of this Section.
8. NEC required corrosion resistant enclosures, cabinets and boxes as specified in Article 2.8, 2.11, 2.16 & 218 of this Section.

C. Submit proof of qualifications as specified in Article 1.2.A of this Section.

1.4 PRODUCT HANDLING

A. Delivery: Deliver all materials to the Project Site in the manufacturer's original unopened containers with all labels intact and legible.

B. Storage: Store all materials under cover in a manner to prevent damage and contamination, and store only the specified materials at the Project site.

C. Protection: Use all means necessary to protect swimming pool electrical materials before, during, and after installation and to protect the installed Work specified in other Sections.

PART 2 - PRODUCTS

2.1 MATERIALS, GENERAL

A. Materials shall be new, in unbroken packages and bear the U.L. label of approval.

B. Equipment of one type shall be by same manufacturer. One type of equipment for classifications such as:

1. Switchboards, panels, buss duct, disconnect switches and allied items.
2. Conduit.
3. Wire.
4. Conduit fittings.
5. Fixtures of the same general type.
6. Wiring devices.

2.2 CONDUIT AND FITTINGS

A. Conduit within or under buildings or where exposed outdoors shall be rigid metal threaded, hot dipped galvanized, or U.L. approved plastic except where noted otherwise on the Drawings. Metallic conduit shall be of the same metal between outlets or terminals.

B. Use flexible metallic conduit only for short connections of motors and where specifically called for on Drawings. Maximum length shall be 40". Use only liquid tight flexible metal conduit. Install an unbroken #12 AWG insulated copper grounding conductor in each liquid tight flexible conduit with permanent connection at motor junction box and service panel ground.

C. Protect, before installation, metallic conduit runs in all slabs laid on grade or in contact with the earth or exposed in damp locations, with two (2) heavy coats of asphaltum rust-resisting compound.

D. Encase conduits 2-1/2" or larger run underground, outside, or under buildings, in concrete envelopes a minimum of 3" thick, except as indicated otherwise on Drawings or stubouts. Conduits 2 and smaller laid 18" below finish surface in soil.

E. Low voltage runs underground outside buildings, 1-1/4" or smaller, may be G.I. or sherardized steel conduit, with machine applied wrapping equal to double wrap or Scotch-Wrap #50 tape, half lapped and quadrupled at joints in lieu of concrete encasement.

F. Service conduits through foundations or concrete members shall run through metal sleeves with adequate clearances for full movement of the conduit. Do not run conduits through footings.

G. Secure conduits run exposed on surfaces with one hole heavy-duty straps or fasten with matching fittings to inserts or trapezes, parallel to building walls and ceilings.

H. Cap all conduit or duct stub-outs with standard factory caps; except cap threaded steel conduit with B.I. water pipe caps in outdoor locations.

I. Use conduit fittings as manufactured by Crouse-Hinds Company, Appleton Electric Co., or approved equal.

J. Employ U.L. liquid tight fittings for use with liquid tight flexible metal conduit.

K. Use unions as manufactured by Appleton, O-Z/Gedney, or approved equal. The use of running threads will not be permitted.

L. Exposed conduit and fittings in chemical rooms shall be nonmetallic rigid polyvinyl chloride, corrosion resistant rated suitable for installation in corrosive environments and in accordance with the latest NEC requirements.

2.3 EQUIPOTENTIAL BONDING/GROUNDING

A. Bond together and ground to a common ground at a single point all metallic conduit, piping systems, pool reinforcing steel, metal parts of ladders, lifeguard stands, handrails and their supports and the like. The solid copper bonding conductor shall not be smaller than #8 copper.

2.4 WIRING CONNECTIONS

A. Make connections without strain on conductors, allowing the conductors to take a natural position after connections or taps are made. Include all strand of wire in making the connection.

B. Make connections for wiring by one of the following means:

1. Make all taps or connections to conductors with compression type connectors except those smaller than #8 B&S gauge may have soldered connections. Solderless connections for #10 AWG or smaller may be used and shall be "Scotchlok", Buchanan, or approved equal. For #8 AWG or larger, they shall be T&B "LockTite", Burndy "Versitaps", or approved equal.
2. All cable or conductor terminal lugs shall be Burndy "Quicklug", Ilsco, or approved equal. Two piece stamped lugs and solder lugs will not be approved.
3. Paint taped splices in damp or outdoor locations with two (2) coats of insulating paint.
4. Tag all branch circuit wires with circuit number at the panelboard and at each point of use with linen or plastic tags.

2.5 CONDUCTORS

A. Copper RHW or THW. Do not make splices between boxes.

2.6 COLOR CODING

A. Neutrals (identified conductors shall be white).

B. Phase conductors shall be red for phase B; blue for phase C.

C. Green shall be used for mechanical equipment and receptacle grounds only.

2.7 MOTOR WIRING

A. Make final connections to motors with the required AWG (Minimum #12), Flamenol machine tool wire, 19 strand. Control wiring for equipment shall be Flamenol machine tool wire, 19 strand of required AWG. Provide corrosion resistant junction boxes at each item of equipment to change from standard building wiring to machine tool wire.

B. Phase motors as proper in direction of rotation.

2.8 PANELBOARDS

A. Panelboards shall be flush or surface mounting as indicated with circuit breakers as shown on panel schedule, hinged lockable doors, index card holders and proper bussing.

B. Where indicated on the drawings, panelboards shall be furnished with subfeed breakers and/or lugs, split bussing, contractors, time switches, relays, etc., as required.

C. All panelboards shall be keyed alike.

D. All panelboard enclosures shall be corrosion resistant rated in accordance with the latest NEC requirements.

E. Furnish corrosion resistant panelboard enclosures and terminal cabinets with Yale 46515 flush locks and LL806 keys except where indicated otherwise herein. Fasten the trim to panel boards and terminal cabinet by means of concealed, bolted or screwed fasteners accessible only when the door is open.

F. Panelboards 208/120 volt, three phase, 4 wire, S/N or 120/240 volt, single phase, 3 wire, S/N.

Panelboard types as manufactured by:	
Westinghouse	Type B10B
General Electric	Type NLAB
Square D	Type NQOB

G. Panelboards for 480/277 volt, three panes, 4 wire, S/N.

Panelboard types as manufactured by:	
Westinghouse	Type Pow-R-Line 2
General Electric	Type AE
Square D	Type NEHB
Sylvania	Type NH1B
I.T.E.	Type Approved Equal

H. Panelboard for bussing sizes thru 400 amp shall be 20" wide surface mounted type. Recess mounted type shall have a 20" wide (maximum) recess metal enclosure with trim plate cover extending 1" on all sides of enclosure. Depth shall be 5-3/4" nominal. Height of panel as required for devices.

I. Provide 6" additional gutter space in all panels where double lugs are required, or where cable size exceeds bus size. Minimum bottom gutter space shall be 6" high. 12" additional gutter space may be required for aluminum feeders where used.

J. Panelboards shown on the drawings with relays, time clocks or other control devices shall have a separate metal barriered compartment mounted above panel with separate hinged locking door to match panelboard. Provide mounting sub-base in cabinet for control devices and wiring terminal strips.

K. Panelboard shall have a circuit index card holder removable type, with clear plastic cover. Index card shall have numbers imprinted to match circuit breaker numbers.

2.9 CIRCUIT BREAKERS

A. Breakers shall have a minimum short circuit interrupting rating of 10,000A symmetrical for panelboard voltage thru 240 volt and 14000A for panelboards thru 600 volts or as specified on the drawings. In no case shall the interrupting rating be less than the bus withstand rating unless noted otherwise on the drawings.

B. Circuit breakers as manufactured by the following companies only are acceptable:

1. General Electric Company
2. Square D Company
3. Westinghouse Company
4. I.T.E. Company

C. Circuit breakers shall be arranged in the panels so that the breakers of the proper trip settings and numbers correspond to the numbering in the panel schedules on the drawings. Circuit numbers of breakers shall be black-on-white micarta tabs or other previously approved method. Circuit number tabs which can readily be changed from front of panel will not be accepted. Circuit number tabs shall not be attached to or be a part of the breaker.

D. Where two or three pole breakers occur in the panels, they shall be common trip units. Single pole breakers with tie-bar between handles will not be accepted.

E. All circuit breakers shall be padlockable in the "off" position. Locking facilities shall be riveted or mechanically attached to the circuit breaker (submit sample for approval). Other means of attachment shall not be accepted without prior written approval of Architect.

F. Where branch circuit breakers supply the power to motors and signal systems, the breakers shall be furnished with lockout clips, mounted in the "on" position. The breakers shall be able to trip automatically with lockout clips in place.

G. Panelboard circuit breakers shall be bolt-on type.

2.10 BUSSING

A. Bussing shall be rectangular cross section copper, or full length silver or tin-plated aluminum.

B. Bussing shall be braces to withstand symmetrical short circuit ratings as follows or as noted on drawings. In no case shall bus short circuit bracing be less than specified circuit breakers.

C. Each panelboard shall be equipped with a ground bus secured to the interior of the enclosure. The bus shall have a separate lug for each ground conductor. No more than one conductor shall be installed per lug.

2.11 POOL MECHANICAL EQUIPMENT ENCLOSURES, TERMINAL CABINETS & MISC CABINETS

A. All pool mechanical equipment enclosures, terminal cabinets and miscellaneous cabinets in the pool mechanical room or chemical storage rooms shall be corrosion resistant rated in accordance with the latest NEC requirements. Enclosures and all cabinets shall be flush mounted (except where noted a surface) of the size indicated on the drawings, and complete with hinged lockable doors and the number of 2-way screw terminals required for termination of all conductors. Terminal cabinet locks to operated form same key used for panelboards. The trim to terminal cabinets shall be fastened by means of concealed bolted or screwed fasteners accessible behind door to terminal cabinets. Terminal cabinets shall have 5/8" plywood backing.

B. Provide engraved nameplate on each enclosure and cabinet indicating its designation and system (i.e., Swimming Pool - Panel 'SP').

2.12 MOTOR CONTROL INDIVIDUAL STARTERS

A. Manual Motor Starters:

1. Provide flush or surface mounting manual motor starters with number of poles and size of thermal overload heaters as required for the motor being controlled (equipped with overload heaters, one for each motor lead). Back boxes shall be supplied with all flush mounting starters whether they are toggle type requiring only a 4" square outlet box or the larger type requiring a special box and cover designed to accept the particular unit. All box types shall be corrosion resistant rated in accordance with the latest NEC requirements.
2. Unless otherwise noted on the drawings, all manual starters for single phase motors, smaller than 1 h.p., shall be the compact toggle type. Manual starters for all single phase motors, 1 to 5 h.p., and all three phase motors up to 5 h.p. shall be the heavy duty type.
3. Where manual motor starter is shown with pilot light, the pilot light shall be installed in a separate outlet box adjacent to the starter outlet, and engraved nameplate in indicate function of pilot light.
4. The following motor starters as manufactured by:

Manufacturer	**Single Phase 1HP and Below**	**Others**
Arrow Hart	Type RL	Type LL
General Electric	CR 101	Class CR 1062
I.T.E.	Class C10, C11 or C12	Class C20
Square D Company	Class 2510, Type A	Class 2510, Type B & C
Westinghouse	Type MS	Type A100
Allen Bradley	Approved Equal	Approved Equal.

B. Individual Magnetic Motor Starters:

1. Magnetic motor starters shall be A.C. line voltage, across-the-line units in a corrosion resistant rated enclosure in accordance with the latest NEC requirements.
2. All starters located outside of a building whether or not indicated shall be W.P. (weatherproof), and all starters noted W.P. shall be furnished in a corrosion resistant rated stainless steel enclosure in accordance with the latest NEC requirements.
3. Starter shall be horsepower rated for the motor controlled, and shall be equipped with properly sized overload elements. Every pole shall be with overload element.
4. Verify the exact motor current and voltage characteristics with the Contractor supplying the motor before installation of a starter.
5. Each starter shall be equipped with "Hand-Off-Auto" switch or stop-start pushbutton as required.
6. Coils shall be designed to operate on voltage indicated on control diagrams and have built-in-under the voltage release for coil circuit to drop motor starter off the line when the line voltage drops below normal operating voltage.
7. The coil control circuit shall be independently fused, sized to protect coil.
8. Starters to be equipped with running pilot light indication with a "Push-to-Test" feature.
9. Magnetic starters shall have a minimum of two auxiliary contacts. Additional auxiliary contacts shall be provided as required to comply with the requirements of the wiring diagrams on the electrical and mechanical drawings and the description of the function in the Mechanical Section of the Specifications.
10. Starters shall comply with NEMA standards, size and horsepower ratings as indicated on drawings.
11. The following types of magnetic motor starters as manufactured by:

Manufacture	Type
General Electric	Class CR 106
I.T.E.	Class A20
Square D Company	Class 8536
Westinghouse	Type A200 (Size 4 Max.) or Class II-200 (Sizes 5-8)

2.13 INDIVIDUAL COMBINATION MOTOR STARTERS

A. Combination starter shall incorporate fused disconnect switch and individual magnetic motor starter. Combination starters shall be mounted in a corrosion resistant rated enclosure in accordance with the latest NEC requirements.

B. Starters shall comply with NEMA standards, size and horsepower ratings as indicated on drawings General Electric, Square D, Westinghouse or I.T.E.

C. The disconnect handle used on combination starters shall control the disconnect device with the door opened or closed. The disconnect handle shall be clearly marked as to whether the disconnect device is "ON" or "OFF", and shall include a two-color handle grip, the black side visible in the "OFF" position indicating a safe condition, and the red side visible in the "ON" position indicating an unsafe or danger condition.

D. All starters used in combination starters shall be manufactured in accordance with the latest published NEMA standards, sizes, and horsepower ratings. These starters shall be furnished with three melting alloy type thermal overload relays.

E. Thermal units shall be of one-piece construction and interchangeable. The starter shall be inoperative if a thermal unit is removed.

2.14 MOTOR CONTROL CENTER, INTERLOCKS AND CONTROL DEVICES

A. Refer to mechanical and plumbing drawings and specifications and provide all control devices including timeswitches, relays and interconnection of starters as required.

B. Mount all relays and timeswitches in a separate compartment in motor control center unless otherwise indicated.

C. Whether shown on mechanical and plumbing drawings or control center schedules or not, where motors are controlled by external devices (i.e., thermostats, relays, float or pressure switches, etc.) or interlocked with other motors, each motor starter to be equipped with a "Hand-Off-Auto" selector switch in starter cover. Other starters equipped with a "Start' Stop" pushbutton station in starter cover. The Contractor shall be responsible to submit a complete and detailed set of shop drawings, electrical schematic design along with electrical component cut sheets from the MCC panel or the interlock control device manufacturer. RSD Total Control: Allan Pearson 949-380-7878, South Coast Controls: Anthony Ellis 714-998-5656 or approved equal.

2.15 FUSES

A. Fuses shall be dual element, current limiting type, U.L. Class RK5 unless otherwise indicated on the drawings. Provide one spare set of fuses of each size and type in each motor control center.

2.16 TIME CLOCKS

A. Time clocks shall be provided for all underwater lighting systems and swimming pool circulation pumps not controlled by filter microprocessors.

B. Contacts shall have a minimum rating of 40 amperes at 277V.

C. Timing motor shall be heavy duty synchronous, self starting, high torque type, and shall be rated at 120, 208, 240, 277 volt 60 Hz.

D. Motor shall operate normally at temperature range of -60 degrees Fahrenheit to +120 degrees Fahrenheit.

E. Dial shall be 3" diameter, clearly calibrated with day/night zones and 24 hour rotation, with gear to provide one revolution yearly which automatically varies the on/off settings each day according to seasonal changes. Day and month of the year shall show clearly through calendar window on the dial.

F. Time clocks shall be equipped with 7-spoke omitting wheel marked with days of the week.

G. Time clocks shall be housed in a corrosion resistant rated enclosure in accordance with the latest NEC requirements.

H. Acceptable manufacturers are Intermatic, Tork, Paragon, or approved equal.

2.17 GROUND FAULT CIRCUIT INTERRUPTERS

A. Minimum rating shall be 20 amperes, 125V, 5 milliampere trip setting, Class A per UL943.

B. Manufacturer to be Crouse-Hinds, Leviton, or approved equal.

2.18 BOXES

A. Boxes shall be of the size required by ordinances or larger, must be corrosion resistant in accordance with the latest NEC requirements where concealed or exposed on ceilings or walls.

B. Outlets to be surface where wiring is exposed and flush in areas where conduit is concealed.

C. Provide surface outlets with proper corrosion resistant surface covers. Box and cover shall be deep enough to provide at least 1/4" clearance between back of device and back of box. Where box contains more than one device, use a corrosion resistant rated gang box with proper cover in accordance with the latest NEC requirements. Surface outlet boxes shall be of the threaded hub type wherever below 8'0".

D. If necessary for cable installation, additional pull boxes or junction boxes may be installed in accessible locations. Exposed pull boxes and junction boxes shall be corrosion resistant rated in accordance with the latest NEC requirements.

E. Where exposed to weather pull boxes larger than outlet boxes are required, galvanized code gauge sheet steel boxes may be used with covers attached by brass machine screws may be used. Boxes exposed to the weather shall be approved for the purpose, and conduit entrances shall be on the bottom made by means of an interchangeable hub with gasket and adapter nut. Pull boxes not shown on Drawings may be added only after approval of size and location is obtained.

F. For outlets exposed to weather or where noted, cast outlet boxes shall be Crouse-Hinds, Appleton, or approved equal. Boxes shall have proper number and size hubs. Device plates, covers, adapters and boxes shall be as manufactured by Crouse-Hinds, Appleton, or approved equal.

G. Exposed junction boxes, outlet boxes and pull boxes for pool chemical rooms shall be non - metallic suitable for a corrosive environment and in accordance with the latest NEC requirements.

2.19 IDENTIFICATION MARKINGS

A. Plainly mark all motor and electrical appliance control equipment indicating the equipment controlled with engraved metal tags.

B. Provide laminated plastic nameplates on panelboards on the outside of the door at the top indicating panel designation and feeder source.

C. Provide laminated plastic nameplates on distribution switchboards and motor control centers at the top center indicating panel designation and feeder source.

D. Identify each distribution switchboard and motor control center circuit breaker with a laminated plastic nameplate indicating its' use.

E. Type panelboard directories on the forms provided with the equipment, indicating the use of each branch circuit breaker.

F. Fasten all laminated plastic nameplates to surfaces with two (2) or more screws.

PART 3 - EXECUTION

3.1 INSPECTION

A. Verify conditions at the Project site before submitting bid. Be responsible for providing all necessary wiring for the new electrical systems. Wherever wiring is being disrupted due to remodeling or changes, reconnect existing and provide new wiring circuits to accomplish a fully operable system at no additional cost to the Owner.

3.2 COORDINATION

A. The Drawings are essentially diagrammatic and indicate the desired location, size, routes, connection points, etc., and are to be followed as closely as possible. Proper judgment must be exercised in executing the Work so as to provide the best possible installation in the available space and to overcome difficulties, limitations or interference wherever encountered. Be responsible for the correct placement of this Work, the proper location and connection in relation to Work of other trades, for determining the exact location of all conduits, outlets and equipment, and for installing the conduits in such a manner as to conform to the structure, avoid obstruction, preserve headroom and keep openings and passageways clear. Particular attention is directed to the close coordination required on exposed Work. Locations shown on Architectural or Mechanical Drawings if different than those shown on Electrical Drawings should be communicated to the Owner’s Representative in writing for clarification.

3.3 INSTALLATION

A. Trenching and Backfill: Conform with requirements of Section 13 11 01. Provide minimum cover as required by Code.

B. Conduit Installation:

1. Conduit and metallic raceway systems shall be mechanically and electrically continuous from sources of current to all outlets in a manner to provide a continuous grounding path. Close ends of conduit during construction to prevent entrance of dirt or moisture.
2. Securely fasten conduit to the building construction within three feet of each outlet and within every ten feet thereafter. Secure it to boxes, cabinets, pull boxes, terminals with two locknuts and ends equipped with bushings or a terminal fitting. Cut square with ends carefully reamed.
3. Make bends or elbows so that the conduit will not be injured or flattened.
4. Use insulated metallic bushings in all places where bushings are required.
5. Run exposed conduits level or plumb and parallel to the construction members of the building. No cutting across or diagonal runs will be permitted. Neatly surmount structural obstructions encountered on conduit runs by the use of fittings or pull boxes.
6. Identify feeder conduits by stamped metal tags secured to exposed section of conduit in main or sub-panels.
7. Make up all threaded conduit joints gas and watertight with conductive sealer except conduit above ground in dry indoor locations.
8. Rigidly support all boxes independently of the conduit system.

C. Connections to Equipment:

1. Fully connect, in an approved manner, all electrical outlets, apparatus, motors, equipment, fixtures, wiring devices and appliances whether they are installed under the Electrical Contract or not, which require electrical connections, to the corresponding electrical system outlet.
2. Where the Work of this Section requires connections to be made to equipment that is furnished and set-in-place under other Sections, obtain such roughing-in dimensions from the manufacturer or supplier of each item as required and assume full responsibility for the installation of the connections thereto.

3.4 ADJUSTMENT AND CLEAN-UP

A. Preliminary Operation: Should the Owner's Representative deem it necessary to operate the electrical installation or any part thereof prior to Substantial Completion of the Work, consent to such preliminary operation and supervise conduction of same. Subcontractor shall pay all costs occasioned by such operation. Preliminary operation shall not be construed as an acceptance of any Work installed under this Contract.

B. Clean-up: Upon completion of the Work of this Section, immediately remove all swimming pool electrical materials, debris and rubbish occasioned by this Work to the approval of the Owner's Representative.

END OF SECTION

SECTION 13 31 00 - FABRIC STRUCTURES

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes folded plate structural supports and canvas shaped in 2 principal directions prefabricated fabric structures (PFS):

1.2 ADMINISTRATIVE REQUIREMENTS

A. Coordination:

1. Coordinate structural support of canvas cover with adjacent supporting assemblies.

1.3 SUBMITTALS

A. Data: Manufacturer/fabricator product data, including installation instructions for each component of the PFS. Include laboratory test reports and other data, where applicable.
B. Shop drawings:

1. Large scale, dimensioned shop drawings for the PFS. Include complete details and schedules for fabrication and shop assembly, and details, schedules, procedures and diagrams showing the sequence of erection.

C. Samples: Of fabric, 36-inch square minimum, and full-size samples of fittings.

1.4 QUALITY ASSURANCE

A. Source quality control:

1. Materials and fabrication procedures are subject to inspection and tests in the mill, shop or yard at the Architect's option. Such inspections and tests will not relieve the Contractor of responsibility for providing materials and fabrication procedures in compliance with specified requirements.
2. Materials and fabrication procedures shall comply with Code and regulations of authorities having jurisdiction.

PART 2 - PRODUCTS

2.1 FABRICATORS

A. Van Nuys Awning, 2580 Azurite Circle, Newbury Park, CA 91320, arly@vannuysawning.com, basis of design.
B. Eide Industries, Inc., 16215 Piuma Avenue, Cerritos, California USA 90703. www.eideindustries.com
C. Or equal.

2.2 MATERIALS

A. Fabric: See FA-1, Drawing A300.

1. Serge Ferrari Soltis Perform 92. Color: Velvet Red 92-2152.

B. Structural supports: See 05 12 00.
C. Cables and fittings: Type 302/3-304, polished stainless-steel components consisting of cables, and end fittings.
D. Finishes on exposed and concealed ferrous metal surfaces shall be a high performance coating as specified in Section 09 96 00.

2.3 FABRICATION

A. In accordance with Section 05 12 00 and 05 12 13 and to match approved samples.

PART 3 - EXECUTION

3.1 INSPECTION

A. Examine the conditions under which this work is to be performed and correct unsatisfactory conditions.
B. Correct unsatisfactory conditions before proceeding with installation.

3.2 ERECTION

A. Comply with the PFS manufacturer recommendations, the approved shop drawings and the applicable requirements of Sections referenced above.
B. After installation, restore marred or abraded surfaces to original condition using same paint or coating as factory-applied finishes, when the results are acceptable to the Architect, otherwise replace damaged equipment.

END OF SECTION

SECTION 13 17 35 - EXTREMITY WHIRLPOOL

PART 1 - GENERAL

1.1 SUMMARY

A. Section Includes:

1. Extremity Whirlpool.

B. Related Items:
1. Mechanical: Refer to Division 22.
2. Electrical: Refer to Division 26.

1.2 SUBMITTALS

A. Comply with Section 01 33 00, unless otherwise indicated.

B. Product Data: Manufacturer's specifications and technical data including the following.
1. Detailed specification of construction and fabrication.
2. Manufacturer's installation instructions.

C. Shop Drawings: Indicate dimensions, description of materials and finishes, general construction, specific modifications, component connections, anchorage methods, hardware, and installation procedures.

D. Quality Control Submittals:
1. Statement of qualifications.
2. Professional certifications.
3. Field Quality Control Submittals is specified in Part 3.

E. Contract Closeout Submittals: Comply with Section 01 77 00.
1. Operating and maintenance manuals.
2. Special warranties.

1.3 QUALITY ASSURANCE

A. Installer's Qualifications: Firm experienced in installation or application of systems similar in complexity to those required for this Project.

B. Regulatory Requirements: Conform to applicable portions of the following.
1. Electrical Testing Laboratories (ETL).
2. National Sanitation Foundation (NSF).
3. Underwriters Laboratory (UL).

1.4 DELIVERY, STORAGE, AND HANDLING

A. Packing and Shipping: Deliver products in original unopened packaging with legible manufacturer's identification.

B. Storage and Protection: Comply with manufacturer's recommendations.
1. Store in a cool, dry place out of direct sunlight.
2. Protect from the elements and from damage.
3. Store at a temperature of not less than 40 degrees F.

1.5 PROJECT CONDITIONS

A. Environmental Requirements: Maintain ambient temperature above 40 degrees F. during and 24 hours after installation.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, available products that may be incorporated into the Work include, but are not limited to, the following:
   1. Extremity Whirlpool E Series 24E-45-M (www.rehaboutlet.com)

B. Model should include the following features:
   1. 45 Gallon tank capacity.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Verification of Conditions: Examine areas and conditions under which Work is to be performed and identify conditions detrimental to proper or timely completion.
   1. Verify correct power at disconnect switch.
   2. Verify correct water supply and anti-siphon devices have been installed.
   3. Do not proceed until unsatisfactory conditions have been corrected.

3.2 INSTALLATION

A. Comply with manufacturer's recommendations.

3.3 FIELD QUALITY CONTROL

A. Tests: Test installation for leaks and for proper operation.

3.4 ADJUSTING

A. Adjust equipment and apparatus to ensure proper working order and conditions.

3.5 DEMONSTRATIONS

A. Demonstrate operation and maintenance to Owner and Operator.

END OF SECTION

DIVISION 14
CONVEYING SYSTEM

SECTION 14 24 00 - HYDRAULIC PASSENGER ELEVATORS

PART 1 - GENERAL

1.1 SUMMARY

A. Section includes: Hydraulic passenger elevators as shown and specified. Elevator work includes:

1. Standard pre-engineered hydraulic passenger elevators.
2. Elevator car enclosures, hoistway entrances and signal equipment.
3. Operation and control systems.
4. Jack(s).
5. Accessibility provisions for physically disabled persons.
6. Equipment, machines, controls, systems and devices as required for safely operating the specified elevators at their rated speed and capacity.
7. Materials and accessories as required to complete the elevator installation.

B. Related Sections:

1. Division 1 General Requirements: Meet or exceed all referenced sustainability requirements.
2. Division 3 Concrete: Installing inserts, sleeves, and anchors in concrete.
3. Division 4 Masonry: Installing inserts, sleeves, and anchors in masonry.
4. Division 5 Metals:
    a. Providing hoist beams, pit ladders, steel framing, auxiliary support steel and divider beams for supporting guide-rail brackets.
    b. Providing steel angle sill supports and grouting hoistway entrance sills and frames.
5. Division 9 Finishes: Providing elevator car finish flooring and field painting unfinished and shop primed ferrous materials.
6. Division 16 Sections:
    a. Providing electrical service to elevators, including fused disconnect switches.
    b. Emergency power supply, transfer switch and auxiliary contacts.
    c. Heat and smoke sensing devices.
    d. Convenience outlets and illumination in control room, hoistway and pit.
7. Division 22 Plumbing
    a. Sump pit and oil interceptor.
8. Division 23 Heating, Ventilation and Air Conditioning
    a. Heating and ventilating hoistways and/or control room.

C. Work Not Included: General contractor shall provide the following in accordance with the requirements of the Model Building Code and ANSI A17.1 Code. For specific rules, refer to ANSI A17.1, Part 3 for hydraulic elevators. State or local requirements must be used if more stringent. The cost of this work is not included in the thyssenkrupp Elevator’s proposal, since it is a part of the building construction.

1. Elevator hoist beam to be provided at top of elevator shaft. Beam must be able to accommodate proper loads and clearances for elevator installation and operation.

2. Supply in ample time for installation by other trades, inserts, anchors, bearing plates, brackets, supports and bracing including all setting templates and diagrams for placement.
3. Hatch walls require a minimum two hours of fire rating. Hoistway should be clear and plumb with variations not to exceed 1/2" at any point.
4. Elevator hoistways shall have barricades, as required.
5. Install bevel guards at 75° on all recesses, projections or setbacks over 2" (4" for A17.1 2000 areas) except for loading or unloading.
6. Provide rail bracket supports at pit, each floor and roof. For guide rail bracket supports, provide divider beams between hoistway at each floor and roof.
7. Pit floor shall be level and free of debris. Reinforce dry pit to sustain normal vertical forces from rails and buffers.
8. Where pit access is by means of the lowest hoistway entrance, a vertical ladder of non-combustible material extending 42" minimum, (48" minimum for A17.1-2000 areas) shall be provided at the same height, above sill of access door or handgrips.
9. Machine room to be enclosed and protected.
10. Machine Room temperature must be maintained between 55º and 90º F.
11. If machine room is remote from the elevator hoistway, clear access must be available above the ceiling or metal/concrete raceways in floor for oil line and wiring duct from machine room.
12. Access to the machinery space and machine room must be in accordance with the governing authority or code.
13. Provide an 8” x 16” cutout through machine room wall, for oil line and wiring duct, coordinated with elevator contractor at the building site.
14. All wire and conduit should run remote from the hoistways.
15. When heat, smoke or combustion sensing devices are required, connect to elevator control cabinet terminals. Contacts on the sensors should be sided for 12 volt D.C.
16. Install and furnish finished flooring in elevator cab.
17. Finished floors and entrance walls are not to be constructed until after sills and door frames are in place. Consult elevator contractor for rough opening size. The general contractor shall supply the drywall framing so that the wall fire resistance rating is maintained, when drywall construction is used.
18. Where sheet rock or drywall construction is used for front walls, it shall be of sufficient strength to maintain the doors in true lateral alignment. Drywall contractor to coordinate with elevator contractor.
19. Before erection of rough walls and doors; erect hoistway sills, headers, and frames. After rough walls are finished; erect fascias and toe guards. Set sill level and slightly above finished floor at landings.
20. To maintain legal fire rating (masonry construction), door frames are to be anchored to walls and properly grouted in place.
21. The elevator wall shall interface with the hoistway entrance assembly and be in strict compliance with the elevator contractor's requirements.
22. General Contractor shall fill and grout around entrances, as required.
23. Elevator sill supports shall be provided at each opening.
24. All walls and sill supports must be plumb where openings occur.
25. For applications with jack hole, free and clear access to the elevator pit area for the jack hole-drilling rig is required.
26. Where jack hole is required, remove all spoils from jack hole drilling.
27. When not provided by Elevator Contractor, jack hole shall accommodate the jack unit. If required the jack hole is to be provided in strict accordance with the elevator contractor's shop drawings.
28. Locate a light fixture (200 lx / 19 fc) and convenience outlet in pit with switch located adjacent to the access door.

29. A light switch and fused disconnect switch for each elevator should be located inside the machine room adjacent to the door, where practical, per the National Electrical Code (NFPA No. 70).
30. For signal systems and power operated door: provide ground and branch wiring circuits, including main line switch.
31. For car light and fan: provide a feeder and branch wiring circuits, including main line switch.
32. Wall thickness may increase when fixtures are mounted in drywall. These requirements must be coordinated between the general contractor and the elevator contractor.
33. Provide supports, patching and recesses to accommodate hall button boxes, signal fixtures, etc..
34. Locate telephone and convenience outlet on control panel.

D. Product data: When requested, the elevator contractor shall provide standard cab, entrance and signal fixture data to describe product for approval.

E. Shop drawings:

1. Show equipment arrangement in the corridor, pit, and hoistway and/or optional control room. Provide plans, elevations, sections and details of assembly, erection, anchorage, and equipment location.
2. Indicate elevator system capacities, sizes, performances, safety features, finishes and other pertinent information.
3. Show floors served, travel distances, maximum loads imposed on the building structure at points of support and all similar considerations of the elevator work.
   Indicate electrical power requirements and branch circuit protection device recommendations.

F. Powder Coat paint selection: Submit manufacturer’s standard selection charts for exposed finishes and materials.

G. Plastic laminate selection: Submit manufacturer’s standard selection charts for exposed finishes and materials.

H. Metal Finishes: Upon request, standard metal samples provided.

I. Operation and maintenance data. Include the following:

1. Owner’s manuals and wiring diagrams.
2. Parts list, with recommended parts inventory.

J. Manufacturer Qualifications: An approved manufacturer with minimum 15 years of experience in manufacturing, installing, and servicing elevators of the type required for the project.

1. The manufacturer of machines, controllers, signal fixtures, door operators cabs, entrances, and all other major parts of elevator operating equipment.
   a. The major parts of the elevator equipment shall be manufactured by the installing company, and not be an assembled system.
2. The manufacturer shall have a documented, on-going quality assurance program.
3. ISO-9001:2000 Manufacturer Certified
4. ISO-14001:2004 Environmental Management System Certified
5. LEED Gold certified elevator manufacturing facility.

K. Installer Qualifications: The manufacturer or an authorized agent of the manufacturer with not less than 15 years of satisfactory experience installing elevators equal in character and performance to the project elevators.

L. Regulatory Requirements:

1. ASME A17.1 Safety Code for Elevators and Escalators, latest edition or as required by the local building code.
2. California Building Code, current edition.
3. NFPA 70 National Electrical Code.
4. NFPA 80 Fire Doors and Windows.
5. Americans with Disabilities Act - Accessibility Guidelines (ADAAG)
6. Section 407 in ICC A117.1, when required by local authorities
7. CAN/CSA C22.1 Canadian Electrical Code
8. CAN/CSA B44 Safety Code for Elevators and Escalators.
9. California Department of Public Health Standard Method V1.1–2010, CA Section 01350.

M. Fire-rated entrance assemblies: Opening protective assemblies including frames, hardware, and operation shall comply with ASTM E2074, CAN4-S104 (ULC-S104), UL10(b), and NFPA Standard 80. Provide entrance assembly units bearing Class B or 1 1/2 hour label by a Nationally Recognized Testing Laboratory (2 hour label in Canada).

N. Inspection and testing:

1. Elevator Installer shall obtain and pay for all required inspections, tests, permits and fees for elevator installation.
2. Arrange for inspections and make required tests.
3. Deliver to the Owner upon completion and acceptance of elevator work.

O. Sustainable Product Qualifications:

1. Environmental Product Declaration:
    a. GOOD: If Product Category Rules (PCR) are not available, produce a publicly available, critically reviewed life-cycle assessment conforming to ISO 14044 that has at least a cradle to gate scope.
    b. BEST: If Product Category Rules (PCR) are available, produce and publish an Environmental Product Declaration (EPD) based on a critically reviewed life-cycle assessment conforming to ISO 14044, with external verification recognized by the EPD program operator.
2. Material Transparency:
    a. GOOD: Provide Health Product Declaration at any level
    b. BETTER: Provide Health Product Declaration (HPD v2 or later). Complete, published declaration with full disclosure of known hazards, prepared using the Health Product Declaration Collaborative's "HPD builder" on-line tool.
    c. BEST: Cradle to Cradle Material Health Certificate v3, Bronze level or higher.
3. LEED v4 – Provide documentation for all Building Product Disclosure AND Optimization credits in LEED v4 for product specified.
4. Living Building Challenge Projects: Provide Declare label for products specified.

P. Manufacturing shall deliver elevator materials, components and equipment and the contractor is responsible to provide secure and safe storage on job site.

Q. Temporary Use: Elevators shall not be used for temporary service or for any other purpose during the construction period before Substantial Completion and acceptance by the purchaser unless agreed upon by Elevator Contractor and General Contractor with signed temporary agreement.

R. Provide the hole for the jack unit (if required by the type of jack provided), based on excavation through normal soil or clay which can be removed by manual digging or by standard truck-mounted regular drilling unit. Provide a casing if required to retain the walls of the hole. General contractor shall remove excavation spoils deposited in the elevator pit.

1. If a physical obstruction or hindrance is encountered below the ground surface, including boulders, rock, gravel, wood, metal, pilings, sand, water, quick sand, caves, public utilities or any other foreign material, obtain written authorization to proceed with excavating using special excavation equipment.
2. Maintain a daily log of time and material costs involved.
   Elevator contractor will be compensated on a time and material basis for additional costs incurred after encountering the physical obstruction or hindrance, including the cost of the special excavation equipment.

S. Warranty: Submit elevator manufacturer's standard written warranty agreeing to repair, restore or replace defects in elevator work materials and workmanship not due to ordinary wear and tear or improper use or care for 12 months after final acceptance.

T. Furnish maintenance and call back service for a period of 12 months for each elevator after completion of installation or acceptance thereof by beneficial use, whichever is earlier, during normal working hours excluding callbacks.

1. Service shall consist of periodic examination of the equipment, adjustment, lubrication, cleaning, supplies and parts to keep the elevators in proper operation. Maintenance work, including emergency call back repair service, shall be performed by trained employees of the elevator contractor during regular working hours.
2. Submit parts catalog and show evidence of local parts inventory with complete list of recommended spare parts. Parts shall be produced by manufacturer of original equipment.
3. Manufacturer shall have a service office and full time service personnel within a 100 mile radius of the project site.

PART 2 - PRODUCTS

2.1 MANUFACTURERS

A. Manufacturer: Design based around AZtech Elevator Company’s hydraulic elevator.

2.2 MATERIALS, GENERAL

A. Elevator Cab materials including frame, buttons, lighting, wall and ceiling assembly, laminates and carpet shall have an EPD and an HPD, and shall meet the California Department of Public Health Standard Method V1.1–2010, CA Section 01350 as mentioned in 1.03.9 of this specification.

B. Colors, patterns, and finishes: As selected by the Architect from manufacturer's full range of standard colors, patterns, and finishes.

C. Steel:

1. Shapes and bars: Carbon.
2. Sheet: Cold-rolled steel sheet, commercial quality, Class 1, matte finish.
3. Finish: Factory-applied baked enamel for structural parts, powder coat for architectural parts. Color selection must be based on elevator manufacture’s standard selections.

D. Plastic laminate: Decorative high-pressure type, complying with NEMA LD3, Type GP-50 General Purpose Grade, nominal 0.050" thickness. Laminate selection must be based on elevator manufacture's standard selections.

E. Flooring: See Materials Legend.

2.3 HOISTWAY EQUIPMENT

A. Platform: Fabricated frame of formed or structural steel shapes, gusseted and rigidly welded with a wood sub-floor. Underside of the platform shall be fireproofed. The car platform shall be designed and fabricated to support one-piece loads weighing up to 25% of the rated capacity.

1. Sling: Steel stiles bolted or welded to a steel crosshead and bolstered with bracing members to remove strain from the car enclosure.
2. Guide Rails: Steel, omega shaped, fastened to the building structure with steel brackets.
3. Guides: Slide guides shall be mounted on top and bottom of the car.
4. Buffers: Provide substantial buffers in the elevator pit. Mount buffers on continuous channels fastened to the elevator guide rail or securely anchored to the pit floor. Provide extensions if required by project conditions.
5. Jack: A jack unit shall be of sufficient size to lift the gross load the height specified. Factory test jack to ensure adequate strength and freedom from leakage. Brittle material, such as gray cast iron, is prohibited in the jack construction. Provide the following jack type: Twin post holeless. Two jacks piped together, mounted one on each side of the car with a polished steel hydraulic plunger housed in a sealed steel casing having sufficient clearance space to allow for alignment during installation. Each plunger shall have a high pressure sealing system which will not allow for seal movement or displacement during the course of operation. Each Jack Assembly shall have a check valve built into the assembly to allow for automatically re-syncing the two plunger sections by moving the jack to its fully contracted position. The jack shall be designed to be mounted on the pit floor or in a recess in the pit floor. Each jack section shall have a bleeder valve to discharge any air trapped in the section.
6. Automatic Self-Leveling: Provide each elevator car with a self-leveling feature to automatically bring the car to the floor landings and correct for over travel or under travel. Self-leveling shall, within its zone, be automatic and independent of the operating device. The car shall be maintained approximately level with the landing irrespective of its load.
7. Wiring, Piping, and Oil: Provide all necessary hoistway wiring in accordance with the National Electrical Code. All necessary code compliant pipe and fittings shall be provided to connect the power unit to the jack unit.
8. Pit moisture/water sensor located approximately 1 foot above the pit floor to be provided. Once activated, elevator will perform "flooded pit operation", which will run the car up to the designated floor, cycle the doors and shut down and trip the circuit breaker shunt to remove 3 phase power from all equipment, including pit equipment.
9. Motorized oil line shut-off valve shall be provided that can be remotely operated from the controller landing service panel. Also a means for manual operation at the valve in the pit is required.

2.4 POWER UNIT

A. Power Unit (Oil Pumping and Control Mechanism): A self-contained unit consisting of the following items:

1. An oil reservoir with tank cover.
2. An oil hydraulic pump.
3. An electric motor.

4. An oil control valve with the following components built into single housing; high pressure relief valve, check valve, automatic unloading up start valve, lowering and leveling valve, and electro-magnetic controlling solenoids.

B. Pump: Positive displacement type pump specifically manufactured for oil-hydraulic elevator service. Pump shall be designed for steady discharge with minimum pulsation to give smooth and quiet operation. Output of pump shall not vary more than 10 percent between no load and full load on the elevator car.

C. Motor: Standard manufacture motor specifically designed for oil-hydraulic elevator service. Duty rating shall be selected for specified speed and load.

D. Oil Control Unit: The following components shall be built into a single housing. Welded manifolds with separate valves to accomplish each function are not acceptable. Adjustments shall be accessible and be made without removing the assembly from the oil line.

1. Relief valve shall be adjustable and be capable of bypassing the total oil flow without increasing back pressure more than 10 percent above that required to barely open the valve.
2. Up start and stop valve shall be adjustable and designed to bypass oil flow during start and stop of motor pump assembly. Valve shall close slowly, gradually diverting oil to or from the jack unit, ensuring smooth up starts and up stops.
3. Check valve shall be designed to close quietly without permitting any perceptible reverse flow.
4. Lowering valve and leveling valve shall be adjustable for down start speed, lowering speed, leveling speed and stopping speed to ensure smooth "down" starts and stops. The leveling valve shall be designed to level the car to the floor in the direction the car is traveling after slowdown is initiated.
5. Provided with constant speed regulation in both up and down direction. Feature to compensate for load changes, oil temperature, and viscosity changes.
6. Solid State Starting: Provide an electronic starter featuring adjustable starting currents.
7. Oil Type: Provide a zinc free, inherently biodegradable lubricant formulated with premium base stocks to provide outstanding protection for demanding hydraulic systems, especially those operating in environmentally sensitive areas.

2.5 HOISTWAY ENTRANCES

A. Doors and Frames: Provide complete hollow metal type hoistway entrances at each hoistway opening bolted\knock down construction.

1. Manufacturer's standard entrance design consisting of hangers, doors, hanger supports, hanger covers, fascia plates (where required), sight guards, and necessary hardware.
2. Main landing door & frame finish: ASTM A1008 steel panels, factory applied powder coat finish.
3. Typical door & frame finish: ASTM A 366 steel panels, factory applied powder coat finish.

B. Interlocks: Equip each hoistway entrance with an approved type interlock tested as required by code. Provide door restriction devices as required by code.

C. Door Hanger and Tracks: Provide sheave type two point suspension hangers and tracks for each hoistway horizontal sliding door.

1. Sheaves: Polyurethane tires with ball bearings properly sealed to retain grease.
2. Hangers: Provide an adjustable device beneath the track to limit the up-thrust of the doors during operation.
3. Tracks: Drawn steel shapes, smooth surface and shaped to conform to the hanger sheaves.

D. Hoistway Sills: Extruded metal, with groove(s) in top surface. Provide mill finish on aluminum.

2.6 PASSENGER ELEVATOR CAR ENCLOSURE

A. Car Enclosure:

1. Walls: Cab type a laminate wall design, durable wood core finished on both sides with high pressure plastic laminate.
2. Reveals and frieze: Not applicable
3. Canopy: Cold-rolled steel with hinged exit.
4. Ceiling: Suspended type, LED lighting with translucent diffuser mounted in a metal frame. Framework shall be finished with a factory applied powder coat finish.
5. Cab Fronts, Return, Transom, Soffit and Strike: Provide panels faced with No. 4 brushed stainless steel
6. Doors: Horizontal sliding car doors reinforced with steel for panel rigidity. Hang doors on sheave type hangers with polyurethane tires that roll on a polished steel track and are guided at the bottom by non-metallic sliding guides.
7. Door Finish: Stainless steel panels: No. 4 brushed finish.
8. Cab Sills: Extruded aluminum, mill finish.
9. Handrail: Provide 1.5" diameter cylindrical metal on side and rear walls on front opening cars and side walls only on front and rear opening cars. Handrails shall have a stainless steel, No. 4 brushed finish.
10. Ventilation: Manufacturer’s standard exhaust fan, mounted on the car top.
11. Protection pads and buttons: Provide one set of vinyl protection pads with metal grommets for the project. Provide pad buttons on cab front(s) and walls.

B. Car Top Inspection: Provide a car top inspection station with an “Auto-Inspection” switch, an "emergency stop" switch, and constant pressure "up and down" direction and safety buttons to make the normal operating devices inoperative. The station shall give the inspector complete control of the elevator. The car top inspection station shall be mounted in the door operator assembly.

2.7 DOOR OPERATION

A. Door Operation: Provide a direct or alternating current motor driven heavy duty operator designed to operate the car and hoistway doors simultaneously. The door control system shall be digital closed loop and the closed loop circuit shall give constant feedback on the position and velocity of the elevator door. The motor torque shall be constantly adjusted to maintain the correct door speed based on its position and load. All adjustments and setup shall be through the computer-based service tool. Door movements shall follow a field programmable speed pattern with smooth acceleration and deceleration at the ends of travel. The mechanical door operating mechanism shall be arranged for manual operation in event of power failure. Doors shall automatically open when the car arrives at the landing and automatically close after an adjustable time interval or when the car is dispatched to another landing. AC controlled units with oil checks, or other deviations are not acceptable.

1. No Un-Necessary Door Operation: The car door shall open only if the car is stopping for a car or hall call, answering a car or hall call at the present position or selected as a dispatch car.
2. Door Open Time Saver: If a car is stopping in response to a car call assignment only (no coincident hall call), the current door hold open time is changed to a shorter field programmable time when the electronic door protection device is activated.

3. Double Door Operation: When a car stops at a landing with concurrent up and down hall calls, no car calls, and no other hall call assignments, the car door opens to answer the hall call in the direction of the car's current travel. If an onward car call is not registered before the door closes to within 6 inches of fully closed, the travel shall reverse, and the door shall reopen to answer the other call.
4. Nudging Operation: The doors shall remain open as long as the electronic detector senses the presence of a passenger or object in the door opening. If door closing is prevented for a field programmable time, a buzzer shall sound. When the obstruction is removed, the door shall begin to close at reduced speed. If the infra-red door protection system detects a person or object while closing on nudging, the doors shall stop and resume closing only after the obstruction has been removed.
5. Door Reversal: If the doors are closing and the infra-red beam(s) is interrupted, the doors shall reverse and reopen. After the obstruction is cleared, the doors shall begin to close.
6. Door Open Watchdog: If the doors are opening, but do not fully open after a field adjustable time, the doors shall recycle closed then attempt to open six times to try and correct the fault.
7. Door Close Watchdog: If the doors are closing, but do not fully close after a field adjustable time, the doors shall recycle open then attempt to close six times to try and correct the fault.
8. Door Close Assist: When the doors have failed to fully close and are in the recycle mode, the door drive motor shall have increased torque applied to possibly overcome mechanical resistance or differential air pressure and allow the door to close.

B. Door Protection Device: Provide a door protection system using microprocessor controlled infra-red-light beams. The beams shall project across the car opening detecting the presence of a passenger or object. If door movement is obstructed, the doors shall immediately reopen.

2.8 CAR OPERATING STATION

A. Car Operating Station, General: The main car control in each car shall contain the devices required for specific operation mounted in an integral swing return panel requiring no applied faceplate. Wrap return shall have a No. 4 brushed stainless-steel finish. The main car operating panel shall be mounted in the return and comply with handicap requirements. Pushbuttons that illuminate using long lasting LED’s shall be included for each floor served, and emergency buttons and switches shall be provided per code. Switches for car light and accessories shall be provided.
B. Emergency Communications System: Integral phone system provided.
C. Auxiliary Operating Panel: Not Required
D. Column Mounted Car Riding Lantern: A car riding lantern shall be installed in the elevator cab and located in the entrance. The lantern, when illuminated, will indicate the intended direction of travel. The lantern will illuminate, and a signal will sound when the car arrives at a floor where it will stop. The lantern shall remain illuminated until the door(s) begin to close.
E. Special Equipment: Not Applicable

2.9 CONTROL SYSTEMS

A. Controller: The elevator control system shall be microprocessor based and software oriented. Control of the elevator shall be automatic in operation by means of push buttons in the car numbered to correspond to floors served, for registering car stops, and by "up-down" push buttons at each intermediate landing and "call" push buttons at terminal landings.

B. Automatic Light and Fan shut down: The control system shall evaluate the system activity and automatically turn off the cab lighting and ventilation fan during periods of inactivity. The settings shall be field programmable.

C. Emergency Power Operation: (10-DOA) Upon loss of the normal power supply, building-supplied standby power is available on the same wires as the normal power supply. Once the loss of normal power is detected and standby power is available, the elevator is lowered to a pre-designated landing and the doors are opened. After passengers have exited the elevator, the doors are closed and the car is shut down. When normal power is restored, the elevator automatically resumes operation.

D. Special Operation: Not Applicable

2.10 HALL STATIONS

A. Hall Stations, General: Provide buttons with white-illuminating or blue-illuminating LED halos to indicate that a call has been registered at that floor for the indicated direction. Provide 1 set of pushbutton risers.

1. Provide one pushbutton riser with faceplates having a No. 4 brushed stainless-steel finish.

a. Phase 1 firefighter's service key switch, with instructions, shall be incorporated into the hall station at the designated level.

B. Floor Identification Pads: Provide door jamb pads at each floor. Jamb pads shall comply with Americans with Disabilities Act (ADA) requirements.

C. Hall Fixtures: Wall mounted hall fixtures shall be provided with necessary push buttons and key switches for elevator operation. Wall mounted hall fixtures shall have a Brushed Stainless Steel.

1. Hall fixtures shall feature round, mechanical, buttons in applied mount face frame. Hall fixtures shall correspond to options available from that landing. Buttons shall be in a vertically mounted fixture. Hall fixtures shall not be jambmounted.

a. Hall Position Indicator.
b. Hall lanterns.

D. Special Equipment: Not Applicable

2.11 MISCELLANEOUS ELEVATOR COMPONENTS

A. Oil Hydraulic Silencer: Install multiple oil hydraulic silencers (muffler device) at the power unit location. The silencers shall contain pulsation absorbing material inserted in a blowout proof housing.

PART 3 - EXECUTION

3.1 EXAMINATION

A. Before starting elevator installation, inspect hoistway, hoistway openings, pits and/or control room, as constructed, verify all critical dimensions, and examine supporting structures and all other conditions under which elevator work is to be installed. Do not proceed with elevator installation until unsatisfactory conditions have been corrected in a manner acceptable to the installer.

B. Installation constitutes acceptance of existing conditions and responsibility for satisfactory performance.

3.2 INSTALLATION

A. Install elevator systems components and coordinate installation of hoistway wall construction.

1. Work shall be performed by competent elevator installation personnel in accordance with ASME A17.1, manufacturer's installation instructions and approved shop drawings.
2. Comply with the National Electrical Code for electrical work required during installation.

B. Jack unit excavation (if required by the type of jack provided): Drill or otherwise excavate below elevator pit construction as required to install the jack unit.

1. Install casing for jack unit.
2. Provide HDPE jack protection system for all in ground jacks.
3. Set casing for jack unit assembly plumb, and partially fill with water settled sand, eliminating voids. Back fill depth shall be sufficient to hold the bottom of the jack in place over time.

C. Perform work with competent, skilled workmen under the direct control and supervision of the elevator manufacturer's experienced foreman.

D. Supply in ample time for installation by other trades, inserts, anchors, bearing plates, brackets, supports, and bracing including all setting templates and diagrams for placement.

E. Welded construction: Provide welded connections for installation of elevator work where bolted connections are not required for subsequent removal or for normal operation, adjustment, inspection, maintenance, and replacement of worn parts. Comply with AWS standards for workmanship and for qualification of welding operators.

F. Coordination: Coordinate elevator work with the work of other trades, for proper time and sequence to avoid construction delays. Use benchmarks, lines, and levels designated by the Contractor, to ensure dimensional coordination of the work.

G. Install machinery, guides, controls, car and all equipment and accessories to provide a quiet, smoothly operating installation, free from side sway, oscillation or vibration.

H. Alignment: Coordinate installation of hoistway entrances with installation of elevator guide rails for accurate alignment of entrances with cars. Where possible, delay final adjustment of sills and doors until car is operable in shaft. Reduce clearances to minimum safe, workable dimensions at each landing.

I. Erect hoistway sills, headers, and frames before erection of rough walls and doors; erect fascia and toe guards after rough walls finished. Set sill units accurately aligned and slightly above finish floor at landings.

J. Lubricate operating parts of system, where recommended by manufacturer.

3.3 FIELD QUALITY CONTROL

A. Acceptance testing: Upon completion of the elevator installation and before permitting use of elevator, perform acceptance tests as required and recommended by Code and governing regulations or agencies. Perform other tests, if any, as required by governing regulations or agencies.

B. Advise Owner, Contractor, Architect, and governing authorities in advance of dates and times tests are to be performed on the elevator.

C. Make necessary adjustments of operating devices and equipment to ensure elevator operates smoothly and accurately.

D. Before final acceptance, remove protection from finished surfaces and clean and polish surfaces in accordance with manufacturer's recommendations for type of material and finish provided. Stainless steel shall be cleaned with soap and water and dried with a non-abrasive surface; it shall not be cleaned with bleach-based cleansers.

E. At completion of elevator work, remove tools, equipment, and surplus materials from site. Clean equipment rooms and hoistway. Remove trash and debris.

1. Use environmentally preferable and low VOC emitting cleaners for each application type. Cleaners that contain solvents, pine and/or citrus oils are not permitted.

F. At time of Substantial Completion of elevator work, or portion thereof, provide suitable protective coverings, barriers, devices, signs, or other such methods or procedures to protect elevator work from damage or deterioration. Maintain protective measures throughout remainder of construction period.

G. Instruct Owner's personnel in proper use, operations, and daily maintenance of elevators. Review emergency provisions, including emergency access and procedures to be followed at time of failure in operation and other building emergencies. Train Owner's personnel in normal procedures to be followed in checking for sources of operational failures or malfunctions.

H. Make a final check of each elevator operation, with Owner's personnel present, immediately before date of substantial completion. Determine that control systems and operating devices are functioning properly.

I. Elevator Qty. 1

1. Elevator Model: Endura Above-Ground (1-Stage).
2. Elevator Type: Hydraulic Passenger.
3. Rated Capacity: 3500 lbs.
4. Rated Speed: 150 ft./min.
5. Travel: 13'-4" (verify).
6. Landings: 2 total.
7. Openings:

    a. Front: 2.
    b. Rear: 0.

8. Clear Car Inside: 6' - 8" wide x 5' – 4-1/2" deep.
9. Cab Height: 8'-0" standard.
10. Hoistway Entrance Size: 3' - 6" wide x 7'-0" high
11. Door Type: Single Speed.
12. Power Characteristics: 460 volts, 3 Phase, 60 Hz.
13. Seismic Requirements: Zone 4.
14. Hoistway Dimensions: 8' - 4" wide x 6' - 11" deep.
15. Pit Depth: 4' - 0".
16. Button & Fixture Style: Match College standard.
17. Special Operations: None.

END OF SECTION

DIVISION 21
FIRE SUPPRESSION

SECTION 21 05 00 - COMMON WORK RESULTS FOR FIRE SUPPRESSION

PART 1 GENERAL

1.1 SUMMARY

A. Section includes pipe, fittings, valves, and connections for sprinkler system.

B. Related Sections:
1. Div. 3/ Section 03 10 00 - Concrete Forming and Accessories: Execution requirements for inserts and sleeves specified by this section.
2. Div. 9/ Section 09 90 00 - Painting and Coating: Execution requirements for piping painting specified by this section.

1.2 REFERENCES

A. American Society of Mechanical Engineers:
1. ASME B16.1 - Cast Iron Pipe Flanges and Flanged Fittings.
2. ASME B16.11 - Forged Steel Fittings - Socket-Welding and Threaded.
3. ASME B16.25 - Buttwelding Ends.
4. ASME B16.3 - Malleable Iron Threaded Fittings.
5. ASME B16.4 - Gray Iron Threaded Fittings.
6. ASME B16.5 - Pipe Flanges and Flanged Fittings.
7. ASME B16.9 - Factory-Made Wrought Steel Buttwelding Fittings.

B. ASTM International:
1. ASTM A47 – Standard Specification for Ferric Malleable Iron Castings.
2. ASTM A53/A53M - Standard Specification for Pipe, Steel, Black and Hot-Dipped, Zinc-Coated, Welded and Seamless.
3. ASTM A135 - Standard Specification for Electric-Resistance-Welded Steel Pipe.
4. ASTM A234/A234M - Standard Specification for Piping Fittings of Wrought Carbon Steel and Alloy Steel for Moderate and High Temperature Service.
5. ASTM A795 – Standard Specification for Black and Hot-Dipped Zink-Coated (galvanized) Welded and Seamless Steel Pipe for Fire Protection Use

C. American Welding Society:
1. AWS D1.1 - Structural Welding Code - Steel.

D. American Water Works Association:
1. AWWA C110 - American National Standard for Ductile-Iron and Grey-Iron Fittings, 3 in. through 48 in. (75 mm through 1200 mm), for Water and Other Liquids.
2. AWWA C111 - American National Standard for Rubber-Gasket Joints for Ductile-Iron Pressure Pipe and Fittings.
3. AWWA C151 - American National Standard for Ductile-Iron Pipe, Centrifugally Cast, for Water.
4. AWWA C105 – Polyethylene Encasement for Ductile Iron Pipe Systems.

E. National Fire Protection Association:
1. NFPA 13 - Installation of Sprinkler Systems. 2019 edition
2. NFPA 13R Standard for installation of sprinkler systems in low riser residential occupancy. 2019 edition

3. NFPA 24 - Installation of Private Fire Service Mains and Their Appurtenances. 2019 edition
4. NFPA 14- Standard for installation of standpipe and hose system 2019 edition
5. NFPA 25- Standard for inspection, testing, and maintenance of water-based fire protection systems 2020 edition

1.3 SUBMITTALS

A. Section 01 33 00 - Submittal Procedures: Submittal procedures.

B. Shop Drawings: Indicate pipe materials used, jointing methods, supports, floor and wall penetration seals. Indicate installation, layout, weights, mounting and support details, and piping connections.

C. Product Data: Submit manufacturers' catalogue information. Indicate valve data and ratings.

D. Manufacturer's Certificate: Certify products meet or exceed specified requirements.

1.4 CLOSEOUT SUBMITTALS

A. Section 01 70 00 - Execution and Closeout Requirements: Closeout procedures.

B. Project Record Documents: Record actual locations of components and tag numbering.

C. Operation and Maintenance Data: Submit spare parts lists.

1.5 QUALITY ASSURANCE

A. Perform Work in accordance with NFPA 13 standard.

B. Maintain one copy of each document on site.

1.6 QUALIFICATIONS

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum three years documented experience.

B. Installer: Company specializing in performing Work of this section with minimum three years documented experience approved by manufacturer.

1.7 PRE-INSTALLATION MEETINGS

A. Section 01 30 00 - Administrative Requirements: Pre-installation meeting.

B. Convene minimum one week prior to commencing work of this section.

1.8 DELIVERY, STORAGE, AND HANDLING

A. Section 01 60 00 - Product Requirements: Product storage and handling requirements.

B. Deliver and store valves in shipping containers, with labeling in place.

C. Furnish cast iron and steel valves with temporary protective coating.

D. Furnish temporary end caps and closures on piping and fittings. Maintain in place until installation.

1.9 WARRANTY

A. Section 01 70 00 - Execution and Closeout Requirements: Product warranties and product bonds.

B. Furnish five-year manufacturer: warranty for basic fire suppression materials and methods.

1.10 EXTRA MATERIALS

A. Section 01 70 00 - Execution and Closeout Requirements: Spare parts and maintenance products.

B. Furnish two sets of valve stem packing for each size and type of valve installed.

PART 2 PRODUCTS

2.1 VALVES

A. Manufacturers:
1. Milwaukee.
2. Stockham.
3. Kennedy.
4. Mueller.
5. Victaulic
6. Substitutions: Section 01 60 00 - Product Requirements.

B. Gate Valves:
1. Up to and including 2 inches: bronze body and trim, rising stem, hand wheel, solid wedge or disc, threaded ends. Similar to Stockham Model No. B-133.
2. Over 2 inches: Iron body, bronze trim, rising stem pre-grooved for mounting tamper switch, hand wheel, OS&Y, solid bronze or cast-iron wedge, flanged ends. Similar to Stockham Model No. G-634.

C. Globe or Angle Valves:
1. Up to and including 2 inches: bronze body, bronze trim, rising stem and hand wheel, inside screw, renewable Buna n Seat disc, threaded ends, with back seating capacity. Similar to Kennedy Model No. 98-SD. Ball Valves:
2. Up to and including 2 inches: bronze two-piece body, brass, chrome plated bronze, or stainless-steel ball, Teflon seats and stuffing box ring, lever handle, threaded ends. Similar to Kennedy Model No. 775.

D. Butterfly Valves:

1. Bronze Body: Stainless steel disc, resilient replaceable seat, threaded or grooved ends, extended neck, hand wheel and gear drive and integral indicating device, and built-in tamper proof switch rated 10 amp at 115-volt AC.
2. Cast or Ductile Iron Body: Cast or ductile iron, chrome or nickel-plated ductile iron or aluminum bronze disc, resilient replaceable EPDM seat, wafer, lug, or grooved ends. With extended neck, hand wheel and gear drive and integral indicating device, and external tamper switch rated 10 amp at 115-volt AC.

E. Check Valves:
1. Up to and including 2 inches: Bronze body and swing disc, rubber seat, threaded ends. Similar to Stockham Model No. B-319Y.
2. Over 2 inches: Iron body, bronze trim, swing check, renewable disc and seat, flanged ends. Similar to Stockham Model No. G-939.
3. 4 inches and Over: Iron body, bronze disc with stainless steel spring, resilient seal, threaded, wafer, or flanged ends.

2.2 BURIED PIPING

A. Double Iron: AWWA C151.
1. Fittings: AWWA C110, ductile iron standard thickness.
2. Joints: AWWA C111, rubber gasket.
3. Mechanical Couplings: Shaped composition sealing gasket, steel bolts, nuts, and washers.
4. Jackets: AWWA C105, polyethylene jacket for corrosive soils.
5. Mega lug Flange Restrainer fitting or AMES ES-A in-building riser

2.3 ABOVE GROUND PIPING

A. Steel Pipe: ASTM A53/A53M, Grade B; ASTM A135; ASTM A135 UL listed, threaded light wall for mains larger than 2 inches; or ASTM A795; Schedule 40 black, outside applications shall be galvanized pipe. Pipes shall have a corrosion resistance ratio (CRR) of 1.00 or greater per UL listing. Piping shall be black carbon steel, except in FM approved dry systems, where pipe shall be hot-dipped galvanized to meet ASTM A795 zinc coating specifications. Pipe shall be Schedule 40 or equal; for 2 inches and smaller. Threaded joints and fittings. Schedule 10 for pipes size 2-1/2 inches or larger. Victaulic or grooved fittings may be used.
1. Steel Fittings: ASME B16.9, wrought steel, butt welded; ASME B16.25, butt weld ends; ASTM A234/A234M, wrought carbon steel and alloy steel; ASME B16.5, steel flanges and fittings; or ASME B16.11, forged steel socket welded and threaded.
2. Cast Iron Fittings: ASME B16.1, flanges, and flanged fittings; or ASME B16.4, threaded fittings.
3. Malleable Iron Fittings: ASME B16.3, threaded fittings, or ASTM A47.

2.4 PIPE HANGERS AND SUPPORTS

A. Conform to NFPA 13/NFPA 13R.

B. Hangers for Pipe Sizes 1/2 to 1-1/2 inch: Carbon steel, adjustable swivel, split ring.

C. Hangers for Pipe Sizes 2 inch and Over: Carbon steel, adjustable, clevis.

D. Multiple or Trapeze Hangers: Steel channels with welded spacers and hanger rods.

E. Wall Support for Pipe Sizes to 3 inches: Cast iron hook.

F. Wall Support for Pipe Sizes 4 inches and Over: Welded steel bracket and wrought steel clamp.

G. Vertical Support: Steel riser clamp.

H. Floor Support: Cast iron adjustable pipe saddle, lock nut, nipple, floor flange, and concrete pier or steel support.

PART 3 EXECUTION

3.1 PREPARATION

A. Ream pipe and tube ends. Remove burrs.

B. Remove scale and foreign material, from inside and outside, before assembly.

C. Prepare piping connections to equipment with flanges or unions.

3.2 INSTALLATION

A. Install piping in accordance with NFPA 13 for sprinkler systems and NFPA 24 for service mains.

B. Route piping in orderly manner, plumb and parallel to building structure. Maintain gradient.

C. Install piping to conserve building space, to not interfere with use of space and other work.

D. Group piping whenever practical at common elevations.

E. Pipe through floors, wall, and ceilings, at head locations, shall be equipped with approved sleeves and escutcheons. Escutcheons shall be polished chrome plated.

F. Install pipe sleeve at piping penetrations through footings, walls, and floors. Seal pipe and sleeve penetrations to maintain fire resistance equivalent to fire separation.

G. Install piping to allow for expansion and contraction without stressing pipe, joints, or connected equipment.

H. Pipe Hangers and Supports:
1. Install in accordance with NFPA 13.
2. Install hangers to with minimum 1/2-inch space between finished covering and adjacent work.
3. Place hangers within 12 inches of each horizontal elbow.
4. Use hangers with 1-1/2-inch minimum vertical adjustment. Design hangers for pipe movement without disengagement of supported pipe.
5. Support vertical piping at every floor. Support riser piping independently of connected horizontal piping.

6. Where installing several pipes in parallel and at same elevation, provide multiple or trapeze hangers.
7. Prime coat exposed steel hangers and supports. Refer to Section 09 90 00. Hangers and supports located in crawl spaces, pipe shafts, and suspended ceiling spaces are not considered exposed.

I. Slope piping and arrange systems to drain at low points. Install eccentric reducers to maintain top of pipe level.

J. Prepare pipe, fittings, supports, and accessories for finish painting. Where pipe support members are welded to structural building framing, scrape, brush clean, and apply one coat of zinc rich primer to welding. Refer to Section 09 90 00.

K. Do not penetrate building structural members unless indicated.

L. Where more than one piping system material is specified; Install compatible system components and joints. Install flanges, union, and couplings at locations requiring servicing.

M. Die cut threaded joints with full cut standard taper pipe threads with red lead and linseed oil, or other non-toxic joint compound applied to male threads only.

N. Install valves with stems upright or horizontal, not inverted. Remove protective coatings after installation.

O. Install gate or butterfly valves for shut-off or isolating service.

P. Install drain valves at main shut-off valves, low points of piping and apparatus.

Q. Sprinkler system shall be provided with complete drainage facilities in accordance with UBC Std drain discharge shall not spill on grade. It shall go into a sewer.

R. Where inserts are omitted, drill through concrete slab from below and install through-bolt with recessed square steel plate and nut recessed into and grouted flush with slab.

S. Upon completion and prior to acceptance of installation, Contractor shall subject system, including underground supply connections, to tests required by CBC Std and shall furnish CFC with a certificate of compliance as required.

T. Close nipples shall not be used. Threaded unions shall not be installed in concealed areas unless provided with an approved access panel.

U. Fire sprinkler systems piping hanger and supports shall conform to the UBC Std requirements.

V. Underground pipe shall be laid on a flat undisturbed sand bed. After required pressure-leak test, pipe shall be covered with sand not less than 6 inches thick, prior to backfilling.

W. Piping to a sprinkler head in the elevator machine room or elevator shaft shall not go out of the room or shaft.

X. Provide shunt trip on sprinklers located in the elevator machine rooms and elevator hoist way unless the sprinklers are located 2 feet or less from the pit floor.

3.3 INTERFACE WITH OTHER PRODUCTS

A. **Inserts:**
1. Install inserts for placement in concrete forms.
2. Install inserts for suspending hangers from reinforced concrete slabs and sides of reinforced concrete beams.
3. Install hooked rod to concrete reinforcement section for inserts carrying pipe over 4 inches.
4. Where concrete slabs form finished ceiling, locate inserts flush with slab surface.

3.4 CLEANING

A. Div. 01/ Section 01 70 00 - Execution and Closeout Requirements: Final cleaning.

B. Clean entire system after other construction is complete.

END OF SECTION 21 05 00

SECTION 21 13 13 - FIRE-SUPPRESSION SPRINKLER SYSTEM

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Fire sprinkler system for protection of buildings.

C. Related Requirements: The requirements of this Section, NFPA 13 and NFPA 14 shall take precedence over requirements found in the following:

1. Division 01 - General Requirements.

2. Section 07 84 13: Penetration Fireproofing.

3. Section 22 05 00: Plumbing Common Work.

4. Section 31 23 23: Excavation and Fill for Utilities.

5. Section 33 11 00: Site Water Distribution Utilities.

1.02 SUBMITTALS

A. Manufacturer’s Data:

1. Submit complete and detailed equipment and material list of items to be furnished and installed under this section.

2. Submit manufacturer's specifications and other data required to demonstrate compliance the plans and specified requirements.

B. Drawings:

1. Submit shop drawings of wet pipe fire protection sprinkler system in compliance to NFPA 13, Standard for the Installation of Sprinkler Systems, Sprinkler systems shall comply with the provisions of NFPA 13.

2. Shop drawings shall fully comply with the most stringent provisions of this specification and plans, and with the applicable codes and standards.

3. Shop drawings shall be same size as the Contract Drawings and shall be produced using AutoCAD.

C. Regulatory Requirements:

1. Installation of fire sprinkler system shall not vary from the plans unless alterations have been approved by the State Fire Marshal at DSA.

2. Complete DSA standard testing forms and get sign-off by the Project Inspector.

D. Closeout Submittals: Submit in accordance to Section 01 77 00, Contract Closeout, and as specified herein:

1. Record Drawings:

a. Record drawings of installed Work shall be maintained current on the Project site, available for Fire Marshal and the Project Inspector to review.

b. At completion of installation submit Record Drawings signed by installing Contractor in AutoCad format, including:

1). Record Specifications.

2). Record Product Data: Include specific model, type and size for equipment and material installed.

3. Record Test Results.

4. Maintenance Manuals.

1.03 QUALITY ASSURANCE

A. Comply with applicable national or local codes and standards.

B. Except where exceeded by the requirements of these specifications, the following are made part of this section: prints and details, and provisions of the NFPA 13 Standard for Installation of Sprinkler Systems Standard for the Installation

C. Qualifications of Manufacturer: Products used in work of this section shall be produced by manufacturers regularly engaged in manufacture of similar items and with a 5 year history of successful production that is acceptable to the Architect.

D. Qualifications of Installer: Installer shall have a current C-16 license in the State of California in the installation of fire sprinkler systems.

1.04 FIRE SERVICE WATER CONNECTION

A. Fire Service Mains shall be provided with approved Meter Service Backflow protection. An approved Reduced Pressure Principle Backflow Prevention Assembly (RP) to meet minimum backflow protection requirements for meter service protection (MSP) shall be provided on the fire main, according to the California Plumbing Code (CPC) and according to the current City of Compton Requirements.

1.05 PRODUCT HANDLING

A. Comply with the provisions specified in Sections 22 05 00 and 22 05 13.

1.06 COORDINATION

A. Coordinate activities in accordance with provisions of Section 22 05 00.

1.07 JOB CONDITIONS

A. Unscheduled utility flow interruptions are not permitted. Schedule service interruptions in advance, with the OAR.

1.08 EXTRA MATERIALS FOR MAINTENANCE

A. Provide spare sprinkler heads in quantity equal to 2 percent of total number of each type of sprinkler head installed. There shall be no less than two heads of each type and temperature rating provided, and in no case less than six spare sprinkler heads per building. There shall be no fewer than 6 spare sprinkler heads for up to 300 sprinkler heads installed; no less than 12 spare sprinkler heads for up to 1,000 sprinkler heads installed; and no less than 24 spare sprinkler heads for the sites with more than 1,000 sprinkler heads installed. Spare sprinkler heads shall be kept inside of spare sprinkler head box(s). A spare sprinkler wrench for each type of sprinkler head shall also be provided inside of each spare sprinkler head box, at each building. Locations of spare sprinkler boxes shall be located at:

1. Fire Sprinkler Riser, when enclosed and secure.

PART 2 - PRODUCTS

2.01 FIRE PROTECTION SYSTEM DESCRIPTION

A. General: Provide systems complete including, but not limited to:

1. Provide underground and above ground sprinkler and standpipe piping including trenching and backfilling. Materials and equipment shall be UL/FM listed and approved as required by NFPA for their application. Required signage shall be provided and installed as required by NFPA 13.

2. Provide overhead sprinkler system with sprinklers installed as required according to type, location and temperature rating.

B. Sprinkler Heads:

1. Provide chrome pendant spray type sprinkler heads with matching escutcheons in areas with finished ceilings. Exterior escutcheons shall be poly-coated or concealed type to prevent rusting and oxidation.

2. Provide upright sprinklers in areas with exposed piping.

3. Provide poly-coated glass bulb corrosion resistance type sprinklers heads in areas exposed to a corrosive environment such as parking garages and coastal air.

4. Sprinklers shall be glass bulb type, with hex-shaped wrench boss integrally cast into the sprinkler body to reduce the risk of damage during installation,

5. Sprinklers in concealed spaces, exterior locations, and other areas that will experience over 100 degrees F ambient temperature shall be furnished with 200 to 225 degree rated sprinklers. Sprinkler heads in boiler rooms, furnace rooms, or heater rooms shall be furnished with sprinklers rated at 250 to 290 degrees F. If a sprinkler is directly affected by a spotlight, steam, or other heat source, a 350 degree F or higher sprinkler head shall be furnished. Sprinkler heads in other locations, unless otherwise noted, shall be 155 to 165 degrees F rated.

6. Automatic fire sprinkler head type shall be as follows:

   a. In areas with ceiling heights of nine-feet or lower, sprinkler heads installed shall be recessed or fully concealed.

   b. Ceilings eight-feet or lower shall be provided with fully concealed sprinkler heads.

   c. Areas with ceiling height of nine-feet or lower, that are not constantly supervised such as corridors, arcades, students restrooms, and other restrooms shall be provided with fully concealed sprinkler heads.

7. Sprinkler heads in light hazard occupancies are required to be Quick Response sprinklers as required in NFPA 13. Sprinkler heads shall be of the same manufacturer throughout the building/site as indicated. Sprinklers shall typically be ½ inches NPT, standard orifice, minimum 5.6 nominal K factor, UL listed for 175 psi, and listed for light and ordinary hazard occupancies.

8. Other specialized sprinkler heads such as walk-in refrigerator or freezer heads, side wall, ¾ inches sprinklers above 5.6 K factor, and those sprinklers with a K factor below 5.6, shall only be used where required by project condition. Large drop sprinkler heads and extended coverage sprinkler heads shall not be installed.

9. Sprinkler head location shall be designed and installed in an aesthetically pleasing manner and should generally be located in center of 24-inch by 24-inch ceiling tiles and in center of 24-inch by 48-inch ceiling tiles in the 24-inch direction and no closer than 12-inch from the edge in the 48-inch direction.

10. UL/FM listed Sprinkler head guards shall be provided on Sprinkler heads installed at seven feet six inches above floor or lower in exposed locations, or that are deemed subject to damage. Sprinkler head guards shall securely fasten with bolt-on feature to the base of the sprinkler or be a factory installed guard. Guards shall also be provided on upright and sidewall heads where sprinklers are installed at seven feet six-inch heights or lower.

C. Fire Sprinkler and Standpipe Systems:

1. Underground piping: Comply with the requirements of Section 33 1100, Site Water Distribution Utilities.

2. Provide an underground UL/FM listed PVC or Ductile iron supply line connected to detector check meter or water main as indicated. Install site water mains no closer than 10'- 0" parallel to the building foundations. Underground fire water lines shall be installed 36 inches below grade. Tracer wire shall be installed in accordance with Section 33 1100: Site Water Distribution Utilities.

3. Fire Department Connection (FDC) with check valve (wafer type) shall be provided after the backflow preventor, and before the building fire sprinkler riser(s), located where the FDC will be accessible to the fire department from the street or sidewalk without obstructions. No shut off valve shall be allowed on the FDC line as per NFPA 13. FDCs shall have a height between two and four-foot above the ground.

4. PIVs shall be electrically supervised regardless the number of fire sprinkler served (CBC 903.4), and set at a height of three feet to the top and have the handle locked in place with a break-a-way lock.

5. Provide a UL listed, FM approved FDC, approved RP type backflow assembly, check valves, shut-off valves, drain valves, ITV, and flow indicator at the locations required. (Test-and-drain combination valves are prohibited.)

6. Flow indicator shall activate the fire alarm system between 45 and 90 seconds, and activate a local alarm on the outside of the building continuously with water flow. Connection of this switch is a part of the Work of Division 26. Shut-off including valves on the fire main backflow preventor shall be electrically supervised according to CBC 903.4,, NFPA 13 and Section 28 3100 – "Fire Detection and Alarm".

7. Pipe through ceilings at head locations shall be furnished with a two piece, or fully concealed escutcheon. Unless otherwise designated, escutcheons shall be identical and match the other escutcheons of the same type throughout the building or site. Piping through walls and ceilings shall have a split ring chrome escutcheon.

    a. Flexible stainless steel sprinkler head drop system may be used. Flexible drops shall be UL listed, FM approved, and shall be compatible with ceiling systems. Flexible drop length shall be included in the Hydraulic Calculations. The drop system shall include the required support bracing.

8. Furnish and install required signs, spare heads, special wrenches, and spare sprinkler head boxes as required to satisfy NFPA 13, NFPA 14 and this specification.

9. Sprinkler system piping shall be provided with complete drainage as required by NFPA. Test valve discharge shall be piped away from planters to asphalt areas. Furnish protection of piping against accidental or malicious damage.

10. Upon completion of the Work of this section, and before Substantial Completion, subject system, including underground supply connection, to tests required. A minimum hydrostatic test shall be two hundred pounds (200 psi) or fifty pounds (50 psi) in excess of the maximum system working pressure, whichever is greater, for two hours with no leaks or loss of pressure per NFPA 13. The Project Inspector shall be furnished with a NFPA 13 test certification.

11. Local fire sprinkler alarm requirements shall be accomplished with a vane or paddle type water flow detector switch and an electrically powered fire sprinkler horn located on the street side of the building and connected to the fire alarm control panel with secondary power provided from the fire alarm batteries. The drilled out disk shall be attached to the mounting U-bolt. Time delay shall be set at 45 to 60 seconds. Mechanically activated water bells with alarm valve and pressure switch are prohibited.

12. Seismic separation assemblies shall be located between the buildings if space allows accessibility. Otherwise they shall be located inside the building providing the most space. Swing joints may be fabricated on site using flexible groove couplings and six grooved (Victaulic) 90 degree elbows in a teepee formation (see NFPA 13, figure A.9.3.3). Seismic separation assemblies can also be made utilizing a manufactured, UL/FM listed swing joint assembly rated at a minimum 175 psi.

13. Hanging, bracing and support shall utilize only UL/FM listed approved products, and comply with NFPA 13, Chapter 9 requirements for rod and bolt sizes except for the following: 4 and 6 inch pipe shall be supported by a minimum ½ inch hanger rod, 8 inch pipe shall be supported by a minimum 5/8 inch hanger rod, 10 and 12 inch pipe shall be supported by a minimum ¾ inch hanger rod. Hanger rods in exterior locations and in parking structures shall have Electrodeposited Zinc Coating per ASTM B633 to prevent rusting.

14. Building Fire Sprinkler riser assemblies shall be provided as follows. Every building shall be provided with an accessible and electrically supervised riser shut off valve at a height not to exceed five-feet above the floor. Every building riser assembly shall be equipped with a check valve followed by a main drain valve and then the flow indicating switch and pressure gauge immediately after the shut-off valve. In cases where a riser assembly is provided for each floor in the building, a check valve, main drain and flow switch shall be provided for each floor; the main building shut-off shall not be required. An electrically supervised Post Indicator Valve located outside the building may serve as the building riser shut-off valve.

2.02 MATERIALS

A. Access Panel:

FAP-1 Square, steel, prime-coated, with vandal-proof door lock operated by Allen wrench:

Smith	Josam	Elmdor
4760		DW – AKL

B. Globe or Angle Valves: UL/FM listed.

AV-1 Bronze angle valve: 2 inches and smaller, screwed-in bonnet, threaded ends, rising stem:

Nibco	Kennedy	Fairbanks	United
T-301	98 SD	0210	126T

C. Automatic Fire Sprinkler Head, UL/FM listed:

AFSH-1 Brass pendant type for areas with suspended ceilings:

Victaulic	Tyco	Viking	Reliable
V27	TY 3231	VK302	F1FR56

AFSH-2 Brass upright type for areas with no ceilings:

Victaulic	Tyco	Viking	Reliable
V27	TY3131	VK300	F1FR300

AFSH-3 Chrome or poly coated semi recessed type with semi-recessed escutcheon:

Victaulic	Tyco	Viking	Reliable
V27	TY3231	VK302	F1FR56

AFSH-4 Fully concealed type sprinklers; chrome cover:

Victaulic	Tyco	Viking	Reliable
V38	TY3531	VK462	F4FR
		VK404	G4A

D. Backflow Prevention Assemblies:

BPV-1 Reduced Pressure Principle Backflow Prevention Assembly (RP) type for meter service protection (MSP) requirements:

Ames	Febco	Watts	Wilkins
4000SS	860 OS&Y	909 RP	975 RP
C400	880 OS&Y	957 RP	375 RP
M400		994 RP	

E. Gear Operated Butterfly Valves:

GOBFV-1 Grooved end Gear Operated Butterfly Valve, 300 psi, for fire protection sprinkler risers. UL listed, FM approved, with weatherproof gearbox and double pole/double throw monitor switch, double seal design for bubble tight shut off at 175 psi. Corrosion-resistant, fusion-bonded nylon II body coating, easy to read position indicator:

Kennedy	Nibco	Victaulic	Tyco
Figure 82M	GD-4765-8N, 300 psi	705W 300 psi	580 300 psi

GOBFV-2 Wafer Type Gear Operated. Butterfly Valve, same requirements as GOBFV-1:

Kennedy	Nibco
Figure 82W	WD-3510

300 psi

F. Check Valves:

CV-1 Bronze check valves: 2 inches and smaller, 200 psi WOG, bronze disc, swing type, conforming to MSS-SP-80-97, threaded ends:

Crane	Nibco	Stockham	United
37	T-433-Y	B-319	62T

CV-2 Iron check valves: 2-1/2 inches and larger, class 175, composition disc, swing type, bolted cap, UL listed, FM approved flanged ends:

Stockham	Kennedy	Tyco	Clow
G-940	126	Model G	F5380

CV-3 Wafer Type Check Valve:

United Wafer Check #90	Nibco KW-900-W	Mueller A-2102

CV-4 Grooved Check valve 2 ½ inch and larger:

United	Gruvlock	Reliable	Victaulic	Tyco
67	7800	Mode “G”	Series 717	590F

G. Escutcheons

ES-1 Chrome plated, or white poly-coated, 2-piece canopy (escutcheon), 2.25 to 3.5 inches in extended position:

FPPI	Tyco	Reliable
01 - 401 Chrome or White	No. 401 Chrome or White	HBC (chrome) HBW (white)

ES-2 Chrome plated or white poly coated, 2-piece recessed:

FPPI	Tyco	Reliable (semi recessed)
01 - 400	410	GF2-C (chrome)
01 - 402	420	GF2-W (white)

H. Fire Department Connections:

FDC-1 UL listed, FM approved, type, 4 inch by 2-1/2 inches by 2-1/2 inches bronze body fire department hose connection (FDC):

Crocker	Potter-Roemer	Tyco	Powhaten
6405 or 6420	5710 or 5730	86	21-201 or 31-133

I. Flow Indicators:

FIA-1 Listed by State Fire Marshal, with double pole, double-throw switch, one normally open and one normally closed, UL listed and FM approved:

Potter-Roemer	Notifier
VSRF Series	WFR Series

J. Outside Stem and Yoke Gate Valves:

OS&Y-1 Bronze Gate Valves: 2 inches and smaller, class 175, solid bronze wedge disc, OS&Y, copper silicon alloy stem, UL/FM listed, threaded ends:

Stockham	Crane	Nibco	United
B-133	459	T-14	18

OS&Y-2 Iron gate valves: 2 ½-inch and larger, class 175, IBBM, OS&Y, solid wedge disc, Teflon-impregnated packing, UL/FM listed, flanged ends:

Stockham	Crane	Kennedy	Mueller	Victaulic
G-634	467	68	A-2073	771

OS&Y-3 2 ½-inch and larger, epoxy coated, resilient wedge, 175 pounds gate valve for riser valves, P.I.V., and shut off:

Clow	Nibco	Kennedy	Mueller
F-6136	617-0	KV-4068	A-2360

K. Gate Valves:

GV-1 Bronze gate valves: 2-inch and smaller, class 175, solid bronze wedge disc, rising stem copper silicon alloy stem, UL/FM listed, threaded ends:

Stockham	Crane	Grinnell	United
B-133	459 Fig. 66	14	

GV-2 Iron gate valves: 2 ½-inch and larger, class 175, IBBM, solid wedge disc, Teflon impregnated packing, UL/FM listed, flanged ends:

Stockham	Crane	Kennedy	Mueller	Victaulic
G-634	467	68	A-2052	772

L Gear Operated Ball Valves:

GOBV-1 Threaded ball valve for sizes two inches and smaller:

Nibco KT-505W-4 Victaulic 728

M. Seismic Swing Joints:

SJ-1 UL/FM Approved flexible seismic connector with grooved, or threaded ends for seismic separation requirements.

SJ-2 Fabricated swing joints as per NFPA 13 using six groove 90 degree elbows and flexible groove couplers such as Victaulic style 75.

N. Post Indicator Valves:

PIV-1 Vertical Indicator Posts: Furnished for underground valves, post must provide a means of knowing if the valve is open or shut, UL/FM listed. (Where a backflow assembly is provided, the shutoff valves on the backflow preventer satisfy the requirement for a post indicator valve to control the fire main and FD Connection):

Stockham	Kennedy	Grinnell
G-951	2945	F-750
Clow	Mueller	Victaulic
F-576	2945	774

PIV-2 Posts Indicator valve: Furnished for underground valves. Ductile iron fusion bonded epoxy coated resilient wedge gate valves: 4 inches and larger, class 175 lb, non-rising stem, mounting plate for indicator post, UL/FM listed, flanged or mechanical ends (in accordance with NSF 61).

Stockham	Kennedy	Clow	Mueller	Victaulic
G-635	71X	F-6100	2360	772

O. Sprinkler Guards:

SPG-1 Sprinklers installed at seven feet six inches above floor or lower in exposed locations, or that are deemed subject to damage shall be equipped with a UL/FM listed, head guard. Guards shall be listed, supplied and approved for use with the sprinkler by the sprinkler manufacturer. Sprinkler head guards shall securely fasten with bolt-on feature to the base of the sprinkler or be a factory installed guard. Guards shall also be provided on upright and sidewall heads where sprinklers are installed at seven feet six-inch heights or lower.

Reliable	Viking	Tyco	FPPI	Victaulic

P. Sprinkler Horn:

SPH-1 UL/FM approved, surface-mounted, weatherproof and red finished:

Horn:	Bell:
HRK System Sensor	SSM-24-10 System Sensor
24 V-DC	24 V-DC
Weatherproof with	Weatherproof with
BBS-2 back-box for	WBB box for
Surface mount	Surface mount installation

Q. Hangers, Supports, Bracing:

HSB-1 Tolco products or UL listed and FM

R. Threaded fittings:

TF-1 Ductile iron, 300 psi rated, UL listed, FM or NFPA approved.

TF-2 Cast iron fittings, 175 psi rated, UL listed, FM or NFPA approved:

Anvil Ward Taylor

TF-3 Malleable Iron, 300 psi rated, UL, Listed, FM or NFPA approved

TF-4 Galvanized, 175 psi rated, UL Listed, FM or NFPA approved

S. Fire Sprinkler Pipes and Standpipes:

FSP-1 Fire sprinkler pipe: 1 inch through 8-inch, Schedule 40, black or galvanized steel meeting ASTM Standards A53, A135, or A795. Pipe Corrosion Resistance Ratio (CRR) shall be 1.00 or greater. Pipe may be threaded or grooved.

a. Piping 2 inches and smaller shall have threaded joints and fittings in concealed, non-accessible locations. Groove coupler connections (Victaulic, Viking VGS) on pipe sizes 1 inch through 2 inches are acceptable in accessible areas with required seismic bracing provided. Plain end connections such as “Plainlock” and “FIT” are prohibited.

b. For pipe sizes 2 ½-inch and larger, grooved type (Victaulic, Viking VGS), welded, threaded and flanged connections may be used. Any connection that does not utilize a threaded, welded or grooved connection is prohibited, except for mechanical tee bolt-on branch outlet fittings sizes 2-inch and smaller (Victaulic 920 and the 920N).

c. Submit Verification from manufacturer stating that piping material furnished meets above criteria; (i.e.: threadable pipe has a UL assigned CRR of 1.00 minimum, that it meets ASTM A53, A135 or A795, and it is UL listed, FM or NFPA approved.)

FSP-2 Ductile iron pipe, AWWA C151 (for pipes below grade). Gasketed self retaining joints per ASME/ANSI B16.4.

FSP-3 Plastic, PVC, thick wall (cast iron OD sized), DR 14 (200 PSI). UL listed for fire main service (underground). Gasketed self retaining joints - Johns Manville Blue Brute AWWA C900, JM Eagle C900 water pipe.

FSP-4 Fire Sprinkler Pipe: 1 inch through 3-inch, Copper meeting NFPA 13 Standards. Pipe may be grooved.

FSP-5 Flexible Fire Sprinkler Head Connectors: 1 inch pipe size flexible stainless steel fire sprinkler head connectors “Flex Head Industries” Models 2024, 2036, 2048, 2060 and 2072.

2.03 ACCESSORIES AND APPURTENANCES

A. Escutcheons: Polished chrome plated split-ring type for exposed piping at every penetration inside finished rooms.

B. Guards: Provide sprinklers with guards at ceiling at or under seven feet six-inch high and where subject to damage or vandalism.

C. Miscellaneous: Provide accessories and appurtenances for a complete system.

2.04 FIRE HOSE VALVES (Not Applicable).

A. Schedule Numbers:

SPV-1 Valve, Fire Hose, cast brass angle valve, UL listed and Factory Mutual approved; 1 ½-inch at 175 psi, female NPT outlet with 1 ½-inch male NPT by 1 ½-inch male NST adapter nipple.

POTTER-ROEMER	POWHATAN	UNITED
4070	500	88

SPV-2 Valve, Standpipe for 2 ½-inch for 150 or higher psig working pressure, male NST outlet for fire department hose connection. Cast brass, replaceable composition disc, and rough chromium-plated body (unless provided inside UL listed valve cabinet) with hand wheel.

POWHATAN	UNITED	POTTER-ROEMER
DXWDGV-250F DXAV5-250F	88H	4065

2.05 STANDPIPE VALVE CABINETS (Not Applicable).

A. Schedule Numbers:

SPVC-2 Surface mounted cabinet for masonry walls, same as SPVC-1.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine areas and conditions under which Work of this section shall be performed. Correct conditions detrimental to proper and timely completion of Work. Do not proceed until unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Ream pipe and tube ends. Remove burrs. Bevel or groove plain end ferrous pipe ends.

B. Remove scale and foreign matter, from inside and outside of pipes, before assembly.

C. Provide piping connections to equipment with flanged or grooved connections.

3.03 INSTALLATION

A. Install underground supply line connected to detector check or water main indicated. Braced or clamped bends shall be in accordance with requirements of NFPA 24. Provide vertical clamp rods at flange and spigot piece of risers, long enough to pass through riser's base flange where required. Furnish concrete thrust blocks where required. Tracer wire shall be installed as per Section 22 0553: Plumbing Identification on PVC underground piping.

B. Install FDCs, check valves, shut-off valves, gauges, Inspector’s test and drain assemblies and flow indicator. FDC must be installed so that it is unobstructed and accessible for the Fire Department’s first response unit.

C. Pipe through floors, wall, and ceilings, at head locations, shall be furnished with required sleeves, and escutcheons and fire caulking where indicated and/or required by code. Escutcheons shall be polished chrome plated unless other finish is selected by the Architect.

D. Sprinkler system shall be provided with complete drainage facilities in accordance with CBC standards. Drain discharge may discharge into a sewer, storm drain, sump pit or street gutter. Fire sprinkler drains shall not discharge onto a playground or across a sidewalk. Discharge to plumbing fixtures is prohibited due to the inability of a plumbing fixture to receive a full flow of water from a fire sprinkler drain valve under working pressure.

E. Upon completion of the Work of this section, and before Substantial Completion, subject the entire system, including underground supply connections, to tests as required by NFPA 13, and CBC standards and furnish the Owner with a certificate of compliance as required.

F. Close nipples are prohibited. Threaded unions are prohibited. Where a threaded union or coupling is needed, a groove type fitting (Victaulic) shall be used instead. If a groove style coupling is used in a concealed area, an access panel allowing full access to that connection shall be provided.

G. Fire sprinkler systems piping hangers, seismic bracing, anchors and supports shall conform to NFPA 13, CBC and other applicable codes and the requirements of this specification.

H. Grooved joints shall be installed in accordance with the manufacturer's latest published installation instructions. Grooved ends shall be clean and free from indentations, projections, and roll marks in the area from pipe end to groove. Gaskets shall be of an elastomer grade suitable for the intended service, and shall be molded and produced by the coupling manufacturer.

I. Tee branch outlets on fire sprinkler mains shall be by the use of a threaded ductile iron tee fitting, a groove type tee fitting, (Victaulic), or by the use of a thread-a-let welded on by a certified welder as required by NFPA. Mechanical tee bolted branch outlet fittings are prohibited except for branch outlet sizes 2-inch and smaller.

J. Sprinkler lines within the building shall be concealed within the structure. Risers shall be installed in utility, supply rooms or similar service areas whenever possible, and shall not obstruct access, or maintenance of other equipment within the space. Mains and risers shall be located within the area protected by the sprinkler system unless otherwise approved by fire authorities having jurisdiction.

K. Sprinklers that have been dropped, damaged, have cracked bulbs, or show a visible loss of fluid shall not be installed.

L. Sprinkler bulb protectors shall be removed by hand after sprinkler installation. Tools or other devices to remove the protector that could damage the bulb in any way shall not be used.

M. Routing of piping in non-concealed exposed areas shall be subject to the Architect's review in the final shop drawings.

N. Underground piping shall have a minimum of 36 inches of cover to grade. Underground pipe shall be installed on a flat not less than 6-inch thick undisturbed sand bed. After required pressure-leak test, pipe shall be covered with sand not less than 6 inches thick, before backfilling. Comply with NFPA Standards. Piping is not allowed to be underground below the building floor slab.

O. Provide approved backflow prevention assemblies. Installations of backflow prevention assemblies shall be tested and certified by a certified Los Angeles County backflow prevention device tester prior to Substantial Completion. Tests shall be performed in the presence of the Project Inspector. Test reports shall be turned over to the Project Inspector for mailing to proper agency.

P. Provide shunt trip when sprinklers are installed in the elevator machine rooms and elevator hoist way unless the sprinklers are located 2 feet or less from the hoist way pit floor.

Q. Test valve (ITV) shall be located at the opposite end of the sprinkler system from the supply. Test-and-drain type combination valves are prohibited. ITV discharge and main drain lines shall be piped to a sump pit or to the outside of the building to within a foot from the ground where it will drain away from the building to an exterior storm drain.

R. Each building with a sprinkler riser shall be furnished with an accessible shut off riser valve installed no higher than five feet from the finish floor. Each floor shall have a separate shut off valve with flow switch, and shall be securely enclosed or secured with a chain and break-a-way lock. Also see section 2.01- C-12 of this specification.

3.04 PROTECTION

A. Protect the Work of this section until Substantial Completion.

3.05 CLEANUP

A. Remove rubbish, debris, and waste materials and legally dispose at off-project site.

END OF SECTION

DIVISION 22
PLUMBING

SECTION 22 05 00 - PLUMBING COMMON WORK

PART 1 – GENERAL

1.01 SUMMARY

A. Section Includes:

1. This Section provides the basic plumbing requirements that apply to the Work of Division 22.

B. Related Requirements:

1. Division 01: General Requirements.
2. Division 22: Plumbing
3. Division 23: Mechanical
4. Division 26: Electrical.

1.02 REGULATORY REQUIREMENTS

A. Current federal Safe Drinking Water Act (SDWA) regulations require the furnishing of lead-free pipe, solder, and flux in the installation or repair of plumbing in non-residential facilities connected to public drinking water systems. Under this regulation, solders and flux are considered lead-free when they contain 0.2 percent lead or less. Under California regulations pipes and pipe fittings are considered lead-free when they contain 0.25 percent lead or less as defined in California Assembly Bill 1953 (AB 1953). No pipe, pipe fittings, or any other fitting or fixture intended to convey or dispense water for human consumption by drinking or cooking is allowed in the domestic plumbing system, if they do not meet the low lead definition of AB 1953. Weighted average lead content of the wetted surface area of pipes, fittings and fixtures may not exceed 0.25 percent.

1. Provide lead-free water pipe, solder, and flux materials that meet the standards as outlined by the federal SDWA regulations and California AB 1953 if installed in drinking water system.
2. Collect pipe, solder, and flux material samples as required by the Project Inspector. Test samples shall be delivered to an Owner designated testing laboratory for testing of lead content.
    a. Test samples for lead content by the atomic absorption spectrophotometry method.
3. Materials found not conforming to SDWA and California AB 1953 regulations shall be deemed defective Work and shall be replaced with lead-free materials.
4. Comprehensive testing of the remaining materials for their lead content shall be performed as required by the Project INSPECTOR.

A. Materials, fabrication, equipment, and installation shall comply with industry standards and code requirements. Where manufacturer's recommendations exceed industry standards, the manufacturer's recommendation shall establish the minimum standard. As a minimum, standards from the following organizations shall apply:

1. ANSI - American National Standards Institute.
2. ASME - American Society of Mechanical Engineers.

a. ASME Boiler and Pressure Vessel Code.

b. ASME B31 - Standards for Pressure Piping.

3. ASHRAE - American Society of Heating, Refrigerating and Air-Conditioning Engineers.

4. ASTM - American Society for Testing and Materials.

a. ASTM A53 Specification for Welded and Seamless Pipe.

5. AWWA - American Water Works Association.

6. CSA - Canadian Standards Association.

7. FM Global - Factory Mutual Global

8. IAPMO - International Association of Plumbing and Mechanical Officials.

9. NFPA - National Fire Protection Association.

10. OSHA - Occupational Safety and Health Administration.

11. NOT USED

12. UL - Underwriters Laboratories Inc.

13. Intertek (ETL Certification).

B. Materials, fabrication, equipment, and installation shall comply with federal, state, and local codes including, but not limited to, the following:

1. CBC, California Building Code, and CMC, California Plumbing Code.

a. Latest edition as adopted by the City of Compton, the County of Los Angeles, and the State of California including amendments effective on the Effective Date of the Contract.

2. California Code of Regulations, Title 8, Industrial Relations, Division 1, Chapter 4, Division of Industrial Safety.

3. OSHA - Occupational Safety and Health Administration.

4. CDPH - California Department of Public Health.

5. SCAQMD - South Coast Air Quality Management District.

C. Specifications or Drawings shall not be construed to permit deviation from the requirements of governing codes unless approval has been obtained from legally constituted authorities having jurisdiction, and the Architect. The Contract Documents may contain more stringent requirements than those legally required.

D. Permits and Fees: Refer to the General and Supplementary Conditions.

1.03 SUBMITTALS

A. Provide submittals in accordance with Section 01 3300: Submittal Procedures and with specific requirements of Division 22 sections, as applicable.

B. The above information shall become the basis for inspecting and testing materials and actual installation procedures performed in the Work.

C. Shop Drawings: Submit one additional copy when control diagrams having line voltage connections are indicated. Shop Drawings shall be specifically prepared for the Work of this Project. Drawings prepared in accordance with requirements of Section 01 31 13: Project

Coordination and Section 01 3300 may be provided by the Architect to serve as a background for the Shop Drawings. Shop Drawings shall comply with the requirements of Section 01 31 13 and Section 01 33 00 and shall indicate at a minimum:

1. Complete system layout of equipment, components, plumbing fixtures, piping, indicating service clearances, and pipe sizes, fitting types and sizes and pipe elevations, distances of pipes and equipment from building reference points and hanger support locations. The above items shall be coordinated on the shop drawings according to the requirements of Section 01 31 13.

2. Schedule and description of equipment, piping and fittings.

1.04 PROJECT RECORD DOCUMENTS

A. Comply with provisions of Section 01 77 00: Contract Closeout.

B. Project Record Drawings:

1. Provide a complete set of plumbing and fire protection drawings in AutoCAD and BIM, complete with external reference drawings, fonts, blocks and plotter pen color/line thickness settings on CD-ROM. Also submit one set of full size reproducible plots on vellum and 3 sets of prints.

2. Before Contract Completion, deliver corrected and completed prints to the OAR. Delivery of project record documents to the OAR does not relinquish responsibility of furnishing required information omitted from project record documents.

C. Operation and Maintenance Manuals:

1. Submit two copies of operation and maintenance manuals in required form and content. If no revisions are required, furnish one additional copy. If revisions are required, one copy shall be returned with instructions for changes; perform such changes and return three copies of manuals. Manuals shall be bound in accordance to Section 01 77 00. Deliver manuals to the OAR. Submit an electronic copy of the entire manual in PDF file format.

2. Contents of Manual:

a. Title sheet with Project name, including names, addresses and telephone number of Contractor, installer, and related equipment suppliers.

b. Manufacturer's operating instructions including, but not limited to, the following:

1) Identification of components and controls.

2) Trouble shooting checklist and guidelines.

3) Recommendations for optimum performance.

4) Warnings and safety precautions on improper or hazardous operational procedures or conditions

c. Manufacturer's product data and parts and maintenance booklet for each item of equipment furnished under Division 22 that includes the following as a minimum:

1) Manufacturer’s model, identification and serial numbers.

2) Exploded view of assembly drawings identifying each component or part with the relevant part number.

3) Directory of manufacturer's representatives, service contractors and part distributors.

4) Maintenance and trouble-shooting instructions, including schedule for preventive maintenance, periodic inspection and cleaning criteria.

d. Project Record Drawings: Complete set of plumbing, fire protection and control system drawings in 50 percent reduced print format shall be furnished with the manual. Submit the above record drawings on CD-ROM in AutoCAD and, if available, BIM, complete with external reference drawings, fonts, blocks, and plotter pen color/line thickness settings.

e. Testing, Adjusting, and Balancing reports: Submit as specified in Section 23 0593.

f. South Coast Air Quality Management District (SCAQMD) permits to install and operate boilers, water heaters and other fuel burning equipment and third-party source test reports as required by SCAQMD to allow start-up and operation of equipment.

g. Los Angeles County industrial waste permits.

h. Valve directory complete with location, function, size, and model of each valve with reference to the project record drawings.

i. Equipment and component identification chart complete with location, function, size, and model of each equipment or component with reference to the project record drawings.

1.05 COORDINATION

A. Contract Documents indicate extent and general arrangement of Work under Division 22. Contractor shall coordinate work in accordance with Section 01 3113 requirements and make adjustments as required to provide maximum headroom, a neat arrangement to keep passageways and openings clear to provide accessibility and provisions for maintenance, and to meet code requirements.

1.06 DELIVERY, STORAGE, AND HANDLING

A. Delivery and Storage: Deliver materials to Project site in their original unopened containers with labels intact and legible at time of delivery. Store in strict accordance with manufacturer's recommendations.

B. Do not store plastic pipe or materials in direct sunlight.

1.07 PRELIMINARY OPERATION

A. OAR may require any portion of plumbing Work to be operated before Substantial Completion. Such operation shall be in addition to regular tests, demonstrations and instructions required under the Contract Documents, and shall be performed as required.

B. Notify the INSPECTOR at least 24 hours in advance of lighting or re-lighting pilots.

1.08 TRAINING OF OWNER PERSONNEL

A. Training of Owner's personnel shall include:

1. A minimum of 4 hours of on-site overview of the overall Plumbing System.

2. Refer to Division 22 sections for specific training on each of the components of the Plumbing System.

B. Contract shall include the cost of training Owner operation and maintenance personnel in operating, adjusting, maintenance, trouble-shooting, and Project site repair of each component, equipment, or system provided under this Contract.

C. Operational and maintenance training shall be conducted on the Project site, unless indicated otherwise.

D. Upon completion of Owner training, a completion certificate indicating the nature of the training and a description of the systems, complete with equipment and component lists shall be issued to each trainee. The certificate should be issued in duplicate with one copy retained by OAR.

E. An attendance sheet with the names and signatures of all participants attending the training shall be submitted to the OAR and kept as part of the project documents.

1.09 GUARANTEES AND DAMAGE RESPONSIBILITY

A. Sound of water flowing in piping shall not be transmitted to building structure. Operation of mechanical system shall not produce operational sounds that can be heard outside of rooms enclosing apparatus or equipment.

PART 2 – PRODUCTS

2.01 MATERIALS AND EQUIPMENT

A. Unless otherwise specified, materials and equipment shall be new, in good and clean condition. Equipment, materials, and components shall be of the make; type and model number noted on Drawings or specified. Pieces of equipment of the same type shall be by the same manufacturer.

B. Whenever an item is listed by a single proprietary name, with or without model number and type, it shall be for purpose of design only, to indicate characteristics and quality desired. Proprietary designation listed on Drawings, or listed first in Specifications, is used as a basis for design to establish a standard for quality and performance and space requirements.

C. Equipment and materials indicated or required to be installed outdoors shall be of the type that is designed, manufactured, listed or approved by authorities having jurisdiction for outdoor installation by being resistant to the adverse effects of weather. The additional protective measures against outdoor weather required by the manufacturers' installation instructions and prevalent practice shall be provided.

D. For substitution of materials or products, refer to the General Conditions.

PART 3 – EXECUTION

3.01 SERVICE INTERRUPTIONS, OFF-SITE, GAS AND WATER

A. Schedule Work so there shall be no service interruptions of existing systems or systems during normal hours of operation of affected systems and facilities.

B. When service interruptions are mandatory, arrange in advance with the OAR as to time and date of such interruptions.

C. Systems, which are interrupted, shall be returned back into operation in such manner that they will function as originally intended.

3.02 CUTTING, NOTCHING, AND BACKING

A. Conform to California Building Code, Title 24, Part 2, for notches and bored holes in wood and for pipes and sleeves embedded in concrete and for cuts in steel, as detailed on structural Drawings.

B. Where pipes pass through, or are located within one inch of any construction element, install a resilient pad, ½ inch thick minimum, to prevent contact.

C. Furnish provisions for recesses, chases, and accesses and provide blocking and backing for proper reception and installation of plumbing Work.

3.03 LOCATION OF PIPING AND EQUIPMENT

A. Location of piping, apparatus and equipment indicated on the Drawings is approximate and shall be altered to avoid obstructions, preserve headroom, and provide free and clear openings and passageways.

B. Trenches parallel to footings shall not be closer than 18 inches to the face of footings and shall not be below a plane having a downward slope of 2 horizontal to one vertical, from a line 9 inches above bottom of footing.

C. Pipe in tunnels shall be installed close to one side of tunnel to provide maximum space for passage. Pipe shall not be installed through crawl hole unless otherwise specified or detailed on Drawings.

D. Place equipment in locations and spaces indicated, disassemble and/or reassemble equipment as required by Project conditions.

3.04 TESTS AND TESTING

A. Tests shall be as required under the applicable sections of Division 22, including this Section.

B. Additional tests may be required in the case of products, materials, and equipment if:

1. Submitted items are altered, changed, or cannot be determined as exactly conforming to the Contract Documents.

2. Performance testing and results may also be required on certain items which are as specified, including fan, and pump performance.

C. Piping Tests:

1. Perform tests required to demonstrate that operation of plumbing systems and their parts are in accordance with Specifications covering each item or system, and furnish materials, instruments and equipment necessary to conduct such tests. Tests shall be performed in presence of the Inspector, and representatives of any governmental agency having jurisdiction. Work shall not be concealed or covered until required results are provided.

2. If required tests are not performed, Owner may provide in accordance with the Contract Documents.

3. Pressure gauges furnished in testing shall comply with CPC. Air shall be bled from lines requiring hydrostatic or water tests.

4. Systems shall be pressure-tested in accordance with pipe testing schedule below. Pipe test shall indicate no loss in pressure after a minimum duration of 4 hours at test

pressures indicated. Where local codes require higher test pressures than specified herein for fire sprinkler systems, local codes shall govern.

5. Fuel gas lines shall be first tested with piping exposed, before backfilling trenches or lathing; second with piping in finished arrangement, backfilled and paved where required, and walls finished.

6. Piping systems may be tested as a unit or in sections, but entire system shall successfully meet requirements specified herein, before final testing by the Inspector.

7. Repair of damage to pipes and their appurtenances or to any other structures resulting from or caused by these tests, shall be provided.

D. Pipe Testing Schedule:

System Tested	**Test Pressure (psig)**	**Test With:**
Cast-iron soil, waste, vent, storm drain, condensate drain from air conditioning equipment	10 feet of water, vertically	
Domestic water piping	200	Water
Gas piping (steel threaded or plastic)	60 (both tests)	Air
Gas piping (steel welded)	100 (both tests)	Air
Gas welding station	1-1/2 Working pressure 100 min.	Dry nitrogen

E. Equipment Performance Assurance Tests:

1. Before operating any equipment or systems, a thorough check shall be performed to determine that systems have been flushed and cleaned as required and that equipment has been properly installed, aligned, lubricated, and serviced. Factory instructions shall be checked to verify installations have been completed and recommended lubricants have been installed in bearings, gearboxes, crankcases, and similar equipment. Particular care shall be furnished in lubricating bearings to avoid damage by over-lubrication and blowing out seals. Equipment shall also be checked for damage that may have occurred during shipment, after delivery, or during installation. Damaged equipment, products, and materials shall be replaced or repaired as required.

2. Upon completion of the above, adjust the system settings to within normal operating conditions to prevent the system from being damaged upon start-up.

3. Run-test the equipment after start-up for five consecutive days. Tests shall include operation of all equipment and systems for a period of not less than two 8 hour periods at 90 percent of the full specified capacities.

4. Equipment Start-up Reports: For each equipment or system on which start-up is performed, submit 8 copies of start-up report for review by the Architect.

   a. The start-up report shall include the manufacturer's standard start-up form completed and signed by the start-up technician.

5. Provide, maintain, and pay costs for equipment, instruments, and operating personnel as required for specified tests.

6. Provide electric energy and fuel required for tests.

7. Final adjustment to equipment or systems shall meet specified performance requirements.

8. Equipment, systems, or Work deemed defective during testing shall be replaced or corrected as required. Test until satisfactory results are provided.

F. Specific Coordinated Plan for Test and Balance:

1. Provide a narrative of the operational intent that clearly describes the function and sequence of operation of each component, equipment, or system installed. Instruct designated Owner personnel in the operation of the installed systems.

2. Prior to final test and balance, plumbing equipment and systems shall be operated and tested as indicated in Article 3.04.F above to demonstrate satisfactory overall operation of the installed systems.

3. Welding performed as part of this Division may be subject to radiographic inspections at random in accordance with requirements specified in Section 22 05 13: Plumbing Basic Materials and Methods.

3.05 NOISE AND VIBRATION REDUCTION

A. Correct noise or vibration caused by plumbing systems. Provide all necessary adjustments to specified and installed equipment and accessories to reduce noise to the lowest possible level

B. Correct noise or vibration problems caused by failure to install work in accordance with Contract Documents. Include all labor and materials required as a result of such failure. Pay for re-testing of corrected noise or vibration problems by the project acoustical consultant including travel, lodging, test equipment expenses, etc.

3.06 PROTECTION, CARE AND CLEANING

A. In addition to storage criteria of the General Conditions, and provisions under Section 01 50 00: Construction Facilities and Temporary Controls, the following shall be provided:

1. Provide for the safety and good condition of materials and equipment until Substantial Completion. Protect materials and equipment from damage.

2. Protect installed Work.

3. Replacements: In case of damage, immediately provide repairs and/or replacements as required.

4. Protect covering for bearings, open connections to tanks, pumps, compressors and similar equipment.

5. Interior of piping shall be maintained free of dirt, grit, dust, and other foreign materials.

6. Fixtures, piping, finished brass or bronze, and equipment shall have grease, adhesive, labels, and foreign materials removed. Chromium, nickel plate, polished bronze or brass Work shall be polished. Glass shall be cleaned inside and out.

7. Before initial start-up and again before Substantial Completion, piping shall be drained and flushed to completely remove grease and foreign matter. Pressure regulating assemblies, traps, strainers, boilers, flush valves, and similar items shall be thoroughly cleaned. Tag system with an information tag listing responsible party and date of element, before initial start-up and again before Substantial Completion. Compressed air, oil, and gas piping shall be blown out with oil-free compressed air or inert gas.

END OF SECTION

SECTION 22 05 13 - PLUMBING MATERIALS AND METHODS

PART 1 – GENERAL

1.01 SUMMARY

A. Section Includes:

1. This Section prescribes basic materials and methods generally common to the Work of Division 22.

B. Related Requirements:

1. Division 01: General Requirements.

2. Division 22: Plumbing.

3. Division 23: Mechanical.

4. Division 26: Electrical.

1.02 SUBMITTALS

A. Provide in accordance with Division 01, Section 22 05 00 and specific requirements of each section of Division 22.

B. Types of welding rods to be used.

1.03 QUALITY ASSURANCE

A. Standards: Comply with applicable national, state, and local codes and standards: ASTM, ASME, and ANSI. Federal Specifications, AWWA, SISPI, NFPA, FM, UL, CPC (California Plumbing Code), CMC (California Plumbing Code), CSA.

B. Conform to provisions of Section 22 05 00: Plumbing Common Work

C. Manufacturer of plumbing products must be third-party certified to ANSI/NSF Standard 61, Section 9 certification, and ANSI/NSF 372 to demonstrate compliance with the federal requirements for lead contribution to drinking water, the Safe Drinking Water Act SDWA, and the California Health and Safety Code Section 116875.

D. Qualifications of Manufacturer: Products used in the Work of this Section shall be produced by manufacturers regularly engaged in manufacture of similar items and with a history of successful production as reviewed by the ARCHITECT.

1.04 COORDINATION

A. Coordinate related Work in accordance with provisions of Section 01 31 13: Project Coordination.

PART 2 – PRODUCTS

2.01 GENERAL

A. Provide the following products if they are indicated in the Contract Documents or if they are required for the proper installation, function or operation of equipment, systems or components indicated in the Contract Document.

B. Provide the following products as a complete assembly with required accessories for a complete and functioning entity in compliance with governing codes and applicable standards as specified in Section 22 05 00, manufacturer's instructions or as required.

1. Omission of minor details in the Contract Documents does not waive and/or otherwise relinquish compliance with the above requirements.

2.02 MANUFACTURERS AND MATERIALS

A. Ball Valves: 2-inch and smaller:

BV-1: Class 150, 600 psi, Bronze, CWP two piece construction with reinforced TFE seats, full port, adjustable packing gland, (no threaded stem designs allowed), threaded or solder ends.

Manufacturer: Apollo Valves 77CLF-100A/77CLF-200A, NIBCO T-685-66-LF/S-685-66-LF, Hammond UP8303A/UP8513, Milwaukee UPBA400S/ UPBA450S

BV-2: Class 150, 600 psi, Stainless Steel, CWP two piece construction with reinforced TFE seats, full port, adjustable packing gland, (no threaded stem designs allowed), threaded or solder ends.

Manufacturer: Apollo Valves 76F-100, NIBCO T-585-S6-R-66-LL, Milwaukee BA260.

Ball Valves in Insulated Piping: Use extended operating handle of non-thermal conducive material, and protective sleeve that allows operation of valve without breaking the vapor seal or disturbing insulation and memory stops that are fully adjustable after insulation is applied. Apollo Valves Therma-Seal, NIBCO Nib-Seal Handle.

B. Butterfly Valves:

BFV-1 Centerline Series A, 200 psi CWP tight shut-off.

1. Body: Lug type ductile iron. Suitable for bi-directional dead-end service at rated pressure without use of downstream flange.

2. Disc: Bronze, or aluminum bronze.

3. Stem: One or two-piece, 400 series stainless steel.

4. Seat and O-Rings: EPDM.

5. Upper and Lower Stem Bearings: Copper alloy or non-metallic material.

6. Operators: Valves 6 inches and smaller, with lever handle. Valves 8 inches and larger, with manual gear operator and disc position indicator.

7. Manufacturers:

   a) Valves 2.5 to 6-inch: Apollo Valves LD141, Milwaukee ML 233E, Hammond 6411-03

   b) Valves 8-inch and larger: Apollo Valves LD141, Milwaukee ML 333E, Hammond 6411-03, NIBCO LD 2000

C. Check Valves:

1. Bronze, 2-inch and smaller:

   CHV-1: 200 psi, CWP horizontal swing, Y pattern, renewable seat and disc, threaded ends.

   Manufacturer: Apollo Valves 163T-LF, NIBCO T-413-Y-LF, Milwaukee UP-509, Hammond UP-904

   CHV-2: 200 psi, CWP, bronze body, horizontal swing, Y pattern, renewable seat and disc, solder ends.

   Manufacturer: Apollo Valves 163S-LF, NIBCO S-413-Y-LF, Hammond Up-943

2. Cast Iron 2 1/2-inch and larger:

   CHV-3: Class 125, 200 psi, CWP, IBBM, renewable seat and disc, bolted cap, flanged:

   Manufacturer: Apollo Valves 910F, Crane 372, Stockham G-927, NIBCO T-918-B.

D. Earthquake Valve:

EQV-1: Mechanically triggered by seismic movement, complying with state of California seismic response specifications, UL listed and certified by D.S.A. Size and pressure as required or indicated on Drawings. (Minimum 1/4 psi, maximum 10 psi. Earthquake valve shall shut off gas automatically during an earthquake to prevent an explosion or fire. Acceptable Manufacturers: California Valve (former Koso).

1. Not sensitive to vibrations caused by passing trucks or accidental bumping.

2. Sensitive to wide amplitude G's only. Preset at factory for the correct G-rating.

3. Positive sealing from minus 10 degrees F. to 150 degrees F.

4. Visual open-close indicator.

5. Manual reset.

6. Plumb line for mounting.

7. Tripping mechanism has non-creeping rolling latch.

8. Install valve per manufacturer’s recommendations only.

E. Expansion Tank:

ET-1: Pressurized, vertical, steel expansion tank for potable water systems with FDA approved, replaceable, heavy duty, butyl rubber blend diaphragm, polypropylene lined dome, 1/2 inch, 3/4 inch, 1 inch or 1 ½-inch NPT system connection, 1/2 inch or 3/4 inch drain, 0.302 inch-32 standard automobile tire valve type charging connection, lifting rings and a floor mounting skirt for vertical installation. The tank must be constructed in accordance with Section VII of the ASME Boiler and Pressure Vessel Code and stamped for 125 psi working pressure. The tank must be also rated for a continuous working temperature of 240 degrees F. Provide weather and rust resistant coating.

Manufacturer: Apollo Valves 16XT, Bell and Gossett, Wheatley, Taco, Amtrol

F. Flow Control Valve – Manual:

FC-1: Flow control valves: Bell and Gossett Series CB circuit setter balancing valve, line size, with integral pointer (to register degree of valve opening), differential pressure meter connections with built-in check valves and lockable memory stops. Manufacturer: Apollo Valves 58A, Armstrong ARMFLO circuit-balancing valves, series CBV

G. Gate Valves:

1. Bronze, 2-inch and smaller:

GV-1: Class 125, 200 psi, CWP, bronze body and bonnet, non-rising stem, inside screw, screw-in bonnet, solid disc, threaded ends:

Manufacturer: Apollo Valves 101T-LF, NIBCO T-113-LF, Milwaukee UP105-P2, Hammond UP645

GV-2: Same as GV-1, except solder ends:

Manufacturer: Apollo Valves 101S-LF, NIBCO S-113-LF, Milwaukee UP115, Hammond UP647.

2. Iron, 2-1/2-inch and larger:

GV-3: Class 125 250 psi CWP iron body, flanged ends, bolted bonnet with wheel handle, resilient wedge, non-rising stem.

Manufacturer: Apollo Valves 610F-LFA, NIBCO F-619-RW.

GV-4: Class 125, 250 psi CWP iron body, flanged ends, bolted bonnet with 2-inch operating nut, resilient wedge, non-rising stem, fusion bonded epoxy coated. For below grade use..

Manufacturer: NIBCO F-619-RW-SON.

H. Heater Vent Pipe:

1. Schedule Number:

HVP-1 For use in intake and exhaust of high efficiency condensing type gas water heaters only as required by manufacturer. Pipe shall be PVC, Schedule 40, extruded from 100 percent virgin polyvinyl Chloride (PVC) compound, meeting requirements of class 1254-13 of ASTM D1784. Manufacturer: Spears, Charlotte.
Fittings shall be Schedule 40 molded from PVC type I compound, conforming to the requirements of specification ASTM D2466.
Manufacturer: Spears, Charlotte, Harvel Plastics Inc..

I. Piping and fittings:

1. Piping shall be continuously and permanently marked with manufacturer's name, type of material, size, pressure rating, and the applicable ASTM, ANSI, UL, or NSF listing. On plastic pipe, date of extrusion must also be marked.

2. Underground non-ferrous pressure pipes shall be installed with proper color tracer wires. Refer to color code provisions in Section 22 0553: Plumbing Identification.

J. Pipe and Fitting Requirements Schedule: Unless otherwise specified or indicated on Drawings, pipe and fittings shall be installed in accordance with the following table:

TABLE I
PIPE AND FITTING SCHEDULE

Use	Limits	Pipe	Fittings
Condensate Drain	All sizes	P-3	PF-3
Domestic Hot and Cold water,	All Sizes	P-3	PF-3
Storm and Overflow Drain	All sizes	P-1	PF-1
Natural Gas, Exterior	Underground, site only	P-5	PF-5a, and PF-5b
Natural Gas, Interior, aboveground	All sizes	P-4	PF-4a and PF-4b
Waste and Vent - Indirect	All sizes	P-2	PF-2
Waste and Vent – Sanitary/ Grease	All sizes	P-1	PF-1

1.

P-1: Cast iron: Hubless, service weight, ASTM A888, CISPI 301, conforming to CISPI 310 and installed in accordance to IAPMO IS 6.

Manufacturer: American Foundry, Tyler, AB & I.

PF-1: Cast iron, soil or waste no-hub coupling with neoprene gaskets, stainless steel corrugated shields and stainless steel clamps. 2 bands for size 1 ½-inch thru 4-inch, IAPMO, ASTM C 564 and CISPI 310.

P-2: Copper drainage tube, inside structure and above grade. Type DWV hard temper, ASTM B 306.

Manufacturer: Mueller, Anaconda, Cerro Brass, Cambridge-Lee, Halstead.

PF-2: Cast brass drainage fittings ASA B 16.23, ASTM B 42.

Manufacturer: Mueller Brass, Nibco, Stanley Flagg, Lee Brass..

P-3: Copper water tube, Type L hard, ASTM B88. (For above ground use only.)

Manufacturer: Mueller, Cambridge-Lee, Halstead.

PF-3 Copper Press-Connect pressure fittings, comply with ASME B16.51 “Copper Alloy Press-Connect Pressure Fittings”, with Ethylene Propylene Diene Monomer, EPDM O-Ring Seal in each end. Fittings with the sizes of 2-1/2” and larger shall have cross-section Grab Rings and separation rings.

Manufacturer: Viega, Mueller Industries, Apollo.

P-4: Black steel pipe, Schedule 40, ASTM A53, Type E, ERW.

Manufacturer: US Steel.

PF-7a: Malleable iron, Class 125, ANSI B 16.3, threaded or welded Schedule 40 black steel for 2-inches and below and welded for 2 ½-inch and above.

Manufacturer: Stockham.

PF-4b: Press fittings, ASME B31, Carbon Steel, – For aboveground piping 2-inches and below. Provide fittings with Hydrogenated Nitrile Butadiene Rubber, HNBR Sealing Element.

Manufacturer: Apollo Valves: Power Press, Viega: MegaPressG.

P-5: Polyethylene plastic pipe, ASTM D 2513, Standard Dimension Ratio 11 rated at 80 psi working pressure and 73° Fahrenheit for 3 inches and smaller, SDR 11.5 rated at 76 psi and 73° Fahrenheit for 4 inches and above, butt or socket type fittings, joined by heat fusion, orange or yellow color. Installer shall be certified by the manufacturer for this kind of joint installation.

Manufacturer: CPCHEM (Chevron Phillips Chemical Company LP) PE 2406.

PF-5a: Polyethylene plastic fittings, ASTM D 3261 and D 2683, Standard Dimension Ratio 11 rated at 80 psi working pressure and 73° Fahrenheit for 3 inches and smaller, SDR 11.5 rated at 76 psi at 73° Fahrenheit for 4 inches and above, butt or socket type fittings, joined by heat fusion, Installer shall be certified by manufacturer for joint installation. Color orange or yellow.

Manufacturer: CPCHEM, (Chevron Phillips Chemical Company LP).

PF-5b: Polyethylene transition risers, for PF-13a above, Transition fitting must have a minimum vertical height of 36 inches from the horizontal connection which will allow for a 6-inch steel riser above ground. Polyethylene transition risers shall be anodeless.

Manufacturer: GF Piping Systems.

K. Pipe Isolators:

PLA-1 Absorption pad shall be not less than ½ inch thick, unloaded. Pad shall completely encompass pipe. ForCopper piping

Manufacturer: Holdrite, LSP, Stoneman, Potter-Roemer, Trisolator, PR-Isolator.

L. Pressure Gage: Aluminum or steel case, minimum 4 ¼-inch dial; pressure type or combination vacuum-pressure type, with provisions for field calibration. Dial indicator to indicate pressure in psi with accuracy to within plus or minus 0.5 percent of maximum dial reading. Furnish gages with restriction screw, size 60, to eliminate vibration impulses. Black case and ring, bourdon tube of seamless copper alloy with brass tip and socket. Three way gage cock,

constructed of brass with stuffing box, 1/2 inch couplings, with fixed or movable cap nut to shut off pressure gage.

PG-1 Pressure type, black drawn steel case, 4-1/2-inch glass dial, range approximately twice line pressure.

Manufacturer: Marsh Keckley, Trerice, Weksler, Weiss.

M. Plug Valves:

PV-1 2 inches and smaller: Rockwell No.114, lubricated plug type, 200-pound., water operating gauge pressure iron body and plug, regular pattern, threaded, with indicating arc.

Manufacturer: Walworth, Homestead, WKM.

PV-2. 2 ½-inch and larger: Rockwell No.115 and No.165 lubricated plug type, 200 pound water operating gauge. Iron body and plug, regular pattern, flanged, with indicating arc.

Manufacturer: Walworth, Homestead, WKM.

N. Safety Relief Valves:

SRV-1: Combination temperature and pressure relief type. CSA approved. Set to open at 125 psi pressure.

Manufacturer: Apollo Valves: 18C, Watts: 40L, Cash-Acme: NCLX-1.

SRV-2: Same as SRV-1, except provide on storage type water heater with anode in dip tube.

Manufacturer: Apollo Valves: 18C, Watts: 100XL, Cash-Acme: NCLX-1.

SRV-3 Spring type, ASME and NB stamped and certified with manual lifting device for air or gas.

Manufacturer: Apollo Valves, Bailey, Cash-Acme, Watts, Keckley.

O. Strainers:

STR-1 Description: Wye type with monel or stainless steel strainer cylinder (manufacturer's standard mesh), and gasketed machine strainer cap. Where indicated on Drawings, provide with valved (globe valve) blowout piping, same size as blowout plug.

1. 2-inch and smaller:
   C.M. Bailey No.100-A, 250 lb., cast iron body, threaded, Keckley: Style B, Spirax Sarco Y-type.

2. 2 ½-inch and larger:
   C.M. Bailey No.100-A, 125 lb., cast iron body, flanged, or Victaulic style 732, 300 psi, ductile iron body, grooved, fusion bonded epoxy coated.

   Manufacturer: C.M.Bailey, Armstrong, Muessco, Keckley 'A'.

STR-2 Y pattern cast iron bodies, 125 psi, monel screen. Open area at least twice the cross-sectional area of IPS pipe in which strainer is installed and may be woven wire or perforated type. Screwed ends for sizes up to 2 inches, flanged ends fusion bonded epoxy coated for 2 ½-inch and larger perforations, in accordance with the following:

1. Steam service - 40 square mesh.

2. Other services - 16 square mesh.

Bailey No.100, Armstrong, RP&C, Keckley.

STR-3 Flanged, bucket type, semi-steel body, 125 psi, stainless steel screen with 1/8 inch diameter perforations, all sizes.

Manufacturer: Bailey No.1, Zurn 150 Series, RP&C, Keckley GF.

STR-4 Grooved, T-pattern, ductile iron body, 300 psi, stainless steel frame and mesh basket, grooved ends.

P. Vent Caps:

VC-1 Vandal-proof hood type, for plumbing vent lines.

Manufacturer: Stoneman Engineering and Mfg., Semco 1550.

Q. Flanges: Flanges shall be furnished and installed at each flanged connection of each type of equipment, tanks, and valves. Faces of flanges being connected shall be furnished alike. Connection of a raised face flange to a flat-faced flange is not permitted. Flanges shall conform to following schedules:

TYPE OF PIPE	FLANGE
Screwed black or galvanized grooved steel pipelines.	125-pound black cast iron screwed flange, flat faced or grooved flange adapters, Victaulic Style 741, Tyco-Grinnell Fig. 71, Gruvlok Fig. 7401.
Welded or grooved steel pipe, except high pressure steam lines.	150-pound black forged steel welding flanges, 1/16 inch raised face ASTM A 105, Grade II or grooved flange adapters, Apollo Shurjoint 7041, Victaulic Style 741, Tyco-Grinnell Fig. 71, Gruvlok Fig. 7401.
Copper and brass pipe or tubing.	150 pound cast bronze, flat-faced flange with solder end or grooved flange adapters, Apollo Shurjoint C341, Victaulic Style 641, Tyco-Grinnell Fig. 61, Gruvlok Fig. 6084.

1. Gasket material for flanged connections shall be full faced or ring type to suit facing on flanges and shall be furnished in accordance with following schedule:

SERVICE	TYPE
Cold water	1/16-inch-thick neoprene

Grooved end flange adapters supplied with pressure responsive elastomeric Gaskets supplied with grooved flange adapters shall be pre-lubricated by the manufacturer. Grade of gasket to suit intended service.

R. Unions:

1. Unions shall be furnished and installed in accordance with the following requirements (unless flanges are furnished):

a. At each threaded or soldered connection to equipment and tanks, except in Freon or fuel gas, piping systems, whether indicated or not.

b. Immediately downstream of any threaded connection to each manually operated threaded valve or cock, and each threaded check valve, yard box or access box except those in Freon piping systems, whether indicated or not.

c. At each threaded connection to threaded automatic valves (except those in Freon piping systems) such as reducing valves and temperature control valves, whether indicated or not.

d. If grooved piping is used, couplings shall serve as unions. Additional unions are not required

2. Unions shall be located so that piping can be easily disconnected for removal of equipment, tank, or valve.

PART 3 – EXECUTION

3.01 EXAMINATION

A. Examine areas and conditions under which Work of this Section shall be performed. Correct conditions detrimental to proper and timely completion of Work. Do not proceed until unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Provide all materials and equipment for the Work. Furnish and install necessary apparatus, parts, materials, and accessories.

B. Pipe Installation:

1. Install piping parallel to wall and provide an orderly grouping of proper materials and execution.

2. Piping shall clear obstructions, preserve headroom, provide openings and passageways clear, whether indicated or not. Verify the Work of other Divisions to avoid interference.

3. If obstructions or the Work of other Divisions prevent installation of piping or equipment as indicated by the Drawings, perform minor deviations as required by the ARCHITECT.

4. Install piping after excavation or cutting has been performed. Piping shall not be permanently enclosed, furred in, or covered before required inspection and testing is performed.

5. Exposed polished or enameled connections from fixtures or equipment shall be installed with no resulting tool marks or threads at fittings. Residue or exposed pipe compound shall be removed from exterior of pipe.

6. Piping shall be concealed in chases, partitions, walls, and between floors, unless otherwise directed or specifically noted on Drawings. When penetrating wood studs,

joists, and other wood members, provide such members with reinforcement steel straps of Continental Steel & Tube Co., ULINE, Independent Metal Strap.

7. Reduce fitting where any change in pipe size occurs. Bushings shall not be furnished unless specifically reviewed by the ARCHITECT, or indicated on Drawings.

8. Piping subject to expansion or contraction shall be anchored in a manner, which permits strains to be evenly distributed. Swing joints or expansion loops shall be installed. Seismic restraints shall be installed so as not to interfere with expansion and contraction of piping. Seismic loops required at all building separations.

9. Immediately after lines have been installed, openings shall be capped or plugged to prevent entrance of foreign materials. Caps shall be left in place until removal is necessary for completion of installation.

10. Couplings shall not be installed except where required pipe runs between other fittings are longer than standard length of type of pipe being installed and except where their installation is specifically reviewed by the ARCHITECT.

11. Water piping shall be installed generally level, free of traps, unnecessary offset, arranged to conform to building requirements, clear of ducts, flues, conduits, and other Work. Piping shall be arranged with valves installed to provide for complete drainage and control of system. Piping shall not be installed which causes an objectionable noise from flow of water therein under normal conditions. Refer to Section 23 0500: Common Work Results for Plumbing.

12. Water lines may be installed in same trench with sewer lines, provided bottom of water line is 12 inches minimum above top and to the side of sewer line.

13. Changes in pipe sizes shall be furnished with eccentric reducers, flat on top. Offsets to clear obstruction shall not be installed so as to produce air pockets.

C. Pipe Sleeves and Plates:

1. Provide pipe sleeves of Schedule 40 black steel pipe or Schedule 40 PVC plastic pipe in concrete or masonry walls, footings, and concrete floors below grade. Provide adjustable submerged deck type sleeves at locations where pipes pass through concrete floors, except concrete slab floors on grade, and at locations where soil pipe for floor type water closets passes through concrete floors.

2. Sleeves shall provide ½ inch clearance around pipes, except plastic pipe shall have 1 inch clearance. Caps of deck type sleeves shall be removed just prior to installation of pipe. Area around sleeves shall be smooth and without high or low spots. Sleeves in walls shall not extend beyond exposed surface of wall. Sleeves in concrete floors and walls shall be securely fastened to forms to prevent movement while concrete is being placed.

3. Piping installed on a roof shall clear the roof surface by 10 inches minimum, with or without insulation. Bottom of individual fittings may infringe on 10 inches clear space but not groups of fittings or fittings located within 27 inches of each other.

4. Stiles shall be provided to facilitate crossing of piping when parallel piping runs are laterally greater than 12 inches out-to-out, or any pipe is higher than 18 inches, and more than 40 feet long or runs between two or more major pieces of equipment or housings greater than 20 feet apart. Stiles shall be not less than 20 inches wide with a

minimum tread depth of 10 inches. Where stiles are required, they shall be located so greatest obstructed distance is 30 feet.

5. Where pipes pass through waterproofed walls, floors, or floors on grade, sealant with Link-Seal Modular Seals, between pipe and sleeve to provide a waterproof joint. Where earth is in contact with pipe on both sides of a wall or foundation, the waterproof joint is not required. Commercial rubber compression units may be furnished instead of sealed sleeves if reviewed by the ARCHITECT.

6. A swing joint, or other required device, shall be furnished and installed in hot water lines with 10 feet of sealant or compression joint to allow for expansion.

7. Provide polished, chrome-plated flanges when plumbing pipes pass through walls at plumbing fixtures, etcetera as specified in Section 22 10 00 Plumbing. Provide polished steel, chromium-plated split floor and ceiling plates at locations where pipes pass through walls, floors, ceilings, and partitions in finished portion that neatly conceals pipe insert.

8. Pipe sleeves shall be provided where pipes intersect footings or foundation walls and sleeve clearances shall provide for footing settlement, but not less than one inch all around pipe.

D. Welding of Pipe and Qualifications of Welder:

1. Joints above grade or accessible conduit or tunnels in steel piping may be either welded or screwed unless specifically indicated otherwise on Drawings or specified. Joints in below grade steel piping, whether in insulation or not, shall not be welded, unless otherwise indicated.

2. Welded joints in pipe shall be continuous around pipe and shall comply with ASME B31: Code for Pressure Piping, unless otherwise specified.

3. Each pipe weld shall be stamped with welder's identification mark. Welding shall be performed by welders possessing a valid certificate of qualification for welding carbon steel welding pipe in horizontal position (2G) and horizontal fixed position (5G) in accordance with the requirements of Section IX of the ASME Boiler and Pressure Vessel Code, by an OWNER-recognized, DSA approved testing laboratory.

4. Before any welder performs welding on the Work, furnish the INSPECTOR with a copy of welder's valid qualification papers and obtain verification. Welder qualification is not valid unless it has been issued while welder was performing work for current employer, and has performed type of work described by qualification in the preceding 3 months.

REFERENCE: ASME BOILER AND PRESSURE VESSEL CODE, SECTION VIII, UW-29 TESTS OF WELDERS AND WELDING OPERATORS.

5. Welding performed under these Specifications is subject to special tests and inspections including rigid Ultra Sonic Testing (UT) and radiographic inspection at random, in accordance with Technique for Radiographic Examination of Welded Joints by an OWNER recognized, DSA approved testing laboratory.

ASME BOILER AND PRESSURE VESSEL CODE, SECTION VIII, UW-51 RADIOGRAPHIC EXAMINATION OF WELDED JOINTS.

E. Unacceptable Welds and Repairs to Welding:

1. Welds containing any of the following types of imperfections shall be deemed defective Work:

   a. Cracks of any type.

   b. Zones of incomplete (in excess of 1/32 inch) fusion or penetration.

   c. Elongated slab inclusions longer than 1/4 inch.

   d. Groups of slag inclusions in welds having an aggregate length greater than thickness of parent metal in a length 12 times the thickness of the parent metal.

   e. Undercuts greater than 1/32 inch.

   f. Overlaps, abrupt ridges or valleys.

3. When a defective weld is detected by examination as outlined above, two additional welds shall be radiographed at locations selected by the Project Inspector. If the two selected welds demonstrate compliant welding, then the two tested welds shall be deemed to be in compliance. Welding revealed by radiographs to be defective Work shall be removed, repaired, and tested by radiograph.

4. If either of the two selected welds demonstrates welding deemed to be defective Work, all welding in that portion of the Work shall be deemed defective Work and either: all welds shall be cutout, prepare new ends for welding and weld to comply with this Specification, or radiograph all welds, removing and repairing only such welding deemed to be defective Work.

5. Repair welding shall be performed in a manner in full compliance with ASME B31. The welded joints or repairs shall be spot examined with UT or radiographic tests in accordance with foregoing requirements.

   REFERENCE, ASME BOILER AND PRESSURE VESSEL CODE, SECTION VIII, UW-52.

6. OWNER shall cause to be performed additional random UT and radiographic examinations of welds. OWNER shall be responsible for the costs of any UT and radiographic examinations found to be in compliance with specified requirements.

7. Installer shall be responsible for the costs of UT and radiographic re-examinations of welds deemed defective Work and not in compliance with this Specification, and shall repair or replace said welds in accordance with specified requirements.

F. Welding Rods: Submit a written list of materials and proposed type of welding rods.

G. Backing Rings: Backing rings may be submitted for installation provided the Product Data is submitted with the material list.

H. Qualification Tests for Low-pressure Welding:

1. Tests shall be performed on 3-inch standard weight pipe ASTM A53, Grade A, and shall be welded by acetylene and electric arc. Each sample shall consist of 2 pieces, each 10 inches long, with 30-degree bevel at point weld.

2. Two 20-inch samples shall be performed in the 2G and two 20-inch samples in the 5G positions, with positions defined in Section IX, ASME Boiler and Pressure Vessel Code. Welds shall have the reinforcement ground or machined flush to the surface of the pipe before testing. Samples shall be tested as full section tensile.

3. Weld shall develop a load of 90 percent of 50,000 psi, i.e., 45,000 psi or shall develop a fracture in parent metal.

4. Each qualified welder shall carry an identification card listing welder's name, date of test, and type of welding tests passed; signed by the welder and the laboratory.

5. A valid certificate of qualification issued in compliance with requirements of the ASME Boiler Pressure Vessel Code Section IX shall qualify a welder for issuance of a certificate for low-pressure pipe welding.

I. Certificates of Qualification for Welding of Unfired Pressure Vessels:

1. Certificates of qualification shall be issued by a laboratory recognized by the OWNER in compliance with the requirements of the ASME Boiler Pressure Vessel Code Section IX. Qualifications shall be for both acetylene and arc welding of Schedule 40 ASTM A53, Type B, steel welded or seamless pipe in the Horizontal Position (2G) and the Horizontal Fixed Position (5G) as defined by said code.

2. Certificate described above is not valid unless it has been issued while welder was working for his current employer, and unless welder has performed type of work described by certificate in the preceding three months. Requirements for possession of a valid certificate shall not be waived for welders fabricating unfired pressure vessels when the Specifications require compliance with ASME code or when welding pipe carries working pressures greater than 75 psi and temperatures greater than 250 degrees F.

J. Pipe Joints and Connections:

1. Pipe and tubing shall be cut per IAPMO Installation Standards. Pipe shall have rough edges or burrs removed so that a smooth and unobstructed flow shall be provided.

2. Hot tapping of gas lines is strictly prohibited.

3. Threaded Pipe: Joints in piping shall be installed according to the following service schedule:

   a. Soap Piping: Litharge and glycerine, or Expando, Gasoila.

   b. Plastic Piping: Teflon pipe joint compound tape.

   c. Oxygen Piping: Wash treads with S.P., rinse, blow-dry and apply litharge and glycerine.

d. Cleanout Plugs: No compound shall be used. After inspection and test, plugs shall be removed, cleaned, greased, and replaced.

e. Other services furnish sealant, suitable and as reviewed by the ARCHITECT.

4. Threads on pipe shall be cut with sharp, clean, unblemished dies and shall conform to ANSI/ASME B2.1 for tapered pipe threads.

5. Joint compounds shall be smoothly placed on male thread and not in fittings. Threaded joints shall be installed tight with tongs or wrenches and sealant of any kind is not permitted. Failed joints shall be replaced with new materials. Installation of thread cement or sealant to repair a leaking joint is not permitted.

6. Sharp-toothed Stillson, or similar wrenches, is not permitted for the installation of brass pipe or other piping with similar finished surfaces.

K. Copper Tubing and Brass Pipe with Threadless Fittings:

1. Silver brazed joints shall be used for attaching fittings to non-ferrous metallic refrigerant piping.

2. Non-pressure gravity fed condensate lines may be soldered with 95/5 solder.

3. Silver brazing alloy, Class BCUP-5. Surfaces to be joined shall be free of oil, grease, and oxides. Socket of fitting and end of pipe shall be thoroughly cleaned with emery cloth and wiped to remove oxides. After cleaning and before assembly or heating, flux shall be installed to each joint surface and spread evenly. Heat shall be applied in accordance with instructions in the Copper Tube Handbook issued by Copper Development Associates. Joints constructed of rough bronze fittings shall be provided as recommended by manufacturer.

4. Do not overheat piping and fittings when installing silver brazing.

5. Joints in non-ferrous piping for services not covered above shall be installed with solder composed of 95/5 tin/antimony, ASTM B32, Grade 5A. Surfaces to be jointed shall be free of oil, grease, and oxides. Sockets of fitting and end of pipe shall be cleaned with emery cloth to remove oxides. Solder flux shall be sparingly installed and solder added until joint is completely filled. Do not overheat. Excess solder, while plastic, shall be removed with a small brush in order to provide an uninterrupted fillet completely around joint. Random inspection of joints shall be conducted by Project Inspector to ensure joints are lead-free.

6. Grooved end joints for copper piping shall be assembled in accordance with the latest manufacturer recommendations. Pipe ends shall be clean and free from indentations, projections, and roll marks in the area from pipe end to groove for proper gasket sealing. Grooving tools shall be as manufactured by Victaulic, RIDGID, MAG Tool.

7. Pressed fittings for copper or copper alloy pipe or tubing shall have an elastomeric O-ring that forms the joint. The pipe or tubing shall be fully inserted into the fitting, and the pipe or tubing marked at the shoulder of the fitting. Pipe or tubing shall be cut square, mechanically cleaned and reamed prior to joining to remove all burrs (interior and exterior) and restore full inside diameter and a smooth, chamfered exterior surface. The fitting alignment shall be checked against the mark on the pipe or tubing to ensure the pipe or tubing is inserted into the fitting. The joint shall be pressed using the tool recommended by the manufacturer.

a. Press Installation Training Requirement: Installation training shall be provided on site by manufacturer personnel and documented with Engineer. Installation procedures, depth guides, and tool inspection shall be provided by manufacturer for all product types (steel or copper) for reference and safety assurance.

L. Ring-Type Pipe: Joints shall be installed in accordance with manufacturer's instructions with grooved couplings, fittings and rubber rings. Couplings and pipe shall be compatible and of the same manufacturer. Rings shall be accurately located and installed by grooves in coupling. Pipe shall be installed with zero deflection unless otherwise specified. Pressure pipe shall be furnished with thrust blocks at each offset point.

M. Welded Pipe Joints:

1. Joints in welded steel pipelines shall be installed by oxyacetylene or electric arc process. Welding shall be continuous around pipe and provided as specified.

2. Butt welds shall be of the single V-type, with ends of pipe and fittings beveled approximately 37 ½ degrees. Piping shall be aligned before welding is started with the alignment maintained during welding.

3. Welds for flanges and socket fittings shall be of the fillet type with a throat dimension not less than pipe wall thickness.

N. Grooved End Pipe Joints: Grooved end joints for carbon steel piping shall be assembled in accordance with the latest manufacturer recommendations. Pipe ends shall be clean and free from indentations, projections, and roll marks in the area from pipe end to grove for proper gasket sealing. Grooving tools shall be as manufactured by Victaulic, RIDGID, MAG Tool.

O. Stainless steel press joints: Joints shall be Vic-Press 304TM, made with Victaulic Series ‘PFT’ tools and the appropriate sized jaw. Pipe shall be certified for use with Vic-Press 304TM system, and shall be square cut, properly deburred and cleaned, and marked at the required location to insure full insertion into the fittings and/or couplings.

P. Polyethylene (Plastic) Pipe:

1. Joints shall be installed by the heat fusion method, in accordance with manufacturer's recommendations and IAPMO installation standard IS 12, for natural gas.

2. Pipe Riser at Meter, Regulator and Building Wall: Prefabricated, anodeless type, utilizing a grade level transition between underground polyethylene pipe and gas supply steel pipe of riser outlet, GF Piping Systems. Below grade to above grade transition shall be installed in a welded, epoxy coated, steel casing.

3. Connections to Existing Pipe Line or Branch:

a. Steel-to-plastic (PE): Provide manufacturer’s prefabricated standard transition fitting, transition from epoxy-coated steel pipe to plastic, R. W. Lyall Co..

b. Plastic-to-plastic, PVC to PE: Provide manufacturer’s prefabricated standard transition fitting, transition from PVC to epoxy-coated steel pipe to PE; R.W. Lyall Co..

c. Plastic-to-plastic, PE to PE: Provide manufacturer’s standard fused tapping tee assembly with shut-off feature.

4. Provide PE reinforcing sleeves where PE pipe is fused to multi-saddles, service punch tee, reducing tees, transition fittings and anodeless risers.

Q. Valves: Valves shall conform to the following:

1. Piping systems shall be furnished with valves at points indicated on Drawings and specified, arranged to provide complete regulating control of piping system throughout building and the Project site.

2. Valves shall be installed in a neat grouping, so that parts are easily accessible and maintained.

3. Valves shall be full size of line in which they are installed, unless otherwise indicated on Drawings or otherwise specified, and shall be one of types specified.

4. Provide chain operators on valves 2-inch and larger located 7 feet or more above the servicing floor level.

5. Valves for similar service shall be of one manufacturer.

6. Except where otherwise specified, valves shall be Apollo, Belimo, Victaulic, Stockham, Crane, Jenkins, Milwaukee, Hammond, American, NIBCO, Hoffman.

7. Ball valves below grade in yard boxes shall have stainless steel handles.

8. Hose bibs in dense garden areas shall be ¾ inch in size with one hose bib in the lunch pavilion 1 inch in size. Other hose bibs shall be ¾ inch lock shield type. Bibs shall be furnished with vacuum breaker protection.

9. Safety valves and pressure relief valves shall have stamp of approval as required by ASME and shall be provided with annual test lever. Where a hot water storage tank is heated by means of a coil, pressure relief valve shall have a steam BTU discharge rating of the coil. Discharge pipe from safety or pressure relief valves shall be not less than one pipe size larger than inlet pipe size of valve. Discharge pipe shall terminate as indicated and shall be free of traps. In addition to locations specified, pressure relief valves shall be installed in the following locations:

   a. On discharge side of each pressure-reducing valve.

   b. On each water heater connected to a hot water storage tank and other pressure vessels.

   c. On cold water line to each water heater or hot water storage tank when there is a check valve, backflow prevention valve or similar device between water heater or hot water storage tank and meter or relief valve at the pressure reducing valve assembly.

   d. On discharge side of each air compressor.

   e. On each air receiver connected to an air compressor.

10. Temperature relief valves and combination temperature and pressure relief valves shall be as specified and furnished as set forth in this Section. Discharge pipe from relief valves shall be not less than discharge area of valve or valves it connects,

based on discharge area of valves, and shall terminate as indicated and free of any traps. Valves shall be installed at following locations:

11. A combination temperature and pressure relief valve or combination of valves on each heating hot water storage tank. Temperature sending element shall extend into water inside tank.

12. Manual air vent valve assemblies shall be installed at each high point of hot water space heating and chilled water piping systems. Valves shall discharge through 1/4 inch diameter copper tubing and drain to nearest floor sink. Automatic type air vent valve shall only be installed where specifically indicated. Radiator, convectors, and finned pipe convectors shall be fitted with packless radiator valves, angle or straight pattern. Each convector or radiator installed as part of a space hot water heating system shall be furnished with a manual-type air vent valve.

R. Strainers: Strainers shall be installed on each water main (except for fire line) downstream of the meter, above grade, when a pressure regulator assembly is not installed. Main strainer shall be of Y-flange or groove type. On closed loop chilled and heating hot water systems pump systems, a strainer shall be installed at each pump inlet and upstream of each flow control valve assembly. The control valve assembly may include a modulating temperature control valve and a flow-limiting valve, manufactured by Griswold, AutoFlow, Flow Control Industries, Inc..

S. Hangers and Supports:

1. Piping shall be securely fastened to building structure by approved iron hangers, supports, guides, anchors, and sway braces to maintain pipe alignment to prevent sagging and to prevent noise or excessive strain on piping due to uncontrolled or seismic movement under operating conditions. Hangers and supports shall conform to Manufacturer’s Standardization Society Specification SP-69. Hangers shall be relocated as required to correct unsatisfactory conditions that may become evident when system is placed into operation. Appliances, heat exchangers, storage tanks, and similar equipment shall be securely fastened to structure in accordance with seismic requirements. Outdoor metal hangers and supports shall be hot-dipped galvanized steel, unless otherwise specified.

2. Hose faucets, compressed air outlets, and similar items at ends of pipe branches shall be rigidly fastened to building construction near point of connection.

3. Piping shall not be supported by wire, rope, wood, plumbers' tape, or other non-recognized devices.

4. Hangers and supports shall be designed to support weight of pipe, fittings, weight of fluid and weight of pipe insulation, and shall have a minimum factor of safety of five, based on ultimate tensile strength of material installed.

5. Burning or welding of any structural member under load is not permitted. Field welding not specified on Drawings or reviewed Shop Drawings is not permitted without review by ARCHITECT and DSA.

6. Burning holes in beam flanges or other structural members is not permitted without review by the ARCHITECT and DSA.

7. Pipe hangers on piping covered with low temperature insulation shall be installed on outside of insulation and not in contact with pipe unless otherwise detailed on

Drawings. Insulation shall be protected by 18 gage galvanized steel shield, with a minimum length of 10 inches, installed completely around pipe covering between covering and hanger. Installing hangers directly on pipe and butting adjoining sections of insulation against hanger is permitted provided void and hanger rod are properly insulated and sealed so that no sweating occurs at hangers.

8. Hanger rods shall be fastened to structural steel members with suitable beam clamps. Clamps shall be Tolco, Carpenter & Patterson, Fee and Mason, as follows:

   a. Tolco I beam, Fig.62 for maximum 1000 pounds.

   b. Tolco I or WF beam, Fig. 329, for maximum of 1290 pounds.

9. Hanger rods shall be fastened to concrete inserts in concrete slabs or beams. Inserts shall be Tolco, Carpenter & Patterson, Fee and Mason, as follows:

   a. Tolco Fig.310 for maximum of 600 pounds.

   b. Tolco Fig. 309 for maximum of 1140 pounds.

10. For fastening to wood ceilings, beams, or joists, furnish Grinnell Fig. 128R, Grinnell Fig. 153, Tolco 78, pipe hanger flange fastened with drive screws. Under wood floors, 3/8 inch hanger rods shall be hung from 2-inch by 2-inch by 1/4 inch angle clips 3 inches long, with 2, staggered 10d nails, clinched over joist.

11. Pipe hanger rod sizes: 3/8-inch for pipe sizes ½-inch through 4-inch, ½-inch for pipe sizes 5-inch through 8-inch, and 5/8-inch for pipe size 10-inch through 12-inch.

12. Where rod hangers are used with a diameter greater than 3/8-inch, they shall be equipped with swivels or eye nuts to prevent bending in the rod.

13. Turnbuckles, if furnished, shall provide a load carrying capacity to that of the pipe hanger with which they are being installed.

14. Pipe hangers shall be of same size, or nearest larger manufactured size available, as pipe or tubing on which they are being installed.

15. Hangers, clamps, and guides furnished for support of non-metallic pipe shall be padded with 1/8 inch thick rubber, neoprene, or soft resilient cloth.

16. Where special pipe-supporting requirements in the Specifications conflict with any standard requirements specified herein, the Specification requirements shall govern.

17. Vertical Piping:

   a. Vertical pipe risers shall be securely supported with riser clamps of recognized type. Risers in reinforced concrete buildings shall be furnished with extension clamps fastened to pipe above each concrete floor slab with extended arms of clamp to rest on slab. Clamps shall be provided with lead or Teflon liners when installed on copper tubing. Clamps shall be plastic-coated when installed on non-ferrous pipe or tubing.

   b. Copper tubing in sizes 1 ½-inches and larger and steel pipelines passing up through building shall be supported at each floor of building or every 15 feet whichever is less.

c. Copper tubing sizes 1 ¼-inches and smaller shall be supported at not intervals not more than 6 feet on center. Special provisions shall be installed for vertical lines subject to expansion and contraction caused by operating temperature differences.

d. Vertical cast iron pipelines shall be supported from each floor and at its base. Malleable iron or steel pipe clamps with minimum thickness of 1/4 inch shall be furnished and fastened around pipe for support.

18. Horizontal Piping:

a. Roof Mounted Piping: Pressure and non-pressure piping shall be supported from channels, stands, clamps, trapezes, rollers, or structures mounted on 100% rubber, UV resistant rooftop supports with reflective strips, Dura-Block,. Roller type supports shall be provided below and above pipe to prevent its dislodgement. Bottom of pipes shall clear the roof surface by 10 inches.

b. Insulated steam and space heating hot water insulated condensate lines, insulated domestic hot water supply and return piping shall be supported with Tolco Figure 4, B-Line Figure B3140, Grinnell Figure 212, steel hangers with welded eye rods to permit hinge movement at point of attachment of hangers. Hinge movement at point of support shall be provided by welded eye linked rods Tolco Figure 101L, B-Line Figure B3211X, Grinnell Figure 278.

c. Domestic cold water piping, water supply and return piping, condenser water piping, insulated refrigerant piping gas piping, compressed air piping, cast iron soil piping, galvanized steel vents, waste and downspout piping and glass to be supported with Tolco Figure 1, B-Line Figure B3100, Grinnell Figure 260, hangers with rods, turnbuckles and inserts suitable for above hangers.

d. Maximum hanger and support spacing shall conform to CPC schedule for horizontal piping installed above grade.

19. A hanger or support shall be installed close to the point of change in direction of a pipe run, in either a horizontal or vertical plane.

20. When practicable, supports and hangers for cast iron soil pipe shall be installed as close as possible to joints and when hangers or supports are not located within one foot of a branch line fitting, an additional hanger or support shall be installed at fitting.

21. In systems where grooved piping is used, couplings shall be provided with angle pattern bolt pads to comply with support and hanging requirements of ANSI/ASME B31.1, ANSI/ASME B31.9, and NFPA Pamphlet 13.

T. Flashings:

1. Each pipe, duct, or gas-fired equipment vent passing through roof shall be installed with waterproof flashing.

2. Flashing or flanges on pipes, vents, and ducts passing through a tile or slate roof shall be constructed of sheet lead. Flashing for pipes and heater vents passing through a roof shall be 4 pound soft sheet lead. Flashing and flanges for ducts and heater vents passing through exterior walls shall be 22 gage sheet metal. Install caps on top of heater pipes. Flanges and flashing shall be installed waterproof at point of connection

with pipe or duct by welding. No soldered joints on roof flashings will be allowed. No Stoneman lead roof flashings will be allowed.

3. Lead flashing and flanges shall be constructed of 4 pound sheet lead with burned joints. Flange of lead flashing or lead flange on a duct shall extend out onto roof a minimum of 12 inches from pipe or duct. Lead flashing shall extend up the pipe or duct not less than 8 inches.

4. Sheet metal flashing shall be constructed of 24 gage galvanized sheet steel. Flanges on these flashings shall extend out onto roof a minimum of 10 inches from pipe or duct. Flanges on ducts through exterior walls shall extend out from duct a minimum of 2 ½ inches. Flanges on gas-fired equipment single-wall vents shall be of ventilated type. Type B gas vents through a roof shall be furnished with non-ventilated flashing as per NFPA Pamphlet 211.

5. Cast iron, steel, brass, and copper pipe, which terminates less than 18 inches above roof, shall be furnished with a combination counter-flashing and vandal-proof hood for protection against water, birds and foreign matter. Cast iron, steel, brass and copper pipe, which does not terminate within 18 inches of roof, shall be furnished with a counter-flashing sleeve. Pipe, which terminates more than 18 inches above roof, shall be furnished with protection against entrance of water, birds, and foreign matter.

6. Counter-flashing and combination counter-flashing sleeves and vandal-proof hoods shall be cast iron, vandal-proof, threaded, sealed or approved gas-heated sleeve type. Counter-flashing sleeves on each of these items shall extend down over flashing a minimum of ¾ inch.

7. Storm collars shall be securely screwed and installed waterproof around appliance vent pipe immediately above flashing.

8. Vent piping above roof shall be furnished with a combination counter-flashing sleeve and vandal-proof hood.

U. Equipment Installation: Install roof or floor mounted equipment on level platforms, housekeeping pads or curbs and provide sound, vibration and seismic control measures per Section 23 0548 even if not indicated on Drawings.

END OF SECTION

SECTION 22 05 53 - PLUMBING IDENTIFICATION

PART 1 – GENERAL

1.01 SUMMARY

A. Section Includes: Marking and identification on mechanical piping systems, ducts, controls, valves, and apparatus.

B. Related Requirements:

1. Division 01: General Requirements
2. Section 21 13 13: Fire Suppression Sprinkler Systems.
3. Section 22 05 13: Plumbing Materials and Methods.
4. Section 22 10 00: Plumbing.

1.02 SUBMITTALS

A. Submit in accordance with Division 01 and Section 22 05 00: Plumbing Common Work.

B. Submit product data and installation instructions for each item specified.

C. Submit Samples of materials.

1.03 QUALITY ASSURANCE

A. Comply with provisions of:

1. Section 22 05 00: Plumbing Common Work.
2. ANSI/ASME A13.1: Scheme for the Identification of Piping Systems.
3. APWA: Uniform Color Code.
4. IAPMO: Uniform Plumbing Code (UPC)

PART 2 – PRODUCTS

2.01 MATERIALS

A. General: Piping systems, controls, valves, apparatus, etc., except those that are installed in inaccessible locations in partitions, walls, and floors, shall be permanently identified.

2.02 VALVES

A. Furnish prepared chart or diagram for each piping system, indicating by identifying letter or model number of each valve in the system, its location, and function.

B. Install charts in aluminum frame with clear glass front and secure on wall where designated by the Project Inspector.

C. Bind copies of each chart in operating instructions manual.

D. Provide each valve with a brass, aluminum, or plastic disc, not less than 1-1/4 inches diameter bearing engraved numbers corresponding to those indicated on chart. Fasten discs to valve with No. 14 brass wire.

E. Provide an additional tag for safety valves and other valves that could be hazardous to safety and health of occupants. Distinguish these tags from regular valve tags by color (such as yellow with black letters and marked "Danger"); submit Sample tag to the Architect for review.

2.03 INSTRUMENTS AND CONTROLS

A. Identify panel-mounted instruments and controls with engraved bakelite nameplates permanently affixed to panel boards.

B. Identify alarm indicating devices and alarm reset devices by nameplates.

C. Identify automatic valves, flow switches, and pressure switches, with embossed aluminum or plastic tape affixed to controller, indicating service and setting.

2.04 EQUIPMENT

A. Identify each major piece of equipment with engraved bakelite nameplates permanently affixed to the equipment, indicating the room numbers it services, Equipment identification designation shall be the same to its designation indicated on the “As-Built Drawings”. Room numbers in the nameplates shall correspond to the final room numbers.

2.05 ABOVE GRADE PIPE IDENTIFICATION

A. Identify pipes by means of colored labels with directional flow arrows and identification of the pipe content, in conformance to ANSI/ASME A13.1 or the UPC.

B. Materials: Precoiled acrylic plastic with clear polyester coating, all-temperature, self-adhering, as manufactured by Brady, Brimar Industries, Seton, Stranco, Inc., or equal.

C. Size:

Outside Diameter of Pipe or Insulation (in inches)	Length of Color Field (in inches)	Size of Letter (in inches)
¾ to 1 ¼	8	½
1 ½ to 2	8	¾
2 ½ to 6	12	1 ¼
8 to 10	24	2 ½
over 10	32	3 ½

D. Locations:

1. On accessible piping, whether insulated or not (including mechanical rooms, attic and ceiling spaces); except that labels shall be omitted from piping where contained material is obvious due to its connection to fixtures (such as faucets, water closets, etcetera.).

2. Near each valve and branch connection in such accessible piping.

3. At each pipe passage through wall or floor.

4. At not more than 20 feet spacing on straight pipe run between bands required in 2 and 3 above.

5. At each change in direction.

E. Application: Install on clean surfaces free of dust, grease, oil, or any material that will prevent proper adhesion. Replace non-adhering or curling labels with new labels.

F. Color Schedule:

Content of Pipe	Legend	Background Color	Lettering Color
Domestic cold water	Domestic. C.W.	Green	White
Non-potable cold water	Caution: Non-potable Water Do Not Drink (1)(2)	Purple	Black
Domestic hot-water 140ºF	Domestic H.W. 140ºF	Blue	Black
Sanitary waste	San waste	Green	White
Sanitary vent	San vent	Green	White
Storm drain or downspout	Storm drain	Green	White
Indirect drain	Ind drain	Green	White
Sump pump discharge	Pump discharge	Green	White
Fire sprinkler supply	Fire Sprinkler supply	Red	White
Fire sprinkler drain	Sprinkler drain	Red	White
Fuel oil	Diesel oil	Yellow	Black
Gas	Gas	Yellow	White
Reclaimed Water	Caution: Reclaimed Water Do Not Drink (1)(3)	Purple	Black

H. Notes on Schedule:

1. Note (1) indicates 2 ¼ inch by 1 inch yellow label with ½ inch letters reading UNSAFE WATER at one end of primary label.

   Note (2) words should read “CAUTION: NONPOTABLE WATER DO NOT DRINK.” with international *do not drink* symbol.

Note (3) words should read “CAUTION: RECLAIMED WATER DO NOT DRINK.” with international *do not drink* symbol.

2.06 UNDERGROUND PIPE

A. Detectable Marking Tape:

1. Provide and install detectable marking tape along buried piping. Tape shall be specifically manufactured for marking and locating underground utilities with electronic equipment. Tape shall be acid and alkali resistant, and manufactured with integral wires or foil backing, encased with protective cladding. Tape shall be a minimum of two inches in width.

2. Manufacturer: Reef Industries, Inc., Advantage Brands, Inc., Northtown Company, Mutual Industries, Inc., or equal.

3. Detectable marking tape shall be color-coded per APWA Color Code:

a. Yellow: Oil and gas.

b. Blue: Water, irrigation and slurry lines.

c. Green: Sewer and drain lines.

B. Tracer Wire:

1. Solid copper wire type THWN, 12 AWG gauge, with heat and moisture resistant insulation.

PART 3 – EXECUTION

3.01 INSTALLATION

A. Correct detrimental conditions prior to commencing the Work of this Section. Install markers and identification tags as specified with materials and installation procedures recommended by manufacturer.

B. Place tracer wire on top of non-metal utility lines allowing some slack. Do not wrap tracer wire around pipe. Fasten tracer wire in place at approximately 10 feet on centers with non-metal ties.

C. Install underground detectable pipe marking tape continuously buried 8 to 10 inches above the buried utility pipe. Wrap tape on pipe risers up to a height of 12 inches above grade.

3.02 CLEANUP

A. Remove rubbish, debris, and waste materials and legally dispose of off the Project site.

END OF SECTION

SECTION 22 07 00 - PLUMBING INSULATION

PART 1 – GENERAL

1.01 SUMMARY

A. Section Includes:

1. Insulation for plumbing piping.

B. Related Requirements:

1. Division 01: General Requirements.
2. Section 22 05 00: Plumbing Common Work
3. Section 22 05 13: Plumbing Materials and Methods.
4. Section 22 05 53: Plumbing Identification.
5. Section 22 10 00: Plumbing.

1.02 REFERENCES

A. American Society for Testing and Materials International (ASTM):

1. ASTM C302 - Standard Test Method for Density and Dimensions of Preformed Pipe-Covering-Type Thermal Insulation.
2. ASTM C411 - Standard Test Method for Hot-Surface Performance of High-Temperature Thermal Insulation.
3. ASTM C423 - Standard Test Method for Sound Absorption and Sound Absorption Coefficients by the Reverberation Room Method.
4. ASTM C533 - Standard Specification for Calcium Silicate Block and Pipe Thermal Insulation.
5. ASTM C547 - Standard Specification for Mineral Fiber Pipe Insulation.
6. ASTM C1104 - Standard Test Method for Determining the Water Vapor Sorption of Unfaced Mineral Fiber Insulation.
7. ASTM E84 - Standard Test Method for Surface Burning Characteristics of Building Materials.
8. ASTM G21 - Standard Practice for Determining Resistance of Synthetic Polymeric Materials to Fungi.

B. Underwriters Laboratories, Inc.

1. UL 723 - Test for Surface Burning Characteristics of Building Materials.

C. National Fire Protection Association:

1. NFPA 255 - Standard Method of Test of Surface Burning Characteristics of Building Materials.

D. California Code of Regulation Title 24.

1. California Green Building Standards Code.

1.03 SUBMITTALS

A. Submit in accordance with Division 01 and Section 22 05 00: Plumbing Common Work.

1. Complete material list of items to be furnished and installed under this Section.

2. Manufacturer's specifications and other data required demonstrating compliance with the specified requirements.

3. Shop Drawings, catalog cuts and manufacturer's data indicating insulation, jacketing, adhesives, and coating. Insulating materials shall be certified by manufacturer to comply with the California quality standards for insulating materials.

4. Display sample cutaway sections.

5. Manufacturer's recommended method of installation procedures, which will become part of this Section.

1.04 QUALITY ASSURANCE

A. Qualifications of Manufacturer and Installer, Materials, Fabrication, Execution, and Standard of Quality: Comply with provisions stated under Section 22 0500: Common Work Results for Plumbing and Section 22 0513: Basic Plumbing Materials and Methods.

B. Insulation Work shall be in accordance with the California Building Energy Efficiency Standards, CBC, and Uniform Mechanical Code and the California Green Building Standards Code.

C. Test Ratings:

1. Comply with provisions stated under Section 22 0500 and 22 0513 with emphasis on ASTM E84, NFPA 255, or UL 723. ASTM C167, ASTM C302, UL label or listing of satisfactory test results from the National Institute of Standards and Technology, or a satisfactory certified test report from an acceptable testing laboratory. Approval by the State Fire Marshal is required.

2. Furnish labels, legibly printed with the name of the manufacturer or listings indicate that fire hazard ratings do not exceed those specified for materials proposed for installation. Flame spread index of not more than 25 and smoke developed rating not exceeding 50.

3. Tests shall be performed on each item individually when insulation, vapor barrier covering, wrapping materials, or adhesives are installed separately at the Project site.

4. Test insulation, vapor barrier covering, wrapping materials and adhesives as an assembly when they are factory composite systems.

D. Regulatory Requirements: Insulation furnished and installed under this Section shall meet minimum legal requirements of the Building Energy Efficiency Standards adopted and incorporated in the California Energy Commission, Title 24, Part 2, Chapters 2 through 53 and the California Green Building Standards Code unless otherwise noted, for the piping,

E. Chemically based products such as sealers, primers, fillers, adhesives, etcetera must meet the California air quality regulations.

1.05 PRODUCT HANDLING

A. Protection, Replacement, Delivery and Storage: Comply with provisions stated under Sections 22 0500: Common Work Results for Plumbing and 22 0513: Basic Plumbing Materials and Methods.

PART 2 – PRODUCTS

2.01 MATERIALS

A. General:

1. Insulating material shall be fire resistant, non-corrosive, shall not break, settle, sag, pack or disintegrate under vibration, nor absorb more than 1 percent moisture by weight.

2. Insulating material shall be furnished with thickness indicated in Table 1, and shall furnish thermal resistance in the range of R-4.0 to 4.6 in accordance with inch at 75 degrees F. For any other value of R, insulation thickness shall be calculated accordingly and submitted for review.

3. Asbestos in any quantity in insulating material is not permitted.

4. Provide insulation materials, adhesives, coatings, sealants, fitting covers, and other accessories with a fire hazard rating not to exceed 25 for flame spread, 25 for fuel contributed and 50 for smoke developed, except for materials listed as follows:

   a. Nylon anchors for installing insulation to equipment.

   b. Treated wood blocks.

5. Flame-proofing treatments subject to moisture damage are not permitted.

TABLE 1 - MINIMUM PIPING INSULATION THICKNESS (1)

Insulation Thickness Required (in inches)

Piping System Type	Temp. Range (degrees F)	Runouts up to 2 (2)	1 and less	1.25 to 2	2.5 to 4	5 to 6	8 and larger
Service Water Heating Systems (recirculating, piping supply and return)							
Hot Water	Up to 180	0.5	1.0	1.0	1.5	1.5	1.5
Condensate Drain	½ inch minimum insulation thickness.	0.5	0.5	0.5	0.5	0.5	0.5
From A/C Equipment:	Insulate condensate drain lines within building, in room, inside walls and above ceilings.	0.5	0.5	0.5	0.5	0.5	0.5

NOTES: (1) For piping exposed to ambient temperatures, increase thickness by 0.5 inch.

(2) Runouts to individual terminal units, not exceeding 12 feet in length.

B. Lagging Adhesives: Shall be nonflammable and fire-resistant and shall have a maximum flame spread index of 25 and a maximum smoke developed index of 50 when tested in accordance with ASTM E84. Insulation finished with canvas shall be provided with laps adhered in accordance to manufacturer's recommendation. A finish coat of same material shall be applied to entire outer surface of lagging cloth at coverage specified by manufacturer.

C. Canvas Jackets: Provide 6 ounce, in accordance with square foot minimum, 48 by 48 thread count canvas jacketing.

D. Insulation Jackets:

1. Exterior insulation exposed to weather shall be weatherproofed with Childers aluminum jacketing as basis of design, or Pabco, RPR, or equal. Jacketing shall be manufactured from 1100, 3105 or 5010 aluminum alloy with 3/16 inch corrugations. Smooth or embossed jackets may be permitted in special situations to match an existing installation. Jacketing shall be furnished with an integrally bonded moisture barrier over entire surface in contact with insulation. A minimum thickness of 0.016 aluminum jacketing is to be provided on ducts and piping. A minimum thickness of 0.020 shall be provided on tanks, equipment, and heat exchangers.

2. Insulated elbows, of 90 degrees and 45 degrees, with a nominal iron pipe size of ½ inch to 8-inch shall be provided with Childers aluminum Ell-Jacs insulation covers as basis of design, or Pabco, RPR, or equal, manufactured from 1100 aluminum alloy of 0.024 inch thickness. Insulated elbows with a nominal pipe size of 10-inch to 18-inch shall be provided with Childers 4-piece aluminum Ell-Jacs as basis of design, or Pabco, RPR, or equal.

3. Tees, Flanges, and Valve Insulation in Conjunction with Aluminum Jacketing: Furnish Childers Aluminum Special Fabrications Insulation Covers as manufactured by Childers Products Company, Pabco, RPR, or equal.

E. Adhesives: Adhesives shall be water based, UL Classified, meet the requirements of NFPA 90A and NFPA 90B, have been tested according to relevant ASTM requirements, and be acceptable to the State Fire Marshal. Name, type and method of installation shall be submitted for review.

F. Valve and Fitting Cover: When installed in conjunction with PVC jacketing, furnish Zeston 25/50 rated polyvinyl chloride fitting covers as manufactured by Johns Manville, Knauf Insulation, Speedline, or equal.

2.02 DOMESTIC HOT WATER PIPING SYSTEM INSULATION

A. General: Insulate domestic hot water supply and return piping, including valves, strainers and fittings with insulation thickness as indicated on Table 1.

B. Materials:

1. Classes of Insulation:

a. Class A: Glass fiber molded pipe insulation suitable for service temperatures up to 850 degrees F. Pipe insulation shall be one piece, preformed, and provide a minimum R factor of 4.0 at 75 degrees F mean temperature. Insulation shall be faced with all-purpose fire retardant vapor barrier jacket. Pipe insulation shall be Johns Manville Micro-Lok, Knauf Redi-Klad 1000, Owens Corning FIBERGLAS Pipe Insulation SSL II-ASJ, or equal.

b. Class B: Flexible open-cell melamine (foam insulation) suitable for service temperature -150 degrees F to 400 degrees F. Thermal conductivity at 75 degrees F, K= 0.26. Pipe insulation, one-piece pre-formed, laminated to heavy non-reinforced PVC jacket, with locking track, factory installed to jacket, to snap insulation and jacket onto pipe. Similar to TechLite 079 Series as manufactured by Accessible Products Co., or equal. Installation shall comply with manufacturers recommendations.

c. Class C: Mineral fiber pipe insulation suitable for service temperatures up to 1200 degrees F. Pipe insulation shall be one-piece, preformed up to 3 inches thick, and provide a minimum R factor of 4.0 at 75 degrees F mean temperature. Insulation shall be faced with all-purpose fire-retardant vapor barrier jacket. Pipe insulation shall be 8 pounds in accordance with cubic foot density by Roxul Techton 1200, Fibrex COREPLUS 1200, Industrial Insulation Group, LLC (IIG) MinWool-1200, or equal.

2. Locations and Class of Insulation Required:

TABLE 2 – LOCATIONS AND CLASS OF INSULATION REQUIRED

LOCATION	CLASS OF INSULATION
Equipment Room	A, B or C
Other Locations	A, B or C

3. Fittings on indoor piping shall be covered with flush, hand-wrapped Class A, B, or C insulation, to match the adjoining pipe insulation and covered with polyvinyl chloride fitting covers: Zeston 2000 25/50 by Johns Manville, Knauf Insulation Proto PVC Fitting Cover, Speedline Polyco Smoke Safe, or equal.

4. Adhesive: Fibrous Adhesive to bond calcium silicate to itself and non-porous surfaces.

PART 3 – EXECUTION

3.01 INSTALLATION

A. Except as specified herein, install material in accordance with recommendations of manufacturer. Do not install insulation materials until tests specified in other sections are completed. Remove foreign material such as rust, scale, or dirt. Surfaces shall be clean and dry. Maintain insulation clean and dry at all times.

B. On cold surfaces where a vapor barrier must be provided and maintained, insulation shall be installed with a continuous, unbroken moisture and vapor seal. Hangers, supports, anchors, or other projections that are fastened to cold surfaces shall be insulated and vapor sealed to prevent condensation.

C. Surface finishes shall be extended in such a manner as to protect raw edges, ends, and surfaces of insulation.

D. Pipe insulation shall be continuous through walls, ceiling or floor openings, or sleeves; except where firestop or firesafing materials are required.

E. Metal shields shall be installed between hangers or supports and the piping insulation. Rigid insulation inserts shall be installed between the pipe and the insulation shields. Inserts shall be of equal thickness to adjacent insulation and shall be vapor sealed accordingly.

F. Insulation shall not be installed in the following locations unless otherwise noted:

1. On unions, flanged connections or valve handles.

2 Over edges of any manhole, clean-out hole, clean-out plug, and to restrict opening or identification of access.

3. Over any label or stamp indicating make, approval, rating, inspection, or similar data, unless provision is made for identification and access to label or stamp.

3.02 INSTALLATION OF DOMESTIC HOT WATER PIPING SYSTEM INSULATION

A. General: Domestic hot water, tempered water supply and return piping and condensate return piping, after having been tested, shall be cleaned and insulated.

B. Application: Insulate condensate return piping, domestic hot water supply and return, including tempered supply and return piping in accordance with manufacturer's instructions and as specified herein.

1. Install insulation on valve bodies up to valve bonnet. Fill void in saddles, in accordance with Section 22 0513: Basic Plumbing Materials and Methods, with insulation and seal joints.

2. Install insulating material to fittings, valves, and strainers and smooth to thickness of adjacent covering. Leave strainer clean-out plugs accessible. Covers fabricated from polyvinyl chloride shall be furnished.

C. Insulation Jackets in Exposed Indoor Locations:

1. Cover completed insulation with canvas jacket tightly pasted to covering with lagging adhesive. Lap jacket seams 1 1/2-inch minimum. Finish entire jacket with coating of undiluted adhesive.

2. Equivalent factory applied pre-sized, glass fiber reinforced, or glass fiber jackets may be furnished. Seal jacket seams with adhesive in accordance with manufacturer's instructions.

3. Johns Manville Zeston 2000, Knauf Insulation Proto PVC Fitting Cover, Speedline Polyco Smoke Safe, or equal, fitting covers may be furnished, with molded or segmented insulation equal to specified insulation applied to fittings. Secure covers in accordance with manufacturer's instructions.

4. In addition to above requirements, cover exposed insulated piping within a distance of 8 feet above floors with 26 gage galvanized steel jacket. Omit jacket in areas accessible only to maintenance personnel, such as mechanical equipment rooms, utility corridors, accessible pipe tunnels and manholes.

D. Concealed Indoor Locations: Cover insulation over fittings, valves, and strainers with canvas. Provide pipe insulation with factory or field applied standard jacket of 4 ounce minimum canvas, fiberglass cloth, or glass fiber reinforced jacket. Seal jacket laps with adhesive in accordance with manufacturer's instructions.

E. Exposed Outdoors: In addition to canvas or fiberglass cloth cover, pipe insulation exposed to weather shall be provided with an additional 0.016 inches thick aluminum jacket with 2-inch lap connected with one inch hem overlap joint located on side of pipe and turned down to shed water. Jacket shall be strapped 12 inches on center with ½-inch wide stainless steel strapping and wing seals. Aluminum jacket shall be mitered to fit fittings.

3.03 CLEANUP

A. Remove rubbish, debris, and waste materials and legally dispose of off the Project site.

3.04 PROTECTION

A. Protect the Work of this Section until Substantial Completion.

END OF SECTION

SECTION 22 10 00 - PLUMBING

PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes: Labor, materials, tools, and equipment to install plumbing systems as indicated.

B. Related Sections:

1. Division 01 - General Requirements.
2. Section 22 05 00: Plumbing Common Work.
3. Section 22 05 13: Plumbing Materials and Methods.
4. Section 22 05 53: Plumbing Identification.
5. Section 22 07 00: Plumbing Insulation.

1.02 SUBMITTALS

A. Provide in accordance with Division 01 and Section 22 05 00: Plumbing Common Work.

B. Provide necessary documentation to Owner for processing rebates for water efficient fixtures.

1.03 QUALITY ASSURANCE

A. Unless otherwise noted, the California Plumbing Code is hereby made part of this section.

B. Conform to provisions of Section 22 05 00: Plumbing Common Work.

C. Manufacturer of plumbing products must be third-party certified to ANSI/NSF Standard 61, Section 9 certification, and ANSI/NSF 372 to demonstrate compliance with the federal requirements for lead contribution to drinking water, the Safe Drinking Water Act SDWA, and the California Health and Safety Code Section 116875.

1.04 PRODUCT HANDLING

A. Conform to provisions of Section 22 05 13: Plumbing Materials and Methods.

PART 2 - PRODUCTS

2.01 PIPING SYSTEMS

A. Materials: Refer to Section 22 05 13: Plumbing Materials and Methods.

B. Insulation for Piping: Refer to Section 23 07 00: Plumbing Insulation.

2.02 FIXTURES AND DRAINS

A. General: Fixtures specified shall be furnished complete with trim and fittings. Cast iron plumbing fixtures shall be acid resistant enamel, and identified by casting letters "AR" or words "acid-resistant" into metal. Fixtures shall be white unless otherwise specified. Cast iron fixtures shall be white enamel inside and on back, rim and apron, with exposed unfinished surfaces painted white. Fixtures of same general classifications shall be of same make.

B. Finished Brass:

1. Unless otherwise specified, finished brass of a similar type shall be of same manufacturer and model throughout buildings.

2. Finished and exposed brass plumbing, except floor, shower and urinal drains shall be chromium-plated and polished. Floor, shower and urinal drains, unless otherwise specified, shall be nickel-bronze metal.

C. Traps, Trap Arms and Tailpieces:

1. Fixture Traps shall be all L.A. Code Cast Brass Chromium-plated and polished. Exceptions as follows:

a. Traps that are an integral part of a fixture.

b. Traps concealed in floors, walls and furring.

c. Traps standard for service sinks and Industrial Shop equipment.

d. Laboratory traps and tailpieces shall be as specified in section 22 05 13 “Plumbing Materials and Methods”.

2. Trap Arms shall be all IPS Threaded Brass Nipples into Female IPS Threaded Drainage Tee.

3. Tailpieces, Extension Tailpieces, 2-part wastes and any other tubular products shall be minimum 17 gage polished chromium-plated brass, except as otherwise specified.

4. Furnish polished chromium-plated brass wall flanges with setscrews and polished chromium-plated brass cover casing on discharge side of each trap.

D. Faucet and Shower Valve Handles: Faucet and shower valve handles shall be solid brass, chromium-plated and polished, and fastened to their stems by Allen type hollow head stainless steel set screws through the side of the handle extending into the stem. Handles with sharp edges or projections shall not be furnished. At accessible fixtures: handles shall be operable with one hand and shall not require tight grasping, pinching, or twisting of the wrist. The force required to activate handles shall be 5 pounds maximum.

E. Fixture Supplies:

1. Supplies for water heaters shall be unplated rigid copper water tube with threaded adaptors for connections to valves and other threaded connections. All other supplies shall be chromium-plated brass with hospital threads or shall be furnished with fittings and valves, which completely cover threads.

2. Exposed supplies for showers shall be chromium-plated brass pipe up to header with hospital threads or shall be furnished with fittings and valves, which completely cover threads.

3. Supplies to water closet tanks, lavatories, and drinking fountains shall be furnished with a NSF 372/61 threaded brass nipple. Exposed unfinished piping shall be sleeved with chrome plated brass or copper cover casing and have an appropriate escutcheon for a clean finished appearance. Angle/straight valve stops shall be female 1/2 IPS (inlet) by 3/8 compression (outlet). Fixture supplies shall be polished chrome-plated, solid supply bulbed end risers with size compatible supply nut connection to fixture and 3/8 O.D. compression nut and ferrule connection to angle stop outlet. Stainless steel flexible braided connectors with re-enforced PVC inner hose are not allowed.

4. Hot and cold water fitting supply outlet piping serving water closets, urinals, lavatories, drinking fountains, sinks, faucets, hose bibs, and sillcocks shall be iron pipe size (IPS) brass nipple, and piped in such a manner that through wall water supply outlet piping be removable, size appropriate, and lead free. The use of copper, copper MIP sweat adapters or similar fittings, in lieu of brass nipples is not allowed. The IPS brass nipple shall be directly connected to the fixture as follows:

   a. Control stops for water closet and urinal flush valves.

   b. Angle stop for lavatories, sinks and drinking fountains.

   c. Shank/arm adapters for wall mounted sink faucets.

   d. Iron pipe size (IPS) brass nipple connection for hose bibs, sillcocks, and other plumbing related fixture and/or plumbing fitting water supply outlets.

5. Water supply pipe that penetrates a finished surface, wall, countertop or part of a cabinet shall be appropriately sized polished chromium-plated cover casing and wall flange/escutcheon fitting tight to the brass through wall nipple and securely affixed to the finished wall surface.

6. Water supplies of plumbing fixtures shall be protected against back-siphonage in event of a vacuum in piping system. Toilet and urinal flush valves shall be furnished with recognized atmospheric vacuum breakers, installed a minimum of 6 inches above fixture.

7. Discharge outlets of supply faucets for lavatories and sinks shall clear top of overflow rim by at least one inch.

2.03 ACCESS PLATES (To cleanouts, valves, water hammer arrestors and hose faucets)

A. Schedule Numbers:

AP-1: Square, unless otherwise noted, steel, prime coated; frame, 18 gage minimum. Door shall be 16 gage minimum with concealed hinge or be removable, with vandal-proof lock operated by Allen wrench. (Specify for painted and stucco walls.)

SMITH	ZURN	ELMDOR	MILKOR	WATTS	MIFAB	JOSAM
Fig 4760 AK	Z-1462-VP	DW-AKL	MOR DW AK1	CO-300-S-6	UA-A	58650-VP

AP-2: Round type, stainless steel, vandal-proof, 5/16 inch No. 18 or 1/4 inch No. 20 flat-head machine screw into cleanout plug. Plate shall be prime coated minimum 18 gage steel or polished chrome-plated brass, 18-8 No. 302 stainless steel, or polished nickel bronze. (To be specified for painted walls, screwed into cleanout plug.)

SMITH	ZURN	JOSAM	WADE	WATTS	MIFAB

2.04 BACKFLOW PREVENTION ASSEMBLIES

A. Schedule Numbers:

BPV-1: Reduced pressure or pressure differential type, City of Compton approved. Sizes ½ inch to 6-inch.

WILKINS	WATTS	FEBCO
375 and 975 XL (for	LF009-QT; LF909-NRS	LF860

uninterrupted service)		

BPV-2: Pressure vacuum breakers with 3/4 inch hose bib. Install 6 feet above finished floor.

WILKINS	WATTS	FEBCO
420XL	LF008PCQT	LF765

2.05 CLEANOUT ASSEMBLIES

A. Cleanout plug shall be line size.

B. Schedule Numbers:

CO-1: Iron body cleanout tee full line size up to 4 inches and round access plate, plugs shall be brass, countersunk with tapped boss for 5/16 inch No. 18 or ¼ inch No. 20 screws. (Specify for finished walls at base of waste stack, above urinal and service sink.) AB&I and TYLER may be used as iron body cleanouts. Trim and accessories shall be Smith or Zurn.

SMITH	ZURN	WATTS	MIFAB	JOSAM
4532-U	Z-1446-BP	CO-460-RD-34B	C1460-RD-6	58600-CO

CO-2: Iron body with approved UPC plug, top and adjustable sleeve, cut-off ferrule, polished scoriated brass nickel bronze secured cover. AB&I and TYLER may be used as iron body cleanouts. Trim and accessories shall be Smith or Zurn(To be specified for finished floors inside buildings, in covered areas, and in concrete paving.)

Square:

SMITH	ZURN	WATTS	MIFAB	JOSAM

4033-L-U-NB	ZN-1400	CO-200-R	C1220-1-6	55000-1

CO-3: Secured cover, extra heavy-duty, adjustable sleeve, cut-off ferule, UPC. Brass approved type plug, scoriated tractor type cover.

(To be specified for areas outside building on concrete paving.)

SMITH	ZURN	WATTS	MIFAB	JOSAM
4233-U	ZN-1400-HD	CO-200-RX-4	C1220-4-6	55000-22

CO-4: Tapped soil tee with brass plug, full line size.

(Specify for above grade, outside building at base of exposed downspout.)

SMITH	ZURN	WATTS	MIFAB	JOSAM
4512	Z-1445-BP	CO-460-34A	C1460	58910

CO-5: Raised threaded head brass plug.

(To be specified for yard box YB-3.)

ZURN	WATTS	SMITH	JOSAM
Z-1470-A	CO-590	4285	58540-20

2.06 CIRCULATING PUMPS, HOT WATER HEATING SYSTEM

A. Schedule Numbers:

CPH-1: Centrifugal, single stage, close coupled with adjustable cast iron base, bronze enclosed impeller, lead-free mechanical shaft seal suitable for water temperature range from 20 degrees to 300 degrees F. Screwed or flanged connections. GPM and TDH capacities as indicated.

BELL & GOSSETT	WEIMAN	PACIFIC	TACO

CPH-2: In-line mounted. Close coupled, centrifugal type with an all bronze water chamber, bronze sleeve bearings, bronze impellers, water tight shaft seal suitable for water temperature range from 20-300 degrees F. Forged steel shaft. It must be provided with bracket support to damper vibrations. GPM and TDH capacities as indicated.

BELL & GOSSETT All Bronze	GRUNDFOS	TACO

2.07 DIELECTRIC UNIONS

A. Schedule Numbers:

1. Dielectric style Unions using ferrous and no-ferrous metals are prohibited. Dielectric flanges are admitted for use – see DU-2.

DU-1: Lead Free Brass union with 6-inch Lead Free Brass nipple.

DU-2: Lead Free Brass union or Lead Free Brass flanged fittings are to be used in between pipes made of dissimilar metals to prevent accelerated corrosion and deterioration in the piping systems due to galvanic and stray current.

WATTS	NIBCO
LF3100M3	733-LF

2.08 EMERGENCY EYE WASH / EMERGENCY SHOWER

A. Schedule Numbers:

EEW-1: Access compliant combination emergency shower and fold-away eyewash mounted in a flush mounted recessed stainless steel cabinet with concealed piping: Eyewash: eye/face wash in a stainless steel door/water tray assembly folds up flush into stainless cabinet. Shower: access compliant shower activation by pull lever handle mounted 42 to 45 inches above the finished floor, located inside of stainless steel cabinet, supplying an exposed 20 gpm flow regulated stainless steel shower head, mounted between 82 and 96 inches above finished floor. Unit is access compliant when eye/face wash spray outlet is mounted at a height of 36 inches above finished floor. Provide 30 inches wide by 48 inches deep clear floor space for access compliance.

HAWS	GUARDIAN	ACORN SAFETY	BRADLEY
8356WCC	GBF2150-FC20	S2260-BF-PAN-RA	S19345JXB

2.09 ELECTRIC WATER COOLERS

A. Water Coolers shall be provided with brass free waterways and lead mitigating water filtering systems (DFWF).

B. Provide as indicated on Plumbing Fixture Schedule: Call out of the schedule is the basis of design. Acceptable manufacturers are Haws, Murdoc and Elkay

2.10 FAUCETS

A. Access compliant faucets: Force to activate controls shall be no greater than 5 pounds. Self-closing metering, where specified, to remain open 10 seconds minimum when activated. Handles shall be operable with one hand and shall not require tight grasping, pinching, or twisting of the wrist.

C. Provide as indicated on Plumbing Fixture Schedule: Call out of the schedule is the basis of design, Acceptable manufacturers are Chicago, T&S and American Standard.

2.11 FLOOR DRAINS

A. Schedule Numbers:

FD-1: Cast iron body, no hub with seepage pan and flat, round nickel bronze strainers not less than 5-inch diameter for 2-inch outlet bodies, 7-inch for 3-inch outlet bodies and 8-inch for 4-inch outlet bodies, with maximum of ½ inch square holes or slots not larger than ¼ inch by 1 ¼-inch.

(To be specified for use in locations other than tile floors.)

SMITH	ZURN	WATTS	MIFAB	JOSAM

2005Y-A	ZN-415-B	FD-100-A	F1100-C-1	30000-A

FD-2: Same as specified for FD-1, except with square tops.

(To be specified for use in tile floors.)

SMITH	ZURN	WATTS	MIFAB	JOSAM
2005Y-B	ZN-415-S	FD-100-M	F1100-C-S-1	30000-S

FD-3: Area type, with 8-inch diameter minimum cast iron top grates (no hub). Drain shall be vandal-proofed by securing grate to body with stainless steel Allen flat-head screws.

SMITH	ZURN	WATTS	MIFAB	JOSAM
2110-Y-U	Z-550-VP	FD-320-Y-6	F1320-4-6	32100-VP-Z

FD-4: Gang shower, cast iron body with 5-inch diameter nickel-bronze vandal-proof strainer. No hub.

SMITH	ZURN	WATTS	MIFAB	JOSAM
2005-Y-NB-U-(A)	ZN-415-B-VP	FD-100-A-6	F1100-C-1-6	30000-A-VP

FD-5: For indirect waste. Cast iron body, with vandal-proof nickel-bronze top and funnel. No hub.

SMITH	ZURN	WATTS	MIFAB	JOSAM
3510-F11-NB5	ZN-415-E	FD-100-EF-1	F1100-C-EF-1	30000-E2-VP

FD-6: Area drain, cast iron body, round pedestrian grate set in square frame.

SMITH	ZURN	WATTS	MIFAB	JOSAM
1470Y-U-NB	ZN-158-VP	RD-200-CP-L-1	F1100-C-S8-1-6	23730-VP

FD-7: Trash Drain Wash down Area Drain: Waste water diversion valve drain acts as an area drain for sanitary and rain drainage. When the hose Bibb is activated, the drain automatically diverts run offs to sanitary drain.

FOX Waste Water Diversion Valve System:
DD 600

2.12 FLEXIBLE HOSES

A. Schedule Numbers:

FLH-1: Braided stainless steel metal hose (for gas use). US Flex, Metraflex, Nelson Dunn.

FLH-2: Braided bronze metal hose (for non-pressure condensate connection use). US Flex, Metraflex, Nelson Dunn.

2.13 FLUSH VALVE ASSEMBLY

A. Valves shall be furnished so that flush remains constant and will not require any adjustment.

1. Each flush valve shall be provided with a loose key, square shank, lock shield angle service stop connected to flush valve with a union connection.

2. Provide l7 gage pressed brass escutcheons for wall and fixture. Escutcheons shall be fastened to not turn or rattle.

3. Each flush valve shall be furnished with a vacuum breaker providing one inch opening to atmosphere, which will not leak under any degree of back pressure and will not restrict rate of flow more than 10% at 10 PSI, and will operate noiselessly.

4. Tailpiece shall not be lighter than 17 gage and shall be part of flush valve assembly.

5. Exposed metal parts of flush valve assembly shall be nickel or chromium-plated on a brass or copper base.

6. Controls for water closet flush valves shall be mounted on the wide side of toilet areas.

B. Schedule Numbers:

FLV-1: Manual Flush Valve for Water Closet: Shall deliver 1.28 gallon of water at each operation.

SLOAN	ZURN
Royal 111-1.28	Z6000AV-HET

FLV-2: Manual Flush Valve for Urinals: shall deliver 1/8 gallon of water per flush.

SLOAN	ZURN
Royal 186-0.125-DBP	Z6003AV-ULF

2.14 FLOOR SINKS

A. Schedule Numbers:

FS-1: 6 inches to 8 inches deep, square cast iron acid-resistant enamel, bottom aluminum dome strainer with nickel bronze rim and grate top.

SMITH	ZURN	WATTS	MIFAB	JOSAM

3140Y 3150Y	Z-1901 ZN-1900	FS-740-1 or FS-730-1	FS1720-1, FS1730-1	49320A-NB, 49340A-NB

2.15 HOSE BIBBS

A. Schedule Numbers:

HB-1: For plaster or stucco wall, furnished with box and stop, exposed trim chrome-plated, with or without door and with vacuum breaker.

ACORN	WOODFORD	PRIER
8141, 8151	B75	C-633NFC

HB-2: For brick, CMU and poured in place concrete walls, furnished with box and stop, exposed trim chrome-plated, with or without door and with vacuum breaker.

ACORN	WOODFORD	PRIER
8141, 8104, 8151	B75	C-633NFC

HB-3: ASTM B 62 bronze body, rubber composition disc or renewable seat, bent nose with brass die cast or enamel iron hand wheel and with vacuum breaker. (To be specified for use at roof top AC Unit. Mechanical Equipment Room, Boiler Rooms, etc.)

ACORN	ZURN	CHAMPION	PRIER
8126-LK-RBVB	Z-1343-VB-LK	B-401 LK	C-255NP

HB-4: Recessed hose box furnished with wall flange and built-in drip lip. Box shall be one piece construction; door shall have a recessed cam lock. Door shall remain up and out of the way when in fully opened position. Valve shall be replaceable loose key wheel handle and screwdriver stop. Install within 2 feet above finished floor. Provide vacuum breaker.

(To be specified for use in Toilet Rooms.)

ACORN	WOODFORD	PRIER
Hose box 8104 or 8151	B75	C-634BX1

2.16 LAVATORIES

A. Access compliant faucets for Lavatories: Force to activate controls shall be no greater than 5 pounds. Self-closing metering, when specified, to remain open 10 seconds minimum when activated.

B. Cast Iron Lavatories shall be acid resistant enamel and shall conform to Commercial Standards CS 77.63. Unites furnished in conjunction with strainer installation or faucet installation shall be brass. Exposed brass nuts shall be chrome plated.

C. Exposed trim shall be free from sharp edges or points. Fixture shall be furnished with other listed manufacturer specified trim. Instead of solid supply pipe, polished chrome-plated risers, 3/8 inch outside diameter with ferrule stop end and metal nosepiece may be furnished.

D. Insulate cold water, hot water and drain lines under all access compliant lavatories with approved type insulation.

PLUMBEREX	LAV-GUARD

E. Provide as indicated on Plumbing Fixture Schedule: Call out of the schedule is the basis of design. Acceptable manufacturers are Kohler, Sloan and American Standard.

	BRASS CRAFT	CHICAGO	ZURN
Drain		327 XCP	Z8743
Supply	HSTR 1720 A-CB-C	1017	ZH-8822-CE-LK

Note: Provide cast iron hangers for sinks.

2.21 PIPE HANGERS

A. Refer to Section 22 0513: Basic Plumbing Materials and Methods.

B. Schedule Numbers:

1. PH-1: Complete with clamps, inserts, etc.

2.22 P-TRAPS

A. Schedule Numbers:

PT-1: Cast brass complete, chrome-plated.

AB&A
107

2.23 PRESSURE REGULATING VALVE ASSEMBLIES

A. Schedule Numbers:

PRV-1: Furnish for sizes ½-inch to 2-inch water service, all bronze body, stainless steel seat, bronze strainer, calibrated springs, and corrosion resistant, adjustable control.

WILKINS	WATTS

500XL- YSBR-HLR	LF223S-B-HP

PRV-2: Furnish for sizes 2 ½-inch and larger: Automatic (pressure) control valve-pilot controlled and diaphragm actuated pressure control valve, straight or angle pattern, flanged inlet and outlet connection, fusion bonded epoxy coated inside and out with stainless steel cover, stainless steel pilot, stainless steel bolts and nuts, and stainless steel flexible tubing in a compact configuration, vandal resistant bolt-on pilot controller, ¼ ball valve on all pilot control lines, and stainless steel internal parts.

WATTS	CLA-VAL
LFM115	90-01

PRV-3: Furnish for gas service, spring-loaded model, Buna N rubber composition or leather valve seat disc and diaphragm, inlet pressure 125 pound maximum.

REPLANCE	FISHER	SENSUS
1813C	S-100. 166-1, S-201, 166-2	121

PRV-4: Furnish for gas service for (unit heaters, boilers, and similar installations). Spring-loaded model, Buna N rubber composition, or leather valve seat and diaphragm suitable for temperatures to 150 degrees F.; maximum inlet pressure one pound. Outlet pressure 4 inches to 10 inches adjustable; orifice to suit. For pilot lines and main burners.

2.25 SHOWER ASSEMBLIES

A. General Requirements:

1. All shower and diverter valves and related components shall be concealed within the wall, along with all required supply and outlet piping.
2. Hand held shower slide bars have been omitted.
3. Hand held shower wall brackets shall be used in place of prior specified slide bars
4. Shower heads and hand-held showers shall have maximum flow rate of 1.8 GPM.
5. All showers and diverter valves internal working components shall be constructed of brass or stainless steel. Ceramic disk and/or plastic cartridges of any type are not accepted.
6. Reference Plumbing Standard Technical Drawings P-032 thru P-035 for placement of all ADA shower components.
7. All finish trim components, to include trim plates, flanges, handles, etc., shall be polished chrome of metal material. Plastic components of any type shall not be accepted.

D. Provide as indicated on Plumbing Fixture Schedule: Call out of the schedule is the basis of design. Acceptable manufacturers are Haws, Murdoc and Elkay

2.26 SERVICE SINKS and TRIM

A. Provide as indicated on Plumbing Fixture Schedule: Call out of the schedule is the basis of design. Acceptable manufacturers are American Standard, Chicago, and Sloan.

SS-1: Cast Iron corner service sink, conforming to Commercial Standard CS 77.63 for acid-resistant enamel, 28-inch by 28-inch, coated wire rim guard, 2-inch flat strainer and rough-

plated double faucet with top brace mounted above sink back, furnished with vacuum breaker and hose end.

	CECO	KOHLER	ZURN
Strainer	B-71-2	K-9142	D-2

2.27 SINKS and TRIM

A. Provide as indicated on Plumbing Fixture Schedule: Call out of the schedule is the basis of design. Acceptable manufacturers are American Standard, Chicago, and Sloan.

B. Access compliant faucets for sinks: Force to activate controls shall be no greater than 5 pounds. where specified self closing metering to remain open 10 seconds minimum when activated.

C. Cast iron sinks shall be acid resistant enamel, and shall conform to Commercial Standards CS 77.63. Units furnished in conjunction with strainer installation or faucet installation shall be brass. Exposed brass nuts shall be chrome-plated. Refer to the Fixture Supplies paragraph of this section.

D. Exposed trim shall be free from sharp edges or points. Fixture shall be furnished with other listed manufacturer specified trim. Instead of solid supply pipe, polished chrome-plated risers, 3/8-inches outside diameter with ferrule stop end and metal nosepiece may be furnished.

E. For access compliant sinks: Insulate cold water, hot water and drain pipes under sinks with district approved type insulation.

PLUMBEREX	LAV GUARD

2.28 SERVICE STOP GAS VALVES

A. Schedule Numbers:

SGV-1: Bronze/Brass, ¾-inches to 2-inch IPS (WOG) water, oil, or gas – full port ball valve. CSA approved.

(To be specified for larger water heaters, small boilers, pool heaters, and A/C units on roofs.)

WATTS	NIBCO	WILKINS
LFFBV-4	F-510-CS-R-66-FS	Model 850

SGV-2: Cast iron, 2-inch to 4-inch flanged ball valves (WOG) water, oil, or gas. CSA approved.

(To be specified for larger heating equipment.)

WILKINS	NIBCO	WATTS

Model 850	F-510-CS-R-66-FS	G4000M1

SGV-3: Lubricated plug gas valve, 3/4-inch to 2-inch IPS valve.

To be specified for use after gas meter headers, gas regulators, and isolation valves for building isolation, individual floor level isolation, and boiler rooms.)

NORDSTROM	WALWORTH	RESUN
142	1786	1430

SGV-4: Lubricated plug gas valve flanged type 2 ½-inch and larger valve.

(To be specified for use after gas meter headers, gas regulators, isolation valves for buildings isolation, individual floor level isolation and boiler rooms.)

NORDSTROM	WALWORTH	RESUN
142	1786-F	1431

SGV-5: Bronze/Brass ½ inch to 2-inch IPS X Flare Appliance ball valves with Tee handle. Flares to be used in conjunction with corrugated flex lines.

(To be specified for clothes dryer, water heaters, unit heaters, and wall heaters up to 100,000 BTU.)

BRASSCRAFT	NIBCO
TBV 10-12 TBV 8-8 TBV 6-8	GBV 12 GBV 1516

2.29 STOP VALVES

A. Stops shall be loose key type, ½-inches IPS inlet and outlet chrome-plated brass casting, except as noted.

B. Schedule Numbers:

STV-1: Angle:

CHICAGO,	NIBCO
442-LKABCP	77

STV-2: Partition:

CHICAGO	T& S BRASS
1771-ABCP	B-1028

CHICAGO	T&S BRASS
45-LKABCP (1/2 inch)	B-O418

2.30 TRAP PRIMERS

A. Schedule Numbers:

ATP-1: Automatic, multi-trap primer, cast bronze with access panel. Pressure drop of three p.s.i. shall activate trap seal primers. Manufactured by MIFAB. (Installed in accessible location.)

MIFAB
MR-500-NPB

2.31 URINALS

A. Provide as indicated on Plumbing Fixture Schedule: Call out of the schedule is the basis of design. Acceptable manufacturers are American Standard, Kohler, and Sloan.

B. Manual-flush valve: FLV-2.

2.32 WATER CLOSETS

A. General: Water closets shall be vitreous china with Polyvinyl chloride bolt caps. Fixtures with auto-flush valves shall be provided with manual override button.

B. Provide as indicated on Plumbing Fixture Schedule: Call out of the schedule is the basis of design. Acceptable manufacturers are American Standard, Kohler, and Sloan.

2.33 WATER HEATERS / DOMESTIC BOILERS

A. Provide as indicated on Plumbing Fixture Schedule: Call out of the schedule is the basis of design. Acceptable manufacturers are Ajax, Rheem and Raypak.

2.34 WATER HAMMER ARRESTORS

WHA-1: Lead Free Water Hammer Arrestor provided for Headers for Lavatories, Wash Sinks, Wash Fountains, Kitchen Sinks, Service Sinks, Urinals and Water Closets. For sizing purposes size according to manufacturer's recommendations.

SIOUX CHIEF	PPP	JR SMITH	WATTS	JOSAM
655 and 656 SERIES	SC SERIES	5005 TO 5050 SERIES	Series LF05 and LF15M2	75000

2.35 WATER TANKS, HOT – UNFIRED

A. Schedule Numbers: Provide as indicated on Plumbing Equipment Schedule: Call out on the schedule is the basis of design. .

B. Unfired Hot Water Storage Tanks: All welded 1/2 inch thick hot rolled carbon steel plate construction conforming to requirements of ASME Code for Unfired Pressure Vessels (Section VIII of ASME Boiler and Pressure Vessel Code). Tank designed for a working pressure of 125 psig and temperature of 150 degrees F.; tested and coded stamped. Connections shall be 3,000 psi welded extra heavy couplings. Flanged coupling may be furnished on 3 inches or larger connections.

RAYPAK	A.O. SMITH
LOCHINVAR	BRADFORD/WHITE

2.36 YARD BOXES

A. Schedule Numbers:

YB-1 Yard Boxes: 14 3/4-inch by 20-inch by 12-inch, cast concrete, with cast iron hinged locking traffic cover marked "GAS"

(For use over gas stops for portable buildings only, on addition to accessible emergency shutoff valve on building.)

BROOKS No. 36-HFL Assembly with cast iron hinged locking cover

YB-2: Same as YB-1, marked "WATER" (For use over water valves).

BROOKS No. 36-HFL Assembly with cast iron hinged locking cover

YB-3: Same as YB-1, marked "SEWER"

BROOKS No. 36-HFL Assembly with cast iron hinged locking cover

2.37 HEIGHT OF FIXTURES

A. Heights for standard fixtures.

Fixture	Adults and Students (Inches)
Toilets, height to top of seat	15 to 17

Lavatories, sink top height	32
Wash Sinks	30
Urinals, lip height	24
Shower Heads From tip of shower head to finish floor	72
Shower valves	48

B. Heights for access compliant fixtures.

Fixture	Adults and Students (Inches)
Toilets, center line from wall/partition	17-1/2
Toilets Seat Height	18
Lavatories, sink top height	34 maximum
Lavatories, sink knee clearance	27 minimum
Urinals, lip height	16
Urinals, flush handle height	43
Drinking fountains, bubbler height.	36 maximum
Drinking fountains, knee clearance	27 minimum
Wash Sink	Per Drawings
Shower Valves	Per CBC
Shower Seat	Per CBC
Shower Head (adjustable) Bar	Per CBC

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine areas and conditions under which Work of this section will be performed. Correct conditions detrimental to proper and timely completion of Work. Do not proceed until unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. General:

1. Unless otherwise specified, plumbing fixtures, equipment and appliances that require connections to plumbing line shall be connected. This shall include fixtures specified or indicated as furnished by others, furnished by Owner, or specified in other related sections. Install supplies, stops, valves, traps, wall flanges, or pipe casing for connection of this equipment.

2. Install equipment as indicated on reviewed and accepted Shop Drawings.

3. Avoid interference with Work of other trades. Do not deviate from Drawings without review of the Architect.

B. Examination: Check each piece of equipment in system for defects verifying that parts are properly furnished and installed.

C. For piping Work, refer to Section 22 0513: Basic Plumbing Materials and Methods.

D. Plumbing Fixture and Equipment Installation:

1. Unless otherwise indicated, fixtures shall be installed with 5/16 inch brass bolts or screws of sufficient length to securely fasten fixture to backing, wall, or closet ring.

2. Fixtures installed against concrete or masonry walls shall have their hangers fastened with 5/16 inch brass bolts, Philip Shield type anchors, or 2 unit cinch anchors. Wood or plastic plugs are not permitted.

3. Fixtures installed against wood or metal stud walls shall have their hangers fastened to metal backing plates with 5/16 inch brass bolts screwed into plate. Fixture hangers for urinals shall be fastened centered vertically on metal backing plate with three 5/16 brass bolts each for small individual hangers and six, for larger one piece hangers. Lavatories shall be hung with not less than four 5/16 inch brass bolts or not less than five 1/4 inch brass bolts. Each sink hanger shall be hung with not less than four 5/16 inch brass bolt or not less than five 1/4 inch brass bolts.

4. Pan type drinking fountains shall be hung with 5/16 inch cadmium plated bolts with a bolt in each bolt opening in hanger. Hangers for pan type drinking fountains shall provide 2 inches (plus or minus 1/4 inch) between pan and wall. Spaces due to

irregularities between fixtures and tile walls shall be neatly filled with white cement or silicone filler.

5. Backing for hanging of plumbing fixtures and equipment shall be installed in supporting wall at time rough piping is installed. Backing for stud walls shall be steel plate 1/4 inch thick, not less than 4 inches wide. Backing for urinals shall be ¼-inches thick by 6-inch wide steel plate. Steel plate shall be attached to stud at each end of plate and to each stud it crosses. Plate shall be attached to metal studs by bolting with two ¼ inch U-bolts per stud with bolts through plate and around stud flange or by welding with a 1/8 inch fillet weld full width of stud flange, top and bottom of plate. At wood studs, plate shall be carefully recessed flush with face of stud and attached to each stud with 2 No. 14 flat-head wood screws, 2 inches in length into pre-drilled 1/8 inch holes. Backing for stud walls supporting wall-hung closets shall be as detailed.

6. Rough-in for fixtures, equipment and appliances shall be as indicated on Drawings and as specified, including those items indicated as furnished by others, furnished by Owner, or future capacity. When connections to equipment from capped or plugged lines are required, caps or plugs shall be removed at time equipment is set and stops or valves installed and connections provided as specified.

7. Piping shall be stubbed out to exact location of fixtures and stubs shall be installed symmetrical with fixtures. Hot and cold water supplies for center set faucets on lavatories shall be installed on 8-inch centers, unless otherwise specified or required.

8. Kitchen equipment requiring backflow protection with hot and cold water connections shall be installed with approved backflow prevention assemblies; BPV-3 and drain into floor sink with air gap.

E. Cleanouts in Drain, Waste, Vent and Sewer Lines:

1. Cleanouts shall be installed at locations stated in the California Plumbing Code and accessible at following locations:

   a. At locations above first floor as stated on construction documents and 5 feet outside of the building.

   b. Install an accessible main line upper terminal cleanout in all restrooms above water closet overflow. (Install above upper terminal water closet where there are more than one water closets in a restroom).

   c. Above faucets of each sink with brass plug.

   d. Above service sink with brass plug.

   e. At each Drinking Fountain with brass plug.

   f. At each urinal and locate above urinal with brass plug.

g. Above overflow level of pot sinks with brass plug.

h. In vertical line at base of each downspout connected to an underground storm drain system extend cleanout to exterior of building.

i. At upper end of a horizontal vent line when any part of horizontal line is below overflow level of fixture it serves.

j. Not to exceed 100-foot intervals in sewer and waste lines exterior of building.

k. At property line connection.

l. Where indicated on Drawings.

2. Cleanouts shall be extended to grade as follows:

a. Not to exceed 100-foot intervals in straight runs of pipe outside buildings.

b. At horizontal changes of direction in aggregate greater than 135 degrees (underground).

c. At property lines.

d. Where cleanouts occur under concrete.

e. Where marked for future connections.

3. Cleanouts in building shall be extended to floor level or above floor level or above floor level in walls or furring when cleanouts are not accessible or where clearance is less than 18 inches.

4. Cleanouts in finished areas in building shall be concealed except that cleanouts above service sinks in janitor's rooms or closet, and cleanouts above service sinks or in exposed piping in boiler or heater equipment rooms, may be exposed. Cleanouts for urinals shall be installed above urinal and shall terminate behind an access plate.

5. Cleanouts in floors of covered areas and those extended to grade in concrete areas shall be floor level type with extensions body brass plugs and detachable nickel-bronze or aluminum alloy scoriated.

6. Concealed cleanouts in vertical lines shall be service weight soil cleanout tees with brass plugs and round cover plates unless otherwise specified or indicated. A snug fitting sleeve of galvanized sheet metal shall be placed around hub of tee and shall extend to flush with finished soil, or cleanout shall be extended to finished wall.

7. Cleanouts extended from below floor to a wall or furring or on horizontal lines above floor that terminate at a wall or furring shall be iron body type with brass plugs and round cover plates.

8. Cover plates over cleanouts in painted walls shall be steel, bonderized and prime coated. Cover plates cover cleanouts in tile walls shall be chromium-plated brass or nickel bronze. Plates shall be attached to cleanout plugs with 5/16 inch No. 18 or 1/4 inch No. 20 stainless steel vandal-proof type screws. Plates shall be one inch larger in diameter than fitting opening.

9. Cleanouts at bases of downspouts shall be tapped soil tees with brass plugs as hereinafter specified, full size of line.

10. Cleanouts extended to grade in exterior sewer lines other than floors or concrete areas shall be a cleanout assembly with secured top, extra heavy-duty, adjustable sleeve, cut-off ferrule, countersunk threaded brass plug and scoriated tractor type cover.

11. Other cleanouts shall be iron body type.

12. Cleanout extensions shall be no-hub cast iron soil pipe. Exterior cleanouts, those in concrete excepted, shall terminate in a 14-inch by 6-inch thick concrete block with cleanout assembly and top of block flush with finish grade.

13. Fittings in lines utilized as cleanouts shall be approved soil fittings including no-hub pipe. Tees and crosses in vent headers excepted.

14. Pipe joint compound shall not be installed on cleanout plug. After lines are tested and approved, each cleanout plug shall be removed, greased, and replaced.

3.03 EXCAVATION, TRENCHING AND BACKFILLING

A. Perform trenching, excavation, and backfilling required for Work of this section as specified herein and in Section 31 2323: Excavating, Backfilling, and Compacting for Utilities.

3.04 SERVICE CONNECTIONS

A. Determine exact location of required water, drain, and sewer connections and provide proper connections.

B. Potable water lines shall be purged completely before connecting to sources of water for the Project. Determine quality of water supply before connection.

3.05 WATER HAMMER ARRESTORS

A. Install water hammer arrestors indicated on Drawings and in following locations (only non-ferrous arrestors may be installed in copper water system):

1. Water lines to lavatory headers, water closet and urinal headers, service sinks, kitchen sinks, wash fountains, drinking fountains, laboratories with medical type faucets and on wash sinks having three or more stations and all other quick closing fixture such as clothes washers, as close to fixture as possible.

2. Between last two fixtures when three or more fixtures, other than those listed in Number 1 above, are served by a common header.

B. When possible, arrestor shall be installed in wall or furring. When arrestor is installed in wall or furring, furnish an access plate large enough to permit removal of arrestor. Access plate shall be a minimum of 2 inches larger in each direction than the arrestor.

C. Fixture water lines shall be provided with mechanical water arrestor hammer dampening devices. Air chambers are not approved.

3.06 CONDENSATE DRAINS - FROM AIR CONDITIONING UNITS

A. Connect drain piping from drain pan of air conditioning unit to condensate disposal location indicated. When coil or unit housing is shock or vibration isolated, connection shall be furnished through a flexible connector not less than 10 inches long. Drain line shall pitch to flow out at not less than one inch in 8 feet. Drain line shall not be reduced smaller than unit outlet connection.

B. Condensate drain piping installed within building whether in air conditioned space or not shall be insulated. Refer to Section 22 0700: Plumbing Insulation, for type of material required.

C. Condensate Trap:

1. A condensate trap shall be installed for each air conditioning coil. Trap shall be assembled from 2 brass unions: one between A/C unit and inlet of trap, and one at outlet of trap that connects to main drain.

2. Trap configuration shall be per manufacturer's recommendations based on total unit casting static pressure (simulated plugged filter condition), but not less than 3 inch water seal.

3. Running trap design is not permitted.

4. Secondary drain shall not be trapped.

D. Condensate trap shall be checked at equipment operational tests for proper water drainage flow from air conditioning unit. Cooling condensate pan shall be filled with water, filters covered with plastic (plugged filter simulated), unit panels replaced, and unit motor running at design condition. Pan shall drain without hesitation to bottom of inlet connection. Tests are made prior to installation of ceiling.

E. Secondary Overflow Drain:

1. Drain pan installed underneath air conditioning units in concealed ceiling space or units that incorporate dam fitting shall be furnished with secondary drain piped to outside planter area with outflow location clearly visible.

2. If outside building location is not available or feasible, secondary drains shall be piped to a classroom sink, if sink is not available pipe to a room corner away from cabinets, computers, desks, door ways/entrances or stairs.

3. Secondary vertical pipe that penetrates through suspended ceiling shall be furnished with a coupling or threaded adapter so ceiling tile can be removed without damage.

3.07 CONDENSATE DRAINS - FROM WINDOW TYPE HEAT PUMP AND EXTERIOR WALL MOUNT HEAT PUMP UNITS

A. Whether indicated on Drawings or not, window units and wall mount units without built in bottom drain pan for evaporator and condenser coils shall be provided with galvanized steel condensate pan at bottom of unit with drain line that drains into approved drywell. Install copper 1/2 inch diameter pipe for window type air conditioners and 3/4 inch diameter pipe for exterior wall-mounted heat pump units.

3.08 MAKE-UP WATER SYSTEMS

A. Provide and connect make-up water systems for equipment in other sections.

3.09 GAS SERVICE

A. Above Grade Service: Pipe shall be steel, hammered, free of dirt and scale, and blown out with oil-free air or nitrogen to a clean, dry condition. Piping shall not be installed in or through a ventilation duct or plenum.

B. Underground Service, Gas approved (yellow) Polyethylene Plastic Pipe: Refer to Section 22 0513: “Basic Plumbing Materials and Methods”.

1. Pipes shall be joined with polyethylene fitting and joined together by thermal fusion in accordance with procedures recommended by Polyethylene plastic pipe and fitting manufacturer.

2. Plastic pipe shall be installed not less than 30 inches below grade.

3. Underground Warning Tape shall be installed 12 inches above buried gas piping. Warning tape shall be yellow with caution statement as follows: “CAUTION – BURIED GAS LINE BELOW”.

4. Plastic pipe shall not be installed in or under a building or structure. Pipe shall be installed under bituminous surfacing or compacted soil area, free from large stones. Pipe may be installed under sidewalks or driveways, as long as no joint occurs. Pipe installed under paved covered areas wider than 40 feet shall be installed in ventilated conduits extending 2 feet past paving.

5. Pipe shall be installed on a 6 inches deep sand bed. After required pressure-leak test, pipe shall be covered with sand not less than 6 inches thick.

6. Piping shall not support weight of valves, metal fittings or other items. Pipe shall be installed strain free.

7. Plastic pipe fittings shall not be stored or left exposed to sunlight. Pipe in open trenches shall be shielded. A sand envelope of 6 inches minimum shall be placed around pipe, with exception of joints, until inspection by IOR is completed. Protection for pipe shall be provided when necessary to leave pipe exposed overnight.

8. Installer of piping is required to have training and to have attained a certification. Non-trained/Non-certified installer must contact the manufacturer or manufacturer's representative to provide on-site fusion training and certification, prior to work commencement

9. Polyethylene plastic pipe shall connect to a steel epoxy coated anodeless type riser to minimum of 6 inches above grade, when exiting the underground installation and transitioning to steel pipe connection.

10. Where a steel pipe riser passes into a structure or building, a double swing or double-offset joint shall be furnished. Pipe shall pass into structure 6-inches above grade and through a sleeve with a minimum one inch clearance. An isolation valve is required before pipe entering the building.

3.10 CLEANING - PLUMBING PIPING SYSTEMS AND FIXTURES

A. Plumbing lines and fixtures shall be flushed to remove dirt and foreign material until water runs clear and no foreign substance or odor is present. Strainers and screens on faucets shall be removed during this cleaning operation.

B. After satisfactory cleaning of strainer and screen replacements has been witnessed by the Project Inspector, post and maintain signs stating: "CAUTION - Water at this construction project has not yet been certified for human consumption." Signs shall be furnished with letters at least 1/2 inch in height and shall be conspicuously posted at entrances to the Project site. Signs shall be paneled, black and yellow, in conformance with OSHA Section 1910.1455.

3.11 DISINFECTING DOMESTIC WATER PIPING SYSTEMS

A. Newly installed or replaced piping and/or fixtures dispensing potable water, and any additional piping and/or equipment impacting the integrity of this system shall be disinfected and undergo an approved bacteriological analysis before water system is allowed for public use.

B. Disinfection shall commence upon complete installation of all related domestic water systems including fixtures, valves, faucets, water heating systems, etc.

C. Work shall be performed by Technicians Certified by the American Water Works Association (AWWA) and/or the State of California Department Health Services, Grade II

Water Treatment Operator Certification or higher issued by the Department of Health Services (DHS) for the State of California. Comply with Title 22, Code of Regulations Division 4, Chapter 13, and Article 2 Operator Certification Grades.

D. Method:

1. A Physical Separation of minimum 6" or Reduced Pressure Backflow assembly shall be installed to protect from cross contamination of the local water purveyor's meter service supply when at any time there is any type of water connection with the piping to be disinfected (Chlorinated) and the water meter service supply.

2. Install a Chlorination Port including a T fitting and a shut off valve to the proximity of the point of connection at the new piping system.

3. System is to be flushed to remove any materials that may have entered the system.

4. Using a chemical feed metering pump and a chlorine tank, the chlorine solution is injected into the water system.

E. Disinfection and De-chlorination procedure (24 or 3 Hour Contact Time):

1. 24-hour Test Method:

a. Prior to disinfection, post signs on all water outlets of the system to be disinfected. Sign or tags shall read, "Water System Being Chlorinated- "Danger Do Not Drink Water" or similar warning.

b. Piping system shall then be adequately flushed with water to remove any particles and eliminate air pockets.

c. Using the continuous feed method, sodium hypochlorite conforming to ANSI/ AWWA B300 will be injected into the water system at a minimum of 50 PPM. A water flow meter provided by the water treatment technician will be used to determine the rate of injection and a chlorine test kit, Hach or equivalent, will be used to monitor the residual.

d. Chlorine residual test will be taken at all appropriate points and outlets to verify 50 PPM residual levels.

e. The chlorinated system shall be shut down for any use and the chlorinated water shall remain in the water system for retention of 24 hours.

f. After 24 hours, chlorine residual levels will again be tested at various points throughout the system to insure a minimum of 25 PPM residual. If the system has not met the minimum of a 25 PPM residual, the above disinfection process shall be repeated.

g. After satisfactory completion of the residual testing, flush out system until Hach or equivalent test reveal the water outlets have a free chlorine residual concentration less than 0.5 PPM. The procedure shall be in accordance with the AWWA standard C651-05.

h. The OAR may allow temporary use of the water system for construction purposes pending results of the bacteriological test analysis. Sign or Tags shall be left on all outlets stating water system is not safe for consumption until laboratory results are complete and meet these specifications.

2. 3 Hour Test Method:

a. If the water systems must be turned on for use as soon as possible, a 3 hours chlorine contact time to allow for disinfection is permitted with the OAR's approval.

b. Prior to disinfection, post signs on all water outlets of the system to be disinfected. Sign or tags shall read, "Water System Being Chlorinated-"Danger Do Not Drink Water" or similar warning.

c. Piping system shall be then adequately flushed with water to remove any particles and eliminate air pockets. Using the continuous feed method, sodium hypochlorite conforming to ANSI/ AWWA B300 will be injected into the water system at a minimum of 200 PPM. A water flow meter provided by the water treatment technician will be used to determine the rate of injection and a chlorine test kit, Hach or equivalent, will be used to monitor the residual.

d. Chlorine residual test will be taken at all appropriate points and outlets to verify 200 PPM levels. The chlorinated system shall be shut down for any use and the chlorinated water shall remain in the water system for retention of 3 hours.

e. After satisfactory completion of a 3 hour disinfection period, flush out system until Hach or equivalent test reveal the water outlets have a free chlorine residual concentration less than 0.5 PPM. The procedure shall be in accordance with the AWWA standard C651-05.

f. The OAR may allow temporary use of the water system for construction purposes pending results of the bacteriological test analysis. Sign or Tags shall be left on all outlets stating water system is not safe for consumption until laboratory results are complete and meet these specifications.

F. Bacteriological Test:

1. After final flushing and satisfactory results from the residual free chlorine concentration test, Bacteriological test samples shall be collected. The intent of the following is to provide insurance for an accurate representation to a complete

Bacteriological test of the water system. At least two samples shall be taken from each floor of each building.

2. Bacteriological test samples shall be delivered to a State of California Department of Health Services Certified Laboratory to perform qualitative and quantitative bacterial analyses on the water samples for the presence of any Total Coliform bacteria and Plate Count. This count must be less than 500 cfu/mL.

3. The procedure shall be repeated if it shown by bacteriological examination made by an approved agency that the level of Disinfection does not meet these specifications.

4. After satisfactory results for the bacteriological test are provided to the OAR, the physical barrier or temporary reduce pressure back flow devise shall be removed, and the new piping shall be connected to the point of connection. All the connecting piping and fittings shall be disinfected prior to installation. Chlorination Port shall be capped water tight. Warning sign or tags shall be removed.

G. Drinking Fountain and Bottle Filler Lead Test: After installation of Drinking Fountain or Bottle Filler, and successful Bacteriological Test, shut off domestic water supply line feeding the fixture, and inform OAR. OAR will coordinate with the Drinking Water Quality Program (DWQP) Supervisor in local Project Unit and M&O's Plumbing Technical Unit Supervisor to conduct lead detection test and mitigate as necessary. Do not remove related construction warning sign and tags.

3.12 VALVES ON PLUMBING SYSTEM

A. Furnish and install gates, ball, globes, angles, and check valves on plumbing Work at following locations whether indicated on drawings or not.

B. Hot and cold valves shall be:

1. Lead free complying with AB1953.

2. Above the ground copper water system, 2-inch and larger, may utilize Victaulic butterfly valves and fittings for their connections. A 2-inch or larger Victaulic valve may be in a wall if an adequately sized access panel is provided for maintenance or removal.

C. Valves shall be accessible and installed within an access panel approximately 3 feet above floor and no more than 7 feet above floor, or in a marked yard box to prevent tampering.

1. Immediately after each water meter, in addition to any valve furnished by utility company, there shall be an accessible valve on the inlet side for a strainer assembly, dual backflow device assembly and/or possibly a dual pressure reducing valve assembly.

2. A gate or ball valve on each water supply before it enters building. Valves shall be accessible from outside building and shall be installed in a marked yard box, unless

otherwise indicated on drawings. Ball valves 2 ½-inch size or larger shall omit gate valve handle and furnish 2-inch square operating nut.

3. At multi story buildings, provide an isolation-valve or multiple valves for both hot and cold water in access panel to isolate and control each floor level.

4. For classrooms, shops, offices and boiler or mechanical room, install a gate or ball valve to control hot and cold water lines to each group of fixtures, a group of fixtures shall be considered to be 2 or more fixtures in the same room. When practical, valves shall be installed on the same wall as group of fixtures. Valves shall control only fixtures in rooms in which they are installed.

5. For restrooms, a gate or ball valve shall be installed in each restroom to isolate the hot and cold water supply into a restroom regardless of the number of fixtures. These valves shall control and be accessible only from within the restroom in which fixtures are installed. Valves shall be installed on the same wall as the group of fixtures it serves. Valves shall control only fixtures in restroom in which they are installed. Back to back restrooms shall be isolated separately and individually.

6. Install a gate or ball valve on each building branch line, which serves two or more fixtures, when these fixtures are not provided with a group isolation valve as specified above. These valves shall be located approximately 3 feet but not more than 7 feet above finish floor.

7. Install a gate, ball valve or partition stop for a drinking fountain or a group of drinking fountains.

8. Install a gate, ball valve or partition stop for hot and cold water supply to plumbing fixtures with no accessible supply stops, such as wall mounted faucets.

9. Install a gate, ball valve or partition stop for stops adjacent to, and controlling water flow to each sill cock and hose bib except as follows:

   a. A sill cock immediately below an exterior drinking fountain may be controlled by the same gate, ball valve or partition stop as drinking fountain.

   b. Valves or stops will not be required for individual hose bibs when these hose bibs are on a branch line serving only hose bibs and branch line is furnished with a shut-off valve.

10. Install a lose key angle stop, on each exposed fixture supply, and for each flush valve unless otherwise specified,

11. Install gate or ball valve at each location where a water line is connected to a piece of equipment other than items mentioned above.

12. Install a check valve on each hot water return line where it connects to a hot water storage tank or a water heater.

13. Handles, hand wheels (including dishwasher fill valve handles) and operating nuts shall be furnished of steel, brass, or cast iron and shall be removable. Unless specified to be loose key type, handles shall be securely fastened to their stems. On exposed outdoor valves, omit operating handles and provide operating nuts.

14. Provide a handle or a key for each five, or fraction thereof, loose key valves, bibs, or stops and deliver them to the project OAR.

3.13 VALVES - GAS SERVICE

A. A gas readily accessible shut-off stop shall be installed on each gas line entering a building immediately prior to the point it enters the building. Unless otherwise specified or indicated, shut-off valves for lines entering a permanent structure, buildings or portable buildings, shall be installed in a vertical riser above grade.

1. Gas shut off valve for portable buildings – In addition to the gas readily accessible shut-off stop specified above, a dedicated Gas shut off valve shall be provided in a marked Yard Box, for each portable building to facilitate relocation/removal of building without the need to shut off gas to entire campus.

B. Gas Shut off valve within a building – A gas shut off valve with handles shall be accessible and serviceable within an access panel. Install valve minimum 3 feet above floor but less than 7 feet above floor.

C. In addition to locations specified, gas shut off valve shall be installed at following locations:

1. Install a lubricated plug gas shut off valve on any line connected to gas main or header at master assembly.

2. Install a lubricated plug gas shut off valve before entering any building or structure.

3. Install a gas valve on each outlet, in addition to any gas stop furnished with equipment.

4. Service to laboratory gas cocks shall be furnished with a special precision check valve, located downstream from gas stop servicing room outlet at each laboratory cock. Unless otherwise specified, 1/8-inches bore shall be provided for each outlet cock.

5. Install a gas shut-off valve on each gas line serving 2 or more gas outlets in same room. Service stop shall be installed not more than 7 feet above floor, and shall be in the room it serves.

6. Install a gas shut-off valve on inlet side of each gas pressure regulating valve.

7. Gas shut-off valves to be furnished with equipment.

8. Install gas shut-off valve at not more than 1,000 foot intervals on each gas main.

9. At multi-story buildings, provide gas-shut off valve(s) to isolate and control each floor or level. Install valves in a concealed manner in walls with access panels.

10. Gas shut-off valves in classrooms and locations subject to tampering shall be protected while remaining accessible.

D. When a gas-shut off valve adjacent to gas-fired equipment is indicated in Contract Documents it shall be furnished and installed as part of Work of this section.

E. When electrical wall switches with emergency push button are specified for controlling gas outlets at Laboratory Classrooms, provide main shut-off gas valve with normally closed electric solenoid valve within an accessible access panel.

3.14 ELECTROLYSIS PREVENTION

A. Brass nipples, 6 inches, with recognized brass unions; flanges shall be furnished and installed at locations described herein. Flanges shall be installed with complete insulating component consisting of gasket bolt sleeves and bolt washers. Dielectric insulators shall be installed at following locations:

1. Where special applications indicated on Drawings require an insulation flange or brass union, with 6-inch brass nipple to be installed in a condensate line, or steam line, flange insulation shall be of a high temperature type, suitable for continuous operation at temperatures up to 220 degrees F. for condensate and 400 degrees F. for steam.

2. Where steel or cast iron in ground connects to copper or brass piping above ground, transition from steel or cast iron pipe to copper or brass pipe shall be provided in an accessible location.

3. Underground dielectric connections shall be furnished in accessible yard boxes.

4. Above ground dielectric connections shall be exposed; or if in finished rooms shall be located in accessible access boxes.

3.15 UNDERGROUND PIPE MARKERS

A. Pipe markers shall be furnished according to Section 22 0553: “Plumbing Identification”

B. Underground Caution Tape shall be placed 12 to 18 inches above the utility line. The Caution Tape shall be a designated color and marked with the appropriate name for the specific type of utility pipe as follows:

1. Yellow – with the words: CAUTION GAS LINE BELOW

2. Blue – with the words: CAUTION WATER LINE BELOW

3.16 HOT WATER CIRCULATING PUMPS

A. Floor-mounted pumps shall be provided with a 4-inch high concrete base with ½ inch reinforcing bars at 12-inch centers each way and doweled into concrete floor.

B. Piping shall be supported from building structure so as to prevent any strain on pump casing.

C. In-line pumps, unless otherwise specified, shall be centrifugal type with non-overloading characteristics and shall not overload motor above its horsepower rating under operating conditions with ratings based on continuous operation.

D. Centrifugal water pumps shall be rated according to Hydraulic Institute Test Code for Centrifugal Pumps. Pumps shall be furnished with bronze water chamber, bronze impeller and mechanical seal. Rotating parts shall be statically and dynamically balanced.

E. Flanged connections shall be provided on pumps with discharge connections larger than 2 inches. Smaller sizes may be threaded connections.

F. Hot water circulating pump shall be arranged so that pump can be automatically turned off when hot water system is not in operation.

3.17 WATER TEMPERATURE CONTROLLERS

A. Furnish and install a water temperature controller in hot water line adjacent to, and for control of, circulating pumps on hot water return lines when said pump is indicated on Drawings or herein specified. Bulb of temperature controller shall be installed so as to be directly in path of flowing water and so as not to obstruct flow of water.

B. Furnish and install a water temperature controller in hot water storage tanks for control of circulating pump on hot water circulating line when said pump is indicated on Drawings or specified herein.

3.18 DEPTH OF SEWER LINES

A. Minimum depth of below grade sewer lines shall be 24 inches to centerline of pipe. Sewer lines shall slope ¼ inch per foot minimum, unless otherwise indicated. Minimum depth at Owner property line shall be 6 feet, unless otherwise required.

3.19 BACKFLOW PREVENTION DEVICES

A. Backflow Devices: Installation of backflow devices shall be tested and certified by Los Angeles County backflow device tester before Substantial Completion. Tests shall be performed in presence of Project Inspector. Test reports shall be turned over to Project Inspector for mailing to proper agency.

3.20 CLEANUP

A. Remove rubbish, debris, and waste materials and legally dispose off Project site.

3.21 PROTECTION

A. Protect Work of this section until Substantial Completion.

END OF SECTION

DIVISION 23

HEATING, VENTILATING, AND AIR-CONDITIONING (HVAC)

SECTION 23 05 00 - MODULAR CENTRAL PLANT

PART 1 – GENERAL

1.1 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.2 SUMMARY

A. Section Includes:

1. General description.
2. Manufacturers.
3. Qualifications.
4. Performance testing.
5. Mechanical equipment.
6. Electrical and controls equipment.
7. Project execution.

1.3 GENERAL DESCRIPTION

A. Provide a factory assembled modular central plant as specified herein and according to plan drawings. The modular central plant shall be no smaller than specified on plan drawings.

B. The modular central plant after assembly shall require only the following connections for the hot water portion:
   1. Hot water suction and discharge pipe connections.
   2. One (1) make-up water connection.
   3. <Insert number> electrical power connection(s).
   4. Terminal contacts to field mounted devices and building automation system (BAS).

1.4 MODULAR CENTRAL PLANT COMPONENTS

A. The modular central plant's hot water portion shall consist of the following components: structural base, boiler(s), domestic water skid, hot water pump(s)/motor(s), power distribution, controls, valves, and all necessary piping and components as listed in the specification for a complete system.

1.5 MODULAR CENTRAL PLANT DESIGN CONDITIONS

A. Boiler Plant:
   1. Total heating load at present: 4,000 MBH, two boiler(s) at 2,000 MBH each.
   2. Hot water system: Two 100 GPM HHW Variable Primary Pumps with 110' TDH. One 35 GPM HHW Pump for Domestic Water Skid with 25' TDH.
   3. Instantaneous Domestic Water: 18.6 GPM Capacity with 70 Degree temperature rise and 379 MBH.

1.6 MANUFACTURER

A. Subject to compliance with the specification, provide a complete modular central plant by one of the following manufacturers:

   Base Bid: Systecon Inc. (www.systecon.com).
   Alternates: Stellar Energy (www.stellar-energy.net).
   TAS Energy (www.tas.com).

   Alternate manufacturers not listed above must submit 2 weeks before the bid date following data for the engineer's review. Failure to provide the information below will result in a disqualification:

   1. Preliminary 3D layout & P&ID for this project
   2. Complete control sequence.
   3. Pumping energy analysis.
   4. System performance data.
   5. Documentation of proposed equipment with flow diagrams.
   6. At least five successful variable primary flow jobs with contact name and phone number.
   7. Itemized list of any exceptions taken to the base bid specification.

8. Provide a letter from an officer of the packaged plant manufacturer stating that the exceptions listed are the only deviations from the specifications.

1.7 QUALIFICATIONS

A. The modular central plant manufacturer shall be listed by ETL or UL as an approved manufacturer of factory assembled modular central plants. The equipment shall bear the listing and label before shipment from the factory.
   a. The listing must cover the entire modular central plant as assembled.
   b. An individual listing for components is unacceptable.
   c. If the manufacturer does not carry a listing, they must pay UL or ETL to field label the entire modular central plant system.

B. The modular central plant manufacturer must be the manufacturer of the controls and control panel used for the system.
   a. The control panel shall be listed by UL as an approved manufacturer of industrial control panels.
   b. Upon request from the engineer, the manufacturer shall furnish proof of listing.
   c. Use of commercial grade controllers from the building automation contractor is not acceptable.

C. Boiler Plant Controls:

   i. Skid Controller to provide PLC start stop of major equipment and pump control.

D. The modular central plant manufacturer shall have a quality assurance program.
   a. The manufacturer shall provide documentation of this program in the submittal.
   b. The manufacturer shall provide a description of the performance test procedure.
   c. The manufacturer shall provide current (within last 9 months) independent testing certifying the performance test stand instrumentation is NIST traceable.

E. The modular central plant manufacturer shall of a minimum of fifteen (15) years of manufacturing and application experience.

F. The modular central plant manufacturer shall provide all mechanical drawings in a three-dimensional format. These drawings shall be reviewed utilizing a 3D viewer with the owner and engineer. The use of 3D design software is required to ensure the design adequately provides for maintenance and angle clearance.

1.8 PERFORMANCE TESTING

A. Factory Performance Test Standards

1. Field performance testing of the modular central plant is not acceptable.
2. Factory performance tests to be witnessed by the owner, consulting engineer, commissioning agent, installing contractor and equipment representative.
3. The entire testing facility shall be independently certified and traceable to NIST or ASME PTC 18.1 calibration procedures. Certification shall be kept on file for inspection. Hydraulic Institute standards shall be followed for the calibration procedures of all testing instrumentation.

4. Prior to factory assembly of the modular central plant, each pump or pumping system shall be performance tested as per 1.8B.
5. After factory assembly of the modular central plant, the entire system shall be hydrostatically tested with water to 150 PSIG for ANSI class 150 for a minimum of thirty (30) minutes.
6. The performance test stand must have a tank that will limit the water temperature rise from the beginning to the end of the test to 10 degrees F. Flow test data must be provided showing the tank temperature.
7. As a minimum requirement, the following test equipment must be utilized and shall be within the following accuracies:

    a. Flow meter: ±4% of rated flow, 0 to full range.
    b. Pressure gauges and sensors: ±2% based upon independent dead weight test.
    c. Tachometer: ±1% of rated speed, 0 to full range.
    d. Multimeter: for readings of supply voltage, input amperage, input kilowatts, and power factor ±1% of selected reading, 0 to full range.

1.9 SUBMITTALS

A. Submittals shall include the following as a minimum:

1. Title page with job name, location, and equipment title.
2. Table of contents with document index.
3. System design information sheet.
4. Description of system operation.
5. Modular central plant general arrangement and dimensioned drawing(s).
6. Modular central plant schematic showing all pipe sizes, location of reducers, components, specialties, and instrumentation.
7. Structural base drawings showing number and size of members.
8. Structural base deflection calculations.
9. Electrical power and control wiring drawings.
10. Pump(s) material and construction drawing(s).
11. Pump(s) performance curve showing design point.
12. A predictive pumping energy analysis showing system efficiency and kW.
13. [Complete boiler submittal.]
14. Complete variable frequency drive(s) submittal.
15. Catalog information on valves, strainers, and control components.
16. Name and address of factory trained service company.
17. Performance test procedure and performance test stand drawing.

B. Provide electronic download of submittal for approval.

C. Submittals that are generic and not specifically designed to meet the requirements of this specification section will be immediately rejected and are not acceptable.

D. Submittal shall be assembled in an organized manner with proper index.

E. If the submittal is rejected more than once, upon the third submission the manufacturer shall pay the engineer $5,000.00 for each instance for their service before the third or subsequent submittal is reviewed.

1.10 OPERATION AND MAINTENANCE MANUALS

A. Operation and Maintenance (O&M) Manuals shall include the following as a minimum:

1. Title page with job name, location, and equipment title.
2. Table of contents with document index.
3. System design information sheet.
4. Description of system operation.
5. Modular central plant general arrangement and dimensioned drawing(s).
6. Modular central plant schematic showing all pipe sizes, location of reducers, components, specialties, and instrumentation.
7. Electrical power and control wiring drawings.
8. Bill of material.
9. Modular central plant component's operation and maintenance instructions.

B. Provide electronic download of operation and maintenance manual.

C. Operation and maintenance manuals that are generic and not specifically designed to meet the requirements of this section are not acceptable.

D. Operation and maintenance manuals shall be assembled in an organized manner with proper index.

PART 2 – PRODUCTS

2.1 MECHANICAL

A. Structural Base

1. A pre-engineered structural steel base shall be provided by the modular central plant manufacturer to support all equipment and facilitate lifting, shipping, and the proper installation of the plant. All major equipment, including chiller(s), boiler(s), pump(s), and heat exchanger(s), shall be supported directly with full height structural steel members underneath the floor. All equipment shall be welded to the floor. Bolting equipment is not acceptable.

2. Structural base shall be supported on a maximum of 24" centers to the structural intermediate support channels. Structural base shall be lifted with a maximum of 4 lifting lugs. Structural base shall not deflect more than the allowable strain at the allowable design stress or 1/360th of the length of the base, whichever is less. Floor decking shall be provided and be made from solid welded ¼" hot rolled steel diamond plate sheets. Floor decking shall be 1" stitch welded, every 12" from the bottom and continuously welded from above. Floor decking shall be turned upward at the perimeter a minimum of 2" to provide for proper containment. Module sections shall be provided with clips used to pull sections together, as well as base bolts to fasten modules together. Jacking bolts shall also be present on either side of base bolts on each module section.

B. Condensing Boiler(s)

1. Boiler(s) shall be provided by the modular central plant manufacturer.
Required Equipment:
Qty (2) Aerco Benchmark Platinum 2000
Outdoor Covers

C. Instantaneous Domestic Water Heater

Qty(1) Aerco Smartplate EV

D. Pump(s) and Motor(s)

1. Hot water pump(s) and motors(s) shall be provided by the modular central plant manufacturer.
   Required Equipment:
   Qty (2) HHW Pumps 100 GPM @ 110' TDH
   Qty (1) HHW Pump: 35 GPM @ 25' TDH

E. Pipe, Manual Valves, Fittings, and Hydronic Specialties
1. All pipe, manual valves, fittings, and hydronic specialties as shown on the bid drawings within the boundaries of the plant enclosure shall be provided by the modular central plant manufacturer.
2. Refer to Section 230516 "Expansion Fittings and Loops for HVAC Piping."
3. Refer to Section 230523 "General-Duty Valves for HVAC Piping."
4. Refer to Section 230529 "Hangers and Supports for HVAC Piping and Equipment."
5. Refer to Section 232113 "Hydronic Piping."
6. Refer to Section <Insert number> "Hydronic Specialties."
7. Pipe shall be fabricated welded steel headers using manufactured fittings conforming to ASME Section 9 Code B.31.1, 150# ANSI class. Pipe shall be sized for a maximum velocity of 10 feet/second and maximum head loss of 8.5 feet per 100 feet of pipe. Branch piping shall be sized for the design capacity of each component.
8. Grooved couplings shall be limited to connections between modules, chiller evaporator and condenser connections, and connections through enclosure walls. A modular central plant assembled entirely of grooved couplings is unacceptable.
9. All pipe on the plant skid shall be supported from the structural base and be independent of component connections. Pipe shall be isolated from supports using a non-metallic spacer. Pipe welded directly to supports is unacceptable.
10. When copper pipe is used, it shall be Type L and Pro Press fittings shall be used.

F. Actuated Control Valves

1. The modular central plant manufacturer shall provide automatic, two-way, two-position, control valves with electric actuator for the following functions, at a minimum:
   a. Boiler inlet isolation.

2. All valves indicated above shall be provided as an integral part of the modular central plant. All valves shall be designed for quarter turn operation. Three-way assemblies shall consist of two butterfly valves with integral linkage and tee. All butterfly valve shall be constructed with a ductile iron lug body, EPDM seat, stainless steel disc, 416 stainless steel shaft, and copper and brass bushings. The actuator shall be mounted on a bracket, which is coupled to the valve shaft. The actuators for two position operation shall have a split phase capacitor AC reversing motor with 25% duty. The actuators for modulating operation shall have a split phase capacitor AC reversing motor with 100% duty. Actuators shall be housed in an aluminum NEMA 4 enclosure with integral 115 VAC condensate heater. Two-position valve actuators shall have end switches. All valves shall be provided with position indication displays on HMI. All electric actuated control valves shall be provided with manual override clutch and wheel hand operator. Brass isolation valves shall be present at headers for equipment tie-in

G. Piping Insulation

1. The modular central plant manufacturer shall provide and install piping insulation with service jacket for all hot water system components which are included within the interior of the plant enclosure. Components include pumps, piping, valves, fittings, and air separators.
2. Expansion tanks/associated piping and water make-up pipes shall be uninsulated
3. Refer to Section 230716 “HVAC Equipment Insulation.”
4. Refer to Section 230719 “HVAC Piping Insulation.”
5. All piping insulation required for piping that will be installed exterior to the plant enclosure shall be provided and installed by the installing contractor.

H. Fit and Finish

1. Paint: All exposed steel components shall be cleaned, degreased and painted with a rust preventive primer, and shall be painted the same color as the base. Base and pipe components shall be mechanically cleaned per SSPC – surface preparation specification No. 2. The structural base, exposed steel, pipe, pump(s), motor(s), and valves shall be painted with a consistent color and two-part epoxy. All other major equipment shall be in original condition and not painted. Provide touch up paint as part of the shipment.
2. Tagging: All mechanical components, electrical devices (including switches and receptacles), transmitters, and control devices shall be tagged. Provide phenolic name tags with chains for all control valves and transmitters. Provide type tagging in circuit breaker panels. Tagging to be the same as shown on the submitted flow diagram. Refer to Section 230553 “Identification for HVAC Piping and Equipment.
3. Pipe marking: All pipe shall be marked with pipe markers to indicate type of fluid and flow direction. Markers to have 2 inch letters with colored background. Locate marker before and after major components. Use different colors for each system.
4. Caution markers: Provide caution markers for all hazards. Markers to include hoist ratings, shock hazards and burn hazards. Provide tagging on exterior doors for refrigerant and hearing protection.
5. Conduit and Pipe: All horizontal conduit and pipe shall be installed level. All vertical conduit and pipe shall be installed vertical. Pipe and conduit shall be arranged not to impede access. Pipe and conduit to be arranged so that it does not become a trip hazard or hazard for bumping your head.

2.2 ELECTRICAL

A. Electrical Distribution

1. A switchboard shall be provided by the modular central plant manufacturer for distribution of power for the entire skid. This shall include power for boilers, pump(s), valve(s), and controls.
2. Power Supply: 460/3/60.
3. The switchboard shall be package mounted and wired. The switchboard shall comply with all applicable codes and braced for 65,000 AIC. Switchboard shall include the following:
   a. Main plant circuit breaker.
   b. Boiler water pump circuit breakers.
   c. Load center panel board with 480v/120v step-down transformer. Serves 120/1/60 utilities on the skid enclosure.
   d. Transient Voltage Surge protection.
   e. NEC clearance required for all electrical components.
4. Conduit shall be provided for all electrical wiring.
   a. Galvanized rigid conduit with Meyers hubs shall be required conduit for outdoor use.
   b. Connectors to be watertight where conduit crosses the floor. Where the conduit is not a trip hazard raise conduit a minimum of 1-5/8” above floor using Unistrut stand off to allow drainage.

c. Control device wiring shall be run in conduit.
d. When sensor wiring does not have a junction box, run conduit to minimize exposed wire.
e. Main power wiring to be color tagged at each end. All power wiring to be phased correctly. All 115-volt wiring to be tagged at each end. All control wiring to be tagged at each end. Control wires to be continuous except across package splits. Use shielded cable as required for transmitters.

B. Variable Frequency Drives

1. The modular central plant manufacturer shall provide an ABB ACH580 variable frequency drive for each hot water pump.
2. Refer to Section 262923 “Variable-Frequency Motor Controllers”.
3. Provide with adjustable frequency, which employ a pulse width modulated inverter.
4. Each drive shall have its own, individual disconnect
5. Drives for cooling tower fans and single pump applications shall have manual by-pass starters.
6. To ensure safety of the equipment, the VFD shall include these protective features and options:
   a. NEMA 3R enclosure.
   b. Static instantaneous over-current and over-voltage trip.
   c. Static over-speed (over-frequency) protection.
   d. Line or fuse loss and under-voltage protection.
   e. Power unit over-temperature protection.
   f. Motor inverse time overload protection.
   g. Input line reactor or DC choke. AC or DC sized for a minimum of 1-½% impedance.
   h. Ammeter.
   i. Speed meter.
   j. Automatic restart after power failure or minor drive fault. The drive shall attempt a minimum of two restarts before a complete drive shut-down.
   k. Power on light.
   l. Manual speed potentiometer or control capability through the keypad.
   m. Hand/Off/Automatic Switch or Manual/Automatic Switch with start/stop pushbutton.
   n. VFD fault light and reset.
   o. The drive shall include built in diagnostics. Diagnostics shall be annunciated through the alpha numeric keypad. The drive shall be listed UL, ETL and/or CSA.
   p. All drive information shall be transmitted to the BAS through an interface with the master control panel. Multiple BAS connections are not acceptable.

2.3 CONTROLS

A. Hardware

1. All controls hardware required for the operation of the boiler/domestic water plant to be provided by the modular boiler skid manufacturer.
2. The control enclosure to conform to NEMA 3R type construction.
3. Control panel to be UL 508A listed under cULus.
4. The modular boiler plant control panel to include:
   a. Disconnect switch.
   b. Control circuit transformer 480/120 with primary and secondary fuses.
   c. System Local-Off-Remote selection.
   d. System Initialized indication.
   e. Run indication for each pump
   f. Pump failure alarm indication and reset.
   g. Lead selector for manual alternation of each pump set.

h. Lead selector for manual alternation of chillers.
i. Open-close-auto switch for each control valve.
j. Position indication for each control valve.
k. Failure alarm indication for each control valve.
l. Programmable Logic Controller (PLC).
m. Human Machine Interface (HMI).
n. Interface controls for variable frequency drives.

5. Programmable Logic Controller (PLC).
   a. Industrial PLC based control system shall be used.
   b. Manufacturer: Allen-Bradley
   c. Memory: Expandable to 64K.
   d. PLC to have built in communication for peer-to-peer, DH 485, device net or RS232.
   e. I/O points: 4096.
   f. Provide built in security with multiple levels of passwords.
   g. PLC is to be mounted in the cabinet to avoid accidental damage. Damage to the HMI shall not affect the operation of the PLC.
   h. Individual remote I/O panels to be provided for each equipment module.
   i. Commercial grade DDC systems are not acceptable.
6. All analog and digital inputs and outputs to be supplied with compatible programmable logic controller interface (either individually or in clustered groups).
7. Human Machine Interface (HMI)
   a. The operator display is to be provided in a single integrated graphic display screen with a separate processor for the controls.
   b. The HMI to be suitable for mounting in the door of a NEMA 1 enclosure so that it will maintain the enclosure's NEMA 1 rating.
   c. Mount at a suitable height to assure proper visibility and easy access by the operator.
   d. Display shall be a 15" color STN display and a resistive touch screen rated for at least 5,000,000 touches.
   e. The HMI includes the following:
      1. CPU: Minimum 5x86/133 MHz.
      2. System memory: Minimum 8 MB.
      3. Storage Memory: Compact FLASH Cartridge (minimum 8 MB). Rotating media devices and mechanical hard drives are not acceptable.
      4. Serial ports: Total 2, with at least one (1) port configurable for RS232/422/486.
      5. Ethernet port: NE 2000 compatible, 10 MBPS / 10 Base-T with RJ45 connector.
      6. Expansion Slots: Minimum one (1) PC/104 slot
   f. The HMI will be provided with a full color graphic display. A separate screen shot will be provided for the following:
      1. Master screen.
      2. Hot water schematic.
      3. Hot water pump(s).
      4. Boilers(s).
      5. Heat exchanger(s).
   g. Each screen will have a touch button to relocate the screen to any of the main screens. On each screen the touching of the individual component will take you to a component screen. The component screens to consist of:
      1. Boiler(s).
      2. Pump(s).
      3. Valve(s).
   h. The master screen will display the active tons, kW, flow and kW/ton.
   i. All screens' shots to be provided digitally to the building automation for their use in monitoring the controls.

8. Transmitters
   a. Differential Pressure Transmitters
      1. Provide One complete, self-contained, variable capacitance type differential pressure transmitters. DPT's shall be hard wired back to the control system for pump monitoring and failure sequencing.
      2. The following are to be remote mounted by others:
         Hot water system zones (at load) - ONE
      3. Manufacturer: Rosemount "Smart Transmitter" No. 2051 or equal.
      4. Wiring terminals and electronics to be in separate compartments, so the electronics remain sealed during installation.
      5. Provide reverse polarity protection to keep wiring mishaps from damaging the transmitter.
      6. Wiring Manufacturer: Belden 9320, two wire, shielded twisted cable between the control system and the transmitters, and installed separate from any conduit containing AC circuit wiring.
      7. Design range shall be as required by system. External zero and span adjustments, over-pressure to 2,000 PSI, and no humidity effects.
      8. Minimum accuracy: 0.25% of calibrated span. Includes combined effects of linearity, hysteresis and repeatability.
      9. Stability: 0.25% of upper range limit for six months.
      10. Internal mechanical linkages are not allowed in the transmitter(s).
   b. Turbine Type Flow Meters
      1. Provide ONE dual turbine, insertion type flow meter(s) for the hot water system.
      2. Manufacturer: Onicon SF1210 or equal.
      3. Wiring Manufacturer: Belden 9320, two wire, shielded twisted cable between the control system and the transmitters, and installed separate from any conduit containing AC circuit wiring.
      4. Provide 15 straight pipe diameters for installation. Provide additional straight pipe diameters as necessary.
      5. Provide hot tap installation, in order to be both insertable and removable through a ball valve when the pipe is under pressure.
   c. HOT Water Temperature Transmitters
      1. Provide TWO self-contained RTD type temperature transmitters.
      2. Manufacturer: Rosemount 248 or equal.
      3. Provide for supply and return temperatures of chilled water and hot water systems.
      4. Provide for inlet and outlet temperatures on each chiller evaporator and condenser.
      5. Provide for inlet and outlet temperatures on each heat exchanger.
      6. Power input and current output (4-20mA) through the same pair of low voltage wires.
      7. Each transmitter head to be explosion proof.
      8. Temperature Probe: Provide a platinum, wire wound, sensing element in a 316SS sheath, spring loaded, and inserted into a ¾" NPT stainless steel thermowell with explosion proof process fittings and connection head. The thermowell to penetrate one-half the pipe diameter.
      9. Temperature Range: 32-122ºF (0-50ºC) for chilled or condenser water. For applications measuring the supply and return temperatures for a loop type water system, the two probes to be a matched pair.
   d. Pressure Transmitters
      1. Provide across heat exchangers, boilers, pumps and suction diffusers. Pressure to be displayed after compensation for elevation.
      2. Manufacturer and Product: Dyer Model 626-12.

B. Control Sequencing

   1. All controls sequencing of pumps and boilers required for the operation of the modular central plant to be provided by the modular central plant manufacturer.

2. Refer to Section 230993 “Sequence of Operations for HVAC Controls”.

C. Communications

1. Modular central plant shall include full integration of all components to single BAS interface of the protocol BACnet MS/TP
2. The communication interface shall be native to the existing building management system. The installation of the communication cabling to the main building shall be included in another contract.

3. The communication interface shall transmit and receive the following points:
   a. Transmit:
      1. Hot Water System Request to Start/Stop (Digital)
   b. Receive:
      1. Equipment on/off status (Each pump boiler) (Digital)
      2. Equipment failure alarms (Each pump boiler) (Digital)
      3. Valve failure alarm (Each control valve) (Digital)
      4. Valve position (Each 2-way control valve) (Digital)
      5. Valve position (Each modulating control valve) (Analog)
      6. Pump speed (Each pump) (Analog)
      7. Pump suction pressure (Each pump) (Analog)
      8. Pump discharge pressure (Each pump) (Analog)
      9. Suction header pressure (Each connection) (Analog)
      10. Discharge header pressure (Each connection) (Analog)
      11. Hot water system flow (Analog)
      12. Hot water system zone differential pressure (Analog)
      13. Hot water system supply temperature (Analog)
      14. Hot water system return temperature (Analog)
      15. Boiler inlet temperature (Analog)
      16. Boiler outlet temperature (Analog)
      17. Boiler inlet pressure (Analog)
      18. Boiler outlet pressure (Analog)
      19. Hot water system KW (Analog)
      20. Hot water system KW/MBH (Analog)

PART 3 – EXECUTION

3.1 DELIVERY OF EQUIPMENT

A. Prior to Shipment:

Manufacturer is required to disassemble modular central plant into subassembly form. Subassemblies shall be authorized by the engineer. Manufacturer is required to weatherize subassemblies for shipment. This shall include exterior equipment and exposed sections of the subassemblies. Manufacturer is required to completely drain system of water and remove drain plugs where the possibility of freeze damage may exist.

B. Upon Delivery at Jobsite:

Reassembly of the modular central plant is the responsibility of the installing contractor. Reassembly of the subassemblies shall be coordinated between the manufacturer and installation contractor, with the manufacturer providing a technician for supervision. Installation contractor shall comply with the manufacturer’s instructions for rigging, unloading, and transporting equipment.

3.2 INSTALLATION

A. Responsibilities of the Manufacturer:

1. Provide detailed instruction manual on the reassembly of the modular central plant.
2. Provide two (2) visits for the supervision of the installation of the modular central plant.
3. Inspect installed modular central plant including field assembled components and connections.

B. Responsibilities of the Installation Contractor:

1. Install the modular central plant in accordance with the manufacturer's instructions.
2. Receive and inspect the interior and exterior of the modular central plant and report damage accordingly.
3. Provide temporary protection of individual enclosure and equipment sections from the elements before roofing and final section connections can be finalized.
4. Hoist and rig all subassemblies into final locations.
5. Reassemble equipment sections including reconnections at the section spits for the base, house enclosure, and piping. Caulking and sealing as required.
6. Level and shim structural base as needed per manufacturer's recommendations.
7. Supply and install all roof finishing materials including caulking and sundry items needed to complete modular central plant installation.
8. Realign and level all equipment within recommended tolerances including pumps and motors.
9. Check and tighten all mechanical connections that may have vibrated loose during shipment.
10. Reconnect all internal electrical power and control conduit between subassemblies as required.
11. Install equipment accessories that are shipped loose from the manufacturer.
12. Install control instrumentation that is shipped loose from the manufacturer. This may include pressure transmitters, temperature transmitters, flow meters, and the associated wiring for each device.
13. Install all field connections to the modular central plant. This shall include all system, electric, domestic water, drainage, and control connections.
14. Reassemble and install all boiler exhaust stacks.
15. Touch-up and paint scratches and minor dents that may occur during hoisting and rigging.
16. Flush and fill each system.
17. Obtain all pertinent inspections and permits required to start-up modular central plant.

3.3 DEMONSTRATION

A. Commissioning and Start-up: Manufacturer to provide two (2) visits for commissioning and start-up. Each visit will require a minimum of three (3) days on-site. Installation contractor to complete and sign off on all items listed on the start-up request form. Commissioning shall include final checkout, adjustment, and start-up of the complete system.

B. Training: Manufacturer or representative will provide a minimum of eight (8) hours of training for the owner's personnel on the operation and maintenance of the modular central plant.

3.4 WARRANTY

A. Manufacturer shall provide parts and labor warranty coverage for all components for a period of 12 months from start-up or 18 months from installation, whichever occurs first.

END OF SECTION

SECTION 23 05 13

MECHANICAL MATERIALS AND METHODS

PART 1 – GENERAL

1.01 SUMMARY

A. Section Includes:

1. This Section prescribes basic materials and methods generally common to the Work of Division 23.

B. Related Requirements:

1. Division 01: General Requirements.

2. Division 07: Thermal and Moisture Protection: Polyvinyl-Chloride Roofing.

3. Division 23: Heating, Ventilating, and Air-Conditioning.

4. Division 26: Electrical.

5. Section 31 23 23: Excavation and Fill for Utilities.

1.02 SUBMITTALS

A. Provide in accordance with Division 01, Section 23 05 00 and specific requirements of each section of Division 23.

1.03 QUALITY ASSURANCE

A. Standards: Comply with applicable national, state, and local codes and standards: ASTM, ASME, and ANSI. Federal Specifications, AWWA, CISPI, NFPA, FM Global, UL, CPC (California Plumbing Code), CMC (California Mechanical Code), CSA.

B. Qualifications of Manufacturer: Products used in the Work of this Section shall be produced by manufacturers regularly engaged in manufacture of similar items and with a history of successful production as reviewed by the Architect.

1.04 COORDINATION

A. Coordinate related Work in accordance with provisions of Section 01 31 13: Project Coordination.

PART 2 – PRODUCTS

2.01 GENERAL

A. Provide the following products if they are indicated in the Contract Documents or if they are required for the proper installation, function or operation of equipment, systems or components indicated in the Contract Document.

B. Provide the following products as a complete assembly with required accessories for a complete and functioning entity in compliance with governing codes and applicable standards as specified in Section 23 05 00, manufacturer's instructions or as required.

1. Omission of minor details in the Contract Documents does not waive and/or otherwise relinquish compliance with the above requirements.

2.02 MANUFACTURERS AND MATERIALS

A. Air and Dirt Separators:

AS-1 Furnish Spirotherm, Bell and Gossett, or Wessels air and dirt separation fitting on the hot water heating system, chilled water system, and closed loop fluid cooler system. Fittings shall be fabricated steel, rated for 150 psig design pressure and selected for less than one foot of water pressure drop and entering velocity not to exceed 4 feet per second at specified GPM. Performance curves from the unit manufacturer shall be furnished as part of the submittal for each unit. Units shall be furnished with internal copper coalescing medium to facilitate maximum air and dirt separation and suppress turbulence. Units shall be furnished with galvanized steel strainer and stainless steel collector tube. Provide integral high capacity float actuated air vent at top fitting of tank. Furnish cast iron float actuated air vent rated at 150 psig, threaded to the top of the fitting. Unit shall be furnished with the bottom of the vessel extended for dirt separation with the system connection nozzles equidistant from the top and bottom of the vessel and shall include a blowdown connection and valve.

Bell and Gossett, Spirotherm, Wessels, or equal.

B. Balancing Valves:

BBV-1 Dual purpose, balancing and shut-off:

1. Direct operated Pressure Regulator: Class 200# SAG duct iron body, silicone chrome spring, stainless steel 316L Bellows/push rod.

2. Pilot operated Pressure Regulator Class 250# SAG cast iron body, cast iron cover, stainless steel valve stem, valve seat.

Sarco Type BRV 2, 71, 25P Armstrong GD 45 GP 28
Hoffman series 754

C. Boiler Blow-Off Valve:

BOV-1 Boiler blow-off (drain): Refer to Section 23 50 00.

D. Ball Valves: Bronze, 2 inches and smaller:

BV-1 Class 150, 600 psi, CWP, 2 piece construction reinforced Teflon seats, full port, adjustable packing gland, stainless ball and stem, threaded ends.

Hammond UP-8303A/UP-8305/UP-8513, NIBCO T-685-80-LF/TS-685-66-LF, Milwaukee UPBA400S/450S.

BV-2 Class 150, 600 psi CWP, 2-piece construction, bronze body, reinforced Teflon seats, adjustable packing gland, (no threaded stem designs allowed), threaded ends.

Hammond UP8301A, NIBCO T-585-70, Milwaukee BA-400.

Ball Valves in Insulated Piping: Use extended operating handle of non-thermal conducive material, and protective sleeve that allows operation of valve without breaking the vapor seal or disturbing insulation and memory stops that are fully adjustable after insulation is applied. NIBCO Nib-Seal Handle.

E. Butterfly Valves:

BFV-1 Centerline Series A, 200 psi CWP tight shut-off.

1. Body: Lug type ductile iron. Suitable for bi-directional dead-end service at rated pressure without use of downstream flange.

2. Disc: Bronze, or aluminum bronze.

3. Stem: One or two-piece, 400 series stainless steel.

4. Seat and O-Rings: EPDM.

5. Upper and Lower Stem Bearings: Copper alloy or non-metallic material.

6. Operators: Valves 6 inches and smaller, with lever handle. Valves 8-inch and larger, with manual gear operator and disc position indicator.

7. Manufacturers:

   a) Valves 2.5 to 6-inch: NIBCO, Milwaukee ML-233E, Hammond 6411-03.

   b) Valves 8-inch and larger: Milwaukee ML 333E, Hammond 6411-03, NIBCO LD 2000.

8. Grooved ends: Valves 6 inches and smaller, Victaulic No. 700 or NIBCO No. GD-4765-3 with lever handles. Valves 8 inches and larger, Victaulic VIC-300 Masterseal Series 761, NIBCO No. GD-4765-5, Gruvlok Fig. 7700 Series, with manual gear operator and disc position indicator.

F. Check Valves:

1. Bronze, 2-inch and smaller:

   CHV-1 Class 125, 200 CWP swing check, Teflon disc, threaded ends.

   NIBCO T-413-Y, Milwaukee 509-T, Hammond IB-940.

CHV-2 Class 150, 300 psi, CWP, swing check, bronze, Teflon disc, threaded ends:

Stockham B-321; Crane 11TF, NIBCO T-433, Milwaukee 510-T, Hammond IB-946..

2. Cast Iron 2-1/2 and larger:

CHV-3 Class 125, 200 psi, CWP, IBBM, renewable seat and disc, bolted cap, threaded ends:

Crane 372, Stockham G-927, NIBCO T-918-B.

CHV-4 Class 125, 200 psi, CWP, IBBM, renewable seat, bronze or cast iron disc, bolted cap, flanged ends:

Stockham G-931, Crane 373, NIBCO F-918 B, Milwaukee F-2974-M, Hammond IR-1124-HI.

CHV-5 On pump discharge, Class 250, 400 psi, CWP, wafer check, center guided disc, spring actuated:

NIBCO W-960B, Keckley Co. Style CW, Val-Matic 1400

G. Expansion Tank:

ET-1 Pressurized, vertical, steel expansion tank for non-potable water systems with a replaceable, heavy duty, Butyl rubber bladder, 1 inch or 1 ½-inch NPT system connection, 3/4 inch drain, 0.302 inch-32 standard automobile tire valve type charging connection, lifting rings and a floor mounting skirt for vertical installation. The tank must be constructed in accordance with Section VIII of the ASME Boiler and Pressure Vessel Code and stamped for 125 psi working pressure. The tank must be also rated for a continuous working temperature of 240 degrees F. Provide weather and rust resistant coating.

Bell and Gossett, Wheatley, Taco, Amtrol.

H. Flow Control Valve – Manual:

FC-1 Flow control valves: Bell and Gossett Series CB circuit setter balancing valve, line size, with integral pointer (to register degree of valve opening), differential pressure meter connections with built-in check valves and lockable memory stops. Armstrong Series CBV circuit-balancing valves, Victaulic/TA Hydronics.

I. Venturi Flow Measuring Device:

FMD-1 Preso B-plus Series, Victaulic “Style 733”, Griswold QuickSet Metering Stations, venturi type flow measuring device. Provide on the main heating hot water and chilled water lines and other locations as required for balancing, as indicated, between straight sections of pipe. Upstream pipe section shall be not less than 5 diameters in length and downstream section shall be not less than 2 diameters in length. Venturis shall be furnished complete with quick disconnect valves, safety shut-off with memory valves and attached metal identification tag.

1. 2-inch or smaller shall be furnished with threaded connections.

2. 2 ½-inch or larger shall be furnished with flanged or grooved connections.

J. Electronic Flow Readout Meter:

FM-1 Flow meter shall combine the functions and ranges of several gages into a single board range meter. Meter shall function as a compound pressure gage measuring the high side and low side pressure simultaneously and display each reading in sequence. Meter shall be furnished complete with a shut-off, bypass, and blow down valve network installed on a portable meter panel. A carrying case shall be provided with storage for accessories. Meter shall automatically select the proper range, compensate for temperature, and reset itself. Memory function shall store up to 90 sets of pressure and temperature. Pressure reading shall be accurate to plus or minus 2 percent of reading from 0.01 to 150 psi. Temperature readings shall be accurate to plus or minus 0.5 degrees F and plus or minus 1.0 degree F. from minus 65 degrees F to 250 degrees F. The flow metering device shall be Hydrodata Multimeter HDM-250 as manufactured by Shortridge Instruments Inc., and shall be furnished with pressure gage, portable meter panel and with valve network, carrying case, battery charger, instruction manual and certificate of calibration, two 6 feet long by 1/2 inch OD pressure hoses with quick disconnects, two 8 foot by 1/4 inch OD drain hoses, and a set of adapters.

K. Gate Valves:

1. Bronze, 2 inches and smaller:

GV-1 Class 125, 200 psi CWP, bronze body and bonnet non-rising stem, inside screw, screw-in bonnet, solid disc, threaded ends:

Hammond IB645, Crane 1701, Milwaukee 105, American 3F, NIBCO T-113.

GV-2 Same as GV-1, except solder ends:

NIBCO S 113, Milwaukee 115, Hammond IB 647.

GV-3 Class 125, 200 psi WOG, rising stem, inside screw, screw-in bonnet, solid disc, threaded ends:

Stockham B-100, Crane 428, NIBCO T-111, Milwaukee 148, Hammond IB-640.

GV-4 Same as GV-3 except solder ends:

NIBCO S-111, Milwaukee 149, Hammond IB-635, or equal.

GV-5 Class 125, 200 psi CWP, rising stem, union bonnet, solid disc, threaded ends:

Stockham B-105, Crane 428 UB, NIBCO T-124, Milwaukee 1152, Hammond IB-617.

GV-6 Class 150, 300 psi CWP, rising steam, union bonnet, solid wedge, threaded ends:

Crane 431 UB, Stockham B-120, NIBCO T-134, Milwaukee 1151, Hammond IB-629.

2. Iron Body Gate Valves; 2 1/2 inches and larger:

GV-7 Class 125, O S and Y, IBBM, bolted bonnet, solid disc, flanged ends:

Hammond IR1140HI, Stockham G623, Crane 465-1/2, NIBCO F-617-0, Milwaukee F 2885M.

L. Heater Vent Pipe:

1. Schedule Number:

HVP-1 Shall be UL approved for service specified. Concealed heater vent pipe, including pipe in or through attic spaces, shall be City of Compton approved double wall metal vent pipe. For recessed wall heaters, furnish B.W. type. All others may be Type B, or B.W. Clearances must comply with Compton code and conditions of UL listing.

American Metal Products Co., Inc., Simpson Dura-Vent, AmeriVent, Hart & Cooley Mfg. Co., Metalbestos.

M. Liquid Level Gage:

LLG-1 Refrigerant type, carbon steel with stainless steel trim or all forged steel construction, back-seating standard design. Upper and lower valve furnished with ball check valves; 1/2 inch diameter glass on center. Four 3/16 inch diameter gage glass guard rods or slotted steel guard.

Peneberthy, Henry, Conbraco.

N. Piping:

1. Piping shall be continuously and permanently marked with manufacturer's name, type of material, size, pressure rating, and the applicable ASTM, ANSI, UL, or NSF listing. On plastic pipe, date of extrusion must also be marked.

2. Underground non-ferrous pressure pipes shall be installed with proper color tracer wires. Refer to color code provisions in Section 23 0553: HVAC Identification.

3. Refer to HVAC Piping: Section 23 2013 for heating and chilled water piping and fittings.

O. Pipe Isolators:

PLA-1 Absorption pad shall be not less than 1/2 inch thick, unloaded. Pad shall completely encompass pipe.

Holdrite, LSP, Stoneman, Potter-Roemer, Trisolator, PR-Isolator.

PLA-2 Plastic cushion to form an insulating liner and eliminate metal to metal contact when securing copper tubes and pipes in air conditioning and refrigeration insulation preventing galvanic erosion. (Acoustical Type for Sound Absorption)

Hydra-Zorb Cushion Clamps, LSP Products Group Acousto Clamp.

P. Pressure Gage: Aluminum or steel case, minimum 4-1/4 inches dial; pressure type or combination vacuum-pressure type, with provisions for field calibration. Dial indicator to indicate pressure in psi with accuracy to within plus or minus 0.5 percent of maximum dial reading. Furnish gages with restriction screw, size 60, to eliminate vibration impulses. Black case and ring, bourdon tube of seamless copper alloy with brass tip and socket. Three way gage cock, constructed of brass with stuffing box, 1/2 inch couplings, with fixed or movable cap nut to shut off pressure gage.

PG-1 Pressure type, black drawn steel case, 4 ½-inch glass dial, range approximately twice line pressure.

Marsh Keckley, Trerice, Weksler, Weiss.

Q. Safety Relief Valves:

SRV-1 Combination temperature and pressure relief type. CSA approved. Set to open at 125 psi pressure.

Watts 40L, Cash-Acme NCLX-1, Wilkins TP220.

SRV-2 Same as SRV-1, except provide on storage type water heater with anode in dip tube.

Watts 10 x L, CashAcme NCLX-1, Wilkins TP220.

R. Strainers:

STR-1 Description: Wye type with monel or stainless steel strainer cylinder (manufacturer's standard mesh), and gasketed machine strainer cap. Where indicated on Drawings, provide with valved (globe valve) blowout piping, same size as blowout plug.

1. 2-inch and smaller:
   C.M. Bailey No.100-A, 250 lb., cast iron body, threaded, Keckley 'B', Spirax Sarco Y-type.
2. 2 ½-inch and larger:
   C.M. Bailey No.100-A, 125 lb., cast iron body, flanged, or Victaulic style 732, 300 psi, ductile iron body, grooved, fusion bonded epoxy coated.
   C.M.Bailey, Armstrong, Muessco, Keckley 'A'.

STR-2 Y pattern cast iron bodies, 125 psi, monel screen. Open area at least twice the cross-sectional area of IPS pipe in which strainer is installed and may be woven wire or perforated type. Screwed ends for sizes up to 2 inches, flanged ends fusion bonded epoxy coated for 2 1/2 inches and larger perforations, in accordance with the following:

1. Other services - 16 square mesh.

Bailey No.100, Armstrong, RP&C, Keckley.

S. Temperature Control Valves:

TCV-1 Motor-operated valve, Forged brass bodies rated at no less than 400 psi working pressure; Chrome plated brass ball and stem, female NPT union ends, dual EPDM lubricated O-rings and TEFZEL characterizing disc.

Operated by Electronic Valve Actuator, manufactured, brand labeled or distributed by Belimo, TA, Honeywell.

TCV-2 Valves, automatic, electric, 3-way control.

Nickel-plated forged brass body rated at no less than 400 psi, stainless steel ball and blowout proof stem, NPT female end fittings, with dual EPDM O-ring packing design, fiberglass reinforced Teflon flow characterizing disc. [NPS ¾ inch and Smaller for Terminal Units: Nickel plated forged brass body rated at no less than 600 psi, chrome plated brass ball and blowout proof stem, NPT female fiberglass reinforced Teflon flow charactering disc.]

Belimo, Flow Control Industries, Inc., Delta Control Products

T. Thermometers

1. Industrial:

T-1 Straight type with fixed or ratable stem, extruded or cast brass or cast aluminum case and brass separable well 6 inches minimum scale, angle or straight type range 30 degrees - 240 degrees F.

Weksler, Trerice, Weiss, Ashcroft, Marshalltown.

T-2 Round type 3 ½-inch minimum dial range of 100 between 30 degrees and 155 degrees F, color coded red above 150 degrees F. Brass chrome plated case.
Ashcroft, U.S. Gage, Marsh, Weiss.

2. Remote:

T-3 Liquid-filled capillary type with bulbs as required for remote and insertion mounting dials of 3 ½-inch minimum diameter, non-ferrous internal parts, external means for re-calibration, glass or plastic lens and steel or non-ferrous case suitable for wall, duct or panel mounting range 30 degrees to 240 degrees F.

U. Valves (Air Vent):

VAV-1 Hot or chilled water air release valves shall be cast brass rated for 150 psig design pressure and 270 F operating temperature.

Spirotherm, Bell & Gossett, Taco.

VAV-2 Hot or chilled water space heating system air valve, brass with nickel trim 1/4 inch connection, disc type for manual or automatic venting.

Hoffman 500, Spirotherm, Watts.

VAV-3 Brass petcock, 1/4 inch connection by 1/4 inch copper tube to high point of coil or line by means of a tapped cap on top of 6 inches vertical nipple. Petcock to be installed approximately 5 feet 6 inches above finish floor.

Amtrol, Watts, Dole.

V. Unions:

1. Unions shall be furnished and installed in accordance with the following requirements (unless flanges are furnished):
    a. At each threaded or soldered connection to equipment and tanks, except in Freon or fuel gas, piping systems, whether indicated or not.
    b. Immediately downstream of any threaded connection to each manually operated threaded valve or cock, and each threaded check valve, yard box or access box except those in Freon piping systems, whether indicated or not.
    c. At each threaded connection to threaded automatic valves (except those in Freon piping systems) such as reducing valves and temperature control valves, whether indicated or not.
    d. If grooved piping is used, couplings shall serve as unions. Additional unions are not required

2. Unions shall be located so that piping can be easily disconnected for removal of equipment, tank, or valve.

PART 3 – EXECUTION

3.01 EXAMINATION

A. Examine areas and conditions under which Work of this Section shall be performed. Correct conditions detrimental to proper and timely completion of Work. Do not proceed until unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Provide all materials and equipment for the Work. Furnish and install necessary apparatus, parts, materials, and accessories.

B. Pipe Installation:

1. Install piping parallel to wall and provide an orderly grouping of proper materials and execution.

2. Piping shall clear obstructions, preserve headroom, provide openings and passageways clear, whether indicated or not. Verify the Work of other Divisions to avoid interference.

3. If obstructions or the Work of other Divisions prevent installation of piping or equipment as indicated by the Drawings, perform minor deviations as required by the Architect.

4. Install piping after excavation or cutting has been performed. Piping shall not be permanently enclosed, furred in, or covered before required inspection and testing is performed.

5. Exposed polished or enameled connections from fixtures or equipment shall be installed with no resulting tool marks or threads at fittings. Residue or exposed pipe compound shall be removed from exterior of pipe.

6. Piping shall be concealed in chases, partitions, walls, and between floors, unless otherwise directed or specifically noted on Drawings. When penetrating wood studs, joists, and other wood members, provide such members with reinforcement steel straps of Continental Steel & Tube Co., ULINE, Independent Metal Strap, or equal.

7. Reduce fitting where any change in pipe size occurs. Bushings shall not be furnished unless specifically reviewed by the Architect, or indicated on Drawings.

8. Piping subject to expansion or contraction shall be anchored in a manner, which permits strains to be evenly distributed. Swing joints or expansion loops shall be installed. Seismic restraints shall be installed so as not to interfere with expansion and contraction of piping. Seismic loops required at all building separations.

9. Immediately after lines have been installed, openings shall be capped or plugged to prevent entrance of foreign materials. Caps shall be left in place until removal is necessary for completion of installation.

10. Couplings shall not be installed except where required pipe runs between other fittings are longer than standard length of type of pipe being installed and except where their installation is specifically reviewed by the Architect.

11. Water piping shall be installed generally level, free of traps, unnecessary offset, arranged to conform to building requirements, clear of ducts, flues, conduits, and other Work. Piping shall be arranged with valves installed to provide for complete drainage and control of system. Piping shall not be installed which causes an objectionable noise from flow of water therein under normal conditions. Refer to Section 23 05 00.

12. Water lines may be installed in same trench with sewer lines, provided bottom of water line is 12 inches minimum above top and to the side of sewer line.

13. Hot and chilled water circulating piping installed for space heating or cooling shall pitch up to a high point at a slope of 1/4 inch in 10 feet in the direction of flow. Where supply and return lines are exposed, both lines shall pitch in same direction. Otherwise, where possible, lines shall pitch up toward compression tank.

14. Changes in pipe sizes shall be furnished with eccentric reducers, flat on top. Offsets to clear obstruction shall not be installed so as to produce air pockets.

C. Pipe Sleeves and Plates:

1. Provide and install pipe sleeves of Schedule 40 black steel pipe or Schedule 40 PVC plastic pipe in concrete or masonry walls, footings, and concrete floors below grade. Provide and install adjustable submerged deck type sleeves at locations where pipes pass through concrete floors, except concrete slab floors on grade, and at locations where soil pipe for floor type water closets passes through concrete floors.

2. Sleeves shall provide 1/2 inch clearance around pipes, except plastic pipe shall have 1-inch clearance. Caps of deck type sleeves shall be removed just prior to installation of pipe. Area around sleeves shall be smooth and without high or low spots. Sleeves in walls shall not extend beyond exposed surface of wall. Sleeves in concrete floors and walls shall be securely fastened to forms to prevent movement while concrete is being placed.

3. Piping installed on a roof shall clear the roof surface by 10 inches minimum, with or without insulation. Bottom of individual fittings may infringe on 10 inches clear space but not groups of fittings or fittings located within 27 inches of each other.

4. Stiles shall be provided to facilitate crossing of piping when parallel piping runs are laterally greater than 12 inches out-to-out, or any pipe is higher than 18 inches, and more than 40 feet long or runs between 2 or more major pieces of equipment or housings greater than 20 feet apart. Stiles shall be not less than 20 inches wide with a minimum tread depth of 10 inches. Where stiles are required, they shall be located so greatest obstructed distance is 30 feet.

5. Where pipes pass through waterproofed walls, floors, or floors on grade, sealant with Link-Seal Modular Seals, or equal, between pipe and sleeve to provide a waterproof joint. Where earth is in contact with pipe on both sides of a wall or foundation, the waterproof joint is not required. Commercial rubber compression units may be furnished instead of sealed sleeves if reviewed by the Architect.

6. A swing joint, or other required device, shall be furnished and installed in hot water lines with 10 feet of sealant or compression joint to allow for expansion.

7. Pipe sleeves shall be provided where pipes intersect footings or foundation walls and sleeve clearances shall provide for footing settlement, but not less than one inch all around pipe.

D. Welding of Pipe and Qualifications of Welder:

1. Joints above grade or accessible conduit or tunnels in steel piping may be either welded or screwed unless specifically indicated otherwise on Drawings or specified. Joints in below grade steel piping, whether in insulation or not, shall not be welded, unless otherwise indicated.

2. Welded joints in pipe shall be continuous around pipe and shall comply with ASME B31: Code for Pressure Piping, unless otherwise specified.

3. Each pipe weld shall be stamped with welder's identification mark. Welding shall be performed by welders possessing a valid certificate of qualification for welding carbon steel welding pipe in horizontal position (2G) and horizontal fixed position (5G) in accordance with the requirements of Section IX of the ASME Boiler and Pressure Vessel Code, by an Owner-recognized, DSA approved testing laboratory.

4. Before any welder performs welding on the Work, furnish the Project Inspector with a copy of welder's valid qualification papers and obtain verification. Welder qualification is not valid unless it has been issued while welder was performing work for current employer, and has performed type of work described by qualification in the preceding 3 months.

REFERENCE: ASME BOILER AND PRESSURE VESSEL CODE, SECTION VIII, UW-29 TESTS OF WELDERS AND WELDING OPERATORS.

5. Welding performed under these Specifications is subject to special tests and inspections including rigid Ultra Sonic Testing (UT) and radiographic inspection at random, in accordance with Technique for Radiographic Examination of Welded Joints by an Owner recognized, DSA approved testing laboratory.

REFERENCE: ASME BOILER AND PRESSURE VESSEL CODE, SECTION VIII, UW-51 RADIOGRAPHIC EXAMINATION OF WELDED JOINTS.

E. Unacceptable Welds and Repairs to Welding:

1. Welds containing any of the following types of imperfections shall be deemed defective Work:

a. Cracks of any type.

b. Zones of incomplete (in excess of 1/32 inch) fusion or penetration.

c. Elongated slab inclusions longer than 1/4 inch.

d. Groups of slag inclusions in welds having an aggregate length greater than thickness of parent metal in a length 12 times the thickness of the parent metal.

e. Undercuts greater than 1/32 inch.

f. Overlaps, abrupt ridges or valleys.

2. When a defective weld is detected by examination as outlined above, two additional welds shall be radiographed at locations selected by the Project Inspector. If the two selected welds demonstrate compliant welding, then the two tested welds shall be deemed to be in compliance. Welding revealed by radiographs to be defective Work shall be removed, repaired, and tested by radiograph.

3. If either of the two selected welds demonstrates welding deemed to be defective Work, all welding in that portion of the Work shall be deemed defective Work and either: all welds shall be cutout, prepare new ends for welding and weld to comply with this Specification, or radiograph all welds, removing and repairing only such welding deemed to be defective Work.

4. Repair welding shall be performed in a manner in full compliance with ASME B31. The welded joints or repairs shall be spot examined with UT or radiographic tests in accordance with foregoing requirements.

REFERENCE, ASME BOILER AND PRESSURE VESSEL CODE, SECTION VIII, UW-52.

5. Owner shall cause to be performed additional random UT and radiographic examinations of welds. Owner shall be responsible for the costs of any UT and radiographic examinations found to be in compliance with specified requirements.

6. Installer shall be responsible for the costs of UT and radiographic re-examinations of welds deemed defective Work and not in compliance with this Specification, and shall repair or replace said welds in accordance with specified requirements.

F. Welding Rods: Submit a written list of materials and proposed type of welding rods for review by the Architect.

G. Backing Rings: Backing rings may be submitted for installation provided the Product Data is submitted with the material list.

H. Qualification Tests for Low-pressure Welding:

1. Tests shall be performed on 3-inch standard weight pipe ASTM A53, Grade A, and shall be welded by acetylene and electric arc. Each sample shall consist of two pieces, each 10 inches long, with 30-degree bevel at point weld.

2. Two 20-inch samples shall be performed in the 2G and two 20-inch samples in the 5G positions, with positions defined in Section IX, ASME Boiler and Pressure Vessel Code. Welds shall have the reinforcement ground or machined flush to the surface of the pipe before testing. Samples shall be tested as full section tensile.

3. Weld shall develop a load of 90 percent of 50,000 psi, i.e., 45,000 psi or shall develop a fracture in parent metal.

4. Each qualified welder shall carry an identification card listing welder's name, date of test, and type of welding tests passed; signed by the welder and the laboratory.

5. A valid certificate of qualification issued in compliance with requirements of the ASME Boiler Pressure Vessel Code Section IX shall qualify a welder for issuance of a certificate for low-pressure pipe welding.

I. Certificates of Qualification for Welding of Unfired Pressure Vessels:

1. Certificates of qualification shall be issued by a laboratory recognized by the Owner in compliance with the requirements of the ASME Boiler Pressure Vessel Code Section IX. Qualifications shall be for both acetylene and arc welding of Schedule 40 ASTM A53, Type B, steel welded or seamless pipe in the Horizontal Position (2G) and the Horizontal Fixed Position (5G) as defined by said code.

   NOTE: Certificate described above is not valid unless it has been issued while welder was working for his current employer, and unless welder has performed type of work described by certificate in the preceding three months. Requirements for possession of a valid certificate shall not be waived for welders fabricating unfired pressure vessels when the Specifications require compliance with ASME code or when welding pipe carries working pressures greater than 75 psi and temperatures greater than 250 degrees F.

J. Pipe Joints and Connections:

1. Pipe and tubing shall be cut per IAPMO Installation Standards. Pipe shall have rough edges or burrs removed so that a smooth and unobstructed flow shall be provided.

2. Threaded Pipe: Joints in piping shall be installed according to the following service schedule:

   a. Refrigerant and Soap Piping: Litharge and glycerine, or Expando, Gasoila, or equal.

   b. All other services Furnish sealant, suitable and as reviewed by the Architect.

3. Threads on pipe shall be cut with sharp, clean, unblemished dies and shall conform to ANSI/ASME B1.20.1 for tapered pipe threads.

4. Joint compounds shall be smoothly placed on male thread and not in fittings. Threaded joints shall be installed tight with tongs or wrenches and sealant of any kind is not permitted. Failed joints shall be replaced with new materials. Installation of thread cement or sealant to repair a leaking joint is not permitted.

5. Sharp-toothed Stillson, or similar wrenches, is not permitted for the installation of brass pipe or other piping with similar finished surfaces.

K. Copper Tubing and Brass Pipe with Threadless Fittings:

1. Silver brazed joints shall be used for attaching fittings to non-ferrous metallic refrigerant piping.

2. Non-pressure gravity fed condensate lines may be soldered with 95/5 solder.

3 Silver brazing alloy, Class BCUP-5. Surfaces to be joined shall be free of oil, grease, and oxides. Socket of fitting and end of pipe shall be thoroughly cleaned with emery cloth and wiped to remove oxides. After cleaning and before assembly or heating, flux shall be installed to each joint surface and spread evenly. Heat shall be applied in

accordance with instructions in the Copper Tube Handbook issued by Copper Development Associates. Joints constructed of rough bronze fittings shall be provided as recommended by manufacturer.

4. Do not overheat piping and fittings when installing silver brazing.

5. Joints in non-ferrous piping for services not covered above shall be installed with solder composed of 95/5 tin/antimony, ASTM B32, Grade 5A. Surfaces to be jointed shall be free of oil, grease, and oxides. Sockets of fitting and end of pipe shall be thoroughly cleaned with emery cloth to remove oxides. Solder flux shall be sparingly installed and solder added until joint is completely filled. Do not overheat. Excess solder, while plastic, shall be removed with a small brush in order to provide an uninterrupted fillet completely around joint. Random inspection of joints shall be conducted by Project Inspector to ensure joints are lead-free.

6. Grooved end joints for copper piping shall be assembled in accordance with the latest manufacturer recommendations. Pipe ends shall be clean and free from indentations, projections, and roll marks in the area from pipe end to groove for proper gasket sealing. Grooving tools shall be as manufactured by Victaulic, RIDGID, MAG Tool, or equal.

L. Ring-Type Pipe: Joints shall be installed in accordance with manufacturer's instructions with grooved couplings, fittings and rubber rings. Couplings and pipe shall be compatible and of the same manufacturer. Rings shall be accurately located and installed by grooves in coupling. Pipe shall be installed with zero deflection unless otherwise specified. Pressure pipe shall be furnished with thrust blocks at each offset point.

M. Welded Pipe Joints:

1. Joints in welded steel pipelines shall be installed by oxyacetylene or electric arc process. Welding shall be continuous around pipe and provided as specified.

2. Butt welds shall be of the single V-type, with ends of pipe and fittings beveled approximately 37 ½ degrees. Piping shall be aligned before welding is started with the alignment maintained during welding.

3. Welds for flanges and socket fittings shall be of the fillet type with a throat dimension not less than pipe wall thickness.

N. Grooved End Pipe Joints: Grooved end joints for carbon steel piping shall be assembled in accordance with the latest manufacturer recommendations. Pipe ends shall be clean and free from indentations, projections, and roll marks in the area from pipe end to grove for proper gasket sealing. Grooving tools shall be as manufactured by Victaulic, RIDGID, MAG Tool, or equal.

O. Joints shall be Vic-Press 304TM, or equal, made with Victaulic Series ‘PFT’ tools and the appropriate sized jaw. Pipe shall be certified for use with Vic-Press 304TM system, and shall be square cut, properly deburred and cleaned, and marked at the required location to insure full insertion into the fittings and/or couplings.

P. Valves: Valves shall conform to the following:

1. Piping systems shall be furnished with valves at points indicated on Drawings and specified, arranged to provide complete regulating control of piping system throughout building and the Project site.

2. Valves shall be installed in a neat grouping, so that parts are easily accessible and maintained.

3. Pressure Independent Characterized Control valve type shall be suitable for service on which installed.

4. Valves shall be full size of line in which they are installed, unless otherwise indicated on Drawings or otherwise specified, and shall be one of types specified.

5. Provide chain operators on valves 2-inch and larger located 7 feet or more above the servicing floor level.

6. Valves for similar service shall be of one manufacturer.

7. Except where otherwise specified, valves shall be Belimo, Victaulic, Stockham, Crane, Jenkins, Milwaukee, Hammond, American Valve, NIBCO, Hoffman, or equal.

8. Ball valves below grade in yard boxes shall have stainless steel handles.

9. Temperature relief valves and combination temperature and pressure relief valves shall be as specified and furnished as set forth in this Section. Discharge pipe from relief valves shall be not less than discharge area of valve or valves it connects, based on discharge area of valves, and shall terminate as indicated and free of any traps. Valves shall be installed at following locations:

   a. A combination temperature and pressure relief valve or combination of valves on each heating hot water boiler. Temperature sending element shall extend into water inside boiler.

10. Manual air vent valve assemblies shall be installed at each high point of hot water space heating and chilled water piping systems. Valves shall discharge through 1/4 inch diameter copper tubing and drain to nearest floor sink. Automatic type air vent valve shall only be installed where specifically indicated. Radiator, convectors, and finned pipe convectors shall be fitted with packless radiator valves, angle or straight pattern. Each convector or radiator installed as part of a space hot water heating system shall be furnished with a manual-type air vent valve.

Q. Strainers: Strainers shall be installed on each water main (except for fire line) downstream of the meter, above grade, when a pressure regulator assembly is not installed. Main strainer shall be of Y-flange or groove type. On closed loop chilled and heating hot water systems pump systems, a strainer shall be installed at each pump inlet and upstream of each flow control valve assembly. The control valve assembly may include a modulating temperature control valve and a flow-limiting valve, manufactured by Griswold, AutoFlow, Flow Control Industries, Inc., or equal.

R. Hangers and Supports:

1. Piping shall be securely fastened to building structure by approved iron hangers, supports, guides, anchors, and sway braces to maintain pipe alignment to prevent sagging and to prevent noise or excessive strain on piping due to uncontrolled or

seismic movement under operating conditions. Hangers and supports shall conform to Manufacturer's Standardization Society Specification SP-69. Hangers shall be relocated as required to correct unsatisfactory conditions that may become evident when system is placed into operation. Appliances, heat exchangers, storage tanks, and similar equipment shall be securely fastened to structure in accordance with seismic requirements. Outdoor metal hangers and supports shall be hot-dipped galvanized steel, unless otherwise specified.

2. Piping shall not be supported by wire, rope, wood, plumbers' tape, or other non-recognized devices.

3. Hangers and supports shall be designed to support weight of pipe, fittings, weight of fluid and weight of pipe insulation, and shall have a minimum factor of safety of 5, based on ultimate tensile strength of material installed.

4. Burning or welding of any structural member under load is not permitted. Field welding not specified on Drawings or reviewed Shop Drawings is not permitted without review by Architect and DSA.

5. Burning holes in beam flanges or other structural members is not permitted without review by the Architect and DSA.

6. Pipe hangers on piping covered with low temperature insulation shall be installed on outside of insulation and not in contact with pipe unless otherwise detailed on Drawings. Insulation shall be protected by 18 gage galvanized steel shield, with a minimum length of 10 inches, installed completely around pipe covering between covering and hanger. Installing hangers directly on pipe and butting adjoining sections of insulation against hanger is permitted provided void and hanger rod are properly insulated and sealed so that no sweating occurs at hangers.

7. Hanger rods shall be fastened to structural steel members with suitable beam clamps. Clamps shall be Tolco, Carpenter & Patterson, Fee and Mason, or equal, as follows:

   a. Tolco I beam, Fig.62 for maximum 1000 lbs.

   b. Tolco I or WF beam, Fig. 329, for maximum of 1290 lbs.

8. Hanger rods shall be fastened to concrete inserts in concrete slabs or beams. Inserts shall be Tolco, Carpenter & Patterson, Fee and Mason, or equal, as follows:

   a. Tolco Fig.310 for maximum of 600 lbs.

   b. Tolco Fig. 309 for maximum of 1140 lbs.

9. For fastening to wood ceilings, beams, or joists, furnish Anvil Fig. 128R, Anvil Fig. 153, Tolco 78, or equal pipe hanger flange fastened with drive screws. Under wood floors, 3/8 inch hanger rods shall be hung from 2-inch by 2-inch by 1/4 inch angle clips 3-inch long, with two staggered 10d nails, clinched over joist.

10. Hanger rod sizes for copper, iron, or steel pipe: 3/8 inch for pipe sizes 1/2 inch through 2-inch, 1/2 inch for pipe sizes 3-inch, 4-inch and 5-inch, 5/8 inch for pipe size 6-inch, and 3/4 inch for 8-inch and 10-inch pipe.

11. Turnbuckles, if furnished, shall provide a load carrying capacity equal to that of the pipe hanger with which they are being installed.

12. Pipe hangers shall be of same size, or nearest larger manufactured size available, as pipe or tubing on which they are being installed.

13. Hangers, clamps, and guides furnished for support of non-metallic pipe shall be padded with 1/8 inch thick rubber, neoprene, or soft resilient cloth.

14. Where special pipe-supporting requirements in the Specifications conflict with any standard requirements specified herein, the Specification requirements shall govern.

15. Vertical Piping:

    a. Vertical pipe risers shall be securely supported with riser clamps of recognized type. Risers in reinforced concrete buildings shall be furnished with extension clamps fastened to pipe above each concrete floor slab with extended arms of clamp to rest on slab. Clamps shall be provided with lead or Teflon liners when installed on copper tubing. Clamps shall be plastic-coated when installed on non-ferrous pipe or tubing.

    b. Copper tubing in sizes 1 ½-inches and larger and steel pipelines passing up through building shall be supported at each floor of building or every 15 feet whichever is less.

    c. Copper tubing sizes 1 ¼-inch and smaller shall be supported at not intervals not more than 6 feet on center. Special provisions shall be installed for vertical lines subject to expansion and contraction caused by operating temperature differences.

    d. Vertical cast iron pipelines shall be supported from each floor and at its base. Malleable iron or steel pipe clamps with minimum thickness of 1/4 inch shall be furnished and fastened around pipe for support.

16. Horizontal Piping:

    a. Roof Mounted Piping: Pressure and non-pressure piping shall be supported from channels, stands, clamps, trapezes, rollers, or structures mounted on 100% rubber, UV resistant rooftop supports with reflective strips, Dura-Block, or equal. Roller type supports shall be provided below and above pipe to prevent its dislodgement. Bottom of pipes shall clear the roof surface by 10 inches.

        1) At PVC roofing provide walk tread, polyester reinforced, UV resistant, with surface embossment at rooftop supports. Heat welding of walk pads shall only be done by manufacturer certified installers.

            a) Sika-Sarnafil and Carlisle: Walk tread shall be no more than one inch larger than the plan area of the pipe support blocks and adhered to the roof membrane with Sika 1A or Carlisle Universal Single-Ply sealant, as applicable.

            b) Johns Manville: Walk tread shall be installed under the pipe support blocks and adhered to the blocks, if possible, and left

loose laid on top of the PVC roof system. Walk-pad shall have a minimum of 4 inches of material past perimeter on all 4 sides of block.

2) Built-up roofing: Provide APP granulated modified torch-down at each pipe support block. Torch-down shall extend 2 to 4 inches beyond the edges of the block and adhered by torch application over existing cap sheet membrane. This work shall be performed by a certified roofer.

b. Piping Mounted to Underside of Roof and Decks and from Structure:

1. Insulated steam and space heating hot water supply and return piping shall be supported with Tolco Figure 4, B-Line Figure B3140, Anvil Figure 212, or equal, steel hangers with welded eye rods to permit hinge movement at point of attachment of hangers. Hinge movement at point of support shall be provided by welded eye linked rods Tolco Figure 101L, B-Line Figure B3211X, Anvil Figure 278X, or equal.

2. Chilled water supply and return piping, condenser water piping, insulated refrigerant piping may be supported with Tolco Figure 1, B-Line Figure B3100, Anvil Figure 260, or equal, hangers with rods, turnbuckles and inserts suitable for above hangers.

c. Maximum hanger and support spacing shall conform to CPC schedule for horizontal piping installed above grade.

17. A hanger or support shall be installed close to the point of change in direction of a pipe run, in either a horizontal or vertical plane.

18. When practicable, supports and hangers for cast iron soil pipe shall be installed as close as possible to joints and when hangers or supports are not located within one foot of a branch line fitting, an additional hanger or support shall be installed at fitting.

19. In systems where grooved piping is used, couplings shall be provided with angle pattern bolt pads to comply with support and hanging requirements of ANSI/ASME B31.1, ANSI/ASME B31.9, and NFPA Pamphlet 13.

S. Flashings:

1. Each pipe, duct, or gas-fired equipment vent passing through roof shall be installed with waterproof flashing.

2. Flashing or flanges on pipes, vents, and ducts passing through a tile or slate roof shall be constructed of sheet lead. Flashing for pipes and heater vents passing through a roof shall be 4 pound soft sheet lead. Flashing and flanges for ducts and heater vents passing through exterior walls shall be 22 gage sheet metal. Flanges and flashing shall be installed waterproof at point of connection with pipe or duct. No soldered joints on roof flashings will be allowed.

3. Lead flashing and flanges shall be constructed of 4 pound sheet lead with burned joints. Flange of lead flashing or lead flange on a duct shall extend out onto roof a minimum of 12 inches from pipe or duct. Lead flashing shall extend up the pipe or duct not less than 7 inches.

4. Sheet metal flashing shall be constructed of 24 gage galvanized sheet steel. Flanges on these flashings shall extend out onto roof a minimum of 10 inches from pipe or duct. Flanges on ducts through exterior walls shall extend out from duct a minimum of 2 ½ inches. Flanges on gas-fired equipment single-wall vents shall be of ventilated type. Type B gas vents through a roof shall be furnished with non-ventilated flashing as per NFPA Pamphlet 211.

5. Cast iron, steel, brass, and copper pipe, which terminate less than 18 inches above roof, shall be furnished with a combination counter-flashing and vandal-proof hood for protection against water, birds and foreign matter. Cast iron, steel, brass and copper pipe, which does not terminate within 18 inches of roof, shall be furnished with a counter-flashing sleeve. Pipe, which terminates more than 18 inches above roof, shall be furnished with protection against entrance of water, birds, and foreign matter.

6. Counter-flashing and combination counter-flashing sleeves and vandal-proof hoods shall be cast iron, vandal-proof, threaded, sealed or approved gas-heated sleeve type. Counter-flashing sleeves on each of these items shall extend down over flashing a minimum of 3/4 inch.

7. Flashing and flanges on ducts shall be installed waterproof at point of connection to the duct by riveting and soldering. Storm collars shall be securely screwed and installed waterproof around appliance vent pipe immediately above flashing.

8. Vent piping above roof shall be furnished with a combination counter-flashing sleeve and vandal-proof hood.

T. Equipment Installation: Install roof or floor mounted equipment on level platforms, housekeeping pads or curbs and provide sound, vibration and seismic control measures per Section 23 0548, unless indicated otherwise whether indicated on drawings or not.

END OF SECTION

SECTION 23 05 48

MECHANICAL SOUND, VIBRATION AND SEISMIC CONTROL

PART 1 – GENERAL

1.01 SUMMARY

A. Section Includes: Reduction or elimination of excessive noise or vibration within building due to operation of equipment, machinery, piping, and ductwork as specified.

1. Vibration isolators.
2. Seismic restraint devices.
3. Duct silencers.
4. Acoustic housings.
5. Lining and enclosing ductwork.
6. Acoustic louvers.
7. Sound attenuation boots at supply, return, exhaust and transfer air inlets, outlets and openings.
8. Flexible ducts, conduits and piping.

B. Related Requirements:

1. Division 01: General Requirements.
2. Section 01 45 25: Testing, Adjusting, and Balancing for HVAC.
3. Section 23 05 00: Mechanical Common Work.
4. Section 23 05 13: Mechanical Basic Materials and Methods.
5. Section 23 20 13: Mechanical Above Grade Piping.
6. Section 23 30 00: Mechanical Air Distribution.
7. Section 23 80 00: Mechanical Equipment.

1.02 GENERAL REQUIREMENTS

A. Provide vibration isolators to eliminate or reduce the transmission of vibration noise to any part of building and mitigate vibration frequency and load imposed by equipment. Vibration isolators,

base frames, inertia bases and seismic restraints shall be of sufficient size, flexibility and load distribution configuration to assure that deflection, stability and seismic restraint requirements are met without permitting excessive movement when starting. For typical units, no fewer than four isolators shall be provided. Isolators shall be provided to deflect uniformly under operating gravity and equipment thrust loadings to within plus or minus 10 percent of specified deflection values.

B. Static deflections specified are based on the anticipated equipment characteristics. In the event the equipment proposed by the Contractor has characteristics other than those indicated, particularly the rated rpm, the static deflection shall be re-evaluated and the proper mountings and other devices shall be provided.

C. Where fabricated vibration isolator units are indicated, furnish manufacturer's standard catalog products with printed loading ratings or certified submittals

D. Seismic Requirements:
